D-c and a-c machines based on fundamental laws. By Michael Liwschitz-Garik, assisted by Robert T. Weil Jr. New York D. Van Nostrand Company 1952 508 p. illus. 24 cm. $7.25 6309

Contents (abridged): The fundamental laws. D-c armature windings. The magnetic circuit. The d-c generator. The d-c motor. Some special d-c machines. Transformer construction. The phasor diagram and equivalent circuit of the transformer under load. Determination of parameters from no-load and short-circuit test. Parallel operation of transformers. A-c armature windings. The polyphase induction motor as transformer. Circle diagram of the polyphase induction motor. Determination of parameters from no-load and locked-rotor test. Starting and speed control of the polyphase induction motor. Some special induction machines. The single-phase induction motor. Starting the single-phase motor. Equivalent circuit of the synchronous machine. Small synchronous motors. Hunting of synchronous machine. The synchronous converter. The d-c armature in an alternating magnetic field. The single-phase series commutator motor. The repulsion motor. The 3-phase shunt commutator motor (The Schrage motor). Appendices. List of symbols. Conversion table. References. Answers to problems. Index.

Note: A textbook for engineering courses. The importance of four fundamental laws, Faraday's law of induction, Kirchhoff's law of the electric circuit, circuital law of the magnetic field (Ampère's law); and law of force on a conductor in a magnetic field (Biot-Savart law) is constantly emphasized. The author's method of instruction is to guide the student in the selection of those laws that apply to a particular problem, to derive the fundamental equations for the machine in question, and then to demonstrate the derivation of the machine's characteristics from these equations. The book is written in a direct, easily-read style, and the derivations are adequately detailed. The author is a member of the faculty of the Polytechnic Institute of Brooklyn.

LIWSCHITZ GARIK, MICHAEL

Direct-current machines, by Michael Liwschitz Garik assisted by Clyde C. Whipple. Second edition. New York D Van Nostrand Company Inc. 1956. 307 p. illus. 24 cm. $6.25 6310

Contents: Part I, Fundamentals of d-c machines. The fundamental laws. Mechanical elements of the d-c machine. d-c armature and field windings. Emf induced in d-c armature winding (application of Faraday's law of induction); electromagnetic torque (application of Faraday's law of Biot-Savart's law). The [illegible] produced by d-c machine (application of Ampère's law). Methods of excitation. Magnetic circuit (application of Ampère's law). Methods of excitation: direction of rotation of the shunt and series machine. The d-c generator. The d-c motor. Commutation. Special d-c machines and rotating amplifiers. Losses. Heating and cooling. Starting of d-c motors. Part II, Some advanced topics: Tangential forces in the electric machine. Limitations of the wave winding with respect to the number of winding elements per layer per slot. Determination of the no-load field curve. Commutation. Losses due to slot-openings and skin-effect. Heat flow and temperature rise of the windings and iron. Approximate determination of the field-distribution curve. The two-stage and three-stage rototrols. Index.

Note: The first part of this book is designed for the instruction of undergraduate students of engineering, and is a traditional introduction to direct-current machines. In contrast, the second part of the volume entitled "Some advanced topics" is directed to graduate students and practicing engineers. It presents at a level suited to this audience the topics named in its chapter titles, and includes, among other things, an extended analytical treatment of commutation. The book first appeared as the first volume of the author's *Electric machinery* 1946. In the second edition it has been revised, completed and made independent of the volume on a-c machines. The author is a member of the faculty of the Polytechnic Institute of Brooklyn.

LIWSCHITZ-GARIK, MICHAEL

Winding alternating-current machines a book for winders, repairmen, and designers of electric machines. By Michael Liwschitz Garik, assisted by Celso Gentilini. New York D Van Nostrand Company Inc. 1950. 766 p. illus. 24 cm. $9.50 6311

Contents: Classification of a-c windings and some fundamental conceptions. Types and insulation of polyphase windings. Integral-slot lap windings. Balanced fractional-slot lap windings. Unbalanced fractional-slot lap windings. Integral-slot and (integral + 1/2)-slot 3-phase wave windings. Balanced fractional-slot wave windings. Unbalanced fractional-slot wave windings. Two and more speed polyphase windings. Reconnecting an old polyphase winding for new conditions and rewinding an old core. Single-phase windings and diagrams. Electrical faults in a-c windings. Appendices: Balanced fractional-slot lap windings laid out with respect to the main wave. Balanced fractional-slot lap windings laid out with respect to harmonics (windings with cyclic coil shift and doubly chorded windings). Balanced fractional-slot wave windings with single and double chording. Unbalanced, fractional-slot lap and wave windings. Distribution and pitch factors of integral and fractional-slot windings. List of symbols. Bibliography. Index of diagrams. Index of tables. General index.

Note: A practical instruction and reference book. It includes numerous varieties of lap and wave windings not covered in the older books on winding. A considerable part of the space is devoted to reproductions of diagrams and other illustrative material. Extensive tables show all possible series and parallel connections for pole numbers between two and 30. The main part is addressed to winders and electricians and includes no mathematical theory. The appendices contain mathematical analysis of the various types of windings and are of interest to designers of a-c machines.

MCDOUGAL, WYNNE LUTHER, AND K. C GRAHAM

Small non-commutator motors. Chicago American Technical Society 1951 265 p. illus. 22 cm. $4.25 6312

Contents: Theory of motor operation. The use of inductance in motor operation. Operations preliminary to rewinding stator. Rewinding split-phase motor. Rewinding with formed coils. The capac

tor motor. Essential features of motor construction. Special types of split-phase motors. Deviations from split-phase type. Testing motors and locating trouble. Index.

Note. A simplified treatise on alternating current motors that have no commutator and that are less than one horsepower in size. Such motors range from the simple low-power ones used in driving household electric clocks to capacitors and shaded-pole motors used in such applications as office machinery and household refrigerators. The basic principles and the elements of such motors are described as fully as possible without the use of mathematics. The book is designed for use in vocational courses in high schools and trade schools and for home study by apprentice electricians and others with practical interest in the subject.

McFarland, Thomas Clair

Alternating current machines. New York D Van Nostrand Company, Inc., 1948 540 p illus. 24 cm $7 00 6313

Contents. The single-phase transformer Special-purpose transformers. Polyphase transformations. Polyphase induction machines. The synchronous machine. The constants of synchronous machines. Performance of synchronous machines. Mechanical-type power converters. Electronic-type power converters. Single-phase motors. Alternating-current motor controls. Index.

Note. A college text based on material developed for courses given to junior and senior electrical engineering students at the University of California. The detailed discussions of special characteristics, design, construction, and operation of various types of a-c machinery require that the student have prior knowledge of a-c current theory Numerous circuit diagrams are included, but no attempt is made to describe specific commercial machines. The problems given at the end of each chapter illustrate the practical applications of the subject.

Massachusetts Institute of Technology Department of Electrical Engineering

Magnetic circuits and transformers, a first course for power and communication engineers, by members of the staff of the Department of Electrical Engineering, Massachusetts Institute of Technology New York John Wiley & Sons, Inc., 1943 718 p. illus. 23 cm (Principles of electrical engineering series) $7 50 6314

Contents. Properties of ferromagnetic materials, the magnetic-circuit concept. Principles of magnetic-circuit computations. Permanent magnets and energy in the magnetic field. Losses in magnetic cores containing time-varying fluxes. Alternating-current excitation characteristics of iron-core reactors and transformers. Model theory and design of iron-core reactors. Thermal properties and heat flow General design and cost considerations. Transformers: general principles. Physical features of transformers. Magnetic leakage in transformers. Leakage inductances. Voltage regulation, efficiency and rating. Autotransformers. Economy in power-system transformer applications. Self and mutual inductances. Frequency characteristics. Special applications of transformers in power systems. Applications of transformers in telephone systems. Three-phase connections general considerations. Effects of transformer impedances in balanced three-phase circuits. Harmonic phenomena in three-phase circuits. Unbalanced conditions in three-phase transformer banks. Three-phase connections of autotransformers. Three-phase transformers. Multicircuit transformers. Transformer connections for phase transformation. Parallel operation of transformers. Appendices. Bibliography Index.

Note A feature of this book is that practical applications are made to both heavy-current power and light-current control, measurement, and communications problems. The material is presented both through mathematical analysis and through physical interpretation of the phenomena. The first part of the book deals with magnetic circuits. It includes discussions of the current theory of ferromagnetism, the derivation of the magnetic circuit concept, and the development of the fundamental principles for computation of the behavior of magnetic circuits. Also included are a treatment of iron-core reactors by means of model theory and a concise summary of thermal-circuit problems. Part II, on transformers, surveys first some general principles involved in the design and manufacture of all electric apparatus. It then applies the general principles to transformers and continues with analysis of their electrical characteristics. Two methods of analysis are given, and their interrelations stressed, the resolution of the magnetic fields of transformers into leakage and resultant mutual components, and the classical theory of coupled circuits.

Mueller, George Vernon

Alternating-current machines. New York McGraw Hill Book Company, Inc., 1952 502 p. illus. 24 cm $8 50 6315

Contents. Construction details and no-load relations in transformers. Relations in a loaded transformer Parallel operation of transformers. Special types of transformers. Transformer connections in polyphase systems. Polyphase induction motors. Speed control of induction motors. Further induction machine topics. Synchronous generators. Synchronous motors. Single-phase motors. Synchronous converters. Rectifiers. Appendix. Index.

Note. The author of this text is Professor of Electrical Engineering in Purdue University and the book is intended for use in introductory courses in a-c machines offered to electrical engineering students who are majoring in machines and power circuits. There is some emphasis on those aspects of the subject which are useful in design. The illustrations include a number of oscillograms of the wave forms of currents in a-c machines.

Paschkis, Victor

Industrial electric furnaces and appliance New York Interscience Publishers, Inc 1945–48 2 v illus. 23 cm. Vol. I, o p., vol. I $10 00 631

Contents (abridged) Volume I, Introductory survey Economic justification. Uses. Selection of furnace types. Fundamentals of furnace calculations. Fundamentals of furnace economy. Electrode melting furnaces (arc type and arc resistor type) The furnace body The electrodes. Busses (connectors) Transformer and reactor Furnace control. Operating diagram and efficiency Ferro-alloy furnaces Appendix. Subject index. Volume II, Resistance furnaces and appliances. Section I, Indirect-heat furnaces: Furnace size and heating time. Furnace parts. Furnace design. Section II, Direct-heat furnaces. Section III, Appliances—resistance type Direct-heat appliances. Indirect-heat appliances (resistance type.) Induction and high-frequency capacitance heating: High-frequency power supply Induction furnaces and appliances. High-frequency capacitance (HFC) or dielectric heating. Selection of furnaces. Appendix. Subject index.

Note. Electric furnace construction and operation are here discussed chiefly from the standpoint of engineers who may be responsible for the design and operation of such furnaces. Although some descriptive matter is included and many of the illustrations show actual installation, the emphasis is not on description but on sound application of known principles of heat transfer. The author's purpose is to facilitate the design of furnaces that will operate more efficiently particularly in the production of uniform products, than is possible when design is based only on past experience. Much engineering data are given in graphs and tables, and many useful mathematical formulas are included. There is considerable discussion of accessories such as electrodes, pots, and covers.

Pestarini, Joseph Maximus

Metadyne statics. New York Published jointly by The Technology Press of Massachusetts Institute of Technology and John Wiley & Sons Inc., 1952 415 p. illus. 24 cm. $9 50 6317

Contents. Part I, General rules valid for all metadynes. Introduction. Canonical currents. Electromotive force induced in an isotropic metadyne. Main characteristics of an isotropic metadyne—the case of absolutely constant speed. Principal characteristics of an isotropic metadyne—the case of approximately constant speed due to a regulating device. The metadyne with substantially variable speed. Metadynes complete with their external connections. Quasi-static characteristics and static stability. Consideration of the anisotropic metadyne and of the saturated iron. On commutation. Part II, Special cases of metadynes. Introduction. The cross transformer metadyne at substantially constant speed. Some transformer metadynes of degree $m = 4$. Some generator metadynes of degree $m = 4$. Some motor metadynes of degree $m = 4$. Some applications used metadynes previously described. Special metadynes of degree $m = 4$. Hyperstatic... Some applications of the metadynes already described.

windings—the "ideal" transformer metadyne. Some metadynes of [illegible] from 4 [illegible] The rotating transformer metadyne [illegible] Glossary of nomenclature. Index.
[illegible] The author of this book discovered the class of direct-current [illegible] machines now known as metadynes in the course of making an analytical study of commutation in direct-current machines. Since his original discovery, numerous patents have been [illegible] and a number of metadynes have been designed and built for specific applications. However the potentialities of the metadyne are still largely unexplored. The greater part of this book is devoted to the theory and analysis of the steady-state characteristics of metadynes. Included also are descriptions and analyses of a variety of metadyne installations.

PUCHSTEIN A. F., AND OTHERS
Alternating-current machines. Third edition. By A. F. Puchstein T. C. Lloyd, and A. G. Conrad. New York John Wiley & Sons, Inc., 1954 721 p. illus. 24 cm. $8.50. 6318

Contents (abridged) Transformers: Transformer construction. Equivalent circuits. Characteristics from test data. Parallel operation of transformers. Polyphase transformer connections. Alternators: Synchronous generators. Armature windings. Factors affecting alternator regulation. Two-reaction analysis. Transient conditions of alternators. Polyphase induction motors: Construction. Analysis of operation—the equivalent circuit. Test data. Harmonics in the air-gap flux. Winding reactance—leakage reactance—rotor bar slots—[illegible]. Methods of controlling speed. Single-phase induction motors. Construction—starting methods and characteristics. Double-revolving field theory—equivalent circuit. Cross-field theory. Determination of single-phase induction-motor constants from tests. Capacity motors. Self-synchronous machines. Synchronous motors: Theory of operation and characteristics. Vector diagrams. Mathematical analysis of motor performance. Characteristics by analytical and graphical methods. Starting synchronous motors. The rotor as a [illegible] Alternators in parallel. Synchronizing. Parallel operation. Synchronous converters: Characteristics of the synchronous converter. Voltage control, efficiency regulation. Mercury-arc rectifiers. Rectifier circuits. Voltage regulation—overlap—[illegible]—inversion. Single-phase commutator motors: Theory and characteristics—vector diagrams. Series motors, performance, [illegible] Repulsion motors: Characteristics, tests. Methods of analysis. Problems. Index.

Note: A thorough and rigorous treatment of the characteristics and analysis of alternating-current machines is provided in this textbook. The volume is organized in 10 sections, the titles of all of which are given above, and 34 chapters of which only [illegible] is listed. It is addressed to advanced undergraduate students in engineering colleges and the level of treatment assumes [illegible] knowledge of fundamental electrical principles as well as facility in the solving of algebraic equations. Although there is necessarily some description of typical machines, the emphasis is on analysis, interpretation of test data, etc. The second edition was published in 1942. In this third edition, the scope and organization of the book are essentially the same, but [illegible] number of topics are treated differently or in more detail, and [illegible] few topics have been added.

ROBERTSON BURTIS LOWELL AND LEON ARD J BLACK
Electric circuits and machines New York D. Van Nostrand Company Inc 1949 434 p. illus. 24 cm. $5 75 6319

Contents Electrical power. Generation of electrical power. Circuit elements. Single-phase, alternating-current circuits. The single-phase transformer. Polyphase systems. Transformer connections. Electrical machines. Machine windings. Synchronous machines. Polyphase induction motors. Single-phase motors. Direct-current machines. Some basic aspects of electronics. Vacuum tubes and their characteristics. Amplifiers and oscillators. Gas-filled tubes and power supplies. Electrical instruments. Appendices. Index.

Note: A textbook specifically designed for college students of mechanical rather than electrical engineering. The principles and chief types of circuits and machines are covered with the main emphasis on single-phase alternating current machines. A special feature is an unusually large selection of problems for the student to solve. The book was developed over [illegible] period of many years at the University of California. A second edition was published in 1957. 436 p. $6.75.

ROSENBERG, ROBERT
Electric motor repair a practical book on the winding repair and troubleshooting of a-c and d-c motors and controllers. Enlarged edition. New York Rinehart & Company Inc. 1951 2 v. in 1 illus. 23 cm. $6 95 6320

Contents. Foreword, by I. D. Cohen. Split-phase motors. Capacitor motors. Repulsion-type motors. Polyphase motors. Alternating-current motor control. Direct-current armature winding. Direct-current motors. Direct-current motor control. Universal, shaded-pole, and [illegible] motors. Direct-current generators. Synchronous motors and generators, synchros [illegible] electronic control of motors. Appendix. Index.

Note: A clearly written book for students who are learning electric motor repair in trade schools or on the job. The text takes up the various types of motors one by one, describes their operating principles and construction, then gives specific, practical directions for troubleshooting, repair and rewinding. The text and illustrations comprise two separate volumes, each of which is attached by spiral wire to the outer edges of [illegible] common binding. When in use, the binding and both volumes may be placed flat on [illegible] desk or workbench and the text and plates turned separately; when not in use, the two volumes are folded inward to form [illegible] appears to be a single volume. There are more than 900 illustrations.

ROTERS HERBERT CHRISTOPHER
Electromagnetic devices. New York John Wiley & Sons, Inc. 1941 561 p. illus. 23 cm. $10.00. 6321

Contents. Introduction. Magnetic properties of iron and some of its alloys. The theory of operation of electromagnets and the factors entering into their efficient design. Calculation of magnetic circuits containing iron and air gaps of known permeance. Calculation of the permeance of flux paths through air between surfaces of high-permeability material. Coils. Heating of magnet coils. Magnetic force. Characteristics of tractive magnets. Selection of best type for [illegible] specific duty. Design of tractive magnets, design procedure. Illustrative designs. Time-delayed magnets. High-speed magnets. Alternating-current magnets. Relays. Appendix. Index.

Note. A textbook for advanced students in electrical engineering, and [illegible] reference book for engineers concerned with the development or design of magnetic devices. The last six chapters cover the practical application of the theory to the solution of design problems. The general treatment of the solutions of these problems is followed by examples of exact and specific numerical solutions. Special emphasis is given to the properties of magnetic materials.

SEALEY WILLIAM C
Transformers theory and construction. Scranton International Textbook Company 1948 246 p. illus. 22 cm. $4 00. 6322

Contents (abridged) Part I. Transformer uses. General characteristics of transformers. Construction of elementary transformer. Core-type power transformers. Shell-type power transformers. Surge voltage protection. Transformer cooling methods. Entrance bushings. Part II. Three-phase connections. Tap-changing equipment. Parallel operation. Phase transformation. Three-winding transformers. Autotransformers. Unit substations. Part III. Rotary converter transformers. Rectifier transformers. Instrument transformers. Network transformers. Reactors. Transformer noise. Temperature equipment. Installation and maintenance of transformers. Insulating oil. Appendices. Index.

Note: A concise introductory exposition that is suitable for use in vocational courses and for self-instruction. It discusses the fundamental principles of transformers and outlines practical methods for calculating transformer performance. However, theoretical considerations are reduced to [illegible] minimum, and the emphasis is on the practical aspects of design, construction, and use. The author is Engineer-in-Charge of transformer design at the Allis-Chalmers Manufacturing Company.

SHOULTS, DAVID ROY AND C J RIFE
Electric motors in industry Edited by T C Johnson. New York John Wiley & Sons, Inc., 1942 389 p. illus. 23 cm. (General Electric series) $7.50. 6323

Contents Industrial power supply Industrial power supply continued. Physical concepts of motor performance. Basic motor characteristics of induction motors. Induction motor applications. Synchronous apparatus. D-c motors. Industrial control apparatus. The application of electric motors. Special applications requiring adjustable speed drives. Coordinated drive systems. Electronic devices and their principles. The industrial application of electron tubes. Index.

Note. This volume deals thoroughly with the characteristics of motors and their control. The approach is fundamental. It offers detailed discussion of those principles which form the best basis for correct motor application in industry The treatment is not exhaustive in scope. Representative uses have been selected. The motors dealt with are typical of those found in industry Brief description of their mechanical construction are given so that the reader may be able to understand their operation.

SISKIND, CHARLES SEYMOUR

Alternating-current armature windings, theory, practice, and design New York Mc Graw Hill Book Company, Inc , 1951 236 p illus 24 cm $5 00 6324

Contents General comparisons between d-c and a-c armature windings. Elementary principles of a-c machines. The single-phase concentric (spiral) winding. Windings for repulsion-type motors. Windings for split-phase motors. Two-speed windings for split-phase motors. Winding types and coils for polyphase machines. Concentric chain windings. Wave windings. Lap windings. Winding connections for different voltages. Fractional-pitch lap windings. Fractional-slot lap windings. Windings for multispeed motors. Equalizer connections in polyphase windings. Winding changes and calculations in polyphase induction motors. Winding troubles causes, symptoms, locations, remedies. Appendixes. Index.

Note. A simplified, practical introduction. The basic principles of alternating-current machines are discussed briefly; then the main types of windings are described. There is somewhat more attention to the principles and characteristics of the various windings than there is to winding and rewinding techniques. Nevertheless, the book is designed for students and electricians who are preparing to do practical winding. It is a companion volume to the author's *Direct-current armature winding* (below)

SISKIND, CHARLES SEYMOUR

Direct-current armature windings theory and practice. New York McGraw Hill Book Company, Inc. 1949 149 p illus. 26 cm. $4 00 6325

Contents (abridged) The generator-principle of construction. Types of winding. Back pitch for lap windings. Progressive and retrogressive windings. Parallel paths in lap windings. Armatures with more bars than slots. Wave windings. Simplex-wave-winding problems. Multielement coils for wave windings. Dummy elements in wave windings. Parallel paths in simplex-wave windings. Multiplex-wave windings. Circulating currents in lap windings. Frog-leg windings. Voltage, speed and armature-winding calculations. Winding troubles—causes, symptoms, locations, remedies. Formulas. Wire tables. Index.

Note In this excellent introductory presentation the author has simplified the problem of understanding direct-current windings by pointing out that all of them can be analyzed into two fundamental types the lap and the wave. Both the exposition and the drawings are based on this analysis. Although written from practical standpoint, the book is not complete manual of d-c armature winding practices. Apparently the author' chief purpose was to make certain that his readers understand the principles of d-c windings rather than to give them details of shop operations. No discussion of rewinding techniques is included.

STAFFORD, HARRY E

Troubles of electrical equipment their symptoms causes and remedy Third edition New York McGraw Hill Book Company Inc. 1947 455 p illus 23 cm $7 50 6326

Contents. Induction-motor troubles and remedies. Synchronous-motor troubles and remedies. Maintenance of direct-current generators and motors with their troubles and remedies. The operation, maintenance, and troubles of transformers. The operation, application, maintenance, and troubles of autotransformers. Operation and proper methods of connecting instruments transformers. Troubles of air- and oil-circuit breakers. Operation, maintenance, and troubles of relays. Industrial motor control. Points to remember in selecting motors for an industrial application. Operation, maintenance, and troubles of lightning arresters. Insulation-resistance tests. Factors determining the economic use of power. Power factor what it is; what it does to an industrial-plant power-load how to control it. Handling maintenance and inspection on a schedule basis. The use of a load survey and how to make one. The troubles of voltage regulators, their symptoms, causes, and remedies. Industrial-plant lubrication. Determination and location of cable faults. Storage battery maintenance. Index.

Note: The practical nature of this trouble-shooter's manual has already established it as a standard guide for plant electricians and other persons charged with locating and eliminating troubles in electrical equipment. Each chapter in addition to discussions of uses, operation, and maintenance methods, includes a handy tabulation of symptoms, troubles, causes and remedies. In the present edition, the chapter on relays and the one on storage battery maintenance are new; the chapters dealing with transformers and voltage and current regulators have been considerably enlarged.

TARBOUX, JOSEPH G

Alternating-current machinery Scranton International Textbook Company, 1947 652 p illus. 23 cm. (International textbooks in electrical engineering) $8.50 6327

Contents (abridged) Part I, Fundamental-circuit theory: Generalized circuit equations. Fundamentals of machinery Part II, Transformers: Determination of transformer equivalent circuits. Ideal power transformer. Voltage regulation, efficiency and losses. Ideal coupled circuit. Transformer connections. Auto-transformers. Special types of transformers. Harmonics and leakage inductance. Part III, Induction machines. Three-phase induction motor construction. Stator magnetomotive forces. Theoretical circle diagram of unsaturated three-phase induction motor Induction generator. Single-phase induction motors. Split-phase induction motors. Series A-c commutator motors. Repulsion motors. Part IV Synchronous machines. Generator construction details. Generator induced voltages. Voltage regulation of alternators. Alternator impedances. Alternator transients. Alternator losses. Synchronous motors. Parallel operation of alternators. Mechanical transients of synchronous machines. Part V Converters and rectifiers. Rotary converters. Electronic converters. Experiments. Index.

Note. Professor Tarboux's earlier textbooks are well known. This work presents—for a textbook—a thorough treatment of the basic circuits of alternating-current machinery including transformers, generators, motors, converters and rectifiers. It is intended for use in senior classes in engineering schools, hence adequate preparation in mathematics is assumed. The author is Professor of Electrical Engineering at University of Michigan.

TIMBIE, WILLIAM HENRY

Industrial electricity direct-current practice. Second edition completely rewritten. New York John Wiley & Sons Inc., 1939 635 p illus. 22 cm. $4 96 6328

Contents. Fundamental ideas, Ohm's law Distributing systems. Electrical properties of wire Methods of measuring resistance. Magnets and magnetism. Electromagnets. The magnetic circuit. Inductance. Generators. Motors. Efficiency parallel operation. Armature windings. Batteries and electrochemical action. Kirchhoff's laws. Insulators, dielectrics, condensers. Electrical measuring instruments. Appendix. Index.

—— Volume II, Alternating-current practice. By William H. Timbie and Frank G. Willson New York John Wiley & Sons, Inc., 1949 781 p. 22 cm $6 95 6329

Contents. Alternating currents, fundamental ideas. The use of vectors in computing a-c currents and pressures—series, parallel and polyphase circuits. Powers, power factor single-phase circuits. Circuits containing reactance and impedance. Power in polyphase circuits. The alternator-construction and armature windings. The alternator performance and operation. The transformer. The polyphase induction motor. Single-phase induction motors—commutator type motors. The synchronous motor. Short transmission and distributing lines. Long transmission lines—capacity reactance. Converters and rectifiers. Appendixes. Index.

Note A standard, elementary text. It is used in vocational schools and other courses at the secondary school level and in self-instruction by young men studying at home. It is outstanding for the lucidity of its style and for its balance between fundamental principles and application.

VEINOTT CYRIL GEORGE

Fractional horsepower electric motors. What kinds are available—What makes them run and what they will do—How to repair, rewind and reconnect them. Second edition. New York. McGraw Hill Book Company Inc., 1948. 554 p. illus. 24 cm. $8.00 6330

Contents The story behind the nameplate. What makes an induction motor run? Single-phase induction motor windings and connections. Split-phase induction motors. Capacitor-start motors. Two-value capacitor motors. Permanent-split capacitor motors (single-value capacitor motors). Capacitor motors for unit heaters, fans and blowers. Two-speed tapped-winding capacitor motors. Repulsion-start induction motors. Repulsion and repulsion induction motors. Universal motors. Shaded-pole induction motors and fans. Polyphase induction motors. Synchronous motors. Predicting and synchronous-drive systems. Direct-current motors. Connections common to more than one type. Testing fractional horsepower motors. Selecting the motor for the job. Appendix. Glossary. List of visual aids. Index.

Note A successful manual which has proved useful not only to motor-repairmen but also to manufacturers and engineers concerned with the design and maintenance of machinery powered by small electric motors. This edition has been thoroughly revised and has been expanded by more than 100 pages. A considerable part of the material that has been carried over from the first edition has been rewritten. Synchronous motors and systems which found wide application during World War II are now covered. There are many new illustrations and a glossary.

WRIGHT FORREST B

Electricity in the home and on the farm. Third edition. New York John Wiley & Sons, Inc., 1950. 380 p. illus 21 cm. $4.24 6331

Contents (abridged) Part I, Principles and applications of electricity: Importance of electricity to farm business and to the farm home. Electric current. Electrical terms and measurements. Electromagnetic induction and some of its applications. Power-generating, transmission, and distribution systems for alternating current. Wiring systems for the farm and for the home. Planning wiring systems. Electric motors. Part II, Jobs and study activities. Index.

Note A practical textbook in which most of the information relates to the use of electricity on the farm. Some parts, such as the discussion on how to splice wire, are very elementary. On the other hand, certain chapters, such as the one on electric motors, contain comparatively thorough discussions useful to farmers in selecting and operating electrical equipment. A fair amount of new material has been added in this edition.

ELECTRIC WIRING

ABBOTT ARTHUR L

National electrical code handbook. Based on the 1953 edition of the National electrical code. By Arthur L. Abbott and revised by Charles L. Smith. Eighth edition. New York McGraw Hill Book Company Inc., 1954 642 p. illus. 21 cm. 6332

Contents General. Wiring design and protection. Wiring methods and materials. Equipment for general use. Special occupancies. Special equipment. Special conditions. Communication systems. Construction specifications. Tables, diagrams, and examples. Appendix. Rules of procedure—National Electrical Code Committee. Tentative Interim Amendments. Interpretation procedure. National Electrical Code Committee. Index.

Note In its eighth edition, the purpose of this book remains the same: to explain and illustrate the meanings of the various articles and rules of the current edition of the United States of America *National electrical code.* Essentially it is complementary to the *Code,* however, the *Code* is reprinted entirely, the arrangement in this edition being a sectional one with the *Code*-section printed first and the explanation or comment following. Often, there is also an explanatory illustration or diagram. As each new edition of the *Code* makes previous editions of it obsolete, this eighth edition of the *Handbook* also supersedes all of the preceding ones. The reviser of this edition is Electrical Field Engineer for the National Fire Protection Association. The ninth edition was published in 1957 650 p., $8.00.

ASHLEY RAY

Electrical estimating. Second edition. New York McGraw Hill Book Company Inc., 1956 363 p. illus. 26 cm. $8.00. 6333

Contents (abridged) The electrical estimator and estimating requirements. Preparing estimates. Operating costs. Sample estimates. Preliminary estimates. Labor units. 1955 unit costs. Definitions. Questions and answers. Index.

Note A comprehensive manual of practical methods of estimating costs of electrical construction. The subject is covered in detail, and the book contains many tabulations of useful data and many reproductions of sample forms. Although estimating of electrical wiring in residential construction is adequately treated, most of the book is devoted to estimating of larger jobs, such as the wiring of office buildings and factories. The first edition was published in 1949. This second edition appears to be identical with it through page 307. The section on labor units begins on page 308 and is new in this edition. Also newly added are a glossary and a section of questions and answers.

BROWN ROBERT H.

Farm electrification. New York McGraw Hill Book Company Inc., 1956 367 p. illus. 24 cm. (McGraw Hill publications in agricultural engineering Quincy C. Ayres consulting editor) $7.00 6334

Contents The power-distribution story. The electric bill. Electric wiring practices. Electricity for the farm residence. The increased distribution system. Wiring for farm buildings. Electricity for light. Electricity for heat. Farm electric motors. Electricity for the water supply. Electricity for cooling. Electrical controls for farm use. Special equipment for the electrified farm. Appendix. Index.

Note A practical introductory text on electric wiring and basic electric equipment for farms. Wiring materials and simple wiring practices are clearly and specifically described, and the author has taken particular pains to emphasize safety features, such as adequate grounding and the use of correctly sized fuses. The descriptions of electrical machines are brief, but they do cover characteristics and uses and often include an illustration of a typical machine. The book is designed for use as a text in agricultural colleges. It will be useful also as a guide for farmers who are planning electrification of their farms.

GRAHAM KENNARD C.

Interior electric wiring and estimating. Part two Industrial. Chicago American Technical Society 1955 324 p illus. 22 cm. $4.95 6335

Contents Industrial methods. Planning nonresidential lighting. Installing nonresidential lighting. Wiring for motors. Generators, power feeders, and services. Transformers, capacitors, industrial power distribution. Special circuits and applications. Estimating electrical wiring. Appendix. Index.

Note An introduction for practical students and working electricians to some of the special techniques and devices employed in planning and installing electric wiring in factory buildings, office buildings, etc. It is a companion to A. Uhl, and others, *Interior electric wiring: residential,* fourth edition, 1951. The author has wisely not attempted to cover the whole field, particularly in regard to specialized equipment, but has instead limited the book to standard techniques and to the more common problems such as wiring for motors. Estimating is covered in considerable detail. Familiarity on the part of the reader with basic terminology and with techniques of residential wiring has been assumed in the treatment.

NOWAK, JOHN F

Practical residential wiring New York D Van Nostrand Company, Inc., 1948 495 p illus. 24 cm. $6 95 6336

Contents Circuiting. Tools and splicing. Plan reading. Methods of wiring—open wiring on insulators, concealed knob and tube, nonmetallic cable. Methods of wiring—armored cable—rigid conduit—surface extensions. Household electrical appliances. How to wire bungalow How to wire a one-family house—armored cable. How to wire workshop and garage—rigid conduit. Finished-house wiring. Lighting fixtures. Signaling systems. Testing and trouble-shooting Glossary National Electrical Code tables. Index.

Note The special feature of this manual is the very detailed discussions of wiring and maintenance operations. Many jobs are described step by step. The book is intended for practical students and workers, particularly vocational school students, apprentice electricians, home mechanics, and building superintendents.

RICHTER, HERBERT P

Practical electrical wiring, residential farm and industrial Based on the 1951 National Electrical Code. Fourth edition New York McGraw Hill Book Company, Inc., 1952 602 p. illus. 22 cm 6337

Contents (abridged) Part I, Theory and basic principles Underwriters and codes. Electricity—basic principles and measurements. Basic devices and circuits. Overcurrent devices. Types and sizes of wires. Wire connections and joints. Outlet and switch boxes. Different wiring methods. Branch circuits and service entrance Adequate wiring. Good lighting. Residential and farm motors. Part II, Actual wiring—residential and farm Planning an installation. Installation of service entrance and ground. Installation of specific outlets. Old work. Farm wiring. Isolated and stand-by power plants. Wiring apartment houses. Code requirements with respect to wire. Part III, Actual wiring—nonresidential projects Planning nonresidential installations. Nonresidential lighting. Wiring for motors. Wiring schools and churches. Wiring offices. Wiring stores. Wiring miscellaneous occupancies. Bibliography Appendix. Index.

Note. A standard practical manual, useful primarily to the working electrician but intelligible also to the home mechanic who wants to learn how particular operation in wiring should be done. I comparison to the preceding edition published in 1947 it has been rather extensively revised. The changes made necessary by the publication of a new edition of the National Electrical Code have of course been made. However in addition, the author has revised both the text and illustrations of sections unaffected by code revisions. The fifth edition was published in 1957 $6.50.

SEGALL, BEN Z

Electrical code diagrams Based on the 1951 edition of the National Electrical Code With complete supplementary revisions for the 1953 Code. New York McGraw Hill Book Company, 1954 2 v illus 29 cm Vol I $13 50 vol. II, $15 00 set $25 00 6338

Contents. Volume I: Wiring design and protection. Wiring methods and materials. Index. Volume II Equipment for general use. Special occupancies. Special equipment. Special conditions. Communication systems. Index.

Note. In this work all of the rules of the National Electrical Code, 1951 which lend themselves to illustration are represented by diagrams. The arrangement within the chapters is numerical, in accordance with the numbered rules in the code there are always legend and often some discussion for each diagram, but the book must be used ith copy of the Code. Changes made in the 1953 revision of the Code are illustrated in supplementary pages bound in at the ends of both volumes. The book is useful to all who are concerned in practical way with the installation of electrical wiring, including electricians, electrical contractors, and inspectors.

UHL, ALBERT, AND OTHERS

Interior electric wiring and estimating residential, including farm buildings By Albert Uhl, Carl H Dunlap and Frank W Flynn Fourth edition Chicago American Technical Society, 1951 312 p illus. 22 cm. $4 25 6339

Contents How to ead drawings for electrical construction. Electrical fundamentals applying to wiring. How to make electrical connections. Installing service switch and metering equipment. Wiring outlets and wall switches. Installing knob-and-tube iring. How to do cable wiring. Wiring residences. Conduit wiring materials. Conduit wiring, tools, and methods. Electric ranges and water heaters. Residential furnace controls. Estimating electrical wiring. Electrical power for the farm. Index.

Note A well-established trade school textbook. It is written clearly and is generously illustrated. There are several features such as questions and detailed answers that suit it to home study However the book is not a substitut for the more comprehensive works on electric wiring. This edition is a thorough revision with many new illustrations, new review questions, new text in many parts, etc. The chapters on apartment building and factory wiring that appeared in the earlier edition has been dropped and three new chapters have been added. The index is about three times as long.

ELECTRIC INSULATION

PHILOFSKY, H M, AND R. W CROWE, editors

Digest of literature on dielectrics, Volume 18, 1954 Prepared by the Committee on Digest of Literature of the Conference on Electrical Insulation Edited by H. M Philofsky and R W Crowe. Washington, D C. National Academy of Sciences—National Research Council 1955 176 p 27 cm. (National Research Council Publication 383) $5.00. 6340

Contents. Introduction, by R. W Crowe. Part I, Instrumentation and measurements Instrumentation and measurements, by R. A Soderman. Tables of dipole moments, dielectric constants and dielectric relaxation values, by R. C. Miller and D E. Williams. Part II, General and theoretical Molecular and ionic interactions in dielectrics, by J Hart. Conduction phenomena in dielectrics, by S. Roberts. The breakdown of dielectrics, by A. H. Sharbaugh and R. W Crowe. Ferroelectric and piezoelectric materials, by W R. Cook, Jr and H. Jaffe. Ferromagnetic materials, by D. J. Epstein. Part III, Insulation Rubber and plastic insulation, by L. L. Seber and [illegible] Palischak. Insulating fibers, by H. A. Birdsall. Insulating liquids, by J E. Gibbons. Ceramic insulation, by T C. Browne and J H. Strimple.

Note. This publication, hich is one of series, presents digest of the literature of the field of dielectrics for the year 1954. Under the chapter headings noted above, it gives brief reviews f books and journal literature and summarizes the scientific and technical accomplishments of the year At the ends of the chapters are numbered bibliographies of the publications mentioned in the reviews and summaries.

VON HIPPEL, ARTHUR R., editor

Dielectric materials and applications. Papers by twenty two contributors. New York Published jointly by the Technology Press of M.I T and John Wiley & Sons Inc., 1954 438 p. illus. 29 cm. $17 50 6341

Contents (abridged) Survey by A. von Hippel. Theory by A. von Hippel. Dielectric measuring techniques. Permittivity by D. J. Epstein, F Field and W B. Westphal Permeability by D. J. Epstein. Magnetic resonance. Microwave spectroscopy by M. W Strandberg. Dielectric materials and their applications Dielectric by F Bitter Dielectric materials and their applications. Dielectrics as equipment materials, by J G. Trump and others. Dielectric materials as devices, by L. J Berberich and others. Dielectric requirements of the Armed Services, by F H. Behrens and others. Tables of dielectric materials. Index.

Not The broad, fundamental approach to dielectric materials which is characteristic of the work of the Laboratory for Insulation Research of the Massachusetts Institute of Technology reflected in this volume, by-product of summer course [illegible]

sued by the Laboratory in September, 1952. The contributors to the volume include college professors of physics, directors of research for manufacturers of electrical equipment, specialists on the staffs of research units of the national defense forces, as well as staff members of the Laboratory. The topics discussed range from relationships between molecular structure and dielectric properties to measuring techniques for high voltage generators. The level of treatment is graduate. The final section of the book is devoted to reports of Volume IV of the Laboratory's *Tables of dielectric materials*, previously issued in January 1953, as a technical report for limited circulation.

ELECTRONICS

ARCHIBALD LAWRENCE BAKER

Vacuum-tube circuits and transistors. With transistor contributions by Richard Brooks Adler. New York John Wiley & Sons, Inc., 1956. 646 p. illus. 24 cm. $10.25 6342

Contents: Radio communications. Diodes and rectifiers. Triodes, pentodes, and linear amplifiers. Transistors—principles—linear amplifiers. Transient response of video amplifiers. Amplitude modulation and tuned amplifiers. Power amplifiers. Oscillators. Inverse feedback. Amplitude modulation. Frequency modulation. Television. Transmission lines. Noise. Index.

Note: A revised and expanded version of the author's *Vacuum-tube circuits*, New York, 1948. It is primarily a textbook for electrical engineering students. The emphasis is on basic matters. On the other hand, information is included on numerous small [illegible], such as single side band transmission. In contrast to the preceding work in which the transistor was not mentioned, considerable space is devoted to the transistor and circuits based on it. Chapters on transmission lines and noise have been added, and the number of problems included for the reader to solve has been increased. Although designed for those who are taking their first [illegible] course in vacuum-tube and transistor circuits the book has enough substance to make it of interest also to graduate engineers already at work in the field.

BENDZ, WALDEMAR I.

Electronics for industry with the assistance of C. A. Scarlott. New York John Wiley & Sons, Inc., 1947 501 p. illus. 22 cm. $7.00. 6343

Contents: Meet the electron. Electron escape from solids—emission. Electricity from light. Electricity into light. Two-element tubes. Three-element gas tubes. Multigrid phototubes. Thyratrons. From alternating to direct current. Mercury-pool tubes. Amplification. Principles of oscillation. Modulation and detection of carrier waves. Heating by high frequency. Basic circuits of electronic control. Industrial applications of electronic control. Electronic regulators. Appendix. Index.

Note: An introductory work written to provide engineers in fields other than electronics with a basic knowledge of electronics so that the design and applications of industrial electronic equipment can be understood. The author has assumed that the reader will be acquainted with the principles of electricity and the characteristics of electric circuits. A number of typical industrial devices are described in detail, but the book [illegible] more than a descriptive treatment of such equipment.

BEVITT WILLIAM DEALTRY

Transistors handbook. Englewood Cliffs, N. J. Prentice-Hall, Inc., 1956 410 p. illus. 22 cm. $9.00. 6344

Contents: Introduction. Fundamental definitions and concepts. Point-contact transistors. Junction transistors. Power transistors. Measurements of transistor characteristics. Methods of analysis of transistors and transistor circuits. Tetrode and pentode transistors. Photodiodes and phototransistors. Some practical considerations in transistor circuits. Noise and temperature effects in transistors. Transistor audio-frequency amplifiers and power amplifiers. Transistor radio-frequency amplifiers. Transistor audio-frequency oscillators. Transistor radio-frequency oscillators. Amplitude modulation and detection with transistors. Frequency modulation and demodulation with transistors. Transistor radio and television receivers. Transistor relaxation oscillators. Computer applications of transistors. Miscellaneous applications of transistors. Appendix: IRE standards on electron devices—definitions of semiconductor terms, 1954. Manufacturers of transistors discussed in the text. IRE abbreviations as used in Table II(b). Essential characteristics of transistors. Author index. Subject index.

Note: A reference book of information on transistor characteristics and on circuits in which the transistor is an element. It has been written from the standpoint of applications, both developed and potential. The early chapters are devoted to the classes and varieties of transistors and the characteristics of each. The other chapters (and the greater part of the volume) are given over to applications and to data useful in designing applications. A wide variety of circuits are diagrammed and discussed. Literature references are given. The book should prove useful to practically all engineers, scientists, and technicians, including amateur experimenters, who are interested in the design and development of electronic devices. The author is Transistor Applications Engineer for CBS-Hytron.

BOONE, E. MILTON

Circuit theory of electron devices. New York John Wiley & Sons, Inc., 1953 483 p. illus. 24 cm. $9.25 6345

Contents: Diodes, triodes, and equivalent circuits. Tetrodes, pentodes, and equivalent circuits. Audio-frequency voltage amplifiers. The audio-amplifier power stage. Gas-filled tubes as circuit elements. Single-phase rectifiers and power supplies. Polyphase rectifiers. Tuned radio-frequency and band-pass amplifiers. Radio-frequency power amplifiers. Vacuum-tube oscillators. Modulation and demodulation. Circuit theory of transistors. Index.

Note: An engineering college textbook in which the vacuum tube and transistor are treated in the concepts of four-terminal networks. The author states: "The uses of electron tubes are so numerous and so varied in complicated communication and industrial-control systems that it becomes necessary to consider the action tube in rather general terms as a circuit element of certain particular properties. These circuit properties of electron tubes and other electron devices may be analyzed in their dependence upon the design of the component elements of the device, or they may be determined for practical applications by a consideration of the device in its entirety as a 'black box' from which external certain terminals at which energy forms, voltage, etc. may be impressed and the resulting response measured. The latter point of view has the distinct advantage of permitting the intelligent use of the electron device as a circuit component without a prior knowledge of its interior complexities." The book is a development of the author's courses at Ohio State University.

BROTHERTON MANFRED

Capacitors their use in electronic circuits. New York D Van Nostrand Company Inc. 1946 107 p. illus. 23 cm. $3.50. 6346

Contents: Introduction. Summary of characteristics of practical capacitors. How a capacitor behaves under direct voltage. How a capacitor behaves under alternating voltage. Capacitors wear out. Which capacitor shall we use? Electrolytic capacitors. Impregnated paper capacitors. Mica, ceramic, and air capacitors. Synthetic dielectrics of the future. Twenty keys to the right capacitor. Examples of typical capacitor reactions. Index.

Note: This small book is addressed to engineers and other persons who design circuits, such as radio and telephone circuits, in which capacitors are used. It is intended to answer practical questions on the characteristics, behavior, and limitations of different types of capacitors under various operating conditions. The final chapter "Twenty keys to the right capacitor," should be very useful to those who are not capacitor specialists but who nevertheless must know enough about them to select the particular type that will give the best performance.

BRUNETTI, CLEDO editor

New advances in printed circuits Proceedings of the First Technical Symposium on Printed Circuits held October 15 1947 in Washington, D C., under the sponsorship of the Aeronautical Board and technical direction of the National Bureau of Standards. Washington, D C. Government Printing Office, 1948. 73 p. illus. 26 cm. (United States.

National Bureau of Standards Miscellaneous publication 192) $0 45 6347

Contents Foreword. Status of printed electronic circuits. Centralab printed circuit techniques. Conductive silver preparations. Printed resistors. Metal films and their application to the fabrication of resistors and printed circuits. Trends in military communication and the applicability of printed circuits. Vitreous enamel dielectric products. Printed electronic components on glass. Electrical circuits on plastics and other nonconductors. Imprinted circuit inlays. Spraying techniques for producing electronic circuits. Physical aspects of printed circuit conductors. Mechanization of electrical wiring. Die-stamped wiring. Printed circuit production. Prefabricated components for printed circuit application. Typical commercial applications. General discussion Summary Questions and answers. Summary of questionnaires.

Note. The technical symposium on printed circuits, at which were presented the papers included in this publication was held because of the wide interest shown by Government, scientific, and industrial organizations in the subject during the months following the first release of information on printed circuits by the National Bureau of Standards in February 1946. At the symposium twenty speakers and an audience of over seven hundred persons reviewed the many methods of printing circuits.

BRUNETTI, CLEDO, AND ROGER W CURTIS

Printed circuit techniques Washington, D C Government Printing Office, 1947 43 p illus. 26 cm (United States National Bureau of Standards Circular 468) $0 40 6348

Contents Introduction. Painting. Spraying. Chemical deposition. Vacuum processes. Die-stamping. Dusting. Performance. Applications. Conclusion. References.

Note. The first general treatise on the subject of printed circuits, this pamphlet outlines the practical details of the art, describing in turn the six main methods of printing circuits and presenting the advantages of each. It was prepared to meet the need which began to be felt in 1946 for technical information about printed circuits, a new development for mass production of electronic devices. Circuits are defined as being "printed when they are produced on an insulating surface by any process. The bibliography lists sixty references on the subject.

CAGE, JOHN M

Theory and application of industrial electronics. With the assistance of C J Bashe. New York McGraw Hill Book Company Inc., 1951 290 p illus 24 cm. (McGraw Hill electrical and electronic engineering series Frederick Emmons Terman consulting editor) $6 50 6349

Contents Polyphase rectifiers. Grid-control circuits for gas tubes. Amplifiers for industrial electronics. Regulators and servomechanisms. Dynamics of closed-loop systems. Electronic control of motors and generators. Basic timing circuits. Ignitrons and thyratrons as line switches. Resistance-welder controls. Induction heating. Dielectric heating. A survey of electronics measurements. Oscillators and pulse techniques. Miscellaneous principles and applications. Appendix. Index.

Note In this text for advanced and graduate electrical engineering courses, the purpose is to present the basic principles and circuits of electronic devices used in industry The space is about evenly divided between fundamental theories and their application to problems in measurement, control, and power conversion. Although numerous circuits are described and illustrated, no attempt is made to deal with the instruments of specific manufacturers. Review problems and brief lists of references are included in each chapter. The author is consultant at the Electrical Engineering Department in Purdue University

CARROLL, JOHN M editor

Mechanical design for electronics production. New York McGraw Hill Book Company, Inc. 1956 348 p illus 23 cm $6 50 6350

Contents. The importance of mechanical design. Space planning in equipment design. Chassis design and layout. Fabricating the chassis. Manufacturing small parts. Shielding components and equipment. Potting, embedding, and encapsulating. Moving parts. Electric motors and rotating components. Wiring and soldering. Assembly methods. Cabinet construction. Environmental factors in equipment design. Bibliography Index.

Note. The mechanical design of electronic equipment is exacting not only because of its relationship to profits but also because good mechanical design is an important factor in the performance of the equipment. The subject is covered comprehensively and in detail in this book. The importance and general requirements of the field are clearly stated. A great ariety of techniques are explicitly described. Numerous tables of useful engineering data are included. The book is based on articles that appeared in the October 1954 issue of *Electronics* but contains much additional material.

CHANCE, BRITTON, AND OTHERS, editors

Electronic time measurements. Edited by Britton Chance, Robert I. Hulsizer Edward F MacNichol, Jr , and Frederick C. Williams. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company, Inc., 1949 538 p illus. 23 cm. (Massachusetts Institute of Technology Radiation Laboratory series. Louis N Ridenour, editor-in-chief Volume 20) $7.50 6351

Contents Introduction. Radio distance and speed measurements. Techniques f pulse time measurements. Generation of fixed indices. Generation of movable indices—single-scale circuits. Generation of movable indices—circuits. Manual measurements. Techniques of automatic time measurement. Systems for automatic time and position measurement. Special data-transmission systems. Relay radar systems. Delay and cancellation of recurrent wa e trains. Glossary Index.

Note. In this volume the problems and techniques of measuring precisely very small intervals of time are considered. Methods invented before the development of radar are mentioned, but mainly the book deals with the special circuits and devices that were developed in the Radiation Laboratory and elsewhere during the intensive development of radar before nd during World War II. However the emphasis is not on mil ary applications but on methods that are more generally useful.

CHUTE, GEORGE M

Electronics in industry Second edition. New York McGraw Hill Book Company Inc., 1956 431 p illus. 24 cm. $7.50 6352

Contents. Choosing electronics for your needs. How electricity passes through an electron tube. Simple rectifiers—alternating current into direct current. Control of electron flow within tube. Time-delay action. Tubes in a-c circuits. The a-c time-delay relay. Multigrid vacuum tubes. Filtering—d-c power supply for tube circuits. Gas tubes—control of larger currents. Simple welding control—ignitron contactor. Tyratron tubes. Gradual control of thyratrons by phase shifting. Resistance-welding controls. Light and heat relays. Heating and light-dimming controls. Simple speed and voltage regulators. Large-current polyphase rectifiers. High frequencies shorter wave-lengths. Amplifiers, oscillators, inverters. The electronic heater Temperature recorders. High-speed light relays. Register controls. Thy-mo-trol—automatic tube control of d-c motors. Closed-loop systems—servomechanisms. Electronic service instruments. Nonelectronic devices. Visual bibliography Answers to problems. Index.

Note A standard, practical manual covering the elementary principles of electronics, the elements of electronic circuits, and the circuits and operating principles of the chief varieties of industrial electronic devices. It is addressed to electricians and other technicians who install and maintain such devices, but is suitable also as a source of practical information for anyone—including graduate engineers—in need of general survey of the field or elementary information about particular device. The first edition was published in 1948. A good deal of material has been carried over from it to this second edition, but there are also important changes The chapter on closed loop systems is new and descriptions of the circuitry of newer control devices have been substituted for those of older ones. There has been some reorganization of the chapters. The volume has been printed from new type and has been given more attractive format.

Electrical Engineering

COBLENZ, ABRAHAM AND HARRY L. OWENS

Transistors, theory and applications. New York. McGraw-Hill Book Company Inc., 1955. 313 p. illus. 24 cm. $6.00. 6353

Contents: A short history of transistors. Holes and the transistor. A page of quantum mechanics. The electron. Nature of semiconductors. Point contact transistors. Junction transistors. Electronics [illegible] 4 terminal. Small-signal parameters. Grounded emitter and grounded [illegible] connections. Theory of transistor switching circuits. Cascading of transistors. Manufacturing processes. [illegible] [illegible] Appendixes: Four-pole parameter transformation [illegible]. Generalized equations for transistors in cascade. [illegible] MIL-T-12679A (Sig C). Index.

Note: A book addressed primarily to technicians and engineers [illegible] concerned with the present and potential uses of transistors. [illegible] discussion of basic theory, transistor characteristics [illegible] equations, as well as related topics, such as [illegible] description of the processes of transistor manufacture. The chapters are brief, [illegible] clear and direct style, and are concluded with selected [illegible]. [illegible] chapter on quantum [illegible] to literature. Although there is [illegible] chapter on quantum mechanics, the over-all mathematical level is not beyond the average [illegible] reader. Eleven of the chapters were originally published [illegible] the journal, *Electronics*, and were expanded and revised for publication in the book.

COOKE, NELSON MAGOR, AND JOHN MARKUS

Electronics dictionary: an illustrated glossary of over 6,000 terms used in radio, television, industrial electronics, communications, facsimile, sound recording, etc. New York McGraw-Hill Book Company Inc., 1945. 433 p. illus. 23 cm. $6.50. 6354

Note: In this dictionary well-selected terms are defined in language that should not prove unintelligible to the reader [illegible] At the same time, the accuracy of the definitions [illegible] will appeal to engineering students and engineers. There is [illegible] number of illustrations. The authors have considered the problem of standardization carefully and have presented the terms they believe are best and should be made standard. Unfortunately there is no cross-references to related terms.

CORNELL AERONAUTICAL LABORATORY INC., BUFFALO N. Y.

Heat transfer in miniaturized electronic equipment. Bureau of Ships Navy Department. Washington, D. C. Government Printing Office, 1955. 85 p. illus. 27 cm. (United States. Department of the Navy. Bureau of Ships. Navships 900 189) $1.25 6355

Contents: Introduction. Summary. Present electronic heat transfer techniques. Natural methods. High temperature electronic parts. Forced air cooling. Liquid coolant systems. Vaporization cooling. Methods of cooling vacuum tubes. Ultimate sinks for the dissipation of heat. Thermal design methods in use. Techniques investigated not currently in use. List of contributors. Bibliography.

Note: One of the primary causes of poor reliability in electronic equipment has been inadequate heat removal; improvements realized through decrease in operating temperature would significantly increase equipment life. The report encompasses [illegible] survey of methods of heat transfer in electronic equipment. The work on which it was based was undertaken as the initial phase of [illegible] research program directed toward the preparation of [illegible] heat transfer design manual to assist electronic engineers in the design of miniaturized equipment with satisfactory thermal performance. The scope of the survey was broadened to include not only [illegible] bibliographical study, but also [illegible] thorough survey and inspection of techniques and methods in use at prominent facilities throughout the nation. The survey was not confined to miniaturized equipment, because of special heat removal methods utilized, conventional equipment was also surveyed. The bibliography of about 400 items relates to reports and articles dated between 1 [illegible] and 1 [illegible]

DALEY J. L. AND F. S. QUINN, JR. editors

Principles of electronics and electronic systems. Edited by J. L. Daley, assistant editor F. S. Quinn jr. Authors: G. E. Leydorf, H. F. Malling, F. S. Quinn, jr., J. S. Stoutenburgh, R. C. Mathis, E. L. Golding, H. M. Neustadt, jr., J. C. Thompson, and P. L. Quinn. Annapolis. United States Naval Institute 1956. 492 p. illus. 27 cm. $9.25 6356

Contents: Circuit elements and elementary electric circuits. Emission of electrons, diode vacuum tubes. Triode vacuum tubes. Multigrid vacuum tubes. Vacuum tube amplifiers. Gas tubes. Wave shaping circuits. Cathode ray tubes. Multivibrators. Sine-wave oscillators. Modulation. Radio transmitters. Radio-frequency transmission lines. Antennas. Wave propagation. Radio receivers. Servomechanisms. Radar. Navigational aids. Electronic countermeasures. Propagation of sound in the sea. Sonar systems. Guided missiles. Transistors. Digital computers. Basic principles of television. Appendixes. Problems. Index.

Note: Edited and written by teachers at the United States Naval Academy and officers in the United States Navy and Air Force, the book provides [illegible] broad, practical introduction to electronics and electronic devices. It is organized in the chapters whose titles are given above, and the authorship of the individual chapters is identified on the title page of the volume. The importance of understanding basic theory is emphasized, and some space is devoted to such basic matters as the phenomena of electron emission. However, most of the chapters are devoted to electronic elements and to equipment and systems in [illegible] which these elements are employed. The principles and properties of devices and systems are discussed at an engineering level and, as would be expected, from the viewpoint of naval personnel. Selected literature references are included.

DAVIS WELLS L., AND HERMAN R. WEED

Industrial electronic engineering. Englewood Cliffs, N. J. Prentice-Hall, Inc. 1953. 514 p. illus. 22 cm. (Prentice-Hall electrical engineering series. W. L. Everitt, editor) $8.50. 6357

Contents: Gas tube characteristics. Basic gaseous tube circuits. Rectifiers and inverters. Semiconductor rectifiers. Phototubes and associated circuits. Industrial timing circuits. Servomechanisms. Regulators. Electronic control of motors. Radio frequency heating. X-rays. Index.

Note: The emphasis in this book is on the theory behind industrial electronic circuits rather than on the circuits themselves. Mathematical and quantitative methods of analyzing and solving problems are stressed. Prior knowledge of a-c circuit theory, elementary electronic circuit theory and elementary differential equations on the part of the reader [illegible] assumed. Each chapter begins with [illegible] brief, nontechnical description of the devices that embody the applications of theory and circuits discussed in it. The book is illustrated with about 430 line drawings, diagrams, graphs, and an occasional photograph. There are [illegible] few footnote references to related literature, but no systematic bibliography.

DOW WILLIAM GOULD

Fundamentals of engineering electronics. Second edition. New York. John Wiley & Sons, Inc. 1952. 627 p. illus. 23 cm. $9.00. 6358

Contents: Potential distribution diagrams. Electron ballistics. Cathode-ray devices. Electrostatic fields in space-charge control tubes. Space-charge control of current. Triodes, tetrodes, pentodes. Thermionic cathodes. Electrons in metals and semiconductors. Amplifier circuit principles. Amplifier coupling; oscillators. Introduction to microwave electron tube principles. Random velocities of gas particles. Ionization and excitation of atoms. Photosensitive devices. Current flow in gases. Plasma boundary regions. Arc and glow transient phenomena. Gaseous-conduction rectifying devices. Tables. Bibliography. Index.

Note: T[illegible] use the words of the author, this book deals with "the internal functioning of the electron devices that serve as the active elements in electronic circuits." The subject is treated essentially

from the standpoint of engineers who are concerned with design of these electronic elements, such as tubes and it covers not only the main points but also numerous smaller problems such as how to calculate the effect of space-charge-limited current of potential variations along the cathode. Primarily it is text for electrical engineering students, but it is also useful for fundamental information and reference to graduate engineers. This edition incorporates a considerable range f material not in the preceding edition, but as the author has deleted material the length of the book is approximately the same. Recent literature has been added to the bibliographies.

EASTMAN, AUSTIN VITRUVIUS

Fundamentals of vacuum tubes. Third edition New York McGraw Hill Book Company, Inc, 1949 644 p illus 24 cm. (McGraw Hill electrical and electronic engineering series, F E Terman, consulting editor) $8 50 6359

Contents Part 1 Basic concepts. Electronic emission. Construction f vacuum tubes. High-vacuum tubes. Gas-filled tubes. Photoelectric tubes. Special types f tubes. Part II, Applications and circuits. Rectifiers. The vacuum tube as a control device. Audio-frequency amplifiers. Radio-frequency amplifiers. Oscillators. Power series analysis of vacuum-tube performance. Modulators. Demodulators. Appendixes. Author index. Subject index.

Note An introduction to the basic principles of vacuum tubes used in radio and industry Applications of such tubes and the circuits in which they are employed are also discussed at some length. The book is intended primarily for senior electrical engineering students, but it is also of value to practicing electrical engineers. Readers are expected to have a knowledge of mathematics through elementary calculus. This edition has been revised to include recent developments in the field. The chapter on audio-frequency amplifiers has been largely rewritten, and provides a more detailed treatment of video amplifiers and of low- and high-frequency compensation circuits. The discussion of modulation and demodulation has also been expanded to form two chapters.

EDSON, WILLIAM A

Vacuum tube oscillators. New York John Wiley & Sons, Inc., 1953 476 p illus. 24 cm. $9 00 6360

Contents Introduction. Transient behavior of linear systems. Negative resistance oscillators. Nonlinear oscillations. Feedback systems and stability criteria. Resonators. Linear oscillators. Conventional harmonic oscillators. Crystal-controlled oscillators. Intermittent behavior Operation at high-power levels. Practical relaxation oscillators. Locking and synchronization. Frequency multiplication and division. Tube and thermal noise. Modulation of oscillators. Automatic frequency control. Long-line and multiple-resonance effects. Bibliography Name index. Subject index.

Note As the author of this book points out, vacuum-tube oscillators are universally used in transmitters and receivers for radio, television and radar The book is full-scale treatise on them. It covers the principles, types, properties, and applications from the standpoint of the engineer concerned with the design of electronic circuits and devices. Problems to be sol ed are included for engineering students who use the book as text. However the book scope, together with its bibliography of 313 references, makes it useful one for graduate engineers who are concerned with electronic circuit design.

ELECTRONIC COMPONENTS SYMPOSIUM

Proceedings 1956 Electronic Components Symposium Washington D C May 1, 2 3 1956 Sponsored by American Institute of Electrical Engineers Institute of Radio Engineers Radio-Electronics-Television Manufacturers Association West Coast Electronic Manufacturers Association With active participation by agencies of the U S Department of Defense and the National Bureau of Standards. New York Engineering Publishers 1956 240 p illus. 28 cm $5 00 6361

Contents Session I, General. Address of welcome, by A. Rogers. Future demands on component design, by W L Ball. broad survey of the Military Electronic Equipment Reliabi problem and its controlling factors, by C. L Seery A review of cent British component developments, by C. E. Richards. Look forward into the future, by K. Matthews. More or better engine in components, by J D Ryder Session II, Progress with ma rials: New glasses and electrical components applications, by W Hauth and A. L. Pugh, jr Positive temperature coefficient of distance thermistor materials for electronic applications, by E. Sauer and S. S. Flaschen. Ferrites for use in S-band microwa components, by H. C. Rothenberg. Properties of piezoelect titanates and zirconates, including a discussion on their control evaluation, by T G. Kinsley and R. D. Wehrle. Glass in hig temperature components, by H. S. Cramer Standards for capacit paper by H. A. Anderson. Session III, Theory and operating prin ciples Factors affecting back swing of high power pulse tran formers, by T Temple. D. c. current amplification factor of jun tion transistors, by C. Huang and A. Anoschl. The use of di persion measurements for analyzing ceramic components, by D. Lupfer. Examination of contact and other surfaces by plas replica technique, by H. W Hermance and T F Egan. Miniatu strip transmission line and transmission line components, by E. Torgow and J W E. Griemsmann. The effects of nuclear radiati on electronic components, by C. C. Robinson. Session IV Instru ments and measurements Automatic testing of components, b F M. Booth. A dielectrometer for millimeter wavelengths, by M J. Kurlick. Quality control of magnetic sub-assemblies, by M Cashman. High frequency transistor test set, by C. E. Williams An automatic card punching transistor test set, by M. L. Embr and D. E. Williams. Magnetic probe for traveling wave tub magnetic field, by V E. Legg and G. N. Packard. Session V Electron tubes and solid state devices. A report on the state o the art of semi-conductor devices, by D. E. Kerr. High powe silicon transistors, by J S. Saby Theory of operation and applica tion f a new series of fixed and adjustable corona discharg voltage regulator tubes, by N Anton and M. Youdin. The appli cation of industrial X-ray techniques for the prevention of reliabi tube defects, by E. A. Kalm. Current trends in cathode ray tube development and design by B. H. Rosen. Manufacturing sub miniature tubes to meet MIL-E-1B microscopic inspection, by R. E. Brooks. Session VI, Passive components I. Metal film powe resistors, by J J Bebrw and others. Precision and high tempera ture metal film resistors, by S. J Stein and J Riseman. Wide coils for traveling wave tube solenoids, by A. S. Ostrum and others. Pyrolytic alloy high temperature resistors, by C. Wellard and K. Gentner New type miniaturized power transformers for high temperature airborne applications, by H. S. Feder and A. B. Haines. A new thermally fused metal-to-ceramic glass resistor, by R. C. Langford and J Rocheleau. Session VII, Passive components II: High Q resonant charging reactors for magnetic radar pulsers, by C. E. Carter jr Ceramic transformers and filters, by C. A. Rosen. Distributed components in printed circuits, by A. Smith and G. Cooper. A new type of ferroelectric shift register by J. R. Anderson. Recent progress in the development of standard functional divisions for electronic equipment, by J Reese and R. S. Shultz. A systematic plan for predicting equipment reliability by J. A. Connor Reliability theory and trial engineering interpretations, by H. L. Wuerffel.

Note. The titles of the 43 papers collected in this volume are listed above. The participants in the symposium (and the authors of the papers) are experts currently engaged in one way or another with the development, testing, or applications of components of electronic systems. The typical paper is concise summary of an area of the field that has recently come into prominence or of new developments in an older area. Usually it is accompanied by literature citations and illustrations. There is no volume index.

ELECTRONICS

Electronics for engineers reference articles charts and graphs from Electronics magazine. Edited by John Markus and Vin Zeluff New York McGraw Hill Book Company, Inc., 1945 390 p. illus. 29 cm. $7.50. 6362

Contents. A-F impedance-matching networks. Antennas. Audio amplifiers. Audio-circuit design Capacitors. Cathode-ray tubes. Coaxial lines. Electronic heating. Filters. Industrial control. Iron-core transformers and chokes. Mathematics. Networks. Oscillators. Permanent magnets. Pulses. Rectifiers. Relays. R F coils and transformers. R F impedance-matching networks. R-F power amplifiers. Sound. Television, frequency modulation, and facsimile. Transmission lines. Tubes. Tuned circuits. Wide-band amplifiers.

Note. One hundred and forty-two articles that have reference value ha been collected in this volume. In some cases they have

[illegible] condensed to suit them to the book. However the [illegible] of the original appearance of each item in *Electronics* is given. [illegible] a valuable reference book for all persons concerned with the design of electronics apparatus.

HAPPELL, GEORGE E., AND WILFRED M HESSELBERTH

Engineering electronics. New York McGraw-Hill Book Company Inc., 1953 508 p illus. 24 cm. (McGraw Hill electrical and electronic engineering series Frederick Emmons Terman, consulting editor) $8.00 6363

Contents: Electron ballistics. Emission. The high-vacuum diode. The vacuum triode and other multielement tubes. Some applications of vacuum tubes. Concepts useful in vacuum-tube-circuit analysis. Voltage amplifiers. Audio-frequency power amplifiers. Power amplifiers using tuned loads. Feedback amplifiers. Oscillators. Modulation and detection. Conduction through gases. Rectifiers. Photoelectric cells. Solid-state electronics and reactance amplifiers. Appendixes. Index.

Note: An engineering college textbook developed and tested at Purdue University before publication. It is designed for use in introductory courses offered to students who have completed basic courses [illegible] general physics, mathematics through calculus, and have completed or are taking concurrently courses in alternating-current circuits and electrical measurements. It presents [illegible] broad view of the field rather than [illegible] concentrated study of selected areas. The chapter on analysis of vacuum-tube circuits introduces the reader to both analytical and graphical methods.

HARVARD UNIVERSITY CRUFT LABORATORY

Electronic circuits and tubes by the Electronics Training Staff of the Cruft Laboratory Harvard University New York McGraw Hill Book Company Inc., 1947 948 p. illus. 23 cm. $10.00 6364

Contents: Alternating current theory. Circuit response. Circuit elements. Measurement of circuit elements. Networks and impedance matching. Transients. Coupled circuits. Filters. Fourier analysis. Electron emission and the diode. Multielement tubes. Cathode-ray tubes. Amplifiers—class A and class B. Power tubes. Oscillators. Gas-filled tubes. Rectifiers and power supplies. Signal analysis. Principles of modulation. Methods of modulation. Detection. Tone transmission. Radio receivers. Timing circuits. Appendices. Subject index.

—— Transmission lines antennas, and wave guides, by Ronold W P King Harry Rowe Mimno, and Alexander H. Wing New York McGraw Hill Book Company Inc., 1945. 347 p. illus. 23 cm. $7.00. 6365

Contents: Transmission lines, by A H Wing. Antennas, by R W P King. Ultra-high-frequency circuits, by R W P King. Wave propagation, by H. R. Mimno. Problems. Index.

Note: The origin of these volumes was [illegible] set of lectures before classes of U. S. Army and Navy technical officers during World War II. The course was preparatory to the study of radar. The treatment is elementary in the sense that it is intended for persons who are just beginning to study electronics, particularly high frequency phenomena, but the authors have assumed that their audience will know mathematics through calculus and will have had at least one college course in physics. The text of the first volume is unexpectedly comprehensive for an elementary work. The second volume treats material that had not been released for publication at the time of writing, but is otherwise [illegible] introductory introduction.

HICKEY HENRY V AND WILLIAM M VILLINES

Elements of electronics. New York McGraw Hill Book Company Inc. 1955 487 p. illus. 24 cm. $6.50 6366

Contents (abridged): Fundamentals of electricity. Introduction to vacuum tubes. Electron circuits. Principles of magnetism. Alternating-current fundamentals. Introduction to trigonometry. Vectors and phase relationships. Laws and properties of inductance. Laws and properties of capacitance. Sources of direct current. Alternating-current generators. Power transformers. Batteries. Power supplies and rectifiers. Voltage dividers and regulators. Introduction to amplifiers. Amplifier circuits. Oscillators. Transmitter circuits. Modulation principles. Antennas and transmission lines. Typical transmitter. Receiver circuits and the superheterodyne receiver. Transistors. Appendix. Visual aids. Index.

Note: A simplified introduction to electronic principles, terminology and basic devices. It has grown out of the authors' teaching experience in the United States Navy hence, the communications applications of electronics are emphasized. However the approach is basic, and radio apparatus used in the U. S. Navy is not specifically described. There are 30 chapters altogether. The typical one is about nine pages long and includes worked examples, review questions and other aids to comprehension.

HILL WILLIAM RYLAND

Electronics in engineering. New York McGraw Hill Book Company Inc. 1949 274 p 24 cm. (McGraw Hill electrical and electronic engineering series F E. Terman, consulting editor) $5 50 6367

Contents (abridged): Practical emitters and diodes. Single-phase rectifier circuits. Grid-controlled vacuum tubes. Gas-filled tubes. Photosensitive devices. Electronic control circuits. Polyphase rectifiers. Practical amplifier circuits. Feedback. Resonance and tuned amplifiers. Oscillators. Amplitude modulation and demodulation. Transducers. The vacuum-tube voltmeter. Appendix: The R-C discharge. Index.

Note: A relatively short introduction to basic electronic principles and devices. It is intended for advanced engineering students [illegible] do not intend to specialize in the field [illegible] wish [illegible] fundamental understanding of it. Despite the brevity of the book, the discussion of important points is adequate, and the exposition is usually illustrated by [illegible] worked examples. Besides its intended use, the book should be of value to graduate engineers [illegible] wish to acquire information about electronics in home study.

HUDSON RALPH GORTON

An introduction to electronics. New York The Macmillan Company 1945 97 p. illus. 22 cm. $3 00 6368

Contents: The constitution of matter. The flow of electricity. Radio communication. Reproduction of sound and picture. Modern sources of light. More power to the electron. Diverse applications of electronics. Conversion factors. Index.

Note: An explanation of the science of electronics and [illegible] description of its applications in the fields of radio, television, photography navigation, meteorology and medicine. The last two chapters also discuss electronic rectifiers and the electron microscope, the radiosonde, and other recent applications. Although intended for the layman with [illegible] limited knowledge of physics and chemistry some technical terminology is employed. The author is Professor of Electrical Engineering at the Massachusetts Institute of Technology.

HUNTER LLOYD P editor

Handbook of semiconductor electronics a practical manual covering the physics, technology and circuit applications of transistors diodes and photocells. New York McGraw Hill Book Company Inc., 1956 597 p. illus. 24 cm $12.00 6369

Contents: Part I, Physics of transistors, diodes, and photocells: Transistor characteristics. Electronic conduction in solids. Rectification in solids. Transistor action. Photoconductivity and photovoltaic cells. Part II, Technology of transistors, diodes, and photocells: Preparation of semiconductor materials. Methods of preparing PN junctions. Metal-semiconductor contacts. Encapsulation. Device design considerations. Part III, Circuit design and application for transistors, diodes, and photocells: Low-frequency amplifiers. High-frequency and video amplifiers. Directly coupled amplifiers. Transistor oscillators. Transistor switching circuits. Circuits using special semiconductor devices. Part IV, Reference material: Graphical analysis of nonlinear circuits. Matrix methods of circuit analysis. Mea-

from the standpoint of engineers who are concerned with design of these electronic elements, such as tubes and it covers not only the main points but also numerous smaller problems such as how to calculate the effect of space-charge-limited current of potential variations along the cathode. Primarily it is a text for electrical engineering students, but it is also useful for fundamental information and reference to graduate engineers. This edition incorporates a considerable range of material not in the preceding edition, but as the author has deleted material the length of the book is approximately the same. Recent literature has been added to the bibliographies.

EASTMAN, AUSTIN VITRUVIUS

Fundamentals of vacuum tubes Third edition New York McGraw Hill Book Company, Inc., 1949 644 p illus. 24 cm. (McGraw Hill electrical and electronic engineering series, F E Terman, consulting editor) $8 50 6359

Contents Part I, Basic concepts Electronic emission. Construction of vacuum tubes. High-vacuum tubes. Gas-filled tubes. Photoelectric tubes. Special types of tubes. Part II, Applications and circuits. Rectifiers. The vacuum tube as a control device. Audio-frequency amplifiers. Radio-frequency amplifiers. Oscillators. Power series analysis of vacuum-tube performance. Modulators. Demodulators. Appendixes. Author index. Subject index.

Note An introduction to the basic principles of vacuum tubes used in radio and industry Applications of such tubes and the circuits in which they are employed are also discussed at some length. The book is intended primarily for senior electrical engineering students, but it is also of value to practicing electrical engineers. Readers are expected to have a knowledge of mathematics through elementary calculus. This edition has been revised to include recent developments in the field. The chapter on audio-frequency amplifiers has been largely rewritten, and provides a more detailed treatment of video amplifiers and of low and high-frequency compensation circuits. The discussion of modulation and demodulation has also been expanded to form two chapters.

EDSON, WILLIAM A.

Vacuum tube oscillators New York John Wiley & Sons, Inc. 1953 476 p. illus 24 cm. $9 00 6360

Contents Introduction. Transient behavior of linear systems. Negative resistance oscillators. Nonlinear oscillations. Feedback systems and stability criteria. Resonators. Linear oscillators. Conventional harmonic oscillators. Crystal-controlled oscillators. Intermittent behavior Operation at high-power levels. Practical relaxation oscillators. Locking and synchronization. Frequency multiplication and division. Tube and thermal noise. Modulation of oscillators. Automatic frequency control. Long-line and multiple-resonance effects. Bibliography Name index. Subject index.

Note. As the author of this book points out, vacuum-tube oscillators are universally used in transmitters and receivers for radio, television and radar The book is a full-scale treatise on them. It covers the principles, types, properties, and applications from the standpoint of the engineer concerned with the design of electronic circuits and devices. Problems to be solved are included for engineering students who use the book as a text. However the book scope, together with its bibliography of 352 references, makes it a useful one for graduate engineers who are concerned with electronic circuit design.

Note. A simplified introduction to electronic principles, terminology and basic devices. It has grown out of the authors' teaching experience in the United States Navy; hence the communications applications of electronics are emphasized. However the approach is basic, and radio apparatus used in the U. S. Navy is not specifically described. There are 30 chapters altogether. The typical one is about nine pages long and includes worked examples, review questions and other aids to comprehension.

HILL WILLIAM RYLAND

Electronics in engineering. New York McGraw Hill Book Company Inc., 1949 274 p. 24 cm. (McGraw Hill electrical and electronic engineering series F E Terman consulting editor) $5 50. 6367

Contents (abridged): Practical emitters and diodes. Single-phase rectifier circuits. Grid-controlled vacuum tubes. Gas-filled tubes. Photosensitive devices. Electronic control circuits. Polyphase rectifiers. Practical amplifier circuits. Feedback. Resonance and tuned amplifiers. Oscillators. Amplitude modulation and demodulation. Transducers. The vacuum-tube voltmeter. Appendix: The R-C discharge. Index.

Note: A relatively short introduction to basic electronic principles and devices. It is intended for advanced engineering students who do not intend to specialize in the field but wish a fundamental understanding of it. Despite the brevity of the book, the discussion of important points is adequate, and the exposition is usually illustrated by a worked example. Besides its intended use, the book should be of value to graduate engineers who wish to acquire information about electronics in home study.

HUDSON RALPH GORTON

An introduction to electronics. New York The Macmillan Company 1945 97 p illus. 22 cm. $3 00 6368

Contents: The constitution of matter. The flow of electricity. Radio communication. Reproduction of sound and picture. Modern sources of light. More power to the electron. Diverse applications of electronics. Conversion factors. Index.

Note: An explanation of the science of electronics and a description of its applications in the fields of radio, television, photography, navigation, meteorology and medicine. The last two chapters also discuss electronic rectifiers and the electron microscope, the cyclotron, and other recent applications. Although intended for the layman with a limited knowledge of physics and chemistry, some technical terminology is employed. The author is Professor of Electrical Engineering at the Massachusetts Institute of Technology.

HUNTER LLOYD P editor

Handbook of semiconductor electronics a practical manual covering the physics technology and circuit applications of transistors diodes and photocells. New York McGraw Hill Book Company Inc., 1956 597 p. illus. 24 cm. $12 00 6369

Contents: Part I, Physics of transistors, diodes, and photocells: Transistor characteristics. Electronic conduction in solids. Rectification in solids. Transistor action. Photoconductivity and photovoltaic cells. Part II, Technology of transistors, diodes, and photocells. Preparation of semiconductor materials. Methods of preparing PN junctions. Metal-semiconductor contacts. Encapsulation. Device design considerations. Part III, Circuit design and application for transistors, diodes, and photocells. Low-frequency amplifiers. High-frequency and video amplifiers. Directly coupled amplifiers. Transistor oscillators. Transistor switching circuits. Circuits using special semiconductor devices. Part IV Reference material: Graphical analysis of nonlinear circuits. Matrix methods of circuit analysis. Mea-

urement of semiconductor-device parameters. Measurement of material parameters. Bibliography Author index. Subject index.

Note: Publication of this work provides the rapidly developing field of semi-conductor applications with an engineering handbook cast in the traditional pattern of such reference aids. The first part of the volume is devoted to the basic physics, but the emphasis of the work as a whole is decidedly on technology and applications. A concise style of presentation is followed, and there are numerous graphs and circuit diagrams. Each of the sections has its individual list of references. In addition, there is a comprehensive bibliography chronologically arranged. The author index covers the authors cited in the reference lists in the sections but unfortunately does not cover those cited in the comprehensive bibliography. The subject index is adequate.

KNOLL, M., AND B. KAZAN

Storage tubes and their basic principles. New York John Wiley & Sons, Inc., 1952 143 p illus. 23 cm. $4 50 6370

Contents. Equilibrium potentials acquired by an insulating surface under electron bombardment and the action of light. Definitions. Methods of writing and reading. Signal-converter storage tubes (electrical-electrical) Viewing storage tubes (electrical-visual) Computer storage tubes (electrical-electrical) Television-camera storage tubes (visual-electrical) Bibliography Index.

Note. Electronic storage tubes such as are used in television cameras and electronic computers are covered in this book. The treatment is largely descriptive but on a level which makes the book useful to technically trained persons who have an interest in the subject although not specialists in electronic tubes. Writing methods (charging) and reading methods (discharging) are precisely described in technical terms. The authors next describe the main types of tubes which have been developed to the commercial stage and also some which are under development. The following points are given for each type of tube elements and operating principles, writing and reading principles and characteristics, half-tone characteristics and (in some cases) the method of erasing and other outstanding features. The descriptions are not specifically to tubes manufactured by specific manufacturers. There is an extensive bibliography in which many of the entries have short annotations.

KOHL, WALTER HEINRICH

Materials technology for electron tubes. New York Reinhold Publishing Corporation, 1951 493 p illus. 24 cm $12 50 6371

Contents. Physics of glass. The annealing of glass. Strain analysis of glass. Glass-to-metal seals. Electrical conduction in glass. Glass in radiation fields. Electrons, atoms, crystals, and solids. Tungsten. Molybdenum. Tantalum. Nickel. Copper Carbon and graphite. Joining metals by soldering and brazing. Ceramics and mica. Ceramic-to-metal seals. The phase rule. High-vacuum technique. Thermionic emission. Author index. Subject index.

Note. A systematic survey of the physical properties of the materials used in electron tubes. Considerable information is included on the manipulation and fabrication of these materials, but the book is not treatise on manufacturing techniques. The treatment is technical, and the work is intended for scientists doing research in connection with the design and manufacture of electron tubes as well as for physicists interested in tube phenomena. The text is well documented with literature references and is supplemented by many tables of chemical physical, and mechanical data.

KRAMER ANDREW WILLIAM

Industrial electronics elementary principles & applications New York Pitman Publishing Corporation 1950 311 p illus 24 cm $7 00 6372

Contents Electron behavior Fundamental principles of the electron tube. The simplest thermionic tube—the diode. The triode. Triode characteristics and operation. Electronic generation of electrical oscillations. Multielement tubes. Effect of gas in tube. Types and characteristics of gas-filled tubes. Mercury-pool tubes. Photoelectric tubes and cells. Cold-cathode tubes. Special-purpose tubes. What tubes can do. Electronic control and regulation. Application of electron-tube rectifiers. Electronics in instrumentation and measurement. Industrial applications of electronic control. Applications of electronic regulation. Electron tubes in heat production. Electron tubes in light production. Miscellaneous electronic applications. Index.

Note. This book provides nonmathematical explanations of the fundamental principles of electronics and clear descriptions of typical industrial applications of electron tubes and related devices. It is especially suited to the needs of workers who come in contact with industrial applications of electronics in the course of work and desire to acquire an understanding of them by means of home study. Although elementary and intended for persons who probably will not undertake formal study of the subject, the writing is factual and the author has not gone out of his way to simplify terminology.

LEE, REUBEN

Electronic transformers and circuits. Second edition. New York John Wiley & Sons, Inc., 1955 360 p. illus. 24 cm. $7.50. 6373

Contents. Introduction. Transformer construction, materials, and ratings. Rectifier transformers and reactors. Rectifier performance. Amplifier transformers. Amplifier circuits. Higher-frequency transformers. Electronic control transformers. Magnetic amplifiers. Pulse and video transformers. Pulse circuits. Bibliography Index.

Note. The standard American work on the design of transformers for use in electronic circuits and on the characteristics and performance of such transformers as circuit elements. It is addressed primarily to graduate engineers who are concerned with design; nevertheless, the mathematics employed is rather simple. The first edition was published in 1947 Two new chapters, those on magnetic amplifiers and pulse circuits, have been added in this edition. Also, important changes and, in some instances, extensive revisions have been made in other chapters. Another change of note is the omission of the problems for students to solve that appeared in the first edition.

LO, ARTHUR W., AND OTHERS

Transistor electronics. By Arthur W Lo, Richard O Endres, Jakob Zawels, Fred D Waldhauer, and Chung Chih Cheng. Englewood Cliffs, N J Prentice-Hall, Inc., 1955 521 p. illus 23 cm. (Prentice-Hall electrical engineering series, W L. Everitt, editor) $12 00 6374

Contents. Physical concepts. Characteristics, parameters, equivalent circuits. Basic amplifier configurations. Direct-current bias circuits. Low-frequency amplifiers. Power amplifiers. High-frequency operation. Physical interpretation of transistor parameters. High-frequency amplifiers. Oscillators. Modulation and demodulation. Pulse circuits. Index.

Note. An important treatise on the transistor Primarily it deals with the transistor as a circuit element and of course with the design of circuits to take advantage of transistor properties. The first chapter is a brief outline of transistor physics, and the reader is referred by the authors to Shockley's more comprehensive treatise. In the subsequent chapters, the reader is assumed to have knowledge of vacuum-tube circuits, but the authors do not lean on analogies between them and circuits based on transistors. Practical techniques for analyzing transistor circuits and for designing them are presented explicitly and in detail. The book is potentially of interest both to engineering students and to graduate engineers. All of the authors are or have been associated with the Radio Corporation of America.

MANDL MATTHEW

Handbook of basic circuits TV-FM-AM New York The Macmillan Company, 1956. 365 p illus. 24 cm. $7 50. 6375

Contents (abridged) Audio detector (AM demodulator). Automatic gain control (A-G-C) Balanced modulators. Bridge circuit (reactance type) Burst amplifier Cascode circuit (TV tuner application) Clipper circuit. Color demodulator Crystal oscillator. Damping circuit (diode type) Differentiating circuit. Discriminator (FM oscillator frequency control) Electron-coupled oscillator. Frequency doubler (multiplier) Grid modulation (anode-output type). Hartley oscillator Horizontal-sweep output system (direct-drive type) Integrator circuit. Inverse feedback (negative-current type). Keyed automatic gain control (A-G-C) Klystron oscillator. Limiter. Mixer (nonlinear) Noise clipper (diode type) Phase inverter (floating-paraphase type) Power supply (half-wave type) Push-pull audio amplifier (class A) Reactance circuit (capacitive type). Reflex klystron oscillator. Retrace eliminator Shading control (and

[illegible] Blocking oscillator (color receiver). Tone controls. [illegible] oscillators. Ultra-audion oscillator. Video amplifier. [illegible] (high-voltage type). Appendixes: Classification of [illegible]. VHF television station frequencies. UHF television [illegible] frequencies. Color television transmission standards. Color [illegible] and definitions. Bibliography. Index.

Note: More than 150 circuits commonly used in television, radio and other electronic equipment, have been assembled in this book. [illegible] given above. For each circuit, [illegible] schematic diagram, and brief descriptions of purpose, [illegible] and applications of the circuit. The appendix includes [illegible] of block diagrams illustrating how various circuits are [illegible] transmitting and receiving equipment. The book is [illegible] reference compilation for radio and TV servicemen, experimenters and technicians in the field of electronics.

MARKUS, JOHN AND VIN ZELUFF

Electronics for communication engineers. New York. McGraw Hill Book Company Inc., 1952. 610 p. illus. 28 cm. $11.50 6376

Contents (abridged): Amplifiers. Antennas. Audio. Cathode-ray tubes. Computers. Electronic music. Filters. Measurements. Microwaves. Oscillators. Power supplies. Propagation. Pulses. Receivers. Transmission lines. Transmitters. Index.

Note: A collection of 232 outstanding articles which appeared in the periodical *Electronics* during the period April, 1940, to November, 1951. The articles are grouped under the headings given above, and the general index to the volume covers all of them. In some instances the original text has been abridged, but usually the full text and all of the illustrations are reprinted. The date of publication of the original article is always given. The book is [illegible] useful compilation of reference material for engineers in the electronics and communication fields.

MARKUS, JOHN AND VIN ZELUFF

Handbook of industrial electronic circuits. New York. McGraw Hill Book Company Inc., 1948. 272 p. illus. 29 cm. $7.50 6377

Contents (abridged): Audio-frequency circuits. Capacitance control circuits. Cathode-ray circuits. Control circuits. Counting circuits. [illegible] amplifier circuits. Electronic switching circuits. [illegible] circuits. Measuring circuits. Metal-locating circuits. Motor control circuits. Multivibrator circuits. Oscillator circuits. Photoelectric circuits. Power supply circuits. Stroboscopic circuits. Telemetering circuits. Temperature-control circuits. Timing circuits. Ultrasonic circuits. Welding control circuits. Index.

Note: A very useful compilation of circuits which have been developed for various industrial—as contrasted to communication—applications. Four hundred and thirty-three circuits are illustrated in wiring diagrams and explained in an adequate accompanying text. Most of the material was published first in the periodical *Electronics*, but some of it has been reproduced from other periodicals. Values of the circuit components are given, and there is some description of performance characteristics.

MARTIN THOMAS L., JR.

Electronic circuits. New York Prentice-Hall, Inc., 1955 707 p. illus. 22 cm. (Prentice-Hall electrical engineering series W. L. Everitt, editor) $10.00. 6378

Contents. Part I, Introduction. Principles of equivalent circuits. Principles of circuit theory. Part II, Class A circuits. Principles of vacuum tube amplifiers. Single stage vacuum tube amplifiers. Multistage amplifiers in the steady state. Transient response of multistage amplifiers. Feedback circuits. Transistor amplifiers. [illegible] negative resistance and class A oscillators. Nonlinear class A circuits. Part III, Operation in the switching mode. Vacuum tube power amplifiers in the switching mode. Modulation and modulators. Rectifiers and power filters. Detectors and mixers. Magnetic amplifiers. Wave shaping and computing circuits. Trigger circuits and nonsinusoidal oscillators. Index.

Note: An analytical study in which the author demonstrates that electronic components can be represented by simple equivalent circuits, thereby reducing electronic circuit design to ordinary circuit design. The first part is an outline written at [illegible] level appropriate to the rest of the book; the second part [illegible] devoted to the analysis of circuits in which the electronic component operates [illegible] and the third part to circuits in which the component operates discontinuously. In most of the circuits studied, vacuum tubes constitute the electronic component; however, the inclusion of [illegible] chapter on transistor amplifiers is noteworthy, particularly in view of the fact that the author presents an original method of analysis in this chapter. The book is organized as [illegible] text, designed for students [illegible] who have completed an introductory course in electronics. It contains enough original matter to make it of interest also to graduate physicists and engineers [illegible] who are concerned with the design of electronic circuits or components. The author is head of the Department of Electrical Engineering at the University of Arizona.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Applied electronics a first course in electronics electron tubes, and associated circuits. Second edition by Truman S. Gray A publication of The Technology Press, Massachusetts Institute of Technology New York John Wiley & Sons, Inc. 1954 881 p. illus. 24 cm. $10.50. 6379

Contents. Electron ballistics. Electron emission from metals. Electrical conduction through [illegible], gases, and vapors. Vacuum tubes. Gas tubes. Rectifier circuits. Controlled-rectifier circuits. Vacuum tubes as linear circuit elements; class A single-stage amplifiers. Cascade amplifiers, class A. Amplifiers with operation extending beyond the linear range of the tube characteristic curves, class AB, class B, and class C amplifiers. Vacuum-tube oscillators. Modulation and demodulation, or detection. Semiconductor rectifiers and transistors. Appendixes. Bibliography. Author index. Subject index.

Note: An introductory but not superficial treatment. The authorship of the first edition was credited to "members of the staff of the Department of Electrical Engineering, Massachusetts Institute of Technology." Professor Gray [illegible] who has revised the book for the second edition, is [illegible] member of the faculty of the same department. As in the first edition, mathematics is often resorted to in the exposition, but [illegible] balance has been maintained between narrative exposition and mathematical. The same emphasis on precise definitions and fundamental equations runs through this edition. Also the contents and organization are much the same, except that new developments such as the transistor, are now covered, and revisions have been made in [illegible] parts to improve clarity or to introduce new methods of analysis.

MILLMAN JACOB, AND SAMUEL SEELY

Electronics. Second edition. New York McGraw Hill Book Company Inc., 1951 598 p. illus. 24 cm. (McGraw Hill electrical and electronic engineering series F. E. Terman consulting editor) $8.50 6380

Contents. Introduction. Motion of charged particles in electric and magnetic fields. Applications of the motion of particles in applied fields. Electronic phenomena in metals. Statistical electron theory of metals. Characteristics of thermionic cathodes. Diode characteristics. The kinetic theory of gases. Fundamental processes in gases. Electrical discharges in gases. Commercial gas tubes. Rectifiers. Filters for rectifiers. Polyphase rectifiers. Photoelectricity and photoelectric cells. Triode characteristics. Triodes as circuit elements. Multielectrode tubes. Appendixes. Index.

Note: A well-established textbook in which adequate attention [illegible] paid both to theory and applications of electronics. It is suitable for engineering students [illegible] who are preparing for careers in communications engineering, industrial electronics, and electronic equipment design. Although the present edition is 125 pages shorter than the first edition, the book has been well revised and [illegible] considerable amount of new matter added. The shortening has been accomplished largely by the elimination of two chapters and by resetting the type so that there are three more lines to the page.

NODELMAN HENRY M., AND FREDERICK W SMITH

Mathematics for electronics with applications. New York McGraw Hill Book Company Inc., 1956 391 p. illus. 23 cm. $7.00. 6381

Contents: Part I, The uses of mathematics in electronics: Case histories of practical applications. Electronic applications of calculus. Part II, Equation testing prior to mathematical operations: Dimensional formulas and systems. Checking equations and pre-

dicting solutions. Part III, The algebra of circuit analysis: Theory of determinants. Network solutions by determinants. Matrix algebra. Network solutions by matrices. Part IV Theory and applications of series Basic properties and applications. Nonlinear electronic devices. Part V Differential equations—theory and applications Classical solutions and non-network applications. Transient solutions and elementary Laplace transforms. Part VI, The direction of mathematics in electronics Elements of Boolean algebra. A study plan in mathematics for specialists in electronics. Appendix. Author index. Subject index.

Note A textbook addressed both to advanced students and to graduate engineers preparing for or working in the electronics and communications fields. Readers are assumed to have completed introductory courses in calculus, physics, and network theory There are two features worthy of special note. First, many applications of abstract mathematics to the solution of problems in electronics and communication engineering are illustrated and discussed. This is true even in the more advanced sections of the book. Second, large number of problems taken from actual engineering practice and literature have been included for the reader to solve. Although designed primarily for use in organized classes, the book is suitable also for self instruction text by engineers and others who have the required preparation in basic subjects.

PIERCE, JOHN ROBINSON

Theory and design of electron beams Second edition. New York D Van Nostrand Company, Inc., 1954 222 p illus 24 cm (The Bell Telephone Laboratories series) $4 95 6382

Contents Properties of electric and magnetic fields. Forces and equations of motion. Simple electron motions. Some general relations. Some typical special problems. The paraxial ray equation. Magnetic and electric lenses—analytical and numerical solutions. The effect of thermal velocities. Space charge in electron beams. Electron guns. Periodic focusing fields. About designing electron beam devices. Appendixes. Index.

Note An outstanding work which is written on level that suits it to use as text and reference book by graduate engineers. It presents the theoretical material which is necessary for an understanding of electron flow and electron focusing in amplifier and oscillator tubes, and especially in microwave tubes. Some of the material included is to be found also in books on electron optics however space charge and thermal velocities are more fully treated than in such books. A selected bibliography is given as part of the preface, with occasional other references appearing in footnotes. The first edition was published in 1949 In this second edition, the book is longer by approximately 25 pages, an increase due largely to the addition of a chapter on periodic focusing fields.

PIERCE, JOHN ROBINSON

Traveling wave tubes Princeton D Van Nostrand Company Inc. 1950 260 p illus. 23 cm (Bell Telephone Laboratories series) $4 95 6383

Contents (abridged) Simple theory of traveling-wave tube gain. The helix. Filter-type circuits. General circuit considerations. The circuit described in terms of normal modes. Equations for traveling-wave tube. The nature of the waves. Discontinuities. Noise figure. Backward waves. Power output. Transverse motion of electrons. Field solutions. Magnetron amplifier Double-stream amplifiers. Appendixes Propagation of helically conducting sheet. Stored energies of circuit structures. Evaluation of space-charge parameter *Q* Diode equations of Llewellyn and Peterson. Evaluation of impedance and *Q* for thin and solid beams. How to calculate the gain of traveling wave tube. Bibliography Index.

Note The traveling-wave tube has several advantages over other types of electronic tubes, but the chief one is very wide band width. This first book on the subject was written by member of the technical staff of the Bell Telephone Laboratories, and it is addressed to graduate engineers in the communications field. It provides detailed treatment of the theory of traveling-wave amplifiers and some indication of their potential uses. Magnetrons and double-stream amplifiers, viewed as related devices, are discussed more briefly Apparently the bibliography lists all of the articles that had appeared up to August, 1949

RADIO CORPORATION OF AMERICA

Transistors I. A selection of papers describing research and development work of the Radio Corporation of America, as it applie[s] to the theory fabrication, and application o[f] transistors Princeton RCA Laboratories 1956 676 p illus. 24 cm. $4 50 638[4]

Contents (abridged) General. Materials and techniques. De[vices]. Fluctuation noise. Test and measurement equipment. Ap[plications]. Abstracts.

Note. A collection of technical reports and papers written by members of the staff of the RCA Laboratories and other divisions of the Radio Corporation of America. Included are 31 papers not previously published, and 10 papers reprinted from periodicals. In addition, the final section of the book is devoted to abstracts of 44 articles which have been published in scientific and technical journals. A number of the papers represent significant advances in transistor principles and technology The volume is potentially of interest to most scientists and engineers who are beginning work in the semiconductor field, or who for some other reason need to keep up with developments in transistor theory and application. It lacks an index.

RIDER, JOHN F , AND HENRY JACOBOWITZ

Basic vacuum tubes and their uses. New York John F Rider, Inc., 1955 204 p. illus. 22 cm $4 50 6385

Contents Introducing the vacuum tube. Electrons and electron emission. Diodes. Triodes. Multielectrode tubes. Index.

Note: A clearly-written, nontechnical account of fundamental principles and phenomena of vacuum tubes. It is intended for readers who have not studied the subject before and who are not prepared to study highly mathematical or analytical expositions. The authors have not avoided mathematics, but they have taken pains to explain patiently both the mathematical and other aspects so that the reader will be able to comprehend the book, even though he studies it without the assistance of an instructor Some use is made of cartoon-type drawings in getting ideas across, on the other hand, there are also numerous engineering graphs. The book is suitable for technicians with practical concern with the subject, advanced high school students interested in electronics and general readers who want a book on basic matters rather than on applications and "wonders. It replaces the senior author's *Inside the vacuum tube*, New York, 1945

RIDER, JOHN F

Obtaining and interpreting test scope traces. New York John F Rider, Inc., 1954 192 p. illus 22 cm $2 40 6386

Contents Sine and complex waveforms. The square waveform. Rectangular waveforms. Sawtooth and trapezoidal waveforms. Differentiated and integrated waveforms. Amplitude modulated wave envelopes. Response and "S" curves. Manipulation of scope controls for display Interpretation of scope traces. Lissajous figures. Test setups for observation with the scope. Index.

Note. The cathode ray oscilloscope is widely used as an instrument in analyzing the performance of electronic equipment and in trouble-shooting when repair is necessary This book, written by an expert on this instrument and addressed to technicians, deals in detail with (1) how the waveforms seen on the face of the "scope are produced and (2) how to interpret them. The early chapters are nonmathematical expositions of the kinds of waveforms, with special emphasis on understanding the components of complex waveforms. How to manipulate the controls of the oscilloscope so as to facilitate study of the waveform is explained. In addition to detailed expository text the book contains scores of illustrations of scope traces.

RUITER, JACOB H JR.

Modern oscilloscopes and their uses. Revised edition. New York Rinehart & Company 1955 346 p. illus. 24 cm. $6 50. 6387

Contents. Introduction. History of the oscillograph. Brief history of the development of the cathode-ray tube. Fundamental principles of cathode-ray tube operation. Details of the modern cathode-ray tube. The general purpose oscilloscope. Power-supply circuits. Amplifiers, attenuators, and positioning circuits. Time-base circuits. Operation of the oscilloscope Interpretation of basic patterns. Auxiliary equipment. Typical applications in the electronics industry Servicing A-M radio receivers. Servicing F M radio receivers. Servicing television receivers. Use at the radio transmitter

ing the oscilloscope in teaching. Additional industrial applications of the oscilloscope. Photographing cathode-ray patterns. Quantitative measurement. Glossary. Index.

Note: A standard book of semitechnical and practical nature. As the chapter titles show it covers the history, principles, and the many uses of oscilloscopes. The principal change in this second edition is the addition of the chapter at the end of the book on quantitative measurements.

RYDER, JOHN DOUGLAS
Electronic engineering principles. Second edition. New York Prentice-Hall, Inc., 1952 506 p. illus. 22 cm. $7.50 6388

Contents: The fundamental particles of electronics. The movement of charged particles in fields. The cathode-ray tube. Emission of electrons. Space charge in vacuum tubes. Vacuum diode rectifiers. The vacuum triode. Multi-element tubes. Small-signal amplifiers. Feedback. Large-signal amplifiers—class A and B. Gaseous emission. Gas diodes. Gaseous control tubes and circuits. Photoelectric cells. Solid-state electronics. Appendix. Selected vacuum tube characteristic curves and data. Index.

Note: An engineering college textbook in which electronics is treated as an engineering specialty in its own right rather than as a subdivision of communications engineering or radio. In other words, the primary emphasis is on the electron and on the internal characteristics of electron tubes rather than on the devices in which they are employed. Nevertheless, there is a good deal of discussion of basic circuits in which electron tubes are used. The first edition was published in 1947. For this edition the work was thoroughly revised and augmented. Changes were made in the text, illustrations, and bibliographies; and the final chapter was added so as to incorporate the advances represented by the development of the transistor.

RYDER, JOHN DOUGLAS
Electronic fundamentals and applications. New York Prentice-Hall, Inc., 1950 806 p. illus. 22 cm. (Prentice-Hall electrical engineering series W. L. Everitt, editor) $9.00. 6389

Contents (abridged): Fundamental particles. Electron ballistics. The cathode-ray tube. Emission of electrons. Space charge in vacuum tubes. The vacuum triode. Small-signal amplifier circuits. The tubes. Radio-frequency amplifiers. Vacuum-tube oscillators. Modulation systems. Demodulation. Wave-shaping circuits. Gaseous conduction. Gas tubes. Gas control tubes and circuits. Photoelectric cells. Solid-state electronics. Appendixes. Index.

Note: A substantial textbook for upperclass students of physics and electrical engineering. It is based on the author's Electronic engineering principles, 1947 but much new material has been added. Basic physical principles, tube characteristics, and fundamental circuits are now all covered. The author is Dean of Engineering in Michigan State College.

SEELY, SAMUEL
Electronic engineering. New York McGraw-Hill Book Company Inc. 1956 525 p. illus. 24 cm. (McGraw Hill electrical and electronic engineering series Frederick E. Terman, consulting editor) $8.00. 6390

Contents: Characteristics of electron tubes. Vacuum triodes as circuit elements. Basic amplifier principles. Untuned potential amplifiers. Feedback in amplifiers. Electronic computing circuits. Special tubes and electronic circuits. Oscillators. Heavily biased relaxation circuits. Saw-tooth sweep generators. Special sweep generators. Rectifiers. Rectifier filters and regulators. Electronic instruments. Solid-state. Appendixes: Notes on network theory. Transistors as circuit elements. General network analysis. Plate characteristics of receiving-type tubes. Index.

Note: An intermediate-level text on electronic circuits used in such fields of application as television, radar, computers, control circuits, and electronic detecting and measuring instruments. It is devoted both to the description of such circuits and to their analysis. However, the analysis is on an elementary and practical level. The style is concise, and more ground is covered than would be expected from the book's length. Selected literature references are included in the chapters and usually guide the reader to more extended treatments. The book is a complementary volume to the author's *Radio electronics*. Together, the two books supersede his *Electron tube circuits*, published in the same series in 1950.

SHEA, RICHARD F editor
Principles of transistor circuits. Co-authors Woo Foung Chow Sorab K. Ghandhi, Edward Keonjian Vernon P Mathis Charles A. Rosen John S Saby Johannes S Schaffner Richard F Shea, Jerome J Suran. New York John Wiley & Sons Inc. 1953 535 p. illus. 24 cm. $12 75 6391

Contents: Semiconductor principles. Forms, types, and characteristics of transistors. Transistors as low-frequency circuit elements. Basic principles of the amplifier stage. Junction transistor multistage amplifiers. Bias stabilization. Power amplifiers. Direct-current amplifiers. Transistors as high-frequency circuit elements. Basic principles of high-frequency operation. High-frequency circuit design. Video amplifiers. Oscillators. Circuit design by duality. Matrix methods of circuit analysis. Feedback amplifiers. Transient analysis. Large-signal operation. Computer circuits. Noise in transistors. Associated semiconductor devices. Small-signal parameter measurement. Appendix. Matrix algebra. Definitions of terms. Bibliography. Index.

Note: As indicated in the title, this book is devoted to the transistor as a circuit element. The first two chapters are introductory and short, the remainder of the book is devoted to the transistor in low-frequency circuits, high-frequency circuits and in large signal operations where the nonlinear characteristics of the transistor becomes useful. The book is addressed both to advanced engineering students and graduate engineers. With the needs of the latter group in mind, the authors have taken pains to present and analyze the equivalent circuits and to point out comparisons with vacuum tube circuits. Literature references are included. The authors are associated with the Electronic Laboratory of the General Electric Company.

SHEA, RICHARD F
Transistor audio amplifiers. New York John Wiley & Sons Inc., 1955 219 p. illus. 24 cm. $7.00. 6392

Contents: Fundamental considerations. Transistor parameters. Basic amplifier design. Coupled stages. Preamplifiers. Class A power amplifiers. Class B power amplifiers. Examples of practical amplifier design. Bibliography. Index.

Note: Although limited to junction-type transistors and their application to audio devices, this book should prove to be a useful addition to transistor literature. It is addressed primarily to engineers with vacuum-tube experience who wish a knowledge of transistors for use in practical design. Certain fundamental matters such as static characteristics and temperature effects are discussed succinctly in the first chapter. The second chapter contains a helpful discussion of (1) parameter variations due to such influences as emitter current, temperature and frequency and (2) tabulated specifications for transistors now available commercially. Later chapters are devoted to the various areas of audio design named in their titles. The bibliography is a selected one of literature published 1948–1954. The author is a member of the staff of the Electronics Division of the General Electric Company.

SHOCKLEY WILLIAM
Electrons and holes in semiconductors with applications to transistor electronics. New York D Van Nostrand Company Inc., 1950 588 p. illus. 24 cm. (Bell Telephone Laboratories series) $9 75 6393

Contents: Part I, Introduction to transistor electronics. The bulk properties of semiconductors. The transistor as a circuit element. Quantitative studies of injection of holes and electrons. On the physical theory of transistors. Part II, Descriptive theory of semiconductors. Quantum states, energy bands, and Brillouin zones. Velocities and currents for electrons in crystals. Electrons and holes in electric and magnetic fields. Introductory theory of conductivity and Hall effect. Distributions of quantum states in energy. Fermi-Dirac statistics for semiconductors. Mathematical theory of conductivity and Hall effect. Applications to transistor electronics. Part III, Quantum-mechanical foundations. Introduction to Part III. Ele-

mentary quantum mechanics with circuit theory analogues. Theory of electron and hole velocities, currents and accelerations. Statistical mechanics for semiconductors. The theory of transition probabilities for holes and electrons. Appendixes. Name index. Subject index.

Note. The development of the transistor and the recognition of its many potential applications in electronic devices have resulted in increased interest in the conduction of electricity by the solid semiconductors. The subject is scientifically interesting not only because of possible practical applications but because of the light the associated phenomena shed upon the nature of solids. In this important work by a member of the technical staff of Bell Telephone Laboratories, Inc., the subject is treated from the standpoint of statistical physics. The concept of the excess electron and its counterpart, the "hole" with positive charge, is explained in terms of the quantum theory but is nevertheless related to practical work in transistor electronics.

SPANGENBERG, KARL RALPH

Vacuum tubes New York McGraw Hill Book Company, Inc., 1948 860 p illus. 23 cm. (McGraw Hill electrical and electronic engineering series Frederick Emmons Terman, consulting editor) $12 50 6394

Contents Introduction. Basic tube types. Electrons and ions. Electronic emission. Determination of potential fields. Laws of electron motion. The electrostatic field of triode. Space-charge effects. Triode characteristics. Tetrodes. Pentodes. Noise in vacuum tubes. Electrostatic electron optics. Magnetic lenses. Cathode-ray tubes. Ultra-high-frequency effects in conventional tubes. Velocity-modulated tubes or klystrons. Magnetron oscillators. Photoelectric tubes. Special tubes. High-vacuum practice. Appendixes. Problems. Name index. Subject index.

Note This volume, primarily a text for graduate electrical engineering students, is also useful reference work for electronic engineers engaged in the design of vacuum tubes, and for radio technicians requiring a detailed knowledge of the characteristics of vacuum tubes. It discusses in terms of electron behavior the basic principles and theories underlying tube operation, and shows how these principles are applied in the design and construction of the wide variety of tubes now in general use. Except in the discussions of ultra-high-frequency tubes, no attempt is made to describe tube application and circuits. Pertinent literature is cited in footnotes. The book is based on courses in vacuum tube design given by the author at Stanford University

SYMPOSIUM ON PRINTED CIRCUITS Proceedings of the Symposium on Printed Circuits. Sponsored by the Engineering Department of the Radio-Electronics Television Manufacturers Association with the participation of the Professional Group on Production Techniques Institute of Radio Engineers New York Engineering Publishers 1955 122 p illus 28 cm $5 00 6395

Contents Session I, Product design application Consideration of conversion of an AC-DC receiver to printed circuit design, by A. V Nichol. Current status and recent progress of printed circuits in England, by P Eisler. A subminiature printed circuit system (design phase) by R. J Roman. Product design of an airborne indicator unit using printed wiring, by A. F Maynard. Review of products incorporating printed circuit construction, by A. R. Hughes. Session II, Reliability and serviceability Results of environmental and operational service tests on MDE equipment, by M. E. Goulder Results of military environmental tests of equipment using printed wiring assemblies, by F M. Standaher Factors determining the reliability of electric wiring, by L. F Martin and others. Silver migration in printed circuits, by D K. Yost. Session III, Management considerations Printed wiring—a challenge to management, by M. R. Johnson. Status of printed circuit standardization, by D W Cottle. Session IV Panel on techniques of producing printed wiring boards. Techniques for production of printed wiring boards, by R. A. Gerbold, moderator

Note. The papers which make up this volume were presented at the symposium named in the title and apparently have been printed without revision or amplification Most of the authors are engineers and scientists on the staffs of manufacturing corporations, and most of the papers are devoted to matters which are of concern in the manufacture of electronic equipment employing printed circuits in place of conventional wiring. Techniques of manufacturing printed wiring boards also are discussed. The book is not systematic treatise but it does provide a wide range of explicit information on printed circuit manufacturing.

TERMAN, FREDERICK EMMONS, AND OTHERS

Electronic and radio engineering By Frederick Emmons Terman, assisted by Robert A Helliwell Joseph M Pettit, Dean A. Watkins, and William R. Rambo Fourth edition New York McGraw Hill Book Company Inc., 1955 1,078 p illus. 24 cm. (McGraw Hill electrical and electronic engineering series Frederick Emmons Terman consulting editor) $13 00 639

Contents. The elements of system of radio communication. Circuit elements and circuit theory· Circuit elements. Properties of circuits with lumped constants. Transmission lines. Wave guides and cavity resonators. Electronic engineering fundamentals. Fundamental properties of electron tubes. Electron optics and cathode-ray tubes. Voltage amplifiers for audio frequencies. Voltage amplifiers for video frequencies. Amplifier distortion, power amplifiers, and amplifier systems. Negative feedback in amplifiers. Tuned voltage amplifiers. Tuned power amplifiers. Vacuum-tube oscillators. Amplitude modulation. Detectors and mixers. Frequency modulation. Wave shaping, nonlinear waves, and pulse techniques. Microwave tubes. Power for operating vacuum tubes. Transistors and related semiconductor devices. Radio engineering and radio systems. Propagation of radio waves. Antennas. Radio transmitters, receivers, and communication systems. Television. Radar and radio aids to navigation. Name index. Subject index.

Note. Earlier editions of this work are entitled *Radio engineering* The change in title reflects increased emphasis on the fundamentals of electronic elements and systems, and less attention to radio in particular a shift already apparent in the third edition published in 1947 In this fourth edition, the part entitled "Electronic engineering fundamentals" accounts for more than half of the pages, while the part on radio engineering and radio systems only about 280 pages in length. In comparison to the third edition this edition represents a thorough revision. There are several new chapters including those on wave guides and on transistors. The chapters carried over have also been revised. There are numerous new illustrations and new literature references. Still primarily textbook for advanced undergraduate college students, the book also has reference value by virtue of its comprehensive assembly of basic knowledge. It is well indexed.

TERMAN, FREDERICK EMMONS, AND JOSEPH MAYO PETTIT

Electronic measurements Second edition. New York McGraw Hill Book Company Inc., 1952 707 p. illus. 24 cm (McGraw Hill electrical and electronic engineering series Frederick E Terman consulting editor) 6397
$11 00

Contents Voltage and current. Power. Circuit constants of lumped circuits Circuit constants in systems involving distributed constants. Measurement of frequency Waveform, phase and time-interval measurements Characteristics of triodes, pentodes and similar tubes. Amplifier measurements. Receiver measurements. Antennas. Radio waves. Laboratory oscillators. Generators of special waveforms. Reactance and resistance standards and devices. Attenuators and signal generators. Author index. Subject index.

Note. The first edition of this book was titled *Measurements in radio engineering* and it was well received as text for college students of radio engineering and reference book for radio technicians. In this edition, the scope has been extended to include measurements in the higher frequencies used in television, radar, etc., hence the change in title. It now contains about twice as many words and more than twice as many illustrations as it did in the first edition. However it is still addressed to essentially the same audience that is, advanced students in engineering courses and graduate engineers who are interested in the principles and techniques of measurements in radio and electronics. The laboratory experiments that were outlined in the appendix of the first edition

[illegible] has dropped. The literature citations have been much expanded and the names of authors of cited papers are now included [illegible] index.

TURNER, RUFUS P

Basic electronic test instruments their operation and use. New York Rinehart Books, Inc., 1953 254 p. illus. 24 cm. $4 95 6398

Contents: Simple meters for current and voltage. Ohmmeters and ohm-in-ammeters. Vacuum-tube voltmeters. Power measurements and power meters. Impedance meters and measurements. Capacitor checkers. Inductance checkers. Special-purpose bridges and [illegible]. Oscilloscopes and applications. R-F test oscillators and signal generators. Audio-test oscillators. Frequency-measuring devices for radio frequencies. Audio-amplifier testing devices. R F and [illegible]. Tube characteristics and tube testers. Index.

Note: In this book, the types of instruments which are treated in the chapter titles are described for the benefit of servicemen in television and radio fields. Instruments are described specifically [illegible] principles and uses. Basic circuits are illustrated in diagrams. Typical commercial instruments are shown in photographs. The book [illegible] successor to the author's *Radio test instruments*, 1945 [illegible] might be expected in view of the rapid development of the field, contains much material that was not presented in the earlier work.

UNITED STATES. DEPARTMENT OF THE ARMY

English-Russian, Russian English electronics dictionary Washington D C. Government Printing Office 1956 944 p. 23 cm. (United States. Department of the Army Technical manual no. 30-545) $3 50 6399

Contents: Introduction. English-Russian dictionary. Russian-English dictionary.

Note: "This manual is published to aid the English-speaking [illegible], translator, writer, editor, or engineer who has occasion to use Russian language publications on electronics and telecommunications. Though [illegible] pioneer work in its field the dictionary is believed to be reasonably comprehensive as all modern sources available have been used in the compilation. In addition to the sources published in the U.S.A., the U.S.S.R., and the U K many Russian terms have been obtained from Soviet technical, research institutions, and individual scientists. [illegible] The dictionary is an overall collection of about 22,000 Russian terms and abbreviations covering the following fields Antennas and wave guides, Atomics (principal terms), Aeronautical applications, Batteries, Beacons, Cable, Communications, Computers, Dial telephone systems, Direction finding, Electroacoustics, Electromedical applications, Electron devices, Electronic formulas, High-frequency techniques, Industrial electronics, Military applications, Measurements and measuring instruments, Meteorological systems, Navigation (radio aids to) Optics, Oscillographs, Photo applications, Physics (fringe terms) Pulse work, Radar, Radio, Radiolocation, Radiology RR signals, Interlocking and automatic control, Semiconductors (including transistors) Signaling (including alarm systems) Sound recording, Telegraphy Telemechanics (including telemetering) Telephony Television, Tubes and their manufacture, and X-rays.

UNITED STATES DEPARTMENT OF THE NAVY BUREAU OF NAVAL PERSONNEL

Basic electronics. Washington, D C. Government Printing Office 1955 728 p. illus. 20 cm. (Navy training courses. Navpers 10087) $2.25 6400

Contents: Tuned circuits. Operating principles of the electron tube. Power supplies for electronic equipments. Introduction to electron-tube amplifiers. Electron-tube amplifier circuits. Audio power amplifiers. Oscillators. Modulation and demodulation. Transmitters. Transmission lines. Antennas and propagation. Elementary communications receivers. Electronic test equipment. Introduction to radar. Appendix. Answers to quizzes. Electronic color coding and symbols. Index.

Note: A text developed for enlisted personnel of the Navy [illegible] duties require them to have [illegible] knowledge of the fundamentals of electronics. It presents basic concepts in the field of electronics, with emphasis on the theory of operation of typical electronic components and circuits having frequent application in naval electronic equipments. Electronics is defined as "the science and technology [illegible] concerned [illegible] with devices involving the emission, behavior and effect of electrons in vacuums, gases, and semiconductors.

VAN DER ZIEL ALDERT

Noise. New York Prentice Hall Inc. 1954 450 p. illus. 23 cm. (Prentice-Hall electrical engineering series W L. Everitt editor) $8.50 6401

Contents: Introduction. Thermal noise. Applications of Nyquist's theorem and Schottky's theorem. Noise measurements. Tube noise at low frequencies. Tube noise at high frequencies. Practical low-noise circuits. Excess noise in semiconductors and vacuum tubes. Noise in mixer tubes and circuits. Noise in feedback circuits. Statistical methods. Fourier analysis of fluctuating quantities. Noise in detector circuits. The laws of [illegible] vacuum tube electronics. Space-charge waves in electron beams. Noise in physical instruments. Appendix. Index.

Note: Electronic rather than acoustical noise is treated in this book. (The two types are distinct, although electronic noise in such [illegible] communications systems as radio will produce acoustical noise at the speaker.) The author shows that most noise problems can be solved by standard techniques of network analysis. The first ten chapters illustrate the solutions of noise problems of most interest to the practical electronics engineer. In these chapters the treatment is not mathematically rigorous. The level of treatment is stepped up in succeeding chapters, beginning with the chapter on statistical methods. The book is of interest to [illegible] variety of graduate scientists and engineers, including physicists, communications engineers, engineers specializing in the design of measuring instruments based on electronic principles, and engineers concerned with the design of vacuum tubes and transistors. The author is Professor of Electrical Engineering in the University of Minnesota.

WESTINGHOUSE ELECTRIC CORPORATION

Industrial electronics reference book, by electronics engineers of the Westinghouse Electric Corporation. New York John Wiley & Sons, Inc., 1948. 680 p. illus. 30 cm. $18.00. 6402

Contents (abridged): Physical background of industrial electronics, by E. U. Condon and E. G. F. Arnott. Vacuum tubes, by H. J. Dailey, J. H. Findley and E. C. Okress. Gas tubes, by D. E. Marshall. Photoelectric devices, by W. W. Watrous and D. E. Henry. Industrial X-ray tubes, by J. Lempert. Cathode-ray tubes, by P. E. Volz and P. E. Grandmont. Circuit elements, by D. G. Little. Rectifier circuits, by H. J. Bichsel. Amplifier circuits, by R. Lee. Circuits for industrial control, by H. J. Bichsel. Transmission lines, by E. U. Condon and W. Altar. Mercury-arc rectifiers for power application, by G. F. Jones and C. E. Marcum. Radio-frequency heating, by D. Venable and T. P. Kinn. Power-line carrier, by F. E. Mabry. Electronic instruments, by M. P. Vore. Electrostatic precipitators, by E. H. R. Pegg. Electronic motor control, by E. F. Pachkowski. Applications of ultraviolet radiations, by H. C. Rentschler. Care and maintenance of electronic apparatus, by C. J. Madsen. Index.

Note: Each of the 34 chapters in this volume presents [illegible] concise digest of [illegible] topic in electronics. Together, they constitute [illegible] comprehensive manual of information that will be useful to engineers responsible for the design or use of industrial electronics apparatus. The information is basic and general; for example, the chapter on electric motor control contains diagrams of many basic control circuits but contains no reference to specific makes of control equipment. Mathematics is used freely and there has been no obvious attempt to avoid technical terminology but the exposition will be clear to most plant engineers and to other persons familiar with the terminology of electronics.

YOUNG MILTON GABRIEL AND HARRY S BUECHE

Fundamentals of electronics and control. New York Harper & Brothers, 1952 525 p. illus. 25 cm. $6.00. 6403

Contents: Electron theory. Basic circuit components and control. Principles of electron emission. High vacuum (hard) tubes. Tube

utilizing gas (soft tubes) Mercury pool tubes. Amplifiers. Oscillators. Modulation and demodulation. Rectifiers. Appendixes. Index.

Note. A textbook for use in engineering college courses. Although introductory it provides an adequate coverage of theory and includes also discussions of standard electronic devices including such recently developed ones as the transistor. Enough information is included on many topics to suit the needs of the nonspecialist engineer at work in industry For example, the chapter on mercury pool tubes is 38 pages long and includes 11 references to related literature.

ZELUFF, VIN, AND JOHN MARKUS

Electronics manual for radio engineers. New York McGraw Hill Book Company, Inc., 1949 879 p illus. 28 cm. $14 00 6404

Contents: Antennas. Audio. Circuit theory Components. D-c amplifiers. Filters. Ionosphere. Measurements. Microwaves. Power supplies. Production. Receivers. Television. Transmission lines. Transmitters. Tubes. Index.

Note: A collection of 289 articles which appeared in the periodical *Electronics* during the period 1940–1948 and which have been in demand for reference use by men in radio and other communications fields. It is similar in nature to *Electronics for engineers* New York, 1945 and in fact there is slight amount of duplication. Some editing is apparent, but generally speaking the texts of the articles are unaltered from the periodical form. Citations are given to the original publications. An extensive subject index makes the volume a reference or manual of considerable usefulness.

ZWORYKIN, VLADIMIR KOSMA, AND E. G RAMBERG

Photoelectricity and its application. New York John Wiley & Sons, Inc., 1949 494 p. illus. 24 cm. $10 00 6405

Contents. Historical introduction. General theory Photosensitive surfaces. Materials and apparatus for making phototubes. General methods of preparing phototubes. The vacuum phototube. The gas-filled phototube. The multiplier phototube. The image tube. Photoconductive cells. Photovoltaic cells. Photocell circuits and amplification. The measurement of small photocurrents. Photoelectric metering devices. Phototubes in sound reproduction. Phototubes in picture transmission. Photosensitive camera tubes in television. Light beam signalling and infrared detection. Miscellaneous applications of photoelectricity Photocells in the future. Appendix. Author index. Subject index.

Note: A comprehensive but largely descriptive survey Somewhat more than half of the book is given over to describing the operating principles, characteristics, and uses of photoelectric devices. The coverage is wide, including not only apparatus already in commercial use but also inventions still in the experimental stage. An example of the latter is a photoelectric reading machine for the blind. The work will be useful to engineers, machine designers, and inventors. Extensive bibliographies are appended to the chapters.

COMMUNICATIONS ENGINEERING

GENERAL

ALBERT, ARTHUR LEMUEL

Electrical communication. Third edition. New York. John Wiley & Sons, Inc., 1950. 593 p. illus. 23 cm. $7.00. 6406

Contents: [illegible]

Note: A standard work used both as textbook in engineering [illegible]

ALBERT, ARTHUR LEMUEL

The electrical fundamentals of communication. Second edition. New York McGraw Hill Book Company Inc., 1952 531 p. illus. 24 cm. $7.00. 6407

Contents: The fundamentals of electronics. Direct voltages and currents. [illegible] Index.

Note: A successful introductory text for students [illegible]

ALBERT, ARTHUR LEMUEL

Fundamentals of telephony New York McGraw Hill Book Company Inc., 1943 374 p. illus. 21 cm. $6.00. 6408

Contents: Direct-current theory. Alternating-current theory. [illegible]

Note: An elementary book for beginning students and telephone workers. [illegible]

BLACK, HAROLD S

Modulation theory New York D Van Nostrand Company Inc., 1953 363 p. illus. 24 cm. (The Bell Telephone Laboratories series) $8 75 6409

Contents: Historical background. Why modulate? Kinds of modulation. [illegible] Appendix. Index.

Note: A well-organized text developed from material used in the Communications Development Training Program of the Bell Telephone Laboratories, Inc. [illegible] Well-chosen lists of literature are included.

BRILLOUIN, LEON

Science and information theory New York Academic Press, Inc., 1956. 320 p. illus. 24 cm. $6.60. 6410

Contents: The definition of information. [illegible] Author index. Subject index.

Note: An introduction to information theory for graduate scientists and engineers. [illegible] The author is at present a member of the faculty of Columbia University

BRONWELL, ARTHUR B, AND ROBERT E BEAM

Theory and application of microwaves. New York McGraw Hill Book Company, Inc., 1947 470 p. illus. 24 cm (Radio communication series, Beverly Dudley, consulting editor) $7 50 6411

Contents. Introduction. Charges in electric fields. Current, power and energy relationships. The physical basis f equivalent circuits. Negative-grid triode oscillators and amplifiers. Transit-time oscillators. Magnetron oscillators. Transmission-line equations. Graphical solution of transmission-line problems. Transmission-line networks. Transmitting and receiving systems. Pulsed systems—radar Maxwell's equations. Propagation and reflection of plane waves. Solution of electromagnetic-field problems. Wave guides. Impedance discontinuities in guides—resonators. Applications of wave guides and resonators. Linear antennas and arrays. Impedance of antennas. Other radiating systems. Appendices. Index.

Note This work provides a comprehensive introduction to the fundamental principles and computations pertinent to microwaves and to basic microwave apparatus. It should be useful not only to engineering students but also to engineers, particularly radio specialists, who completed their college work before ultra-short waves took on their current importance. Although the mathematics employed are not as advanced as in some works on microwaves, the authors have assumed that the reader will have at least the mathematical background of senior engineering student. Worked examples and problems for the user to solve are provided.

DOSS, M P, editor

Information processing equipment New York Reinhold Publishing Corporation 1955 280 p illus 24 cm. $8 75 6412

Contents Special typing, stenciling, hectographing, figure preparation, and miscellaneous equipment, by R. B. Moore. Lensless copying with sensitized papers, by P E. Smith. Photography in the laboratory by L. C. Stock and M. P Doss. Microcopying, methods and use, by H. W Ballou. Xerography—dry photographic copying, by B H. Weil. Letterpress and offset printing, by G G. Taylor Author's guide to effective slides—projection equipment and copy preparation by L. S. Bonsall and others. Audio methods for handling data, by R. C. McMaster Storing and finding technical information with punched cards, by C. A. Burkhard. Numerical data-handling machines, by J J Stone and A. T Maleron. Index.

Not The full range f machines currently used in the recording, reproducing and interpreting of information is covered in the book. Examples of specific kinds are dictating machines using discs and belts, wir and tape recorders, typewriters, microfilm readers, punched cards and equipment for interpreting them, calculating machines, and machines for copying by photography printed and typewritten materials. A considerable part of the space is devoted to factual descriptions f commercially ailable equipment. Manufacturers' names are given, and in some cases typical retail prices are quoted. Pictures of many machines are shown. The descriptions are accompanied by general discussions of problems and processes and by expert information on the applications and limitations of specific machines Rather extensive bibliographies are included in most of the chapters. The book is essential reading for librarians, persons who are concerned th the selection of office equipment, graduate scientists and scholars hose fields of activity requires the recording and retrieving of data, and inventors with ideas for possible new devices in this field.

EVERITT WILLIAM LITTELL

Communication engineering Second edition New York McGraw Hill Book Company Inc., 1937 727 p illus 23 cm $8 00 6413

Contents. Introduction and classification f impedance elements The function of networks. Network theorems. Networks using linear bilateral impedances Resonance The infinite line. Reflection Filters. Coupled circuits Impedance transformation. Equalizers. Bridge circuits. Inducti coordination Networks using unilateral and non-linear impedances. Unilateral or control impedances Modulation and de-modulation. Vacuum tube detectors. Class A audio frequency amplifiers. Class A radio frequency amplifiers Radio frequency amplifiers for transmission (classes B and C) Oscillators. Coupling between electrical circuits and free sp Radiation. Coupling between electrical and mechanical circ Electromechanical coupling. Appendix. Index.

Note. A college textbook covering the fundamental theory communication systems, designed for students of radio and t phone engineering as well as for electrical engineers in gen who may desire a broad knowledge of the field without spec lizing. N attempt is made to treat specific applications, such telephone switching systems or commercial radio broadcast The second edition contains new material covering the devel ment of communications between 1932 and 1937 including new treatment of nonlinear distortion and new problems, wh chapters on complex quantities and measurements have b deleted.

FISCHER, BERNHARD, AND HERBERT JACOBS

Elements of mathematics for radio, tel vision and electronics. New York The Ma millan Company, 1954 259 p illus. 22 cm $6 95 641

Contents. Whole numbers. Common fractions. Decimal fractio The slide rule. Series circuits. Percentage. Division on the sl rule. Powers of ten. Squaring on the slide rule. Parallel circu Alternating-current circuits. Square roots. Tables, nomographs a curves. Introduction to geometry Reactance and resistance in seri Negati numbers. Addition of signed umbers. Equations. Meta Time constants. Subtraction of positive and negative umbe Multiplication and division in algebra. Multiplication and factori Equations containing fractions. Ratio and proportion. Voltage d viders. Square waves and sine es. Exponents. Loudspeakers a output transformers. Putting algebra to work. Decibels. T radioman's business mathematics. Appendices. Index. Answers.

Note. Both in the expository matter and in the problems, math matics and electronics are related to one another throughout th book. The areas of mathematics covered are adequately indicat by the chapter titles. Under each heading, the treatment is intr ductory and elementary The book is well organized for self-instru tion as well as for use in organized classes.

HERSHBERGER, W D

Principles of communication systems. New York Prentice-Hall Inc. 1955 253 p. illus 22 cm. (Prentice-Hall electrical engineering series, W L. Everitt editor) $5 00 641

Contents. Introduction. Signals and their spectra. Information and rate of transmission of information. Noise. Modulation and detection. Transmission lines in communication. Characteristics of radio waves. Audio frequency systems. Information in radar systems. Information in television. The design of communication systems Appendices. Index.

Not The title of this book may be taken literally It deals with principles both in their broad outlines and in detail and is not concerned with technical features of communication systems except as these illustrate principles. It is addressed primarily to junior and senior engineering students; however, some concepts and topics usually deferred to the graduate years, such as Fourier integrals, are introduced. The exposition is not predominantly mathematical on the other hand, it is not written so that the mathematics can be skipped. Selected literature references are included.

LOCKE, WILLIAM N, AND A DONALD BOOTH, editors

Machine translation of languages, fourteen essays New York Published jointly by The Technology Press of The Massachusetts Institute of Technology and John Wiley & Sons, Inc., 1955 243 p 24 cm. $6 00 6416

Contents Foreword the new tower by W Weaver Historical introduction, by A. D Booth and W N. Locke. Translation, by W Weaver. Some methods of mechanized translation, by R. H. Richens and A. D Booth. The design of an automatic Russian-English technical dictionary by A. G. Oettinger. A preliminary study of Russian, by K. E. Harper Some problems of the "word," by W N. Locke. Speech input, by W E. Bull and others.

Locke, William N., and A. Donald Booth, editors

Machine translation of languages, fourteen essays. New York Published jointly by The Technology Press of The Massachusetts Institute of Technology and John Wiley & Sons, Inc., 1955 243 p. 24 cm $6.00 6416

Contents. Foreword the new tower by W. Weaver. Historical introduction, by A. D. Booth and W. N. Locke. Translation, by W. Weaver. Some methods of mechanized translation, by R. H. Richens and A. D. Booth. The design of an automatic Russian-English technical dictionary by A. G. Oettinger. A preliminary study of Russian, by K. E. Harper. Some problems of the "word"... by W. N. Locke. Storage by W. E. Bull and others. Speech input, by W. N. Locke.

…nts: Two-terminal networks containing inductance and …nce only. General properties of passive four-terminal … Image parameters for nearly symmetric lattice sections. …tions of component networks and location of critical …ences for low-pass lattice (reactive). Some aspects of ladder equivalents. Filter terminating half sections. Insertion …d section plane. Effect of dissipation. Design of low-pass … Frequency transformations. Constant-R, insertion loss equal… bles.

…: An important contribution to the literature of network …ry. It reflects the techniques and experience of the Bell …phone Laboratories in the design of filters and equalizers in …phone and other communications networks. The analysis of …ge four-terminal networks is covered thoroughly. The book …udes equations, tabulations, graphs and other aids to practi… design work. Though organized for use as … text it should … of interest to many graduate engineers as well as to advanced …dents. The author is now Professor of Electrical Engineering in …dgers State University

…ROUT VINCENT C.
Active networks. New York Prentice-Hall, Inc., 1954 485 p. illus. 22 cm. $8 50. 6428

Contents: Some fundamental concepts of communication engineering. Active network elements. Low-pass vacuum-tube amplifiers. Transient response of amplifiers. Band-pass amplifiers. Negative feedback amplifiers. Some special types of small-signal amplifiers. Power amplifiers. Oscillators. Modulation and frequency conversion. Frequency, phase, and pulse modulation. Detectors and demodulators. Wave-shaping circuits. Relaxation oscillators and trigger circuits. Noise and information theory. Appendixes. Index.

Note: A textbook designed for students of communications engineering who have completed basic courses in vacuum tubes and … Active networks, in scope, is all networks capable of amplification. … It covers fairly inclusively … of what the modern communication engineer … concerned with in designing networks. Some topics are treated rather briefly; for example, the chapter on noise and information theory is only 28 pages long. Nevertheless, the reader is introduced to the basic ideas and computations. Aside from its use as a text the book is useful as a reference book of concise information on network elements, such as phase characteristics, and citations of the modern literature pertaining to them. The author is Associate Professor of Electrical Engineering in the University of Wisconsin.

…DER, JOHN D
Networks, lines and fields. Second edition. New York Prentice-Hall Inc. 1955 593 p. illus. 22 cm. (Prentice-Hall electrical engineering series W L. Everitt, editor) $10.65 6429

Contents: Network transformations. Resonance. Impedance transformation and coupled circuits. Filters. Transmission-line parameters. … transmission-line theory. The line at radio frequencies. The line at power frequencies. Equations of the electromagnetic field—radiation. Transmission and reflection of plane waves at boundaries. … Guided waves between parallel planes. Wave guides. Radiation … Appendixes. Index.

Note: A second edition of … college text, first published in 1949. It is an introduction to the analysis of networks and fields and … written at … level to suit the needs of students who are preparing for careers in communications engineering. The analysis … systems) of circuits with lumped parameters and systems … distributed parameters are both covered. Wave guides are … as special forms of transmission lines. In comparison to the first edition, much revision and amplification is apparent. … chapters, including the chapter on antennas, have been … Vector analysis and notation are now used in many parts.

…T E.
Transmission networks and wave filters. Princeton D Van Nostrand Company Inc., 1929 470 p. illus. 22 cm. $7 75 6430

Contents: Introduction: The place of transmission networks in … of electrical communication. Part I. Principles of transmission networks. Definitions—units employed—fundamental principles of electric circuit theory. External performance of networks—… for network equivalences—some important network parameters. The effect of impedance mismatching at the terminals of network—reflection factor—interaction factor. Properties of two-terminal impedance networks. Part II, Electric wave filters: General —conditions for free transmission and for attenuation. The more common types of filter sections. The formulation of multi-section filters—low pass, high pass, band pass, and band elimination types. Terminal effects—reflection interaction losses—total insertion loss characteristics. Part III, Composition of transient waves: Resolution of steady state waves into frequency components by Fourier series analysis. Resolution of transient waves into frequency components by Fourier integral analysis. Appendixes: Bibliography. Relation between decibels and current, voltage, and power ratios. Index.

Note: An outstanding presentation of the classical approach to the steady state design of filter networks. It … as developed originally in courses given by the author at the Bell Telephone Laboratories and the Massachusetts Institute of Technology and is addressed primarily to young graduate engineers. In the last chapter the analysis of transient waves by Fourier series, particularly Fourier integrals, is introduced. The bibliography covers the journal, book and patent literature to approximately the year 1928.

VON TERSCH L. W., AND A. W SWAGO
Recurrent electrical transients. Englewood Cliffs, N J Prentice-Hall Inc. 1953 399 p. illus. 21 cm. (Prentice-Hall electrical engineering series. W L. Everitt editor) $7 75 6431

Contents: Fundamental concepts. Basic combinations of resistive, capacitive and inductive elements. Response of basic circuits to simple waveforms. Clamping circuits. Clipping circuits. Circuits for the electric deflection of cathode-ray tubes. Circuits for the magnetic deflection of cathode-ray tubes. Trigger circuits. Multivibrators. Index.

Note: An introduction to the various wave-shaping circuits is provided in this engineering college text. The scope of the book is broad, and the treatment emphasizes analysis, using the time-constant concept … wherever possible. Comprehension on the part of the reader is further facilitated by the inclusion of numerous worked examples of illustrative problems. Extensive lists of references to the literature are included in the various chapters.

WARE LAWRENCE ALBERT AND HENRY R. REED
Communication circuits. Third edition New York John Wiley & Sons Inc. 1949 403 p. illus. 24 cm. $5 75 6432

Contents: Transmission-line parameters. Networks, T and … sections. Network theorems. The line composed of finite sections. The line having uniformly distributed parameters. Open-circuit and short-circuit lines. Reflection losses. The power-transmission line—efficiency. Constant-K filters. M-derived and composite filters. Impedance transformation. Ultrahigh-frequency transmission in wave guides—general. Ultrahigh-frequency rectangular wave guides. Ultrahigh-frequency cylindrical wave guides. Electromagnetic theory of coaxial lines. Transmission-line experiments. Appendixes. Index.

Note: In this college text for electrical engineering students the basic principles of communication transmission lines for all frequencies are presented, but the ultrahigh frequencies are discussed in the greatest detail. The treatment assumes … knowledge of calculus and elementary a-c theory. More advanced mathematics which may be required is included in the appendix. In this edition, the chapters on transmission-line parameters and impedance matching have been rewritten and enlarged, the treatment of attenuation in wave guides is now based on Poynting's theorem, and the number of review problems given at the end of each chapter has been increased.

SOUND RECORDING AND TRANSMISSION

BEGUN S J
Magnetic recording. New York Rinehart & Company Inc., 1949 242 p. illus. 23 cm. $5.00. 6433

Contents: History of magnetic recording. Acoustic factors in magnetic recording. Fundamentals of magnetism. Theory of magnetic recording. Components of … magnetic recording system. Mag-

pendixes. Students beginning the book should have a general understanding f telephone apparatus and systems, as well as a knowledge of elementary hyperbolic function theory.

CUCCIA, C LOUIS

Harmonics, sidebands, and transients in communication engineering as studied by the Fourier and Laplace analyses New York McGraw Hill Book Company, Inc., 1952 465 p illus 24 cm. (McGraw Hill electrical and electronic engineering series, Frederick E Terman, consulting editor) $10 00 6422

Contents Elementary functions of a complex variable. Periodic wave analysis—the Fourier series. Nonperiodic waves—the Fourier transform. The Laplace transform. Complex waves in radio, television and radar Linear-network analysis. Harmonic distortion—amplifier operation. Gaseous-rectifier-tube circuits. Harmonics and transients in filter networks. Harmonics and transients in amplifiers. Integrating, differentiating, and scanning systems for television. Reactance tubes, frequency stabilization, and phase synchronization. Modulation systems in electrical communications. Amplitude-modulated waves. Single-tone frequency modulation. Single-tone phase modulation Indirect frequency modulation and wave interference. Multitone frequency-modulated waves and pulse-width modulation. Spectral analysis of finite wave trains. Wave transmission through linear networks. Traveling waves in communication systems. Reception in electrical communications. Appendix Bessel functions of the first kind. Name index. Subject index.

Note. In this important work, the mathematics of harmonic and transient analysis are explained for communications engineers, and the mathematical methods are applied to a variety f engineering problems in the communications field. The nature and typical uses f Fourier and Taylor's series and the Laplace transformation in important subfields of communication engineering are fully covered. Selected literature references are included. The book is of interest not only to graduate students of communication engineering but also to engineers at work in research and design. The author is Patent Engineer on the staff of the David Sarnoff Research Center of RCA Laboratories Division.

GUILLEMIN, ERNST ADOLPH

Communication networks. New York John Wiley & Sons Inc 1931–35 2 v illus. 23 cm. Vol. I, $7 50, vol II, $9 50 6423

Contents. Volume I, The classical theory of lumped constant networks The philosophy of linear electrical networks. The single mesh network with constant excitation. The single mesh circuit with harmonic excitation. The steady-state solution for the general network. The transient solution for the general network. The evaluation of integration constants. The vector interpretation of the transient solution. Applications. Some important network formulae. The treatment f periodic force functions. Index. Volume II The classical theory of lines, cables and filters: The engineering formulation of the long-line problem. The steady-state solution to the long-line equations. Propagation and characteristic impedance functions of the long line. Characteristics of four-terminal networks. Theorems regarding driving-point impedances and an extension to two-terminal pairs in the reactive case. Energy functions and linear network transformations. Artificial and lumped-loaded lines. The non-dissipative uniform ladder structure. Conventional filter theory Filter design methods based upon the lattice structure. The transient behavior of filters. Simulative and corrective networks. The transient behavior of long lines. Appendix List of symbols. Index.

Not An analytical treatment of network theory It uses the more advanced methods of analysis to considerable extent. In Volume the mathematical artifices of determinants, particular integrals, and determination of constants of integration are developed for their contribution to the solution. The treatment is mathematically interpretive of such practical aspects as transformer circuits and coupled circuits. The Heaviside expansion formula is introduced, along with the Fourier and other periodic functions. The second volume is not restricted to the determination f analytic solutions to the various problems arising in connection with the behavior and design of transmission networks, but places primary emphasis upon detailed discussions of the results of such analysis in the light of practical requirements in the communications field.

KARAKASH, JOHN J

Transmission lines and filter networks. New York The Macmillan Company, 1950, 413 p illus. 24 cm. $6.25 6424

Contents (abridged) Section one, Transmission lines. Section two, Transmission networks. Section three, Elementary filter theory Section four Appendixes. Maxwell's equation and some elementary applications. Matrix algebra. Index.

Note A textbook designed for the instruction of advanced undergraduate college students of communications engineering. It provides a substantial introduction to the steady-state properties of transmission lines and wave filters. The range of frequencies covered is from those used for voice transmission in conventional telephone lines to the microwave frequencies employed in radar. The style is compact, almost sparse, but nevertheless, lucid. Selected literature references to important source publications are included as footnotes.

KING, RONALD W P

Transmission line theory New York McGraw Hill Book Company, Inc., 1955 509 p. illus. 24 cm $1[illegible].00 6425

Contents The infinitely [illegible] long line. The terminated line. Impedance and admittance. General [illegible] solutions for current and voltage. General [illegible]alities in transmission lines. Transmission Discontinuities and [illegible] special sections of transmission line. Transmission-line oscillators and co[illegible]. Bibliography Index.

Note Methods available for the [illegible] analysis of transmission lines fall into two groups, those based on the [illegible] equivalent circuit concept [illegible] and related concepts, and those based on the Maxwell equa[illegible] [illegible] approach is used in electromagnetic theory The electroma[illegible] High-frequency lines [illegible] this important addition to the literat[illegible] detail, and the differences in the steady state are analyzed in de[illegible] are presented. The [illegible] between lines of infinite and finite len[illegible] University and the author is a member of the faculty of Har[illegible] theory. The book is widely known authority on transmission lin[illegible] electrical engineers organized for use in graduate courses offered [illegible] of the equations The level of treatment and the full developm[illegible] engineers working make it also suitable for home study by gradu[illegible] in communications.

MILLMAN, JACOB, AND HERBERT TAUB

Pulse and digital circuits. New York McGraw Hill Book Company, Inc., 19[illegible]56 687 p. illus. 24 cm (McGraw Hill electrical and electronic engineering series Frederick Emmons Terman, consulting editor) $12.50. 6426

Contents Review of amplifier circuits. Linear wave shaping—RC RL, and RCL circuits. Linear pulse amplifiers and nonlinear wave shaping. The bistable multivibrator. Monostable and time-base multivibrators. Voltage time-base generators. Current time-base generators. Pulse transformers and blocking oscillators. Electromagnetic delay lines. Counting. Synchronization and frequency division. Digital computer circuits. Transmission [illegible] Pulse and comparators. Time modulation and measurement[illegible] Appendixes. digital systems. Transistors in pulse and digital circuits. Tube characteristics. Index.

Note A graduate-level textbook on class of circuits (and their elements) which are basic in such fields f engineering as radar, electronic computers, data processing systems, and instrumentation. Although selected applications are described, they are [illegible] Instead, the book deals with the principles and characteristics. The basic circuits and of such circuit elements as trans[illegible] analysis of mathematics, including differential equations, useful in the [illegible] and design of pulse and digital circuits, is covered. [illegible] diagrammatic representations of circuits are included as [illegible] them. Selected references are given to the literature.

REED, MYRIL B

Electric network synthesis image parameter method. Englewood Cliffs N J Prentice-Hall Inc, 1955 252 p illus. 24 cm. (Prentice-Hall electrical engineering series W L. Everitt editor) $8 00. 6427

Antennas

Contents: Sound waves. Musical terminology. Musical scales. Intensities and loudness. Musical instruments. Characteristics of voice instruments. Properties of music. Theater, studio, and room acoustics. Sound-reproducing systems. Index.

Note: A synthesis of psychological, physical, and technical information that bears on music, its reproduction and hearing. The author's approach makes the book potentially useful to a wide variety of readers, including musicians interested in the technical and psychological aspects of their art, architects and engineers concerned with acoustics, and amateurs and professionals interested in sound reproduction. The chapter on musical instruments contains descriptions of not only the better-known instruments but also of such devices as music boxes and electrical carillons. Discussions of microphones, loudspeakers, telephones, disc phonographs, and broadcasting are included in the chapter on sound reproducing systems. The author ... Director of the Acoustical Laboratory of RCA Laboratories.

POTTER, RALPH KIMBALL, AND OTHERS

Visible speech, by Ralph K. Potter George A. Kopp, and Harriet C. Green. New York D. Van Nostrand Company Inc., 1947 441 p. illus. (part col'd) 27 cm. $6.00 6440

Contents: Foreword, by O. E. Buckley. Part I, Development and basic principles of visible speech: Introduction. The sound spectrograph. The direct translator. The training program. The basic patterns of visible speech—the new ABC's. Part II, Lessons on the patterns of American speech. Suggestions for using the lesson chapters. The patterns and the hubs of the vowels and diphthongs. Reading the stop sounds. Reading the fricative sounds. Reading the vowel-like sounds—the nasal sounds—the glides. Reading the words. Part III, Applications of visible speech: Deaf learning. Phonetic research. Speech correction research. Foreign languages research. Vocal music research. Generation and speculative uses. Appendix I—Reference listing of phonetic symbols. Appendix II—Glossary of the profiles and hub areas. Bibliography of technical publications on visible speech. Index.

Note: It has been long possible to make such visual records of the sounds of speech as appear on the sound tracks of moving picture films, but the patterns of such recordings are much too complex to be read. However, if the complex wave of ... spoken sound is used ... analyzed by ... variable filter into its chief components, and these are recorded individually, distinctive patterns are produced which can be read by persons with proper training. The book contains brief nontechnical descriptions of the electronic sound spectrograph and the direct translator, which convert the spoken sounds to visible patterns, but chiefly it surveys the principles and potential applications of visible speech. It will be of the most interest to teachers of speech and persons concerned with the education of the deaf than to engineers. The authors are all present or former staff members of the Bell Telephone Laboratories.

READ OLIVER

The recording and reproduction of sound. Revised and enlarged second edition. Indianapolis Howard W Sams & Company Inc., 1952. 790 p. illus. 24 cm. $7 95 6441

Contents: Behavior of sound waves. History of acoustical recording. Basic recording methods. Lateral disc recording. Disc recorders. Microgroove recording. Recording (cutting) styli. The decibel. Phono reproducers (pickups). Tone arms and reproducing styli. Magnetic tape and wire recording. Magnetic tape recorders. Magnetic film (tape and wire) recording. Magnetic tape recorders. Dividing networks. Microphones. Loudspeakers and enclosures. Dividing networks and filters. Tone control (equalizers). Attenuators and mixers. Amplifiers. Preamp-equalizers. Music systems. PA sound systems. Receivers. Tuners (AM-FM). Speech input systems. Complete recording systems. Record manufacture (pressings). Audio measurements. Recording and reproducing standards. Appendix. Index.

Note: A comprehensive and useful manual about the theory, construction, and characteristics of present-day sound-recording and reproducing apparatus. The treatment ... technical, and the book is adapted to the needs of most technical personnel in the industries concerned with sound recording and reproduction. It is addressed particularly to sound engineers and to men who are responsible for the setting up and maintaining of sound apparatus. The first edition appeared in 1949. This edition contains about twice as much matter and is much improved in content and organization.

RETTINGER MICHAEL

Practical electroacoustics. New York Chemical Publishing Company Inc. 1955 271 p. illus. 23 cm. $10.00 6442

Contents: Microphones. Loudspeakers. Circuits. Magnetic structures. Public-address systems. Vibrations. Architectural acoustics. Magnetic recording. Appendixes: Octaves. Decibels, volume units, direct current watts. Direct versus voltage. Bibliography. Index.

Note: Primarily this is a book about the elements of present-day audiocommunication systems. The two final chapters, one on architectural acoustics, the other on magnetic recording, are not part of the main subject but will be of interest to the same readers. It is addressed to practicing engineers, particularly those concerned with the design of public address systems, sound broadcasting in connection with radio and television, and the recording of sound in moving picture production. The main components of audio communication systems are described in technical terms and are analyzed mathematically. Many formulas useful to the engineer are included, and extensive use is made of graphs to present information on characteristics and quantities. A number of topics that would be expected in such a book—for instance, high fidelity reproduction of sound—are not included because adequate treatises have already been published or, in the opinion of the author, the available technical information on them is still inadequate.

ANTENNAS

AMERICAN RADIO RELAY LEAGUE

The A.R.R.L. antenna book. Eighth edition. West Hartford, Conn. The American Radio Relay League, Inc., 1956 306 p. illus. 24 cm. $2.00 6443

Contents: Wave propagation. Antenna fundamentals. Transmission lines. Multielement directive arrays. Long-wire antennas. Multiband antennas. Antennas for 160 meters—for 3.5 and 7 Mc.—for 14, 21 and 28 Mc. V.H.F. and U.H.F. antenna systems. Supports and construction. Rotary-beam construction. Finding directions. Receiving antennas. Mobile antennas. Bibliography. Index.

Note: Addressed to amateur radio hobbyists, this publication describes the fundamental principles of antennas and discusses the characteristics and design of individual types which are adapted to receiving and broadcasting in the wavelengths used by amateurs throughout the world. The pages of the volume are closely printed, and even more material ... contained in it than the number of pages might be taken to indicate. However, much of the discussion and most of the descriptions are spelled out in great detail to suit the needs of amateurs, many of whom have no formal engineering training. Specific directions are given for the construction of typical antennas, and successful antennas that have been built by amateurs are described in detail. There are several hundred illustrations. The pagination given above pertains only to the main body of the book. In addition, there is a five-page index and some 20 pages of advertising matter.

HARPER, AUGUSTUS EVERDELL, compiler

Rhombic antenna design. New York D Van Nostrand Company Inc., 1941 111 p. illus. 28 cm. $6 75 6444

Contents: General discussion of directional antennas. Antenna gain. Antenna location. Horizontal orientation. Vertical angles of arrival and departure. Properties of rhombic antennas. Effect of ground plane. Directivity equations. Tabulated functions for directional computations. Typical directional characteristics. Measurement and computation of antenna gains. Multiple wire and three-antenna types. Measurement and significance of terminal impedance. Transmitting antennas. Receiving antennas. Maintenance provisions. Lightning protection. Construction. Tables. Bibliography. Index. Construction drawings.

Note: This book explains the essential factors in the design and construction of the rhombic antenna. It includes an introductory discussion of directional radio transmission, followed by descriptions of horizontal rhombic antenna design methods and mechanical construction practices. Tabulated and graphical functions found useful in antenna development work have been included to expedite computation.

KING RONOLD W P

The theory of linear antennas with charts and tables for practical applications. Cam-

netic recording equipment. Applications of magnetic recording. Instrumentation and magnetic recording measurements. Magnetic recording as challenge to the phonograph. Glossary. Index.

Note Presented in this book is a survey of the state of development of magnetic recording of sound on wire and tape at the close of 1949. The chapters on historical development, acoustic factors, fundamentals of magnetism, measurements, and theory are still valuable. On the other hand, the chapters on equipment and applications ar somewhat out of date. However to readers interested in recording on wire, they would be valuable because they present a more extensive survey of wire recording equipment than would be expected in a mor recent book. The chapters include bibliographies f journal articles and patents. There are many illustrations f equipment, schematic diagrams of wiring and mechanisms, and a useful glossary

FRAYNE, JOHN GEORGE, AND HALLEY WOLFE

Elements of sound recording New York John Wiley & Sons, Inc , 1949 686 p 24 cm $12 00 6434

Contents (abridged): Nature of sound, sound waves, and their perception. Electrical, acoustical, and mechanical circuits. Microphones and their uses. Vacuum tubes. Audio amplifiers. Network theory Attenuators. Filters. Equalizers. Compression and limiting. Recording systems. Principles of disk recording. Fundamental principles of variable-density recording. Variable-intensity modulators. Principles of variable-area recording. Variable-area modulators. N ise-reduction methods. Flutter and its measurement. Film and disk drive mechanisms. Film laboratory processes. Rerecording. 35-mm motion-picture reproducing systems. 16-mm sound film systems. Magnetic recording Loudspeaker systems. Acoustics of stages and theaters. Stereophonic recording. Index.

Note. A comprehensive presentation of the principles and basic techniques of the recording of sound. It had its origin in material collected for presentation to students at the University of California at Los Angeles, but in its present form it is intended for both students and practicing sound engineers. Although consider able space is given over to description of equipment, especially equipment used in commercial studios, the work is not in any sense descriptive treatment. The author' method is exemplified by the chapter on magnetic recording where the theory is explained, the two chief methods of magnetic recording are described, and the characteristics of the chief bias and erase methods are discussed from the engineering standpoint. Wire-recording systems and tape-recording systems are then discussed chiefly from the same viewpoint, but there is only one illustration of recorder and no detailed description is given f it. The chapters are supplemented by short lists of references. Both uthors are associated with the Western Electric Company

HUNT, FREDERICK V

Electroacoustics the analysis of transduction and its historical background New York John Wiley & Sons Inc 1954 260 p illus 22 cm (Harvard monographs in applied science editorial committee F V Hunt and others) $6 00 6435

Content Introduction—historical context. Electromechanical coupling—general. Reciprocity and symmetry considerations in electromechanical coupling. Electrical-impedance analysis of transducer performance. Moving-conductor (dynamic) transducer systems. Electrostatic transducer systems. Moving-armature (magnetic) transducer systems Appendixes Dimensions and units. Conversion charts. Index of names. Index of subjects.

Note The main topic of this book is the analysis of electroacoustical transducers, such as microphones and loud speakers. A new method of analysis based on the concept of "space operator" is fully expounded in the second, third and fourth chapters. Using this method, the chief types of such systems are analyzed in the fifth, sixth and seventh chapters. These two groups of chapters are addressed to readers with considerable previous education in mathematics and electroacoustics, and they are of particular value to advanced college students preparing for research and design in the communications field and t engineers and physicists already at work in radio, television, telephony etc. The first chapter—91 pages in length—is thoroughly documented, condensed survey of the historical development f electroacoustical knowledge and devices. It includes citations of several hundred patents, papers and law cases.

KING, DONALD D

Measurements at centimeter wavelength New York D Van Nostrand Company, Inc. 1952 327 p illus. 24 cm (Van Nostrand series in communications engineering, Herbert J Reich, editor) $6 00 6436

Contents Introduction. Transmission of power at centimeter wavelength. Measurement of centimeter power. Frequency avelength and wa eform measurement. Generators. Impedance measurement. Radiation measurements. Glossary of symbols. Subject index. Author index.

Note. Measurements of power and frequency in the wavelength range from about three meters to about 10 millimeters are the subject of this book. Both the theory and the technique of such measurements are covered. The importance of transmission line theory is stressed, but considerable part of the space is devoted to techniques of measurements. Included in the discussions are descriptions of instruments and related circuits and indications of the applications and limitations of each method. The book is of interest to graduate communications engineers and engineers already at work in communications research and design.

MASSA, FRANK

Acoustic design charts. New York Mc Graw Hill Book Company, Inc., 1942 228 p. illus. 23 cm $4 00 6437

Contents (abridged): Fundamental relations in plane and spherical sound waves. Attenuation of sound and vibrations. Mechanical vibrating systems. Radiation of sound from pistons (direct radiator loud speakers) Directional radiation characteristics. Reverberation and sound reproduction. Exponential horn loud speakers. Electro-magnetic design data. Miscellaneous data.

Note This book presents comprehensive acoustic engineering data for use in the construction or design of electro-acoustic apparatus. It converts basic acoustic theory into practical charts of quantitativ value which may be used ithout laborious computations and interpretations. The scales used have been chosen with view to obtaining constant precision in reading the large range of values plotted. By providing families of curves on many of the charts, it is possible to see immediately the quantitative effect of varying the parameters of systems. The subjects covered include the design of acoustic, mechanical, and electro-acoustic apparatus, vibrating mechanical systems, isolation of machinery noise reduction, lectromagnetic and permanent magnet design, electric circuit, and other data. There are 107 full page charts showing over 750 curves.

OLSON, HARRY FERDINAND

Elements of acoustical engineering Second edition New York D Van Nostrand Company Inc. 1947 539 p illus. 23 cm. 6438

Contents Sound waves. Acoustical radiating systems. Mechanical vibrating systems. Dynamical analogies. Acoustical elements. Direct radiator loud speakers. Horn loud speakers. Microphones. Miscellaneous transducers. Measurements. Architectural acoustics and the collection and dispersion of sound. Speech, music, and hearing. Underwater sound Ultrasonics and supersonics.

Note This work, originally prepared as course of lectures for presentation at Columbia Uni ersity is ell known as comprehensive text for advanced engineering students and graduate engineers. I the exposition, considerable stress is placed on analogies among mechanical, electrical and acoustical systems. In addition to the acoustical devices mentioned in the chapter titles, many others, such as telephone receivers, phonographs, electric megaphones, wire recorders, hearing aids, sirens, underwater speakers and microphones are discussed The third edition as published in 1957 718 p., $13 50.

OLSON HARRY FERDINAND

Musical engineering an engineering treatment of the interrelated subjects of speech, music musical instruments, acoustics sound reproduction and hearing New York Mc Graw Hill Book Company Inc. 1952 369 p. illus 24 cm $7 00 6439

[illegible] topics on *Contents*. For example, [illegible] of pages are devoted to antenna characteristics and [illegible] The basic principles and general features of [illegible] systems, such as point-to-point transmission, also are [illegible] The book is [illegible] for use as text in extension and [illegible] courses, but it is also suitable for home study

American Radio Relay League

How to become a radio amateur 15th edition. West Hartford, Conn. The American Radio Relay League, 1956 109 p. illus. 24 cm. $0.50. 6451

Contents: The lure of amateur radio. Fundamentals of radio. A [illegible] for the beginner. A simple one-tube transmitter. [illegible] V.H.F. The final steps. *Learning the code*. [illegible] Getting on the air.

Note: This frequently revised publication is the standard guide [illegible] in radio who wish to qualify as amateur radio operators under the regulations of the United States Federal Communications Commission. It contains an elementary explanation of the principles of radio and specific directions for building simple [illegible] and [illegible] equipment, as well as instructions for [illegible] licenses.

American Radio Relay League

The mobile manual for radio amateurs. West Hartford, Conn. The American Radio Relay League, Inc., 1955 352 p. illus. 25 cm. $2.50. 6452

Contents (abridged): Going mobile, by D. [illegible] [illegible] converter, by W. W. [illegible] Mobile converter for 6 to 10 meters, by R. M. Smith. Compact converter for 2 and 10 Mc, by C. V. Chambers. Mobile converter for 144 Mc, by F. L. [illegible] Automotive radio noise [illegible], by R. Short. [illegible] Two-band miniature mobile transmitter, by C. V. Chambers. Quad-band transmitter, by C. J. Schauers. [illegible] mobile transmitter, by R. D. Leland. Versatile low-power [illegible] transmitter, by G. A. Baker. Mobile [illegible] for 10 and 11 meters, by G. J. Geisel. A "built-in" 10-meter mobile, by E. L. [illegible] [illegible] and compact 3-band mobile transmitter, by R. D. [illegible] Antennas: Short antennas for mobile operation, by J. S. [illegible] Automatic mobile antenna tuning, by J. [illegible] Directional arrays for 6 and 2 meters, by E. P. Tilton. Unidirectional loops for [illegible] hunting, by W. C. [illegible] Power supply: Vibrator power supplies, by B. Goodman. [illegible] of 6-volt equipment for 12-volt operation, by D. [illegible] The [illegible] battery and its charging system, by D. [illegible] FCC regulations covering mobile operation. Index.

Note: [illegible] *radio stations* mounted on automobiles are the subject of this book, which, as stated in the [illegible], is devoted to [illegible] radio operators. It is composed of about 60 signed articles, many of which have been reprinted from the periodical *QST*. The typical article is short and provides specific information on the building or operation of mobile radio equipment. It is supplemented by several illustrations which in most cases show pictures of the apparatus under discussion and wiring diagrams. The volume [illegible] a mine of ideas and technical information for the interested [illegible]

American Radio Relay League

The radio amateur's handbook by the headquarters staff of the American Radio Relay League. Thirty-third edition. West Hartford, Conn. The American Radio Relay League, Inc., 1956. 569 39 p. illus. 24 cm. $3.00. 6453

Contents: Amateur radio. Electrical laws and circuits. Vacuum-tube principles. Semiconductor devices. High-frequency receivers. High-frequency transmitters. Power supplies. Keying and break-in. Speech amplifiers and modulators. Amplitude modulation. Frequency and phase modulation. Single-sideband. Transmission lines. Antennas. Wave propagation. V.H.F. receivers. V.H.F. transmitters. V.H.F. antennas. Mobile and portable-emergency equipment. Construction practices. Measurements. Assembling a station. BCI and TVI. Operating a station. Miscellaneous data. Vacuum tubes and semiconductors. Catalog section. Index.

Note: This annually published work is widely recognized as the standard reference book for amateur radio operators in the United States of America. It presents basic information on radio principles, tube characteristics, etc., along with specific directions for the construction of radio and receiving equipment. It also contains useful reference data, such as the characteristics of vacuum tubes and transistors used in amateur radio equipment. Although much material is carried over from one edition to the succeeding one, there are always [illegible] changes. Most of the revisions are usually concerned with new developments in equipment. The chapter titles of the 33rd edition published in 1956 are listed above.

Drew Charles Edward

How to pass radio license examinations. Third edition—revised. New York John Wiley & Sons, Inc., 1952 406 p illus. 24 cm. $6.50. 6454

Contents: Basic law. Basic operating practice. Basic radiotelephone. Advanced radiotelephone. Radiotelegraph operating practice. Advanced radiotelegraph. *Appendix*: Federal Communications Commission, rules governing commercial radio operators (revised to June 27 1952). Extracts from radio laws. Q code and abbreviations. Abbreviations available for all services. Miscellaneous abbreviations and signals. International Morse code. Miscellaneous. Frequency vs. wavelength. Symbols. Abbreviations. Greek alphabet. Signs. Bibliography. Aircraft radiotelegraph for flight radio operator, by John F. Kennelly. Ship radar techniques, by John J. Custer. Bibliography.

Note: The third edition of this work, like the first and second, presents [illegible] large number of questions and answers to help students prepare themselves for Federal Communications Commission radio license examinations. The questions are numbered to correspond [illegible] the numbers in the F.C.C. study guides, and many of the questions are accompanied by large, easily-read diagrams. New to this edition are the sections covering F.C.C. Element 7 (Aircraft radio telegraph for flight radio operator) and Element 8 (Ship radar techniques). The book is intended to be used in conjunction with standard textbooks.

Ennes Harold E

Broadcast operator's handbook. Second edition. New York John F Rider Publisher Inc., 1951 440 p. illus. 22 cm. $5.40. 6455

Contents (abridged): Part I, Operating in the control room and studio. What you're up against. Keeping ahead "out of the mud. [illegible] and control room. Part II, Operating [illegible] the master control. Part III, Operating outside the studio. Remote control problems. Remote [illegible] pickups. Eyewitness pickups and mobile transmitters. Field [illegible]. Part IV Operating the transmitter. Operator duties. [illegible] are [illegible] Measuring radio and *distortion*. Part V We're off the air. Emergency [illegible] Preventive maintenance [illegible] Part VI, Technically speaking. Control room and studio equipment. The broadcast studio, featuring the broadcast transmitter [illegible] Bibliography. Index.

Note: A thorough book on the work of [illegible] and other technical personnel concerned with the broadcasting of radio programs and the maintenance of broadcasting equipment. Such aspects of radio broadcasting as the placing of microphones, the [illegible] of equipment for out-of-studio pickups, etc., are covered in detail. [illegible] pages are given to the important subject of preventive maintenance. At the time of writing, the author was Staff Engineer for WIRE, in Indianapolis. The first edition of the book was published in 1947. The present edition is 175 pages longer and contains much new material.

Fischer, Bernhard

Radio and television mathematics a handbook of problems and solutions. New York The Macmillan Company 1949 484 p. illus. 21 cm. $6.95 6456

Contents: Section I, Problems and solutions: Circuit components. Direct-current circuits. Alternating current circuits. Vacuum-tube fundamentals. Amplifiers. Oscillators. Transmitters. Receivers. Power supplies. Antennas and transmission lines. Television. Measurements. Industrial and control circuits. Section II, Problems for further practice. Section III, Some important tools for radio mathematics: Powers of 10, Introduction to the slide rule, The *j*-operator, Polar vectors. Section IV Formulas and tables: Electronic formulas. Tables. Appendix: Reference list. Answers to Section II. General index. Mathematical index.

bridge, Mass. Harvard University Press, 1956 944 p illus 27 cm. $20 00 6445

Contents Introduction—a bridge from mathematics to engineering in antenna theory Isolated antennas. Coupled antennas. Elements of a consistent theory Essentials of electromagnetic theory Linear radiators as circuit elements Antenna as transmitting system. Antenna and transmission line. Hallén's theory of cylindrical antennas. Distributions of current and charge. Theoretical impedance and admittance of cylindrical antennas. Apparent impedance of cylindrical antenna as load on a transmission line. Other formulations of the cylindrical antenna problem. Circuit properties of arrays of linear radiators. Theory of two identical, parallel, nonstaggered, center-driven antennas. Theory of identical, parallel, nonstaggered antennas. Arrays with all units in neutral planes. V-antennas. Asymmetrically driven linear antennas. Collinear arrays. The receiving antenna as a circuit element General theory of two different, arbitrarily oriented antennas. The center-loaded receiving antenna. Parasitic antennas as scatterers and reflectors in the radiation zone. The electromagnetic field of center-driven and multiple half-wave antennas Infinitely thin center-driven antennas—cylindrical coordinates. Theory of thin center-driven and multiple half-wave antennas—confocal coordinates. Radiation factors. Center driven antennas of nonvanishing cross section. Center-driven antenna with unequal currents in the halves. Electromagnetic fields of antenna arrays. Uniform parallel arrays. Nonuniform parallel arrays. Arrays with omnidirectional properties. The reciprocal theorem and the properties of arrays. Antennas over a conducting region Vertical dipoles over conducting earth—general formulation. Far-zone fields of vertical dipoles over a conducting earth. Quasi-near-zone fields of vertical dipoles over conducting earth. Horizontal dipoles over conducting earth. Impedance and radiation resistance of antennas over conducting planes. The antenna as a boundary-value problem: Conical antennas. Cylindrical antennas. Appendix. Problems. Bibliography List of principal symbols. Index.

Note. A comprehensive and rigorous treatment f linear radiators of electromagnetic energy It covers radiation, transmission, reception and scattering from cylindrical conductors of relatively small cross section, and also from related forms such as strips. It is primarily a theoretical and analytical study however it is closely enough related to the ork of engineers in high-frequency design to give it much practical value also. The charts and tables mentioned in the title are designed as aids in practical engineering problems. The book was based on an extended program of research and construction of theory by the author and his graduate students in the Cruft Laboratory at Harvard University A 20-page section of problems is included to facilitate the use of the book as a graduate-level text. The bibliography which is classified in accord with the chapter arrangement, runs to 12 pages.

KRAUS, JOHN DANIEL

Antennas New York McGraw Hill Book Company Inc, 1950 553 p illus. 24 cm (McGraw Hill electrical and electronic engineering series F E Terman consulting editor) $10 00 6446

Contents. Introduction. Point sources. The antenna as an aperture. Arrays of point sources. The electric dipole and thin linear antennas. The loop antenna. The helical antenna. The biconical antenna and its impedance. The cylindrical antenna its current distribution and impedance. Self and mutual impedances. Arrays of linear antennas Reflector-type antennas. Slot, horn, and complementary antennas. Lens, long wire, and other types of antennas. Antenna measurements. Books for references. Appendix. Index.

Note. A systematic treatment of antenna theory written in the form of textbook for upperclass engineering students. Acquaintance with elementary electromagnetic theory the fundamentals of transmission lines and wave guides, and with mathematics through vector analysis is required for understanding the treatment. All the varieties f antennas which are of current interest are considered. Besides its intended use, the book should prove useful to graduate electrical engineers whose formal education did not include course in antenna theory

LAPORT, EDMUND A.

Radio antenna engineering New York McGraw Hill Book Company Inc, 1952 563 p. illus 24 cm $10 00 6447

Contents. Low-frequency antennas. Medium-frequency broadcast antennas. High-frequency antennas. Radio-frequency transmission lines. Graphical synthesis of impedance-matching networks. Logarithmic potential theory Appendixes. Index.

Note. A treatise designed for radio engineers who are not specialists in antenna theory but who must nevertheless design (and sometimes build) radio antennas. It is limited to antennas made of wires, masts, and towers for frequencies up to about 30 megacycles and to transmission lines used in the feeding of signals to such antennas. Major aspects, such as the calculation of radiation patterns, and minor aspects, such as the design of aircraft obstruction lighting, are both covered. Graphical methods are illustrated for the solution of many problems. The illustrations include a number of photographs of construction details. Selected bibliographies are included with the chapters and in the appendix, there is a general bibliography for the convenience of engineers in need of more detailed or more rigorous treatments of specific aspects. The author is on the staff of Radio Corporation of America.

SCHELKUNOFF, SERGEI ALEXANDER

Advanced antenna theory New York John Wiley & Sons, Inc., 1952 216 p. 24 cm. (Applied mathematics series, edited by I. S. Sokolnikoff) $8.25 6448

Contents. Spherical waves. Mode theory of antennas. Spheroidal antennas. Integral equations. Cylindrical antennas. Natural oscillations. Appendixes. Index.

Note. Contemporary antenna theory at an advanced level of research is presented in this valuable monograph. The methods of other contributors, particularly E. Hallén, J. A. Stratton, and L. J. Chu, to the modern theory are described, but the heart of the book is the 70-page second chapter in which the author's own method of dealing with the problems of thin antennas is covered more fully than in his previously published work. The treatment is largely mathematical, and the mathematics is rigorous. The book is of primary interest to advanced graduate students and graduate engineers engaged in antenna research.

SCHELKUNOFF, SERGEI ALEXANDER, AND HARALD T FRIIS

Antennas theory and practice. New York John Wiley & Sons, Inc., 1952 639 p. illus. 24 cm (Applied mathematics series, edited by I. S Sokolnikoff) $10 75 6449

Contents Physical principles of radiation. Maxwell's equations. Plane waves. Spherical waves. Directive radiation. Directivity and effective area. W es over ground. Antenna current. Impedance, reciprocity equivalence. Small antennas. Self-resonant antennas. General theory of linear antennas. Impedance of dipole antennas. Rhombic antennas. Linear antenna systems. Horns. Slot antennas. Reflectors. Lenses. Appendixes. Index.

Note: This authoritative work is best described as a treatment of basic antenna theory for engineering students who are interested in the subject because they may eventually be concerned with practical antenna design. Construction details are not covered, but the theory and mathematical computations that the practical engineer must know in order to design an antenna with specified characteristics are thoroughly covered. A knowledge of general physics and elementary calculus is prerequisite. The uthors have taken special pains to keep the mathematics in the book within the reach of undergraduate students. The discussions of most points are usually full and clear The book should be valuable also to fair number of engineers not enrolled in colleges.

RADIO AND RADAR

ALBERT ARTHUR LEMUEL

Radio fundamentals. New York McGraw Hill Book Company Inc., 1948 595 p. illus. 23 cm. $6 00 6450

Contents. Fundamentals of acoustics. Electrical fundamentals. Series and parallel resonant circuits. Power transfer and impedance matching. Transmission lines, cables and networks. Vacuum tubes. Rectifiers. Voltage amplifiers. Power amplifiers. Oscillators. Modulation and demodulation. Radio transmitters. Antennas and transmission. Radio receivers. Index.

Note. An elementary presentation for radio technicians, radio amateurs, and other persons who have serious interest in the subject. Advanced mathematics is voided in the presentation

Hessing, Julius Lawrence
Radar primer New York McGraw-Hill Book Company Inc., 1948. 215 p. illus. 21 cm $3.00 6462

Contents: Introduction. Fundamentals of radar. Determining the [illegible] Electronic [illegible] picture. The basic parts of [illegible] Radar at work. Long-distance navigation. [illegible] theory of radar. Bibliography. Index.

[illegible] applications, potential and actual, of radar are [illegible] the book. Elementary principles of radar and of [illegible] techniques such as loran, [illegible] and television [illegible] nonmathematical terms. There are many illustrations of typical radar equipment. The text proper is supplemented [illegible] selected bibliography. The book is quite [illegible] book for lay readers and as [illegible] text in [illegible]

Hund, August
Frequency modulation. New York McGraw-Hill Book Company Inc., 1942 375 p. illus. 23 cm. (Radio communication series Beverly Dudley consulting editor) $5.00 6463

Contents: Fundamental [illegible] and features in frequency-modulated, phase-modulated, and amplitude-modulated systems. [illegible] employed in FM systems. Transmitters for [illegible] Receivers for frequency-modulated currents. [illegible] and [illegible]

[illegible] The book for engineers and advanced students [illegible] treatment of all phases of frequency modulation [illegible] principles to the design of commercial apparatus. [illegible] follow the best engineering practice. [illegible] frequency modulation are described [illegible] with customary amplitude modulation and in comparison with phase modulation.

Hund, August
High-frequency measurements. Second edition. New York McGraw-Hill Book Company Inc., 1951 676 p. illus. 24 cm. (International series in pure and applied physics G. P. Harnwell, consulting editor) $12.00 6464

Contents: Fundamental relations and circuit properties. High-frequency sources and other useful laboratory apparatus. Apparatus and [illegible] for measuring high-frequency currents [illegible] Determination of voltage. Determination of frequency. Determination of capacitance. Determination of self-inductance. Determination of mutual inductance and coupling. Determination of [illegible] Determination of high-frequency power and [illegible] Determination of [illegible] decrement, power factor, phase [illegible] and sharpness of resonance. Ferromagnetic measurements. Tube measurements. Modulation measurements. Measurements on [illegible] and aerial systems. Determinations on wave propagation. Microwave measurements. Appendix. Index.

Note: An extended work that is used both as [illegible] textbook for [illegible] students of radio engineering and as [illegible] reference book in radio and electronics laboratories. In its present edition [illegible] thorough coverage of measurement methods throughout the band of radio frequencies that are now in use, including UHF and super-high frequencies. Familiarity with radio terminology and engineering mathematics [illegible] assumed in the treatment. Important changes and additions were made in preparing the present edition.

Hund, August
Short-wave radiation phenomena. New York. McGraw-Hill Book Company Inc., 1952. 2 v illus. 24 cm. (Radio communication series Beverly Dudley consulting editor) $25.00. 6465

Contents: Volume I. Fundamental concepts and relations of [illegible] and electromagnetic fields. [illegible] electromagnetic fields of elementary [illegible] and magnetic dipoles. Fundamental methods used in electromagnetic theory. Propagation characteristics. Transmission lines and radiation. Unobstructed space radiation. Volume II. Space radiation in the presence of electromagnetic obstructions. Electromagnetic diffraction. Wave guides and cavities. Appendix. List of references. Name index. Subject index.

Note: An intermediate-level text or treatise addressed both to students in formal courses and to radio experimenters and graduate engineers studying by themselves. The typical chapter is [illegible] self-contained monograph on [illegible] specific area of the field, containing the pertinent theory and the useful mathematical formulas and computations. The treatment is analytical and is adequately detailed for self-instruction. The work as [illegible] presents [illegible] range of information, together with references to the original literature. The subject index runs to 33 two-columned pages.

International Telephone and Telegraph Corporation
Reference data for radio engineers. Fourth edition. New York International Telephone and Telegraph Corporation, 1956. 1,152 p. illus. (part col d) 22 cm. $6.00 6466

Contents: Frequency data. Units, constants, and conversion factors. Properties of materials. Components. Fundamentals of networks. Filters, image-parameter design. Filters, modern-network theory design. Filters, simple band-pass design. Attenuators. Bridges and impedance measurements. [illegible] transformers and reactors. Rectifiers and filters. Magnetic amplifiers. Feedback control systems. Electron tubes. Electron-tube circuits. Semiconductors and transistors. Transistor circuits. Modulation. Transmission lines. Waveguides and resonators. Scattering matrices. Antennas. Radio-wave propagation. Radio noise and interference. Broadcasting. Radar fundamentals. Wire transmission. Electroacoustics. Digital computers. Nuclear physics. Miscellaneous data. Information theory. Probability and statistics. Fourier [illegible] analysis. Maxwell's equations. Mathematical formulas. Mathematical tables. Index.

Note: Compiled under the direction of the Federal Telecommunication Laboratories Division of the International Telephone and Telegraph Corporation, this handbook provides [illegible] wide range of basic knowledge and engineering data useful in radio and related fields such as telephony and industrial electronics. It is largely compendium of graphs, tables and formulas, but it does contain some explanatory text. This edition was edited by H. P. Westman, and there [illegible] list of contributors in [illegible] the volume.

Jordan, Edward Conrad and others
Fundamentals of radio, by Edward C. Jordan Paul H. Nelson, William Carl Osterbrock, Fred H. Pumphrey and Lynne C. Smeby. Editor W. L. Everitt. New York Prentice-Hall, Inc., 1942 400 p. illus. 23 cm. $3.75 6467

Contents: Mathematics of radio. D.C. circuits—A.C. circuits. Electronic principles. Rectified power supplies. Sound and its electrical transmission. Audio amplifiers—vacuum tube instruments. Electromagnetic waves. Transmission of signals by radio. Radio frequency amplifiers and detectors. Amplitude modulation radio transmitters. Amplitude modulation [illegible] receivers. Frequency modulation. Radio wave propagation. Radio antennas. Index.

Note: This work presents the basic material required for all types of radio work, both civil and military. The primary aim of the book is to make clear to the beginning student the functioning of [illegible] complete radio system and at the same time to lay the foundation for more advanced study of the subject. The reader needs only an elementary knowledge of algebra, which is reviewed briefly in the first chapter. There [illegible] brief discussions on alternating and direct current circuits which may be omitted in [illegible] beginning course. The text is suitable for rapid training programs and for self-instruction.

Kiver, Milton Sol
F-M simplified. Second edition. New York D. Van Nostrand Company Inc., 1951 453 p. illus. 21 cm. $6.95 6468

Contents: Introduction to frequency modulation. F-M from phase modulation. F-M and interference. Propagation, reception, and transmission of F-M signals. R.F. tuners for F-M receivers. High-frequency oscillators. I.F. amplifiers. Limiters. F-M detectors. Audio

Note. As the chapter titles indicate, the scope of this book is more advanced than some of the texts which have been written on the mathematics used in radio and television. It has been developed from material used in classes given by the author and is designed primarily as textbook for use in organized classes. However it is somewhat suitable for self-instruction especially for ad anced students who hav had a course in college algebra. Much of the exposition is expressed in the form of orked solutions of typical problems. Several hundred practice problems for the student are given in the second section of the book. An extended section of useful formulas and tables at the end of the book has some reference value.

GHIRARDI, ALFRED A

Radio and television receiver circuitry and operation, by Alfred A Ghirardi, assisted by J Richard Johnson. New York Rinehart and Company, Inc., 1951 669 p illus. 24 cm. $6 75 6457

Contents Amplitude modulation and AM signals. Frequency modulation and FM signals. R-F amplifiers and T-R-F receivers. AM superheterodyne receivers. AM detector and AVC systems. FM recei ers. Push-button tuning and AFC systems. A-F amplifiers. Loudspeakers. Radio receiver power-supply systems. TV principles and the TV receiver Receiving antenna systems. Home recorders. Phono pickups and record players. Automatic record changers. Mechanical construction of receivers. Glossary Answers to odd-numbered review questions. Index.

Note An introduction written primarily for practical students who are preparing for or are already engaged in radio and television installation and servicing. Also, ther is some appeal to radio amateurs. For an introductory book the treatment is unusually full. The chief aim of the authors was apparently to impart basic understanding of the principles of circuit elements and typical complete circuits. Full circuit diagrams of specific makes and models of receivers are, of course, not included. The first-named author has written the widely used *Radio physics course* and other books.

GHIRARDI, ALFRED A , AND J RICHARD JOHNSON

Radio and television receiver troubleshooting and repair New York Rinehart and Company Inc., 1952 822 p. illus. 24 cm. $7 50 6458

Content (abridged) Receiver components and their troubles. The importanc of systematic troubleshooting procedure. Basic troubleshooting methods. Practical direct-approach troubleshooting. Special troubleshooting problems in -c d-c and three-way portable receivers. Special troubleshooting problems in battery-powered receivers. Servicing communications recei ers. Troubleshooting television receivers. Taking receiver-performance data. Realigning AM receivers. Realigning FM recei ers. Realigning TV recei ers. Replacement of defecti resistors Replacement and repair of R F and I-F inductors and transformers. Replacement and repair of defective power A-F and deflection-frequency inductors and transformers. Replacement and repair of defective capacitors. Servicing defective tuning-device mechanisms. Testing, replacement, and repair f loudspeakers. Repair and replacement of record-playing equipment. Servicing home recorders. Appendix. Index.

Note. A comprehensive textbook for use in vocational courses offered to men ho are preparing to become radio and television servicemen, and for men already in this service industry who wish to extend their knowledge by home study The discussions are practical and detailed. Many operations are described step by step. N mathematics is used, but the riting is in the terminology of the industry The book replaces the senior author's popular *Modern radio servicing*

GHIRARDI, ALFRED A.

Radio physics course , an elementary text book on the basic principles of electricity radio and television 508 illustrations Second edition New York Rinehart & Company Inc. 1932 972 p. illus. 23 cm. $6 50 6459

Contents (abridged) Radio broadcasting system. Electron theory electric current. Electrical circuits, batteries. Magnetism. Electromagnetic induction. Inductance and inductors. Capacitance and condensers. Alternating current circuits. Electric filters. Electrical measuring instruments. Radio transmission, the broadcasting station. The receiving station, detection with crystals. Elementary study of the vacuum tube. Vacuum tube detector and amplifier action. Radio frequency amplification. Superheterodyne receivers. Design of R. F amplifiers and tuning coils. Audio amplification. The battery operated receiver The power supply unit. Electric receivers. Automobile and aircraft recei ers. Phonograph pickups and sound amplifier systems. Short wav reception. Vacuum tube applications and photoelectric cells. Television. The antenna and ground. Testing and servicing. Sound motion pictures. Appendixes. Index.

Note: An outstandingly successful book of its kind. The principles of radio receivers, sound amplifier equipment, photoelectric cells, etc., are described in a detailed, elementary manner ith little use f mathematics. The level of treatment assumes no previous education in physics or electricity Since there has been no revision for many years, the book does not describe all the circuits and elements of present-day radio receivers, and the chapter on television was written before the successful development of television as we know it today Nevertheless, it still has some value as a self-instruction book in the elements of radio.

HENNEY, KEITH, editor in-chief

Radio engineering handbook. Fourth edition. New York McGraw Hill Book Company, Inc., 1950 1,197 p illus. 23 cm. $15 00. 6460

Contents: Basis of radio communication, by R. Dudley Resistance, by J Marsten. Inductance, by F G. Weber. Magnetic materials, by R. L. Sandford. Capacitance, by E. L. Hall. Combined circuits of L, C and R, by W F Lanterman. Electrical measurements, by R. F Field and J. H. Miller. Power-supply systems, by R. C. Hitchcock. Audio-frequency amplifiers, by G. Koehler. Radio-frequency amplifiers, by R. S. Glasgow Vacuum-tube oscillators, by R. L. Sartocher and D C. Felder Modulation and detection, by L. F Curtis. Radio-wav propagation, by D Pollack. Electron tubes, by G. D O'Neill. Antennas, by E. A. Lapert. Wave-guides and ca ity resonators, by T Moreno. Loud-speakers and room acoustics, by H. S. Knowles. Receiving systems, by C. E. Dean. Radio broadcasting, by C. G. Dietsch. Television, by D. G. Fink. Facsimile, by R. E. Mathes. Radio aids to aviation, by H. Diamond. Code transmission and reception, by J B. Moore and D. S. Rau Index.

Note. A standard reference book in hich many" type of exposition and tabulated engineering data are combined. It is suitable for advanced students of radio engineering, advanced radio amateurs and, of course, practicing radio engineers. In the present edition the type has been completely reset, and the format altered to gi larger page size. Enough material has been added to occupy 200 more pages. The chapter on wave-guides treats material that was not mentioned in the third edition. The titles of the other chapters are the same or are changed slightly but examination shows that the contents of substantial umber are essentially new

HENNEY, KEITH, AND GLEN A. RICHARDSON

Principles of radio Sixth edition. New York John Wiley & Sons, Inc. 1952 655 p. illus. 22 cm $6 75 6461

Contents. Fundamentals. Direct-current circuits. Electrical meters and measurements. Magnetism and electromagnetism. Inductance. Capacitance. Properties of alternating-current circuits. Resonance. Properties of coils and condensers. Vacuum tubes. The tube as an amplifier Rectifiers and power supply apparatus. Audio amplifiers. Detection of amplitude-modulation signals. Amplitude-modulated receiver systems. Oscillators. Amplitude-modulation transmitters. Transmission lines, antennas, and electromagnetic radiation. Frequency modulation and detection. Ultra-high-frequency phenomena. Electronic instruments. Transients and wav shaping circuits Television. Radar Index.

Note. A popular self-instruction and vocational school text since the appearance of the first edition in 1929 Only simple mathematics is used, and the discussions of fundamental topics are exceptionally full. Numerous worked examples and procedures for few experiments requiring minimum of apparatus are included. The present edition represents an extensi revision ith many pages of new material and many new illustrations.

[illegible]—the A battery—the C battery. The ac-dc power supply. [illegible] speaker. The radio-frequency amplifier. Volume control [illegible]. The superheterodyne receiver. Types of vacuum [illegible] radio receivers. Part II: Direct current and the [illegible] of electricity. Magnetism, meters, and measuring instruments. [illegible] currents—theory and measurement. Inductance, [illegible] reactance, and impedance. Capacitance and capacitive [illegible]. Resonant circuits and tuning principles. The electromagnetic [illegible]. Radio antennas. Vacuum-tube characteristics—[illegible] oscillators. The continuous-wave (CW) transmitter. The [illegible] transmitter. The cathode-ray tube and its applications. [illegible] for Part I—for Part II. Appendix. Index.

Note: A successful, practical text, widely used in its various editions since publication of the first edition in 1943. It is addressed [illegible] students who are preparing for careers in the repair of radio receiving equipment, but [illegible] suitable for anyone in need of an [illegible] introduction to radio principles and practice. The level [illegible] assumes no previous acquaintance with physics. The technical terminology of the field is used, otherwise the style of the book [illegible] and devoid of mathematics. There are several [illegible] circuit diagrams and other illustrations.

MARCUS ABRAHAM

Radio servicing: theory and practice. Second edition. New York. Prentice-Hall, Inc. 1954. 794 p. illus. 22 cm. $6.60 6475

Contents: Electrical and radio theory. Components and parts. The vacuum tube. The electron tube as a rectifier. The electron tube as a detector. The electron tube as an amplifier. Practical amplifiers. The vacuum tube as an oscillator. Special tubes and [illegible]. Control circuits. Radio receivers. Power supplies. Instruments used for servicing. Servicing procedures. Servicing techniques. [illegible], alignment and realignment. Index.

Note: One of the outstanding texts for practical students. The [illegible] description, but the description is so carefully written and [illegible] that the reader receives a sound idea of how radio [illegible] operates. The book is addressed primarily to vocational [illegible] and other students who are preparing for careers in the [illegible] and servicing of radio receivers. However, much less [illegible] given to actual servicing techniques than to the basic [illegible]. The first edition was published in 1944. This edition [illegible] about 22 pages longer, and the extra length is accounted for by matter which has been added on such commercial developments as the recently popular four- or five-tube home receivers and AM-FM receivers; also [illegible] seven-page section on the transistor has been inserted.

MARTIN THOMAS LYLE, JR.

Ultrahigh frequency engineering. New York. Prentice-Hall, Inc., 1950. 456 p. illus. 22 cm. $6.75. 6476

Contents: Wave-shaping circuits. Trigger circuits. Amplification in UHF systems. Introduction to transmission lines. UHF applications of transmission lines. Parallel plane waveguides. Waveguides [illegible]. UHF triodes and oscillators. Klystrons. Magnetron oscillators. Propagation of radio waves. Appendixes: Fundamental constants. Solutions of the cylindrical waveguide. Index.

Note: As the chapter titles indicate, the book is devoted mainly [illegible] circuits and other components of UHF systems in general [illegible], and other complete circuits in which UHF radio [illegible] applied to specific uses are not considered. The book is outstanding for clear and rather full discussions of basic circuits and circuit elements. The author has assumed that his readers will be [illegible] with basic radio and engineering mathematics. The work is principally [illegible] textbook for upperclass college students majoring in physics or electrical engineering. It is suitable also for college graduates who possess the requisite basic scientific education and desire an introduction to this field for independent reading.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY RADIATION LABORATORY

Radar system engineering. New York. McGraw-Hill Book Company Inc., 1947. 748 p. illus. 23 cm. (Massachusetts Institute of Technology Radiation Laboratory series. Louis N Ridenour editor-in-chief. Volume 1) $8.50. 6477

Contents: Foreword, by L. A. DuBridge. Introduction. The radar equation. Properties of radar targets. Limitations of pulse radar. C-w radar systems. The gathering and presentation of radar data. The employment of radar data. Radar beacons. Antennas, scanners, and stabilization. The magnetron and the pulser. R-f components. The receiving system—radar receivers—indicators. Prime power supplies for radar. Examples of radar system design. Moving-target indication. Radar relay. Index.

—— Radar aids to navigation. Edited by John S Hall. New York. McGraw Hill Book Company Inc., 1947. 389 p. illus. 23 cm. (The same series. Volume 2) $6.00 6478

Contents: Foreword, by L. A. DuBridge. Part I, Introduction: Principles of radar, nonradar navigational methods. Part II, Airborne radar: Characteristics of airborne radar. Special aids and devices. Special design considerations. Engineering and economic considerations. Part III, Ground-based radar: Types of ground-based radar and special equipment. Radar aids to air navigation and traffic control. Part IV, Shipborne radar: Navigation and pilotage. A shipborne navigational radar. Index.

—— Radar beacons. Edited by Arthur Roberts. New York. McGraw Hill Book Company Inc., 1947. 489 p. illus. 23 cm. (The same series. Volume 3) $6.50. 6479

Contents: Foreword, by L. A. DuBridge. Part I, Basic considerations: The uses of beacons. The requirements of systems using beacons—range considerations. Propagation and coverage considerations. Frequency considerations. Coding and communication. Traffic and engineering considerations. Part II, Beacon design: Beacon design—R-f components. Beacon receivers. Interrogation coding. Response coders. Beacons as pulse communication systems. Modulators. Beacon transmitters—magnetrons. Triode transmitters. Power supplies and performance testing. Beacon synthesis. Part III, Interrogator and system design: Radar design for beacon operation. The design of interrogator-responsors. Typical beacon systems. Part IV, Beacons in the field: Installation, operation, and maintenance. Appendix. Glossary. List of symbols. Index.

—— Loran, long range navigation. Edited by J. A. Pierce, A. A. McKenzie and R. H. Woodward. New York. McGraw Hill Book Company Inc. 1948. 476 p. illus. 23 cm. (The same series. Volume 4) $6.00. 6480

Contents: Foreword, by L. A. DuBridge. Part I, The loran system: Introduction. History of loran. Principles of loran. Future trends. Propagation. Methods of computation of loran tables and charts. Part II, Loran equipment: Timers. Switching equipment. Transmitters. Antenna systems. Receiver-indicators. Special techniques and measurements. Appendices: The loran program in the Hydrographic Office. Loran ground stations. Demonstrations concerning the geometry of loran lines. Determination of errors in the positions of loran transmitting stations. Bibliography. Index.

—— Pulse generators. Edited by G. N. Glasoe and J. V. Lebacqz. New York. McGraw Hill Book Company Inc., 1948. 741 p. illus. 23 cm. (The same series. Volume 5) $9.00 6481

Contents: Foreword, by L. A. DuBridge. Introduction. Part I, The hard-tube pulser: The output circuit of a hard-tube pulser. Vacuum tubes as switches. Driver circuits. Particular applications. Part II, The line-type pulser: The pulse-forming network. The discharging circuit of the line-type pulser. Switches for line-type pulsers. The charging circuit of the line-type pulser. Performance of line-type pulsers. Particular applications. Part III, Pulse transformers: Elementary theory of pulse transformers. Pulse-transformer design. Effect of pulse-transformer parameters on circuit behavior. Materials and their use in design. Appendices: Measuring techniques. Pulse duration and amplitude. List of symbols. Index.

—— Microwave magnetrons. Edited by George B. Collins. New York. McGraw Hill

amplifiers and high fidelity F M receiver alignment. Commercial F M receivers. Servicing F M receivers. Commercial F M transmitters. Index.

Note A standard text for radio servicemen and laymen who are familiar with the principles and terminology of amplitude modulation and wish to extend their knowledge to f-m. It is written so that it may be used in organized classes at the trade-school level or as a self-instruction manual. The advantages of frequency modulation are discussed and the similarities and differences between a-m and f-m systems are covered. F-m circuit elements and circuits are described in sufficient detail to make the basic principles clear. Numerous explanatory charts and some wiring diagrams, typical of the circuits of f-m equipment produced for the United States of America market, are included. The first edition was published in 1947 In this edition, the book is approximately 100 pages longer and contains considerable material that did not appear in the 1947 edition.

KIVER, MILTON SOL

Transistors in radio and television. New York McGraw Hill Book Company, Inc., 1956 324 p 24 cm. $6 50 6469

Content Introduction to modern electron theory Point-contact and junction transistors. Comparison of point-contact and junction transistors. Transistor amplifiers. Transistor oscillators. Transistor radio receivers. Transistors in television receivers. Additional transistor developments. Servicing transistor circuits. Experiments with transistors. Bibliography Transistor data tables. Index.

Note Readers, particularly experienced radio and television technicians, who have a basic knowledge of how radio and television receivers work are the intended audience for this book. The basic principles of transistors are explained in an elementary way without resort to mathematics. The various types of transistors, their characteristics and applications are described. The descriptions are accompanied by many wiring diagrams of radio and television circuits in which transistors are employed. Comparisons between radio circuits based on electron tubes and on transistors are drawn. The chapter on servicing of transistor circuits is about 20 pages long and contains outlined procedures for trouble-shooting. The book is suitable for use in home study and also as a text in school courses at the vocational level.

KIVER, MILTON SOL

Introduction to UHF circuits and components. New York D Van Nostrand Company Inc., 1955 408 p illus 24 cm. $7 50 6470

...troduction to the higher frequencies. Transmission lines. Waveguides. Cavity resonators. High-frequency ... oscillator. The klystron oscillator. The ... tubes, and others. UHF antennas. UHF ... television. Index.

Note The author of this book has assumed that ... will be familiar ... television receivers ... for the lower frequencies ... radio begins with a chapter in which ultra-high frequency ... other elements as compared to lower frequency tubes, tuners ... the same kinds. Later chapters deal with UHF ... their principle and characteristics in more detail ... circuit elements. Throughout the ... the terminology is technical nevertheless, the author's style is easy to read. The book is suitable for use as text for organized courses and also for home reading by experienced radio and television technicians.

MACLAURIN WILLIAM RUPERT

Invention & innovation in the radio industry, with the technical assistance of R. Joyce Harman with a foreword by Karl T Compton New York The Macmillan Company 1949 304 p illus. 22 cm (Massachusetts Institute of Technology Studies of Innovation) $3 95 6471

Contents The scientific pioneers of radio The impact of new scientific advances on established ... The process of invention and innovation—Marconi ... telegraph 1896–1920— ... the large ... telephone. The role of ... The struggle over patents 1921 1938. The perennial gale of competition 1921–1941 The rise of industrial research—Radio 1900–1941—Television. Government regulation and technical progress—FM and television. 1930–1941. Conclusions. Appendixes The elements of modern radio communications. Radio patent litigation. Bibliography Index.

Note. Essentially ... history of the radio and television industry from an economic-technical point of view This book portrays the complicated interrelationships of basic inventions, patents and patent litigation, and the policies and organizational activities of large corporations which have figured in the development of this industry especially in the United States of America. Technical details of vacuum tubes, radio circuits, and related apparatus are discussed but the main interest is in the influence of the important inventions and patents. Thus the book covers an aspect of technical development which is often ignored in writing the history of invention. It is heavily documented with references to both published and unpublished material.

MARCHAND, NATHAN

Frequency modulation, fundamentals, apparatus, servicing New York Rinehart and Company, Inc., 1948 409 p illus. 23½ cm. $5 95 6472

Contents. Fundamentals of modulation. Fidelity and band-width requirements. Noise and interference. Direct frequency modulation. Frequency control circuits. Direct frequency-modulation transmitters. Phase-to-frequency modulation. Frequency-modulation transmitters using phase modulation. Frequency-modulation detectors. Amplitude limiters. Radio-frequency amplifiers, oscillators, and converters. Intermediate frequency and audio circuits. Frequency-modulation receivers. Frequency-modulation transmitting antennas. Frequency-modulation receiving antennas. Mobile frequency-modulation equipment. Frequency-modulation test equipment. Frequency-modulation servicing. Answers to questions. Appendix. Index.

Note A basic textbook for practical students such as radio amateurs and radio repairmen. The treatment assumes that the reader will have a knowledge of standard radio principles and apparatus. Mathematics is used sparingly nevertheless the use of a few advanced mathematical techniques, for example Bessel functions, are explained. The various methods of modulating radio signals are outlined, then the specific principles that underlie frequency modulation apparatus and techniques are described fully. Many circuit diagrams are included and enough construction detail is provided to enable the amateur radio operator to construct F-M apparatus. The book is suitable for use in both classroom and self-instruction.

MARCHAND, NATHAN

Ultrahigh frequency transmission and radiation. New York John Wiley & Sons Inc., 1947 322 p. illus. 23 cm $5.50 6473

Contents Transmission lines. Elements of vector analysis. Fundamental electromagnetic equations. Plane electromagnetic waves. Radiation. Antenna arrays. Wave guides. Complex transmission line network analysis. Tables. Characteristic impedances of transmission lines. Degrees to radians. Natural sines, cosines, and tangents. Exponential and hyperbolic functions. Bessel functions. Index.

Note. The material in this volume was first presented by the author in ... government sponsored course at Columbia University in 1943 Chiefly the work is an introductory exposition of advanced mathematical methods of attacking problems that arise in the design of ultrahigh frequency radio apparatus. The characteristics of standard circuit elements also are described. The book is addressed ... graduate students and practicing communications engineers. References for further reading and ... collection of problems to be solved accompany each chapter

MARCUS, ABRAHAM AND WILLIAM

Elements of radio Third edition. Englewood Cliffs, N J Prentice-Hall, Inc., 1953. 771 p. illus. 21 cm. $7 00. 6474

Contents. Part ... History of communication. Wave motion ... in either ... and simple radio receiving set. The aerial-ground system. The tuner. The ... phone reproducer The detector ... The antenna coupler Electric ... current flow in the aerial-ground system ... flow in the tuning ci... The crystal detector and phone ... The vacuum-tube detector ... the diode—the triode. The regenerative detector. The ... radio-frequency amplifier Eliminating the B ...

[illegible]—the A battery—the C battery. The a-c–d-c power supply. [illegible] speaker. The audio-frequency amplifier. Volume [illegible] control. The superheterodyne receiver. Types of vacuum [illegible] receivers. Part II. Direct current and the [illegible] of electricity. Magnetism, meters, and measuring instruments. [illegible] current—theory and measurement. Inductance, [illegible] reactance, and impedance. Capacitance and capacitive [illegible]. Resonant circuits and [illegible] principles. The [illegible] type. Radio antennas. Vacuum-tube characteristics—[illegible]. The continuous-wave (CW) transmitter. The [illegible] transmitter. The cathode-ray tube and its applications. [illegible] for Part I—for Part II. Appendix. Index.

Note: A [illegible], practical text, widely used in its earlier editions [illegible] of the first edition in 1943. It is addressed [illegible] to the preparing for careers in the repair of [illegible] equipment, but is suitable for anyone in need of an [illegible] introduction to radio principles and practice. The level [illegible] assumes no previous acquaintance with physics. The [illegible] terminology of the field [illegible] used, otherwise the style of the book is simple and devoid of mathematics. There are several [illegible] diagrams and other illustrations.

MARCUS, ABRAHAM

Radio servicing theory and practice. Second edition. New York Prentice-Hall Inc. 1954. 794 p. illus. 22 cm. $6.60 6475

Contents: Electrical and radio theory. Components and parts. The electron tube. The electron tube as [illegible] rectifier. The electron tube as [illegible] detector. The electron tube as an amplifier. Practical amplifiers. The electron tube as an oscillator. Special tubes and [illegible]. Control circuits. Radio receivers. Power supplies. Instruments used for servicing. Servicing procedures. Servicing techniques. [illegible], replacement and realignment. Index.

Note: One of the outstanding texts for practical students. The [illegible] descriptive, but the description is so carefully worked out [illegible] that the reader [illegible] sound idea of how radio [illegible] operates. The book is addressed primarily to vocational students and other readers who are preparing for careers in the [illegible] and servicing of radio receivers. However much less [illegible] given to actual servicing techniques than to the basic [illegible]. The first edition was published in 1948. This edition is only about 30 pages longer, and the extra length is accounted for by matter which has been added on such commercial developments as the recently popular four- or five-tube home receivers, and AM-FM receivers; also [illegible] seven-page section on the transistor has been inserted.

MARTIN, THOMAS LYLE JR.

Ultrahigh frequency engineering. New York. Prentice-Hall, Inc. 1950. 456 p. illus. 22 cm. $6.75 6476

Contents: Wave-shaping circuits. Trigger circuits. Amplification in UHF systems. Introduction to transmission lines. UHF applications of transmission lines. Parallel plane wave-guides. Wave-guides and cavity resonators. UHF triodes and oscillators. Klystrons. Magnetron oscillators. Propagation of radio waves. Appendixes: Fundamental constants. Solution of the cylindrical wave-guide. Index.

Note: As the chapter titles indicate, this book is devoted solely to the circuits and other components of UHF systems in general. Radar, television, and other complete circuits in which UHF [illegible] is applied to specific uses are not considered. The book is outstanding for clear and rather full discussions of basic circuits and their elements. The author has assumed that his readers will be familiar with basic radio and engineering mathematics. The work is primarily [illegible] textbook for upperclass college students majoring in physics or electrical engineering. It is suitable also for college graduates who possess the requisite basic scientific education and desire an introduction to this field for independent reading.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY RADIATION LABORATORY

Radar system engineering. New York McGraw Hill Book Company Inc., 1947 748 p illus. 23 cm. (Massachusetts Institute of Technology Radiation Laboratory series. Louis N Ridenour editor in-chief Volume 1) $8.50. 6477

Contents: Foreword, by L. A. DuBridge. Introduction. The radar equation. Properties of radar targets. Limitations of pulse radar. C-w radar systems. The gathering and presentation of radar data. The employment of radar data. Radar beacons. Antennas, scanners, and stabilization. The magnetron and the pulser. R-f components. The receiving system—radar receivers—indicators. Prime power supplies for radar. Examples of radar system design. Moving-target indication. Radar relay. Index.

—— Radar aids to navigation. Edited by John S Hall. New York McGraw Hill Book Company Inc. 1947 389 p. illus. 23 cm. (The same series. Volume 2) $6.00 6478

Contents: Foreword, by L. A. DuBridge. Part I. Introduction. Principles of radar. [illegible] methods. Part II. Airborne radar: Characteristics of airborne radar. Special aids and devices. Special design considerations. Engineering and economic considerations. Part III. Ground-based radar: Types of ground-based radar and special equipment. Radar aids to air navigation and traffic control. Part IV. Shipborne radar: Navigation and pilotage. A shipborne navigational radar. Index.

—— Radar beacons. Edited by Arthur Roberts. New York McGraw Hill Book Company Inc. 1947 489 p illus. 23 cm. (The same series. Volume 3) $6.50. 6479

Contents: Foreword, by L. A. DuBridge. Part I. Basic considerations. The uses of beacons. The requirements of systems using beacons—range considerations. Propagation and coverage considerations. Frequency considerations. Coding and communication. Traffic and engineering considerations. Part II. Beacon design. Beacon design—R-f components. Beacon receivers. Interrogator coding. Response coders. Beacons as pulse communication systems. Modulators. Beacon transmitters—magnetrons. Triode transmitters. Power supplies and performance testing. Beacon synthesis. Part III. Interrogator and system design. Radar design for beacon operation. The design of interrogator-responsors. Typical beacon systems. Part IV. Beacons in the field. Installation, operation, and maintenance. Appendix. Glossary. List of symbols. Index.

—— Loran, long range navigation. Edited by J A. Pierce A. A. McKenzie and R. H. Woodward. New York McGraw Hill Book Company Inc., 1948 476 p. illus. 23 cm. (The same series. Volume 4) $6 00 6480

Contents: Foreword, by L. A. DuBridge. Part I. The loran system. Introduction. History of loran. Principles of loran. Future trends. Propagation. Methods of computation of loran tables and charts. Part II. Loran equipment: Timers. Switching equipment. Transmitters. Antenna systems. Receiver-indicators. Special techniques and measurements. Appendixes: The loran program in the Hydrographic Office. Loran ground stations. Demonstrations concerning the geometry of loran lines. Determination of errors in the positions of loran transmitting stations. Bibliography. Index.

—— Pulse generators. Edited by G N Glasoe and J V Lebacqz. New York McGraw Hill Book Company Inc. 1948 741 p. illus. 23 cm. (The same series. Volume 5) $9 00. 6481

Contents: Foreword, by L. A. DuBridge. Introduction. Part I. The hard-tube pulser. The output circuit of a hard-tube pulser. Vacuum tubes as switches. Driver circuits. Particular applications. Part II. The line-type pulser. The pulse-forming network. The discharging circuit of the line-type pulser. Switches for line-type pulsers. The charging circuit of the line-type pulser. Performance of line-type pulsers. Particular applications. Part III. Pulse transformers: Elementary theory of pulse transformers. Pulse-transformer design. Effect of pulse-transformer parameters on circuit behavior. Materials and their uses in design. Appendixes: Measuring techniques. Pulse duration and amplitude. List of symbols. Index.

—— Microwave magnetrons. Edited by George B Collins. New York McGraw Hill

Book Company, Inc., 1948 806 p illus 23 cm (The same series. Volume 6) $10 00 6482

Content Foreword, by L. A. DuBridge. Introduction. Part I, Resonant systems. The unstrapped resonant system. The rising-sun system. The strapped system. *Output circuits.* Part II, Analysis of operation The interaction of the electrons and the electromagnetic field. The space charge as circuit element. Transient behavior. Noise. Part III, Design: Principles of design. The resonant system. The cathode. *The magnetic circuit. Part IV Tuning and stabilization* Mechanical tuning. Electronic tuning. Stabilization of frequency Part V Practice Construction. Measurements. Typical magnetrons. Index.

—— Klystrons and microwave triodes by Donald R. Hamilton, Julian K. Knipp and J B Horner Kuper Editorial staff George B Collins, Albert G Hill and Winifred Mc Culloch New York McGraw Hill Book Company Inc, 1948 533 p illus 23 cm (The same series Volume 7) $8 00 6483

Contents: Foreword, by L. A. DuBridge. Part I, Fundamentals Introduction. *Discussion* of tube types and functions. Basic electronic phenomena at high frequencies. Basic circuit phenomena at high frequencies. Part II, Planar space-charge tubes Theory of h-f space-charge devices. Space-charge devices as microwave amplifiers. Microwave triode oscillators. Pulse operation of microwave triodes. Part III Klystrons Velocity modulation and klystron bunching. Amplifier klystrons. Frequency multiplier klystrons and two-resonator klystron oscillators. Reflex klystron oscillators. Nonideal reflectors. Hysteresis in reflex klystrons. Load effects in reflex klystrons. Reflex klystron modulation. Noise in reflex klystrons. Practical reflex klystrons. Index.

—— Principles of microwave circuits Edited by C G Montgomery R. H Dicke and E M Purcell New York McGraw Hill Book Company Inc., 1948 486 p illus 23 cm (The same series Volume 8) $6 50 6484

Contents. Foreword, by L. A. DuBridge. Introduction by E. M. Purcell. Electromagnetic waves, by C. G Montgomery Waveguides as transmission lines, by C. G. Montgomery Elements of network theory by C. G. Montgomery General microwave circuit theorems, by R. H. Dicke. Waveguide circuit elements, by C G. Montgomery Resonant cavities as microwave circuit elements, by Robert Beringer *Radial transmission lines, by N Marcuvitz. Waveguide* junctions with several arms, by C G. Montgomery and R. H. Dicke. Mode transformations, by E. M. Purcell and R. H. Dicke. Dielectrics in waveguides, by C. G Montgomery *The symmetry of waveguide junctions,* by R. H. Dicke. Index.

—— Microwave transmission circuits. Edited by *George L Ragan. New York* Mc Graw Hill Book Company, Inc 1948 725 p illus 23 cm (The same series Volume 9) $8 50 6485

Contents , Foreword, by L. A. DuBridge. Introduction. Elementary line theory Materials and construction techniques. Rigid transmission lines. Flexible coupling units and lines. Transition units. Motional joints. Tuners, power dividers, and switches. The theory of microwave filters. The design of microwave filters. Index.

—— Waveguide handbook Edited by Nathan Marcuvitz. New York McGraw Hill Book Company Inc. 1951 428 p illus. 24 cm (The same series Volume 10) $8 00 6486

Contents: Transmission lines. Transmission-line modes. Microwave networks. Two-terminal structures. Four-terminal structures. Six-terminal structures. Eight-terminal structures. Composite structures. Appendix. Glossary Index.

—— Technique of microwave measurements. Edited by Carol G *Montgomery* New York McGraw Hill Book Company, Inc. 1947 939 p illus. 23 cm. (The same series. Volume 11) $11 00 6487

Contents Foreword, by L. A. DuBridge. Introduction. Part I Power generation and measurement Power sources. Microwave power measurements. Microwave signal generators. *Part II,* Wavelength and frequency measurements. The measurement of wavelength. Frequency measurements. The measurement of spectrum and pulse shape. Part III, The measurement of impedance and standing waves: Measurements of standing waves. Impedance bridges. The measurement of dielectric constants. Part IV Attenuators and radiation measurements. Microwave attenuators—cutoff attenuators—resistive attenuators. The measurement of attenuation. Directional couplers. R f phase and pattern measurements. Appendix Manufacturers of microwave equipment. Manufacturers. Index.

—— Microwave antenna theory and design. Edited by Samuel Silver Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company, Inc., 1949 623 p illus 23 cm (The same series. Volume 12) $9 00 *6488*

Contents. Survey of microwave antenna design problems. Circuit relations, reciprocity theorems. Radiation from current distributions. Wave fronts and rays. Scattering and diffraction. Aperture illumination and antenna patterns. Microwave transmission lines. Microwave dipole antennas and feeds. Linear array antennas and feeds. Waveguide and horn feeds. Dielectric and metal-plate lenses. Pencil-beam and simple fanned-beam antennas. Shaped-beam antennas. Antenna installation problems. Antenna measurements—techniques. Antenna measurements—equipment. Index.

—— Propagation *of* short radio waves. Edited by Donald E Kerr Office of Scientific Research and Development, National Defense *Research Committee. Editorial staff* Donald E Kerr S A. Goudsmit, Leon B Linford and Albert M Stone. New York McGraw Hill Book Company, Inc. *1951 728* p illus 24 cm. (The same series. Volume 13) $10 00 6489

Contents Elements of the problem, by J E. Freehafer and D. E. Kerr Evolution of the present problems. Troposphere structure. Atmospheric scattering and attenuation. Theory of propagation in *a horizontally stratified* atmosphere, by J E. Freehafer and others Fundamental concepts. Geometrical optics. Physical optics. The linear modified-index profile. Methods for calculating field strength with standard refraction. The bilinear modified-index profile. Nonlinear modified-index profiles. Meteorology of the refraction problem, by R. A. Craig and others. Humidity and refractive index. Vertically homogeneous air and adiabatic changes. Representation and description of soundings. Eddy diffusion. Vertical distributions in stable neutral and unstable equilibrium. Vertical distributions in superequilibrium. Other atmospheric processes and their effect on M-profiles. Instruments to measure temperature and humidity in the lower atmosphere. Meteorological constants. Experimental studies of refraction, by P J Rubenstein and others One-way transmission over water *One-way transmission over* land. Radar transmission. Space variations in field strength. Angle measurements on short optical paths. Reflections from the earth's surface, by D. E. Kerr and others. Theory of specular reflection. Reflection coefficient of the ocean. Reflection coefficient of land. Errors in radar height measurements. Radar targets and echoes, by D E. Kerr and *H. Goldstein* The radar cross section of isolated targets. Complex targets. Sea echo. The origins of echo fluctuations. The fluctuations of [illegible] echoes. Meteorological echoes, by H. Goldstein and others. General properties of the echo. The intensity of meteorological echoes. General properties of precipitation echoes. Precipitation echo properties and meteorological structure. Atmospheric attenuation, by J. H. Van Vleck and others Properties of the complex dielectric constant. Theory of absorption by uncondensed gases. Measurement of atmospheric absorption. Attenuation by condensed water *Appendix.* Application of the Lorentz reciprocity theorem, by D E. Kerr and others.

[illegible] antenna. Coherent and incoherent scattering from [illegible] of antennas. Name index. Subject index.

—— Microwave duplexers. Edited by Louis D Smullin and Carol G. Montgomery New York. McGraw Hill Book Company Inc, 1948. 437 p. illus. 23 cm. (The same series. Volume 14) $7.00. 6490

Contents. Foreword, by L. A. DuBridge. Introduction. Linear theory of high-Q TR tubes. Bandpass TR tubes. Characteristics of TR switches at low-power levels. Microwave gas discharges. The TR and ATR tubes at high power. The principles of branched duplexing circuits. Practical branched duplexers and balanced duplexers. Measurement techniques. Index.

—— Crystal rectifiers. By Henry C. Torrey and Charles A. Whitmer Edited by S A. Goudsmit, James L. Lawson, Leon B Linford, and Albert M Stone. New York McGraw-Hill Book Company Inc. 1948 443 p. illus. 23 cm. (The same series. Volume 15) $6.50. 6491

Contents Foreword, by L. A. DuBridge. Introduction. Part I, General properties. Fundamental properties of the crystal rectifier. Elements of semiconductors. The semiconductor—metal contact. Part II, The crystal converter: Frequency conversion. Noise generation. Loss and noise measurements. Burnout. Test equipment. Manufacturing techniques. Part III, Special types: Low-level detectors. High-inverse-voltage rectifiers. Welded-contact germanium crystals. Appendices. The reciprocity theorem of Dicke. Skin effect at the semiconductor contact. Spreading resistance of an elliptical contact. Crystal-rectifier types and specifications. Index.

—— Microwave mixers by Robert V Pound, with a chapter by Eric Durand. Edited by C. G Montgomery and D D Montgomery New York McGraw Hill Book Company Inc., 1948. 381 p. illus. 23 cm. (The same series. Volume 16) $5 50 6492

Contents Foreword, by L. A. DuBridge. Introduction. Crystal mixer [illegible] [illegible] networks, crystal mixer circuits. Multiple-crystal mixers. Local-oscillator noise. Balanced mixers. Frequency control of local oscillators. Special measurement techniques. Index.

—— Components handbook. Edited by John Francis Blackburn. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw-Hill Book Company Inc. 1949 626 p illus. 24 cm. (The same series. Volume 17) $8.00. 6493

Contents: Foreword, by L. A. DuBridge. Wires and cables. Fixed composition resistors. Fixed wire-wound and miscellaneous resistors. Iron-core inductors. Piezoelectric devices. Electromagnetic delay lines. Supersonic delay lines. Potentiometers. Special variable condensers. Rotary inductors. Instrument motors and tachometers. Power supplies. Relays and related devices. Receiving tubes. Index.

—— Vacuum tube amplifiers. Edited by George Edward Valley Jr., and Henry Wallman. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company Inc., 1948. 743 p. illus. 23 cm. (The same series. Volume 18) $10.00. 6494

Contents: Foreword, by L. A. DuBridge. Linear-circuit analysis and transient response. High-fidelity pulse amplifiers. Pulse amplifiers of large dynamic range. Synchronous and staggered single-tuned high-frequency bandpass amplifiers. Double-tuned circuits. High-frequency feedback amplifiers. Bandpass amplifiers: pulse response and general considerations. Amplifier measurement and testing. Low-frequency amplifiers with stabilized gain. Low-frequency feedback amplifiers. Direct-coupled amplifiers. Amplifier sensitivity. Minimal noise circuits. Measurement of noise figure. Appendices. Realizability of filters—Calculation of load using condenser—Drift of vacuum-tube characteristics under constant applied potentials. Index.

—— Waveforms edited by Britton Chance Vernon Hughes, Edward F MacNichol David Sayre and Frederick C. Williams. Office of Scientific Research and Development National Defense Research Committee. New York McGraw Hill Book Company Inc., 1949 785 p. illus. 23 cm. (The same series. Volume 19) $10 00 6495

Contents. Introduction. Operations on waveforms with linear circuit elements. Operations with nonlinear circuit elements. Sinusoidal waveform generators. Generation of fast waveforms. Blocking oscillators and delay-line pulse generators. Generation of triangular waveforms. Generation of special waveforms. Amplitude selection, comparison and discrimination. Time selection. Electrical amplitude modulation. Electromechanical modulators. Time modulation. Amplitude and time demodulation. Sinusoidal frequency multipliers and dividers. Pulse-recurrence-frequency dividers. Counting. Mathematical operations on waveforms. Oscilloscopic techniques in waveform measurement. Storage tubes. Electrical delay lines. Supersonic delay devices. Bibliography Appendices. Glossary Index.

—— Electronic time measurements. Edited by Britton Chance, Robert I. Hulsizer Edward F MacNichol jr., and Frederick C. Williams. Office of Scientific Research and Development National Defense Research Committee. New York McGraw Hill Book Company Inc. 1949 538 p illus. 23 cm. (The same series. Volume 20) $7.50 6496

Contents Introduction. Radio distance and speed measurements. Techniques of pulse time measurements. Generation of fixed indices. Generation of movable indices—single-scale circuits. Generation of movable indices—circuits. Manual measurements. Techniques of automatic time measurement. Systems for automatic time and position measurement. Special data-transmission systems. Relay radar systems. Delay and cancellation of recurrent wave trains. Glossary Index.

—— Electronic instruments. Edited by Ivan A. Greenwood, jr J Vance Holdam, jr., and Duncan Macrae, jr New York McGraw Hill Book Company Inc. 1948. 721 p. illus. 23 cm. (The same series. Volume 21) $10 00. 6497

Contents: Foreword, by L. A. DuBridge. Part I, Electronic analogue computers. Introduction. Computer design. Arithmetic operations. Calculus. The generation of functions. Grouped operations. Examples of computer design. Part II, Instrument servomechanisms. Introduction and summary of design procedure. Servo theory—introduction and transient analysis—frequency analysis—evaluation and correction of system performance and special problems. Choice and design of components. Experimental techniques. Special servo systems. Part III, Voltage and current regulators: Regulator elements. Practical regulator design. Part IV Pulse test equipment: Development and design. Practical radar test oscilloscope designs. Part V The design and construction of electronic apparatus. Index.

—— Cathode ray tube displays edited by Theodore Soller Merle A. Starr and George E. Valley jr Office of Scientific Research and Development National Defense Research Committee. New York McGraw Hill Book

Company, Inc., 1948 746 p illus. 23 cm. (The same series. Volume 22) $10 00 6498

Contents Foreword, by L. A. DuBridge. Introduction. Cathode-ray tubes. Focus coils and focus magnets. Circuit techniques. Position-data transmission. Electronic markers and indices. Deflection-modulated displays. Deflection coils. Pattern distortions on magnetic cathode-ray tubes. Sweep amplifiers for reactive loads. Rectangular coordinate displays. Special deflection coils for off-centering. Radial-time-base displays. Sector-display indicators. Range-height displays. Mechanical and optical devices. Spot size. Screens for cathode-ray tubes. Appendices. Index.

—— Microwave receivers. Edited by S N Van Voorhis New York McGraw Hill Book Company, Inc., 1948 618 p illus 23 cm. (The same series. Volume 23) $8 50 6499

Contents: Foreword, by L. A. DuBridge. Introduction. Duplexers, microwave mixers, and local oscillators. AFC systems and circuits. I f input circuits. VHF amplifiers, mixers, and oscillators. Intermediate-frequency amplifiers. Second detectors. Video amplifiers. Gain-control circuits. Mechanical construction of receivers. R-f test equipment. I f test equipment. A simple radar receiver. An airborne receiver incorporating anticlutter circuits. A receiver for an automatic-tracking radar A two-band 200-Mc/sec superheterodyne receiver Wide-band F M receiver Beacon superheterodyne receivers. Crystal-video receivers. Superregenerative receivers. MTI receivers. Index.

—— Threshold signals Edited by James Llewellyn and George E Uhlenbeck. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company, Inc., 1950 388 p illus. 24 cm. (The same series. Volume 24) $6 00 6500

Contents Introduction. Types of signals and methods for their reception. Theoretical introduction. Basic origins of internal noise. Receiver noise. External noise sources—clutter The detectability of signals in the presence of noise. Pulse trains in internal noise. Pulse trains in internal noise—other methods of presentation. Modulated pulse trains. Threshold pulsed signals in clutter. Threshold signals in electronic interference. Treshold modulations for amplitude-modulated and frequency-modulated continuous-wave systems. Index.

—— Theory of servomechanisms edited by Hubert M James, Nathaniel B Nichols and Ralph S Phillips. Office of Scientific Research and Development, National Defense Research Committee. New York McGraw Hill Book Company Inc. 1947 375 p illus. 23 cm. (The same series Volume 25) $5.50 6501

Contents Foreword, by L. A. DuBridge. Servo systems. Mathematical background. Servo elements. General design principles for servomechanisms. Filters and servo systems with pulsed data. Statistical properties of time-variable data. RMS-error criterion in servomechanism design. Applications f the new design method. Index.

—— Radar scanners and radomes Edited by W M Cady, M B Karelitz and Louis A. Turner New York McGraw Hill Book Company, Inc. 1948 491 p illus 23 cm. (The same series. Volume 26) $7 00 6502

Contents Foreword, by L. A. DuBridge. Part I, Radar scanners Uses of radar scanners. Ground and ship antennas. Ground antenna mounts. Stabilization of ship antennas. Ship antenna mounts. Airborne scanners. Stabilization of airborne antennas. Scanner control mechanisms. Part II, Radomes General survey of the radome problem. Electrical design of normal-incidence radomes. Electrical design of streamlined radomes. Theory of the reflection and transmission of electromagnetic waves by dielectric materials. Radome materials and methods of fabrication. Installation and testing of radomes. Appendix. Formulas for stabilization of ship antennas. Glossary Index.

—— Computing mechanisms and linka By Antonin Svoboda. Edited by Hubert James. Office of Scientific Research and velopment, National Defense Research C mittee. New York McGraw Hill B Company, Inc., 1948 359 p. illus. 23 (The same series. Volume 27) $5.50 6.

Contents. Foreword, by L. A. DuBridge. Computing mecha and linkages. Bar-linkage computers. Basic concepts and termi Harmonic transformer linkages. The three-bar linkage. Linkage binations with one degree of freedom. Final adjustment of ba constants. Linkages with two degrees of freedom. Bar-linkage m pliers. Bar-linkage function generators with two degrees of free Appendices. Index.

—— Index, edited by Keith Henney Fo word by Vannevar Bush. Introductory no by Karl T Compton, Lee A. DuBridge, Lo N Ridenour New York McGraw Hill Bo Company, Inc. 1953 160 p. 23 cm. (T same series Volume 28) $4.50 65

Note. The Radiation Laboratory at the Massachusetts Institut Technology was organized and operated under the Office of entific Research and Development of the National Defense search Committee during the World War II period as the main ter in the United States of America for research into the problems encountered in the development of radar and for the sign of practical radar apparatus. Its history is recounted in detail in J P Baxter's *Scientists against time*, 1946. This se although an official publication of the Radiation Laboratory is formal report of the work done there, but is series of treat based on this work and also on the work of scientists and engine who worked elsewhere. The material presented was selected the standpoint of its general interest and applicability in electro and communications rather than for military importance. Some the volumes, such as Svoboda's *Computing mechanisms and linkag* do not have a direct bearing on radar but are of use in ot fields of engineering. Although the manner of treatment va somewhat from volume to volume, the series is, in general, tended for college-trained engineers who are engaged in the de of radar apparatus or other electronic equipment hich opera on radiations of similar frequencies.

MENTZER, J R.

Scattering and diffraction of radio wave New York Pergamon Press, 1955 134 p illus. 22 cm $6 00 650

Contents. Introduction. The mathematical formulation of scatte ing problems. Two-dimensional problems. Three-dimensional pro lems. The measurement of radar cross sections. References. Append Index.

Note. A compact presentation of modern methods of solvin problems in the scattering of radio waves. It is addressed to reade who have thorough knowledge of basic electromagnetic theory an also some mathematical sophistication. It includes both the class methods of attack by means of differential equations and moder methods, particularly integral equations and approximate solution The list of literature references is selected one of 45 citations.

MOSKOWITZ, SIDNEY, AND JOSEPH RACKER

Pulse techniques. New York Prentice-Hall Inc. 1951 300 p. illus. 23 cm. (Prentice-Hall electrical engineering series, W L Everitt, editor) $7.35 6506

Contents: Characteristics of pulses. Transient response of linear networks. Design of pulse networks. Linear pulse amplifiers. Pulse shaping and clamp circuits. Pulse generation. Pulse measurements and instruments. Pulse communication systems. Aerial navigation aids. Appendices Review of complex-variable theory Pulse response of cascaded wave filters. Pulse response of transmission lines. Index

Note The term "pulse techniques designates systems of radio communication in which signals are broadcast in pulses or "bursts" of radiated energy rather than in modulated, continuous ... Continuous waves are the basis of standard radio, but pulses, the basis of radar are finding more and more uses in other systems of co-

systems, such as television and the microwave radio relays in telegraph and telephone circuits. This short book is designed as an introduction to the field for readers possessing knowledge of basic electronic engineering and standard radio. The main viewpoint is that of the engineer; in other words, the purpose is to prepare the reader for work in the field.

LYTHMORE, ROBERT B

Essentials of microwaves. New York John Wiley & Sons, Inc., 1952 236 p. illus. 23 cm. $5.00. 6507

Contents: The electromagnetic laws of Maxwell. Characteristic waves and wave guides. Cavity resonators and filters. Characteristic waves and antennas. Typical microwave antennas. Waves and electron currents; grid-control tubes. Klystrons. Traveling-wave and other-wave tubes. Magnetrons. Electrical noise. Microwave radio systems; maps. Radar. Applications of microwaves in physical research. Microwave measurements. Appendixes. Index.

Note: A simple, straightforward introduction. Some familiarity with radio terminology is necessary in order to understand it, but it is not addressed to readers who are studying the field because they are now professionally trained. It is an ideal book for such readers as technical engineers specializing in, say, power house design, who desire to know something about microwaves for the sake of rounding out their store of information. The author emphasizes the fundamental simplicity of the subject, and he has covered it in text and more than 200 clearly drawn illustrations.

NATIONAL DEFENSE RESEARCH COMMITTEE

Radio wave propagation. Consolidated summary technical report of the Committee on Propagation of the National Defense Research Committee. Charles R. Burrows, chairman. Stephen S. Attwood, editor New York Academic Press, Inc., 1949 548 p. illus. 28 cm. $15.00. 6508

Contents (abridged): Volume 1, Technical survey—Part 1, Summary: Standard propagation. Meteorological measurements. Transmission experiments. Scattering and absorption of microwaves. Part 2, Conference reports on standard propagation. A graphical method for the determination of standard coverage charts. Theoretical analysis of errors in radar due to atmospheric refraction. Siting and coverage of ground radars. Part III, Conference reports on nonstandard propagation: Tropospheric propagation and radio meteorology. Frequent leakage in surface duct. The solution of the propagation equation in terms of Hankel functions. Perturbation theory for an exponential M curve in nonstandard propagation. First order extension of radar targets over the open ocean. Volume 2, Radio wave propagation experiments—Part 1, Meteorology. Part 2, Microwave experiments: Reflection coefficients. Dielectric constant, absorption and scattering. Echoes and targets. Angle-of-arrival measurements. Volume III, The propagation of radio waves through the standard atmosphere: Antennas. Factors influencing transmission. Calculation of radio gain. Coverage diagrams. Diffraction by terrain. Targets. Glossary. Bibliography.

Note: As the subtitle indicates, this volume brings together in condensed form the three-volume report prepared by the Committee on Propagation of the National Defense Research Committee, of which only 150 copies were printed. The report is a technical account of problems relating to radio wave propagation in the atmosphere at frequencies above 30 megacycles, and is written for experienced radio and electrical engineers. The fundamental principles of propagation, the effect of earth and atmosphere characteristics on radio waves, and the properties of antenna systems are discussed in detail. It will thus be of particular value to engineers responsible for designing, locating, and operating radar systems and communications equipment. The appendix includes an extensive bibliography of technical reports prepared by wartime governmental and other organizations.

NATIONAL TELEMETERING CONFERENCE

National Telemetering Conference, 1956. Papers presented at Los Angeles, California, August 20–21 1956. Sponsored American Institute of Electrical Engineers Institute of the Aeronautical Sciences, Institute of Radio Engineers, Instrument Society of America. New York American Institute of Electrical Engineers 1956 126 p. illus. 28 cm. $3.50. 6509

Contents (abridged) Session I, Systems A wide bandwidth telemetry system, by D E. Henry and R. E. Glass. Advanced design telemetry for vehicles subjected to severe environmental conditions, by D. W Blancher. Radio-frequency link design for telemetering, by H. Scharla and Nielsen. Beacon telemetering system, by E. Berlesky Performance characteristics of time and frequency multiplexed telemetering systems, by H. S. McGaughan. Session II, Data processing: A new development in the processing of PDM telemetry data, by W K. Lower. An automatic data reduction system for pulse width telemetry by F T Chambers. A method of separating vibration data into its frequency and amplitude components, by J. M. Hawk. A high-speed, high-accuracy automatic digital data reduction system for FM and PWM telemetered information, by W Kroll. Session III, Components and equipment Temperature measurements on high speed missiles, by G. E. Reis. Measurement of millivolt data by pulse width multiplexing, by A. S. Westneat. A method of commutating low level signals, by O. Ott. Frequency stability investigations on FM/FM telemetering equipment, by J. W Frost and K. F Hartmann. Session Systems III An integrated sub-miniature digital airborne ground data transmission system, by R. M. Gordon. Pulse coded messages over radar beacon equipment, by K. Mard and Richard Rabin. A comparison of encoding techniques for telemetry and data handling, by R. A. Runyan. A wide band radio link telemetering system, by T D. Warnecke. Time code telemetry system for event data, by D. Lichter. Session VI, Recorders. A high speed, general purpose, magnetic tape data recorder for use with digital computers, by E. R. Peltz. Direct writing, continuous recording above 100 cycles per second, by H. L. Chambers and J. C. Rudel. A miniature digital recorder, by C. P. Hedges. A new small digital data printer, by E. A. Hilton and K. Ebel. Session VII, Components and equipment II. Receiver design considerations for future telemetry requirements, by R. E. Green. A continuously tunable discriminator for FM/FM telemetering systems, by G. R. Thiele. A transistorized telemetering system to watch dog on guided missile performance, by F M. Riddle. Transistors applied to an operational FM/FM telemetry system, by C. R. McCampbell and others.

Note: The National Telemetering Conference has been sponsored since 1953 by the four major technical societies who are listed in the above title. The volume described here contains most of the papers presented at the 1956 conference, although some of the papers are printed in abstract form only. It contains also the names of participants and the subjects of panel conferences, but not the proceedings of the panels. Advances in telemetering and in closely related areas, as noted in the titles of the papers, are described. Although the American Institute of Electrical Engineers is listed above as the publisher, the volume may be ordered from any one of the sponsoring societies.

NICHOLS MYRON H., AND LAWRENCE L. RAUCH

Radio telemetry Second edition. New York John Wiley & Sons, Inc., 1956 461 p. illus. 24 cm. $12.00 6510

Contents: Part I, Methods: Introduction and historical background. Methods of radio telemetry. Noise and errors in telemetry—general. Some elements of communication. Frequency-division multiplexing. Time-division multiplexing. Time-division systems without interpolation. Double multiplexing. Data interpretation. Radio links for telemetry. Comparison of multiplexing methods. Instruments for radio telemetry. Part II, Foundations: Modulation and multiplexing. Frequency analysis. Part III, Techniques: Frequency-division radio telemetering systems. Time-division radio telemetering systems. Data reduction. Remote control radio command links. Appendixes. Bibliography. Glossary. Index.

Note: Radio telemetry systems are currently in use for such purposes as transmitting meteorological data from radiosondes to instruments on the ground, from rockets passing through the upper atmosphere to instruments located on the ground, and from experimental planes under test to recording instruments located in another plane or on the ground. This book is a study of the principles, components, and characteristics of such systems. Part II, entitled "Foundations," is primarily a mathematical analysis, and mathematics is freely used in some other parts of the book. However, the third part of the book, entitled "Techniques," is largely a descriptive survey of developed telemetering systems. Here the text is supplemented by numerous diagrams of circuits and pictures

of apparatus. The appendixes contain a variety of reference information useful in the design of telemetering systems. The first edition f the work was privately published.

POLLARD, ERNEST CHARLES, AND JULIAN M STURTEVANT

Microwaves and radar electronics New York John Wiley & Sons, Inc. 1948 426 p illus 22 cm $7 75 6511

Contents Electromagnetic fields and microwa es. Coaxial lines, wa eguides, and cavities. The production of microwaves. Microwave technique. Pulse circuits. Cathode ray tube indicators. Tuned amplifiers. Amplification of very weak signals. Servomechanisms and computers. Miscellaneous circuits. Radar and its accessories. Microwave communications. Microwaves in physical research. Appendices The Fourier integral. Curl and Stokes' theorem. U its. Author index. Subject index.

Note A compact treatment designed to provide upper-class physics or engineering students with an introduction to the basic principles and techniques of microwave production, control, and utilization. Although the treatment as whole is general, some of the discussions f problems that had to be solved in the application f microwaves, especially in radar are specific and rather detailed. Selected literature references are included but there are few references to the Massachusetts Institute of Technology Radiation Laboratory series because publication of this series had not progressed far when the manuscript of this book was completed. However both authors were associated with the Radiation Laboratory during World War II and have based the book on their experience there.

RAMO, SIMON, AND JOHN R. WHINNERY

Fields and waves in modern radio Second edition New York John Wiley & Sons, Inc., 1953 576 p. illus 23 cm $8 75 6512

Contents Oscillation and wa fundamentals. The equations of stationary electric and magnetic fields. Solutions to static field problems. Maxwell's equations and high-frequency potential concepts. Circuit concepts and their derivation from the field equations. Skin effect and circuit impedance elements. Propagation and reflection of electromagnetic wa es. Guided electromagnetic waves. Characteristics of common wave guides and transmission lines. Resonant cavities. Microwave networks. Radiation. Appendix. Index.

Note. A widely used college textbook that contains treatment of electromagnetic theory from the standpoint of radio. It is written at the level of senior and first-year graduat students f electrical and communications engineering. Also, it has proved to be useful treatment for engineers already at work in industry The first edition was published in 1944 Although there is only one wholly new chapter in this second edition, that on microwave networks, revision and fairly extensi rewriting are evident in many parts of the book. When the first edition was written, the authors were associated with the General Electric Company and the book was development of that company's Advanced Engineering Program. The first-named author is now Vice-President of the Hughes Aircraft Company and the second is Professor of Electrical Engineering in the U iversity of California.

REED HENRY R , AND CARL M RUSSELL

Ultra high frequency propagation. By Henry R Reed and Carl M Russell Assisted by W M Browne and J W Plummer New York John Wiley & Sons Inc. 1953 562 p. illus. 24 cm. $10 50 6513

Contents An introduction t UHF communications and the system concept. General aspects of propagation. Meteorological theory Antennas and radiation phenomena (ground reflection behavior) Multipath propagation (ground-to-air air-to-ground, and ground-to-ground propagation) Comparison of VHF and UHF propagation, dipole-to-dipole (ground-to-air and air-to-ground propagation) Complex antennas (linear arrays) Complex antennas (circularly polarized antennas) System comparison, operation and design of UHF complex antennas. Air-to-air propagation. Lobe modulation interference and design considerations Effects of meteorological conditions on experimental flight data. General operational considerations. Illustrative systems design problems Index

Note An important work based largely on studies made in recent years at the United States Naval Air Test Center Much of the Experimental work was related to aeronautical radio, that is to communication bet een the ground and flying airplanes and bet two or more airplanes in the air However the material prese is fundamental and therefore largely applicable to any communica tion based on the U.H.F and V.H.F bands of radiation, includ U.H.F television. The primary theme in the book is the concept the communication system as whole however, the exposition carried forward by analyzing the elements of systems. Altho organized as a text for use in formal courses, the book is potentia of interest to graduate communications engineers as well as students.

REICH, HERBERT J , AND OTHERS

Microwave theory and techniques. B Herbert J Reich Philip F Ordung, Herbe L. Krauss, and John G Skalnik. Princeton D Van Nostrand Company, Inc., 1953 90 p illus. 23 cm (The Van Nostrand series i electronics and communications, edited b Herbert J Reich) $13 50 651

Contents. Introduction. Fundamentals of quasi-static field theo Dynamic fields. Transmission lines. Impedance matching a baluns. W eguides. Waveguide and coaxial-line components. A tennas. Measurements. Microwave resonators. Fundamentals microwave amplifiers and oscillators. Triode and tetrode microwa amplifiers and oscillators. Two- and three-cavity klystrons. Refle klystrons. Magnetrons. Traveling-wave and double-beam tube Appendices. Microwave laboratory experiments. Author index. Sub ject index. Symbol index.

Note A comprehensive introduction to basic theory and micro wave devices operating in a frequency range extending "upwa from lower limit of approximately three or four hundred mega cycles per second. It is written at level that assumes con siderable knowledge of basic physics, particularly electromagnetic A view is provided of the mathematical treatment of the field however most of the chapters are concerned with physical prin ciples and characteristics rather than mathematical analysis. Con siderable use is made of graphic methods in presenting data. Th book is based on the literature published to about the close of 1952 and cites this literature in footnotes and supplementary lists Since the names of the authors of the cited literature are included in the author index, it is useful as guide to the significant literature of that period.

REINTJES J FRANCIS, AND GEOFFREY T COATE

Principles of radar By members of the staff of the Radar School Massachusetts Institute of Technology Third edition. New York McGraw Hill Book Company, Inc., 1952 985 p illus 24 cm. $7 75 6515

Contents Pulsed radar Timing circuits. Modulators. Indicators. Synchros and servomechanisms. Receivers. Radio-frequency transmission lines. Waveguides Resonant lines and cavities. High-frequency triode oscillators. Klystrons and magnetrons. Radio-frequency transmitting and receiving systems. Antennas. Propagation. Index.

Note An otherwise work developed originally for use in the basic course given to selected Army and Navy personnel at the M.I.T Radar School during World War II The book concerned primarily with the basic principles and techniques of radar and is not intended to instruct in the operation of particular types of radar equipment. In this revision the general scope and purpose of the previous editions has been retained, but the subject matter has been extensively reorganized and rewritten The chapters on antennas and propagation, transmitting and receiving systems, wave guides and cavity resonators, ha been thoroughly revised and new material added on step generators, klystrons, switching operations in transmission-line circuits, and applications of synchros. Many new illustrations ha also been included.

RIDER, JOHN FRANCIS AND SEYMOUR D USLAN

F M transmission and reception. Second edition. New York John F Rider Publisher Inc. 1951 426 p illus. 22 cm. $4 95 6516

Contents: Part I: Fundamental considerations. Frequency modulation. Essentials of F-M transmitters. Transmitters of today. The reception of F M signals. Part II: Receiving antennas. The F M front. Alignment of F M receivers. Servicing F M receivers. F.M. [illegible] receivers. Appendix. Bibliography. Index.

Note: A practical introduction for radio amateurs, radio repairmen, and other persons who already have a knowledge of amplitude-modulated radio and of the technical terminology of radio. It is suitable for use in organized classes in trade schools and also as a self-instruction text for men studying the subject at home. The text of the present edition is the same as the first, except that a chapter on FM in television receivers has been added. Also the new questions that were added in the ninth printing of the first edition have been retained.

RIDER, JOHN FRANCIS AND SEYMOUR D USLAN

Understanding vectors and phase. New York. John F Rider Publisher Inc. 1947 153 p. illus. 19 cm. $0.99 6517

Contents: What is a vector? The coordinate system. Single vector quantities. Multiple vector presentation. Resolution of vectors. Addition of vectors. Subtraction, multiplication, and division of vectors. Radio circuit problems. Bibliography. Index.

Note: A clear and concise explanation of the theory of vector diagrams and its utilization to indicate phase relationships and to solve radio circuit problems. The book is written for the radio serviceman, technician, or student who does not have an engineering background but is acquainted with standard radio.

ROWE, FRED D

How to locate and eliminate radio & TV interference. New York John F Rider Publisher Inc., 1954 128 p. illus. 22 cm. $1.80 6518

Contents: The interference problem. Antennas and interference. Low impedance systems and signals. Interference locating equipment. Electrical equipment & appliances as noise sources. Locating the source. Power line interference. Power-line noise filters. Electrical equipment & appliance interference elimination. Fluorescent lamp interference. Television interference suppression for transmitters. Eliminating interference at the TV receiver. Appendixes. Index.

Note: A compact survey of sources of interference in radio and television receivers and of protective measures and devices. The problem is shown to be a complex one, requiring careful and detailed analysis. Specific remedies are described for typical situations. The book is intended for technicians engaged in the installation and maintenance of radio and television receivers.

SEELY SAMUEL

Radio electronics. New York McGraw Hill Book Company Inc., 1956 487 p. illus. 21 cm. (McGraw Hill electrical and electronic engineering series Frederick Emmons Terman, consulting editor) $7.00 6519

Contents: Introduction to communication systems. Characteristics of vacuum tubes. Rectifiers and filters. Vacuum triodes as circuit elements. Basic amplifier principles. Untuned potential amplifiers. Special amplifier considerations. Untuned power amplifiers. Tuned potential amplifiers. Tuned power amplifiers. Oscillators. Amplitude modulation. Demodulation. Frequency modulation and detection. Information theory. Appendixes. Index.

Note: Radio is presented from the engineering viewpoint in this book. The elements of radio systems such as amplifiers, oscillators, etc., are described in physical terms and analyzed mathematically. Most of the space is devoted to the mathematical analyses which, though rigorous, are worked out step by step so as to facilitate comprehension on the part of the reader. Inclusion of discussions of information theory, noise, etc. gives the presentation more breadth than is implied by the title. The book is designed primarily for the instruction of undergraduate college students of communications engineering. It is a companion work to the author's *Electronic engineering*, 1956, and contains some matter also included in that book. However, each book is independent and may be used without reference to the other. The author is Head of the Department of Electrical Engineering of Case Institute of Technology.

SHEINGOLD, ABRAHAM

Fundamentals of radio communications. New York D Van Nostrand Company Inc., 1951 442 p. illus. 24 cm. (The Van Nostrand series in communications engineering edited by Herbert J Reich) $5 75 6520

Contents: General principles of radio communication. Electric circuit fundamentals. Basic radio circuit components. Basic radio circuits. Transfer of power in radio systems. Generation and propagation of radio waves. Fundamental principles of electron tubes. Operational characteristics of electron tubes. Amplification of small alternating voltages. Amplification of large alternating voltages. Rectifiers and rectifier-filter d-c sources. Sine-wave oscillators. Amplitude modulation—A-M transmitters. Detection—reception of A-M signals. Frequency conversion—the superheterodyne receiver. Frequency modulation. Basic pulse circuits. Ultra-high-frequency techniques. Image-transmission systems. Special communication techniques. Radar and radio navigation systems. Index.

Note: A textbook written by a member of the faculty of the United States Naval Postgraduate School. It is suitable for students who have an advanced technical interest in the field but lack knowledge of mathematics beyond college algebra. No previous education in radio has been assumed. The book is especially good for discussions of elements such as sweep circuits which are omitted from typical introductory books on radio.

SKILLING HUGH HILDRETH

Fundamentals of electric waves. Second edition. New York John Wiley & Sons Inc. 1948 245 p. illus. 24 cm. $5 00 6521

Contents: Experiments on the electrostatic field. Vector analysis. Certain theorems relating to fields. The electrostatic field. Electric current. The magnetic field. Examples and interpretation. Maxwell's hypothesis. Plane waves. Reflection. Radiation. Antennas. Wave guides. Waves in the ionosphere. Index.

Note: A discussion for advanced students and graduate engineers of the development of Maxwell's electromagnetic equation and its application to the radiation, propagation, and transmission of radio waves. The reader is supposed to have a knowledge of basic physics and of mathematics through calculus, and the exposition is expressed chiefly in mathematical terms. Substantial changes have been made for this edition. These include discussions of wave propagation in ionized regions and in semiconducting media, revised treatments of antennas and wave guides, and more material on reflection from the ionosphere and from ground surfaces.

SLATER, JOHN CLARKE

Microwave electronics. New York D Van Nostrand Company Inc., 1950 406 p. 24 cm. (Bell Telephone Laboratories series) $7.00 6522

Contents: The wave guide with perfectly reflecting walls. Reflection and standing waves. Power and energy relations. The theory of resonant cavities. The resonant cavity with one output. The cavity with two outputs. The cavity with several outputs, and coupled cavities. The periodically loaded wave guide. Fundamental principles of electronic devices. The klystron. The linear accelerator. The traveling wave amplifier. The magnetron oscillator. The cyclotron and synchrotron. Appendixes: Properties of bilinear transformations. Group velocity. Bibliography. Index.

Note: An essential book for engineers at work in the field of radar design and physicists concerned with the phenomena of electromagnetic waves in the millimeter and centimeter ranges. Mainly it is a mathematical treatment based on the theory of orthogonal functions. This mathematical method is developed so that it can be applied generally to the predictions of microwave behavior. The author was one of the pioneer researchers during World War II; he worked at the Bell Telephone Laboratories and the Radiation Laboratory at Massachusetts Institute of Technology on radar design and particularly on the magnetron. The book is a development of this work, and embraces not only the author's contributions but those made by others to the mathematical solution of microwave problems.

SLURZBERG, MORRIS, AND WILLIAM OSTERHELD

Essentials of electricity for radio and television Second edition. New York McGraw Hill Book Company, Inc., 1950 533 p illus 24 cm $6 50 6523

Contents Communication. Basic theory of electricity Batteries. Electric circuits. Magnetism. Meters. Electrical power apparatus. Inductance. Capacitance. Alternating-current circuits. Resonance. Basic electronic circuits. Appendix. Index.

Note. An introductory book designed for the instruction of men who are preparing for practical work in radio and television installation and maintenance. Although the treatment is essentially descriptive and mathematics beyond elementary algebra is not employed, it is a somewhat more substantial book than the conventional practical text. The first edition was published in 1944 Important changes and additions were made in preparing this edition. Electric circuit phenomena are now explained in terms of electron flow the scope has been extended to include the elements of television, and the discussion of sound has been expanded.

SLURZBERG, MORRIS, AND WILLIAM OSTERHELD

Essentials of radio New York McGraw Hill Book Company, Inc., 1948 806 p illus. 23 cm. $8 00 6524

Contents Introduction to radio. Circuit analysis. Simple receiving circuits. Vacuum tubes. Detector circuits. Tuning circuits. Radio-frequency amplifier circuits. Audio-frequency voltage amplifier circuits. Power amplifier circuits. Vacuum-tube oscillator circuits. Power supply circuits. Audio units. Transmitting circuits. Receiving circuits. Test equipment. Appendix. Index.

Note This text is intended for the use of radio students at the junior-college level. It provides a rather thorough study of the operating characteristics and theory of vacuum tubes, resistors, inductors and capacitors, and of the basic radio circuits utilizing these elements. The book does not require knowledge of mathematics beyond that of elementary algebra, and all data required for the solution of problems, given at the end of each chapter, are contained in the appendix. The appendix also includes list of symbols used in circuit drawings, accompanied by a picture of the element represented, listing of letter symbols, and a compilation of formulas used in radio and electronics calculations. The book is not revision of the authors' *Electrical essentials of radio*, 1944 but is a new work.

SOUTHWORTH, GEORGE CLARK

Principles and applications of waveguide transmission New York D Van Nostrand Company Inc. 1950 689 p illus. 23 cm. (The Bell Telephone Laboratories series) $12 50 6525

Contents. Introduction. Principles of networks. Principles of transmission lines. The nature of electromagnetic waves. Waveguide theory A descriptive account of electrical transmission. Waveguide transmission lines. Waveguide elements (impedors) W veguide components. Waveguide radiators. Electronic devices for waveguide use. Modulation and demodulation by waveguide methods. Appendixes. Ratios frequently used in waveguide calculations. RMA standard rectangular waveguides. Properties f certain dielectrics. References. Index.

Note A substantial treatment of the current knowledge and practice of waveguides in the transmission of microwave radiation. The author who was, at the time of writing, on the staff of Bell Telephone Laboratories, is one of the outstanding investigators of waveguide transmission The first five chapters deal with the fundamental and historical aspects. Rather advanced mathematics is used in them, and they are addressed primarily to graduate students and practicing engineers. Although there are numerous graphs in the remaining chapters, these chapters are by comparison descriptive in nature and can be understood by readers who do not possess the mathematical training required for the reading of the first part of the book. There is a 10-page list of references.

STERLING, GEORGE EDWARD, AND ROBER B MONROE

The radio manual. Chapter on television b Thomas T Goldsmith, jr Fourth edition New York D Van Nostrand Company, Inc 1950 890 p illus 26 cm $12 75 652

Contents Elementary electricity and magnetism. Meters and [illegible] ... Batteries. The electron tube. Amplifiers and oscillat[illegible] Amplitude modulation. Frequency modulation systems. Radio-fre[illegible] quency measurements and monitors. Broadcast studio and contr[illegible] room audio facilities. Standard broadcast transmitters. FM broad[illegible] cast transmitters. Television. Marine radio equipment. Lifeboat rad[illegible] equipment. Marine navigational aids. Radio wave propagation. Antennas. Radio equipment for the emergency services. Importa[illegible] extracts from the Communications Act of 1934, as amended b[illegible] Public 97 approved May 20, 1937 F.C.C. rules and regulation[illegible] International telecommunication convention of Atlantic City an[illegible] radio regulations, 1947 Index.

Note. A long-established and widely used textbook and reference manual. It is slanted for the student and operator with occupa[illegible] tional interests in the field, and is a standard work for those [illegible] are studying to pass examinations so as to obtain licenses as com[illegible] mercial operators. However it serves also as small encyclopedia [illegible] f the field for radio amateurs and for engineers. The third edition was published in 1940. For the fourth edition revisions were made to cover developments of the decade 1940–1950 and to cover the latest regulations and standards of the Federal Communication Commission. New chapters and sections h been added on such topics as radio wave propagation, antennas, and radar. Numerou[illegible] schematic wiring diagrams of commercial equipment are included.

TERMAN, FREDERICK EMMONS

Radio engineers handbook. New York McGraw Hill Book Company, Inc., 1943 1,019 p illus. 23 cm $12 00. 6527

Contents. Tables, mathematical relations, and units. Circuit elements. Circuit theory Vacuum tubes and electronics. Vacuum-tube amplifiers. Oscillators. Modulation and demodulation. Power supply systems. Radio transmitters and receivers. Propagation of radio waves. Antennas. Radio aids to navigation. Measurements.

Note An important reference guide to the literature and [illegible] f the art of radio to approximately the year 1942. It brings together under each of the above headings, all pertinent and [illegible] facts, formulas, designs, and procedures. The material is based on a review of some 1,000 technical articles which, cited as footnotes, constitute an extensive bibliography An author index to the literature and detailed subject index are included.

TUCKER, DURWARD J

Introduction to practical radio. New York The Macmillan Company, 1945 322 p. illus. 22 cm. $5 00 6528

Contents Introduction. Elementary electricity Ohm's law Resistance circuits. Direct-current power. Equipment wiring. Kirchhoff's laws. Magnetism. Electromagnetism. Alternating current. Electrical instruments. Inductance. Capacitance. Impedance. Appendix. Index.

Note. An elementary text in which the functioning of the [illegible] elements of radio equipment, such as coils, condensers, [illegible] tubes, batteries, wired circuits, and transformers, is described by reference to the basic principles of electricity Any mathematics required in the course of the discussion, from simple arithmetic to vector analysis, is briefly reviewed as the need arises. The book is intended chiefly for vocational school students and practical radio men. Review questions and problems are given at the end of each chapter.

UNITED STATES RADIO RESEARCH LABORATORY HARVARD UNIVERSITY

Very high-frequency techniques compiled by the staff of the Radio Research Laboratory Harvard University under the editorial direction of Herbert J Reich, editor Louise S McDowell, asst. editor New York Mc

[illegible]-Hill Book Company Inc. 1947 2 v [illegible] 23 cm. $16.00 per set. 6529

Contents (abridged): Volume I: Broad-band antennas, by A. [illegible] and [illegible]-frequency measurements, by J. A. Nelson and [illegible], Impedance matching, transformers and baluns, by J. A. Nelson [illegible] and [illegible]. Cone and cylinder antennas, by A. Dorne. Sleeve [illegible], by R. L. Beck and others. Horns and reflectors, by [illegible] and A. Dorne. Slot antennas, by A. Dorne and D. Lazarus. [illegible] by R. L. Beck and J. [illegible]. [illegible] of direction finding, by A. Alford, J. D. Kraus, and [illegible]. Antennas for direction finders, by J. D. Kraus and [illegible]. [illegible] for direction finders, by W. McGuigan. [illegible], by J. W. Christensen. Introduction to power generation, by [illegible]. Triode and pentode ultrahigh-frequency oscillators, by [illegible] and others. Coaxial-line power amplifiers and [illegible], by W. R. Rambo. Power output coupling methods, by [illegible]. Modulation of high-frequency power oscillators, by [illegible] and W. R. Rambo. General design considerations of high-power ultrahigh-frequency triode and tetrode oscillators, by [illegible] and G. Hok. The resnatron, by W. G. Dow and [illegible]. Principles of magnetron operation, by G. Hok and [illegible]. Operating characteristics of continuous-wave magnetrons, by [illegible]. Description, characteristics, and operation of typical [illegible] magnetrons, by G. Hok and others. Volume II: Externally [illegible] oscillators, by H. J. Reich. Power-measuring devices for ultrahigh frequencies, by R. A. [illegible] and others. [illegible] considerations, by J. M. Pettit. Principles of [illegible]-line filter design, by S. Cohn. Design of [illegible] line filters, by S. Cohn. Tuners for microwave receivers, by [illegible] and others. Detectors and mixers, by R. A. Soderman. Local [illegible] considerations and butterfly oscillators, by R. A. [illegible] and [illegible] klystron oscillators, by W. H. Huggins [illegible] coaxial-line resonators, by W. H. Huggins [illegible]. Intermediate-frequency amplifiers, by M. T. Lebenbaum. [illegible] output circuits, by R. R. Buss and others. [illegible] by [illegible], by W. R. Whaley. Bibliography. Index.

Note: The Laboratory mentioned in the title of this set was an [illegible] set up primarily for the development of radar countermeasures during World War II. The work does not, however, give [illegible] of the problems or work of the Laboratory. Instead, [illegible] with circuits, apparatus and techniques used or developed by the Laboratory that appear to have broader applications [illegible].

WATSON, HERBERT M., AND OTHERS

Understanding radio a guide to practical operation and theory by Herbert M Watson, Herbert E. Welch and George S Eby Illustrated by Herbert E. Welch. Second edition. New York McGraw Hill Book Company Inc., 1951. 716 p. illus. 24 cm. $7.00 6530

Contents (abridged): Radio waves and wave travel. Something [illegible] electricity. Magnetism and direct-current motors. Ohm [illegible] and by [illegible]. How to build and wire the [illegible]. Principles of the vacuum tube. Wave-form [illegible]. Alternating currents in radio circuits. Resistance and tuning [illegible] direct-current tubes. The dynamic loudspeaker. Power supplies. Alternating-current [illegible] tubes. The superheterodyne [illegible]. Short-wave sets. Public-address units. Power [illegible] and [illegible] circuits. Radio-telephone transmitters. Antennas. [illegible] high frequencies. Frequency modulation. Looking ahead [illegible]. Index.

Note: One of the more successful introductions for students with [illegible] education in mathematics or electricity. In it the fundamentals of electricity are explained in simple terms and with the aid of numerous experiments. Very little mathematics is used, and the special terminology of radio is introduced gradually. The book [illegible] for use both in organized classes with laboratory facilities and in home study. A considerable share of the sample apparatus can be constructed at home. In this edition there are many new [illegible], and material has been added on modern tubes, power [illegible], public address units, etc.

TELEVISION

ANNER, GEORGE E

Elements of television systems. New York Prentice-Hall, Inc., 1951 804 p. 22 cm. $9.00 6531

Contents: Part I, Closed television systems: Transmission of pictures. Picture standards. Scanning methods. Scanning generators. Scanning and picture reproduction. Camera tubes. Video amplification. Closed television systems. Part II, The commercial telecasting system: Special problems of telecasting. The optimum number of lines. Synchronization. Vestigial-sideband transmission. The video transmitter. Receivers. Stagger-tuned amplifiers. The receiving antenna. Televising motion pictures. Part III, Color television systems. Appendix: Dot systems of television transmission. Problems. Index.

Note. This work by [illegible] faculty member of the College of Engineering of New York University is [illegible] treatment from the communication engineer's viewpoint. Though planned for the college student of engineering, it is full enough and the treatment mature enough to make the book useful to such readers as graduate engineers who have been working in radio and are preparing to switch to television. The detailed treatment of closed systems in Part I is unusual. The 64-page chapter on color television contains [illegible] general discussion of the subject and specific descriptions of the leading systems. There is no systematic bibliography but there are occasional footnote references to related articles.

BUCHSBAUM WALTER H.

Television servicing theory and practice. Second edition. Revised in cooperation with Richard Blitzer Englewood Cliffs, N J Prentice-Hall Inc. 1954 367 p. illus. 24 cm $5 95 6532

Contents (abridged). Part I, General television theory: the modern television receiver. The picture tube. Deflection methods. Synchronizing and automatic frequency control circuits. Video detector, video amplifier. Dc restoration. Video IF amplifier. Television sound system. Television tuners. Antennas and transmission lines. Power supplies. Transistors and special television applications. Color television. Part II, Alignment, installation: Video IF alignment. Sound channel alignment. Aligning RF amplifier, mixer and oscillator. Antenna in the home. The average antenna installation. Part III, Troubleshooting: Inoperative receiver. Loss of synchronization. Defective deflection. Poor picture quality. Poor sound quality. Poor cathode ray tube performance. Index.

Note. A book used in the vocational education of men preparing for the occupation of installing and maintaining television receivers. The components of television receivers are described and discussed in the first part. In the second and third parts, specific problems encountered in installing, adjusting and repairing home receivers are discussed explicitly. The section on troubleshooting is well arranged and easy to understand. The first edition was published in 1952. One chapter was added in this second edition.

CHINN HOWARD A.

Television broadcasting. New York McGraw Hill Book Company Inc., 1953 662 p. illus. 24 cm. (McGraw Hill television series Donald G. Fink, consulting editor) $10.00 6533

Contents: Television-system fundamentals. The image orthicon camera. Field television equipment. Field pickup techniques. Synchronizing waveform generation. Studio television equipment. Studio lighting, staging and camera techniques. Projector camera chains. Television projectors. Motion-picture film. Television recording. Program transmission systems. Television transmitters. Studio building planning. Equipment installation practices. Measurements. Index.

Note. An introductory but fairly comprehensive book on contemporary television broadcasting equipment and methods. The chief viewpoint is that of the television engineer or technician [illegible] works in [illegible] television studios and is concerned with the technical aspects of broadcasting. However, the chapter on studio building planning and sections of some other chapters are intended for professional persons, such as architects. The principal emphasis is on the video phase of the subject; in other words, the book contains little on sound broadcasting. The treatment is largely descriptive; nevertheless, the reader needs [illegible] good background in basic electrical and electronic terminology. The author is chief engineer of the Audio-Video Division, General Engineering Department of the Columbia Broadcasting System.

DEUTSCH SID

Theory and design of television receivers. New York McGraw Hill Book Company Inc., 1951 536 p. illus. 24 cm. (McGraw Hill

television series, Donald G Fink, consulting editor) $7 50 6534

Contents. Television standards. Characteristics of amplifier and rectifier circuits. Properties of tuned coupling circuits. Antenna and R-f section. Video I-f section. Detector and automatic gain control circuits. Video amplifiers and D-c restorers. The sound section. Synchronizing section. Electrostatic deflection and focusing. Magnetic deflection and focusing. Power supplies. Automatic frequency control. Intercarrier sound reception. Direct and projection-viewing systems. Television receiver servicing. Index.

Note. A notable contribution to the literature of television. It is designed for advanced students and other readers primarily interested in the engineering aspects. The emphasis is on established standards, basic circuits, and the practical design of television receivers. The mathematics essential to the engineering approach is, of course, not avoided. An understanding of standard radio is the main prerequisite.

DOME, ROBERT B

Television principles New York McGraw Hill Book Company, Inc., 1951 291 p illus 24 cm (McGraw Hill television series, D G Fink, consulting editor) $7 00 6535

Contents *Early history of television and some fundamental conceptions.* Electronic methods of scanning and reproduction. Video-frequency amplifiers. Radio transmitting apparatus. Antennas for transmission and reception. Radio-frequency input circuits and noise factors. *Intermediate-frequency amplifiers. Picture second detector* The scanning system. Miscellany Propagation and relays. Index.

Note: An introductory treatment for engineers who have had no previous acquaintance with the subject. Since it was developed for an audience *already familiar with calculus and the fundamentals of* electrical engineering, the author has devoted the space entirely to television Much of the text is descriptive, but mathematics has not been avoided. The book was developed from lectures that formed an after-hours educational course offered by the General Electric Company to its own employees and also to graduate engineering students in Syracuse University There is an occasional bibliographical footnote.

DUSCHINSKY, WALTER J

TV stations, a guide for architects engineers and management. New York Reinhold Publishing Corporation, 1954 136 p illus. 30 cm. $6 00 6536

Contents (abridged) Part The master plan and the planning organization. Site selection and plant. Utilizing station space. Programming and equipment. Part II Television site and facility planning. *Antenna tower structures. The technical center core.* The large live talent studio. Studio lighting. Audience participation Acoustics and noise control. The use of microwave relay UHF problems. Industrial television. Educational television stations. Appendices. Bibliography Glossary Index.

Note This book deals with the planning, design and equipping of stations for the broadcasting of television. Although addressed to architects, engineers and managers as indicated in the title, the primary viewpoint is that of management. Engineering aspects are not covered except in general, descriptive terms, nevertheless architects and engineers who are concerned with the design of TV broadcasting stations on a level that requires consultation with management and should find the book useful both as broad view and detailed outline. All phases of planning are covered from rate cards to the provision of dressing rooms for program casts. Typical equipment which is currently available from United States of America manufacturers is described. Numerous charts, floor plans and reproductions of photographs are included. The author planned the broadcasting and telecasting facilities of the New York headquarters of the United Nations.

FINK DONALD G

Television engineering Second edition. New York McGraw Hill Book Company Inc., 1952 721 p illus 24 cm (McGraw Hill television series Donald G Fink consulting editor) $8 75 6537

Contents. The television system. Analysis and synthesis of images. Cameras and picture tubes. Scanning and synchronization methods. Transmission of the video signal. Video amplification. Carrier transmission of picture and sound signals. Color fundamentals. Color television systems. Television broadcasting equipment. Television receiving equipment. Appendix. Standards of good engineering practice. Name index. Subject index.

Note. The chapter titles fail to indicate the richness of the book content. The author has included not only good discussions of main points of the subject but also full discussions of sub-topics such as the principles of the iconoscope mosaic. The chapter on color television systems runs to 66 pages and describes in detail the various systems that have been developed in laboratories. The book is organized as a textbook for upperclass engineering students, but it is suitable also for graduate electrical engineers in need of an introductory survey of television. There are good bibliographies. The first edition appeared in 1940 under the title *Principles of television engineering.* In this edition, the work has been largely rewritten and contains much new material.

GLASFORD, GLENN M

Fundamentals of television engineering New York McGraw Hill Book Company Inc., 1955 642 p illus. 24 cm. (McGraw Hill electrical and electronic engineering series, Frederick Emmons Terman, consulting editor) $12 75 6538

Contents. Elements of a television system. Visual characteristics, color specification, and signal analyses. Fundamentals of electron beam scanning. Image-pickup tubes and output circuits. Visual-display tubes. Video amplifiers. Transient analysis of circuits. Side-band radio-frequency amplifiers. The transmitter-receiver relationship. Signal-circuit problems and techniques. Scanning circuits. Synchronization and picture-signal standards. Circuits involved in timing and synchronizing operations. The synchronizing signal generator Television camera and signal processing equipment. Elements of video transmitters and radiating systems. Television-receiver fundamentals and designs. Appendices. Index.

Note. A broad, analytical introduction covering both monochrome and color television systems. Basic knowledge and basic approach to design problems are emphasized, but necessarily the author has included some description of such devices as television picture tubes. Mathematics is used throughout and in such chapters as that on transient analysis of circuits, it is the predominant method of exposition. In other sections the mathematics is sometimes *presented briefly and without proof* however, references are usually given to other books and papers where rigorous treatment is to be found. The book is first a college text of approximately first year graduate level and, second, a basic reference for graduate engineers. The inclusion of numerous and well-selected citations to literature increases the reference value.

GROB, BERNARD

Basic television, principles and servicing Second edition New York McGraw Hill Book Company, Inc. 1954 660 p. illus. 24 cm. (McGraw Hill television series Donald G Fink, consulting editor) $6 00 6539

Contents The television system. Camera tubes. The electron scanning beam. Scanning and synchronizing. The composite video signal. Picture carrier signal. Frequency modulation. Television receivers. Picture tubes. Power supplies. Video amplification. Practical design of video amplifiers. *Brightness* control and D-c reinsertion. Video detector Automatic gain control. Sync separation. Deflection oscillators. Deflection circuits. Picture I-F amplifiers. The R F tuner Antennas and transmission lines. The FM sound signal. *Receiver servicing.* Color television. Appendix. All signal television broadcast channels with picture and sound carrier frequencies. Index.

Note. An outstanding practical introduction to television principles, circuits and servicing. The author is an instructor on the staff of RCA Institutes, Inc., and the book is designed for use as a text by men who are preparing to become television servicemen and technicians. It is suited also to use as a self-instruction guide by persons who are familiar with basic radio. Comparing the second edition with the first edition 1949 neither the organization nor the scope has been changed in any important way but there are now about 60 pages more of text. The former chapter on video detector and automatic gain control has been divided to form two chapters. *The chapter on light* which appeared in the first edition has been dropped. Some rewriting is apparent in all of the chapters, and in several of them it is extensive.

[illegible] the chapter on color television in the second edition [illegible] and has been completely rewritten.

HAZELTINE CORPORATION

Principles of color television. By the Hazeltine laboratories staff Compiled and edited by Knox McIlwain and Charles E. Dean. New York. John Wiley & Sons, Inc., 1956. 536 p. illus. (part col d) $13.00 6540

Contents: Light and photometry. Color perception. Color space and its concepts. Colorimetry. Color in [illegible] television system. Signal information content. Characteristics of the eye. The [illegible] of color components and their interleaving in the composite [illegible]. Formation of composite color signal. Synchronization. Nonlinear amplitude relations and gamma correction. The color television standards of the FCC. Equipment for producing the transmitted signal. Color television receivers. Decoders for three-gun display. Decoders for one-gun picture tubes. Test and measuring methods. Glossary of color television terms. Appendixes: Relative [illegible] coefficients to [illegible] reproduced color by the three primaries. [illegible] formulas for components of the color signal. FCC Composite Color Order of December 1953. Author index. Subject index.

Note: In this book, it is shown that the basic problem of [illegible] [illegible] that of fitting the necessary information [illegible] of the signal into the available frequency band. It is shown [illegible] that the problem has been solved by transmitting [illegible] signal [illegible] full detail on [illegible] of brightness [illegible] of the [illegible] and [illegible] less information on its color values or [illegible]. The psychophysics of color perception by the human eye that permits this combination of information to give [illegible] good [illegible] explained in the first half of the book. The remainder [illegible] devoted to technical information on color television standards, [illegible] and receivers, and to testing and measuring methods [illegible] to transmitting and receiving equipment. The book [illegible] [illegible] engineers already acquainted with monochrome [illegible] theory and practice. It is self-contained, nevertheless [illegible] references to the literature are included. It [illegible] the product of the staff of [illegible] research and engineering firm which has taken [illegible] part in the development of both monochrome and color [illegible] [illegible] the United States of America.

HELT, SCOTT

Practical television engineering. Second edition. New York Rinehart & Company Inc., 1953 744 p. illus. 23 cm. $8.00. 6541

Contents: The fundamentals of picture transmission. The cathode-ray tube. The cathode-ray oscillograph. Electron tubes for image pickup. The synchronizing generator—timing, shaping and delay [illegible]. The video amplifier and cathode followers. The voltage-regulated power supply. The television receiver. The television [illegible] chain. The television transmitter. Television broadcasting techniques. UHF and color television. Glossary. Index.

Note: A detailed presentation of television transmission and reception from the engineering viewpoint. Most of the space is given to matters which are of interest to engineers associated with television broadcasting, but enough is included on television reception to make the representation complete. The work [illegible] aimed [illegible] practicing engineers on the staffs of broadcasting studios and students who are preparing for such work. It is outstanding not only for its presentation of the major aspects of the field, but also for its discussion of details, such special problems of [illegible] [illegible], and the routine procedures which are essential [illegible] [illegible] television transmitter at peak operating condition. The useful glossary runs to 30 pages. Extensive bibliographies are included, and there are several hundred illustrations. The first edition was published in 1951. Addition of the chapter on UHF and color television is the major change in this second edition.

JOHNSON J RICHARD

Television—how it works. Second edition. New York. John F Rider Publisher Inc., 1956. 346 p. illus. 28 cm. $4.60. 6542

Contents: General aspects of the television system. TV propagation, antennas and transmission lines. TV front ends. The video I-F [illegible] and AGC sections. Video amplifiers and D-C restorers. The FM sound channel. The synchronizing section. Sweep circuits. The picture tube. Power supplies. Color television.

Note: A technical but non-mathematical exposition of television principles. It covers both the general principles and the functions of the various elements of television receivers. It is addressed primarily to men in the occupation of installing and repairing radio and television equipment, but it is suitable also for such readers as amateurs who have made a hobby of radio and wish to begin the study of television. It is thoroughly illustrated and written in a style that suits it to home study as well as to use in vocational school courses. The first edition was published in 1948. For this second edition, the book was extended to cover color television and other changes were made to reflect other advances in television receivers.

KIVER MILTON SOL

Color television fundamentals. New York McGraw Hill Book Company Inc., 1955 317 p. illus. (part col d) 23 cm. (McGraw Hill television series Donald G Fink, consulting editor) $6.00. 6543

Contents: Color fundamentals for TV servicemen. The NTSC color television system. The three-gun color receiver in block form. Three-gun receiver circuits. Narrow-band color receivers. Three-gun color picture tubes. Deflection and convergence circuits of three-gun color receivers. Typical color television receivers—analysis and alignment. Color television servicing. Appendixes. Glossary. Index.

Note: An introductory and practical book designed for the instruction of vocational school students and men at work in the craft of installing and repairing domestic television receivers. Familiarity on the part of the reader with monochrome television receiving equipment is assumed. Otherwise the exposition is elementary and nonmathematical. Basic circuits and elements of color receivers and the circuits of specific makes of receivers being manufactured in the United States of America when the book was written are covered.

KIVER, MILTON SOL

Television and F M receiver servicing Third edition. Princeton, N J D Van Nostrand Company Inc., 1953 320 p. illus. 28 cm. $4 60. 6544

Contents (abridged): The antenna system—operation and installation. Television receiver installation. Television test equipment. The R.F stages—operation and servicing. Video I.F and video detector stages—operation and servicing. Video amplifiers, D-C restorers and A.G.C systems—operation and servicing. Cathode-ray picture tubes—operation and servicing. Additional service notes on intercarrier receivers. How to use television test patterns. Deflection systems. Television power supplies. Television receiver alignment. UHF television. F M fundamentals. Commercial F M receiver circuits. F M receiver alignment. F M receiver servicing. Appendix: Interference in television receivers. Index.

Note: Written for men who are experienced in the maintenance and repair of amplitude modulated radio receivers, this book is a practical introduction to installation, maintenance and repair operations on television receivers and frequency-modulated radio receivers. Theory and design are discussed only where needed to clarify servicing problems, and then in elementary terms. The first edition was published in 1948 and the second edition in 1952. In this third edition, the level of treatment and the overall organization are unchanged, but several chapters have been added.

KIVER, MILTON SOL

Television simplified. Fifth edition. Princeton, N J D Van Nostrand Company Inc., 1955 541 p. illus. 23 cm. $6 95 6545

Contents: The television field. High frequency waves and the television antenna. Wide-band tuning circuits—R.F amplifiers. The H.F oscillator and [illegible]-TV tuners. Video amplifiers. Diode detectors and A.G.C. circuits. D-c restoration. Cathode-ray tubes. Television receiver power supplies. Additional notes on intercarrier systems. Synchronizing circuit fundamentals. Deflection systems. Frequency modulation. Typical television receivers—analyses and alignment. Servicing television receivers. UHF television. Color television. Glossary. Index.

Note: An outstanding textbook of the elementary practical kind. It is addressed primarily to men who are preparing for the occupation of repairing television receivers. Basic principles, standard circuit elements and circuits are described and explained in a nontechnical style. Common troubles and their causes are discussed in relation to the basic circuits and their functions. The book was

television series, Donald G Fink, consulting editor) $7 50 6534

Content Television standards. Characteristics of amplifier and rectifier circuits. Properties of tuned coupling circuits. Antenna and R-f section. Video I-f section. Detector and automatic gain control circuits. Video amplifiers and D-c restorers. The sound section. Synchronizing section. Electrostatic deflection and focusing. Magnetic deflection and focusing. Power supplies. Automatic frequency control. Intercarrier sound reception. Direct- and projection-viewing systems. Television receiver servicing. Index.

Note A notable contribution to the literature of television. It is designed for advanced students and other readers primarily interested in the engineering aspects. The emphasis is on established standards, basic circuits, and the practical design of television receivers. The mathematics essential to the engineering approach is, of course, not oided. An understanding f standard radio is the main prerequisite.

DOME, ROBERT B

Television principles New York McGraw Hill Book Company Inc. 1951 291 p illus 24 cm (McGraw Hill television series D G Fink, consulting editor) $7 00 6535

Contents Early history of television and some fundamental conceptions. Electronic methods of scanning and reproduction. Video-frequency amplifiers. Radio transmitting apparatus. Antennas for transmission and reception. Radio-frequency input circuits and noise factors. Intermediate-frequency amplifiers. Picture second detector The scanning system. The book is first a college text of approximately first year graduate level and, second, a basic reference for graduate engineers. The inclusion of numerous and ell-selected citations to literature increases the reference alue.

GROB, BERNARD

Basic television principles and servicing Second edition. New York McGraw Hill Book Company Inc. 1954 660 p illus. 24 cm. (McGraw Hill television series, Donald G Fink, consulting editor) $6 00 6539

Contents. The television system. Camera tubes. The electron scanning beam. Scanning and synchronizing. The composite ideo signal. Picture carrier signal. Frequency modulation. T levision receivers. Picture tubes. Power supplies. Video amplification Practical design of ideo amplifiers. Brightness control and D-C reinsertion. Video detector Automatic gain control. Sync separation. Deflection oscillators. Deflection circuits. Picture I F amplifiers. The R F tuner Antennas and transmission lines. The FM sound signal. Receiver servicing. Color television. Appendix Assigned television broadcast channels with picture and sound carrier frequencies. Index.

Note An outstanding practical introduction to television principles, circuits and servicing. The author is an instructor on the staff of RCA Institute, Inc., and the book is designed for use as text by men who are preparing to become television servicemen and technicians. It is suited also to use as self-instruction guide by persons who are familiar with basic radio. Comparing the second edition with the first edition, 1949 neither the organization nor the scope has been changed in any important ay but there are now about 60 pages more of text The former chapter on video detector and automatic gain control has been divided to form two chapters. The chapter on light hich appeared in the first edition has been dropped. Some rewriting is apparent in all of the chapters, and in several of them it is extensive. As might be

expected, the chapter on color television in the second edition [illegible] longer and has been completely rewritten.

HAZELTINE CORPORATION

Principles of color television. By the Hazeltine laboratories staff Compiled and edited by Knox McIlwain and Charles E. Dean. New York John Wiley & Sons, Inc., 1956. 595 p. illus. (part col d) $13 00 6540

Contents: Light and photometry Color perception. Color space and color triangles. Colorimetry Color in [illegible] television system. Required information content. Characteristics of the eye. The choice of color components and their interleaving in the composite signal. Production of composite color signal. Synchronization. Nonlinear amplitude relations and gamma correction. The color television standards of the FCC. Equipment for producing the transmitted signal. Color television receivers. Decoders for three-gun displays. Decoders for one-gun picture tubes. Test and measuring methods. Glossary of color television terms. Appendixes: Relative luminance contributions to [illegible] reproduced color by the three primaries. Principal formulas for components of the color signal. FCC Compatible Color Order of December 1953 Author index. Subject index.

Note In this book, it is shown that the basic problem of practical color television is that of fitting the necessary information content of the signal into the available frequency band. It is shown further that the problem has been solved by transmitting [illegible] signal that gives full detail on luminance or brightness contents of the picture and considerably less information on its color values or chromaticity The psychophysics of color perception by the human eye that permits this combination of information to give [illegible] good picture [illegible] explained in the first half of the book. The remainder [illegible] devoted to technical information on color television standards, transmitters and receivers, and to testing and measuring methods applicable to transmitting and receiving equipment. The book is addressed to graduate engineers already acquainted with monochrome wireless theory and practice It is self-contained, nevertheless abundant references to the literature are included. It is the product of the staff of [illegible] research and engineering firm [illegible] has [illegible] taken prominent part in the development of both monochrome and color television in the United States of America.

HELT SCOTT

Practical television engineering. Second edition. New York Rinehart & Company Inc., 1953 744 p. illus. 23 cm. $8 00 6541

Contents The fundamentals of picture transmission. The cathode-ray tube. The cathode-ray oscillograph Electron tubes for image pickup The synchronizing generator—timing, shaping and deflection circuits The video amplifier and cathode follower The voltage-regulated power supply The television receiver The television camera chain The television transmitter Television broadcasting techniques. UHF and color television. Glossary Index.

Note [illegible] detailed presentation of television transmission and reception from the engineering viewpoint. Most of the space is given to matters which are of interest to engineers associated with television broadcasting, but enough [illegible] included on television reception to make the representation complete The work [illegible] aimed primarily at practicing engineers on the staffs of broadcasting stations and students [illegible] who are preparing for such work It [illegible] outstanding not only for its presentation of the major aspects of the field, but also for its discussion of details, such special problems of local remotes, and the routine procedures which are essential to maintaining [illegible] television transmitter in peak operating condition. The useful glossary runs to 30 pages. Extensive bibliographies are included, and there are several hundred illustrations. The first edition was published in 1950. Addition of the chapter on UHF and color television [illegible] the major change in this second edition.

JOHNSON J RICHARD

Television—how it works. Second edition. New York John F Rider Publisher Inc. 1956 346 p. illus. 28 cm. $4.60 6542

Contents General aspects of the television system. TV propagation, antennas and transmission lines. TV front ends The video I-F detector and AGC sections Video amplifiers and D-C restorers. The F M sound channel The synchronizing section Sweep circuits. The picture tube Power supplies Color television.

Note A technical but non-mathematical exposition of television principles. It covers both the general principles and the functions of the various elements of television receivers. It is addressed primarily to men in the occupation of installing and repairing radio and television equipment, but it is suitable also for such readers as amateurs [illegible] who have made [illegible] hobby of radio and [illegible] to begin the study of television. It is thoroughly illustrated and written in [illegible] style that suits it to home study as well as to use in vocational school courses. The first edition was published in 1948. For this second edition, the book [illegible] expanded to cover color television and other changes were made to reflect other advances in television receivers.

KIVER MILTON SOL

Color television fundamentals. New York McGraw Hill Book Company Inc. 1955 312 p. illus. (part col d) 23 cm. (McGraw Hill television series Donald G Fink, consulting editor) $6.00 6543

Contents Color fundamentals for TV servicemen. The NTSC color television system. The three-gun color receiver in block form. Three-gun receiver circuits. Narrow-band color receivers. Three-gun color picture tubes. Deflection and convergence circuits of three-gun color receivers. Typical color television receivers—analysis and alignment. Color television servicing. Appendixes. Glossary Index.

Note. An introductory and practical book designed for the instruction of vocational school students and men at work in the craft of installing and repairing domestic television receivers. Familiarity on the part of the reader with monochrome television receiving equipment [illegible] assumed. Otherwise the exposition is elementary and nonmathematical. Basic circuits and elements of color receivers and the circuits of specific makes of receivers being manufactured in the United States of America [illegible] the book was written are covered

KIVER, MILTON SOL

Television and F M receiver servicing. Third edition. Princeton, N J D Van Nostrand Company Inc., 1953 320 p. illus. 28 cm. $4 60. 6544

Contents (abridged) The antenna system—operation and installation. Television receiver installation. Television test equipment. The R.F stages—operation and servicing. Television receiver alignment. UHF television. F-M fundamentals. Commercial F-M receiver circuits. F-M receiver alignment. F M receiver servicing. Appendix: Interference in television receivers. Index.

Note Written for men [illegible] who are experienced in the maintenance and repair of amplitude modulated radio receivers, this book is [illegible] practical introduction to installation, maintenance and repair operations on television receivers and frequency-modulated radio receivers. Theory and design are discussed only [illegible] where needed to clarify servicing problems, and then in elementary terms. The first edition was published in 1948 and the second edition in 1950. In this third edition, the level of treatment and the overall organization are unchanged, but several chapters have been added.

KIVER, MILTON SOL

Television simplified. Fifth edition. Princeton, N J D Van Nostrand Company Inc., 1955 541 p. illus. 23 cm. $6.95 6545

Contents: The television field. High frequency waves and the television antenna. Wide-band tuning circuits—R.F amplifiers. The R.F oscillator and mixer-TV tuners. Video amplifiers. Diode detectors and A.G.C. circuits. D-c restoration. Cathode-ray tubes. Television receiver power supplies. Additional notes on intercarrier systems. Synchronizing circuit fundamentals. Deflection systems. Frequency modulation. Typical television receivers—analysis and alignment. Servicing television receivers. UHF television. Color television. Glossary Index.

Note. An outstanding textbook of the elementary practical kind. It is addressed primarily to men [illegible] who are preparing for the occupation of repairing television receivers. Basic principles, standard circuit elements and circuits are described and explained in [illegible] nontechnical style. Common troubles and their causes are discussed in relation to the basic circuits and their functions. The book was

first published in 1946 and new editions have appeared frequently each one being revised so as to keep the book up-to-date with new developments in television receivers.

MANDL, MATTHEW

Mandl's television servicing Revised edition New York The Macmillan Company, 1956 460 p illus. 24 cm. $6 50 6546

Contents Television receiver fundamentals. Localizing the trouble. Master index to common television troubles. The picture tube and associated components. R F mixer-oscillator stages. The sound section. Video I F video amplifiers, video detector and D-C restorer The sync separator stages. The vertical sweep system. The horizontal sweep system. The power supplies. Repairing and improving antenna system. Transistors. VHR UHF servicing factors. Test equipment and color receiver section The oscilloscope as a modern servicing tool. The sweep generator The marker and other servicing equipment. Color television servicing. Additional circuits and systems. Appendix. Index.

Note. First published in 1952 this book is known as text in which the troubles of television receivers and the reasons therefore are described in detail in a style that is easy to comprehend. It is intended for the instruction of men preparing for or already employed in the servicing of home television receivers and is suitable both for organized study and self-instruction. In this edition, new chapter on transistors has been substituted for a former chapter on projection systems, a chapter on color TV has been rewritten, and a chapter entitled Additional topics and systems" has been added. About 30 of the 314 figures are new

MARCUS, ABRAHAM, AND SAMUEL E GENDLER

Elements of television servicing for bench and field. Englewood Cliffs, N J Prentice Hall, Inc, 1955 587 p illus (part col'd) 22 cm $7.35 6547

Contents Section I, Introduction Television transmission and reception. The television signal and the television receiver. Section II, Field servicing: Selecting the TV antenna. Installing the receiver Field trouble-shooting. Section III, Bench servicing. Set-up for bench servicing. The heater circuit and low voltage power supply The horizontal sweep and high-voltage sections. The vertical sweep section. The synchronization section. The picture-signal path. The sound-signal path. The picture tube. Alignment. Section IV Color television: Theory of color television. Practical color television receivers. Servicing the color television receiver. Glossary of television terms. Glossary of color television terms. Index.

Note. An introductory and practical book designed for the instruction of vocational-school students who are preparing for careers in the installation and repair of domestic television receivers. As indicated in the title, it covers both techniques applicable in the repairman's shop and in the set owner' home. It is written in a straightforward style and is adequately illustrated.

MILLER, SIMON S, AND HOWARD BIERMAN

Handbook of 630-type TV receivers. New York John F Rider, Inc., 1955 194 p. illus 22 cm $3 50 6548

Content Tuners. Video I F amplifier and detector Sound section. Sound and picture I F alignment. AGC systems. Video amplifier and D-C restorer Sync circuits. Horizontal deflection and high-voltage section. Vertical circuits. Low voltage power supply The picture tube. Troubleshooting charts. Index.

Note The 630-type" television receiver owes its name to the fact that its circuitry is identical with or essentially similar to the circuitry first introduced in Radio Corporation of America model 630 receiver The circuit was used not only in this receiver but also in receivers manufactured by other companies. This book is primarily manual for television servicemen. The authors have assumed that their readers will already be familiar with the basic principles and elements of TV receivers and accordingly have devoted the whole book to the 630-type circuitry The various sections and elements of this circuitry are discussed under the headings quoted above. The circuits are diagrammed, the tubes are named, the capacitors, resistors, etc., are identified, and the functions of all parts are made clear The authors describe modifications introduced by various manufacturers and also modifications that may be made by the serviceman in order to make the set more sensitive, to adapt it to a larger picture tube, etc.

NATIONAL TELEVISION SYSTEM COMMITTEE

Color television standards. Selected papers and records of the National Television System Committee. Edited by Donald G Fink. New York McGraw Hill Book Company Inc., 1955 520 p illus. (part col'd) 24 cm. (McGraw Hill television series, Donald G Fink, consulting editor) $11.50 6549

Contents Development of color television. The NTSC color television standards. Subjective aspects of color television. The color video signal. The color synchronization signal. Field tests of compatibility Field tests of color performance. Field tests of networks and transmitters. Color films, processes, and transmission equipment. Definitions of color television terms and symbols. Appendix I, Description of color television transmissions in accordance with proposed signal specifications. Appendix II, Amendments to FCC rules governing radio broadcast stations. Index.

Note. A basic book on color television. It consists of selections from the proceedings of the second National Television System Committee, a quasi-official group that fostered the development of practical and acceptable standards for the system of compatible color television. The Committee made a broad and extended study of the problems and eventually drew up recommendations which were accepted as standards by the United States Federal Communications Commission. These standards are the regulatory basis for the contemporary television broadcasting industry in the United States of America. As the table of contents listed above indicates, the Committee considered not only matters pertaining to government regulation but also the basic scientific and technical aspects of color television broadcasting, including such topics as the psychophysics of color perception.

RABINOFF, CARTER V, AND MAGDALENA E WOLBRECHT

Principles of television servicing New York McGraw Hill Book Company Inc. 1953 560 p illus 24 cm. $7.50 6550

Contents Introduction. A survey of commercial receivers. Basic principles of the television system. Preliminary receiver investigation. Adjusting the pre-set controls. Television R-F tuners and I F stages. Second detectors, video amplifiers, and automatic gain control. D-C restoration and picture tubes. Sync-pulse separation and sweep circuits. AFC-sync systems. Low- and high-voltage power supplies. Projection-receiver systems. Television-receiver sound sections. Aligning ideo I F stages. Aligning the R-F and oscillator sections. Radio-television combinations. Turntables and record changers. Standard antennas and transmission lines. Antenna and receiver installations. The problems of television interference. A summary of trouble-shooting principles. Test equipment for servicing. Building up servicing business. Appendix. Motion pictures. Index.

Note This textbook for television servicemen and for students preparing for careers in television servicing is outstanding for its inclusiveness and its practical approach. The descriptions of subcircuits and circuit elements include not only those found in recent models of home receivers but also those used in earlier sets. Problems such as interference are well covered from the standpoint of the serviceman who is called in to remedy them. The chapter on building up business is a useful preview of the business aspects of setting up one's own business. Many reproductions of wiring diagrams are included among the hundreds of illustrations.

SLURZBERG, MORRIS, AND OTHERS

Essentials of television. By Morris Slurzberg William Osterheld and Elmo N Voegtlin. New York McGraw Hill Book Company, Inc., 1956 687 p illus. 24 cm. $8.50 6551

Contents. Introduction to television. Characteristics of television. The front end. The sound section. Video I-F amplifier circuits. Video detector circuits. Video amplifier circuits. Types and sources of wave forms. Synchronizing and sweep circuits. The picture tube. Power-supply circuits. Antennas and transmission lines. UHF circuits. Television receiver circuits. Color television. Appendixes. Index.

Note: Men who are preparing for careers in the installation and maintenance of domestic television receivers constitute the intended audience for this book. The author has assumed on the part of his readers a thorough knowledge of radio receivers from the technician's viewpoint. Without resort to mathematics more advanced than high-school algebra, the principles of television and the circuits of television receivers are explained. The book is outstanding for its detailed nonmathematical explanations of typical circuits, their properties and uses. Review questions and problems for the reader to solve are included.

WENTWORTH, JOHN W

Color television engineering New York McGraw Hill Book Company Inc., 1955 459 p. illus. 24 cm. (McGraw Hill television series Donald G. Fink, consulting editor) $8.00 6552

Contents: Introduction. Part I, Basic principles of color: color perception, and color measurement: The physical aspects of color. The psychological aspects of color. Colorimetry—the measurement and specification of color. Part II, Principles of color reproduction. The application of colorimetry to color television. Color photographic processes. Transfer characteristics in color reproducing systems. Part III, Principles of color television transmission systems: Color television as an information-transfer problem. Multiplexing techniques for compatible color television systems. Time multiplex or sequential color television systems. Part IV Apparatus and circuits for color television. Color television kinescopes and receivers. Color television test equipment. Appendixes: Standardized CIE colorimetric data. Data for color mixture curves for the FCC primaries. FCC standards for compatible color television. Trigonometric identities. Mathematical proof of the two-phase modulation technique. Index.

Note. A broad, somewhat descriptive survey of the technical requirements of color television and how they are met with special circuits and electronic devices. The title is apt, for the book is addressed primarily to engineers who are acquainted with monochrome television and are beginning to work in such fields as the design of color television receivers. Considerable space is devoted to psychology of color vision and to the physics of color. The basic material is related directly to the problems of broadcasting and receiving images in color. The book is particularly useful for its discussions of such problems as are discussed in the chapter entitled, "Transfer characteristics in color reproducing systems," which describes qualitatively but in detail how distortions which occur in the photographing of [illegible] scenes in color, translating it into signals, receiving the signals, reconstructing them into [illegible] color scenes, are compensated for by electronic circuits. The final part on apparatus and circuits and on test equipment gives a quick view of basic devices and their purposes without attempting [illegible] comprehensive review of developed equipment. Selected literature references are included.

ZBAR, PAUL B., AND SIDNEY SCHILDKRAUT

Advanced television servicing techniques. By RETMA, Pilot Training Course, Teaching staff New York John F Rider Publisher Inc., 1954 163 p. illus. 29 cm. $3.60 6553

Contents: Introduction. TV test equipment. Sweep section servicing. High-voltage servicing. Sync section servicing. Video section servicing. Sound section servicing. Low-voltage power supply servicing. Tuner and servicing. Alignment. Antennas and transmission lines. Television interference. Customer relations.

Note: A textbook developed as part of the program of the Radio-Electronics-Television Manufacturers Association to improve the television service industry. Since it is addressed primarily to men already in the industry, the usual introductory material on television principles is lacking, and the style of the book is compact and technical. However, considerable care has been taken in defining basic terms, such as "tube oscillator" and in describing circuit elements and test instruments.

ZWORYKIN, V K., AND G A. MORTON

Television the electronics of image transmission in color and monochrome. Second edition. New York John Wiley & Sons Inc., 1954 1,037 p. illus. 24 cm. $17.50. 6554

Contents: Part I, Fundamental physical principles: Physical electronics. Fluorescent materials. Electron optics. Electron optical systems. Part II, Principles of television: Fundamentals of television. The transmission and reproduction of high-definition pictures. Video pickup devices. Picture-reproducing systems. Part III, Component elements of an electronic television system: The iconoscope. Television pickup tubes. The kinescope. The electron gun. Video amplifiers. Scanning and synchronization. The television transmitter. The receiver. Part IV Color television, industrial television, and television systems: Color television—fundamentals—principles. Practical color television. Industrial television. Practical television systems. Author index. Subject index.

Note: Basic science, engineering analysis and technical descriptions of television devices are combined in this authoritative and unique treatise. Dr. Zworykin is the inventor of the iconoscope, and both authors have played major parts in the development of television as we know it today. Their experience is reflected in certain "behind-the-scenes" flavor in the book's style which successfully conveys the complexity of television, both in the problems that had to be solved and the solutions. The book is addressed to advanced college students, graduate physicists, engineers and others who have [illegible] grasp of basic electronic concepts and terms. The first edition appeared in 1940. In this edition, the fourth part is entirely new. The titles of most of the chapters in the first three parts are identical with those of the first edition; however, the texts of most of these have been revised and augmented.

CHEMICAL ENGINEERING

ADVANCES IN CHEMICAL ENGINEERING Volume 1 Edited by Thomas B Drew and John W Hoopes, jr New York Academic Press Inc., 1956 448 p illus 24 cm. $10 00 6555

Contents Boiling of liquids, by J W Westwater Non-Newtonian technology—fluid mechanics, mixing, and heat transfer by A. B. Metzner Theory of diffusion, by R. B Bird. Turbulence in thermal and material transport, by J B Opfell and B. H. Sage. Mechanically aided liquid extraction, by R. E. Treybal. The automatic computer in the control and planning of manufacturing operations, by R. W Schrage. Ionizing radiation applied to chemical processes and to food and drug processing, by E. J Henley Author index. Subject index.

Note The first volume in a new review series designed to cover important developments in and pertinent to chemical engineering. It contains the seven monographic reviews whose authors and titles are listed above. The individual review is a critical, well-organized survey of the current status of the topic named in its title. It is based on published literature and includes an extensive bibliography but is not a résumé of the literature of a specified year or span of years. It is addressed to graduate chemical engineers, especially those working at the planning and research levels. Monographs, such as Opfell and Sage's "Turbulence in thermal and material transport," are related directly to practical chemical engineering. On the other hand, Henley and Barr's "Ionizing radiation applied to chemical processes and to food and drug processing" deals with a field of investigation that will be of more importance in industrial chemistry in years to come than it is now These monographs illustrate the planned scope of the series.

AMERICAN CHEMICAL SOCIETY

Directory of graduate research, faculties, publications and doctoral theses in departments of chemistry and chemical engineering at United States universities 1955 Prepared by the Committee on Professional Training Washington, D C American Chemical Society 1956 440 p 28 cm. $2 50 6556

Note An annual publication which provides lists of the faculties of chemistry and chemical engineering in universities in the United States of America and lists of the publications of the individual professors and instructors. It is arranged in two major parts departments of chemistry and departments of chemical engineering. Under the name of each university within each part, the professors and instructors are listed individually and information is given on degrees held, areas of specialization and recent publications. Indexes listing the names in alphabetical order are included.

AMERICAN INSTITUTE OF CHEMICAL ENGINEERS

Collected research papers for spring 1954 F J Van Antwerpen editor New York American Institute of Chemical Engineers 1954 142 p illus 28 cm. (Its Chemical engineering progress symposium series No 10) $4 25 6557

Contents Concurrent turbulent-turbulent flow of air water-clay suspensions in horizontal pipes, by H. C. Ward and J M. Dallavalle. Mass transfer between two liquid phases, by K. F Gordon and T K. Sherwood. Separation of azeotropes by diffusion through porous membranes, by D H. Hagerbaumer and K Kammermeyer Lateral diffusion in gases flowing through tubular reactors, by H. E. Hoelscher Flow through irrigated duct packings—pressure drop loading, flooding, by M. Leva. The effect of total pressure on the gas-film absorption coefficient in a packed tower, by W Zabban and B. F Dodge. Mass transfer between immiscible liquids in continuous flow in an agitated chamber by A. E. Karr and E. J Scheibel. Transfer of momentum in jet of air issuing into a tube, by L. G. Alexander and others. Mass-transfer effects and variable productive area in fixed-bed catalytic converters, by R. F Kayser and H. E. Hoelscher Evaporation of solids into laminar air streams, by R. M. Butler and A. C. Plewes. Vapor-liquid phase-equilibria hydrogen chloride-ethane, by J H. Ashley and G. M Brown. Integral isobaric heat of vaporization of methanol, benzene mixtures, by J A. Tallmadge and others.

—— Nuclear engineering Part I. F J Van Antwerpen editor and publisher, Sylvia Fourdrinier manuscript editor New York American Institute of Chemical Engineers 1954 280 p illus 28 cm. (The same series. No 11) $4.25 6558

Contents Synthesis in nuclear engineering education, by D W McLenegan. Atomic energy jobs for new engineering graduates in ten, by P N Powers. Powder metallurgy of zirconium and beryllium, by H. H. Hausner and H. B Michaelson. Melting and fabrication of zirconium, by J W Holladay and J G. Kura. Electrocladding of reactor materials, by J G. Beach and C. L. Faust. The technology and fabrication of graphite, by L. D Loch and J. A. Slyh. Experience with graphite as fabrication material in high-temperature heat-transfer systems, by R. D Keen. Preparation, properties, uses of beryllium, by E. J Boyle and J. L. Gregg. Thorium metallurgy by J R. Keeler Metallurgy of uranium, by H. A. Saller and F A. Rough. The extractive metallurgy of uranium, by R. D Macdonald. Heat exchange in liquid-metal-fuel reactor for power by A. S. Dwyer Force-convection, heat transfer in pipes with volume-heat sources within the fluids, by H F Poppendiek. Heat transfer to supercritical water and other fluids with temperature-dependent properties, by K. Goldmann. Pressure drop and heat transfer to nonboiling and boiling water in turbulent flow in an internally heated annulus, by R. P Stein and others. The temperature distribution in nuclear reactor pierced by circular cooling channels, by P B Richards. Use of the cyclic heat-temperature method for measurement of reactor heat-transfer coefficients, by S. L. Fawcett and R. E. Grimble. Engineering problems pertinent to the use of sodium hydroxide in reactors, by E. M. Simons and J H. Stang. First principles of heat removal from nuclear reactors the possible conflict between temperature and power removal, by W A. Loeb. Ten years' operating experience of the O.R.N.L. graphite-moderator natural-uranium reactor by M E. Ramsey and C. D Agle. Optimizing and comparing reactor designs, by F T Miles and I. Kaplan. Appraisal of reactor systems for central-station power plants, by T Stern. Corrosions and impurities in the heavy-water system of the Dutch-Norwegian reactor by P J Barendregt and K. H. Brakstad. The Swedish reactor by S. Eklund. Safety considerations in the selection of university research-reactor designs on locations, by L. C. Widdoes. Naval research laboratory research reactor by E. H. Krause. A description of the Argonne National Laboratory research reactor CP 5 by J T Wells. Reactor dynamics of the Los Alamos water boiler by P R. Kasten. Liquid-metal-fuel reactor systems for power by C. E. Williams and F T Miles. Chlorination of some aromatic compounds under the influence of gamma radiation, by D E. Harmer and others. Radioisotopes in industrial control, by G. D. Calkins and M. Pobereskin. Gamma-ray-initiated polymerization of styrene and methyl methacrylate, by D S. Ballantine and others. A thermal method for concentrating heavy water by E. Cerrai and others.

—— Part II. F J Van Antwerpen editor and publisher Sylvia Fourdrinier manuscript editor New York American Institute of Chemical Engineers 1954 259 p. illus. 28 cm. (The same series No. 12) $4 25 6559

Contents: Operational characteristics of [illegible] heavy-water reactor, by A. Lundby. Research reactor program at the Pennsylvania State University, by W. M. Breazeale. Measurement of the diffusion length of thermal neutrons in graphite, by J. G. Fleck. Corrosion of uranium in high-temperature water, by D. E. Thomas. Studies in the uranium bismuth fuel system, by J. E. Atherton and others. Radiation damage to nonmetallic materials, by T. P. Collins. A high-performance research reactor, by J. P. Gill. A nuclear reactor for metallurgical research, by J. J. O'Connor and L. E. Foster. Electrolytic preparation of uranium from [illegible] fluoride, by S. E. Kenton and others. Caustic treatment of stream used, by G. H. Beyer and others. The use of exponential experiments in reactor design, by E. R. Cohen. Nonuniform fuel distributions in nuclear reactors, by G. Goertzel and W. A. Loeb. Calculation of the characteristic factors of [illegible] uranium-graphite lattice, by R. Q. Fornaguera and others. Application of analog computer techniques to reactor dynamic analysis, by J. C. Mason. Application of analog computing techniques to the solution of neutron-flux distribution problems, by H. C. Hench and D. J. Ott. A comparative evaluation of some coolants for power reactors, by T. T. Shimazaki. Liquid-fuel reactors with uranium oxides, by J. J. Wendt and R. De Bruyn. The system uranyl nitrate-diethyl ether-water: extraction by water in spray and packed columns from uranyl nitrate-ether solutions, by L. G. Jodra and others. Processes for high-level waste disposal, by B. Manowitz and L. P. Hatch. Liquid-metal-fuel reactor processing loops, by C. Raseman and J. Weisman. A continuously separating breeder blanket using thorium fluoride, by F. T. Miles and others. Selection of optimum temperature conditions in pile reactors and their heat-exchanger systems, by C. H. Robbins. Use of the remaining power of nuclear reactors for profitable chemical processes, by B. Manowitz. Radiation effects on structural materials, by C. R. Sutton and D. O. Leeser. Economic power from fast breeder reactors, by C. A. Rennie. Processing of liquid bismuth alloys by fused salts, by R. W. Bareis and others. Radiation damage to water, by A. O. Allen. The cooling system of the Saclay pile, by M. Goldschmidt and P. Pierre. Approximations of the kinetic behavior of fast reactors, by R. A. Fayram and E. Bernstein.

—— Part III. F J Van Antwerpen, editor and publisher Sylvia Fourdrinier manuscript editor New York American Institute of Chemical Engineers, 1954 274 p. illus. 28 cm. (The same series. No. 13) $4.25 6560

Contents: Operational features of reactors, by L. R. Shepherd and others. A process for recovery of uranium from pitchblende, dissolver residues, by G. E. Brown and C. W. Kuhlman, jr. Liquid-metal fuels and liquid-metal breeder blankets, by R. J. Teitel and others. A [illegible]-plate subroutine for large-diameter pulse columns, by F. W. Woodfield and G. Sege. General purpose overhead manipulator, by L. G. Grimmelmann and others. Recombination of radiolytic gas for aqueous nuclear reactors, by E. M. Berry and R. P. Hammond. Recent developments in pulsed-column techniques, by J. D. Thornton. A power plant for nuclear power, the SGR, by W. E. Parkins. The chemical potential of waste fission products, by E. J. Henley. Kinetics of the ethylene reaction initiated by gamma radiation, by J. C. Hayward and R. H. Bretton. Design of [illegible] pile-irradiation facility using gamma rays to break the stockpile cycle, by H. J. Gomberg and others. Growth of radioisotope utilization in industry and agriculture, by P. C. Aebersold and E. E. Crampton. The design philosophy of remote operation and maintenance of separation facilities, by W. M. Harty. The current design for [illegible] full-scale nuclear power plant, by T. G. LeClair. The development of radiochemical processes, by C. M. Nicholls and A. S. White. The experimental breeder reactor, by H. V. Lichtenberger. Heterogeneous reactors with reflector, by A. Mcllan and F. E. Purns. Materials testing reactor structure temperatures, by G. H. Hanson and others. The Amex process for separation of uranium, by M. Smutz and others. High-temperature centrifugal pumps, by H. W. Savage and W. G. Cobb. Pulse-column variable variables: solvent extraction of uranyl nitrate with tributyl phosphate in [illegible]-in.-diam. pulse column, by G. Sege and F. W. Woodfield. The failure and dismantling of the Los Alamos fast reactor, by E. T. Jurney. Rugger guide for nuclear energy, by J. J. Grebe and A. W. Hanson. A. Guerrieri and R. D Talty Effect of agitation on the critical temperature difference for a boiling liquid, by F S. Pramuk and J W Westwater Heat transfer and fluid friction in a shell-and-tube exchanger with a single baffle, by F W Sullivan and O. P Bergelin. Heat transfer mechanism for vaporization of water in a vertical tube, by C. E. Dengler and J N Addoms. Measurement and prediction of density transients in a volume-heated boiling system, by R. P Lipkis and others. Abstracts.

Note. An important series in which papers written by and addressed to chemical engineers and dealing in most instances with new developments and the results of recent research are published.

ARIES, ROBERT S , AND ROBERT D NEWTON

Chemical engineering cost estimation. New York McGraw Hill Book Company Inc., 1955 263 p illus 24 cm (McGraw Hill series in chemical engineering Sidney D Kirkpatrick, consulting editor) $6 00 6566

Contents. Capital investment. Physical-plant cost—equipment—components other than equipment. Manufacturing cost. General expense Sales and profits. The effect f variable conditions upon costs and profits. Cost factors in plant location. The relative importance of the components of cost. Economic evaluation. Nomenclature. Sample problems. Index.

Note. A compact, straightforward manual of information on the elements of manufacturing for profit and of reference data on the cost of chemical plants and chemical manufacturing. It is addressed particularly to engineers and chemists, and its express purpose is to enable such persons to guide management in decisions on new chemical manufacturing enterprises. Terms such as "capital investment and 'turnover ratio" are defined however these definitions and related basic information are much subordinated to the data pertaining to estimation of plant costs, manufacturing costs, etc. The book contains 59 tables of data on such topics as Fixed capital per annual ton of capacity "Prices of chemicals, Power requirements for various processes, and "Cost of research as a percentage of sales Also there are 88 figures, most of which are graphs presenting data on equipment costs, etc. Well-selected lists of references are included.

BADGER, WALTER L , AND JULIUS T BANCHERO

Introduction to chemical engineering New York McGraw Hill Book Company 1955 753 p. illus 24 cm. (McGraw Hill series in chemical engineering Sidney D Kirkpatrick, consulting editor) $9 50 6567

Contents Introduction. Flow of fluids. Transportation of fluids. Flow of heat. Evaporation. Distillation. Extraction. Gas-phase mass transfer—humidity and air conditioning. Gas absorption. Drying. Crystallization. Filtration. Mixing. Size separation. Crushing and grinding. Conveying. Appendix. Index.

Note: A textbook organized according to unit processes. In the typical chapter devoted to a specific process—such as distillation—theory computations, and design are interwoven so that the topic is covered from the viewpoint of an engineer faced with an actual design problem, and the discussions, considering the purpose of the book, are unexpectedly full. Worked examples of typical problems are included. In some of the chapters there is also considerable description of typical commercially available equipment. The book is limited to the unit processes named in the chapter titles. Other processes of some importance in present-day chemical manufacturing, for example, ion exchange, are not included.

BENEDICT, MANSON, AND CLARKE WILLIAMS, editors

Engineering developments in the gaseous diffusion process. New York McGraw Hill Book Company, Inc., 1949 127 p. illus. 24 cm. (National nuclear energy series. Manhattan Project technical section. Division II—Vol. 16) $2 00 6568

Contents. Part I, Special plant instruments and devices. Recording mass spectrometer for process analysis, by A. O. Nier and others. Recording ionization chamber for traces of radioactive gases, by A. O. Nier and others. Magnetic gear for torque transfer in a closed system, by T A. Abbott and J K. Pickard. Part II, Vacuum engineering Mass spectrometer for leak detection, by A. O. Nier and others. New developments in vacuum engineering, by R. B. Jacobs and H. F Zuhr. Part III, Development of heat-transfer equipment Theory of heat and mass transfer in batch condensation of solids, by W L. Thompson. Part IV Absorption of UF and fluorine Absorption in high-molecular-weight nonaqueous system—uranium hexafluoride in heavy oil, by R. Landau and others. Continuous fluorine-disposal plant, by R. Landau. The reaction of fluorine oxide with sodium hydroxide, by E. Simons and others. Subject index. Author index.

Note: A variety of devices and techniques developed in the course of the engineering design of gaseous diffusion plants for separating uranium isotopes are described in this book. Most of the inventions and developments have potential applications in other fields. An example is the magnetic gear which was developed for transferring motion through the wall of totally enclosed system. Literature references are included for some of the chapters. The book is addressed to graduate engineers.

BROWN, GEORGE GRANGER, AND OTHERS

Unit operations New York John Wiley & Sons Inc. 1950 611 p. illus. 28 cm $11 50 6569

Contents (abridged) Part I, Solids: Screening. Handling of solids. Part II, Fluids The flow of solids through fluids. Flotation. Sedimentation. Transportation of fluids. Pumping and compressing. Gas flow at high velocity Flow f fluids through porous media. Filtration. Centrifugation. Fluidization of solids. Part III, Separation by mass transfer—the ideal stage concept Solid-liquid extraction. Liquid-liquid extraction. Vapor-liquid transfer operations. Adsorption. Part IV Energy and mass transfer rates Heat transfer. Evaporation. Crystallization. Agitation. Simultaneous heat and mass transfer Nomenclature. Appendix. Index.

Note At the time of writing, all twelve authors, are members of the Faculty of Chemical and Metallurgical Engineering in the University of Michigan. They collaborated in writing this text in chemical engineering. Each of the chapters is briefly written exposition of specific topic. There is much emphasis on mathematical calculation in the solution of practical problems in chemical engineering, and the similarity of the basic principles of many processes is constantly stressed. The exposition is supplemented by numerous illustrations of present-day chemical apparatus and substantial bibliographies.

CEAGLSKE, NORMAN H.

Automatic process control for chemical engineers. New York John Wiley & Sons Inc., 1956 228 p. illus. 24 cm. $6 75 6570

Contents: Introduction. Control systems. Derivation of equations. Solution by the standard methods of differential equations. Transient analysis of control systems. Frequency response of control systems. The analysis of [illegible] control systems. Appendix. Index.

Note: The first two chapters of this book are introductory and descriptive; the remainder are an introduction, rendered as elementary as possible, to the mathematical analysis of control systems. The Laplace transformation is extensively used in these chapters; however, the author has not assumed that readers will have previous knowledge of it. Although designed specifically for the instruction of undergraduate engineering students majoring in chemical engineering, there is little obvious bias toward chemical engineering except in the second chapter, where instruments are described, and in the worked examples. The book is useful to engineering students and also to graduate engineers who feel the need for a basic understanding of the analytical approach to control systems based on feedback. The author is Professor of Chemical Engineering in the University of Minnesota.

CHU JU CHIN AND OTHERS

Distillation equilibrium data, by Ju Chin Chu, Robert J Getty Llewellyn F Brennecke and Rajendra Paul. New York Reinhold Publishing Corporation 1950 304 p. 24 cm. $7 00 6571

Contents: Binary systems. Ternary systems. Multiple component systems. Bibliography. Index.

Note: A compilation of vapor-liquid equilibrium data which probably includes all of the data published through December, 1949. Altogether 175 systems are covered, and full references are given to the sources of the data. The book will be especially useful to chemical engineers.

CHU JU CHIN AND OTHERS

Vapor liquid equilibrium data. By Ju Chin Chu, Shu Lung Wang Sherman L. Levy Rajendra Paul. Ann Arbor J W Edwards, Inc., 1956 754 p. 22 cm. $9.00 6572

Note: A complementary book to *Distillation equilibrium data*, by J Chin Chu and others, described above. It supplies [illegible] vapor-liquid equilibrium data for 446 systems. The data have been collected from 274 journal articles and other publications issued up to June, 1954. Data found in literature published during the period covered by the original volume have been included in this one along with data published since the first compilation was made. The sources of all data are given. A cumulative index including covering both the present book and the earlier one [illegible] included.

CLARKE LOYAL

Manual for process engineering calculations New York McGraw Hill Book Company Inc 1947 438 p. illus. 23 cm. $7.00. 6573

Contents: Perspective. Numerical and mathematical data. Conversion [illegible]. Physical and mechanical properties. Thermodynamic data. Fluid [illegible], hydraulics, and flow measurements. Heat transfer. Combustion [illegible]. Pumps, fans, blowers, and compressors. [illegible] [illegible] [illegible], distillation. Water. Index.

Note: An engineering data book which brings together in one [illegible] of graphs, tables, and notes that are ordinarily found scattered through many handbooks and texts. It [illegible] intended [illegible] quick source of basic scientific and technical information [illegible] engineers engaged in chemical process calculations and in the design [illegible] process and equipment. For the benefit of readers desiring [illegible] and material most of the chapters include [illegible] short list of [illegible] reading in the subject discussed.

COMINGS EDWARD W

High pressure technology New York McGraw Hill Book Company Inc., 1956 572 p. 23 cm. (McGraw Hill series in chemical engineering Sidney D Kirkpatrick, consulting editor) $11.50 6574

Contents: Introduction. Chemical processes, by R. M. [illegible]. Metals, by H. C. Van Ness. Safety. Equipment. Thick-walled cylinders. Experimental techniques. Gases and liquids. Chemical-engineering unit operations. Chemical equilibrium. Chemical reactions. Synthesis of ammonia. Appendixes: Units and dimensions. Values for the Redlich and Kwong equation. Constants for equations of state. Properties of gases, liquids, and solids. Equipment data. Limits of flammability of gases and vapors. Mercury-cleaning technique. Steels and alloys for high pressures. Problems and questions. Glossary. Name index. Subject index.

Note: Addressed to senior college students of chemical engineering and graduate chemical engineers, this book is an introduction to the effects of high pressures on chemical reactions and to the design of apparatus in which reactions can be carried out at high pressures. It covers both experimental and industrial techniques and equipment. A wide range of information is included on equipment and techniques and also on fundamental science pertaining to equilibrium reaction rates, etc. There is extensive citation of the literature. The names of authors of cited literature and of manufacturers of equipment are brought together in the "Name index.

CORCORAN WM H. AND OTHERS

Momentum transfer in fluids. By Wm H. Corcoran, J B Opfell and B H. Sage. New York Academic Press Inc., 1956 394 p. illus. 23 cm. $9.00 6575

Contents: Introduction to momentum transfer. Some simple properties of turbulent flow. Some macroscopic characteristics of turbulent flow. Velocity distribution and friction factors for uniform flow. General equations of fluid motion. Some properties of turbulence. Boundary layer. Appendixes: A derivation of Bernoulli's equation. An introduction to tensors and the statistical theory of turbulence. Constants and conversion factors, dimensions. Analysis of potential flow across [illegible] cylinder. References. Index.

Note: Topics in fluid mechanics which are of interest to chemical engineering are treated in this book. Particular attention is paid to the phenomena of such systems as flow in [illegible] circular pipe, boundary flow around [illegible] cylinder, flow along [illegible] flat plate, and flow between parallel flat plates. There is major emphasis on turbulent flow and boundary layer analysis. Throughout the book, there are frequent references to recent experimental results. The authors have assumed that readers [illegible] be familiar [illegible] the calculus and elementary differential equations. Tensor notation is not used in the body of the text, but tensors are introduced in [illegible] "[illegible] appendix. The authors are associated with the Chemical Engineering Laboratory of California Institute of Technology

DODGE, BARNETT FRED

Chemical engineering thermodynamics. New York McGraw Hill Book Company Inc., 1944 650 p. illus. 23 cm. $9.50 6576

Contents: Definitions and fundamental concepts. The first two fundamental laws. Quantitative development of the two fundamental laws. The thermodynamic functions. General equations of equilibrium. Pressure-volume-temperature relations of fluids. Thermodynamic properties of fluids. Compression and expansion of fluids. Thermodynamics of fluid flow. Heat transfer. Refrigeration.

Note: A text and reference book on thermodynamics as applied particularly to the field of chemical engineering. After [illegible] thorough treatment of the fundamental laws, the book develops various applications of special interest to chemical engineers. [illegible] attempt has been made to cover all applications; instead, [illegible] few have been selected for more detailed treatment. The treatment presupposes knowledge of calculus but no previous study of thermodynamics.

GROGGINS PHILIP HERKIMER, editor

Unit processes in organic synthesis. Fourth edition. New York McGraw Hill Book Company Inc., 1952 937 p. illus. 24 cm. $12 50 6577

Contents: Nitration, by P H. Groggins. Amination by reduction, by P H. Groggins. Diazotization and coupling, by H. E. Woodward. Halogenation, by P H. Groggins and H. P Newton. Sulfonation, by P H. Groggins. Amination by ammonolysis, by P H. Grog-

zine. Oxidation by L. F Marek. Hydrogenation, by M. R. Fenske. Hydroformylation (oxo reaction) by M. Orchin and W C. Schroeder Esterification by E. E. Reid. Hydrolysis, by E. J Lloyd and W F Hamner Polymerization, by W P Hohenstein and H. Mark. Alkylation, by R. N Shreve. The Friedel-Crafts reaction, by P H. Groggins. Name index. Subject index.

Note. A widely used textbook of chemical engineering techniques in manufacturing processes that involve organic syntheses. It covers basic principles, operating conditions and factors, typical plant equipment, and contains flow sheets. The information given on many points is detailed enough to make the book of interest to graduate chemical engineers. The previous edition appeared in 1947 In this edition, there are many important changes including one completely new chapter

GUMZ, WILHELM

Gas producers and blast furnaces—theory and methods of calculation. New York John Wiley & Sons, Inc , 1950 316 p. illus 21 cm $12 00 6578

Contents (abridged) Part I, Gas producers. Gasification reactions. Gas compositions at equilibrium. Gas composition at incomplete equilibrium. Applications of the stoichiographical method for associated problems. Mathematical treatment of gas-producer performance. Part II, Blast furnaces. Composition of gas in furnaces. Method of computation. Part III, Reaction kinetics. Appendix. Name index. Subject index.

Note. In this book, the processes which take place in gas producers and blast furnaces are treated as problems in chemical engineering which can be solved largely by mathematical methods. There is necessarily considerable discussion of the chemical reactions, but the author's chief contribution is the presentation 1 the apparently complex gasification process as one to which the concepts and techniques of physical chemistry and chemical engineering are applicable. The book is of interest primarily to engineers associated with the steel industry

HARPER, JAMES I , editor

Chemical engineering in practice, a collection of papers originally presented in Philadelphia Pa. May 12 1953, under the auspices of the Philadelphia Wilmington Section of the American Institute of Chemical Engineers and the Department of Chemical Engineering University of Pennsylvania. New York Reinhold Publishing Corporation, 1954 140 p illus 20 cm $3 95 6579

Content Process research, by G. A. Mills. Process development, by J J Hor Process engineering, by A. S. West. Economic analysis, by R. M. Ott. Project engineering, by W F Cooke. Construction engineering, by G. L. Eaton. Operational engineering, by W C. Huffman. Market research engineering, by R. E. Chaddock.

Note Authoritative descriptions of the work of chemical engineers in various areas of activity in contemporary chemical manufacturing in the United States of America are presented in the chapters of this book which is addressed primarily to chemical engineering students about to graduate and young engineers recently graduated.

HESSE HERMAN CARL AND J HENRY RUSHTON

Process equipment design. New York D Van Nostrand Company Inc. 1945 580 p illus 24 cm. $8 00 6580

Content Materials of construction Mechanical properties and strength of materials. Riveted pressure vessels. Welded pressure vessels. Mechanics. Threaded fasteners and combined stresses. Structural analysis. Trusses and truss adaptation. Piping. Attachments and closures. Non-ferrous construction Concrete construction. Wood and other non-metallic construction Belt and chain drives. Toothed gearing Shafting and bearings. Handling equipment and mechanical frames. Special stress applications. References. Index.

Note. This book is intended for use as a textbook in senior engineering classes and as reference manual in industry Emphasis has been placed mainly on those fundamental principles of mechanics that underlie designing in general, rather than on the design of particular equipment, although equipment used in the chemical industries is emphasized, and the subject of pressure vessels is dealt with at some length. A useful feature of the book is the constant reference to American Society of Mechanical Engineers and other safety codes governing construction today Review problems are listed at the end of each chapter and the two and one-half pages of references are keyed to the text.

HOUGEN, OLAF A., AND OTHERS

Chemical process principles Part I, Material and energy balances. Second edition. By Olaf A. Hougen, Kenneth M Watson, Roland A. Ragatz New York John Wiley & Sons, 1954 504 p. illus. 24 cm $8 50 6581

Contents Mathematical procedures. Stoichiometric and composition relations. Behavior of ideal gases. Vapor pressures. Humidity and saturation. Solubility and crystallization. Material balances. Thermophysics. Thermochemistry Adsorption. Fuels and combustion. Chemical, metallurgical, and petroleum processes. Appendix. Author index. Subject index.

—— Parts II–III. New York John Wiley & Sons, 1947 2 v illus. 23 cm Part II, $6 00, part III, $5 25 6582

Contents Part II, Thermodynamics. Thermodynamic principles. Thermodynamic properties of fluids. Expansion and compression of fluids. Thermodynamics of solutions. Physical equilibrium. Chemical equilibrium. Thermodynamic properties from molecular structure. Part III, Kinetics and catalysis: Homogeneous reactions. Catalytic reactions. Mass and heat transfer in catalytic beds. Catalytic reactor design. Uncatalyzed heterogeneous reactions. Appendix. Author index. Subject index.

Note. An advanced work whose purpose is "to give intensive quantitative training in the practical applications of the principles of physical chemistry to the solution of complicated industrial problems and in methods of predicting missing physico-chemical data from generalized principles." It is used chiefly as a textbook in undergraduate and graduate courses in engineering schools. The first edition of Part I as published in 1943 The second edition contains two newly added chapters and numerous new sections in chapters retained from the first edition.

INDUSTRIAL AND ENGINEERING CHEMISTRY

Modern chemical processes, a series of articles describing chemical manufacturing plants. By the editors of Industrial and Engineering Chemistry in conjunction with the technical staffs of the cooperating organizations New York Reinhold Publishing Corporation 1950 222 p. illus 29 cm. $5 00. 6583

Contents Contact sulfuric acid from sulfur. Modern production of chlorine and caustic soda. Iodine from oil well brines. Continuous superphosphate production. Barium potassium chromate pigment. Fine chemicals from coal. Liquid fuel from coal. Synthetic methanol production. Alcohols by sodium reduction. Low temperature manufacture of chemical rubber Carotene and chlorophyll—commercial chromatographic production. Chloroquine manufacture. Paint and varnish manufacture. Petroleum-base protective coatings. Drier soap manufacture. Continuous distillation of gum turpentine. Selective extraction of vegetable oils with furfural. Solvent extraction of oil from soybeans. Phenolic resin glues for plywood. Oxidation of cellulose. Manufacture of basic refractory brick. Paving asphalt from California crude oil. Citrus fruit processing. Index.

—— Volume II. New York Reinhold Publishing Corporation 1952 299 p. illus. 29 cm. $5 00 6584

Contents Chemicals from fats. Aryl compounds from pentane Phenol by sulfonation. TNT into phloroglucinol. Commercial development of glyoxal. Bacitracin—product of biochemical engineering. Reagent grade chemicals. Lithium and its compounds. Calcium cyanamide. Cyanides from the coke oven. Pioneer surfactant Edible oils. Cane sugar refining Brewing Food yeast from sulfite liquor. Modern winemaking. Platinum reforming of gasoline Liquid fuels from oil shale. Modern sulfur mining. Sulfur from sour gases.

Magnesium-base sulfite pulping. Kraft pulp production. Kraft paper making. Rubber reclaiming. Index.

——Volume III. New York Reinhold Publishing Corporation, 1954 276 p. illus. 29 cm. $5.00 6585

Contents: Carbide lined tubes. Ammonia at 1000 atmospheres. An American Fischer-Tropsch plant. Oil black. Oil gas manufacture. Chemicals from milk. Formaldehyde from methanol. Hydroquinone manufacture. Lactic acid from corn sugar. Animal glue. Cellophane. Carboxymethylcellulose. Acetophenone. Diatomaceous earth. Ammonium nitrate. Dextrose. Chemicals from seaweeds. Chlorine and caustic in Italy. Nitric acid in Great Britain. Tinsmith [illegible] finished color production. Mercury cell chlorine and caustic. Catalytic asphalt. Wulff process acetylene. Index.

——Volume IV New York Reinhold Publishing Corporation, 1956 202 p. illus. 29 cm. $5.00. 6586

Contents: Graphite electrodes, by R. M. Hader and others. Vitamin B[12] feed supplement, by A. E. Hester and G. E. Ward. Acrolein, by R. J. Sanders and A. W. Tall. Stengel process ammonium nitrate, by A. E. Hester and others. Modern Portland cement production, by W. Q. Hull and others. Anthraquinone vat dyes, by K. J. Bradley and F. Kronewitt. Specialty soaps, by K. M. Reese and others. Ammonia-base sulfite pulping, by W. Q. Hull and others. Malting, by A. E. Hester, and J. H. Lodish. Rayon and pulp production—1954 style, by R. W. Hobson Jr., and others. Chlorophyll by solvent extraction, by M. A. Judah and others. French synthetic detergents from petroleum, by Q. C. Roberg and A. Menard. Calcium magnesium acetate, by H. W. Knorr, Jr., and L. G. Joyner. Nitroparaffins, by R. J. Sanders and others. Salt manufacture, by A. E. Hester and H. W. Diamond. Vegetable oil refining, by K. J. Bradley and F. M. Smith. p-Xylene from petroleum, by H. W. Hanson, Jr., and others. Alumina, by K. M. Reese and W. H. Cundiff. Aluminum, by K. M. Reese, and others. Index.

Note: Each chapter in the volumes of this set is a detailed description of a present-day method of manufacturing, in a specified plant in the United States of America, the chemical product or group of related products named in its title. The typical article includes flow sheets, pictures and diagrams of plant equipment, tabulated reference data, and a bibliography. Most of the articles are co-authored by a member of the editorial staff of the sponsoring magazine, and a member of the staff of the firm whose process is described. All of the material—text and illustrations—was first published in Industrial and engineering chemistry. Each volume contains a detailed general index.

Jordan, Donald G

Chemical pilot plant practice. New York. Interscience Publishers, Inc., 1955 152 p. illus. 23 cm. $3.50. 6587

Contents: General considerations. The scale-up problem. The handling of solids, liquids, and gases. Chemical reactors. Separation process. Cost estimation and market testing. Literature references. Index.

Note: Manufacture on an industrial scale of a new chemical product or introduction of a new process for the manufacture of an established product often proceeds through three distinct stages (1) laboratory research (2) pilot plant operations (3) industrial production in a full scale plant. This book deals with the second stage. In it are surveyed the purposes of pilot plants and the uses of data derived from their operation, general considerations on the design of pilot plants, equipment for pilot plants, the problems of scaling up to full-size equipment on the basis of pilot plant experience and results and finally making cost estimates and writing up the pilot plant experience. The [illegible] subject is covered from the viewpoint of chemical engineers employed in industry. Many of the topics and sub-topics are covered very briefly but references are usually given to books and articles in which fuller discussions or more data can be found.

Kammermeyer, Karl, and James O Osburn

Process calculations. Englewood Cliffs, N J Prentice-Hall, Inc., 1956 188 p. 23 cm. $4.00. 6588

Contents: Accounting for material. Solving problems. Units and techniques. Chemical reactions. Gases and vapors. Combustion. Accounting for energy. Enthalpy changes in chemical reactions. Special methods and techniques. Comprehensive problems. Appendix. Index.

Note: A practical book for gaining proficiency in the varieties of calculations that occur frequently in chemical engineering. It begins with the simplest kind of problems involving material balances and concludes with a grouping of problems so complex that only approximate solutions can be obtained. The chapters include not only concise discussions of methods of obtaining solutions but also numerous fully worked examples.

Keyes Donald Babcock, and A. Garrell Deem

Chemical engineers' manual. New York John Wiley & Sons, Inc., 1942 221 p. illus. 16 cm. $4.00 6589

Note: This book contains what might be termed the permanent reference information of chemical engineering—the equations, formulas and tables upon which the calculations are based. There are data on fluid flow, heat transfer, diffusional operations, separation. There are tables of logarithms of numbers, integrals, steam tables, tables of specific heat of water and mercury, specific heat of elements, specific heat of aqueous solutions, thermal conductivities of metals, viscosity of gases and vapors, critical constants, standard pipe and line pipe, bursting [illegible] factors for tubing, weights of square and round steel bars. There are altogether 77 convenient tables. The book is fully indexed for ease of reference.

Kirkbride Chalmer Gatlin

Chemical engineering fundamentals. New York McGraw Hill Book Company Inc., 1947 419 p. illus. 24 cm. (McGraw Hill chemical engineering series) $6.75 6590

Contents: Introduction. Human relations in chemical engineering. Useful mathematical tools. Important concepts of physics and chemistry. The material balance. The energy balance. Static equilibria. Dynamic equilibria. The economic balance. Presentation of technical results. Appendix. Index.

Note: Unlike the usual introductory textbook in chemical engineering, which deals chiefly with the technology, this book by including such subject matter as how to get along with the boss, how to express one's thoughts clearly and how to make technical reports, is intended to give the student a broad view of the work of chemical engineers in industry. Technical fundamentals, also, are presented somewhat unconventionally.

Kobe, Kenneth Albert

Inorganic process industries. New York The Macmillan Company 1948. 371 p. illus. 24 cm. $6.50. 6591

Contents: The chemical literature. The natural sodium salts industries. The natural potassium salts industries. The sodium carbonate industry. The electrolytic caustic-chlorine industry. The chamber sulfuric acid industry. The contact sulfuric acid industry. The nitrogen fixation industries. The nitrogen products industries. The phosphorus products industries. Appendix. Index.

Note: This textbook on industrial chemistry covers fewer industries than are covered in well-known books already published in the same field. The advantage of a less-inclusive book for short courses in colleges is obvious. The emphasis placed on chemical literature and on good procedure in making literature searches is commendable. The author is Professor of Chemical Engineering at the University of Texas.

Kowalke, Otto Louis

Fundamentals in chemical process calculations. New York The Macmillan Company 1947 158 p. illus. 22 cm. $3.90. 6592

Contents: Temperature scales. Density and specific gravity. Pressure and its measurement. Metal units. Methods of expressing compositions of mixtures and solutions. Pressure-volume-temperature relations for gases. Partial pressures of gases and vapors. Material accounts. Salts crystallized from water solutions. Silicates and slags.

Combustion calculations for fuels. Heat losses in products of combustion. Appendix Tables of data. Index.

Note. The discussions and problems in this book are designed to acquaint second year chemical engineering students with the types of calculations encountered in industrial chemical operations. The range of topics is admittedly limited, and the problems are largely arithmetical but they are by no means elementary The author is Professor of Engineering at the University of Wisconsin.

LAUER, BYRON ELMER, AND RUSSELL F HECKMAN

Chemical engineering techniques New York Reinhold Publishing Corporation, 1952 496 p illus (part col d) 24 cm $6 00 6593

Contents (abridged) Section I, The assembly of materials. Inter plant transportation. Intraplant transportation. Storage of materials. Section II, The preparation of materials for reaction Size reduction. Size classification. Section III, The production and distribution of energy· Energy sources. The storage, distribution and conservation of energy Section IV Conditions affecting the chemical reaction Measuring and proportioning materials. Mixing of materials. Reaction vessels. Section V The separation and purification of materials Separation of a solid from a solid. Separation of liquid from solid. Separation of a gas from a solid. Separation of a solid from a liquid. Separation of a liquid from a liquid. Separation of liquid from a gas. Separation of a gas from a gas. Section VI, Further treatment of products for sale, shipment, storage, or other use Preparation of materials for marketing. Measurement of physical and chemical qualities. Packaging. Index.

Note. An general treatment in which methods and equipment for handling materials, measuring and proportioning them, separating them, and packaging them are covered rather than unit processes. The expository matter is practically all descriptive and is almost devoid of mathematics and chemical formulas. Types of equipment are described in general and a selected few are shown in the illustrations, but the authors have not attempted to describe particular makes or even typical installations. The book is suitable for use as a supplementary text in college courses and as general survey for manufacturers and graduate chemical engineers. There are 100 figures but no literature references.

LEE, JAMES A

Materials of construction of chemical process industries New York McGraw Hill Book Company Inc, 1950 468 p illus 24 cm (McGraw Hill chemical engineering series) $7 50 6594

Note. A handbook designed to aid chemical engineers in selecting materials for equipment used in the production and handling of corrosive substances. The arrangement of the book is alphabetical according to substance for example, under 'B are found barium carbonate, barium chloride, beer benzene hexachloride, benzoic acid, benzotrifluorides, etc. Under each substance most of the discussion is concerned with the material but, in many cases, there is also brief outline of the manufacturing process together with references to one or more periodical articles or books where the manufacturing process is described more fully At the end of the book directory identifies the trade-names of corrosion-resistant alloys and other materials, gives the manufacturer's name, and the chemical descriptions Much of the material has been drawn from *Chemical engineering* and its predecessor *Chemical and metallurgical engineering*

LEVA M AND OTHERS

Fluid flow through packed and fluidized systems By M Leva, M Weintraub M Grummer M Pollchik and H H. Storch Washington D C Government Printing Office 1951 149 p illus 26 cm. (United States Bureau of Mines. Bulletin 504) $1 00 6595

Contents Introduction. Literature survey Pressure drop through packed tubes, turbulent flow General correlation. Effect of surface roughness. Prediction of voids in packed tubes. Comparison between tower packings. Pressure drop through packed tubes, viscous flow General correlation. Generalized pressure-drop equation. Shape-factor estimations. Fluidization of solids Vesicular and nonvesicular particles. Fluidization of nonporous particles. Fluidization of an iron Fischer Tropsch catalyst. Fluidization of mixed materials. Solid-liquid systems. Fluidization of porous material. Channeling in fluidized beds. Summary of design equations. Nomenclature. Appendix (tables)

Note. The first five pages of this bulletin report the results of an extensive literature search which was made following the development of new processes for the production of synthetic liquid fuels. This search showed that considerable uncertainty existed in the correlation of the operating variables of these new types of converters with the pressure drops which could be expected through packed and fluidized systems. Since the pressure-drop correlations reported in the literature were found to be too inaccurate for use in calculating the energy required to pass fluids through packed beds, the original study reported in the remainder of the bulletin was carried out in order to develop correlations that would be suitable for the design of new equipment in which fluids are brought into contact with granular materials. To arrive at general relationships, systems were chosen that did not involve chemical reactions, and correlations are given only in terms of quantities that are ordinarily available from general process and design specifications.

LEWIS, WARREN K , AND OTHERS

Industrial stoichiometry, chemical calculations of manufacturing processes. Second edition By Warren K. Lewis Arthur H. Radasch and H. Clay Lewis New York Mc Graw Hill Book Company, Inc., 1954 429 p. illus 24 cm. (McGraw Hill series in chemical engineering Sidney D Kirkpatrick, consulting editor) $8.50 6596

Contents Introduction. Gaseous and liquid fuels. Energy balances and equilibrium. Solid fuels. Secondary fuels. Sulfur compounds. Nitrogen compounds. Lime and cement. Fixed alkalies. Metallurgy Ceramics. Design problems. Appendix. Index.

Note. A standard introduction to computational methods useful in chemical engineering, written especially for the use of college students and useful also as refresher and reference book for young graduate engineers. As the chapter titles indicate, only inorganic chemical technology is covered. The first edition of the book, published in 1926 has had many printings. This second edition is much enlarged (429 pages in contrast to 174) Actually the book has been completely rewritten though organized on the same case method" plan of instruction and intended for the same classes of readers.

MANTELL, CHARLES LETNAM

Adsorption Second edition. New York McGraw Hill Book Company, Inc. 1951 634 p illus. 24 cm (McGraw Hill chemical engineering series) $11 50 6597

Contents (abridged) The unit operation of adsorption Theories of adsorption. Fuller's earth and activated clays. Aluminum oxide base materials. Bone char and related materials. Decolorizing carbon, water-treatment carbon. Gas-adsorbent carbons. Silica gel Ion exchangers. Magnesia base materials. Solvent recovery and concentration. Odor removal, air purification and recovery Gas masks. Fractionation of liquid hydrocarbons. Fractionation of gases. Fractionation of ions. Adsorbents in refining of sugar and related substances. Water treatment. Adsorbents in medicine and pharmacy Chromatographic adsorption. Inspection, specifications, and testing of adsorbents. Appendix. Index.

Note Adsorption, the concentration of gases, vapors, etc., on the surfaces of solids where they are held by surface forces, is employed in wide range of industrial chemical processes. This standard book is devoted mainly to descriptions of adsorbents and discussions of the employment of adsorption and adsorbents in industrial chemical processes. It is of particular interest to chemical engineers, but parts are of interest to men in other fields such as air conditioning. In this edition, there is much new material on industrial applications that have been developed since the first edition was prepared. Selected patents and papers are cited in footnotes

NIELSEN CHARLES H. editor

Distillation in practice a collection of papers originally presented in Philadelphia, Pa. in May 1954 under the auspices of the Philadelphia Wilmington Section of the Amer

can Institute of *Chemical Engineers* and the Department of *Chemical* Engineering, University of Pennsylvania. New York Reinhold Publishing Corporation, 1956. 133 p. illus. 20 cm. $3.00. 6598

Contents: Overall tower design from [illegible] process viewpoint, by C. Pyle. Physical design features of plate columns, by R. L. Geddes. Design techniques in petroleum fractionation, by C. M. Brooks. Distillation control, by W. O'Connor. Operation of distillation equipment, by C. R. Strang. Some commercial aspects of vacuum distillation, by W. A. Hall.

Note: Containing papers originally prepared for the second "Experience in Industry" symposium sponsored as noted in the title, the value of this little book lies in its first-hand accounts of distillation practice and experience in industry. The authors are associated with such firms as E. I. Dupont de Nemours & Company, the Sun Oil Company, and the Lummus Company. The papers are unpretentious and informal, but they contain information that will be of interest and, in some instances, very useful to graduate chemical engineers entering upon the practice of their profession.

OTHMER, DONALD F editor

Fluidization. New York Reinhold Publishing Corporation 1956 231 p. illus. 24 cm. $7.00. 6599

Contents: Fluid dynamics of fluid-solid systems, by R. F. [illegible]. Heat and mass transfer in solid fluidization, by J. C. Chu. Graphical analysis of fluid-solids systems in the process industries, by F. A. Zenz. Background, history and future of fluidization, by E. J. Gohr. Operation of fluidization processes, by R. M. [illegible] and A. A. Fried. Fluid coking, by R. W. Krebs. Design and control techniques in moving solids bed systems, by C. Berg. The significance of details in fluid catalytic cracking units—engineering design, instrumentation and operation, by W. W. Kraft and others. Applications and problems of fluidization in the chemical industry by R. B. Thompson. Index.

Note: "Fluidization" as used in the book refers to the technique of suspending fine solid particles in a moving gas (or liquid) in such a way that the solid material behaves essentially as a fluid. The technique has found wide application in petroleum refining, and other applications have been developed or are in prospect. The authors of the various chapters are associated with Esso Research and Engineering Company, the Lummus Company, and other organizations which have been active in the development of fluidization and the design of chemical manufacturing plants based on it. The subject is treated from the viewpoint of graduate (professional) engineers. Aside from its interest for young engineers in the petroleum industry, the book has potential interest for engineers in other fields, such as ore dressing and refining, fuel burning and the transport of solid materials in pipelines.

PERRY JOHN HOWARD editor

Chemical engineers handbook prepared by a staff of specialists. Third edition. New York McGraw Hill Book Company Inc., 1950 1 942 p. illus. 25 cm. (McGraw Hill chemical engineering series) $18 50. 6600

Contents: Mathematical tables and weights and measures. Mathematics. *Physical and chemical data. Physical and chemical principles.* Flow of fluids. Heat transmission. Evaporation. General theory of diffusional operations. Distillation and sublimation. Gas absorption. Solvent extraction and dialysis. Humidification, dehumidification, and cooling towers and spray ponds. Drying. Adsorption. Mechanical separations. Size reduction and size enlargement. Mixing of materials. High-pressure techniques. Process control. Movement and storage of materials. Materials of construction. Fuels. Furnaces and kilns. Power generation and mechanical power transmission. Refrigeration. Plant location. *Electricity and electrical engineering.* Electrochemistry. Accounting and cost finding. Safety and fire protection. Index.

Note: A standard reference handbook for chemical engineers, industrial chemists, executives of companies manufacturing chemicals, and students. The titles of the various sections are listed above. The typical section is composed of several compact papers which cover theory, equipment, practice, and a range of technical data. In this edition, the page size has been increased, and the text now printed two columns to the page. The new size permits larger scale in the illustrations, which is a definite advantage. The organization and scope are essentially the same, but eight new sec-

tions have been added, and four sections that appeared in the preceding edition have been dropped. Extensive revisions are evident in most of the sections carried over from the second edition.

PIERCE, DAVID E

Chemical engineering for production supervision. Second edition. New York McGraw Hill Book Company Inc., 1950. 290 p. illus. 23 cm. (McGraw Hill chemical engineering series S. D Kirkpatrick consulting editor) $5.00. 6601

Contents: General principles of chemistry and physics. Transformation of energy. Heat transfer. Evaporation. *Distillation. Drying. Flow of fluids. Absorption.* Appendixes. Answers to problems. Index.

Note: A book designed to serve chemical plant production supervisors as a memory refresher, reference book, and guide. In it the essential facts and principles of the unit operations of chemical engineering are concisely presented with the mathematical treatment limited to the use of, rather than the derivation of, formulas. Illustrative examples included in each chapter show the way calculations may be made, and many unsolved examples are provided for practice in using these methods. The first seven chapters of this edition are the same except for minor emendations as the same chapters in the first edition, 1944. The eighth chapter entitled "Absorption" is new.

RIEGEL, EMIL RAYMOND

Chemical process machinery. Second edition. New York Reinhold Publishing Corporation 1953 735 p. illus. 24 cm. $12.50 6602

Contents (abridged): Introduction. Screening and grading equipment. Handling bulk material. Tanks, multispheres, multicylinders. Weighing and proportioning solids and liquids. Equipment for the propulsion of gases. *Devices for the cleaning of gases. Separation* of solids from liquids. Evaporators. Crystallizers. Driers. Distilling and fractioning equipment. Heat exchangers. Gas conditioning. Instrumentation. Appendix. Index.

Note: As in the first edition of this standard college text, the sequence of presentation is roughly parallel to the order of operations in chemical plants. A wide variety of apparatus used in chemical manufacturing is covered as to principles, uses, and mechanical details. In this edition, the reading references at the end of each chapter have been brought up to date (1952) and much new information has been added on such equipment as magnetic separators, multispheres, pumps, cyclonic scrubber, continuously operating centrifuges, surface evaporators, continuous crystallizers, and automatic control instruments. There are now 397 figures and 41 tables, many of which are new to this edition.

ROBINSON CLARK SHOVE AND EDWIN R. GILLILAND

Elements of fractional distillation. Revised and rewritten by E. R. Gilliland. Fourth edition. New York McGraw Hill Book Company Inc., 1950 492 p. illus. 24 cm. (McGraw Hill chemical engineering series S. D Kirkpatrick consulting editor) $9.50. 6603

Contents (abridged): Determination of vapor-liquid equilibria. Calculation of vapor-liquid equilibria. *General methods of fractionation.* Simple distillation and condensation. Rectification of binary mixtures. Special binary mixtures. Rectification of multicomponent mixtures. Extractive and azeotropic distillation. Batch distillation. Vacuum distillation. Fractionating column design. Fractionating column auxiliaries. Appendix. Index.

Note: As in the previous editions of this standard text for advanced chemical engineering students, approximately equal attention is given to basic principles and to the application of these principles to the solution of distillation problems and the design of distillation apparatus. In this edition, however, more emphasis is placed on methods involving the calculation and use of vapor-liquid equilibria. Such topics as batch and various distillations have been expanded to chapter length, and the detailed description of fractionating column design and performance now covers three chapters. The book as a whole has been doubled in size and so extensively rewritten as almost to constitute a new work.

SHERWOOD, THOMAS KILGORE, AND CHARLES E REED

Applied mathematics in chemical engineering New York McGraw Hill Book Company, Inc., 1939 403 p illus. 23 cm. 6604

Contents: Integration and differentiation. The use of differential equations. Solution of ordinary differential equations. Applications of partial differentiation. Infinite series. Partial differential equations. Numerical analysis. Graphical treatment of chemical-engineering processes. Theory of errors and precision of measurements.

Note. A practical text on the use of differential equations, partial differentiation, partial differential equations, numerical methods of integration and differentiation, interpolation, empirical equations, graphical methods, and precision of measurements. The application of the various mathematical techniques to chemical engineering is illustrated by examples forming an integral part of the text. A new edition was published in 1957 413 p., $9.00.

SHERWOOD, THOMAS KILGORE, AND ROBERT LAMER PIGFORD

Absorption and extraction Second edition. New York McGraw Hill Book Company, Inc, 1952 478 p illus. 24 cm (McGraw Hill chemical engineering series, S D Kirkpatrick, consulting editor) $9 50 6605

Contents. Diffusion. Eddy diffusion. Transfer of material between phases. Simultaneous heat and mass transfer. Principles of the design of absorption equipment. Design principles for multicomponent systems. Gas-absorption equipment. Performance of absorption equipment. Simultaneous absorption and chemical reaction. Solvent extraction. References. Index.

Note. A rather full treatment of two fundamental and important operations in chemical engineering. The emphasis is on fundamental matters and typical equipment rather than on specific applications. However numerous applications are mentioned in passing. The book is primarily a text for upperclass students of chemical engineering, but some parts are full enough to be useful to graduate engineers. There is a bibliography of 518 references. This edition consists largely of material that did not appear in the original edition.

SHREVE, R NORRIS

The chemical process industries Second edition New York McGraw Hill Book Company, Inc., 1956 1,004 p illus. 24 cm. $11 50 6606

Contents: Objectives. Unit processes and unit operations. General fundamentals. Water conditioning and waste-water treatment. Fuels, power and air conditioning. Coal chemicals. Fuel gases. Industrial gases. Industrial carbon. The ceramic industries. Cements, calcium and magnesium compounds. Glass industries. Potassium salts and mixed fertilizers. Salt and miscellaneous sodium compounds. Soda ash, caustic soda, and chlorine. Electrolytic industries. Electrothermal industries. Phosphorus industries. Sulfur and sulfuric acid. Nitrogen industries. Hydrochloric acid and miscellaneous inorganic chemicals. Explosives, pyrotechnics, and chemical warfare. The photographic industry. Paint, varnish, lacquer and allied industries. Leather, gelatine, and glue. Pesticides. Perfume and flavoring industries. Oils, fats, waxes. Soap, detergents, and related compounds. Sugar and starch industries. Fermentation industries. Wood chemicals. Pulp and paper industries. Synthetic fibers. Plastics. Natural and synthetic rubber. The petroleum industry. Intermediates, dyes, and their application. Organic chemicals, not otherwise classified. Appendix. Name index. Subject index.

Note: A cyclopedic manual in which contemporary chemical industries are described from the viewpoint of chemical engineering. A typical chapter opens with a very brief outline of the history of a specific industry, then follow concise surveys of economics, raw materials, uses and currently important manufacturing processes. Reduced reproductions of flow sheets that appeared originally in *Chemical engineering* and other periodicals are used liberally. Each chapter contains selected references to the literature. The book is used as a text in engineering colleges and as a reference work in libraries. The first edition was published in 1945. This second edition is organized similarly but has been revised to cover new industries and recent literature including statistical publications. The volume is about 50 pages longer.

SIEMON, KARL OTTO GUSTAV

Manual for the design of ferrous and non ferrous pressure vessels and tanks. Fifth edition. Ann Arbor, Mich. Edwards Brothers, Inc., 1953 284 p illus. 21 cm. $3.85 6607

Contents: Part I, Materials of construction. Selection of materials. Iron and steel. Copper, brasses, and bronzes. Aluminum and aluminum alloys. Nickel and nickel alloys. Part II, Design. Cylindrical vessels under internal pressure. Cylindrical vessels under external pressure. Heat stresses in shells. Shell thickness of open tanks. Dished heads and spheres. Flat heads and cover plates. Reinforcement of openings. Flange design. Riveted joints. Fusion-welded joints. Copper vessels. Everdur vessels. Aluminum vessels. Monel and nickel vessels. Stainless steel vessels. Vessels of alloy-clad steel. Shell stresses due to dead and wind load. Supports. Appendix. Supplement, design of hoops. Index.

Note. A concise reference manual used by engineers in designing tanks and other pressure vessels. It deals with materials and with design problems. Methods of calculating stresses are discussed. The book was first published in 1940. In each of the succeeding editions, small but important revisions have been made.

TREYBAL, ROBERT EWALD

Liquid extraction. New York McGraw Hill Book Company, Inc., 1951 422 p. illus. 23 cm. (McGraw Hill chemical engineering series, S D Kirkpatrick, consulting editor) $9 00 6608

Contents: Introduction. Liquid equilibria. Prediction of distribution. Choice of solvent. Diffusion and mass transfer. Methods of calculation—stagewise contact with a single solvent—stagewise contact with mixed and double solvents—continuous countercurrent contact. Equipment for stagewise contact. Equipment for continuous countercurrent contact. Liquid-extraction processes. Problems. Name index. Subject index.

Note. A treatise on the application of liquid extraction techniques to industrial operations. It is organized so that it may be used in courses offered to graduate students of chemical engineering. It is also suitable as a survey of the subject for working chemists whose academic education did not include a course in the subject. Basic principles and techniques are emphasized rather than details of particular applications and equipment. Even in the chapters on equipment the emphasis is on types rather than on specific installations. Numerous graphs and tables of engineering data are included. Statements in the text are key-numbered to the extensive list of references. The author is Professor of Chemical Engineering in New York University.

TREYBAL, ROBERT EWALD

Mass-transfer operations. New York McGraw Hill Book Company, Inc. 1955 666 p illus. 23 cm. (McGraw Hill series in chemical engineering Sidney D Kirkpatrick, consulting editor) $9.50 6609

Contents. Introduction. Part I, Diffusion and mass transfer. Molecular diffusion in fluids. Diffusion in turbulent flow. Diffusion in solids. Interphase mass transfer. Part II, Gas-liquid operations: Equipment. Humidification operations. Gas absorption. Distillation. Part III, Liquid-liquid operations. Liquid extraction. Part IV Solid-fluid operations. Adsorption and ion exchange. Drying. Leaching. Part V Contact of miscible phases. The less conventional operations. Index.

Note: A thorough introduction to chemical manipulations, or unit operations, that are based on the phenomenon of diffusion. It is written from the viewpoint of chemical engineering and is intended primarily for the instruction of advanced undergraduate and first year graduate college students preparing for careers in this field. Throughout the book, discussions of basic theory, practice and descriptions of typical equipment are skillfully intermingled. Embedded in the expository matter are numerous examples of worked problems. Numerous problems for students to solve are included also. Selected literature references to "classic" articles and review articles are given. The author is Professor of Chemical Engineering in New York University.

VILBRANDT, FRANK CARL

Chemical engineering plant design. Third edition. New York McGraw Hill Book Company Inc., 1949 608 p. illus. 23 cm. (McGraw-Hill chemical engineering series) $8.50. 6610

Contents: Introduction. Foundations. Drainage. Piping installation. Pumps and pumping. The building. Power and power transmission. Development of the design project. Flow diagrams. Selection of process equipment. Plant layout and elevation. Locating the chemical plant. Preconstruction cost estimating. Appendices. Index.

Note: A well-known work used as a text in engineering college courses and as a desk book by practicing chemical engineers. It is introductory to the subject of plant design, but it is intended for readers who have a fundamental knowledge of chemical engineering. Although important additions and revisions were made in preparing the present edition, the greater part of the text is unchanged. Approximately half of the increase in pages is accounted for by a major expansion of the chapter on estimating of cost before construction. Other changes are widely scattered throughout the work and have to do with miscellaneous topics such as the size of the steam pipes, safety and the design of pilot plants. The lists of collateral reading have been revised.

WILSON, ERNEST D AND HAROLD C. RIES

Principles of chemical engineering thermodynamics. New York McGraw Hill Book Company Inc. 1956 376 p. illus. 24 cm. (McGraw Hill series in chemical engineering Sidney D Kirkpatrick, consulting editor) $7.50. 6611

Contents: Introduction. States and properties of matter. The first law of thermodynamics. Applications of the first law of thermodynamics. Handling and compression of fluids. Thermochemical effects. The second law of thermodynamics. Graphical presentation and interpretation. Steam power plants. Refrigeration. Thermodynamic potential functions. Real gases versus ideal gases. Phase equilibria. Chemical equilibrium. Appendices. Index.

Note: The authors of this book present thermodynamics as a tool of much practical value in chemical engineering. They stress the importance of understanding fundamental principles, also make clear that there are many situations in engineering design where theory can not be applied strictly. A case in point is their handling of friction, represented by L_f. "In more complicated cases such as flow through pumps, compressors, etc. when L_f can not be calculated, it is put equal to zero and taken care of by giving the pump or other unit an 'efficiency' of a certain per cent." Many worked examples are provided. The simplicity of the treatment makes the book a valuable one for self-instruction.

APPLIED CHEMISTRY

GENERAL

DOOLITTLE, ARTHUR K

The technology of solvents and plasticizers New York John Wiley and Sons, Inc., 1954 1,056 p illus 23 cm. $21 00 6612

Contents General survey of solvent and plasticizer utilization. Introduction to the technology of solvents for resinous substances. Nitrocellulose lacquers. Vinyl resin coatings. Convertible and miscellaneous finishes. Technology of application. Solvents for textile fibers. Solvents for adhesives. Solvent recovery Handling and shipping of solvents. Properties of groups of solvents. Properties of individual solvents. The viscosity of liquids. Theory of solvent action. Plasticizers and plasticization. Properties of individual plasticizers. Appendix. Index.

Note. A reference book of wide interest to chemists and technicians in several major industries, such as the manufacture of plastic materials, adhesives, and coatings. In the chapter devoted to solvents only organic solvents for resinous substances are considered, and both solvents and plasticizers are limited to substances commercially available in the United States of America in 1953 Within these limitations, a very wide range of scientific and technical information on solvents and plasticizers in general and on approximately 160 solvents and 180 plasticizers in particular are included. In the descriptions of individual substances, the properties are given for both the pure and the commercial products. Many phase diagrams and viscosity equilibrium diagrams are included. Also, there are several hundred tables of physical and chemical data. The author is Assistant Director of Research of Carbide and Carbon Chemicals Company and the book is in large part on information gathered by this firm, originally for its own use.

ENCYCLOPEDIA OF CHEMICAL TECHNOLOGY

Edited by Raymond E Kirk and Donald F Othmer New York The Interscience Encyclopedia, Inc , 1947–56 15 v illus 27 cm $30 00 per vol $25 00 per vol. to subscribers 6613

Note In scope, this work is broadly similar to the well-known Thorpe *Dictionary of applied chemistry* There are many differences, but the most important one is the emphasis here on American chemical engineering practice with mention of foreign methods only in cases where the foreign method appears to offer advantages over the American. Materials, equipment, processes and products are all covered. Usually but not invariably uses of chemicals are not described in the articles on methods and product processes but are covered in special articles of which typical ones in Volume deal with abrasives, adhesives, and alloys. The articles range in length from short definitions of terms to long encyclopedic articles. All articles except the very short ones, are signed and are accompanied by selected but rather extensive reference lists which include citations to patents. A subject index covering Volumes I- is provided in Volume XV *A first supplement vol* was published in 1957 $30 00

HAYNES WILLIAMS

American chemical industry Princeton D Van Nostrand Company Inc. 1945–54 6 v illus 24 cm $16 00 per vol set $80 00 6614

Contents (abridged) Volume I, Background and beginnings Part I, The colonial background, 1608–1790 Forest products Logwood, indigo and other dyes. Chemical pioneering Colonial chemistry Part II The birth of the industry 1790–1860 Power and light. Early chemical enterprises mature. Early acid makers. Drugs, medicines and fine chemicals. Part III, Early chemical expansions, 1860–1911 Revolutions in sulfuric acid. Alkalies introduce electrochemicals. Heyday of heavy chemicals. Coal-tar dyes, the first synthetic chemicals. Chemicals invade materia medica. Research and education. Appendix. Book titles. Company and personal name index. Subject index. Volumes II–III, The World War I period, 1912 1922 Volume II, Part I, Setting of World War I period. The Wilsonian background. Trending towards war Gearing industry to war. Part II, Critical raw materials Nitrates from Chile. Nitrogen from the air. The government nitrogen plants. The byproducts from coal. Potash from anything and everywhere. Phosphate rock and elemental phosphorus. Pyrites to brimstone. Gulf Coast sulfur Critical metals. Crude drugs. Appendix. Book titles. Company and personal name index. Subject index. Volume III, Part I, Industrial chemicals. Ash, caustic, and bleach. Sulfuric acid. Alums to silicates. Pigments and colors. Insecticides and fungicides. Alcohol—beverage and chemical. New solvents. Industrial gases. Fertilizers. Part II, The coal-tar chemicals Foundations of new industry The dye crisis. Dye licenses, patents, and tariff Part III, the fine chemicals Medicinal chemicals. Coal-tar medicinals. Aromatics—natural and synthetic. Part IV Chemical evolution Chemicalization of industry Synthetic beginnings. Chemistry in industry The effects of the war Appendix. Book titles. Company and personal name index. Subject index. Volume IV The merger era. Part I, The booming twenties. The return to normalcy The state of trade. American chemical mergers Foreign cartels and trusts. Part II, Inorganic chemicals Contact acid from brimstone Nitric acid from ammonia. Phosphorus compounds. Electrolytic competition in alkalies. Other industrial chemicals. Part III, Organic chemicals. Alcohol under prohibition. Wood chemicals meet synthetic competition. Solvents lead organic progress. Crudes and intermediates. American dyes build a firm base. Part IV Medicinal and other fine chemicals. Coal-tar medicinal chemicals. The fine chemicals. Drug products and pharmaceuticals. Scents and flavors —synthetic and natural. Part V The consuming industries Fertilizers. New pest-control chemicals. From plastics to resins. Oils and pigments. Rayon and other textiles. Petroleum and tetraethyl lead. Chemicals in industry Broadening chemical boundaries. Appendix. Book titles. Company and personal name index. Subject index. Volume V Decade of new products Part I, The depression years Chemistry economics and politics Changing trade channels. Contracting world trade. Part II The basic chemicals Acids and salts. Alkalis and chlorine Nitrogen under political intervention Alcohol after repeal. Crudes, intermediates and dyes. Industrial gases. Part III, The newer chemicals. The acetyl chemicals. Petrochemical beginnings. Part IV The fine chemicals Medicinal products. Perfumes and cosmetics. Part Chemicals for consumers Fertilizers. Plastics and resins. Fibers and fabrics. Broadening chemical markets. Appendix. Book titles. Company and personal name index. Subject index. Volume VI, The chemical companies Company histories. Abbott Laboratories. Air Reduction Company Inc. American Aniline Products, Inc. American Cyanamid Company American Resinous Chemicals Corporation J T Baker Chemical Company Blaney & Smith Company Burroughs Wellcome & Co. (U.S.A.) Inc. Celanese Corporation of America. Colgate-Palmolive-Peet Company The Dewey and Almy Chemical Corporation Durez Plastics & Chemicals, Inc Eaton Chemical and Dyestuff Company Fisher Scientific Company General Ceramics and Steatite Corporation. General Electric Company Johns-Manville Corporation. Monsanto Corporation. National Dairy Research Laboratories, Inc. Pittsburgh Coke & Chemical Company The Quaker Oats Company Shell Development Company Union Carbide and Carbon Corporation. United States Rubber Company Zinsser & Company Inc. Name index. Products Index

Note A comprehensive history of the development of the chemical industry in the United States of America from its beginnings in colonial days. It was based both on published data and, for the later periods, on first hand information gained from men who took part in the events described. Due attention is paid to the political and economic facets, and much information and statistical data on prices, quantities produced, imports, tariffs, etc are included Extensive bibliographies of sources are included. Most of the illustrations are portraits. The sixth volume departs from the chronological arrangement of the other volumes and provides brief histories of 219 companies which have played leading parts in the American chemical industry

HAYNES WILLIAMS

Chemical trade names and commercial synonyms a dictionary of American usage. Second edition, revised and enlarged. Princeton D Van Nostrand Company Inc., 1955 466 p. 24 cm. $8.50 6615

Note: A reference book which presents in an alphabetical listing more than 22,000 trade names, abbreviations, and commercial synonyms for products of a chemical nature which are commercially available in the United States of America. It includes such terms as "Cyclone," "D A," Dowanol, and Rust-preventive Oil No. 11. The definitions characterize the product in standard chemical terminology as to one or more uses, and identify the manufacturer or source of the product. A typical entry reads: "Genetron 130 (Gen. Chem.) 1,1-difluoroethylene chemical intermediate, [illegible] plastomers and elastomers." The first edition was published in 1951. The second edition includes more terms and, generally speaking, the definitions are more complete. The names and addresses of manufacturers were revised so as to take into account changes that occurred between 1951 and 1955.

KILLEFFER, D H.

Two ears of corn, two blades of grass. Princeton D Van Nostrand Company Inc. 1955 139 p. illus. 24 cm. $4.00. 6616

Contents: We shall not want. Our synthetic kingdom. We live longer. With growing vigor. We synthesize about health. More to eat now. If we had no fields. What about power? Our wooden fare. Plenty of metals. How we can make such miracles happen. And all leads to peace. Index.

Note: The theme of this book is that human creativity in scientific and technological fields is an asset of much greater value than material resources. The author outlines the achievements of modern chemistry and shows how they have affected living standards and human welfare, particularly in the years since 1900. He discusses in an optimistic vein the potentialities of the soil, industrial organization of the United States of America, and shows how synthetic materials developed in recent years have become major products. His view of the future is expressed in such passages as the following: "We already know how to live well even [illegible] fields and farms shrink [illegible] our industry is already operating processes that will free us from the necessity of farming fields for food." The book is for general readers.

LEWIS WARREN KENDALL, AND OTHERS

Industrial chemistry of colloidal and amorphous materials by Warren K. Lewis Lombard Squires, and Geoffrey Broughton. New York The Macmillan Company 1942 540 p. illus 24 cm. $8 00 6617

Contents: Structure of liquids. Viscosity. Surface tension. Interface tension and adsorption. Adsorption. Suspensoids. Amorphous solids. Emulsoids. The electrochemical behavior of colloids. Gelatine. Emulsions and foams. Crystalline and amorphous states. Thermoplastics, glass. Plasticization by solution. Paper. The plastic fibers. Leather. Rubber. Ceramic industries. Synthetic resins and plastics. Textile fibers. Index.

Note: A college textbook which has also considerable reference value to practicing chemical engineers. Its purpose is to give readers beginning the study of the subject with a general background of chemistry a satisfactory introduction to the field. A selected bibliography appears at the end of each chapter.

MANTELL CHARLES LETNAM

Industrial electrochemistry Third edition. New York McGraw Hill Book Company Inc 1950 781 p. illus. 23 cm. (McGraw Hill chemical engineering series) $12.00. 6618

Contents (abridged): Part I, Theoretical electrochemistry: Electrolytic dissociation and conductance. Electromotive force and energy relations. Part II, Technical electrochemistry: Electrochemical analysis. Electrolytic reduction and oxidation. Corrosion. Colloid electrochemistry. Primary cells. Rectifiers and lightning arresters. Part III, Electrolytes: Metal deposition and refining. Electroplating and electroforming. Electrowinning of metals. Electrolysis of alkali halides and sulfates. Electrolysis of fused salts. Part IV, Electrothermics: Electric furnaces for metal melting. Metallic electrothermal products. Calcium carbide and cyanamide. Nonmetallic electrothermal products. Part V, Electrochemistry of gases: Electrical discharges in gases. Electronics. Part VI, Engineering: Materials of construction. Power generation and economics. Appendix. Name index. Subject index.

Note: An established text and reference book notable for its treatment of electrochemistry as a branch of chemical engineering. The basic theories are covered in the first 80 pages. The remainder of the book is devoted to the industrial processes in which electrochemistry plays a part. The inclusion of such topics as corrosion and lightning arresters indicates the breadth of view of the field taken by the author. There are no new chapters in this edition, but matter has been added throughout the book, usually in the form of new paragraphs. Additions have been made to the bibliographical footnotes, and there are many new illustrations.

NACHOD, F C., AND JACK SCHUBERT editors

Ion exchange technology New York Academic Press Inc., 1956 660 p. 24 cm. $15.00. 6619

Contents: Part I, Fundamental aspects: Introduction, by J. Schubert and F. C. Nachod. Ion exchange resins, by E. B. Tooper and L. F. Wirth. Equipment and process design, by J. W. Michener and H. L. Lundberg. Mass transfer and equilibria, by W. A. Selke. Principles of deionization with ion exchange resins, by R. Kunin and F. X. McGarvey. Electrochemical operations, by K. S. Spiegler. Ion exclusion, by W. C. Bauman and others. Economic considerations, by G. F. Mason. Prediction of fixed-bed performance with computing machines, by A. Opler. Part II, Applications: Ion exchange technology in water treatment, by C. Calmon and A. W. Kingsbury. Catalysis with ion exchange resins, by F. X. McGarvey and R. Kunin. Application in hydrometallurgy, by A. B. Mindler. Chromium recovery from plating solutions, by W. R. Morrison. Recovery of copper from rayon wastes, by F. Gerstner. The isolation in quantity of individual rare earths of high purity by ion exchange, by F. H. Spedding and J. E. Powell. Processing radioisotopes by ion exchange, by G. W. Parker and others. Treatment of radioactive wastes, by H. G. Swope. Sugar refining and by-product recovery by E. M. Cantor and A. W. Spitz. Organic chemical purification by ion exchange, by A. C. Reents and D. M. Sunnquist. Pharmaceutical and biological products, by R. G. Denk-Walker and L. A. Kazal. Author index. Subject index.

Note: Taken together the 20 chapters of this book provide a broad survey of the current state of development of ion exchange in the United States of America. A wide range of information is covered, as the chapter titles indicate; also, every chapter includes a reasonably long list of references. One of the chapter authors is associated with Farbenfabriken Bayer in Germany, but all of the others are on the staffs of the U. S. A. chemical manufacturers and governmental agencies. Although there are also chapters on "fundamental aspects," the emphasis is decidedly practical. Excellent, fully detailed indexes are included. The book is useful both as a text for young graduate chemists and as a reference for experienced chemists in industry.

RIEGEL, EMIL RAYMOND

Industrial chemistry an elementary treatise for the student and general reader with the support of a large number of collaborators. Fifth edition. New York Reinhold Publishing Corporation, 1949 1,015 p. illus. 24 cm. $9.00. 6620

Contents (abridged): Sulfuric acid. Nitric acid. Salt, hydrochloric acid, bromine. Sodium sulfide, sodium hyposulfite. Caustic soda and chlorine. Synthetic nitrogen products. Phosphates. Fertilizers. Portland cement. Ceramic industries. Fuels. Chemical utilization of wood. Industrial gases. Processes based on the activity of yeasts and bacteria. Synthetic textile fibers. Sugars. Synthetic and semi-synthetic organic chemicals. Manufacture of dyes. Animal and vegetable oils, fats, and waxes. Pigments, paints. Soap, synthetic detergents. Chemical explosives. Synthetic resins. Photographic films, plates, and papers. Insecticides and fungicides. Rubber. Appliances used by the chemical engineer. Pig iron. Steel. Copper, lead, zinc, tin, mercury. Gold, silver, platinum, radium, uranium, thorium, and cerium. Appendix. Index.

Note: As in earlier editions of this standard work, a wide range of information is included on the major chemical industries and the major industrial chemicals. The chemical engineering aspects

are stressed, but there is also considerable information on the economic aspects. In this edition, the chapter headings and general scheme of the book are unchanged from the 1942 edition. However the many advances in industrial chemistry during World War II made extensive revisions necessary and many of the chapters have been radically changed. Among these are the chapters on glass, water and sewage, sugar petroleum, and photography Some of the material which appeared in the fourth edition was deleted. As in earlier editions each chapter is accompanied by list of references to the literature.

ROGERS, ALLEN, editor

Rogers Industrial chemistry, a manual for the student and manufacturer Sixth edition, edited by C C Furnas, in collaboration with Allen Abrams, Jerome Alexander, Arthur A. Backus and others New York D Van Nostrand Company, Inc., 1942 2 v illus 23 cm. $27 50 6621

Contents Section I, Background of the chemical industry· The economic pattern. The unit operations. The organic unit processes. High pressure processes. Industrial instrumentation. Water for municipal and industrial use. Section II, Heavy chemicals and allied products. Sulfuric acid. The nitrogen compounds. Natural salts and by-products. Alkali and chlorine production. Chlorine products. Electrochemical industries. Fertilizers. Section III, Fuels and their by-products: The petroleum industry Manufactured city gas. Coal tar and its distillation products. Wood distillation industry Industrial carbon, blacks, and chars. Industrial gases. Section IV Refractories and allied materials. Glass. The clay products industries. Cement, lime and plaster Section V Metallurgical products. The metallurgy of iron and steel. Non-ferrous metallurgy Section VI, Surface coatings. Surface coatings. White lead. Section VII, Products of organic synthesis. Industrial organic chemicals. Manufacture of intermediates and dyes. Application of dyestuffs. Industrial solvents. Synthetic plastics. Explosives. Military gases. The man facture of pharmaceuticals. Section VIII, Natural organic materials Sugar. Starch—its sources, manufacture and products. The pulp and paper industry Cellulose industries. Rubber and rubber-like products. The natural resins, gums and gum resins. Natural oils, fats and waxes. Soap and glycerine. Glue and gelatine. Casein and allied materials. Leather

Note. This set contains accounts of 49 important chemical industries written by leading American chemists and chemical engineers. Each of the authors has drawn upon his intimate knowledge of his industry t furnish the most essential facts and figures. Each of these industries is covered from raw materials to finished products, including the basic economic and chemical principles and the details f the processes and equipment.

SNELL FOSTER DEE, AND CORNELIA T SNELL

Chemicals of commerce. Second edition Princeton D Van Nostrand Company Inc. 1952 587 p 22 cm. $8 25 6622

Contents Introduction. Inorganic acids. Bases or alkalies. Sodium salts f inorganic acids. Potassium salts of inorganic acids. Organic compounds of sodium and potassium. Ammonium and lithium compounds. Calcium compounds. Barium, strontium and magnesium compounds. Compounds of nickel, cobalt, manganese and zinc. Compounds of aluminum, chromium and iron. Arsenic, antimony and tin. Copper cadmium and bismuth. Lead, sil er gold and mercury Miscellaneous metals and compounds. Carbon and miscellaneous nonmetals with their oxides and related compounds. Hydrocarbons, other than those from petroleum, and their simple halogen derivati es Petroleum hydrocarbons and related products. Alcohols and mercaptans. Phenols and their deri atives. Aldehydes and ketones and their derivatives. Organic acids and closely related compounds. Amines, nitro compounds, and various organic nitrogen derivati es. Esters. Fats and fatty oils. Waxes. Ethers. Organic dyes. Toners, lakes and reduced colors Natural plant and animal products. Extracts of natural products. Alkaloids, glucosides, and saponoids. Essential oils and oleoresins. Natural gums, resins and balsams. Synthetic resins and synthetic elastomers. Carbohydrates. Proteins. Vitamins, sterols, antibiotics and hormones Appendix.

Note. A reference book of general and technical information on chemicals of commercial importance. Miscellaneous materials, such as burnt umber are described as to chemical nature, commercial grades, and uses. Chemicals of more precise composition, such as mercuric sulfate, are described in terms of chemical properties, solubilities, method of preparation, and chief uses. The descriptions range from a few lines to half a page in length. The book is addressed to purchasing agents and other persons who need commercial and practical information rather than to chemists. The lack of an index hampers somewhat the use of the book as a quick reference manual.

UNDERKOFLER, LELAND A , AND RICHARD J HICKEY, editors

Industrial fermentations. New York Chemical Publishing Company Inc. 1954 2 v illus 23 cm. $12.00 per vol. 6623

Contents. Volume I. Introduction, by L. A. Underkofler and R. J Hickey Part I, Alcoholic fermentation and its modifications: Alcoholic fermentation of grain, by W H. Stark. Alcoholic fermentation of molasses, by H. M. Hodge and F M. Hildebrandt. Alcoholic fermentation f sulfite waste liquor by J. L. McCarthy Production of alcohol from ood waste, by J. F Saeman and A. A. Andreasen. The brewing industry by R. L Tenney Commercial production of table and dessert wines, by M. A. Joslyn and M. W Turbovsky Glycerol, by L. A. Underkofler. Part II, The production of yeast: Commercial yeast manufacture, by R. Irvin. Food and feed yeast, by A. J Wiley Part III, The butanol-acetone fermentations The butanol-acetone fermentations, by W N McCutchan and R. J Hickey Part IV Fermentative production of organic acids. Lactic acid, by H. H. Schopmeyer. The citric acid fermentation, by M. J. Johnson. Gluconic acid, by J. W Foster Itaconic acid, by L. B. Lockwood. Acetic acid—vinegar by R. H. Vaughn. Subject index.

Note Fermentation is not only one of the oldest chemical processes employed by man, but it is one which has undergone remarkable development especially in regard to new applications in our own time. Here is the first olume of two-volume systematic account. The point of view is primarily that of the industrial chemist, and most of the processes described are of industrial importance at the present time. The individual chapters are concise surveys based on the literature and—in most cases—on the author's experience. Each one includes substantial reference list. All of the authors are recognized specialists in the field.

UNITED STATES OFFICE OF SCIENTIFIC RESEARCH AND DEVELOPMENT

Chemistry a history of the chemistry components of the National Defense Research Committee, 1940–1946 Edited by W A Noyes, jr , with foreword by James Bryant Conant and Roger Adams. Boston Little, Brown and Company 1948 524 p illus. 22 cm (Science in World War II) $6 00 6624

Contents (abridged) Part I, Introduction The organization of the National Defense Research Committee—general plan. Part II, History of Division 8 The history of Di ision 8 central laboratories Synthetic work on explosi es. Research on detonation and shock waves Evaluation of explosi es and munitions. Molded composit propellants. Tracers and igniters. Part III, History of Di ision 9 The organization of Di ision 9 Protecti clothing and ointments The detection, identification and analysis of chemical warfare agents The toxicity and vesicancy of chemical warfare agents. Part IV History f Division 10 The filtration of aerosols. Screening smokes Gas mask absorbents and related problems. Insecticide dispersal Part V History of Di ision 11 The oxygen program. Incendiary bombs. History of NDRC flame-thrower development Part VI, History of Division 19 Weapons for sabotage. Part VII, History of Tropical Deterioration Committee The study of tropical deterioration. Appendices. Indices.

Note. A comprehensi review of the history organization, and work of the thousands of chemists who were mobilized through the National Defense Research Committee in connection with the United States of America's effort in World War II. The book is written for chemists and other specialists rather than for laymen and is packed with both historical and technical information concerning the development of the widely diversified items indicated in the table of contents. The mechanics of committee and group organization are discussed in detail, and credit is given to individuals and commercial firms responsible for the success of specific projects The series, of which this book is part, constitutes an official record of the activities and accomplishments of the Offi of Scientific Research and Development.

PETROLEUM CHEMISTRY

AMERICAN CHEMICAL SOCIETY

Progress in petroleum technology a collection of the papers presented at the Symposium on Twenty Five Years of Progress in Petroleum Technology held by the Division of Petroleum Chemistry of the American Chemical Society at the Diamond Jubilee meeting in New York, September 3 to 7 1951 Symposium chairman, Robert E. Wilson. Washington, D C. American Chemical Society 1951 392 p. illus. 24 cm. (American Chemical Society Advances in chemistry series edited by the staff of Industrial and engineering chemistry No. five) $5.00. 6625

Contents: Scope of the symposium, by R. E. Wilson. The mechanism of catalytic cracking, by R. S. Greensfelder. Catalytic cracking in fixed- and moving-bed processes, by D. R. Arden and others. Fluid catalytic cracking process, by E. V. Murphree. International and fixed catalytic reforming of naphthas, by H. G. McGrath and L. R. Hill. Fluid hydroforming, by E. V. Murphree. Comparison of platforming and thermal reforming, by V. Haensel and M. J. Sterba. Development of reforming catalyst, by M. J. Fowle and others. Polymerization of hydrocarbon gases to motor fuels, by P. A. Mc... Commercial alkylation of isobutane, by ... and L. M. Henderson. Isomerization, by R. C. Gunness, by A. V. Mrstik and others. Synthesis of liquid fuels from natural gas, by J. H. Arnold and P. C. Keith. Liquid fuels from coal and oil shale, by H. H. Storch. Desulfurization and sweetening, by T. Tait. Dewaxing and deasphalting. Solvent extraction in the petroleum industry, by W. P. Gee and H. R. Grant. Petroleum distillation, by G. C. Carter, Jr. Internal combustion engine fuels, by W. E. Bradley and G. R. Lake. Petroleum lubricants, by R. E. Albright. Tetraethyllead, by G. Edgar. Domestic fuel oils, by R. J. S. Pigott and H. A. Anderson. Asphalts and ..., by R. E. Carney. Natural gas liquids, by J. R. Hill. Petroleum coke and waxes, by E. C. Hughes and H. F. Hardman. Aliphatic chemicals, by G. A. Cohen and others, by C. L. Thomas. Aromatics from petroleum, by R. M. Love and E. F. A. Jaeger. Elastomers and plastics, by W. B. Reynolds and W. W. Flowers. Synthetic detergents from petroleum, by W. K. Griesinger. Composition of petroleum, by F. D. Rossini and J. A. Kerns. Relation of properties to molecular structure for petroleum hydrocarbons, by C. E. Boord. Physical chemistry in the petroleum industry, by B. H. Sage. Analysis of petroleum, by H. Levin.

Note: Many of the papers in this collection cover completely advances made during the past 25 years, while others describe the current status of specific areas of petroleum technology. Literature references accompany each paper. The papers are original, and their authors include many contemporary leaders in petroleum research.

AMERICAN SOCIETY FOR TESTING MATERIALS

ASTM viscosity index calculated from kinematic viscosity Philadelphia. American Society for Testing Materials, 1955 826 p. 24 cm. (American Society for Testing Materials. Special technical publication, no. 168) $8.00. 6626

Note: Presented in this volume are an extended series of original tables designed "for obtaining Viscosity Index values of petroleum products and lubricants quickly and accurately." The tables were calculated on IBM machines according to the procedure described in the Standard method for calculating viscosity index (ASTM Designation D567). The kinematic-viscosity values used in the calculation of the tables are to be found in Table III of the Society's Special technical publication no. 43A.

ASTLE MELVIN J

The chemistry of petrochemicals. New York Reinhold Publishing Corporation, 1956. 267 p. illus. 23 cm. $6.50. 6627

Contents: The petrochemical industry. Synthesis of paraffin hydrocarbons. Reactions of paraffin hydrocarbons. Preparation of olefins. Reactions of olefins. Polymerization and alkylation of olefins. Diolefins. Acetylene. Naphthenes. Aromatic hydrocarbons. Olefin oxides. Alcohols and ethers. Aldehydes and ketones. Acids, acid anhydrides and esters. Amines and nitriles. Index.

Note: A broad, compactly written survey of the reactions and procedures whereby a wide range of chemicals is made from petroleum and natural gas. The main emphasis is on those of industrial importance, but reactions and procedures described only in the literature are included as well as those in use in industry. Reactions are described and diagrammed, conditions and catalysts are stated, and the available information on yields is included. Literature citations are included. The book is a reference guide of potential usefulness to most industrial chemists, especially those who are concerned with exploring the potentialities of the petroleum hydrocarbons.

BELL, HAROLD SILL

American petroleum refining. Third edition. New York D Van Nostrand Company Inc., 1945 619 p. illus. 23 cm. $8.50. 6628

Contents: General introductory. Crude oils and their characteristics. Chemical properties. Physical properties. Physical and chemical. The refinery site and planning data. The manufacturing process. General arrangement. Distillation. Heat transfer. Fractionation. Distillation stills. Pipe heaters. Condensers and heat exchangers. Thermal cracking. Catalytic cracking, theory and development. Special processes for motor-fuel blending. Catalytic cracking. Motor fuels. Special processes. Solvent refining agents. Chemical treatment. Dewaxing. Refrigeration. Solvent extraction. Filtration. Blending and compounding. Packages. Storage of oil. Volume measurements. Evaporation losses. Fire protection. Pumping of oil. Power and boiler house. General departments. Bulk transportation. The problems of the future. Index.

Note: A concise survey of practice and processes in the petroleum refining industry. Some historical and background information is also included. The volume is of value to managers, engineers and operating employees of all refining plants, and as a reference book for general information on the industry. This edition incorporates considerable information on recent developments. Chapters on physical and engineering data have been added, and the chapters on cracking and dewaxing have been enlarged. Thermal and catalytic cracking are treated. The final chapter discusses briefly the production of petroleum products from oil shale, and by the synthesis of gases and the hydrogenation of coal.

ELLIS CARLETON

The chemistry of petroleum derivatives. New York Reinhold Publishing Corporation, 1934–37 2 v 23 cm. Vol. I, o p. vol. II, $25.00. 6629

Contents (abridged): Chemical nature of petroleum and natural gas. Cracking processes and their products. Production of aromatic hydrocarbons. Carbon black industry. Direct hydration of olefins to alcohols. Properties and uses of isopropyl alcohol. Production, properties, and uses of ketones. Reactions of olefins with halogens. Production, properties, and uses of halohydrins, simple glycols, olefin oxides. Some important reactions of diolefins. Halogenation of methane, cyclopentane, and benzene. Oxidation of methane, unsaturated hydrocarbons, and aromatic hydrocarbons. Analysis of natural gas.

Note: A comprehensive survey of the work done to about 1935 on the preparation and utilization of aliphatic hydrocarbons. It is now useful as a guide to the early journal and patent literature.

HATCH LEWIS

The chemistry of petrochemical reactions. Houston Gulf Publishing Company, 1955 182 p. illus. 20 cm. $4.50 6630

Contents: Petroleum as a raw material for the chemical industry. Non-hydrocarbon constituents of petroleum, sulfur and nitrogen compounds—oxygen compounds. Oxidation of hydrocarbons. Chlorination of paraffin and aromatic hydrocarbons. Nitration and sulfonation of paraffin and aromatic hydrocarbons. Production of olefins. Reactions of the olefins. Alcohols from olefins. Halogenation of olefins. Addition of acids to olefins and acetylenes. Oxidation of olefins. Polymerization of olefins. Alkylation with olefins. The oxo reaction—primary alcohols from olefins. The production and reactions of butadiene. Preparation and properties of acetylene. Air and methane. Appendix: Tables and figures. Index.

Note A compact survey of the chemical reactions which are the basis of the petrochemical industry It covers primarily reaction mechanisms and their applications in the industry Some flow sheets of industrial processes are included. The book is addressed to readers who are familiar with chemical symbols and the basic concepts of organic chemistry but is introductory to the specialized field of petroleum chemistry Most of the contents were first published as a series of articles in the *Petroleum refiner* during 1953 and 1954 The author is a member of the faculty of the University of Texas.

HUNTINGTON, RICHARD LEE

Natural gas and natural gasoline. New York McGraw Hill Book Company, Inc., 1950 598 p illus 23 cm. (McGraw Hill chemical engineering series) $11 00 6631

Contents Introduction. Estimation of gas and gasoline reserves. Elements of plant location and design. Gathering of raw gas and return of residue gas. Determination of cycling efficiencies in the Cotton Valley (Louisiana) gas-condensate reservoir Elements of natural-gasoline processing. Absorption. Distillation and fractionation. Gas dehydration. Storage and transportation. High-pressure pipe-line research. Appendices. Index.

Note An engineering college textbook which offers a broad introduction to the natural gas industry with emphasis on the phases which are primarily of interest to chemical engineers. The processes of removing natural gasoline from the raw gas are covered and so are the other aspects of natural gas processing. The chapters on storage and transportation and high-pressure pipe line research are together 125 pages long and present a fairly inclusive survey of basic engineering principles. Aside from its intended use in colleges, the book should be of interest to graduate engineers whose formal education did not include a course in natural gas but who find themselves in need of information about the field.

KALICHEVSKY, VLADIMIR A, AND KENNETH A KOBE

Petroleum refining with chemicals Princeton N J D Van Nostrand Company Inc. 1956 780 p illus 23 cm. $14 50 6632

Contents Nature of crude oil and preliminary refining. Evaluation of petroleum products. Acid refining. Refining with alkalies. Refining with adsorbents. Desulfurization and sweetening. Solvent refining. Deasphalting and dewaxing. Additives for non-viscous petroleum fractions. Lubricating oil additives. Appendix. Indexes Author index. Subject index. Index of chemicals. Index of patents.

Note The subject of this very comprehensive work is the refining or processing of liquid petroleum products and petroleum gases by processes based on solvents, adsorbents, acids and alkalies. It is designed for reference use by chemical engineers in the petroleum industry and by chemists and chemical engineers in other industries who need technical information on this phase of petroleum refining. It is based on a wide literature survey—so extensive, in fact, that the index of cited United States patents alone runs to 25 four columned pages. There are 172 tables in the text proper and 18 in the appendix.

KLOSKY SIMON, compiler

An index of shale-oil patents Washington D C Government Printing Office, 1948 360 p illus 14 × 23 cm (United States Bureau of Mines Bulletin 467) $0 75 6633

Content Nature and origin of shale oil. Method of finding patent abridgments. Part I, Shale-oil patents of the United States List of inventors and assignees. Part II, Other English language patents Australian. British. Canadian. Union of South Africa. List of inventors and assignees Part III, European language patents Austrian Belgian Danish. French German. Italian. Netherlands. Norwegian. Swedish. Swiss. List of inventors and assignees. Classification of shale-oil patents Refining processes Distillation, fractionation. Chemical treatment. Cracking. Desulfurization. Solvent extraction. Hydrogenation. Reagent recovery Dewaxing. Products Gasoline. Diesel fuels. Lubricants. Paraffins. Tars, cokes, etc. Miscellaneous.

Note This compilation is intended to include all patents on record in the United States Patent Office up to January 1 1945 which pertain to the treatment of shale oil for use as an industrial fuel. The material is presented in the form of short notices describing the subject material of each patent, which consist of an abridgment of the patent (if British or Australian) or a typical claim in the case of the United States or foreign patents. A subject grouping of the patents follows the abridgments. Most of the United States patents indexed, and some of the others, have illustrations.

LEMAIRE, GEORGE W

Study of physical properties in the refining of petroleum Golden Colorado School of Mines 1954 87 p illus 23 cm (Colorado School of Mines. Quarterly Vol. 49, no 4) $2 00 6634

Contents (abridged) Aniline point. Flash point. Blending indexes. Pour point. References. Appendix.

Note. The results of studies carried out in the Petroleum Refining Department of the Colorado School of Mines under the supervision of the author and Professor J O Ball are presented in this pamphlet. The studies were concerned with investigating the correlation of the known properties of pure hydrocarbons with the properties of petroleum fractions produced in the course of standard refining. New and important results were obtained. For example, it was found that the degree of paraffinicity of an oil determined its blending efficiency A correlation was obtained by use of the A.S.T.M. predicted viscosity and the difference in paraffinicity of the base oils that quite accurately predicted the actual viscosity of the blends. Literature references are included.

LOCHTE, H L, AND E R. LITTMANN

The petroleum acids and bases New York Chemical Publishing Company, Inc., 1955 368 p illus 23 cm. $9 00 6635

Contents Part I, The petroleum acids. Introduction. Early investigations. Availability and methods of isolation of naphthenic acids. Distribution and concentration of acids in petroleum. Purification of petroleum acids. Analytical methods. Methods of separating petroleum acids. Characterization of petroleum acids. The structure of petroleum acids. The hexahydrobenzoic acid problem Salts and derivates of petroleum acids. Phenols. The aliphatic of fatty acids. Von Braun's study of the properties and reactions of naphthenic acids. Von Braun's study of Roumanian petroleum acids. The structure of Von Braun's ketone. Circylic, polycyclic, and aromatic acids. Recent studies on naphthenic acids. The origin of petroleum acids. Utilization of naphthenic acids. Part II, The petroleum bases. Introduction. Nitrogen in petroleum. Separation of basic compounds. Early investigations. Investigations at the University of Texas. Cracking-process bases. The origin of petroleum nitrogen compounds. Uses of petroleum bases Index

Note. A compactly written survey of published work on the acids and bases occurring in petroleum. The authors did not attempt an exhaustive coverage of the literature and compounds such as the naphthenic acids on which much has been published are treated less thoroughly than compounds on which comparatively little has appeared. The typical chapter is essentially a series of literature abstracts, run together so as to permit straightforward reading and with references to the bibliography at the end of the chapter In general, the patent literature is not cited however there are several specialized lists—for example a listing of United States of America patents on naphthenate surface active agents. The only index is to subjects. The first named author is Professor of Chemistry in the University of Texas and has been actively associated with research in this field for many years.

MAXWELL J B

Data book on hydrocarbons application to process engineering Princeton D Van Nostrand Company Inc. 1950 259 p. illus 26 cm. $6 00 6636

Contents Physical data Physical constants Characteristics of petroleum fractions. Molecular weight Vapor pressure Fugacity Critical properties. Thermal properties Density Viscosity Combustion. Unit operations Flow of fluids Flow of heat Equilibrium flash vaporization. Fractionating towers. Conversion factors Index

Note Earlier editions of this work produced by the Standard Oil Development Company proved of such value to technical personnel in the Company and its affiliates that the Company decided to make it available for general use It contains (1) basic data on hydrocarbons and petroleum fractions, (2) methods of applying these data to process engineering, including illustrative examples and some fundamental theory and (3) applications of a few of the unit operations of chemical engineering used extensively in the petroleum

industry The presentation is largely in the form of graphs and tables.

MEYER, ERICH
White mineral oil and petrolatum. New York Chemical Publishing Company Inc., 1950. 135 p. illus. 22 cm. $4 75 6637

Contents: Technical aspects of white mineral oil and petrolatum. Applications of white mineral oil and petrolatum. Methods of testing white oil and petrolatum. Shipping and handling of white mineral oil and petrolatum. Index.

Note: The heart of this rather short reference book is the second chapter in which data are provided on the uses of petrolatum (including white mineral oil) in a wide range of industries and products. Typical of the arrangement of this part is the matter presented under "Household-type Insecticides." Here the variety of oil and its use are *stated briefly* the ingredients and properties of typical sprays are given; then the requirements to be met by the oil, and the requirements expressed in standard tests taken from U.S. Army and Navy specifications are tabulated.

NELSON WILBUR LUDINE
Petroleum refinery engineering. Third edition. New York McGraw Hill Book Company Inc. 1949 830 p. illus. 24 cm. (McGraw Hill chemical engineering series S D Kirkpatrick, consulting editor) 6638

Contents: Chemical engineering and petroleum engineering. History and development of refining. Composition of petroleum. Refinery products and test methods. Evaluation of oil stocks. Physical properties of petroleum oil. Introduction to processing. Refinery corrosion and metals. Refinery and distillation processes. Auxiliary processes and operations. Conventional chemical treatments. Solvent treating or extraction processes. Dewaxing. Fluid mechanics. Combustion. Vaporization and condensation. Fractionation and towers. Heat transfer and exchangers. Tube-still heaters. Thermal cracking and decomposition processes. Reforming hydrocarbons. Catalytic cracking. Natural gas and natural gasoline. Economics of design. Typical design calculations. Appendix. Author index. Subject index.

Note: Originally an engineering college textbook, this work has gradually evolved into a reference book for practicing engineers. It deals with current processes and practices in petroleum refining, and presents in detail the aspects which are factors in the design of refineries. Extensive bibliographies are a special feature. A fourth edition was published early in 1958, 960 p. $13.00.

SMITH N A C., AND OTHERS
The Bureau of Mines routine method for the analysis of crude petroleum (in three parts) I. The analytical method, by N A C. Smith, H. M Smith, O C. Blade, and E. L. Garton. Washington D C Government Printing Office 1951 [illegible] p. illus. 26 cm. (United States. Bureau of Mines. Bulletin 490) $0.50. 6639

Contents: Introduction. Distillation (Bureau of Mines routine method) Distillation at atmospheric pressure. Distillation at reduced pressure (40 mm of mercury) Treatment of unusual crude-oils—precautions. The analytical report. Sampling and sample handling. Sample information. Sample inspection and identification. Property determination. Specific gravity. Viscosity. Sulfur. Color. Cloud test. Pour point. Carbon residue. Aniline point. Preparing the report of an analysis. Appurtenant summary. Summation. Outline of Bureau of Mines routine method for the analysis of crude petroleum. References. Appendix. Bibliography of reports containing analyses of crude oils by Bureau of Mines routine method. Finding list for crude-oil analyses.

Note: The method of analysis described in this bulletin has been used in analyzing thousands of samples of crude oil since it was developed during the period 1918 to 1920. It was first described in Bureau of Mines Bulletin 207 1922, of which the present bulletin is largely a revision. Details of the procedure, description of the apparatus, and brief discussions of ancillary methods are all included. The appendix includes a bibliography of reports which contain analyses of crude oils by this method and a finding list of analyses arranged by oil fields in the respective states of the United States and in other countries.

STORCH HENRY HERMAN, AND OTHERS
The Fischer Tropsch and related syntheses including a summary of theoretical and applied contact catalysis. By Henry H. Storch, Norma Golumbic and Robert B Anderson. New York John Wiley & Sons, Inc., 1951 610 p. illus. 23 cm. $13.50 6640

Contents. Structure and reactivity of hydrogen, carbon monoxide, iron, cobalt, and nickel and the thermodynamics of the hydrogenation of carbon monoxide and related processes. An introduction to heterogeneous catalysis. Development of Fischer-Tropsch catalysts. Fischer-Tropsch process development. Processes related to the Fischer-Tropsch. Kinetics and reaction mechanism of the Fischer-Tropsch synthesis. Name index. Subject index.

Note: The synthesis of aliphatic hydrocarbons from carbon monoxide is a *chemical process of great potential uses.* This book is a very substantial addition to the literature of the subject. It is based primarily on investigations of German progress and practice in this field that were made by teams of British and American investigators just after the close of World War II. Essentially it is a critical digest of papers pertaining to the subject that were obtained in Germany by the investigating teams. This material has been supplemented to some extent by the results of work done in the United States of America in more recent years. At the time of writing, the authors were all associated with the Office of Synthetic Liquid Fuels of the United States Bureau of Mines. The book is addressed to industrial chemists and chemical engineers.

STORCH, HENRY HERMAN AND OTHERS
Synthetic liquid fuels from hydrogenation of carbon monoxide. Part 1 Review of literature Bureau of Mines research on effect of *catalyst preparation reduction, and induction procedures on activity correlation of physical properties of the catalysts with their activity* By H. H. Storch, R. B Anderson, L. J E Hofer C. O Hawk H. C. Anderson, and N Golumbic. Washington D C. Government Printing Office 1948 213 p illus. 23 cm. (United States. Bureau of Mines. Technical paper 709) $0.50 6641

Contents Introduction. Review of literature: Introduction (1913–32) Industrial development. Engineering development. Catalysts. Pressure, diluents, hydrogen carbon monoxide ratio, throughput, temperature, adsorption, and probable reaction mechanism. Properties of Fischer-Tropsch synthesis products. *Fischer-Tropsch* cost estimates. Bureau of Mines research on effect of catalyst preparation, reduction, and induction procedures on activity. Catalyst-testing experiments. Effect of variations in methods of catalyst preparation, reduction, induction, and synthesis conditions on activity and durability. Correlation *of physical* properties of catalysts with their activity. X-ray diffraction patterns and magnetic properties of iron catalysts. Surface properties of Fischer-Tropsch catalysts. Appendix on preparation of catalysts: Preparation of unpromoted iron catalysts. Preparation of promoted iron catalysts. Preparation of cobalt and nickel catalysts. Equipment used in preparing catalysts. Indexes. Numerical patent index. Author index. Subject index.

Note Because of the importance of information on synthetic liquid-fuel processes in insuring an adequate supply of motor fuels and lubricating oils in the United States, the Bureau of Mines has carried on research and process development work on the use of natural gas to produce gasoline and Diesel oil by the catalytic hydrogenation of carbon monoxide. This technical paper contains a detailed record of experimental work done between 1941 and 1946 on the effect of mode of catalyst preparation, reduction, and induction on activity in the synthesis and on boiling range of the product. Also included are data on the X-ray diffraction patterns, magnetic susceptibility surface area, and porosity of the catalysts.

WILEY J L. AND H. C ANDERSON
Bibliography of pressure hydrogenation. Washington, D C. Government Printing Office, 1950–52 646 p. 26 cm. (United States.

Bureau of Mines Bulletin 485) Part I, o p., Part II, $1 00, Part III, $0.25 6642

Note This work contains abstracts of the world's technical literature bearing on the history development, and commercial application of the Bergius and related processes for the hydrogenation, under greater than atmospheric pressures, of liquid and solid carbonaceous materials such as coal, lignite, their distillation and extraction products, pitches and tars, and petroleum and its distillation residues. Part I contains 2503 abstracts of journal articles Part II, 1544 abstracts of patents, and Part III contains a subject index to Parts I and II and a numerical patent index.

CERAMICS AND REFRACTORY MATERIALS

CAMPBELL, I E , editor

High temperature technology Sponsored by The Electrochemical Society, Inc. New York John Wiley & Sons, Inc., 1956 526 p illus 24 cm. (The Electrochemical Society series) $15 00 6643

Contents. Part I, Introduction An introduction to high-temperature refractory materials. Part II, Materials Metals. Oxides. Properties of carbon and graphite at high temperatures. Carbides. Borides. Silicides. Nitrides. Sulfides. Cermets. Part III, Methods. Sintering of metallic and nonmetallic refractory materials. Means of achieving high temperatures and some of their limitations. Resistance and induction-heated furnaces. Arc furnaces. Other methods of achieving high temperatures. Part IV Measurements Temperature and its measurement. Mechanical properties. Physical properties. Special techniques. Author index. Subject index.

Note The commercial development f gas turbines, jet engines, and other devices in which high temperatures are essential to satisfactory performance has motivated an intensive effort to develop materials that will give service at temperatures above 1500 C. This book, the product of collaboration among the editor—who is associated with the Battelle Memorial Institute—and more than 30 prominent chemists, ceramists and specialists in refractories, surveys the achievements to date in materials and techniques and describes proven methods of measuring temperature and properties. Although there is a brief discussion f metals, the main emphasis is on refractories of the kinds named in the chapter titles of Part II. There is equal emphasis on methods of producing these materials, of achieving high temperatures, and on measurement techniques. There are many tabulations of data, especially on the properties of materials, and extensive literature lists of both journal articles and patents.

GOULD, ROBERT EDWARD

Making true porcelain dinnerware a discussion of processes. Chicago Industrial Publications, Inc 1947 106 p illus. 22 cm. $6.50 6644

Contents. Introduction. Raw materials. Compounding the body Body preparation. Discussion of methods. Forming. Bisque firing. Placing in the glost kiln. Glost firing. Combustion reactions of carbon and oxygen. Theoretical considerations. Drawing the glost kiln. Decorating. Summary Appendix. Index.

Note Contrary to the opinion held generally in the American dinnerware industry the author of this book—himself a manufacturer with experience in both Europe and the United States of America—believes that true or hard fire porcelain can be manufactured profitably in the United States. In support of this view he compares American and European raw materials, processes, machines and workers, and in each category finds that the American manufacturer would suffer no disadvantage. In making these comparisons, the process of producing true porcelain is outlined step by step. The book is addressed to persons engaged in the industry or having a practical interest in it. The appendix contains formulas and analyses.

GREAVES WALKER, ARTHUR FREDERICK

Drying ceramic products. Fourth edition Chicago Industrial Publications, Inc. 1948 112 p illus. 23 cm. $4 00 6645

Contents (abridged) Evaporation. The part played by air Water contained in ceramic materials. Shrinkage. Heat requirements. Types of dryers. Chamber and tunnel dryers heated by steam. Fans. Selection of fans. The designing of ducts or flues. Progressive dryers. Waste heat progressive dryers. Radiated heat dryer Infrared dryers. Control of drying. A theoretical method of running a heat balance in a dryer Psychrometric charts. References on drying.

Note. A concise exposition intended for plant operators and others in charge of drying operations. The physical principles of drying, the causes of dryer losses and how to prevent them, and the design of successful drying equipment are all discussed. Some illustrations of dryers are included. The mathematical computations require only a knowledge of arithmetic and elementary algebra. The material was originally prepared as classroom lectures, and some of the chapters contain problems for the student to solve.

INSLEY, HERBERT, AND VAN DERCK FRÉCHETTE

Microscopy of ceramics and cements, including glasses, slags, and foundry sands. New York Academic Press, Inc., 1955 286 p illus 24 cm. $7 50 6646

Contents Introduction. The microscope and accessories. Optical mineralogy Preparation of material for microscopic examination. Special techniques. Raw materials and their thermal behavior. Whitewares. Refractories. Glass. Cement and cement products. Porcelain enamels. Structural clay products. Foundry sands. Slags. Abrasives, by H. N Baumann, Jr Author index. Subject index.

Note. The petrographic or polarizing microscope is the standard tool in industrial laboratories associated with the ceramic and other industries named in the chapter titles of this book. Although other instruments, including the electron microscope, are introduced briefly this book is chiefly based on it. Chapters I to VI are rather compact statements of knowledge basic to the whole field. Beginning with Chapter VII, microscopy in the various ceramic and related industries is discussed by industry or class or product. These chapters are based rather closely on the literature and consist essentially of condensed descriptions of applications of microscopy and specialized microscopic techniques, together with references to the source articles. Most chapters contain reproductions of photomicrographs. A chart in color of the Michel-Levy scale of birefringence is included. The book should be a valuable one both to scientists already at work in the ceramics, cement and refractories industries and those preparing for such work.

KIRKENDALE, GEORGE A.

A textbook for ceramic engineers. Alfred, N Y Alfred University, 1954 212 p illus. 23 cm. $4 50 6647

Contents Classification of clays. Ceramic raw materials. The mineralogical composition of clays. Chemical composition of clays. Chemical notation and constitution of ceramic materials. Physical properties of clay Scumming and efflorescence. Distribution of clay deposits. Drying clays. Firing clays. Washing, refining and beneficiation of clays and other ceramic materials. Screening and bowling. Classification with water Magnetic separation. Crushing and grinding. Clay feeding and proportioning. Mixing, kneading, and tempering. De-watering. Clay formation. Flotation. Prospecting for clay deposits, collection and preparation of samples. Property survey Winning clays. Index.

Note. A compact book on clays, their prospecting, winning, properties, and preparation for use in ceramics manufacture. Other materials are discussed very briefly in the chapter entitled "Ceramic raw materials. Most of the space is devoted to the properties and preparation of clays. Processes are described in some detail and there are many pictures of the machinery used. The book is directed primarily to college students but is useful also to graduate engineers who find themselves in need of an introduction which is reliable and explicit.

KOENIG, JOHN HENRY, AND W H EARHART

Literature abstracts of ceramic glazes. Philadelphia *College Offset Press* 1951 395 p 24 cm $7.50 6647A

Contents American Journal of the American Ceramic Society Bulletin of the American Ceramic Society Transactions of the Amer-

can Ceramic Society. Ceramic industry. Ceramic age (and Ceramics). British. Transactions of the British Ceramic Society. Pottery gazette. Foreign publications. Berichte Deutsche keramische Gesellschaft. Sprechsaal. Keramische-Rundschau. Tonindustrie-Zeitung. Keramos. Ceramique. Miscellaneous foreign and American publications. Transactions of Indian Ceramic Society. Journal, Canadian Ceramic Society. General. National Bureau of Standards. Engineering experiment station publications. Patents. Reference books. Descriptive bibliography. Glass specifications. List of references and periodicals. Index.

Note: A review of the literature of glass through 1952. As in the previous edition (1942) papers are abstracted in varying lengths depending on their value and on their general accessibility but all important claims, successful glass formulas, and processes are included. Each of the sixteen periodicals listed above is treated separately with the abstracts arranged chronologically beginning with the most recent. There is a subject index but no author index.

LEVIN, ERNEST M., AND OTHERS

Phase diagrams for ceramists. By Ernest M. Levin, Howard F. McMurdie, and F. P. Hall. Margie K. Reser, editor. Herbert Insley, consulting editor. Columbus, The American Ceramic Society, 1956. 286 p. illus. 28 cm. $10.00. 6648

Contents: Glossary. The phase rule. Interpretation of diagrams. Experimental methods for high-temperature heterogeneous equilibria. Selected bibliography. Specific diagrams: Metal oxide systems. Systems containing non-metal oxides. Systems containing halides, sulfides, etc. Water-containing systems. Author index. Subject index.

Note: In this latest version of a standard compilation, there are 811 diagrams of equilibria in chemical systems, of interest in ceramic research and technology. The diagrams are classified in groups under the titles listed under "Specific diagrams" in the above table of contents. Each diagram is very concisely described in a caption, then a literature reference to the source is given. The names of authors of the source literature are assembled in the author index. In the system index the diagrams are entered under each of the components participating in the system. The reproductions of diagrams are preceded by about 35 pages of discussion of systems of equilibrium and by a three-page classified and annotated bibliography.

MCNAMARA, EDWARD P., AND IRVING DULBERG

Fundamentals of ceramics. Second edition. State College, Pennsylvania State University, 1953. 382 p. illus. 24 cm. $4.50 6649

Contents: Introduction to ceramics. Mineralogy. The occurrence, properties and uses of ceramic raw materials. Raw material preparation. Pyrometry. Fuels and combustion. Refractories. Glass. Melting and crystallization of glasses. Equilibrium diagrams.

Note: An introductory textbook directed to students already at work in the ceramic industries or preparing for this field. It provides a broad view of the fundamental technology with emphasis on the properties and preparation of materials, fuels, and pyrometry. An introduction to phase equilibria in systems of inorganic materials is provided in the last chapter. Literature references are included. The first edition was published in 1938 as Volume two of an *Extension course in ceramics*, by E. P. McNamara.

MOREY, GEORGE W.

The properties of glass. Second edition. New York, Reinhold Publishing Corporation, 1954. 591 p. illus. 24 cm. (American Chemical Society monograph series) $16.50 6650

Contents: The history of glass. The devitrification of glass. The composition of glass. The chemical durability of glass. The viscosity of glass. The annealing of glass. The surface tension of glass. The heat capacity of glass. The thermal conductivity of glass. The density of glass. The coefficient of expansion of glass. The elastic properties of glass. The strength of glass. The thermal endurance of glass. The hardness of glass. The optical properties of glass. The electrical conductivity of glass. The dielectric constant, dielectric loss, and dielectric strength of glass. The magnetic properties of glass. The constitution of glass. Author index. Subject index. Properties of glasses in various systems.

Note: The standard monograph in English on the physical and chemical properties of glass. Intended for reference use, it is an organized assembly of the useful scientific data published in the world literature up to about the middle of 1953. The text is compact and is keyed to literature citations. Extensive use has been made of tables in presenting data. The first edition was published in 1938. This second edition is only 30 pages longer, but it has been revised from front to back, so as to incorporate results published in the literature since the writing of the first edition. In Chapter II, for example, nine of the 43 references are later than 1938; in Chapter XVIII, the number of new references is seven out of 39. The indexes are an improvement over those in the 1938 edition.

NATIONAL RESEARCH COUNCIL

Data on chemicals for ceramic use: formulas, molecular weights, colors, crystal forms, densities, refractive indices, melting points, boiling points, transition points, decomposition temperatures. Based on report of the Committee on Chemical Data for Ceramists, Division of Chemistry and Chemical Technology, National Research Council. Alexander Silverman, chairman. Pittsburgh, Pa. Published by the University of Pittsburgh for the National Research Council, National Academy of Sciences, Washington, D. C., 1949. 193 p. 23 cm. (National Research Council. Bulletin Number 118, June, 1949) $3.00 6650A

Note: The scope of this work is indicated by the title. The arrangement is alphabetical by names of elements and compounds. Source articles are cited for the data, and the main part of the work is supplemented by an extensive bibliography. Data published in the literature from 1943 to May 1949 have been added in this edition. Citations of the articles have been added to the bibliography.

NEWCOMB, REXFORD, JR.

Ceramic whitewares: history, technology and applications. New York, Pitman Publishing Corporation, 1947. 313 p. illus. 24 cm. (Pitman books on industrial materials and processes. Alexander Klemin, advisory editor) $6.50. 6651

Contents: A historical introduction, by C. Atherton. Silicate science. Raw materials for ceramic bodies. Body preparation. Forming and drying the ware. Firing. Properties and tests. Glazes and decorations. Ceramics in construction. Ceramic products in the home. Electrical applications of whiteware products. Industrial uses of whiteware products. Abrasives. Appendix. Index.

Note: The branch of the ceramic industry treated in this book produces such diversified ware as sanitary fixtures, floor and wall tiles, dishes, art objects, and electrical insulators. The authors' purpose was to write a survey of this class of ceramics that would be useful to manufacturers and engineers who are not experienced in ceramics but who might benefit from knowledge of the industry and the potential uses of its products. Much useful data regarding chemical constants, dielectric constants, fusion temperatures, and other properties of ceramic materials are tabulated throughout the volume. Selected lists of references are included with the chapters.

NORTON, FREDERICK HARWOOD

Elements of ceramics. Reading, Mass., Addison-Wesley Publishing Co., Inc., 1952. 246 p. illus. 25 cm. $8.50. 6652

Contents: Clay minerals. Origin and occurrence of clays. Properties of clays. Silica and feldspar. Magnesite, lime, dolomite, and chromite. Other nonclay minerals. Mining and treatment of the raw materials. Flow properties of ceramic pastes and slips. Plastic masses. Casting slips. Forming methods. Drying of ceramic ware. Thermochemical reactions. Types of ceramic bodies. Thermochemical changes

in clays and bodies. Kilns and settings. Glassy state. Glasses. Glazes. Enamels on metal. Color formation in glasses and glazes. Ceramic stains and colors. Decorative processes. Cements and plasters. Appendix. Index.

Note An introductory book but a substantial one. It is well organized in short chapters that are supplemented by excellent illustrations and well-chosen references. The appendix contains a variety of information, from detailed directions for constructing small kilns to calibration data for thermocouples. The work is suitable for use in introductory college courses, as a desk reference book in the libraries of potteries, and as a source of information for advanced amateurs.

NORTON, FREDERICK HARWOOD

Refractories Third edition New York McGraw Hill Book Company, Inc , 1949 782 p illus (part col'd) 24 cm $12 50 6653

Contents (abridged) Part I Introduction: Scope of the refractories industry in the United States. Literature on refractories. History of refractory development in the United States. Part II, Manufacture Refractory raw materials. Molding methods. Drying. The firing of clay and other refractory materials. Kilns for burning refractories. Some special refractory materials. Part III, Properties The fusion point of refractory materials and their equilibrium diagrams. Load bearing capacity of refractories. Spalling. Expansion and shrinkage. Sizes and tolerances. Miscellaneous properties of refractories. Part IV Use Refractories in the iron and steel industry Refractories in the generation of steam power Refractories in use in nuclear power production. Refractories for gas-turbine and jet-propulsion engines. Brickwork construction. Appendix Reference tables. Index.

Note A comprehensive treatment in which there is information on practically all aspects of the subject, from the early history of the industry in the United States of America, to probable future uses of refractories. It is designed primarily for engineers and other persons with technical education or experience. However some parts, especially those dealing with uses, are sufficiently nontechnical to be useful to laymen who may need reference information. A considerable amount of material has been added to this edition, including chapters on refractories in nuclear power production and in gas turbine and jet-propulsion engines. Statistical information and also the unusually extensive bibliographies have been brought down to date.

PARMELEE, CULLEN W

Ceramic glazes. Second edition, edited and revised by E D Lynch and A L Friedberg Chicago Industrial Publications, Inc., 1951 322 p. illus. 24 cm $8 00 6654

Contents Definition of glazes. Glaze materials. Calculations. Mixing and milling. Application. Conversion of the batch to the glaze. Leadless glazes. Fritted glazes. Raw lead glazes. Engobes, slips, and underslips. Underglaze and overglaze colors. Glaze defects. Index.

Note A standard and comprehensive treatise designed for practical use in the ceramic industries. The first edition appeared in 1948 and contained the same number of pages. The revisions in the present edition are not extensive however some important information has been added and detected errors have been corrected. Apparently the type for a considerable number of pages was reset Before his death the author was associated with the Department of Ceramic Engineering of the University of Illinois and the revisers of the second edition are associated with the same school.

PHILLIPS, CHARLES JOHN

Glass the miracle maker its history technology, manufacture and applications. Second edition New York Pitman Publishing Corporation, 1948 429 p illus 24 cm. (Pitman books on industrial materials and processes Alexander Klemin advisory editor) $7 50 6655

Contents Part I, History and technology The glass of years gone by. Glass today The chemistry of glass. The mechanical properties of glass. Other physical properties of glass. Part II, Manufacture Materials handling. Fuels, refractories, furnaces, and the melting process. The principles of glassworking. Glassworking machinery Finishing, annealing, decoration, and inspection. Part III, Applications. Glass in architecture and building construction. Glass in the home. Glass in the electrical industry Glass in illumination. Glass in manufacture. Glass in science and research. Fiber glass. Index.

Note. The first edition of this work (1941) established it as a useful survey of the properties, manufacture and uses of glass. Not an account of "miracles" despite the title, it was designed primarily to give semitechnical information to such persons as architects and designers interested in glass as a decorative or structural material. It proved handy also for the enlightenment of curious general readers. The book is essentially the same in this edition. Some important revisions, for example the rewriting of the material on glass-to-metal seals, have been made but the proportion of text altered is small. Nevertheless, the type has been reset, and the new book now presents a more attractive appearance.

ROBSON, J T

Operating the tunnel kiln Chicago Industrial Publications, Inc., 1954 157 p illus. 23 cm. $8 00 6656

Contents Stages of firing—ceramic products. Dinnerware and artware bisque. Wall tile bisque. Dinnerware, two fired wall tile and artware glost. Decorated ware. Electric porcelain—wet-milled and dry press. Sanitary ware—artware—once fired. Stoneware. Glazed hollow tile, single fired wall tile and terra cotta. Abrasives. Refractories. Insulating brick. Clay pipe and drain tile. Face, common brick, hollow and quarry tile. Flower pots. Operating data. Kiln maintenance while operating. Index.

Note A practical book based on the industrial experience of the author and other experts associated with the ceramics industry in the United States of America. Its topic is operation of the tunnel kiln so as to avoid defective products. Defects that develop during firing in the kinds of ceramic products mentioned in the chapter titles are considered in specific detail and their probable causes are stated. In many cases, there is a picture of the defect under discussion. The first chapter and the two chapters at the end of the volume deal with tunnel kiln operation in general. Following the last chapter are 19 graphs on which are plotted tunnel kiln firing curves for various ceramic products.

SCHWARZKOPF, PAUL, AND RICHARD KIEFFER

Refractory hard metals, borides carbides, nitrides, and silicides the basic constituents of cemented hard metals and their use as high temperature materials. By Paul Schwarzkopf and Richard Kieffer in collaboration with Werner Leszynski and Fritz Benesovsky New York The Macmillan Company 1953 447 p illus 24 cm $10 00 6657

Contents (abridged) Introduction and history The crystal structure of hard metals The electronic structure of hard metals. The carbides The nitrides. The borides. The silicides. Materials for service at elevated temperatures. Index.

Note. A monographic survey of the structure, properties and preparations of the kinds of hard, high-melting, organic materials named in the above part titles. These compounds are the basic materials in a variety of bonded (cemented) products used because of their refractory properties as cutting tools, gas turbine buckets, etc. The book is based both on a review of the literature and on the extensive experience of the authors. Citations to the international literature are printed as footnotes. There are [illegible] tables of reference data.

SCOVILLE, WARREN CANDLER

Revolution in glassmaking entrepreneurship and technological change in the American industry 1880–1920 Cambridge Mass. Harvard University Press 1948 398 p illus. 24 cm $5 00 6658

Contents The history of American glassmaking prior to 1880 Industrial growth, 1880–1920. The organization and history of the glass firms founded by the Toledo entrepreneurs, 1888–1920. Revolution in technology at Toledo. Technological innovation elsewhere. Control of labor and product markets. Foreign competition, domestic consumption, and plant relocation. The Toledo entrepreneurs. Ap-

pendix A: The general trend of glassworkers' wages, 1880-1920. Appendix B: Some notes on technology. Appendix C: Some statistics on the financial success of the Toledo firms. Bibliography. Index.

Note. A carefully documented history of the mechanization of the glassmaking industry in the United States of America. The greater part of the book is devoted to the competitive and economic aspects of the story but the sixth and seventh chapters especially cover the mechanical phases and describe the important inventions and machines.

SHAND E. B

Glass engineering handbook. An introduction by E. U Condon. Corning, N Y Corning Glass Works, 1955 258 p. 28 cm. 6659

Contents (abridged): Section I. Glass technology: Properties of glass. Chemical durability. Stress release and annealing. Glass-metal seals. Strength testing and stress determination. Section II. Glass manufacture, by C. H. Greene: Raw materials and melting. Primary forming operations. Secondary finishing operations. Section III. Applications: Glass containers. Flat glass and glazing. Laboratory glassware and thermometers. Applications in the chemical industry. Sight and gage glasses. Electric lamps and electron tubes. Electronic circuit components. Special glasses and their applications. Section IV. Fibrous glass, by J. A. Grant and T. S. Rogers: Composition and properties of fibers. Manufacturing processes and products. Applications of fibrous glass textiles. Applications of fibrous glass wool. Fibrous glass reinforced plastics. Appendices: Federal and military specifications on glass. Definition of glass terms. Index.

Note. Glass is presented as an engineering material in this book which is addressed to engineers and others with technical interests in the subject. Background information such as data on the properties of glass and descriptions of the techniques of glass manufacture is included along with discussions of specific applications. The latter are not mere descriptions of general applications, but are detailed discussions of the properties that make glass a suitable material for the applications mentioned in the chapter titles and others. Much engineering data is included which is not readily available elsewhere. Literature references are given also.

TOOLEY FAY V editor

Handbook of glass manufacture a book of reference for the plant executive, technologist and engineer Compiled and edited by Fay V Tooley New York Ogden Publishing Company 1953 570 p illus. 24 cm. $11 50 6660

Contents: Glass compositions, by A. K. Lyle. Physical properties of glass, by D. E. Sharp and A. E. Badger. Raw materials, by R. [illegible]. Procurement of materials, supplies, and services, by C. L. [illegible]. Batch materials handling and preparation, by W. R. Lester. Furnaces and tanks, by F. G. Schwalbe. Instrumentation in the glasshouse, by J. R. Green. Refractories, by W. L. Fabianic. The glass preparation process, by F. V. Tooley and others. Feeding and forming, by H. H. Holscher. Annealing and tempering, by E. A. McMaster. Glass decorating, by V. H. [illegible]. Auxiliary information and tables, by F. V. Tooley. Index.

Note. A successor to the publisher's *Handbook of the glass industry* (1941). As shown above, it now consists of 13 chapters written by recognized authorities. The material of the former book has been completely reorganized with the addition of considerable theoretical and technical discussion. New features include photographs of machinery used in glass manufacture, literature references appended to sections and subsections, and an index. Section XIII contains a glossary of glass terms which has been approved by the American Society for Testing Materials as standard definitions.

PAINT AND RELATED FINISHES

BIDLACK, VERNE C AND EDGAR W FASIG editors

Paint and varnish production manual. New York John Wiley & Sons, Inc., 1951 288 p. illus. 24 cm. $8.50. 6661

Contents: Physical facilities. Paint plant. Varnish plant. Products. Engineering. Manufacturing operations. Personnel. Factory cost accounting. Research, development and control. Fire protection, safety and health. Index.

Note. In this book—sponsored by the Federation of Paint and Varnish Production Clubs—plant layout, equipment, materials handling, and many other topics of interest in the organization and management of plants for the manufacture of paint and varnish are discussed by experts. The work appears to be addressed to management and production staff of small plants, but there is material in it that is of potential interest to the personnel of larger plants also. Good bibliographies are included.

DENISTON GEORGE LOWELL

The science of modern wood finishing A digest of modern materials and methods for industrial finishers and home craftsmen seeking to secure finer finishes at lower costs. With an introduction by Robert F Ohmer Dayton Research Press Inc. 1949 386 p. illus. (part col d) 21 cm. $7.50. 6662

Contents: Cabinet, furniture and other woods. Glues and gluing. Sanding. Bleaches and bleaching. Staining—materials and methods. Aniline dyes for Chadeloid non-grain-raising stains. Organic solvents used in making Chadeloid NGR stains. Fillers and filling. Sealing the surface. Padding-up practice. Finishing with shellac. Lacquers, synthetics and their application. Rubbing and polishing of organic coatings. Novelty finishes and other special finish effects. Decorative techniques. Representative finishing schedules. Essentials of good finishing practice. Repairing and refinishing. Appendix: Facts and figures for finishers. Bibliography. Glossary of terms.

Note. A technical survey of present-day materials and methods which is especially valuable for information on developments of recent years. Transparent and semi-transparent finishes are covered, while paints and other opaque materials that conceal the grain of the wood are not included. Preliminary operations, such as sanding, and refinishing operations, such as the repairing of scratches, are included together with the application of original finishes. Although much material is presented which is potentially of interest to amateur craftsmen, the book is addressed primarily to persons associated with furniture manufacturing and to others with technical and commercial interests in the field. The bibliography and glossary are adequate but there is no index. A second printing with some changes was issued in 1954 and is the version currently available.

EDWARDS JUNIUS DAVID AND ROBERT I WRAY

Aluminum paint and powder Third edition. New York Reinhold Publishing Corporation, 1955 219 p. illus. 24 cm. $5 50 6663

Contents: Manufacture of aluminum powder. Properties and testing of aluminum powder and paste. Composition of aluminum paint. Aluminum paint in the protection of metals. Special properties and uses of aluminum paint. Aluminum paint in the protection of wood. Aluminum powder in the arts. Index.

Note: The standard manual of information on aluminum powder and its uses including the primary use, aluminum paint. The second edition appeared in 1936. Although in this third edition, the scope of the work is unchanged, and considerable text has been carried over from the preceding edition, the book has been thoroughly revised. Wherever pertinent data have been published, they have been incorporated. A number of products which have only recently reached the state of commercial availability, for instance aluminum paints with silicone resins [illegible], are described. Literature published as recently as 1954 has been added to the chapter reference lists.

GORDON PHILIP L. AND GEORGE J DOLGIN

Surface coatings and finishes. Brooklyn Chemical Publishing Company Inc., 1954 299 p. illus. 23 cm. $9.00. 6664

Contents: Oleoresinous varnish technology. Surface coatings from synthetic resins and polymers. Alkyd resins. Phenol-aldehyde resins. Urea-formaldehyde resins. Cellulose derivatives. Synthetic high polymers. Rubber derivatives. Miscellaneous plastics. Testing methods. Appendix. Index.

Note: A compact manual of practical knowledge on the formulation, preparation and testing of present-day paints, varnishes, and related surface materials. The older technology based on natural resins and oils is outlined briefly in the first chapter the re-

in clays and bodies. Kilns and settings. Glassy state. Glazes. Glazes. Enamels on metal. Color formation in glasses and glazes. Ceramic stains and colors. Decorative processes. Cements and plasters. Appendix. Index.

Note. An introductory book but substantial one. It is well organized in short chapters that are supplemented by excellent illustrations and well-chosen references. The appendix contains a variety of information, from detailed directions for constructing small kilns to calibration data for thermocouples. The work is suitable for use in introductory college courses, as a desk reference book in the libraries f potteries, and as a source of information for advanced amateurs.

NORTON, FREDERICK HARWOOD

Refractories Third edition. New York McGraw Hill Book Company, Inc. 1949 782 p illus (part col'd) 24 cm $12 50 6653

Contents (abridged) Part I, Introduction Scope of the refractories industry in the United States. Literature on refractories. History of refractory development in the United States. Part II, Manufacture Refractory raw materials. Molding methods. Drying. The firing of clay and other refractory materials. Kilns for burning refractories. Some special refractory materials. Part III Properties The fusion point of refractory materials and their equilibrium diagrams. Load bearing capacity of refractories. Spalling. Expansion and shrinkage. Sizes and tolerances. Miscellaneous properties of refractories. Part IV Use Refractories in the iron and steel industry Refractories in the generation of steam power Refractories in use in nuclear power production. Refractories for gas-turbine and jet-propulsion engines. Brickwork construction. Appendix: Reference tables. Index.

Note. A comprehensive treatment in which there is information on practically all aspects f the subject, from the early history of the industry in the United States of America, to probable future uses of refractories. It is designed primarily for engineers and other persons with technical education or experience. However some parts, especially those dealing with uses, are sufficiently nontechnical to be useful to laymen who may need reference information. A considerable amount of material has been added to this edition, including chapters on refractories in nuclear power production and in gas turbine and jet-propulsion engines. Statistical information and also the unusually extensive bibliographies ha been brought down to date.

PARMELEE, CULLEN W

Ceramic glazes. Second edition, edited and revised by E D Lynch and A. L. Friedberg Chicago Industrial Publications, Inc., 1951 322 p illus. 24 cm $8 00 6654

Contents Definition of glazes. Glaze materials. Calculations. Mixing and milling. Application. Conversion of the batch to the glaze. Leadless glazes. Fritted glazes. Raw lead glazes. Engobes, slips, and underslips. Underglaze and overglaze colors. Glaze defects. Index.

Note. A standard and comprehensive treatise designed for practical use in the ceramic industries. The first edition appeared in 1948 and contained the same number of pages. The revisions in the present edition are not extensive however some important information has been added and detected errors have been corrected Apparently the type for considerable number of pages was reset. Before his death the author was associated with the Department of Ceramic Engineering of the University of Illinois and the revisers of the second edition are associated ith the same school.

PHILLIPS, CHARLES JOHN

Glass, the miracle maker its history technology manufacture and applications Second edition. New York Pitman Publishing Corporation, 1948 429 p illus 24 cm (Pitman books on industrial materials and processes Alexander Klemin advisory editor) $7 50 6655

Contents: Part I, History and technology The glass of years gone by Glass today The chemistry of glass. The mechanical properties of glass. Other physical properties of glass. Part II, Manufacture Materials handling. Fuels, refractories, furnaces, and the melting process. The principles of glassworking. Glassworking machinery Finishing, annealing, decoration, and inspection. Part III, Applications: Glass in architecture and building construction. Glass in the home. Glass in the electrical industry Glass in illumination. Glass in manufacture. Glass in science and research. Fiber glass. Index.

Note. The first edition of this work (1941) established it as useful survey of the properties, manufacture and uses of glass. Not an account of "miracles" despite the title It as designed primarily to give semitechnical information to such persons as architects and designers interested in glass as decorati or structural material. It proved handy also for the enlightenment of curious general readers. The book is essentially the same in this edition. Some important revisions, for example the rewriting of the material on glass-to-metal seals, have been made but the proportion of text altered is small. Nevertheless, the type has been reset, and the open book now presents a more attractive appearance.

ROBSON, J T

Operating the tunnel kiln. Chicago Industrial Publications, Inc., 1954 157 p illus. 23 cm. $8 00 6656

Contents Stages of firing—ceramic products. Dinnerware and artware bisque. Wall tile bisque. Dinnerware, two fired wall tile and artward glost. Decorated ware. Electric porcelain—vitrified and dry press. Sanitary ware—artware—once fired. Stoneware. Glazed hollow tile, single fired wall tile and terra cotta. Abrasives. Refractories. Insulating brick. Clay pipe and drain tile. Face, common brick, hollow and quarry tile. Flower pots. Operating data. Kiln maintenance while operating. Index.

Note. A practical book based on the industrial experience of the author and other experts associated with the ceramics industry in the United States of America. Its topic is operation of the tunnel kiln so as to avoid defective products. Defects that develop during firing in the kinds of ceramic products mentioned in the chapter titles are considered in specific detail and their probable causes are stated. In many cases, there is a picture of the defect under discussion. The first chapter and the two chapters at the end of the olume deal with tunnel kiln operation in general. Following the last chapter are 19 graphs on which are plotted tunnel kiln firing curves for arious ceramic products.

SCHWARZKOPF, PAUL, AND RICHARD KIEFFER

Refractory hard metals, borides carbides, nitrides, and silicides the basic constituents of cemented hard metals and their use as high temperature materials By Paul Schwarzkopf and Richard Kieffer in collaboration with Werner Leszynski and Fritz Benesovsky New York The Macmillan Company 1953 447 p illus 24 cm $10 00 6657

Contents (abridged) Introduction and history. The crystal structure of hard metals. The electronic structure f hard metals. The carbides The nitrides. The borides. The silicides. Materials for service at elevated temperatures. Index.

Note A monographic survey of the structure, properties and preparations of the kinds of hard, high-melting, organic materials named in the abo part titles. These compounds are the basic materials in variety of bonded (cemented) products used because of their refractory properties as cutting tools, gas turbine buckets, etc. The book is based both on review of the literature and on the extensi experience of the authors. Citations to the international literature are printed as footnotes There are 97 tables of reference data.

SCOVILLE WARREN CANDLER

Revolution in glassmaking entrepreneurship and technological change in the American industry 1880–1920 Cambridge Mass. Harvard University Press, 1948 398 p. illus. 24 cm $5 00 6658

Contents The history of American glassmaking prior to 1880 Industrial growth, 1880–1920. The organization and history of the glass firms founded by the Toledo entrepreneurs, 1888–1920. Revolution in technology at Toledo. Technological innovation elsewhere. Control of labor and product markets. Foreign competition, domestic consumption, and plant relocation. The Toledo entrepreneurs. Ap-

Contents: Part I. The characteristics and application of "wrinkle" finishes: Origin of "wrinkle" finishes. "Wrinkle" patterns, texture and gloss. Color in "wrinkle" finishes. Physical characteristics of "wrinkle" finishes. Surface preparation of "wrinkle" finishes. Application of "wrinkle" finishes. Baking of "wrinkle" finishes. Flow properties of "wrinkle" finishes. Part II. The formulation and manufacture of bake and air dry "wrinkles": Ingredients and processing equipment. Manufacture of "wrinkle" finishes. Castor oil formulations. Oiticica oil formulations. Tung oil formulations. Perilla, fish and soy bean oil formulations. Linseed oil formulations. Asphaltum and Manila "wrinkle" finishes. Synthetic resin formulations. Air dry and flexible formulations. Special pattern formulations. Air dry study of polymerization. Appendices: Outline for study of "wrinkle" patterns. Mechanism in the drying of oils. Summary of "wrinkle" patents. Kay Wrinkle, Inc. v. Ferro. Bibliography. Glossary of terms.

Note: "Wrinkle" finishes are widely used on metals, especially in the finishing of the cases or housings of office machines, measuring instruments, cameras, etc. This book is a comprehensive summary of the subject in which their development, types, and formulations are covered. The chemistry of "wrinkle" finishing is discussed in practical detail, and there are 11 photographs illustrating various finishes. Also the patent aspect including both patents issued and notable patent litigation is covered.

PLASTICS

BJORKSTEN RESEARCH LABORATORIES, INC.
Polyesters and their applications. New York Reinhold Publishing Corporation, 1956. 618 p. illus. 23 cm. $10.00. 6673

Contents (abridged): Theoretical considerations. Unsaturated polyesters. Raw materials. Resin manufacture. Catalysts and accelerators. Shaping. Finishing. Coatings. Films and reinforcements. Final products. Saturated [illegible] resins. Tailor-making polyesters. Diisocyanate-modified polyesters. Linear fiber-forming polyesters. [illegible] polyesters. Testing. Health hazards. Annotated bibliography. Supplement. Author index. Subject index.

Note: The field covered by this book is defined as the polycondensation products of dicarboxylic acids with dihydroxy alcohols. The "alkyds" are not covered. The designated [illegible] of plastics is surveyed comprehensively except for basic theory which is covered in outline. The bibliography occupies more than 300 of the pages. The international literature, including patents and manufacturers' publications as well as books and articles published to June 1, 1954, has been covered, and there is a supplement containing a selection of articles published between that date and March, 1954. The text that precedes the bibliography is essentially a compact digest of published information, and all important statements in it are keyed to literature citations. The author index includes not only authors but also companies and organizations. The subject index includes the names of all compounds mentioned in the text.

D'ALELIO, GAETANO FRANCIS
Experimental plastics and synthetic resins. New York John Wiley & Sons, Inc., 1946 185 p. illus. 27 cm. $6.00. 6674

Contents (abridged): Phenol for resin preparations. Formaldehyde determination. Preparation and [illegible] of diphenylol [illegible]. Preparation of phenol-formaldehyde casting resins. Preparation of phenol-formaldehyde spirit-soluble laminating varnish. Preparation of acid-catalyzed phenol-formaldehyde molding resins. Preparation of substituted phenolic molding powder. Preparation of molding. Preparation of methylol derivatives of urea. Preparation of resins of the urea and melamine type. Preparation of formaldehyde butyl alcohol resins for varnishes. Relationship of alkyd resins to the structure of reactants. Preparation of resins of alkyd resins for coatings. Preparation of diethylene glycol maleate. Polymerization of styrene. Preparation of methacrylic ester. Polymerization of methacrylic ester. Cross-linked methacrylate polymers. Effect of inhibitors. Preparation of polyvinyl alcohol. Preparation of vinyl chloride monomer. Copolymers of vinyl chloride. Polymers and copolymers of vinylidene chloride. Preparation and polymerization of polyallyl esters. Depolymerization of polymers. Determination of polymer structure. Preparation of butadiene polymerization. Preparation of cellulose acetate. Plasticizing of cellulose derivatives. Vulcanizable elastomers. Preparation of protein plastics. Polyvinyl butyral acetal. Resin-impregnated and compressed woods and plywoods. Preparation of an anion exchange resin. Test methods: Formaldehyde determination, using hydroxylamine hydrochloride. Resin content of mixtures. Refractive index. Viscosity determination. Resin content and volatile content of impregnated stock. Water absorption of molded compounds. Oil solubility. Acid number of alkyd resins. Determination of unsaturation. Appendix.

Note: Laboratory procedures for 97 experiments and 23 tests that illustrate the chemical principles and reactions employed in the synthesis and analysis of the important industrial plastics are furnished in the present edition of this work. The first edition bore the title *Laboratory manual of plastics and synthetic resins* and was intended for use in college courses offered to students who had introductory organic chemistry. However, the work was found to be useful as a guide to experimentation in industrial laboratories as well. Nine additional experiments are included in this edition, and alternate methods of synthesis have been introduced in several others; but the plan and most of the content of the book is unchanged. The appendix contains a directory of manufacturers and other sources of supply.

DICKINSON, THOMAS ALBERT
Plastics dictionary; illustrations by Joseph W. Dickinson. New York Pitman Publishing Corporation, 1948 312 p. illus. 23 cm. $5.50 6675

Note: The compiler of this dictionary has avoided the tendency of many lexicographers to overload their work with terms only remotely connected with the subject in hand. He has produced a dictionary which is truly limited to the plastics field, and one which will appeal to the nontechnical because of its brief and nontechnical definitions. Although more than 3,500 terms are defined, these consist overwhelmingly of nouns and adjectives, while only scant attention is given to terms denoting technical processes. A large proportion of the entries are trade names. A useful feature is the tabulation of technical data under appropriate headings, for example, the table on page 12 of the composition and properties of plasticizers.

MARTIN, ROBERT W
The chemistry of phenolic resins: the formation, structure, and reactions of phenolic resins and related products. New York John Wiley & Sons, Inc. 1956. 298 p. 24 cm. $9.50. 6676

Contents: Introduction. Phenol alcohols. Dihydroxydiphenylmethanes. Phenolic resins. Cure of phenolic resins. Joint reactions of phenols and aldehydes with an added reagent. Heterocyclic products. The reaction of phenolic resins with unsaturated compounds. Reactions of phenol-aldehyde products. Reaction kinetics. Index.

Note: A survey of one of the most important families of plastic materials. As the title is intended to make clear, the subject is chemistry and not chemical manufacturing. Nevertheless, there are numerous incidental statements on manufacturing technology. The main emphasis is on reactions that produce phenolic resins and related products and on the chemical structure of the products. Due attention is given to conditions that affect reactions. An extensive but selective literature survey preceded the writing of the book, and one of the features is the inclusion of extensive reference lists for each chapter. Hundreds of structural diagrams are included. Also, there are numerous tables of data on yields, properties and other chemical matters. Organic chemists working at the research level in phenolic resins or other polymers and also organic chemists who are primarily concerned with manufacturing will find the book of interest.

RAFF, R. A. V. AND J. B. ALLISON
Polyethylene. New York. Interscience Publishers Inc., 1956. 551 p. illus. 24 cm. (High polymers: a series of monographs on the chemistry, physics and technology of high polymeric substances; editorial board: H. Mark, and others. Volume xi) $16.00. 6677

Contents: Historical development. Ethylene. Polymerization of ethylene. Modified polyethylenes. Molecular structure of polyethylene. Properties of polyethylene. Analysis and testing of polyethylene. Processing and handling of polyethylene. Uses and applications of polyethylene. Statistical summary. References. Author index. Subject index.

Note: In recent years polyethylene has become one of the most important of the plastics materials. This book, written by two chemists now on the staff of Koppers Company, Inc., is

mainder of the book is devoted largely to finishing materials made from synthetic ingredients. Information is included on materials, properties, reactions, and there are numerous typical formulas. Literature references are supplied. The appendix includes a list of trade names under which the various synthetic materials are marketed. Although the book contains material of potential interest to anyone concerned with the coatings industry it is most useful to chemists and technicians in firms which do not maintain research departments.

GORDON, PHILIP L., AND RUTH GORDON

Paint and varnish manual, formulation and testing New York Interscience Publishers Inc., 1955 182 p illus 19 cm. $3 50 6665–7

Content (abridged): Section I. Oils, resins and varnishes. Experiments. Test procedures. Section II: Pigmented coatings. Experiments. Test procedures. Color chips. Appendixes. Bulking values. Equipment required. Materials required. Temperature conversion table. Glossary Index.

Note. This unusual book is a manual of laboratory exercises which are designed to teach testing and formulation procedures used in the paint and varnish industry Speaking generally the text on each exercise includes one or more formulas for a coating material, specific directions for making the material in the laboratory and an outline of procedure for testing it. Sources of supply for materials and equipment are given. The book is designed for students of chemical engineering who are preparing for careers in the coatings industry It will be useful also in classes for technicians already employed in this industry

PAYNE, HENRY FLEMING

Organic coating technology Volume I, Oils, resins, varnishes, and polymers New York John Wiley & Sons, Inc. 1954 674 p. illus 23 cm. $13 50 6668

Contents Fundamentals of film formation. Vegetable and marine oils for organic coatings. Varnish resins. Varnishes—composition, manufacture, and use. Driers. Volatile solvents. Alkyd resins. Urea- and melamine-formaldehyde resins. Rubber resins. Plasticizers. Cellulosic polymers. Vinyl resins. Acrylic ester resins. Silicone resins. Test methods. Index.

Note. The first volume of projected two-volume work derived from lecture courses given by the author at Polytechnic Institute of Brooklyn. The subject is treated from the viewpoint of advanced chemistry students who are preparing for work in the coatings industry or graduate chemists who have recently entered this field. Appropriately the style is technical and the practical aspects of the subject are emphasized. The typical chapter is devoted to single class of coatings, and includes some information on economic importance, basic chemistry properties, methods of manufacture, uses, and bibliography Patent citations are included in the bibliographies. The second volume had not been published to the close of 1957

SODERBERG, GEORGE A.

Finishing materials and methods. Bloomington McKnight & McKnight Publishing Company, 1952 320 p. illus. 24 cm $4 00 6669

Contents (abridged) Section I, Finishing materials. Oleoresinous varnishes and enamels. Synthetic varnishes and enamels. Shellac varnish Paint. Metallic paint. Oil-resin emulsion paint. Plastic paint. Wrinkle finishing material. Flock. Fire retardants. Pearl essence. Stains. Woodfiller Bleaches. Paint and varnish removers. Coated and polishing abrasives. Waxes. Pressure-sensitive tapes. Section II, Finishing methods Brushing. Spraying. Dipping and flocoating. Roller coating. Tumbling. Methods of procedure. Recommended and safe practices in the finishing department. Opportunities in the painting industry Index.

Note. Although this book is primarily a textbook for practical students enrolled in vocational courses, it contains such wide range of information that its usefulness extends to readers and craftsmen not enrolled in schools. A number of topics not usually treated in practical texts are covered. For example, there is chapter on how paint brushes are made. It is supplemented by a list of pertinent literature. The discussions of most topics are short, but they contain much useful information. There are 189 illustrations of good quality

VON FISCHER, WILLIAM, editor

Paint and varnish technology New York Reinhold Publishing Corporation, 1948. 509 p illus 23 cm. $8 50 6670

Contents Introduction to the protective coatings industry by E. Schulte. Drying oils their origin, manufacture and properties, by S. O. Sorensen. The chemistry of improved drying oils, by R. L. Terrill. Pigments—general classification and description, by R. S. Radcliffe. White hiding pigments, by W H. Madson. Organic toners and mineral pigments, by S. F Dimlich. Rosin and rosin derivatives, by A. A. Albert. Natural resins and kindred products, by G. T Sohl. Alkyd resin technology by C. L. Levesque. The chemistry of urea and melamine coating resins, by R. W Auten. Phenolic resins in protective coatings, by R. R. Waters. Miscellaneous resins in protective coatings, by H. G. Whitcomb. Solvent-type resins (nitrocellulose lacquers) by J R. Yeager and others. Hydrocarbon thinners, by E. H. McArdle. Formulation of the "volatiles" in nitrocellulose lacquers, by C. D Begin. The application of metallic soaps as driers, fungicides, suspending agents and flatting agents, by S. B Elliott. The testing of raw materials, by R. F Wysocki. Principles of paint formulation, by H. W Dell. Resin and varnish manufacture, by J C. Weaver Industrial finishes, by R. C. Ebersman. Trade sales paints—exterior—interior, by A. E. Holton and H. G. Hayward. Water and emulsion paints, by D. A. Kohr Jr Solvent-type finishes, by R. P Wilson. The examination of paints, by F Scofield. Surface preparation, by R. E. Marce. Methods of applying surface coatings, by G. B. Sawyer and others. Resin and varnish making equipment, by D M. Wilhelm and G. H. Mutersbaugh. Index.

Note. A collection of lectures in edited form which were developed originally for use in instruction at the Case Institute of Technology Most of the authors are chemists associated with industrial production of paint materials and paints. In most cases the specific topic of a lecture is treated descriptively and from practical viewpoint, but much information is included that would be difficult to find elsewhere.

VON FISCHER, WILLIAM, AND EDWARD G BOBALEK, editors

Organic protective coatings New York Reinhold Publishing Corporation, 1953 387 p illus. 23 cm $7 50 6671

Contents Paint as an engineering material, by W von Fischer. Principles of formulation, by E. G. Bobalek. Some theoretical considerations regarding the significance of the pigment dispersion problem in paint formulation, by D M. Gans. Anticorrosive pigments, their function, composition and testing, by A. J. Eickhoff. Design for reflectance properties, by J R. DeVore. Luminescent coatings Part A, Inorganic pigments, by J F DeVore. Part B, Organic colors, by E. G. Bobalek. Reflectance spectrophotometry of pigmented materials color matching calculations, by J. L. Saunderson. New pigments in modern color design, by E. C. Botti. Vinyl resins for organic protective coatings Part A, General theory of formulation, by R. W Quarles. Part B, Stabilizers for vinyl resins, by R. E. Lally Part C, Recent developments in the theory and use of plasticizers for vinyl resins, by H. Grinsfelder. Amineplast resins for organic coatings, by C. H. Parker and F J. Hahn. Wood properties that affect paint performance, by F L. Browne. Hot spray lacquers, by R. F Wise and F E. Piech. Fundamentals of formulating emulsion and latex paints, by W von Fischer Metal protection with synthetic resin coatings, by E. E. McSweeney Organic coatings for electrical insulation, by A. J Sherburne. Silicone resins in heat resistant paints, by M. Kin. Index.

Note Paint and related protective coatings are presented as engineering rather than decorative materials in this authoritative book The primary emphasis is on the properties of the modern organic coatings, but formulation of these coatings, applying them and testing them are all covered. In such chapters as the one on hot spray lacquers, techniques of application are principal topic. Typical formulas are given in some chapters, and literature references are included in all of them.

WALDIE, W A.

The science of wrinkle finishing the manufacture and application of the "one coat" finish Introduction by Paul Kennedy Dayton Research Press Inc. 1949 204 p. illus. (part col d) 21 cm. $5.00 6672

WINDING CHARLES CALVERT AND R. LEONARD HASCHE

Plastics, theory and practice the technology of high polymers. New York McGraw Hill Book Company Inc., 1947 280 p. illus. 23 cm. $6.50 6683

Contents (abridged) The formation and structure of high polymers. General applications of resins. Resins formed from high molecular weight natural products: Fossil and plant resins. Cellulose derivatives. Rubber derivatives. Casein and other protein plastics. Resins formed by condensation reactions. Polyethenoic resins. Silicones. Rubber and synthetic rubbers. Appendix: Tables, properties of common molding materials. Tables, properties of rubbers. Bibliography. Index of trade names and companies. Visual aids. Index.

Note A concise, well-organized survey. The authors have planned it chiefly for chemical engineers who are already familiar with organic chemistry; hence, an attempt is made to present the elementary side of the subject. Flow sheets that illustrate generalized methods of manufacturing the more important resins are included.

VARIOUS SUBSTANCES

ABRAHAM HERBERT

Asphalts and allied substances their occurrence modes of production uses in the arts and methods of testing. Fifth edition. New York D Van Nostrand Company Inc. 1945 2 v 2 142 p. illus. 23 cm. $30.00 6684

Contents Volume I, Raw materials and manufactured products: Part I, General considerations. Historical review. Terminology and classification of bituminous substances. Chemistry of bituminous substances. Geology and origin of bitumens and pyrobitumens. Annual production of bituminous substances and their manufactured products. Part II, Semi-solid and solid bitumens and pyrobitumens. Methods of mining, transporting, and refining. Mineral waxes. Native asphalts occurring in a fairly pure state. Native asphalts associated with mineral matter. Asphaltites. Asphaltic pyrobitumens. Pyrobituminous shales. Part III, Tars, pitches, and pyrogenous asphalts. General methods of producing tars. Wood tar, wood-tar pitch and rosin pitch. Peat and lignite tars and pitches. Shale tar and shale-tar pitch. Coal tar and coal-tar pitch. Water-gas and oil-gas tars and pitches. Fatty-acid pitch, bone tar and bone-tar pitch. Part IV, Pyrogenous asphalts and waxes. Petroleum asphalts. Paraffin wax, wax tailings and petroleum resins. Sulfurized asphalt. Part V, Manufactured products and their uses. Compounding of bituminous substances. Bituminous substances admixed with discrete aggregates, bituminous substances dispersed in water. Bituminous substances dissolved in solvents. Solid, semi-solid and semi-liquid bituminous compositions. Bituminous paving materials. Bituminized fabrics, felts and papers for roofing, flooring, waterproofing, building and insulating purposes. Bituminous lacquers, enamels, varnishes, enamels and japans. Volume II, Methods of testing, bibliography and references: Part VI, Methods of testing. Sampling. Examination of crude, refined and blended bituminous substances. Examination of bituminous substances combined with discrete aggregates. Examination of bituminized fabrics. Examination of bitumen-solvent compositions. Examination of bituminous dispersions. Weathering tests. Temperature conversion table. Bibliography. References. Index of subjects. Index of specifications. Index of names (authors and patentees). Index of patents.

Note This comprehensive work deals with asphalts, tars and pitches and with the industrial products and processes for which they are used. The various deposits of natural asphaltic material throughout the world are discussed, country by country, and the tars and pitches which are produced by distillation and other industrial means are described. Detailed accounts are given of the industrial operations in which asphaltic materials are used, and the methods of testing are furnished for these various raw materials and their finished products. Special features of this fifth edition are the 64-page bibliography—containing over 900 [illegible]—the 92 page index of patents, and the indexes of authors—patentees, and specifications.

ADHESION AND ADHESIVES FUNDAMENTALS AND PRACTICE. Papers read at a symposium held at Case Institute of Technology in Cleveland Ohio and a conference held in London England. New York John Wiley & Sons, Inc. 1954 229 p. illus. 29 cm. $10.50 6685

Contents (abridged) Fundamentals: Survey of adhesion and types of bonds involved, by F. W. Reinhart. On the theory of adhesion, by S. J. Gaynak. Adhesion of organic surface coatings, by H. Grinsfelder. Energy of adhesion, molecular forces and adhesive ruptures, by G. Kraus. The adhesion of high polymers to cellulose, by A. D. McLaren. The mechanism of adhesion, by J. J. Bikerman. Practice: Types and uses of adhesives, by R. F. Blomquist. Adhesives for glass, by L. L. Yaeger. Adhesion in laminated glass, by A. C. Wake. Adhesives in the wood-working industry, by E. A. Dunn. Adhesion in the construction and maintenance of roads, by A. R. Lee and J. H. Nicholas. Pressure-sensitive adhesives, by M. Gassidy and J. Dow. Practical applications of pressure-sensitive tapes, by J. E. Oakes. Aircraft structural adhesives, by T. J. Martin. Room-temperature-setting adhesives for metals and plastics, by M. A. Perry, jr. The adhesion of metals, by G. W. Rowe. The adhesion of rubber and textiles, by W. C. Wake. Physicochemical properties of animal glue, by R. H. Drew. Sodium silicate as an adhesive, by W. S. Macfarlane and J. F. Sewell. Industrial adhesives of vegetable and synthetic origin, by W. J. Opie. Adhesive compositions prepared from resins and rubber emulsions by admixture with hydraulic cements, by L. H. Griffiths. Non-destructive testing of adhesives by ultra-sonic waves, by A. G. H. Dietz. Comments on adequacy and limitations of current test methods, by L. Gilman.

Note The Case Institute of Technology and the Society of Chemical Industry were the sponsors of the meetings at which the 43 papers that appear in this volume were originally presented in 1951. Although some of the papers are more summaries of present-day knowledge or practice, many of them are accounts of recent research. Literature references are appended to most of the papers, and many are supplemented also by excerpts from discussions at the meetings. The authors are all specialists, either in basic research relating to adhesives or in the application and testing of them. The volume is potentially of interest both to industrial chemists who are concerned with research and development of adhesives and to designers of products in which adhesives might be used.

AMERICAN SOCIETY FOR TESTING MATERIALS

Glossary of terms relating to rubber and rubber-like materials. Prepared by ASTM Committee D-11 on Rubber and Rubber-like Materials. Philadelphia American Society for Testing Materials 1956 121 p 23 cm. (American Society for Testing Materials. Special technical publication, no. 184) $3.00 6686

Note: Approximately 2,000 terms, including chemical terms, non-chemical terms and the names of common materials are defined in this publication. Included also are capsule biographies of major contributors to the knowledge of rubber and rubber-like materials. Trade names are not included in the main alphabet, but there is a four-page appendix containing the trade names for apparatus and for compositions whose chemical nature has been divulged by the manufacturers.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on aging of rubbers. Chicago Spring meeting American Society for Testing Materials, March 2 1949 Philadelphia American Society for Testing Materials 1949 72 p. illus. 23 cm. (Special technical publication no 89) $2 40. 6687

Contents: Introduction, by O. C. Mosmer. The mode of attack of oxygen on rubber, by A. M. Neal and J. R. Vincent. Oxygen-absorption methods—their utility and limitations in the study of aging, by J. Reid Shelton. Chemical changes in elastomers and antioxidants during aging, by J. O. Cole. Physical aspects of the aging of rubbers, by M. C. Throdahl. The effects of light and ozone on rubber, by J. T. Blake. The effect of temperature on the air aging of rubber vulcanizates, by M. G. Schoch, jr. and A. E. Juve.

comprehensive account of its chemistry chemical engineering and applications. Full accounts are given of most of the aspects which are named in the chapter titles. The chapter on polymerization, for instance, is 70 pages long and that on properties runs to more than 130 pages. There are over 140 tables. The extensive bibliography is international in scope and includes references to patents.

RIDDLE, E H

Monomeric acrylic esters New York Reinhold Publishing Corporation, 1954 221 p illus 24 cm. $6 00 6678

Contents Introduction. Physical properties. Storage and handling. Polymerization of acrylic esters. Copolymerization of acrylic esters. Reactions of the acrylic esters. Analytical methods.

Note A reference book in which is presented a wide range of information on the properties, polymerization, reactions and analysis of acrylate and methacrylate esters. The author and his associates are all on the staff of the Rohm & Haas Company a major supplier of these chemicals, and the scope of the book is limited to esters which are currently available in commercial quantities. Some of the information presented, for example that on handling, appears to be based on company experience, but the greater part has been abstracted from periodical and patent literature In fact, so many patents are cited that the book can be used as a guide to the patent literature. Of interest to chemists and chemical engineers who are concerned with product development or manufacture in such industries as plastics, synthetic fibers and synthetic coatings.

SCHILDKNECHT, CALVIN E., editor

Polymer processes chemical technology of plastics, resins, rubbers adhesives and fibers New York Interscience Publishers Inc., 1956 914 p illus. 24 cm (High polymers, a series of monographs on the chemistry, physics and technology of high polymeric substances editorial board, H Mark and others Volume x) $19 50 6679

Contents Introduction to free radical polymerization by J H. Baxendale. Polymerizations in bulk, by C. E. Schildknecht. Polymerizations in suspension, by E. Trommsdorff and C. E. Schildknecht. Polymerizations in emulsion, by H. L. Williams. Polymerizations in solution, by C. E. Schildknecht. Ionic polymerizations, by C. E. Schildknecht. Polyamides and polyesters, by D G. Bannerman and E. E. Magat. Condensations with formaldehyde, by T J Suen. Cellulose and cellulose derivatives, by B G. Ranby and S. A. Rydholm. Epoxy resins, by S. S. Stivala. Polysulfide polymers, by E. M. Fettes and J S. Jorczak. New adhesives, by W J Powers. Stabilization of polymers, by C. E. Schildknecht. Paste techniques, by W D Todd. Latex techniques, by O. J Authinger and N H. Sherwood. Compounding and processing rubbers and resins, by G S. Garvin. Polymer reinforcement (polyester epoxy silicone and phenolic resins) by H. L. Gerhart and E. W Moffett. Spinning and drawing fibers, by J L. Riley Appendix. Index.

Note An important addition to the literature of polymers. The chapters are the work of recognized authorities, most of whom are associated with large manufacturers of chemical products in the United States of America In the typical chapter both the basic chemistry (insofar as it is known) and the chemical technology are presented. However the emphasis is on the latter All of the chapters are based on extensive literature surveys including the patent literature. A wide variety of commercial products are described briefly and trade names are often listed. Considerable information on manufacturing methods is given Literature citations are presented in the form of footnotes, but there is no index to the authors cited. The subject index is a detailed one.

SCHILDKNECHT CALVIN E

Vinyl and related polymers their preparations properties and applications in rubbers plastics fibers and in medical and industrial arts New York John Wiley & Sons Inc 1952 723 p. illus. 24 cm $16 50 6680

Contents Styrene polymerization. Styrene copolymerization. Styrene derivative and related polymers. Methacrylic and acrylic ester polymers. Acrylonitrile, acrylic acid and related polymers. Polymers from vinyl acetate and related monomers. Vinyl chloride polymers. Vinylidene chloride and fluorovinyl polymers. Ethylene high polymers and copolymers. High polymers and copolymers of isobutylene. Vinyl ether polymers. Sulfur-vinyl compounds. Nitrogen-vinyl polymers. Vinyl ketones and miscellaneous polymers. Appendix. Abbreviations of publications frequently cited. Companies and organizations cited. Dates of British, French, German and U S. patents. Index.

Note. The compounds discussed in this book include not only many of the well-known plastics but also ion exchange resins, synthetic fibers, finishing materials, and adhesives. The treatment is organized in families or groups as indicated by the chapter titles. Each chapter is mainly an organized critical digest of the pertinent literature, with references to the original publications. Both patents and Allied Intelligence reports were included in the surveyed literature. European and United States of America trademarks and names are mentioned at appropriate points and are included in the index.

SEYMOUR, RAYMOND B , AND ROBERT H. STEINER

Plastics for corrosion resistant applications. New York Reinhold Publishing Corporation, 1955 423 p. illus 23 cm. $7.50 6681

Content Section I, General information on plastics Introduction. A short history of plastic materials of construction. Plastic fundamentals. Physical properties of plastics. Relation of chemical resistance and molecular structure. Testing of plastics. Section II, Plastic materials of construction Protective coatings. Organic linings. Chemical resistant mortar cements. Casting resins. Cellular plastics. Plastic impregnants. Industrial adhesives. Reinforced plastics. Section III, Thermoplastic applications. Thermoplastic structural materials. Thermoplastic structures. Plastic pipe, valves and fittings. Water joining materials. Sewer joining materials. Section IV Applications of plastics in masonry construction Design considerations for concrete floors and tanks. Design of steel tanks. Chemical resistant masonry construction. Chemical resistant floors. Section V Plastics selection of plastics for the solution of corrosion problems. Author index. Subject index.

Note. The first section of this book runs to 80 pages and is a very concise summary of fundamental information pertaining to plastic materials. It includes also a short chapter on testing methods. The remainder of the space is devoted to plastic materials and their applications viewed from the standpoint of corrosion resistance. All plastic materials of interest from this standpoint are considered, including such natural materials as sulfur and asphalt as well as a wide range of synthetic plastics. Chemical and physical properties, applications, fabricating methods, etc., are all covered. Generally speaking, the authors' method of presentation is to present the basic data and describe typical applications but to avoid recommendations for specific applications. nevertheless several tabulations of specific applications which have been proved by satisfactory service are included. Selected literature references are supplied in all chapters.

SIMONDS, HERBERT RUMSEY AND OTHERS

Handbook of plastics by Herbert R. Simonds, Archie J Weith and M H. Bigelow Second edition. Based in part on first edition by Herbert R Simonds and Carleton Ellis. New York D Van Nostrand Company Inc., 1949 1,511 p. illus. 24 cm. $25 00 6682

Contents Survey of the industry Properties of plastics. Commercial materials. Primary ingredients. Characteristics of the various plastics. Textile fibers. Rubbers and elastomers. Natural resins. Films and sheetings. Laminates and plywoods. Coatings. Adhesives. Manufacturing processes. Plant equipment. Processing and fabricating. Finishing operations. Molds. The chemistry of plastics. Analytical methods. Applications. Designing molded parts. Operating practice. Choice of plastic. Cost accounting in the industry Patents in plastics. World plastics. Bibliography General index.

Note A comprehensive reference book prepared under the auspices of an advisory committee composed of leading figures in the plastics manufacturing and fabricating industries. Its purpose and scope has not been materially changed in this edition, but it has been extensively rewritten and expanded. All of the chapters have been revised—some of them very substantially—and new chapters on adhesives, cost accounting, the plastics industry throughout the world, and patents have been added. The bibliography glossaries, lists of trade-marks and names, and the extensive tabulations of technical data have all been revised.

sources. The last-mentioned are international in scope and include some patents. The analytical section at the end of the book covers general analytical methods. The book is an invaluable one for chemists in the perfume industry and is of some interest to organic chemists in other lines.

BENNETT, HARRY editor

The chemical formulary a collection of valuable, timely practical commercial formulae and recipes for making thousands of products in many fields of industry New York Chemical Publishing Company 1933–43 6 v 22 cm. $8.00 per vol. 6693

—— Cumulative index for Volumes I–VI of The chemical formulary New York Chemical Publishing Company 1944 164 p. 22 cm. o.p. 6693A

—— The chemical formulary Volumes VII–X. New York Chemical Publishing Company 1945–56 4 v 22 cm. Vols. VII–IX, $7.50 per vol. vol. X, $8.00. 6693B

Note. A collection of useful recipes and formulas in many fields. In each volume, the material [illegible] grouped under such classifications as Adhesives, Beverages, Cosmetics and drugs; Emulsions, Food products, Inks and marking materials, Lubricants and oils; Metals, alloys and their treatment; Paint, varnish, lacquer and other coatings, Photography; Polishes and abrasives, Pyrotechnics and explosives, Soaps and cleaners, Textiles and fibers. Each volume contains new material of the same nature and is not [illegible] revision of previous volumes. Patent references are given in many cases. Each volume is individually indexed. The set is of interest to small manufacturers, industrial chemists, and others in search of formulas for amateur and commercial use. A new edition of the index, covering Volumes I–X, was scheduled for publication in 1958.

BOGUE, ROBERT HERMAN

The chemistry of Portland cement. Second edition. New York Reinhold Publishing Corporation, 1955 793 p. illus. 24 cm. $16.50. 6694

Contents Part I, The chemistry of clinker formation: History of the cement industry. Classification of cements. The manufacture of Portland cement. Early experimentation on the constitution of Portland cement. Methods of investigation. Heat treatment in manufacture. The principal constituents of clinker. The combination of the cement components. Dosage and control of cement composition. Calculation of phase composition. Part II, The equilibria of clinker components. The principles of high-temperature phase research. The techniques of high-temperature phase research. The system CaO-Al_2O_3—SiO_2. Systems containing MgO, with CaO, Al_2O_3, SiO_2. Systems containing FeO, TiO_2 and P_2O_5. Systems containing Fe_2O_3 with CaO and SiO_2. Systems containing MgO and Fe_2O_3 with CaO and Al_2O_3. Systems containing MgO and Fe_2O_3 with CaO, Al_2O_3, and SiO_2. Systems containing K_2O. Systems containing Na_2O and Li_2O and the alkalies with SO_3. Part III, The chemistry of cement utilization. Early studies on cement hydration. The system CaO—SiO_2—H_2O. Systems containing CaO and H_2O with Al_2O_3 and Fe_2O_3. The aluminate and ferrite complex salts. The heat of hydration. The structure of hydrated cements. The setting of cement pastes. The hardening of cement pastes. External reactions of hydrated pastes. Tests for cement quality. Appendices. Author index. Subject index.

Note In the United States of America, this book is the standard survey of Portland cement chemistry both the chemistry pertinent to manufacture and that pertinent to utilization. It contains, among other material, especially full information on phase rule relationships for the high temperature (fusion chemistry of clinker formation) and for the water-cement systems of cement setting and hardening processes. The body of the work [illegible] comprehensive critical survey of the literature and all important statements and data are keyed to citations of the source articles. The first edition appeared in 1947. This second edition is organized similarly and has the same scope. However it has been extensively revised in order to incorporate methods and results reported in the literature since the writing of the first edition. The type was reset and the pages are now more legible and the illustrations are better reproduced.

BONER, C J

Manufacture and application of lubricating greases. New York Reinhold Publishing Corporation 1954 977 p. illus. 24 cm. $18.50 6695

Contents: Introduction. Structure and theory. Additives other than structure modifiers. Raw materials. Manufacturing processes. Equipment for lubricating grease manufacture. Aluminum base lubricating greases. Barium base lubricating greases. Calcium base lubricating greases. Lithium base lubricating greases. Sodium base lubricating greases. Lead soap lubricating greases. Strontium base lubricating greases. Miscellaneous metal soaps as components of lubricating greases. Mixed base lubricating greases. Complex soap lubricating greases. Non-soap thickeners for lubricating fluids. Fillers in lubricating greases and solid lubricants. Residua and petrolatums as lubricants. Analysis of lubricating greases. Tests of lubricating greases and their significance. Application of lubricating greases. Trends in lubricating greases. Index.

Note: A comprehensive work based in large part on the literature published since 1937. It covers structure, raw materials, manufacturing processes and equipment, the various classes of lubricating greases based on the thickening agents now used, analysis and testing, methods of applying greases to machines, and [illegible] view of probable future developments. Most of the space is devoted to aspects of the field which are primarily of interest to manufacturers of lubricating greases. The group of 18 chapters, which begins with the chapter on raw materials, accounts for 672 of the book's pages. However, these chapters do contain some information potentially useful to engineers, purchasing agents and technicians [illegible] are interested in lubricating greases from the standpoint of use, and the terminal chapters on analysis testing and application are primarily for users. Extensive bibliographies in which important *textual statements are keyed are* [illegible] *valuable feature. The author is* Chief Research Chemist of the Battenfeld Grease and Oil Corporation.

BRAUNS FRIEDRICH EMIL

The chemistry of lignin. New York Academic Press, Inc. 1952 808 p 24 cm. $14.50 6696

Contents Introduction. The evolution of lignin chemistry. The detection and distribution of lignin. Color reactions of lignified materials. The isolation of lignin. The determination of lignin. The physical properties of lignin. The elementary composition and constituent groups of lignin. The acylation and acetylation of lignin. The alkylation of lignin. The halogenation of lignin. The nitration of lignin. The sulfonation of lignin. The hydrolysis of lignin. The alcoholysis of lignin. The mercaptolysis of lignin. The phenolysis of lignin. Reduction, hydrogenation, and hydrogenolysis of lignin. The oxidation of lignin. The alkali fusion of lignin. Special reactions with lignin. The thermal decomposition of lignin. The biological decomposition of lignin. Theories on the structure of lignin. The linkage of lignin in the plant. Theories on the formation of lignin. Synthetic lignins. Author index. Subject index.

Note A comprehensive monograph of the current knowledge of the chemistry of lignin, written for professional chemists. It is based upon [illegible] literature survey; but, unlike some books that are similarly derived, the text does not lean on the original articles but is full enough to be useful in itself. The preface is not dated, and the author has included no statement as to the date to which he covered the literature. A perusal of [illegible] dozen or so of the chapter bibliographies indicates that comprehensive coverage ended with 1948, though [illegible] few entries for publications issued in 1949 and 1950 are included. The book is of primary interest to chemists in the paper industry and of secondary interest to chemists in the plastics industry and to botanists. The author is associated with the Institute of Paper Chemistry

BRAUTLECHT CHARLES ANDREW

Starch its sources, production and uses. New York *Reinhold Publishing* Corporation, 1953 408 p illus. 24 cm. $12 00 6697

Contents Starch, general. Physical structure of starch granules. Potatoes for industry. Potato starch manufacturing processes. White potato starch specifications. Other potato starch manufacture. Corn starch. Tapioca starch. Wheat starch. Rice starch. Sago starch.

Note The papers comprising this symposium have been prepared by industrial chemists actively engaged in rubber research. They provide a description of methods employed in conducting accelerated aging tests on natural and synthetic rubbers and review of present day knowledge concerning the physical and chemical changes which occur during the aging process. Discussions and bibliographies are included.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on rubber testing, fiftieth annual meeting, American Society for Testing Materials, Atlantic City, N J, June 16–20, 1947 Philadelphia American Society for Testing Materials 1947 109 p illus 23 cm (Special technical publication no 74) $1 00 6688

Contents Introduction, by S. Collier The significance of voluntary standards and their status in the rubber industry by A. W Carpenter Functions of rubber reserve—past, present, and projected, by W R. Hucks. Development of methods of chemical analysis of synthetic rubber by W P Tyler and T Higuchi. Developments and improvements in methods of stress-strain testing of rubber by J W Schade and F L. Roth. Development and standardization of tests for evaluating processibility of rubber by R. H. Taylor and others. Standardization of testing and inspection in government synthetic rubber plants, by L. Messer and others. Testing and grading of wild and plantation rubbers, by N Bekkedahl. The use of statistical methods in rubber evaluation, by M. M. Sandomire.

Note In these papers physical and chemical methods of testing synthetic and natural rubbers developed or utilized during World War II by United States government agencies and by industry are described. The first paper reviews standardization efforts in the industry before World War II and points out the need for further effort. The second paper reviews briefly the activities of the Rubber Reserve Company and allied government agencies in the stockpiling of natural rubber and the production of synthetic.

BAILEY, ALTON EDWARD, editor

Cottonseed and cottonseed products, their chemistry and chemical technology New York Interscience Publishers, Inc., 1948 936 p illus 24 cm (Fats and oils, a series of monographs) $16.50 6689

Contents. Part I, History and present state of the cottonseed industry· History of cotton and the United States cottonseed industry by M. R. Cooper Production and consumption of cottonseed and cottonseed products, by C. E. Lund. Part II, Composition and characteristics Structure of the cottonseed, by J Leahy Cottonseed composition—relation to variety maturity and environment of the plant, by W H. Tharp. Biological processes of the cottonseed, by A. M. Altschul. Pigments of cottonseed, by C. H. Boatner Cottonseed oil, by A. E. Bailey Cottonseed proteins, by T D Fontaine. Miscellaneous constituents, by F G. Dollear and K. S. Markley Part III, Grading and evaluation of cottonseed and its primary products Grading and evaluation of cottonseed, by G. S. Meloy Grading and evaluation of cottonseed oil, cake, and meal, by E. R. Barrow Grading of cotton linters, by G S. Meloy Part IV Cottonseed processing Handling and storage of cottonseed, by O. H. Alderks. Mechanical pretreatment of the seed, by A. C. Wamble. Cooking of meats and recovery f the oil, by O. H. Alderks. Economics of cottonseed crushing, by J F Moloney Part V Utilization of cottonseed products Processing of cottonseed oil, by E. M. James. Edible cottonseed oil products, by H. C. Black. Nutrition aspects of cottonseed oil utilization—the role of fat in human nutrition, by H. J Deuel, Jr Nonedible cottonseed oil products, by O. H. Wurster W J Govan, Jr and G. J Stockmann. Cottonseed as source of animal feedstuffs, by F Hale and C. M. Lyman. Miscellaneous products from seed and meal, by A. E. Bailey Cottonseed hulls, by J W Dunning. Cotton linters, by P Van Wyck. Author index. Subject index.

Note. This comprehensive treatise on the cottonseed industry constitutes a valuable reference manual on all phases of the industry Each of the 24 chapters has been prepared by a scientist or industrialist well qualified to discuss a particular phase f the subject.

BAILEY, ALTON EDWARD

Industrial oil and fat products. Second completely revised and augmented edition. New York Interscience Publishers Inc., 1951 967 p illus. 23 cm (Fats and oils, a series of monographs on the chemistry and technology of fats, oils, and related substances editorial board A E Bailey and others) $16.50 6690

Contents (abridged): Part I, The nature of fats and oils· Reactions of fats and fatty acids. Physical properties of fats and fatty acids. *Role of fats in diet of man.* Part II, Raw materials for oil and fat products. Sources, utilization, and classification of oils and fats. Composition and characteristics of individual fats and oils. Part III, Industrial utilization of fats and oils. Cooking and salad oils. Plastic shortening agents. Butter and margarine. Bakery products and confections. Soap and other surface-active agents. Paints, varnishes, and related products. Part IV Unit processes in oil and fat technology· Handling, storage and grading of oils and oil-bearing materials. Extraction of fats and oils. Refining and bleaching. Hydrogenation. Deodorization. Fat splitting, esterification, and interesterification. Soapmaking. *Fractionation of fats and fatty acids.* Polymerization, isomerization, and related processes. Solidification, homogenization, and emulsification. Author index. Subject index.

Note. A comprehensive monograph on the fats and oils used in industry and the technology of extracting and using them. In addition to natural products, information is included on spans, "tweens" and other synthetic materials used in association with fats and oils, especially in food products. The treatment is on a professional level, and the book is intended for graduate students and graduate chemists already at work in industry Processes, extraction, refining, hydrogenation, etc., are explicitly described. Related literature is cited in footnotes, and the authors' names are brought out in the 19-page author index. In comparison to the first edition (1945) the work has been extensively rewritten and much expanded.

BAILEY, ALTON EDWARD

Melting and solidification of fats New York Interscience Publishers, Inc., 1950. 357 p 23 cm. $9 00 6691

Contents. General and theoretical considerations. Laboratory techniques. Melting and solidification of pure compounds. Melting and solidification of mixtures. Solubility Practical melting and solidification processes. Author index. Subject index.

Note: Both the theoretical and practical aspects of the melting and solidification of fats are covered in this book. The presentation is on professional level, and the work is designed for chemists and other technologists in industry and industrial laboratories. Phase diagrams and other graphical and tabular presentations of useful data appear frequently throughout the book. The related literature is cited in footnotes. The names of the authors of the papers referred to are gathered together in the author index.

BEDOUKIAN, PAUL Z

Perfumery synthetics and isolates. New York D Van Nostrand Company Inc., 1951 488 p. illus. 24 cm. $9 75 6692

Contents Introduction. Acetophenone and homologs. Aliphatic alcohols. Aliphatic aldehydes. Amyl cinnamic aldehyde. Anisic aldehyde (aubepine) Anthranilates. Benzaldehyde. Benzophenone. Benzyl alcohol and its esters. Borneol and iso-borneol. Cinnamic acid and its esters. Cinnamic aldehyde. Cinnamyl alcohol. Citral. Citronellal. Citronellol (rhodinol) Coumarin. *p*-cresol derivatives Cyclamen aldehyde. Dimethyl benzyl carbinol. Diphenyl oxide. Eugenol and iso-eugenol. Geraniol. Heliotropin. Hydratropic aldehyde. Hydrocinnamic alcohol. Hydroxycitronellal. Indole and its homologs. Ionone. Alkyl gamma lactones. Linalool. Methyl heptine carbonate and homologs. Beta naphthyl ethers. Artificial nitro musks Macrocyclic musk compounds. Nerol. Phenylacetaldehyde. Phenyl acetic acid and esters. Phenyl ethyl alcohol. Phenyl methyl carbinol Salicylates. Terpineol. Vanillin. Analytical section. Vapor pressure graphs. Index.

Note. A reference book of information on synthetic perfumery and flavoring compounds. In most instances the following information is given for each compound chemical name, chemical formula, structural diagram, a general description covering uses and other points, occurrence, methods of preparation, chemical properties, physical constants, methods of manufacture, methods of purification and analysis, statistical data on production and sales, and literature ref-

Applied Chemistry

Various Substances

arrangement is alphabetical, with substances listed under their currently accepted names. Included in the same alphabet are numerous cross references, chiefly from synonyms. For each substance, information (if available) is given on the following points: Chemical formula, physical and chemical properties. Uses in cosmetic, dental and medical products. Toxicity and dermatologic action. Literature references are given for the information on toxicity and dermatologic action, and the bibliography runs to 2314 citations. Preparation of the book was sponsored by the Toilet Goods Association, and the literature review on which it was based was carried out by the Laboratory of Applied Physiology of Yale University

GUENTHER, ERNEST

The essential oils. Princeton D Van Nostrand Company Inc., 1948–52 7 v illus. 24 cm. Vol. I, $8.50 vols. II–V $12.50 per vol. vol. VI, $13.50 set, $69 50 6704

Contents (abridged) Volume I, History—origin in plants, production—analysis. The origin and development of the essential oil industry by George Urdang. The chemistry, origin and function of essential oils in plant life, by A. J. Haagen-Smit. The production of essential oils—methods of distillation, enfleurage, maceration, and extraction with volatile solvents, by E. Guenther. The examination and analysis of essential oils, synthetics, and isolates, by E. E. Langenau. Appendix. Index. Volume II, The constituents of essential oils, co-author, Darrell Althausen. Hydrocarbons. Alcohols. Aldehydes. Ketones. Phenols. Quinones. Acids. Esters. Lactones, coumarins, and coumarones. Furan derivatives. Oxides. Compounds containing nitrogen and sulfur. Terpenes, sesquiterpenes, and derivatives of unknown constitution. The preparation of derivatives of essential oil constituents, by F. E. Sherrill. Index. Volume III, Essential oils of the plant families Rutaceae and Labiatae. Index. Volume IV, Essential oils of the plant families Gramineae, Lauraceae, Burseraceae, Myrtaceae, Umbelliferae, and Geraniaceae. Index. Volume V, Essential oils of the plant families Rosaceae, Myristicaceae, Zingiberaceae, Piperaceae, Anacardiaceae, Hamamelidaceae, Santalaceae and Myoporaceae, Zygophyllaceae, Leguminosae, Rubiaceae, Dipterocarpaceae, Annonaceae, Oleaceae, Amaryllidaceae, Magnoliaceae, Caprifoliaceae, Violaceae, Resedaceae, Caryophyllaceae, Pinaceae, Theaceae, and Compositae. Index. Volume VI, Essential oils of the plant families Ericaceae, Betulaceae, Valerianaceae, Verbenaceae, Cistaceae, Cruciferae, Liliaceae, Iridaceae, Araceae, Palmae, Cyperaceae, Moraceae, Aristolochiaceae, Chenopodiaceae, Ranunculaceae, Euphorbiaceae, Malvaceae, Canellaceae, Polemoniaceae, Pinaceae, Taxodiaceae, and Cupressaceae. Botanical classification of essential oil plants. Index, Volume VI. Index, Volumes I–VI.

Note A thorough and authoritative review of the whole subject of essential oils. The first volume deals with the chemistry and general manufacturing procedures. The second volume provides data on the occurrence, methods of isolation, and properties of the natural constituents of essential oils. The remaining four volumes discuss the individual oils under such headings as history, botany, producing regions, climatic and soil requirements, planting, harvesting, properties, composition, and total production. The numerous literature references constitute an extensive bibliography of the subject.

HASSLER, JOHN W

Active carbon. New York Chemical Publishing Company Inc., 1951 384 p. 23 cm. $7.00 6705

Contents (abridged) Part I, Preparation and properties. Preparation of active carbon. Theories of adsorption. Chemical and physical properties of adsorbable compounds. Adsorption from mixtures. Leaching? and peptization. Theories of contact catalysis. Chemistry and physics of the active-carbon surface. Desorption. Part II, Applications. Liquid systems. Sugars and syrups. Fats and oils. Alcoholic beverages. Water purification. Organic chemicals. Biochemistry and pharmacology. Analytical applications. Protection against toxic gases. Recovery of solvent and other vapors. Applications in catalysis. Part III, Experimental methods. General principles of experimental adsorption with active carbon. Gas adsorption. Liquid-phase adsorption. Index.

Note A monograph in which the whole field is compactly covered, and references are given to the pertinent literature. The bibliographies include not only books, periodicals, and patents, but also some references to unpublished information. The excellent documents of applications in specific fields account for about one-third of the book.

HOWARD, FRANK ATHERTON

Buna rubber the birth of an industry New York D Van Nostrand Company Inc., 1947 307 p. illus. 22 cm. $5.00 6706

Contents: Rubber. Oil from coal. American rights in German synthetic rubber. Infancy of synthetic rubber. Butyl rubber and vinyl? Europe. The last year of peace. War in Europe. The Muscle Shoals? Board. Europe falls. The Advisory Commission. The problem comes to R. F. C. Indecision. Laying the foundations. Establishing industrial cooperation. Setting the war program. Controversy. Confusion. The Baruch committee. The rubber director. The new industry. Appendix. Index.

Note. Of historical rather than technical importance, this work gives an authentic account of certain major aspects of the founding of the synthetic rubber industry in the United States of America. It describes the program after World War I in the making of Buna rubber under the joint research project of the Standard Oil Company (N.J.) and I. G. Farbenindustrie. The problems which arose at the outbreak of World War II over the joint ownership of the Standard-I. G. Company is discussed at some length, and the reports of the settlements made are included in the appendix. Much additional documentary material on the organization and operations of the industry in the United States is included.

KERR, RALPH WALDO editor

Chemistry and industry of starch. Second edition, revised and enlarged. New York Academic Press, Inc., 1950 719 p. illus. 23 cm. $12.50. 6707

Contents (abridged) Section I, Occurrence in nature. Section II, Preparation: The manufacture of corn starch. Manufacture of tapioca and arrowroot starches. Manufacture of wheat, potato, and other industrial starches. Fractionation of modified starches in practice. Section III, Properties. Section IV Reactions. The hydrogen bond in starch as a basis for interpreting its behavior and reactivity. Derivatives of starch. Oxidation of starch. Dextrinization. Acid hydrolysis of starch. The enzymes, properties and production. Modification of starch by enzymes. Section V Uses and analysis: Uses of starch in paper manufacture. Uses of starch and starch products in the fermentation industries. Use of starch and starch products in the textile industry. Starch adhesives? Use of starch products in foods. Methods of analysis for starch. Author index. Subject index.

Note A comprehensive survey of current starch chemistry and industrial uses of starch. It is designed mainly for the industrial chemist who is concerned with starch in one or more manufacturing processes. Important statements and data in the text are keyed to the extensive reference lists. In the present edition—which is the product of eight authors in addition to the editor—the work has been very substantially revised and amplified. The increase in the length is almost 230 pages, a reflection of the substantial growth of the patent and periodical literature.

KERTESZ ZOLTAN IMRE

The pectic substances. New York Interscience Publishers, Inc., 1951 628 p. illus. 24 cm. $15.50 6708

Contents (abridged) Part I, The chemistry of pectic substances. D-galacturonic acid. Composition and structure of pectic substances. Heterogeneity of pectic substances. Preparation and purification of pectic substances in the laboratory. Detection, determination and characterization of pectic substances. Part II, The botany of pectic substances. Occurrence and distribution of pectic substances in plants. Proportions of and changes in pectic components in some plants. Part III, The biochemistry of pectic substances. Commercial pectic enzymes. Behavior of pectic substances in the animal body. Part IV Manufacture of pectic substances: Apple pectin. Citrus pectin. Beet pectin. Control of setting time. Pectins of commerce. Part V Some functions and applications of pectic substances and pectic enzymes: Pectic substances in foods. Applications of pectic substances in nonfood products. Applications of pectic enzymes. Author index. Subject index.

Note Probably the most comprehensive treatise on this subject that will be published in many years. It is essentially a digest of the complete literature. There are 2,014 footnote references. The work should serve well as a reference book in libraries devoted to organic chemistry and in the personal libraries of food chemists, particularly those chemists concerned with the large-scale manufacture of jams and jellies. The author is associated with the New York State Agricultural Experiment Station at Cornell University

Arrowroot starch. Other starches. Special forms and modified starches. Applications of starch. Dextrin. Glucose and caramel. Analysis of starch and methods of analysis for starch content. Physical and chemical characteristics of starch and its derivatives, by O. A. Moe. Author index. Subject index.

Note Basic information of a general and reference nature has been assembled in this book. Most of the space is given to descriptions of manufacturing processes with emphasis on the manufacture of white potato starch. However economic data are included, and there is a considerable range of information on the properties of the starches discussed. Also, there is a chapter on chemical analysis of starches. Although a comprehensive bibliography was not attempted, there is liberal citation of the pertinent literature. Many of the illustrations depict starch processing machinery The book will be a useful one for industrial chemists, purchasing agents, and others with technical interests in starch.

COOK, PHILIP G

Latex natural and synthetic. New York Reinhold Publishing Corporation, 1956 231 p illus 18 cm. $3 50 6698

Contents Introduction. Development of latex to its present form. Latex production and importation. Testing of latex prior to use. Vulcanization of latex. Compounding—materials affecting liquid properties—materials affecting film properties. Processing and testing compounds. Synthetic rubber latices. Rubber-plastic latices. Latex products—unsupported films or filaments—coatings, binders, and saturants. Literature references. Index.

Note. One of the publisher's Pilot books, this small work is a broad survey of present-day latex technology Both natural and synthetic latices are covered. Specific information is given on manufacturing techniques, and more than 30 pages are devoted to descriptions of manufactured products. There are some literature references but no comprehensive bibliography The book will be useful to industrial chemists and others who are not specialists but are preparing to enter the industry or for some other reason are in need of practical, technical information about latices and products made from them.

CURME, GEORGE OLIVER, JR , editor

Glycols. George O Curme jr , editor, Franklin Johnston, associate editor New York Reinhold Publishing Corporation, 1952 389 p illus 24 cm. (American Chemical Society monograph series) $12 00 6699

Contents Glycols—an introduction. Ethylene glycol production by P R Rector and W J Toussaint. Physical properties of ethylene glycol, by W S. Jones and W S. Tamplin. Commercial applications of ethylene glycol. Ethylene oxide, by H. C Schultze. Derivatives of ethylene glycol by A. B. Boese, jr and others. Ethylene glycol condensation polymers. Propylene glycol production, by P R. Rector and W J Toussaint. Physical properties of propylene glycol, by W S. Jones and W S. Tamplin. Commercial applications of propylene glycol Propylene oxide, by R F Holden Derivatives of propylene glycol, by R. F Holden. Propylene glycol condensation polymers, by R. F Holden. Higher glycols, by S. M. Livengood. Physiological aspects of the glycols and related compounds, by H. F Smyth, jr Analysis and test methods, by E. F Hillenbrand, jr Author index. Subject index.

Note Essentially this is a reference book for the use of industrial chemists The properties of the various glycols and glycol derivatives are adequately described, but the emphasis is on manufacturing methods and applications. The presentation is technical and concise. However all important points in the text are cross-referenced to the source articles cited in the bibliography Patents and books are cited in the bibliographies along with papers in periodicals The authors and editors are all associated with the Carbide and Carbon Chemicals Company

DAVIS, TENNEY LOMBARD

The chemistry of powder and explosives. New York John Wiley & Sons Inc. 1943 490 p illus 22 cm $12 00 6700

Contents Properties of explosives. Black gunpowder Pyrotechnics. Aromatic nitro compounds Nitric esters Smokeless powder Dynamite and other high explosives Nitroamines and related substances. Primary explosives, detonators, and primers. Index.

Note. An exposition, for trained chemists, of the modes of behavior of explosive substances and the phenomena, both chemical and physical, which they exhibit. It presents the properties, classification, and tests of explosives. The first half of the book is elementary in the sense that it contains nothing which is not the common knowledge of those who are skilled either in chemistry or in the manufacture and use of explosives. The second half supplies a basis for an understanding of manufacturing processes and analytical tests, as well as an insight into their interpretation and significance.

DE NAVARRE, MAISON G

The chemistry and manufacture of cosmetics, with a chapter on the Federal Food, Drug and Cosmetic Act of 1938 as it relates to cosmetics by Ralph J Mill with a foreword by Roland T Lakey New York D Van Nostrand Company, Inc 1941 745 p. illus. 23 cm. $9 75 6701

Contents Introduction. Metrology—alligation. Equipment for the small manufacturer—cosmetic materials. Fundamental principles. Preservatives, antioxidants and corrosion. Cosmetic colors—table of certified colors. Emulsions—patent digest. Cold creams and other cosmetic creams—patent digest. Lotions—patent digest. Face powder—miscellaneous powders—patent digest. Make-up—patent digest. Miscellaneous cosmetic preparations—patent digest. The Federal Food Drug and Cosmetic Act of 1938. Appendix and tables. Bibliography Index.

Note This is a general reference and formula book for the preparation of cosmetics. It explains the general principles and requirements which determine the properties of the various types of cosmetics, and shows how these requirements are met by proper formulation, and by the various operations of mixing and blending. This book includes formulas and rules for small scale production of cosmetics as well as for large scale manufacture. A new edition was scheduled for publication in 1958.

ECKEY, E W

Vegetable fats and oils With a chapter by Lawrence P Miller New York Reinhold Publishing Corporation 1954 836 p illus. 24 cm. (American Chemical Society monograph series) $17 50 6702

Contents Introduction Chemical composition of fats. Physical properties of fats. Chemical properties and reactions of fats. Biochemical and nutritional aspects of fats. Genesis of fats and oils in plants. Methods. Fats and oils of the nonflowering plants Fats of the gymnosperms. Fats of some of the monocotyledons Palms and other monocotyledons Fats of some of the dicotyledons. Fats of the Ranales. Rhoeadales Rosales. Geraniales. Sapindales and Rhamnales. Malvales. Parietales Opuntiales. Myrtiflorae Umbelliflorae. Ericales, Primulales, Ebenales Contortae (Gentianales) Tubiflorae Plantaginales, Rubiales, Campanulales. Index

Note Although this book replaces G S Jamieson's out-of-print work of the same title, it is an entirely new work rather than a revision. It is—as was its predecessor—a comprehensive treatise with a decided practical slant The first seven chapters cover general aspects of the vegetable fats and oils, and the remaining ones are devoted to information on specific oils. These latter chapters comprise the greater part of the book's length. They bear the names of plant groups, but this is only a convenient scheme of classification, since the chapters contain very little botanical information and much on economic, chemical, and industrial aspects. Long bibliographies are appended to the chapters, and there are many tables of reference data.

GREENBERG LEON A , AND DAVID LESTER

Handbook of cosmetic materials their properties uses and toxic and dermatologic actions With a bibliography of over 2 500 titles With a chapter on the skin by Howard W Haggard. New York Interscience Publishers Inc. 1954 455 p 24 cm $12 50 6703

Note In the main part of this book condensed technical information is supplied on approximately 1,000 synthetic chemicals and natural materials which are currently used in cosmetics The

MARCHIONNA, FREDERICK

Latex and its industrial applications. New York. The Rubber Age Publishing Co., 1933–37 3 v 24 cm. Vol. I, o.p. vol. II & III, $10.00 per set. 6715

Contents (abridged) Volume I: Rubber plants. Planting and cultivation of rubber. Collecting and extracting latex. Preservation of latex and rubber. Behavior and characteristics of latex. Coagulation of latex. Preparation of rubber. Direct use of latex in industry. Artificial latex. Electrodeposition of rubber. Structure of rubber. Indexes. Volume II, Part 1, Latex and its industrial applications. Latex and its properties. Concentrating of latex. Vulcanized latex and vulcanization process. Compounding and compounded latex. Depositing latex processes and dipped articles. Rubber threads and filaments manufacture. Textile fabric treatment. Paper and artificial leather manufacture. Coating and [illegible]. Porous rubber products [illegible]. Electrical insulation. Volume III: Rubber floor and road coverings. Shoe manufacture. Artificial latex and powders. Miscellaneous processes and products. Part II, Rubber derivatives and dispersions. Electrodeposition of rubber. [illegible] and their industrial applications. Oxidized rubber. Hydrogenated rubber. Halogenated rubber products. Cyclized rubber. Decomposition products of rubber. Index.

Note: A compilation of patent abstracts and an annotated bibliography covering latex and rubber derivatives. The first volume [illegible] up to 1931, and comprises approximately 2,400 abstracts, of which 1,440 are patents and over 960 scientific or technical papers. Volumes II and III were issued as supplements to Volume I to cover the literature of rubber technology during the period 1934–1937. They contain a total of 4,440 abstracts with [illegible] proportion devoted to abstracts of various American, British, French, and German patented processes for the industrial applications of latex and rubber derivatives. Patent number, date, title, owner, and [illegible] synopsis of the process are given under each patent listed. In addition, there is [illegible] technical résumé of the general subject at the beginning of each chapter. There are indexes of patentees, patents, subjects, and authors.

MINER, CARL S., AND N. N. DALTON editors

Glycerol. New York Reinhold Publishing Corporation, 1953 460 p. illus. 24 cm. (American Chemical Society monograph series) $12.00. 6716

Contents: History and economics, by N. N. Dalton and J. C. [illegible], by T. M. Godfrey. Methods [illegible]. Natural source and occurrence, by T. M. Godfrey. Recovery and refining, by T. M. [illegible] of production, by T. M. Godfrey. Analyses, by [illegible] Godfrey. Standards and specifications, by J. B. Segur. Physical properties of glycerol and its solutions, by J. B. Segur. Chemical properties and derivatives of glycerol, by J. B. Segur. Biochemical use of glycerol, by C. H. [illegible]. The physiological action of glycerol, by M. E. [illegible]. Uses of glycerine, by J. B. Segur. Subject index.

Note: A comprehensive survey of glycerol, the chemical substance, and its commercial counterpart, glycerine. Not only are the chemical aspects covered, but also such topics as world production, prices, laboratory and commercial uses are discussed in varying degrees of thoroughness. Much reference data are presented in tables. As [illegible] in the [illegible], the book is based on the literature, and statements in the text are referenced to the [illegible] of the [illegible]. Preparation of the work was supported by the Association of American Soap and Glycerine Producers.

NOBLE, ROYCE J

Latex in industry Second edition. New York Rubber Age, 1953 912 p. illus. 24 cm. U.S.A., $15.00 other countries $16.00 6717

Contents: Part I: Sources, preservation and shipment of latex. Properties of latex. Concentration of latex. Aqueous dispersions. Synthetic latices. Vulcanized latex. Compounding. Coagulation of latex compositions. Vulcanization. Part II: The technical applications of latex. Impregnation. Spreading. Dipping processes. Molding, casting. Electrodeposition. Paper and [illegible]. Artificial leather. Rubber thread. Porous rubber. Friction elements. Adhesives. Latex-treated rugs and plush. Miscellaneous applications. Part III: Examination of latex and latex compounds. Author index. Subject index.

Note: A comprehensive work written from the viewpoint of manufacturers and industrial chemists who are interested in rubber latex as an engineering and manufacturing material. The information given on the properties, compounding and applications of latex is specific and detailed. The typical chapter is accompanied by an extensive bibliography which includes references to patents as well as to book and periodical literature. The names of authors and inventors cited are assembled in the author index. The first edition was published in 1934. This edition is a very thorough revision, with both text and bibliographies brought down to date and the length of the book approximately doubled.

POST, HOWARD WILLIAM

Silicones and other organic silicon compounds. New York Reinhold Publishing Corporation, 1949 230 p. illus. 23 cm. $6.00. 6718

Contents: Introduction. Halogenated silanes. The work of Friedel [illegible], Kipping and others. Organic compounds of silicon prepared at moderate temperatures (journal literature). Organic compounds of silicon prepared at moderate temperatures (patent literature). Organic compounds of silicon prepared at higher temperatures. The uses of polymerized [illegible]. Some organic compounds analogous to ethers and esters. Nomenclature. Physical properties. Bibliography. Author index. Subject index.

Note: The scope of this work is "silicon compounds of silicon which contain carbon of such [illegible] character as definitely to impart organic properties to the molecule." Its purposes are to provide brief descriptions of the properties and uses of the silicones and other compounds of silicon that fit this definition, and to summarize the various methods which have been developed for their synthesis. It is based on an extensive survey of the international literature, including patents, and the bibliography of original sources constitutes one of the most useful features. In the final chapter are tabulated the formulas, names, melting point, and boiling point for more than 1,000 compounds.

ROCHOW EUGENE GEORGE

An introduction to the chemistry of the silicones. Second edition. New York John Wiley & Sons, Inc., 1951 205 p. illus. 24 cm. $6.00 6719

Contents: The simpler organic compounds of silicon. The carbon-silicon bond. Synthesis of organosilicon compounds. The organosilicon polymers. Properties of silicone monomers. Types of organosilicon polymers. The physical chemistry of silicones. The specific silicone polymers. [illegible] from organosilicon. Water-repellent films and protective coatings from organosilicon. [illegible]. Some production considerations. Analytical methods. [illegible]. Tables of physical properties of organosilicon compounds. References. Author index. Subject index.

Note: A useful survey written mainly for the information of industrial chemists and others in need of [illegible] technical guide. There are some discussion of general chemistry and properties and fairly [illegible] information on the various classes of these compounds. Especially useful features from the standpoint of those who will use the volume chiefly for reference are the 11 tables of properties and the bibliography of 318 literature references. Patents are included in this bibliography. There is a substantial amount of new material in this edition, including three chapters that did not appear in the first edition.

ROOT HUBER H.

Beeswax, its properties, testing production and applications. New York Chemical Publishing Company Inc., 1951. 154 p. illus. 23 cm. $4 75 6720

Contents: Introduction. The origin and discovery of the nature of beeswax. The production of beeswax. The honeycomb. Extracting beeswax from combs or cappings. Testing beeswax. Bleaching beeswax. Uses of beeswax. Beeswax in cosmetics. Beeswax candles. Comb foundation. Future trends. Glossary. Index.

Note: A compact survey that is of about equal interest to apiarists whose chief product is extracted honey and to manufacturers who use beeswax in such products as polishes and cosmetics. The various commercial uses for beeswax are described, and the chapter on cosmetics uses contains several formulas, most, if not all, of which are reprinted from other books.

LEMAIRE, GEORGE W

A study of asphalts and asphaltic materials. Golden Colorado School of Mines, 1953 89 p. illus. 23 cm. (Colorado School of Mines. Quarterly Vol. 48, no 2) $1 50 6709

Contents: Review of theories concerning the composition and structure of asphalt. Asphalts, manufacture and tests. Practical application of theories to asphalt manufacture. Significance of physical tests. Significance of chemical tests. Cracked bitumens. Factors for estimating temperature susceptibility Experiments with solvent extraction of bituminous substances at the Colorado School of Mines. Results of research on bituminous materials at the Colorado School of Mines. Production of formalites from asphaltic bitumen. Separation of asphaltic constituents. Appendix. Glossary of terms. Definitions applying to physical qualities of asphalts. Classification. Analysis of bitumens. Bibliography

Note. This pamphlet publication provides compact survey of the current state of chemical and physical knowledge of asphalts, describes methods of manufacture of asphalts and asphaltic products; and evaluates and describes a range of physical and chemical tests that may be applied to characterize asphalts and to describe in physical terms such properties as volatility ductility and resistance to weathering. Some of the information presented was derived from special studies at the Colorado School of Mines, and some of it has been taken from the literature. A bibliography of the pertinent literature is included. The work is of interest to manufacturers and highway engineers, and to large-scale users of asphaltic materials.

LESSER, MILTON A.

Modern chemical specialties. New York MacNair Dorland Company 1950 514 p illus 24 cm. $7 25 6710

Contents (abridged): Detergents and cleaners Dishwashing detergents. Industrial hand cleaners. Medicated soaps. Dog soaps. Carpet, rug and upholstery cleaners. Cleaning and polishing cloths. Paint, varnish and wall paper cleaners. Stain removers. Polishes Furniture polishes. Glass cleaners, polishes and antimists. Aluminum cleaners. Metal polishes. Auto polishes. Floor care products. Floor soaps and cleaners. Wax floor polishes. Floor oils and sweeping compounds. Crack fillers. Textile products. Laundry bluings. Laundry starches. Laundry sours. Laundry bleaches. Mildew preventatives. Moth products. Products for leather care Leather cleaners and renovators. Saddle and leather soaps. Colored shoe polishes. Industrial and household specialties: Washroom sanitation specialties. Cooling system cleaners. Boiler compounds. Paint and varnish removers. Water softeners. Air deodorizers. Index.

Note A practical compendium of information about the manufacture of household and industrial products of the kinds mentioned in the chapter titles. In each section, there is a generalized discussion of the nature and uses of the class f product, discussions of some aspects of its manufacture, and variety of formulas. Literature references are provided for each chapter.

LUBS, H A , editor

The chemistry of synthetic dyes and pigments. New York Reinhold Publishing Corporation 1955 734 p illus 24 cm (American Chemical Society monograph series. No 127) $18 50 6711

Content Benzene intermediates. Naphthalene intermediates. Azo dyes. Azoic dyes. Miscellaneous dyes. Sulfur dyes. Anthraquinone dyes and intermediates. Indigoid dyes. Phthalocyanine pigments. Phthalocyanine dyes. Organic pigments. Color and chemical constitution of dyes. Common names of dye intermediates. Critical bibliography Dye index. Subject index.

Note. Not an exhaustive treatment, as the umber of pages might suggest, this book is instead thorough survey of synthetic dyestuffs which are currently of interest because of commercial importance or because of their relation (historical or otherwise) to those of commercial importance. Chemistry is clearly emphasized, but historical development, dyeing properties, uses and commercial importance are also discussed. The texts of all the chapters and subsections of chapters are keyed to literature citations and, in addition, there is classified critical bibliography Books, papers, patents and technical reports are all included in the documentation. A special feature is frequent citation of BIOS and FIAT reports. The contributors have all been associated with the Jackson Laboratory f the E. I. du Pont de Nemours & Company which played major part in the development of the synthetic dye industry in the United States of America.

MCCUTCHEON, JOHN WELLAND

Synthetic detergents. New York MacNair Dorland Company, 1950 435 p. illus. 24 cm. $7 10 6712

Contents Introduction. Fundamentals of surface activity E aluation methods and analytical examination of detergents. Examination of surface active agents and synthetic detergents by class and type. Manufacturing processes and raw materials. Trade names, products and processes. Applications and uses. Appendix. Boundary tension by pendant drops. A.O.C.S. methods. Surfactant classification list. Industrial classification index. List of surface active agents. Index.

Note: In this work the primary emphasis is on the practical aspects of the synthetic detergents. Applications and methods of evaluation are covered rather thoroughly but manufacturing methods and some other aspects are covered briefly Typical formulas for products, ranging from insecticides to cleansers, in which a detergent is a principal ingredient are included. The appendix includes a long tabulation f trade names under which detergents are sold. For each trademarked product the name of the manufacturer class, formula, uses, etc., are given. The book is useful to purchasing agents and to technical personnel in charge of processes in which detergents are used—for instance, textile dyeing.

MCGREGOR, ROB ROY

Silicones and their uses New York Mc Graw Hill Book Company, Inc., 1954 302 p. illus 21 cm $6 00 6713

Contents. History of silicones: Early studies in organosilicon chemistry Commercial development of silicones. Commercial silicones. Silicone fluids—compounds—lubricants—resins—rubber. "Bouncing putty Physiological response to silicones. General considerations. Applications in pharmacy—in medicine. Applications of silicones to specific industries and cost considerations. Chemistry of silicone preparation Definitions and nomenclature. Synthesis of intermediates. Polycondensation. Literature cited. Index.

Note. An up-to-date, semitechnical survey The chapter on history is an impartial outline with literature references. In the second chapter the silicones that have found commercial application are discussed under the subheadings: *Silicone fluids, Silicone compounds, Silicone lubricants, Silicone resins, and Silicone rubber* The chemical and physical properties of each group are stated, then the various commercial applications are described in detail. In the third chapter both developed and potential applications in pharmacy and medicine are discussed. The fourth chapter is a tabulation by industry of known applications. The book will be useful to industrial chemists, engineers, and technicians who need background and practical information on this important group of chemicals. It is well equipped with literature references for the guidance of those who desire more detailed or more technical information on specific topics.

MANTELL, CHARLES LETNAM

Industrial carbon its elemental, adsorptive and manufactured forms. Second edition New York D Van Nostrand Company Inc. 1946 472 p illus 23 cm. $10 75 6714

Contents. Elemental forms. Diamonds. Natural graphite—properties, mining—dressing, applications. Carbon black. Lampblack. Acetylene black. Pigments. Adsorbents Bone black. Vegetable decolorizing carbon. Gas adsorbents. Other absorbent chars—metal adsorbent chars, pharmaceutical charcoal. Manufactures. Historical aspects of manufactured carbon. Artificial graphite. Raw materials for carbon manufactures. Preparatory processes—calcining—grinding Electrodes. Brushes. Arc light and illuminating carbons. Carbon specialties and resistors. Carbon as material of construction. Porous carbon. Electronic tube anodes. Refractories. Analyses and properties. Analytical and testing methods. Physical and chemical properties. Index.

Note A comprehensive survey of the many forms and uses of carbon in industry Both common and uncommon uses are described The book is intended as a reference book for scientific and technical workers, particularly chemists, physicists, engineers, and persons associated with the production of industrial carbon. The first edition was published in 1928, but this edition is so much revised and expanded that it is irtually new work A umber of the chapters have been written by authorities other than the author There is fair number of references to the related literature, including patents.

phoric acid from elemental phosphorus. The manufacture of phosphoric acid by the wet process, by W. C. Weber. Comparison of sulfuric acid and thermal reduction processes for manufacturing phosphoric acid. Purification of phosphoric acid and its salts, by W. H. Waggaman and W. T. Grace. Superphosphate, its manufacture and properties, by W. H. Waggaman and [illegible] Sauchelli. Concentrated or triple superphosphate. Ammonium phosphates and ammoniated superphosphates, by E. W. Harvey and G. L. Frear. Other water-soluble phosphatic fertilizers. Basic slag, degreased bone and defluorinated phosphates. Calcined, fused and defluorinated phosphates, by K. T. Whitney and C. A. Hollingsworth. Calcium and potassium metaphosphates and miscellaneous products. Complete fertilizers and their preparation. Phosphate leavening agents, by H. W. Easterwood. Phosphate water-softening and cleansing products, by C. B. McCullough. The esters of phosphoric acid and their industrial applications, by J. R. Harris. Phosphating of metals, by G. C. Rendy. Phosphates in the manufacture and refining of cane sugar, by V. R. Deitz and G. P. Meade. Phosphates in flame-resistant products. Miscellaneous industrial uses of phosphoric acid and its derivatives. Appendix. Index.

Note. Each of the chapters in this comprehensive treatise is a concise, up-to-date survey of the particular aspect of the subject which is named in its title and it is supplemented—as is customary in this series—by a substantial list of references. Essentially the work is a reference book for the information of graduate chemists and others who are associated with the phosphate-producing and -using industries. The appendix includes a wide range of useful material including a table of phosphoric acid conversion factors, descriptions of analytical tests, and a classified list of pertinent United States patents. Chapters for which an author's name is not shown in the above table of contents were written by William H. Waggaman. The first edition appeared in 1927. The present edition is an extensive revision and substantial expansion of the original work.

WALKER, J FREDERIC

Formaldehyde. Second edition. New York Reinhold Publishing Corporation, 1953 575 p. illus. 24 cm. (American Chemical Society monograph series) $12.00. 6727

Contents. Formaldehyde production. Monomeric formaldehyde. Rate of dissolved formaldehyde. Commercial formaldehyde solutions. Physical properties of aqueous formaldehyde. Distillation of formaldehyde solutions. Formaldehyde polymers. Chemical properties of formaldehyde. Reactions of formaldehyde with inorganic agents. Reactions of formaldehyde with aliphatic hydroxy compounds and mercaptans. Reactions of formaldehyde with aldehydes and ketones. Reactions of formaldehyde with phenols. Reactions of formaldehyde with carboxylic acids, acid anhydrides, [illegible], acyl chlorides, and esters. Reactions of formaldehyde with [illegible], amides and nitriles. Reactions of formaldehyde with hydrocarbons and hydrocarbon derivatives. Reactions of formaldehyde with heterocyclic compounds. Detection and estimation of small quantities of formaldehyde. Quantitative analysis of formaldehyde solutions and polymers. Hexamethylenetetramine. Uses of formaldehyde, formaldehyde polymers, and hexamethylenetetramine. Author index. Subject index.

Note. A comprehensive treatise based on a critical survey of the literature. Each of the chapters concludes with an extensive list of references to which important statements in the chapters are keyed. The use of the book as a guide to the literature is facilitated by the inclusion of authors' and inventors' names in the author index. Most of the space is devoted to chemical aspects, particularly to reactions among formaldehyde and a variety of inorganic and organic compounds. However, the two final chapters give an adequate view of contemporary uses of formaldehyde. The first edition was published in 1944. This second edition represents thorough revision with nearly 200 additional pages.

WARTH ALBIN H.

The chemistry and technology of waxes. Second edition. New York Reinhold Publishing Corporation, 1956 940 p illus. 24 cm. $18.00 6728

Contents. Introduction. Chemical components of waxes. The natural waxes. Fossil waxes, earth waxes, peat waxes, montan wax and lignite paraffins. Petroleum waxes. Synthetic waxes. Compounded, modified, blended, and compounded waxes. Emulsifiable [illegible], waxy alcohols and acids, metallic soaps. Methods for determining the constants of waxes. Wax technology—uses in industry. Appendix. Tables of physical constants of waxes. Addenda. The compounding of waxes. Author index. Subject index.

Note. A comprehensive reference manual on the kinds, sources, chemistry, physical properties, processing, testing, and uses of waxes. It is based on a wide survey of the international literature, including patents, which is cited in extensive lists of references appended to the chapters. The first edition was published in 1947. The length of the book has been approximately doubled in this edition. Although the titles of most of the chapters are identical with or similar to those of the first edition, the book has been revised from end to end and all chapters are greatly extended. The first chapter on chemical components is 72 pages long in the second edition, in contrast to 11 pages in the first edition. The 225-page chapter on technology is about 100 pages longer. Some literature published as recently as 1955 is cited in the bibliographies.

WHITBY G S editor

Synthetic rubber. Prepared under the auspices of the Division of Rubber Chemistry American Chemical Society. Editorial board G S Whitby editor-in-chief, C. C. Davis, R. F Dunbrook, New York John Wiley & Sons, Inc., 1954 1 044 p. illus. 24 cm. $18.00. 6729

Contents. Introduction, by G. S. Whitby. Historical review, by R. F. Dunbrook. Manufacture of dienes from petroleum, by C. E. Morrell. Manufacture of butadiene from alcohol, by W. J. Toussaint and J. L. Marsh. Preparation and production of dienes by other methods, by H. L. Fisher. Manufacture of styrene monomer, by J. R. Mitchell and J. L. Amos. The manufacture of GR-S, by J. W. Livingston and J. T. Cox, Jr. Emulsion polymerization systems, by C. F. Fryling. Chemical study of the structure of diene polymers and copolymers, by C. S. Marvel and E. E. Baumgarten. Physical chemistry of synthetic rubbers, by L. A. Wood. The processing and compounding of GR-S, by R. F. Dunbrook and R. D. Juve. Physical test methods and polymer evaluation, by A. E. Juve. Aging and stabilization in GR-S, by S. O. Cole. Use of GR-S in rubber manufacture, by R. A. Crawford. Synthetic rubber in wires and cables, by J. T. Blake. Synthetic hard rubber, by F. S. Malm and H. Peters. Reclaimed synthetic rubber, by F. L. Kilbourne, Jr. GR-S latex, by L. H. Howland. Latex masterbatching, by J. W. Adams and L. H. Howland. Diene polymers and copolymers other than GR-S and Neoprene, by W. K. Taft and G. J. Tiger. Neoprene, the specialty rubbers, by W. L. Semon. Nitrile rubber, by A. M. Neal and L. R. Mayo. Thiokol rubber, by W. J. Sparks. Miscellaneous. Butyl rubber, by R. M. Thomas and W. J. Sparks. German synthetic elastomers, by C. H. Fisher and others. German synthetic-rubber developments, by R. L. Bebb and L. B. Wakefield. Name index. Subject index.

Note. An exhaustive survey of synthetic rubber development and current status. The 26 chapters whose titles and authors are listed in the above table of contents are literature summaries of patents, journal papers, technical reports and unpublished private company documents. Chemical and technical aspects are emphasized, but considerable economic information, especially on production, is included. The "Name index" includes both firms and personal authors and runs to about 2,300 names; thus the volume is a guide to the important literature as well as a statement of the important facts.

WILSON PHILIP JOHNSON AND JOSEPH H. WELLS

Coal, coke, and coal chemicals. New York McGraw Hill Book Company Inc., 1950. 509 p. illus. 23 cm. (McGraw Hill chemical engineering series) $10.00. 6730

Contents (abridged). Introduction—the nature and scope of coal carbonization. Fuels and combustion. Characteristics of coal for carbonization. Preparation and cleaning of coal for coking. The coking process in byproduct coke ovens. High-temperature coke. Gas. Ammonia and ammonium salts. Light oil. Coal tar. Coal carbonization for gas manufacture. Some low-temperature carbonization processes and the Curran-Knowles process. Economics of the coal-carbonization industries. Trends in the coal-carbonization industry. Appendix: Select bibliography. List of plants for the carbonization of coal in the United States. Index.

Note. As the chapter titles indicate, this is a treatise on the coking process, its products and by-products. Although many of the topics are discussed from the chemical engineering viewpoint, the effect of the whole work is that of a good general treatment of the present technology and economic importance of the industry. The book is of interest to the personnel of the coking industry and to operatives and engineers in allied industries.

SCHWARCZ, LEONARD

Sanitary chemicals a practical handbook dealing with disinfectants, household and industrial insecticides floor waxes, soap and cleaning specialties, deodorants, and other sanitary chemical products—their manufacture, testing, packaging, labeling, and most effective use New York MacNair Dorland Company, 1953 576 p illus. 24 cm. $8 00 6721

Contents Principles of disinfection. Coal tar disinfectants. Cresol compounds. Pine oil disinfectants. Hypochlorites (chlorine disinfectants) Quaternary ammonium disinfectants. Disinfectant testing. Deodorants. Pyrethrum insecticides. Rotenone insecticides. Synthetic insecticides. Livestock and barn sprays. Bedbug liquids. Cockroach control. Moth preparations. Aerosols. Insecticide testing. Rodenticides. Floor waxes. Sweeping compounds. Liquid soaps. Detergents and cleaners. Surface active agents. Labeling and packaging. Index.

Note Primarily this is a book on the manufacture of the kinds of products named in the chapter titles. However in addition to typical formulas and specific information on manufacturing methods, it contains a variety of facts on such aspects as basic chemistry testing, laws relating to labeling, etc. The first edition was published in 1943 This edition—completed after the author's death by the editorial staff of *Soap and sanitary chemicals*—contains several new chapters, and most of the chapters carried over from the first edition have been revised so as to include recent developments and new standards.

SCHWARTZ, ANTHONY MAX, AND JAMES W PERRY

Surface active agents, their chemistry and technology New York Interscience Publishers Inc., 1949 579 p illus 24 cm. $12 00 6722

Contents (abridged) Introduction General considerations. Part I, Processes for synthesizing and manufacturing surface active agents Anionic surface active agents—Carboxy acids—Sulfuric esters—Alkyl aromatic sulfonates. Cationic, non-ionic, and miscellaneous surface active agents: Ampholytic surface active agents. Special compositions and mixtures. Part II, The physical chemistry of surface active agents in theory and practice Surface and interfacial relationships of pure liquids. Bulk properties of surface active solutions. Gross effects and technical evaluation of surface active agents. Relationship of surface activity to chemical constitution. Part III Practical applications of surface active agents Applications in the textile industry Cosmetics and personal use. Pharmaceutical, germicidal, fungicidal, and disinfectant uses. Household laundering, dry cleaning, and general cleaning uses. Metal technology Leather technology Ore flotation. Author index. Subject index.

Note A comprehensive treatment. Theoretical considerations and practical applications share the space about equally The work is based on an extensive literature survey including patents, and it is of interest not only to chemists working in the field but to chemists and manufacturers in all of the industries in which surface active agents and detergents are used. Volume II, covering 1947 56 developments, was published in 1958 839 p., $17.50.

THOMSSEN, EDGAR GEORGE, AND JOHN W McCUTCHEON

Soaps and detergents New York MacNair Dorland Company 1949 511 p illus 24 cm $9 00 6723

Content Raw materials, definitions, general considerations. Machinery and equipment. Soap making methods—soap manufacture classified and described according to processes Soap products—soap manufacture classified and described according to uses and characteristics of the products. Perfuming and coloring soaps. Glycerine recovery Synthetic detergents. Process and analytical control methods. Appendix. Index.

Note Primarily technical treatise on contemporary processes of soap manufacture and on the chief kinds of soaps. Soap manufacturing processes are described in considerable detail, and there are many pictures of soap-making machinery and of important steps in the manufacturing processes. The chapter on synthetic detergents is only 22 pages in length. The appendix contains tabulated reference data on the glycerine content of common oils, the fatty acid content of common oils, fat constants, soap-making properties of oils and fats, and a list by trade name of synthetic detergents. This list identifies the manufacturer of each trade-marked product, states its class and formula, and principal uses.

VAIL, JAMES GARRETT

Soluble silicates, their properties and uses. Volume 1 Chemistry By James G Vail assisted by John H. Wills. New York Reinhold Publishing Corporation, 1952 357 p illus 24 cm (American Chemical Society Monograph series) $9 00 6724

Contents The beginnings. Present practices. The homogeneous systems. The heterogeneous systems. Complex systems. Author index. Subject index.

—— Volume 2 Technology By James G Vail, assisted by John H. Wills. New York Reinhold Publishing Corporation 1952 669 p illus. 24 cm. (American Chemical Society Monograph series) $18 00 6724A

Contents. Interfaces modified by alkali silicates. New surfaces—coatings and films. Bonded surfaces. Sols, gels, and polymers in industry Physiological behavior Toward the future. Author index. Subject index.

Note: A new work which supersedes the author's earlier *Soluble silicates in industry* New York, 1929 (ACS monograph no. 46) The text is essentially a well-organized literature digest with cross-references from statements and data to citations of original sources. Patents, especially United States patents, are included among the sources. The author index lists the names of authors of the cited articles and patents. The presentation is technical, but it is not too theoretical for the average industrial chemist.

VOET, ANDRIES

Ink and paper in the printing process. New York Interscience Publishers, Inc., 1952 213 p illus. 23 cm. $6 90 6725

Contents. Part I, Ink and press The function of ink. Measurement of the flow of inks. Flow of dispersions. Flow of ink between parallel plates. Flow of ink on the press. Separation of ink films. Part II, Ink and paper Characteristics of discontinuous reproduction. Microscopy of halftone printing. Contrast and coverage of ink. Uniformity of ink films. Penetration of ink into paper Print-through. Ink transfer Picking of paper Offset. Physical drying of ink. Chemical drying of inks. Properties of lithographic inks. Author index. Subject index.

Note. The main emphasis in this treatise is on the physics of ink. Paper and the chemistry of ink are discussed chiefly from the standpoint of their relations in the behavior of printing inks when applied to paper and exposed to the atmosphere. The style of presentation is technical, and readers need some previous introduction to the fundamentals of printing inks and to the graphic arts processes dependent upon them. The illustrations include a number of reproductions of microphotographs of cross sections of ink on paper Literature references are given in footnotes. The author is Director of Ink Research on the staff of the J. M. Huber Corporation.

WAGGAMAN WILLIAM HENRY

Phosphoric acid phosphates and phosphatic fertilizers. Second edition New York Reinhold Publishing Corporation 1952 683 p illus. 23 cm (American Chemical Society monograph series) $15 00 6726

Contents Introduction. Phosphoric acid in animal and plant life Sources of phosphoric acid and their classification. Florida hard rock phosphate, Florida pebble phosphate by J. M. Leberne. The phosphates of Tennessee, by O. C. Chapman. Western phosphates, by K. M Norris. Phosphates of South Carolina, Kentucky Arkansas and Virginia. Phosphates of foreign countries, by C. A. Fulton. SCHWARCZ, LEONARD

Sanitary chemicals, a practical handbook dealing with disinfectants household and industrial insecticides, floor waxes, soap and cleaning specialties, deodorants, and other sanitary chemical products—their manufacture, testing, packaging labeling, and most effective use. New York MacNair Dorland Company, 1953 576 p illus 24 cm $8 00 6721

Content Principles of disinfection Coal tar disinfectants. Cresol compounds. Pine oil disinfectants. Hypochlorites (chlorine disinfectants) Quaternary ammonium disinfectants. Disinfectant testing. Deodorants. Pyrethrum insecticides. Rotenone insecticides. Synthetic insecticides. Livestock and barn sprays. Bedbug liquids. Cockroach control. Moth preparations. Aerosols. Insecticide testing. Rodenticides. Floor waxes. Sweeping compounds. Liquid soaps. Detergents and cleaners. Surface active agents. Labeling and packaging. Index.

Note Primarily this is a book on the manufacture of the kinds of products named in the chapter titles. However in addition to typical formulas and specific information on manufacturing methods, it contains a variety of facts on such aspects as basic chemistry testing, laws relating to labeling, etc. The first edition was published in 1943 This edition—completed after the author's death by the editorial staff of *Soap and sanitary chemicals*—contains several new chapters, and most of the chapters carried over from the first edition have been revised so as to include recent developments and new standards.

SCHWARTZ, ANTHONY MAX, AND JAMES W PERRY

Surface active agents, their chemistry and technology New York Interscience Publishers, Inc , 1949 579 p illus 24 cm. $12 00 6722

Contents (abridged) Introduction General considerations. Part I, Processes for synthesizing and manufacturing surface active agents Anionic surface active agents—Carboxy acids—Sulfuric esters—Alkyl aromatic sulfonates. Cationic, non-ionic, and miscellaneous surface active agents. Ampholytic surface active agents. Special compositions and mixtures. Part II, The physical chemistry of surface active agents in theory and practice Surface and interfacial relationships of pure liquids. Bulk properties of surface active solutions. Gross effects and technical evaluation of surface active agents. Relationship of surface activity to chemical constitution. Part III, Practical applications of surface active agents Applications in the textile industry Cosmetics and personal use. Pharmaceutical, germicidal, fungicidal, and disinfectant uses. Household, laundering, dry cleaning, and general cleaning uses. Metal technology Leather technology Ore flotation. Author index. Subject index.

Note A comprehensive treatment. Theoretical considerations and practical applications share the space about equally The work is based on an extensive literature survey including patents, and it is of interest not only to chemists working in the field but to chemists and manufacturers in all of the industries in which surface active agents and detergents are used. Volume II, covering 1947 56 developments, was published in 1958, 839 p., $17.50.

THOMSSEN, EDGAR GEORGE, AND JOHN W McCUTCHEON

Soaps and detergents. New York MacNair Dorland Company 1949 511 p illus. 24 cm $9 00 6723

Contents Raw materials, definitions, general considerations. Machinery and equipment. Soap making methods—soap manufacture classified and described according to processes. Soap products—soap manufacture classified and described according to uses and characteristics of the products. Perfuming and coloring soaps. Glycerine recovery Synthetic detergents. Process and analytical control methods. Appendix. Index.

Note Primarily a technical treatise on contemporary processes of soap manufacture and on the chief kinds of soaps. Soap manufacturing processes are described in considerable detail, and there are many pictures of soap-making machinery and of important steps in the manufacturing processes. The chapter on synthetic detergents is only 22 pages in length. The appendix contains tabulated reference data on the glycerine content of common oils, the fatty acid content of common oils, fat constants, soap-making properties of oils and fats, and a list by trade name of synthetic detergents. This list identifies the manufacturer of each trade-marked product, states its class and formula, and principal uses.

VAIL, JAMES GARRETT

Soluble silicates, their properties and uses. Volume 1 Chemistry By James G Vail, assisted by John H Wills New York Reinhold Publishing Corporation 1952 357 p. illus. 24 cm. (American Chemical Society Monograph series) $9 00 6724

Contents The beginnings. Present practices. The homogeneous systems. The heterogeneous systems. Complex systems. Author index. Subject index.

—— Volume 2 Technology By James G Vail assisted by John H. Wills New York Reinhold Publishing Corporation, 1952 669 p illus. 24 cm. (American Chemical Society Monograph series) $18 00 6724A

Contents. Interfaces modified by silicate solutions. New surfaces—coatings and films Bonded surfaces. Sols, gels, and polymers in industry Physiological behavior Toward the future. Author index. Subject index.

Note. A new work which supersedes the author's well-known *Soluble silicates in industry* New York, 1929 (ACS monograph no. 46) The text is essentially a well-organized literature digest with cross-references from statements and data to citations of original sources. Patents, especially United States patents, are included among the sources. The author index lists the names of authors of the cited articles and patents. The presentation is technical, but it is not too theoretical for the average industrial chemist.

VOET, ANDRIES

Ink and paper in the printing process. New York Interscience Publishers Inc., 1952 213 p illus. 23 cm. $6 90 6725

Contents Part I, Ink and press The function of ink. Measurement of the flow of inks. Flow of dispersions. Flow of ink between parallel plates. Flow of ink on the press. Separation of ink films. Part II, Ink and paper Characteristics of discontinuous reproduction Microscopy of halftone printing. Contrast and coverage of ink. Uniformity of ink films. Penetration of ink into paper Print-through Ink transfer Picking of paper Offset. Physical drying of ink Chemical drying of inks. Properties of lithographic inks. Author index. Subject index.

Note The main emphasis in this treatise is on the physics of ink. Paper and the chemistry of ink are discussed chiefly from the standpoint of their relations in the behavior of printing inks when applied to paper and exposed to the atmosphere. The style of presentation is technical, and readers need some previous introduction to the fundamentals of printing inks and to the graphic arts processes dependent upon them. The illustrations include a number of reproductions of microphotographs of cross sections of ink on paper. Literature references are given in footnotes The author is Director of Ink Research on the staff of the J M Huber Corporation.

WAGGAMAN WILLIAM HENRY

Phosphoric acid phosphates and phosphatic fertilizers Second edition New York Reinhold Publishing Corporation 1952 683 p. illus 23 cm. (American Chemical Society monograph series) $15 00 6726

Contents Introduction. Phosphoric acid in animal and plant life Sources of phosphoric acid and their classification. Florida hard rock phosphate. Florida pebble phosphate, by L. M. Lebaron The phosphates of Tennessee, by O. C. Chapman Western phosphates, by E. M. Norris. Phosphates of South Carolina, Kentucky Arkansas and Virginia. Phosphates of foreign countries, by C. A. Fulton. Elemental phosphorus and its manufacture. Manufacture of phos-

MINING ENGINEERING

GENERAL

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Seventy-five years of progress in the mineral industry 1871–1946 including the proceedings of the seventy fifth anniversary of the American Institute of Mining and Metallurgical Engineers and World Conference on Mineral Resources March 17th 18th, 19th, 1947 edited by A. B Parsons. New York The American Institute of Mining and Metallurgical Engineers, 1947 817 p. illus. 24 cm. $5.00. 6733

Contents Foreword, by the editor. Introduction, by L. S. Cates. Seventy-five years of progress: In mining geology by L. C. Graton. In metal mining, by L. Eaton. In ore dressing, by A. F Taggart. In smelting and leaching of ores, by F Laist. In iron and steel, by C. D. King. In nonferrous metallurgy by W M. Peirce. In bituminous coal mining, by H. N. Eavenson. In anthracite industry by [illegible] Connor, C. Evans, Jr. In petroleum, by E. L. DeGolyer. In the nonmetallics, by O. Bowles. In mineral production—the statistical record, by E. W Pehrson. In mineral industry education, by T. T. Read. History of the Institute, by A. B. Parsons. Officers of the Institute, 1871–1947 Proceedings of the 75th anniversary celebration and World Conference on Mineral Resources. The story of the meeting. Seventy five years of achievement by the A. I. M. E. in the mineral industry by C. F Kelley. The mineral position of the United States, by J. A. Krug. Iron ore and the steel industry by C. M. White. International aspects of the petroleum industry by Sir W Fraser. Copper, lead and zinc mining in the future, by C. H. Crane. The future of gold in world economy by F M. Anderson. Tin, [illegible], and the metals industry by W L. Dixon. South American minerals in the future world economy, by F. Bañados. World coal resources, by C. A. Carlow. The philosophy of international atomic energy control, by J. M. Hancock. The role of the engineer in the development of atomic energy by P. C. Keith. Applications of atomic energy to industry by H. A. Winne and F R. Prentice. Petroleum and natural gas, uses and possible replacements, by E. E. Wilson and J. K. Roberts. Metals and alloys of the future, by Z. Jeffries. Technologic of mineral exploration of the future, by L. S. Cates and H. Bancroft. American mining enterprise in foreign countries, by S. Bacon. Official delegates and representatives. Committees for the Conference, and Institute officers, 1946. Index.

ASH SIMON HARRY AND E. W FELEGY

Analyses of complex mixtures of gases application to control and extinguish fires and to prevent explosions in mines tunnels and hazardous industrial processes. Washington, D C Government Printing Office, 1948. 202 p. illus. 23 cm. (United States. Bureau of Mines. Bulletin 471) $0.75 6734

Contents (abridged) Part I: Introduction. Explosive limits and explosive range. Critical gas mixtures and critical gas-mixture values. Nonexplosive mixtures and upper limit. Critical oxygen value. Calculation of factors affecting explosibility of complex-gas mixtures. Use of charts to determine explosibility of complex gas-inert gas-air mixtures. Graphic method of determining necessary volume of inert gas necessary to render [illegible] given atmosphere incapable of forming explosive mixtures with air. Use of mixtures of air and inert gas as diluents. Part II, Examples of practical applications of data relating to explosibility limits of mixed gases: An anthracite mine fire. Fire in inaccessible old mine workings. Explosion caused by fuel gas in manufacturing plant. Appendix. Bibliography

Note Complex mixtures of gases encountered in mines, tunnels, and industrial processes sometimes present imminent danger from explosions. The purpose of the report is to point out [illegible] the mine-management official, the safety engineer, and the chemist can do to utilize analyses of complex gas mixtures as [illegible] basis for safe procedure to (1) control and extinguish fires in mines, tunnels, and industrial plants and (2) prevent explosions [illegible] dealing with explosive mixtures and sources of ignition. For those interested in the technical aspects of the subject, the necessary theory and detail relating to the derivation of the formulas are given. To show the application of the material presented, some typical examples are calculated and discussed. Various relations between composition and explosibility are graphically shown in ten *folding charts* [illegible] come with the bulletin.

BASTIN EDISON SUNDERLAND

Interpretation of ore textures. New York The Geological Society of America, 1950 101 p. illus. 26 cm. (The Geological Society of America. Memoir 45) $1 75 6735

Contents: Introduction. Textures of metallic ores. Common textural indicators of deposition in open spaces. Principles of colloidal deposition. Colloidal ore textures. Replacement textures. Microscopic evidences. Paragenesis or order of deposition. Textures of sedimentary ore deposits. Ore textures formed by dynamometamorphism. References cited. Explanation of plates. Index.

Note: The textures of ores [illegible] viewed under the microscope are correlated in the book with the process or methods of formation of ores. Only aspects such as would concern us are analysis or practical application are treated. In other words, there [illegible] *little* discussion of the physical chemistry principles underlying ore deposition. The author has included information from the literature and from his own work. The 14 plates show photographs or microphotographs of approximately 100 prepared ore specimens.

COLORADO SCHOOL OF MINES

Symposium on rock mechanics. Papers and discussion from the first annual Symposium on Rock Mechanics, Colorado School of Mines, April 23–25 1956. Golden Colorado School of Mines, 1956. 239 p. illus. 23 cm. (Colorado School of Mines Quarterly Vol. 51 no. 3) $2.00. 6736

Contents. Part I, Rock failure: Fundamental concepts of rock failure, by C. W Livingston. Some views and trends in mining research, by J. J. Reed. A note concerning the mechanics of artificial and natural hydraulic fracture systems, by H. Odé. Discussion of Part I. Part II, Design and support of underground openings: A report on the South-central Research Program of the School of Mines, Durham, England, by D. Bancroft. Mine stabilization spacing by stress redistribution, by J. J. Reed. Horizontal support of mine openings, by H. K. van Poollen. Discussion of Part II. Part III, Mining by block caving: Fundamental considerations in block caving, by F Becky. Concrete for ground support in the Kelley Mine, by M. Hamadie. Discussion of Part III. Part IV Rock fragmentation by blasting: Basic performance properties of blasting explosives, by F W Brown. Fragmentation of rock through blasting, by K. Hino. Blasting experiments in granite rock, by C. H. Noren. Discussion of Part IV Part [illegible] General discussion.

Note: "Rock mechanics" is an [illegible] term to [illegible] [illegible]. Its meaning is defined in this volume as "the science concerned with the properties and behavior of rocks, in the solid or fragmentary state[illegible] within or beyond their elastic limit and the associated engineering problems arising in causing or preventing rock failure. The subject is of primary interest to mining engineers and also holds interest for civil engineers, geophysicists, and others. The

WISE, LOUIS ELSBERG, AND EDWIN C JAHN

Wood chemistry Second edition. New York Reinhold Publishing Corporation, 1952 2 v illus 24 cm. (American Chemical Society monograph series No 97) $16 50 per vol 6731

Contents. Volume I: Introduction, by L. E. Wise and E. C. Jahn. Part I, The growth, anatomy and physical properties of wood Origin and anatomy of wood, by H. P Brown. The mechanical and physical properties of wood, by C. C. Forsaith. Part II, Components and chemistry of the cell wall: The chemistry of the cell walls of wood, by W M. Harlow Cellulose—chemical evidence regarding its constitution, by L. E. Wise. Cellulose—physical evidence regarding its constitution by H. Mark. Chemically modified cellulose, by C. B. Purves. Cellulose solvents and the properties of cellulose in solution, by A. J Stamm. Cellulose compounds and derivatives, by E. C. Jahn. The hemicelluloses, by L. E. Wise. The chemistry of lignin, by F E. Brauns. Part III, The extraneous substances. Extraneous materials of wood—introduction, by L. E. Wise. The volatile oils, by E. F Kurth. Wood resins, by G. C. Harris. The tannins and coloring matters, by M. A. Buchanan. Miscellaneous extraneous components of wood, by L. E. Wise. Phenolic and other extraneous components of coniferous heartwoods—their relation to taxonomy by H. Erdtman. Index, by C. J. West. Volume II. Part IV Surface properties of cellulosic materials Surface properties of cellulosic materials, by A. J Stamm. Part V Industrial wood chemistry: Combustion of wood, by L. F Hawley The thermal decomposition of wood, by A. W Goos. Wood hydrolysis, by E. E. Harris. The chemical behavior of wood, by E. C. Jahn. Alkaline delignification of wood, by W F Holzer Sulfite delignification of wood, by H. Erdtman. The lesser delignification processes, by E. C. Jahn. Bleaching of wood pulp, by F H. Yorston. Part VI, Decomposition of wood by microorganisms The biological decomposition of wood, by W G. Campbell. Part VII, The chemical analysis of wood Introduction and miscellaneous determinations, by B. L. Browning. The polysaccharide fraction of wood—isolation of cellulose preparations and the determination of cellulose, by B L. Browning—The analysis of non-cellulose polysaccharides, by B. L. Browning. The determination of functional groups, by B. L. Browning. The determination of lignin, by B. L. Browning. The evaluation of cellulose preparations, by B L. Browning. Analytical data and their significance, by B. L. Browning and I. H. Isenberg. Index, by C. J. West.

Note A standard treatise which covers wood and its chief components, such as lignin and cellulose, from the chemical viewpoint. Its lineage goes back to Wise and Hawley's *Chemistry of wood*, New York, 1936. The first edition in which there were chapters written by various contributors appeared in 1944. Now in the present edition the work has been extended to two volumes, and the number of contributors substantially increased. The various chapters are literature digests and are carefully keyed to citations in the source articles. The scope is comprehensive for scientific information, but the technological aspects of wood utilization are not covered.

WOLFE, HERBERT JAY

Printing and litho inks Fifth, and completely revised, edition. New York MacNair Dorland Company, 1949 490 p. illus. 24 cm $8 75 6732

Contents: The history of printing ink. General characteristics of inks. Printing ink vehicles. Solvents for inks. Pigments. Natural mineral pigments. Manufactured mineral pigments. Organic pigments. Black pigments. Resins. Driers and drying. Ink compounds. Addition agents. Typographic printing inks. Planographic inks. Intaglio printing inks. New types of printing inks. Special inks. Physics of printing inks. Factory equipment. Testing. Ink troubles and remedies. Appendix. Index.

Note A standard self-instruction book designed to help young men entering the printing-ink manufacturing industry and technicians already employed in it. It serves also as semi-reference book for journalists and others who occasionally need background information. Emphasis is placed on basic principles and techniques; and the industry is covered from the preparation of inks from raw materials to the testing of the finished product. Numerous formulas for specific types of inks are included. This edition gives more attention to the theory of the subject and includes a chapter on the physics of printing inks. New techniques and the preparation of new types of inks, such as moisture-set and pressure-set typographic inks, are described.

Mining Engineering

General

FORBES, J. J., AND G. W. GROVE
Protection against mine gases (revised 1954) Revised by W. D. Walker Jr., S. J. Pearce, A. E. Morrow and L. B. Berger. Washington, D. C. Government Printing Office, 1954 58 p. illus. 23 cm. (United States. Bureau of Mines. Miners circular 35) $0.55 6746

Contents: Introduction. Methods of protection against mine gases. Location of barricades during fires or following explosions. Carbon monoxide self-rescue respirator. Gas masks for protection against gases, vapors, and smoke. Self-contained oxygen breathing apparatus. Treatment for gas poisoning or asphyxiation.

Note: This publication is the third revision of the title, which was originally issued in 1929. Its object is to teach the various methods and devices used for protection against mine gases. It is one of four publications issued by the Bureau of Mines and kept up to date since 1929, to be used in the Bureau training course in advanced mine rescue training to prepare mine officials and others to organize men for mine rescue and recovery operations. The other three are Miners' Circular 33, dealing with mine gases and the various methods of detecting them; Miners' Circular 34, giving instructions for sampling and analyzing mine atmospheres; and Miners' Circular 34, explaining procedures in sealing and unsealing mine fires and in conducting recovery operations.

LEROY LESLIE WALTER editor
Subsurface geologic methods (a symposium) Second edition. Golden Colorado School of Mines, Department of Publications, 1950. 1156 p. illus. 24 cm. $7.00 6747

Contents (abridged): Introduction. Stratigraphic, structural and correlation considerations. Comments on sedimentary rocks. Subsurface laboratory methods. Subsurface logging methods. Miscellaneous subsurface methods. Secondary recovery of petroleum. [illegible] subsurface geology. Dams and reports of the subsurface [illegible]. Graphic representations. Subsurface maps and illustrations. Subsurface methods as applied in mining geology. Subsurface methods as applied to geophysics. Geologic techniques in civil engineering. [illegible] of well information. Author index. Subject index.

Note: A collection of more than 50 papers, written by 50 authors, on such geological techniques as micropaleontology of rock, X-ray analysis, sampling of well cuttings, electric logging, radioactivity in well logging and on related non-geological subjects such as oil well surveying, design of rock bits, oil well cementing, and oil field valuation. Some of the material has been published previously, but a considerable part was prepared especially for this volume. The first edition was published in 1949. Several papers have been added in this edition and the [illegible] new features that will be much appreciated in libraries.

LEWIS, ROBERT STRONG
Elements of mining Second edition. New York John Wiley & Sons, Inc. 1941 579 p. illus. 23 cm. $8.00. 6748

Contents: Introduction to the mining industry. Prospecting. Mineral [illegible]. Explosives. [illegible] Subsidence and the support of excavations. Drilling and blasting. Shafts. Boring. Mining methods. Mine haulage. Mine drainage and pumping. Compressed air. Ventilation. Sampling and valuing mines. Organization, management, safety work. Index.

Note: An introduction to mining principles and practice. In the second edition the text has been revised to take note of recent advances in mining practice brought about by depletion of rich and shallow deposits that has driven the miner ever deeper into the earth in pursuit of ever leaner ores. Prospecting, exploration, development, and exploitation of mineral deposits are discussed. Definitions and brief study of mineral deposits, methods of prospecting, and aids to mineral discovery followed by a chapter on mining laws, lead the reader to a description of the methods and tools employed to mine diverse types of deposits. The principal implements and equipment used in excavation, haulage, hoisting, pumping, and ventilation are described; methods of sampling and estimating ore reserves and the principles of mine valuation are covered. Examples are cited to illustrate the organization of mining companies to provide efficient management, and several pages are devoted to safety and welfare work and public relations.

PAUL, RODMAN WILSON
California gold the beginning of mining in the Far West. Cambridge Mass. Harvard University Press 1947 380 p illus. 22 cm. $4.50. 6749

Contents: The setting. The new age begins. The great migration. Fundamentals and teachers. From an adventure to a business: mining, 1848–1851. Camps, cabins, courts, and citizens, 1848–1856. The three sections: nature and man, 1848–1860. Basic conditions for [illegible]. I—Rivers [illegible] transitional era. Towards a new economy 1851–1863. II—Deep diggings and veins. Towards a new economy 1851–1863. The regulation of society and the water supply. Greater California. The survival of the [illegible] 1848–1873. The life of the miners, 1848–1873. The distant prize, 1860–1873. Maturity 1860–1873. [illegible] 1860–1873. From Sunday carnival to labor war 1857–1873. Epilogue. Appendix I Wages. Appendix II Gold production. Appendix III [illegible]. Note on sources. Index.

Note: Between 1848 and 1873 mining in California changed from the desperate adventure of the Gold Rush to an organized, stable industry. Simple placer mining gave way gradually to large-scale river mining, hydraulic mining, and deep quartz mining operations. California society, based simply on the necessity for crime control and land regulation, took on a more compact structure with the growth of the new [illegible] and the advent of women and children into the mining [illegible] life. The author describes these technical changes in mining and the economic and social changes that marked California during these years. The book is an excellent, well-documented example of scholarly writing. Even though it sticks to facts, it is as fascinating as some of the romantic accounts of the same subject.

PEELE, ROBERT AND JOHN A. CHURCH editors
Mining engineers handbook written by a staff of forty-six specialists under the editorship of Robert Peele with the collaboration of John A. Church. Third edition. New York John Wiley & Sons Inc. 1941 2 v illus. 22 cm. (Wiley engineering handbook series) $18.50. 6750

Contents (abridged): Volume I: Mineralogy. Geology and mineral deposits. Earth excavation. Tunneling. Shaft sinking in rock. Boring. Prospecting. Shaft sinking in unstable and water-bearing ground. Prospecting, development and exploitation of mineral deposits. Geophysical prospecting. Underground transport. Hoisting plant, shaft [illegible]. Mine ventilation. [illegible] pumps, and [illegible]. Drainage of mines. Electric power for mine [illegible]. Compressed air practice. Volume II: Underground surveying. Mine geologic maps and models. [illegible] Mine organization and accounts. Cost of mining. Wages and welfare. Mine air, gases, dusts, hygiene, explosions, and accidents. Mine examinations, valuations, and reports. Aerial tramways and cableways. Mining laws. Underground mechanical loading, conveying and handling. Breaking, crushing and sorting of ores. Ore sampling. Assaying. Selling, purchasing and treatment of ores. Gold amalgamation and cyanidation. Preparation and storage of anthracite coal. Preparation and coking of bituminous coal. Mathematics and mechanics. Chemical and physical notes and tables. Elements of hydraulics. Engineering thermodynamics. Power and [illegible]. Mechanical engineering miscellany. Electrical power machinery. Elements of structural design. Petroleum production engineering. [illegible] methods. Engineers' tables. Index.

Note: Due to improvements in methods and equipment, much new material has been added to this third edition, and obsolete data have been eliminated. A drastic revision has been made in the section on methods of mining. New sections are included on petroleum and on geophysical prospecting, while the chapter on mine ventilation has been completely rewritten. The rapid development of methods and devices for underground handling and conveying of minerals has resulted in a complete revision and expansion of that section. Bibliographies are included with the sections.

STALEY WILLIAM WESLEY
Introduction to mine surveying. Stanford Stanford University Press, 1939 275 p. illus. 20 cm. $3.75 6751

Contents: Instruments and equipment. Angles and linear measurements. Bearing and azimuth. Determination of true meridian.

Colorado School of Mines, and Professor Clifton W Livingston in particular have played the major role in its development. The majority of the papers in the book describe results of experiments conducted in laboratories and in mines. The three papers on rock fragmentation by blasting are contributions to a closely allied subject.

CRAIN, HARRY M, editor
Economics of the mineral industry Golden, Col Colorado School of Mines, 1950 47 p illus 23 cm (Quarterly of the Colorado School of Mines Vol 45, no 1A) $0 50 6737

Yet Together the volumes listed above constitute the seventy-fifth anniversary volume of the *Quarterly* and they bear a collective title Mineral resources in world affairs. The papers contained in them are original, and are written by outstanding geologists and other men who are associated with geology mining, and petroleum in the *United States of America*. Generally speaking the articles do not contain reports of original research but are, instead, summaries of modern developments or descriptions of the current state of affairs.

FORBES, J J AND G W GROVE
Mine gases and methods for detecting them Revised March 1954 by G E McElroy H A Watson E J Coggeshall D D Dornenburg and L. B Berger Washington D C Government Printing Office 1954 82 p illus. (part col d) 23 cm (United States. Bureau of Mines. Miners circular 33) $0 55 6745

Contents Introduction. Sources, characteristics, and physiological effects of mine gases. Methods of detecting mine gases. Detection of methane. Detection of carbon monoxide Detection of hydrogen sulfide Detection of oxygen Detection of carbon dioxide black damp, or an atmosphere deficient in oxygen Determination of sulfur dioxide. Determination of oxides of nitrogen Portable Orsat gas-analysis apparatus. Laboratory equipment for the analysis of mine atmospheres.

Yet This publication gives detailed information on the nature and occurrence of mine gases and mixtures of gases Various methods of detecting gases are treated at length Attention is given to flame safety lamps, methane-indicating instruments, and different types of detectors It is the latest revision of a circular originally prepared and issued in 1929

GAUDIN ANTOINE MARC
Principles of mineral dressing. New York McGraw Hill Book Company Inc., 1939 554 p. illus. 23 cm. $10.00 6758

Contents: Introduction. Crushers. Laboratory sizing. Liberation. Grinding. Attributes of comminution. Industrial screening. The movement of solids in fluids. Classification. Quantifying comminution. [illegible] operations. Heavy-fluid separation. Jigging. Flowing-film concentration and tabling. Flocculation and dispersion. Flotation and [illegible]—physical aspects, chemical aspects. [illegible] Magnetic separation. Miscellaneous processes. Separation of solids from fluids. Auxiliary operations. Mineral dressing as an art.

Note: Mineral dressing is studied from the unit-process standpoint in this text. Each process, in turn, is analyzed from its physical and chemical principles while the ultimate objectives of the art and its philosophy are kept in view. Includes numerous references and illustrations.

RICHARDS, ROBERT HALLOWELL, AND OTHERS
Textbook of ore dressing, by Robert H. Richards and Charles E. Locke, assisted by Reinhardt Schuhmann, Jr. Third edition, completely revised and rewritten. New York McGraw Hill Book Company Inc., 1940 608 p. 6759 illus. 23 cm. $11.00

Contents: General principles. Preliminary breaking. Intermediate and secondary crushers. Steam stamps. Gravity stamps and amalgamation. Fine grinding. Laws of crushing. Preliminary washing. [illegible] and hand sorting. Sizing by screens. Classifying and sorting in water. Concentration by jigs. Fine-sand and slime [illegible] Miscellaneous processes of [illegible] concentration. Flotation. Miscellaneous processes. General [illegible]. Accessory apparatus. Mill practices and processes. General [illegible]. Coal dressing. Amalgamation. Ore [illegible] and testing. Coal dressing. Appendix. Index.

Note: This textbook for students of metallurgy and for mill operators was originally a condensation and revision of Richards' four-volume treatise, Ore dressing, 1903–09. The first edition of the present title was published in 1909. The third edition incorporates methods and machines developed from 1925 to 1940, including a new chapter on flotation. The treatment has been prepared on the theory that concrete facts such as descriptions of machines and processes should be learned before proceeding to the various theories of operation. Typical mills in each of the important branches are described, together with the best current mill principles and practices.

TAGGART ARTHUR FAY
Elements of ore dressing. New York John Wiley & Sons, Inc., 1951 595 p. illus. 24 cm. 6760 $11.75

Contents: What ore dressing is and does. Hand picking. Screening and filtration. Electrical concentration. Introduction to sedimentation. Acceleration in free-settling. Introduction to gravel separation. Hindered-settling. Sink-float. Jigging. Film and trough separation. Shaking concentrators. Organic chemicals in flotation concentration. Flotation collection—activation and depression—bubble attachment—flotation machines and strategy—operation. Miscellaneous methods of concentration. Primary crushing. Secondary crushing. Grinding. Transport and control. Flowsheets. Appendix. Abbreviations in bibliographies. Index.

Note: Professor Taggart's *Handbook of mineral dressing* serves as basic reference manual covering all phases of ore and mineral separation and concentration. This new work is a less exhaustive treatment of the same subject, and is designed to introduce mining engineering students to current methods of ore processing and preparation. Theory and practice are closely integrated, and descriptions of machines and processes are interwoven with discussions of the fundamental principles underlying the design and operation of each type of equipment. The appendix includes a series of laboratory experiments which have been used in ore dressing courses at Columbia University.

TAGGART ARTHUR FAY
Handbook of mineral dressing: ores and industrial minerals. Contributors Henry A. Behre, Charles H. Breerwood, John M. Callow, Dorr Co. Engineering Staff, Francis E. Finch, T. A. Frankish, Harlowe Hardinge, Menelaos D. Hassialis, Donald F. Irvin, Edward K. Judd, Percey F. Smith, E. J. Tournier, Paul M. Tyler. New York John Wiley & Sons, Inc., 1945 489 p. illus. 22 cm. (Wiley engineering handbook series) $18.00 6761

Contents: Introduction. Metallic minerals. Industrial minerals. Cement. Crushing. Wet grinding. Dry grinding. Screen sizes. Classification. [illegible] water. Air sizing and dust collection. Washing and scrubbing. Gravity concentration. Flotation. Electrical concentration. Miscellaneous methods of concentration. Dewatering. Filtration. Drying. Storage and mill transport. Sampling and testing. Design and construction of ore-treatment plants. Mathematics. Mathematical and miscellaneous tables. Index.

Note: An encyclopedic treatment of mineral dressing processes and machinery. Diagrams and flow sheets illustrate the layout and processes of many actual installations. Comparative data on the performance of various machines and processes and on many other topics that concern those concerned with the planning and operation of mineral dressing plants are included.

ECONOMIC GEOLOGY

BATEMAN ALAN MARA
Economic mineral deposits. Second edition. New York John Wiley & Sons, Inc., 1950. 6762 916 p. illus. 23 cm. $8.75

Contents (abridged): Part I, Principles and processes. Brief history of the use of minerals and of the development of economic geology. Magmas, rocks, and mineral deposits. Processes of formation of mineral deposits. Controls of mineral localization. Folding and faulting of mineral deposits. Classification of mineral deposits. Geophysical prospecting, exploration, development, and valuation of mineral properties. Extraction of metals and minerals. Part II, Metallic mineral deposits. The precious metals. The nonferrous metals. Iron and ferroalloy metals. Part III, Nonmetallic mineral deposits. The mineral fuels. Ceramic materials. Structural and building materials. Metallurgical and refractory materials. Chemical materials. Ground-water supplies. General references on economic geology. Index.

Note: Although this book contains a wide variety of information on minerals of economic importance, it is written mainly from the standpoint of ore genesis. In the first part the processes of formation of ore bodies are discussed at length. In the second and third parts, known mineral deposits are concisely described except in cases of minerals too widely distributed, such as lime. The descriptions include both mineralogical and economic data. The book is useful both as a textbook and a reference book. In this edition, the references have been brought down to the end of 1949 and the text has been revised in numerous places, but there is less emphasis on statistical data, especially statistics of annual production. The author's *The formation of mineral deposits*, New York, Wiley, 1951, 371 p., $6.25, is a less technical presentation for lay readers and nonspecialists.

BATEMAN ALAN MARA
The formation of mineral deposits. New York John Wiley & Sons Inc., 1951 371 p. illus. 24 cm. $6.25 6763

Contents: Introduction. Materials of mineral deposits. Brief history of evolution of ideas on the origin of mineral deposits. Relation of mineral deposits to igneous activity. The primary mineralizing solutions. The processes of formation of mineral deposits. Magmatic processes. Contact-metasomatic processes. Hydrothermal processes. Sedimentary processes and cycles. Weathering processes. Metamorphic processes. Ground-water processes. Controls of mineral localization. Exploration and exploitation of mineral deposits. Mineral resources. Additional general references. Appendix. Geological time table. Glossary. Index.

Note: In this new book the author has covered much of the same ground and used some of the same material as in his *Economic mineral deposits*, described above. However, here he has written for adult general readers rather than advanced college students and

Underground traversing. Stope surveys. Transferring the meridian. Problems in mine surveying. Triangulation system for mining property Tunnel surveys. Compass surveys. Notes and calculations. Maps and sections. Bore hole surveys. Coal-mine surveying. Index.
Note. Designed as a textbook on the modern procedure, technique, and instruments of mine surveying, this book also serves as reference book for people in the field or at an operating mine. Based on extensive correspondence with mine engineers in the United States of America, Canada, and Mexico, as well as on the author's personal experience in the field and in the classroom.

STALEY, WILLIAM WESLEY

Mine plant design. Second edition. New York McGraw Hill Book Company Inc., 1949 540 p illus. 24 cm. $10 00 6752

Contents Graphical solution of simple beams and roof trusses. Review of simple design principles. Roof trusses, columns, and footings. Headframes. Ore bins. Skips and cages. Safety catches. Mine hoists. Handling of water for mining purposes. Compressed air Mine haulage. Power plant. Mine ventilation. Index.
Note. A standard work which is used both as a textbook in engineering colleges and as a guide for mine operators and engineers, particularly those located in isolated areas who must design structures and equipment with little aid from other sources. Only equipment used above and below ground in mining and handling ores is covered. Ore crushing and concentrating machinery are not discussed. In this edition chapters have been added on ore bins, skips, cages, and other topics, and the chapter on headframes has been revised to include the design of wooden structures. The chapters are supplemented by fairly extensive lists of references, and some of these have been revised.

VACQUIER, V , AND OTHERS

Interpretation of aeromagnetic maps. By V Vacquier, Nelson Clarence Steenland Roland G Henderson, and Isidore Zietz. New York The Geological Society of America, 1951 151 p illus 26 cm (Geological Society of America. Memoir 47) $2 25 6753

Contents. Foreword. General principles. Results of interpretation of six aeromagnetic surveys. Calculation of total magnetic intensity anomalies due to idealized bodies. Tables and charts for computations of magnetic effects. References cited. Index.
Note. In this work, a practical method for the interpretation of aeromagnetic maps based on data gathered with the airborne magnetometer is described and the application is illustrated by applying it to the interpretation of the maps of six different aeromagnetic surveys. The book is addressed to professional geologists and is of special interest to those who are associated with prospecting for mineral deposits including petroleum. The illustrated material includes reproductions of a variety of aeromagnetic maps.

VON BERNEWITZ, MAX WILHELM

Handbook for prospectors and operators of small mines. Revised by Harry C Chellson Fourth edition. New York McGraw Hill Book Company Inc. 1943 547 p illus. 19 cm. $7 50 6754

Contents Part I, Aid to prospectors. Tents, clothing, water food, and utensils. Methods of transportation. Health and first aid. Laws pertaining to mining. Part II, Mineralogy Elementary geology Geology in prospecting. Occurrence of ores. Outcrops. Prospecting. What minerals to look for and where. Sampling and assaying. Field tests and measurements. Developing and equipping a prospect. Markets and prices. Part III, Minerals, their occurrence, description, detection, and use Metallic minerals. Non-metallic minerals. Ore dressing and treatment. Memoranda. Glossary of terms used in mining. Index.
Note This handbook is intended as practical guide to prospecting and small-mine operation for the beginner and is based in part on publications of the United States Geological Survey Federal Bureau of Mines, state geological surveys, and state bureaus of mines. The fourth edition includes details of United States of America and Philippine mining law as well as new methods of tests, new material on minerals of increasing importance, crystals, ore-dressing and treatment, miscellaneous weights and measures, shipping ores and products, minerals and metal content, prices for minerals, ores, metals and building materials over a considerable period.

YOUNG, GEORGE JOSEPH

Elements of mining Fourth edition. New York McGraw Hill Book Company, Inc., 1946 755 p. illus. 23 cm. $9 00 6755

Contents: Introduction. Prospecting. Boring. Drilling for blasting purposes. Rock breaking. Blasting rock. Transportation and hoisting. Mine drainage. Ventilation and illumination. Support of mine workings. Open-pit mining. Alluvial mining. Development. Underground methods. Mine organization and operation. Mine accounting. Accidents and miners' diseases. Examination of mineral deposits. Index.
Note. An established text well known to American mining engineers and students. The book provides comprehensive few of the mining field, and offers great deal of useful material compressed into a clearly written and well-balanced treatment. Coal mining principles and practices as well as those of metal mining are included, and the relation of geology to mining is emphasized wherever possible. Mining costs and cost analyses also are presented. The fourth edition covers developments in mining from 1932 to 1945 and contains minor revisions, among which are the rewritten, modernized sections on explosives.

ORE DRESSING

DORR, JOHN VAN NOSTRAND, AND FRANCIS L BOSQUI

Cyanidation and concentration of gold and silver ores Second edition. New York Mc Graw Hill Book Company Inc. 1950 511 p. illus. 24 cm. $9 00 6756

Contents: Part I, Technical Historical. Examination and testing of ores. Coarse crushing. Sorting and sampling. Fine grinding. Classification. Sand treatment. Slime treatment. Concentration. Roasting. Amalgamation and bullion recovery Plant control. Cyanicides and refractory ores. Cyanide regeneration and miscellaneous processes. Part II, Descriptive Treatment of gold ores. Treatment of silver ores. Costs and power Appendixes: Useful reference information. Books on cyanidation. Analytical methods. Index.
Note. The standard book on the economically important process of recovering gold and silver from ores. The first edition was the work of the senior author alone In the present edition, the book has been reorganized and extensively rewritten. Important material added includes new discussions of the treatment of refractory ores and the chemistry of cyanide solutions. The descriptions of considerable number of ore treatment plants which have been constructed since 1936 are now included in the second part. The work is of interest to advanced students in mining engineering and to practicing engineers.

GAUDIN ANTOINE MARC

Flotation New York McGraw Hill Book Company, Inc. 1932 552 p. illus. 24 cm 6757

Contents: Introduction by Theodore J Hoover Historical survey of flotation. The physicochemical foundations of flotation. The phases in flotation systems. Colloid systems. Flotation reagents Mechanical aspects of froth production. Liberation and particle size. Flotation of sulfide ores of copper The flotation of sulfide lead-zinc ores. Sulfide copper zinc, copper-lead, and copper-nickel lead-zinc ores. Oxidized ores of copper lead, and zinc. Precious and rare metals. Non-metallic minerals. Machinery Some pointers on mill design. Elements of costs. Choice of ore-treatment method. Testing and testing equipment. Metallurgical calculations. Effect of flotation on mining, metallurgy and metal markets.
Note: This book presents comprehensive treatment of mineral separation by flotation. Following brief history and review of physicochemical fundamentals, it takes up in detail the technology and practice of the art, including the particular problems encountered in applying flotation to various classes of minerals, data on the solutions accepted in practice and information on machinery engineering control, and the economics of flotation. A second edition was published in 1937 $12.50.

Mining Engineering

Economic Geology

Contents. Introduction. The formation of minerals. Atmosphere, hydrosphere and underground water. The flow of underground water. The spring deposits at the surface. The composition of water. Relations of mineral deposits to mineral underground waters. Metamorphic waters and springs. Origin of underground waters. The magmas in its relations to mineral deposits. The magmas in its relations to mineral deposits. The form and structure of mineral deposits. Faulting and folding. Openings in rocks. The form and structure of mineral deposits. Texture of mineral deposits. Ore-shoots. Classification of mineral deposits. Deposits formed by mechanical processes of transportation and concentration. Detrital deposits. Deposits produced by chemical processes of concentration in bodies of surface water by reactions between solutions. Sedimentary iron ores, regionally metamorphosed. Deposits formed by evaporation of bodies of surface water. Mineral deposits resulting from processes of rock decay and weathering. Deposits formed by concentration of substances contained in the surrounding rocks, by means of circulating waters. Lead and zinc deposits in sedimentary rocks. Deposits independent of igneous activity. Epithermal deposits. Deposits of native copper. Mesothermal deposits. Hypothermal deposits. Pyrometasomatic deposits. Regionally metamorphosed deposits. Mineral deposits of the pegmatite class. Mineral [illegible] deposits. Mineral deposits of the pegmatite class. Mineral deposits formed by concentration in molten magmas. Oxidation of deposits formed by concentration in molten magmas. Index of localities. Index of mineral ores. Meta-igneous epochs. Index of subjects.

Note. An attempt to place the knowledge of mineral deposits on the basis of [illegible] generic classification and thus bring the subject into [illegible] more important position in the field of geology. The general plan has been to select [illegible] few notable examples to illustrate the genesis of formation of each mineral group of deposits. Intended for advanced students of geology and as [illegible] reference for practicing geologists and mining engineers. The fourth edition covers the advances in geological knowledge from 1913 to 1933 resulting from increased activity in mineral production. New bibliographic material has also been added.

Lovering, Thomas Seward

Minerals in world affairs. New York, Prentice-Hall, Inc., 1943 394 p. illus. 23 cm. (Prentice-Hall geology series edited by N. E. A. Hinds) $5.25 6770

Contents. Part [illegible]. Economics, history and geology. Background—ethics, history and geology. Economics of the mineral industries. Minerals in history before the industrial era. The industrial era. Geology. Part II, Industrial minerals. The mineral fuels—coal. Petroleum. Part III, Industrial minerals—iron and the ferro-alloy metals. Iron and steel. Manganese. Chromium. Nickel. Tungsten. Molybdenum. Vanadium. Part IV, Nonferrous industrial metals. Copper. Aluminum. Lead. Zinc. Tin. Mercury. Antimony. Appendix. Index. Production tables.

Note. Mineral resources, according to the author, [illegible] are [illegible] most valuable but ephemeral possessions, since these can be no second crop. Because of their restricted occurrence and indispensability to industry they have determined the course of history many times in the past and will be of increasing importance in the future. The work reviews the role of minerals in national power, the economics of mineral industries, and the geography and control of important minerals.

McKinstry, Hugh Exton

Mining geology with sections by Stanley A. Tyler, E. N. Pennebaker and Kenyon E. Richard. New York, Prentice-Hall, Inc., 1948 650 p. illus. 23 cm. (The Prentice-Hall geology series Norman E. A. Hinds editor) $8.50. 6771

Contents. Part [illegible]. Assembling geological data. Geologic mapping. Sampling ore and calculating tonnage. Drilling. Geophysical investigations. Laboratory methods. Correlating data. Part II, Geological principles of ore-search and ore appraisal. The use of fact and theory. Guides to ore—targets and loci. Physiographic guides. Mineralogical guides. Stratigraphic and lithologic guides. Fracture patterns as guides. Contacts and faults as guides. Dislocated orebodies. Persistence of ore in depth. Part III, Application to specific phases of mining. Field exploration. Examining and developing prospects. Valuing mining properties. Geological work at an operating mine. Engineering geology in mining. Writing and reading reports. Part IV, Technological characteristics of ores. Amenability of ore to treatment. Marketable forms of metals and ores. Appendices. Glossary of mining and geological terms.

Note. A well-written, comprehensive treatise on the application of geological principles and techniques to the locating, appraising, and mining of mineral deposits. It is intended as [illegible] guide and reference manual for the mining geologist in the field. As may not have access to other pertinent literature, it thus includes, in summarized form, basic information concerning mineral [illegible], the occurrence and characteristics of minerals, methods of evaluating mines and ore deposits, preparation of reports, locating of smelting and reduction plants, etc. Since the volume is written for the professionally trained reader, the fundamental principles of structural geology and ore deposits are only briefly reviewed. The references scattered throughout the text form an extensive bibliography of the subject.

National Research Council. Committee on Processes of Ore Deposition

Ore deposits as related to structural features, prepared under the direction of the Committee on Processes of Ore Deposition of the Division of Geology and Geography of the National Research Council Washington, D. C. Edited by W. H. Newhouse. Princeton Princeton University Press, 1942 280 p. illus. 31 cm. $8.50 6772

Contents (abridged). Some features of ore deposits in structural features. Structural features associated with ore deposits of certain types and in large areas. Ore deposits arranged according to structural features. Ore deposits in massive rocks. Ore deposits in layered rocks. Not related to known faults, fissures, or shear zones. With faults, fissures, or shear zones. Ore deposits near contact of massive and layered rocks. Structural principles applied to ore deposits. Index.

Note. A compilation of 81 short papers by about 65 specialists in several fields of geology related to ore deposition, who have had intimate contact with ore occurrence in mines or districts. The papers describe the several structural features which have localized ore in [illegible] given mining district, and [illegible] has the emphasis is upon description and fact rather than on theory, the interpretations and opinions of the various contributors are individual and occasional differences in viewpoint occur. Although many types of structural features and ore deposits are represented, no claim is made for completeness, and no attempt is made to secure [illegible] weighted average of types of relationship. Each paper is illustrated with numerous drawings and there are bibliographic references in footnotes throughout the work.

Singewald, Joseph Theophilus

Bibliography of economic geology of South America. New York, The Society, 1943 159 p. 24 cm. (Geological Society of America. Special papers. No. 50) $0.80 6773

Contents. Preface. List of serials and abbreviations. South America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guianas. British Guiana. Dutch Guiana. French Guiana. Paraguay. Peru. Uruguay. Venezuela.

Note. In this work the bibliographies published in Miller and Singewald's *The mineral deposits of South America*, 1919 were revised to cover the pertinent literature to 1942. There is a total of 2,913 titles.

Steidle, Edward

Mineral forecast 2000 A.D. State College Pennsylvania State University 1952 216 p. illus. 24 cm. $3.00 6774

Contents (abridged). Part I, Minerals and posterity. Part II, Mineral forecast 2000 A.D.: Mineral fuels. Metallic minerals. Nonmetallic minerals. Geology group. Meteorology. Mineral economics. Mineral extraction. Mineral preparation. Water supplies. Atomic energy. Mineral industries education. Mineral possibilities. Conclusions.

Note. A readable account of the present state and the possible future of mineral supplies for the United States of America. The first part, originally published as Circular 33 by Pennsylvania State College, points out the dependence of the United States on other countries for many of the most strategic minerals and suggests the need for down-to-earth mineral policies. The second part, published as Circular 38, is intended to show how education and research can help offset the shortage by developing new methods for utilization or even of synthesis of the important minerals. Each mineral is treated separately and, while Pennsylvania [illegible] part

specialists. What is known about the origin of mineral deposits is recounted in a clear nontechnical style. There is also some discussion of the economic importance of minerals.

ECONOMIC GEOLOGY

Fiftieth anniversary volume 1905–1955 Alan M Bateman, editor Urbana The Economic Geology Publishing Company, 1955 1,130 p illus. 24 cm. $8 00 6764

Contents. Part I: *Economic geology* by A. M. Bateman. Metallogenetic provinces and epochs, by F S. Turneaure. Thermal springs and epithermal ore deposits, by D E. White. The classification of ore deposits, by J A. Noble. Structure of hydrothermal ore deposits, by H. E. McKinstry The zonal theory of ore deposits, by C. F Park, Jr Temperatures in and near intrusions, by T S. Lovering. Synthetic minerals, by W A. Weyl. Hydrothermal alteration as guide to ore, by G. M. Schwartz. Oxidation of copper sulfides and secondary sulfide enrichment, by C. A. Anderson. Methods and problems of geologic thermometry by E. Ingerson. Sedimentary deposits of rare metals, by K. B. Krauskopf. Origin of uranium deposits, by V E. McKelvey and others. Part II Engineering geology—a fifty year review by R. F Legget. Influence of geological factors on the engineering properties of sediments, by K. Terzaghi. Recent developments in clay mineralogy and technology by R. E. Grim. Properties of calcium and magnesium carbonates and their bearing on some uses of carbonate rocks, by D. L. Graf and J E. Lamar The quantitative approach to groundwater investigations, by J G. Ferris and A. N Sayre. Time of petroleum accumulation, by A. I. Levorsen. Coal petrology by C. E. Marshall. The use of gamma ray measurements in prospecting, by W L. Russell. Economic applications of paleoecology by S. P Ellison. Geophysics applied to prospecting for ores, by L. B. Slichter Minor elements in some sulfide minerals, by M. Fleischer The study of pegmatite deposits, by R. H. Jahns.

Note A collection of papers, each one of which was specially written for this volume, which celebrates the fiftieth anniversary of the journal, *Economic geology* Each of the papers is a review of the current knowledge and the literature pertaining to the topic named in its title. Each one contains an extensive bibliography

FORRESTER, JAMES DONALD

Principles of field and mining geology New York John Wiley & Sons Inc., 1946 647 p illus 22 cm $9 25 6765

Contents Part I, Recognition of geologic phenomena. Foreword. Rocks and geologic structures. Field criteria for recognition of geologic structures. Phenomena of economic mineral deposits. The correlation of geologic phenomena. Part II, General field-survey practices and procedures. Foreword. Field equipment exclusive of surveying instruments. General survey procedures. Survey methods and instruments. Part III, Special field techniques of mining geology Foreword. Surveying and mapping procedures. Sampling. Ownership studies and mining claim locations. Prospecting and development practices. Part IV The interpretation and use of field data. Foreword. Library and laboratory research and the preparation of maps, models, and illustrations. The use of prepared maps and illustrations and the correlated analysis of the geological problem. Interpretations, analyses, and conclusions. Bibliography of selected references. Index.

Note The intention of this useful work is to describe the geological techniques necessary for determining the occurrence of economically valuable mineral deposits. Procedures described are those in current use and include most of the various geophysical prospecting techniques. There are numerous photographs, diagrams, and tables The work is useful to practicing geologists for reference purposes and to students as text for learning how to record and interpret observations, and to present conclusions effectively

KELLEY VINCENT COOPER

Geology and economics of New Mexico iron-ore deposits Prepared in cooperation with the Geological Survey U S Department of the Interior Albuquerque The University of New Mexico Press 1949 246 p illus. (part col d) 23 cm. (University of New Mexico publications in geology No two) $2 00 6766

Contents (abridged) Part I. General aspects. Part II, Iron-ore deposits. Bibliography Index.

Note. A comprehensive study of iron-ore deposits and mining in a state which is one of the chief suppliers of ore to the iron and steel industry of the southwestern United States of America. In the first part, such aspects as stratigraphy mineralogy classification, reserves, uses, mining, marketing, and economic features are discussed. The second part is a detailed description by region of known deposits. The whole study represents detailed picture of iron-ore mining in a region where both the mineralogical and economic conditions are comparatively unfavorable.

KIERSCH, GEORGE A.

Engineering geology, historical development, scope, and utilization. Golden Colorado School of Mines 1955 123 p. illus. 23 cm (Colorado School of Mines. Quarterly Vol. 50 no 3) $1 50 6767

Contents. Fundamentals of engineering geology: Part I, Scope, development, and utilization. Part II, Engineering structures and their geologic problems—outline form. Part III, Geologic processes, materials, and fields related to engineering geology—outline form. Foundation and excavation characteristics. Underground openings. Materials of construction. Rocks, structures, and geologic processes (as factors in design, construction, and maintenance) Geology applied to engineering Part IV Techniques, interpretation and presentation of data. Field operations. Field investigations, tests. Mapping and logging techniques. Interpretation of data. Laboratory investigations, tests, techniques, and uses. Methods of construction and maintenance. Presentation of data. Bibliography Part V Appendix.

Note. Instead of writing treatise, the author of this publication prepared a detailed outline of modern engineering geology and gave references to literature in which the various topics and sub-topics are discussed. It is not a bibliography although it can be used as such. It is more in the nature of an outline for a graduate-level course or a survey and guide to the literature for practicing geologists. Part is an essay written in the traditional manner of the historical development and current scope of engineering geology All of the other parts are outlines with literature references. The references have been painstakingly selected.

LAHEE, FREDERIC H

Field geology Fifth edition. New York McGraw Hill Book Company Inc. 1952 883 p illus 19 cm $9 50 6768

Contents Introduction. Features seen on the surfaces of rocks. Rock particles and fragments. Original surface features of sediments. Original structures and structural relations of sedimentary rocks. Field relations of igneous rocks. Tilted and folded strata. Fractures and fracture structures. Metamorphic rocks. Mineral deposits. Topographic forms. Topographic expression Topographic maps and profile sections. Geologic surveying General observations. Instruments and other equipment used in geologic field mapping Instrumental methods in field mapping. Air reconnaissance air photography and air mapping. Subsurface geologic surveying Modes of geologic illustration. Interpretation of geologic maps. Geologic computations. Preparation of geologic reports. Geophysical surveying. Appendix. Bibliography Index.

Note. A standard and widely-used manual of geological exploration and mapping. It is used both as textbook in courses offered to students of mining engineering and as reference book in the field by petroleum and mining geologists and engineers. It presents methods and keys for the recognition and interpretation of land forms and structures, explains how to take and record data in the field, how to make and interpret maps, etc. The first edition was published in 1916 and the fourth edition in 1941 Comparing the fourth edition to the present fifth edition, reasonably extensive revisions have been made in the discussions of number of topics the chapter formerly entitled Airplane mapping" has been completely rewritten and retitled 39 new figures have been added, and there are four newly added tables in the appendix.

LINDGREN, WALDEMAR

Mineral deposits. Fourth edition revised and reset. New York McGraw Hill Book Company Inc., 1933 930 p. illus. 23 cm $11 00 6769

annual meeting of the Association, at Chicago Illinois, April 24–27 1950. Edited by Max W Ball and others. Tulsa The Association, 1951 358 p. illus. 24 cm. $4.00. 6780

Contents (abridged) Alaska, by G. Gry and others. Western Canada, by Alberta Society of Petroleum Geologists. Pacific Coast states and Nevada, by Pacific Section of American Association of Petroleum Geologists. Rocky Mountain region, by Rocky Mountain Association of Geologists and others. Mid-continent region, by Tulsa Geological Society West Texas and eastern New Mexico, by West Texas Geological Society Fort Worth basin and Muenster Arch north-central Texas, by Fort Worth Geological Society Downdip Mesozoic rocks of south Texas, by South Texas Geological Society Mexico, by Manuel Alvarez, Jr Western Gulf coast, by Houston Geological Society Continental shelf of Gulf of Mexico, by Paul Weaver. Southeastern United States, by Committee of Geologists from the Southeastern United States. Northeastern United States, by Julean L. Anderson. Appalachian region, by Appalachian Geological Society Eastern Canada, by J. F Caley and others. Eastern Interior basin, by Illinois Geological Society and others.

Note: In [illegible] this book is [illegible] sequel to the Association Possible future oil provinces of the United States and Canada, which was published in 1941 and contained 154 pages. Again, [illegible] group of outstanding petroleum geologists discuss the chances of finding oil in selected regions of the United States of America and Canada. Much territory has been covered in the present volume, and most of the discussions are based on more geological knowledge. Also, many of the papers outline the experience in particular oil fields and particular geological formations since the 1941 volume was compiled.

AMERICAN ASSOCIATION OF PETROLEUM GEOLOGISTS

Structure of typical American oil fields a symposium on the relation of oil accumulation to structure. Volume I. Tulsa, Okla. American Association of Petroleum Geologists, 1929 510 p. illus. 23 cm. $4 50 6781

Contents Papers arranged alphabetically by states. Irma oil field, Nevada County Arkansas, by L. P Teas. Notes on the McKittrick, California, oil field, by W A. English. Tri-county oil field of southwestern Indiana, by R. E. Esarey Fairport oil field, Russell County Kansas, by T H. Allan and M. M Valerius. Coffeyville oil field, Montgomery County Kansas, by W H. Foster. Rainbow Bend field, Cowley County Kansas, by D R. Snow and D Dunn. Flank production of the Kansas Mountains (Granite Ridge) Kansas, by C. E. Thomas. Relation of production to structure in five oil and gas fields of the Kentucky eastern coal fields, by L. K. Fohs. Caddo oil field, LaSalle, Winn and Grant parishes, Louisiana, by G. W Schneider. Geology of West Edmond oil field, Oklahoma, Logan, Canadian, and Kingfisher Counties, Oklahoma, by Robert Malcolm Swesnik. Apco field, Pecos County Texas, by Samuel P Ellison, Jr. Quitman oil field, Wood County Texas, by E. R. Scott. Talco oil field, Franklin and Titus Counties, Texas, by E. A. Wendlandt and T H. Shelby Jr. Rose Hill oil field, Lee County Virginia, by Ralph L. Miller. Steamboat Butte oil field, Fremont County Wyoming, by H. E. Barton. Index.

Note: Described in this series from the viewpoint of petroleum geology are nearly 100 oil fields in continental United States of America. Each field is fully described as to its history geology and production up to the date of writing of the paper. The series is

is emphasized from time to time, the national picture is clearly delineated.

Symposium on Mineral Resources of the Southeastern United States

1949 proceedings. Sponsored by Department of Geology and Geography, the University of Tennessee. Edited by F G Snyder Knoxville The University of Tennessee Press, 1950 236 p illus 24 cm. $4 00 6775

Contents: Geologic investigations and exploration in southeastern United States, by R. A. Laurence. Tectonic framework of the southeastern states, by [illegible] B King. Problems of the genesis of mineral deposits of the southeastern states, by C. H. Behre, jr. Feldspar and mica deposits of southeastern United States, by J M. Parker III. Geology of the titanium-bearing deposits in Virginia, by A. A. Pegau. Occurrences of tungsten minerals in the southeastern states, by G. H. Espenshade. Recent geological investigations in the Ducktown mining district, Tennessee, by W W Simmons. Zinc deposits of the southeastern states, by C. R. L. Oder and J W Hook. Barite deposits southeast of the Appalachian plateaus, by T L. Kesler Kyanite and sillimanite in the southeastern states, by A. S. Furcron. Talc, soapstone, and pyrophyllite in the southeastern United States, by J L. Stuckey Vermiculite of the southeastern states, by C. E. Hunter. Brown phosphate rock in Tennessee, by H. B Burwell. Notes on the land-pebble phosphate deposits of Florida, by J B. Cathcart. Manganese deposits of the southeastern states, by H. D. Miser Bauxite deposits of the southeastern United States, by J Bridge. Economic minerals in the beach sands of the southeastern United States, by H. B Cannon. Ground-water geology in the southeastern states, by V T Stringfield. Ground water in relation to mining in the southeastern states, by G. D. De-Buchananne. Index.

Note The papers in this volume are devoted—as the title indicates—mainly to resources of specific minerals occurring in economically important deposits in the Southeastern states of the United States of America. The authors are professional geologists, and the papers are addressed to geologists and to members of other professions interested in mineral resources of this region. Although most of the authors give some attention to the historical development of the field covered by their papers, the typical paper is a concise summary of the contemporary status with emphasis on the geological and mineralogical aspects rather than the economic. Substantial lists of references are included.

United States Bureau of Mines

Mineral facts and problems by the Staff of the Bureau of Mines. Washington D C. Government Printing Office, 1956 1 042 p illus 27 cm. (United States Bureau of Mines. Bulletin 556) $5 75 6776

Note This is an up-to-date one-volume encyclopedia of minerals, solid fuels, and petroleum. A general introduction of 15 pages is followed by signed articles on 85 different minerals and metals or groups of the same. For each mineral the following general order of treatment is followed Summary Background History Occurrences. Mining methods. Metallurgy Properties and uses. Secondary production. Substitutes. Market requirements. Prices. Tariff Imports. Exports. Government supervision. Transportation costs. World reserves. Outlook New uses in prospect. Problems. Bibliography Listed in tables are such statistics as annual amounts produced, sold, used, imported, and exported by the United States of America. The publication is potentially useful to metallurgists, engineers, geologists, physicists, and businessmen concerned in the metal trades and metal commerce.

United States Bureau of Mines

Minerals yearbook, 1953 Washington, D C Government Printing Office 1956 3 v illus. 23 cm. Vol. I $4 50 vol. II $2 25 vol. III, $4 00 6777

Content (abridged) Volume I, Metals and minerals (except fuels) Volume II, Fuels Part I, General review Part II, Commodity reviews. Part III, Appendix Tables of measurement. Volume III, Area reports.

Note An annual summary of mineral production. Primarily it covers production in the United States of America and its territories, but there are also data on imports into the U.S.A. and on production in other countries. Data on scrap as well as primary production are included for all metals where scrap metal is a commercially important factor The division of the information among the three volumes of the present issue is indicated in the above contents. The first volume contains both general reviews of mining and metallurgical technology and sections or chapters on the individual metals. Included also in this volume are summaries of classes of minerals such as gem stones, building stones and abrasive materials. Volume II contains parallel summaries of coal, peat, petroleum and related products. Volume III is devoted to summaries of activity and production in the individual states and territories. Each volume contains its own index.

Voskuil, Walter H.

Minerals in world industry New York McGraw Hill Book Company, 1955 324 p. 23 cm. illus $5 75 6778

Contents The mineral economy Man and iron. Geographical pattern of the steel empires. Iron in the Americas. Iron in Europe. Iron in Asia, Australasia and Africa. Iron alloys. Coal in North America. Transportation of coal in the United States. Anthracite. Coal in Europe. Coal in Asia, Australia, Africa, and South America. Petroleum—a world view The petroleum industry in North America. Petroleum in foreign nations. Natural gas. Aftermath fuels. Copper Lead and zinc. Aluminum and magnesium. Building materials. Mineral plant foods—nitrogen, phosphates, potash. Sulfur Minerals used in minor tonnages. American mineral policy Relation of industrial nations to underdeveloped areas. Index.

Note. A well-written book for general readers. Its principal subject is the importance of minerals in the present-day world. A secondary subject is what is commonly known as "mineral resources," in other words, the extent of the known reserves of the various minerals, where they are located, how rapidly they are being used, etc. There are some statistical tables, but in general the book is designed for reading rather than reference. References to the technical literature are included. The author is Mineral Economist on the staff of the Illinois Geological Survey and Professor of Mineral Economics on the faculty of the University of Illinois.

Walker, Robert Tunstall, and Woodville Joseph Walker

The origin and nature of ore deposits. Colorado Springs The Walker Associates, 1956 384 p. illus. 24 cm. $6 50 6779

Contents Vulcanism and orogeny Magmatic gases. Rock alteration. Mineralization. Zoning. Fissure vein ore-bodies. Massive ore-bodies. Pipe ore-bodies. Irregular ore-bodies. Mineralogical types of ore-bodies. Basic ore-bodies. Siliceous ore-bodies. Quartz vein, volcanic type—plutonic type—pegmatitic type. Iron ore-bodies. Copper ore-bodies. Zinc ore-bodies. Lead ore-bodies. Silver ore-bodies. Gold ore-bodies. Uranium ore-bodies. Ore-bodies of minor metals in the upper endothermal zone. Ore-bodies of minor metals in the hypothermal and mesothermal zones. Ore-bodies of minor metals in the lower epithermal zone. Indicator gangue minerals. Exploration practice and procedure. The human element. Index. Appendix A Representative localities in the United States showing typical geological structures and ore deposits.

Note The authors of this book are economic geologists of long experience, and they have addressed themselves to graduate geologists who are primarily concerned with finding commercially valuable ore bodies. Current theories of ore genesis are presented critically The various kinds of ore bodies are described in detail. Statistics on the tonnage and value of the ores produced in various mining districts of continental United States of America are given. The chapter on exploration practice and procedure is an expert review of current problems and practical techniques of finding ore.

PETROLEUM PRODUCTION

American Association of Petroleum Geologists

Possible future petroleum provinces of North America. A symposium conducted by the American Association of Petroleum Geologists. Papers presented at the thirty fifth

ments published in 1942, 1944, and 1947 respectively. The information contained in these earlier volumes has been brought up to date and many papers dealing with new developments and practices have been added. The bibliography, which covers the literature since 1894, has been expanded and now includes more than 2,000 references.

ARDMORE GEOLOGICAL SOCIETY

Petroleum geology of southern Oklahoma a symposium sponsored by the Ardmore Geological Society Volume 1. Tulsa The American Association of Petroleum Geologists, 1956. 402 p. illus. 25 cm. $6.00. 6787

Contents: Surface criteria of southern Oklahoma oil fields, by F Gouin. Résumé of the geology of the Wichita Mountains, Oklahoma, by G. W. Chase and others. Upper Mississippian and lower Pennsylvanian formations of South-Central Oklahoma, by M. K. Elias. The Hardeman trough, by R. H. Harlton. Southwest Lone Grove field, by J. M. Westheimer and F P Schweers. Hewitt field, by W L. McBee. West Hewitt field, by W Newstadt. Jr Camp field, by E. C. Parker. Tussy sector of the Tatums field, by J. L. Heard. North Wildcat Jim field, by K. F Walker West Velma field, by R. H. Harlton. Santa F field, by R. L. Beasley. Southwest Velma field, by L. C. Hicks. Velma field, by R. B. Rutledge North Alma field, by G. C. Rowland. Eastern Alden field, by D. Clyde, Jr. West Duncan field, by D M. Putman. Cruce-Knox field, by H. J. Ready and R. M Becker Peach Valley field, by L. C. Hicks. Oil fields of the central Marietta-Wichita area, by W McBee, Jr and L. G. Vaughan. Aylesworth field, by J. L. Wieneck. The Oddland formation, by J. M. Westheimer. Index.

Note A collection of contributed papers by geologists who are experts on the complex geology of the oil fields of southern Oklahoma. Most of the papers are illustrated and include literature references. A second volume is planned.

BEERSTECHER, ERNEST JR.

Petroleum microbiology an introduction to microbiological petroleum engineering Princeton D Van Nostrand Company Inc., 1954 375 p. illus. 24 cm. $8.00 6788

Contents: Introduction Exploration. The role of microorganisms in geological processes. The role of microorganisms in the synthesis of petroleum. Microbial utilization of petroleum hydrocarbons. The use of microorganisms in petroleum exploration. Production. The activities of microorganisms in drilling muds. The activities of microorganisms in petroliferous formations. The role of microorganisms in corrosion. Manufacturing: The effects of hydrocarbons upon microorganisms. The use of microorganisms as reagents in the manufacture of petroleum products. Petroleum and its products as sources of infectious microorganisms. Glossary. Author index. Microorganism index. Subject index.

Note Written by a prominent biochemist, this book is a survey of the accumulated knowledge pertaining to the role of microorganisms in the genesis of petroleum and to the potentialities of microbiology in petroleum exploration and production. The whole field is surveyed, including such unexpected aspects as the role played in the formation of machine shop washes by bacteria present in cutting oils derived from petroleum. Some speculation is included along with a wide array of established facts. The subject is covered from the viewpoint of the petroleum industry rather than of microbiology. The international literature of the subject is cited.

BELL, HUGH STEVENS

Oil shales and shale oils. Princeton D Van Nostrand Company Inc., 1948 157 p. illus. 23 cm. $5 95 6789

Contents: Geographical distribution and history of exploitation. Characteristics of shale and shale oils. Mining—open-cut methods. Mining—underground. Safety in mining operations. Preparation of shale rock. Retorting. Refining. Economics. Author index. Subject index.

Note The present volume describes the technical and economic problems connected with the exploitation of oil shales and discusses the methods that are being developed to solve them. References to the pertinent literature are included. The work is intended primarily for mining engineers and mineral economists.

HAGER, DORSEY

Practical oil geology Sixth edition. New York McGraw Hill Book Company, Inc. 1951 589 p. illus. 19 cm. $8.00 6790

Contents: Petroleum—its origin and accumulation. Chemical composition of petroleum—physical constituents—commercial values. Stratigraphy. Fossils and their uses. *Structural geology*—the broad continental features. Discussions of gas and oil traps. Searching for new gas and oil fields. Geological field methods and instruments in use. Geophysics. Applications of geology to drilling for gas and oil. Geological factors in oil-well drilling. Well logging. Geological factors in oil production. Methods of estimating oil recoveries. Water and its relationship to oil. Natural gas—natural gasoline. Oil shales. What the geologist has done for the oil business. Appendix. List of books on oil and general geology Index.

Note. The word "practical" in the title of this book has not been idly used. The book is intended for men who are making their living as oil geologists and for students who are preparing to do so. It covers the whole scope of a petroleum geologist's work, including such minor points as how to behave when called as an expert witness in law suits. In the sixth edition, there are two new chapters, one on well logging and the other on estimating the methods of oil recoveries. The book has been reorganized and the type reset. There are five new tables in the appendix, and the bibliography has been expanded to include the recent literature.

HALBOUTY MICHEL THOMAS

Petrographic and physical characteristics of sands from seven Gulf Coast producing horizons. Houston Gulf Publishing Company 1937 106 p. illus 20 cm. $2 00 6791

Note The results of a study conducted on sands either cored or obtained in cuttings from wells drilled to the top of the Middle Oligocene or deeper with the purpose of determining whether or not the sands of certain geologic zones and formations in the Gulf Coast region have enough petrographic or physical characteristics that they may be distinguished solely by these instead of by paleontological methods. The writer was concerned with the relative prospects of correlating the sediments of the Gulf Coast of Texas and Louisiana by means of an intensive study of the component minerals and physical properties of the sand bodies. There are 77 histograms illustrating the textures of various sands. This material was first published in *The Oil weekly* in a number of installments extending over a seven-week period.

HEROLD STANLEY CARROLLTON

Oil well drainage. Stanford Stanford University Press, 1941 407 p. illus. 26 cm. $5.00. 6792

Contents Introduction. Artificial reservoirs. Natural reservoirs. Reservoir energy Functions of gas. Radius and area. Regional drainage and water encroachment. Across property lines. Stratigraphy and structure. Reservoir penetration. Multiple zones. Rates of production. Field development. Wells of oil or no gas. Injection. Control, ultimate recovery and reserves. Abandoned oil and gas. Curtailment, proration and conservation. Conclusion. Index.

Note A book for geologists, engineers, landowners, lease-holders, and operators of producing oil and gas properties. The events and conditions within a producing reservoir are described, and the influence of well performance on the movement of the oil and gas is presented in simple terms. Analogies between artificial and natural reservoirs are considered, the nature of reservoir energy is discussed, and the function of gas in the production of oil is set forth.

INTERSTATE OIL COMPACT COMMISSION ENGINEERING COMMITTEE

Oil and gas production an introductory guide to production techniques and conservation methods. Norman University of Oklahoma Press, 1951 128 p. illus. 24 cm. $2 75 6793

Contents: Petroleum geology. Reservoir fluids. Reservoir mechanics. Field examples. Measurements in the production of oil and gas. Regulatory practices affecting oil recovery Appendix: Major types of reservoir traps. Index.

interesting not only because of his specific descriptions of oil fields, but also for its portrayal of the gradual evolution in the techniques of petroleum geology

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Petroleum conservation. Sponsored by the Henry L. Doherty Memorial Fund. Edited by Stuart E Buckley New York American Institute of Mining and Metallurgical Engineers, 1951 304 p illus. 24 cm $6 00 6784

Contents Elements of conservation. Petroleum resources. The petroleum reservoir. Characteristics of reservoir fluids. Fundamentals of oil recovery Efficient operation of petroleum reservoirs. Secondary recovery Pressure maintenance. Conservation and state regulation. Cooperative development and unit operation. Index.

Note Fourteen experts in the field of petroleum technology have co-operated to prepare this review of the basic principles and methods of petroleum conservation. The material is primarily description of the techniques employed in the efficient recovery of petroleum, and the reasons behind these practices. However since the book is written for the petroleum industry as a whole it also includes discussions of the status of our oil supply and of the steps which must be taken by the industry and governmental agencies to achieve still greater conservation.

AMERICAN PETROLEUM INSTITUTE

Report of progress—fundamental research on occurrence and recovery of petroleum, 1954–55 The projects on fundamental research, sponsored by the Committee on Research of the Board of Directors of the American Petroleum Institute, are directed by research advisory committees, and are financed by private subscription New York American Petroleum Institute 1956 347 p illus (part col'd) 27 cm. $12 00 6785

Contents Project 37 Report on Research Project 37—"Fundamentals of hydrocarbon behavior by B. H. Sage and W N Lacey Benedict equation of state—Application to methane, ethane, nbutane, and npentane, by J B Opfell and others. Diffusion coefficients in hydrocarbon systems—nhexane in the gas phase of the methane-ethane- and propane-nhexane systems, by L. T Carmichael and others. Diffusion coefficients in hydrocarbon systems—nheptane in gas phase of methane-n heptane system, by L. T Carmichael and others. Phase equilibria in hydrocarbon systems—volumetric behavior of heptane, by W B. Nichols and others. The thermodynamics of the critical state for mixtures, by J B. Opfell and B. H. Sage. Material transfer in turbulent gas streams—influence of shape on evaporation of drops of nheptane, by N T Hsu and others. Volumetric behavior of nhexane in liquid phase, by D E. Stewart and others. Relations in material transport, by J B. Opfell and B. H. Sage. Experience with piston-cylinder balance for pressure measurements, by H. H. Reamer and B. H. Sage. Isobaric heat capacities at bubble point—two trimethylbenzenes and heptane, by P F Helfrey and others. Project 47 Final report on Research Pr ject 47b—"Microscopic behavior of fluids in porous systems, by A. Chatenever Report on Research Project 47d—"Solid-fluid interaction as related to petroleum production, by N Hackerman. Project 51 Report on Research Project 51—"Study of near-shore sediments and their environments in the northern Gulf of Mexico, by F P Shepard. Sedimentary environments differentiated by coarse-fraction studies, by F P Shepard and D. G. Moore. Ecology of foraminifera in southeastern Mississippi Delta area, by F P Phleger Clay mineral investigation of sediments in the northern Gulf of Mexico, by R. E. Grim and W D Johns. Central Texas coast sedimentation—characteristics of sedimentary environment, recent history and diagenesis, by F P Shepard and D G. Moore. Delta-front valleys bordering the Mississippi distributaries, by F P Shepard. Sediments of the eastern Mississippi Delta, by F C. Scruton. Project 53 Report on Research Project 53— Age dating of sedimentary rocks, by H. Brown. Appendixes.

Note. Published in this volume—the seventh in biennial series—are research papers resulting from work done in projects being conducted in selected universities under the sponsorship of the American Petroleum Institute. Also included are brief reports from the directors of the projects. Most of the research papers included in the volume hav been reprinted from journals in hich they ere first published.

AMERICAN PETROLEUM INSTITUTE

Secondary recovery of oil in the United States Second edition. Prepared by members of the Standing Subcommittee on Secondary Recovery Methods of the Topical Committee on Production Technology of the Central Committee on Drilling and Production Practice. New York American Petroleum Institute, 1950 838 p. illus. 28 cm $8 50 6786

Contents: Part I, General considerations: A review of secondary recovery of oil in the United States, by P D Torrey Magnitude of secondary-recovery operations in the United States, by E. G. Dahlgren. The economics of secondary oil recovery by W B. Berwald. Statutes relating to secondary-recovery operations, by R. E. Hardwicke and W L. Summers. 1947 report of Legal Committee of Interstate Oil Compact Commission with respect to secondary recovery Formation and operation of unit projects in secondary recovery by K. E. Beall. The formation and operation of cooperative projects in secondary recovery by D V Carter Part II, Criteria for determining oil fields' susceptibility to secondary-recovery methods. Schedule of pertinent information for study of secondary-recovery possibilities, by P D. Torrey Fundamental data pertinent to secondary-recovery studies, by T H. Acres and others. Control and prediction of secondary recovery by W L. Horner Prediction of secondary recovery from core analyses, by R. C. Earlougher and J. M. Robinson. The prediction of oil recovery by water flood, by H. Dykstra and R. L. Parsons. Theoretical considerations involved in secondary-recovery operations, by G. H. Fancher. Electrical-model studies of secondary recovery by W L. Horner and W A. Bruce. Influence of geological factors on secondary recovery of oil, by C. R. Fettke. Effects of permeability on secondary recovery of oil, by J C. Calhoun, Jr and others. Influence of fluid saturation on secondary recovery of oil, by P A. Dickey Influence of viscosity of crude oil on secondary recovery by W A. Heath. Capillary and surface phenomena in secondary recovery by K. H. Andresen and others. Interactions between interstitial and injected water, by A. J. W Headlee. Gas requirements in gas-drive recovery by S. T Yuster and R. J Day Preliminary field tests for determining required injection volumes and pressure, and plant capacity by J C. Furth and P C. Dean. Part III, The development and operation of secondary-recovery projects. The utilization of old wells, by W A. Heath. Selective exclusion of water in secondary-recovery operations, by K. H. Andresen and others. Spacing in water flooding, by S. T Yuster Use of explosives in water flooding, by S. T Yuster Source and purification of water supply by G. W Holbrook and A. R. Ellenberger. Design and construction of water-pumping plants, by G. W Holbrook. Flowing water-flood production, by T F Lowry The behavior of water-input wells, by P A. Dickey and K. H. Andresen. Increasing and maintaining injection rates of water-input wells, by P A. Dickey and others. The importance of injected gas as driving medium in limestone reservoirs as indicated by recent gas-injection experiments and reservoir-performance history by L. E. Elkins. Source and purification of gas supply by L. L. McWilliams. The design and construction of compressor plants, by P D Torrey Part IV Description of secondary-recovery operations in the United States: Water flooding in the state of New York, by W H. Young, Jr and G W Holbrook. Water flooding in Pennsylvania, by C. R. Fettke. Oil recovery by air and gas repressuring in Pennsylvania, by P A. Dickey and E. R. Bender Secondary recovery in West Virginia, cooperative report by Eastern District members—in Ohio, by J Cathell and E. V O'Rourke—in Kentucky by N M Wilder et al.—in Indiana, by V R. Gallagher—in Illinois, by F Squires and others—in Kansas, by E. Z. Hunter and others—in Oklahoma, by W A. Heath and S. L. Betzer Water flooding in Texas, by R. K Guthrie and J W Amyx. Results of water injection in Woodbine reservoir of the East Texas field, by W S. Morris. Gas repressuring in Texas, by R. Goaldy and R. P Dobyns. Secondary recovery in Arkansas, by L. F Danforth and D K. Mackey—in Louisiana, by A. L Vitter Jr and J C. Phillips—in New Mexico, by M S Lesse and R. L. Gray—in the Rocky Mountain states, by C M Nickerson and others—in California, by N van Wingen Part Mining for petroleum Mining for oil—a review by H. C. Miller and C L. Moore. Part VI, Bibliography on secondary recovery Part VII, Addenda. Appendixes.

Note A comprehensive and authoritative account of the various methods employed in recovering petroleum after reservoir has approached its economic production limit by primary-recovery methods. This edition supersedes the first edition and its two supplements.

Petroleum Production

Zenith pool, Stafford county, Kansas—an example of stratigraphic trap accumulation, by W. C. Imbt. Kentucky: Big Sinking field, Lee county, Ky., by L. B. Freeman. Louisiana: Stratigraphic traps in Caddo county oil field, East Baton Rouge parish, La., by [illegible]. Michigan: Stratigraphic gas fields of Michigan, by M. T. Halbouty. Red Fork Shoestring sand pool, Pawnee, Creek, and Tulsa counties, northeastern Okla., by R. Knight. Pennsylvania: Music Mountain oil pool, McKean county, Pa., by C. R. Fettke. Types of stratigraphic oil pools in Venango Pa., by C. R. Fettke. Types of stratigraphic oil pools in Venango sands of northwestern Pa., by R. E. Sherrill and others. Texas: Bryson oil field, Jack county, Tex., by T. C. Hiestand. Cross Cut-Blake district, Brown county, Tex., by E. D. Klinger. Dawn sand, Hardin field, Liberty county, Tex., by S. R. Casey and R. B. Cantrell. East Texas oil field, Rusk, Cherokee, Smith, Gregg, and Upshur counties, Tex., by H. E. Minor and M. A. Hanna. [illegible] field, Galveston county, Tex., showing stratigraphic accumulation and structure, by M. T. Halbouty and B. T. Simmons. Lopez [illegible] oil field, Archer county, Tex., by E. L. Thompson. Lopez oil field, Webb and Duval counties, Tex., by J. B. East. Noodle Creek pool, Jones county, Tex., by H. W. Imbeh. O'Hern field, Duval and Webb counties, Tex., by D. G. Barnett. "Sand belt" area of Ward and Winkler counties, Tex., and Lea county, New Mex., by R. L. Denham and W. E. Dougherty. Seymour pool, Baylor county, Tex., by J. K. Murphy and others. Walnut Bend pool, Cooke county, Tex., by W. J. Hilseweck. West Virginia: Gay-Spencer-Richardson oil and gas trend, Jackson, Roane, and Calhoun counties, West Va., by E. T. Heck. Shinnston oil pool, Harrison county, West Va., by D. B. Reger. Wyoming: Osage oil field, Weston county, Wyo., by C. E. Dobbin and J. C. Miller. Selected bibliography of articles describing stratigraphic type oil fields, by E. F. Tuttle and others. Index.

Note: A collection of papers, with charts and diagrams, on the geology of stratigraphic type oil fields in various parts of the United States of America. The work is intended as [illegible] factual background for [illegible] further approach to the causes of oil and gas accumulation and as [illegible] guide to the prospecting and exploitation of future oil fields in the country. The extensive bibliography covers 27 pages.

LOZO FRANK EDGAR, editor

The Woodbine and adjacent strata of the Waco area of central Texas. A symposium edited by Frank E. Lozo with the assistance of Bob F. Perkins. Dallas Southern Methodist University Press, 1951 183 p. illus. 27 cm. (Fondren science series. No. 4) $7.50. 6800

Contents: The Grand Prairie of Texas, by F. Bryan. History of discovery and development of Woodbine oil fields in east Texas, by C. I. Alexander. Comparative status of the Woodbine in oil production, by G. J. Loetterle. The South Bosque field, McLennan county, Texas, by J. C. Price. Geology of Belton Reservoir area, Bell county, Texas, by J. Colligan. Geology of Whitney Dam area, Bell county, Texas, by A. M. Reservoir area, Brazos river, Bosque-Hill counties, Texas, by A. M. Hall. Stratigraphic notes on the Maness (Comanche Cretaceous) [illegible]. Woodbine sandstone dikes of northern McLennan county, Texas, by J. N. Monroe. Stratigraphy of the Woodbine and Eagle Ford, Waco area, Texas, by W. S. Adkins and F. E. Lozo. References. Plates. Index.

Note: Together the original papers in this volume constitute a detailed study of the geology of one of the most important petroleum producing areas in the world. The volume was prepared by members of the East Texas Geological Society. The illustrative matter includes not only [illegible] charts of geological range of the area but also several plates of photographs of fossil specimens.

MUSKAT MORRIS

Physical principles of oil production. New York McGraw Hill Book Company Inc., 1949 922 p. illus. 24 cm. (International series in pure and applied physics. G. P. Harnwell, consulting editor) $16.00. 6801

Contents: Introduction. The physical properties and behavior of petroleum fluids. The properties of oil-bearing formations pertaining to oil production: core analysis. Basic dynamical equations for homogeneous-fluid-flow systems. Individual well problems in uniform strata with homogeneous-fluid flow. Strata of nonuniform or anisotropic permeability with homogeneous-fluid flow. Dynamical foundations for heterogeneous-fluid-flow phenomena. Steady-state heterogeneous-flow systems: the productivity index. General reservoir mechanics. Gas-drive reservoirs. Composite-water-drive reservoirs. Secondary recovery. Condensate reservoirs. Well spacing, recovery factors, and recoverable reserves. Appendices. Index.

Note: A notable presentation of the current knowledge bearing on the behavior of oil, water, and gas in natural underground reservoirs. The author has endeavored to keep as closely as possible to hydrodynamic and other principles that are scientifically sound. The theoretical material is readily buttressed by facts gathered from experience in oil fields, especially oil fields in the United States of America. The book is addressed to petroleum engineers, conservation officials, and other technically trained personnel concerned with oil field exploitation and regulation. Related literature is cited in footnotes.

NORTH DAKOTA GEOLOGICAL SOCIETY

Stratigraphy of the Williston Basin. Bismarck North Dakota Geological Society 1954 78 p. illus. 28 cm. $5.00 6802

Contents: White River formation. Golden Valley formation. Fort Union formation. Hell Creek formation. Fox Hills formation. Pierre formation. Niobrara-Carlile formation. Greenhorn formation. Belle Fourche-Mowry shales. Newcastle sandstone formation. Skull Creek shale formation. Dakota formation. Fuson formation. Lakota formation. Morrison formation. Swift formation. Rierdon formation. Piper formation. Spearfish formation. Minnekahta limestone. Opeche formation. Minnelusa formation. Amsden formation. Heath formation. Otter formation. Kibbey formation. Charles formation. Mission Canyon formation. Lodgepole formation. Bakken formation. Three Forks formation. "Nisku" formation. "Duperow" formation. Souris River formation. Dawson Bay formation. Prairie Evaporite formation. Winnipegosis formation. Ashern formation. Interlake group. Stony Mountain formation. Red River formation. Winnipeg formation. "Unnamed" formation. Deadwood formation.

Note: A publication intended for oil geologists working in the Williston Basin area of North and South Dakota, Montana, and adjacent parts of Canada. The need for the manual arose from the rapid development of subsurface control in the Williston Basin. It defines and describes in geological order the subsurface formations in common use or recommended for use in the Basin. The following are described for most formations: name, age, type location, lithology, paleontology, thickness, relation to adjacent formations, stratigraphic position, depositional environment, and correlation. Included also are cross-section diagrams showing typical developments in the Williston Basin of the formations described and [illegible] log composite diagrams prepared by the Schlumberger Well Surveying Corporation, Houston, Texas.

PIRSON SYLVAIN JOSEPH

Elements of oil reservoir engineering. New York McGraw Hill Book Company Inc., 1950. 441 p. illus. 23 cm. $8.50. 6803

Contents: The reservoir rocks and structures (microscopic study). The reservoir rocks and structures (macroscopic study). The fundamental equations of fluids. Reservoir forces and energies. The fundamental equations of reservoir engineering. Fundamental production processes. Analysis of field data. Appendix. Abbreviations and symbols. Name index. Subject index.

Note: The management of underground petroleum reservoirs so as to obtain the maximum yield of petroleum and gas is [illegible] complex subject which requires [illegible] detailed knowledge of geology, petrology, geophysics, and associated topics. In this text, designed primarily for graduate petroleum engineering students, the subject is treated comprehensively with the emphasis on the fundamental principles and on sound analytical and forecasting methods. Considerable attention is given to the experimental methods which have advanced the knowledge of oil reservoir behavior.

PORTER, HOLLIS P

Petroleum dictionary for office field and factory Fourth edition. Houston, Tex. The Gulf Publishing Company 1948. 326 p. 23 cm. $6.00. 6804

Note The Interstate Oil Compact Commission, comprising 20 oil and gas producing states, was organized to promote the cause of petroleum conservation. In this book the Commission has provided for laymen and nontechnical employees of the oil industry a simple and concise account of the basic principles and methods of oil and gas production. Emphasis is placed on techniques which result in maximum recovery and minimum waste. The descriptive material is further clarified with numerous charts and illustrations.

KEMLER, EMORY N

Hydraulic pumping a patent and literature survey of hydraulic pumping of oil wells. Spring Park, Minn Summary Reports, 1955 323 p illus 23 cm. $15 00 6794

Contents Introduction. Hydraulic transmission of energy Single acting systems. Double acting systems. Wa e transmission. Surface units. Patents. Bibliography Index by inventors. Patents on bottom hole units. Patents on hydraulic surface units. Patents on electric units.

Note: The first ■ pages of this book are devoted to a condensed account of the elements of hydraulic transmission of energy generalized descriptions of the principal kinds of hydraulic pumping systems, and a series of reference charts useful in the computation of pressure drop in various sizes of pipe. Then follows a bibliography of the scant periodical literature on hydraulic pumping of oil wells. The remainder of the space (approximately 295 pages) is devoted to the United States of America patents of interest in connection with hydraulic pumping. Here the patent reference, date of issue, title of in ention inventor and number of claims are given, followed by an extract from the patent describing the invention, and a quotation of the first claim in full. In umerous instances, one or more drawings is reproduced from the patent.

KINGSTON, BENSON M

Acidizing handbook, a treatise on the application of acid to oil wells Houston Gulf Publishing Company, 1947 116 p illus. 21 cm $3 50 6795

Contents (abridged) Introduction. The chemistry and geology of treatment. Treating acid. Special types of treating solutions. The preparation of wells for treatment. Mechanics of treatment—generalities—the general types of treatment—selecti acidizing—packers and liners. The relation of salt water to treatment. Producing the well after treatment. Acidizing gas wells. Re-treatment and stage treatment. Other uses of muriatic acid in the field. Computations in acidizing. Appendix Bibliography Capacity of casing. Capacity of open hole. Capacity of annular space between tubing or drill pipe and open hole or casing in gallons per linear foot. Muriatic acid data. Mixture figures for treatment acids. Hydrometer conversion data and pressures exerted by different weight brines.

Note A practical survey of the potentialities and techniques of acidizing. Although the discussions are rather detailed, the book is intended more for beginners in the work, or for persons engaged in other branches of petroleum production who need general information on the subject, than for specialists. This edition is considerably revised and enlarged in comparison to the first edition, Houston, 1934. The bibliography covers the literature published 1937 1948 and supplements Fitzgerald and Gladelsperger's *Bibliography on the acid treatment of oil wells* in American Institute of Mining Engineers, Transactions, vol. 123 p 59–62 1937

LALICKER, CECIL GORDON

Principles of petroleum geology New York Appleton Century Crofts, Inc 1949 377 p illus 24 cm. (The Century earth science series, Kirtley F Mather editor) $5 00 6796

Contents Introduction Geographic and stratigraphic distribution of petroleum. Chemical and physical properties of petroleum and related substances. The origin of petroleum. Migration and accumulation of petroleum. Reservoir rocks Classification of oil and gas pools. Origin of structures. Anticlines, domes, and synclines Reservoirs caused by faulting. Salt dome oil fields. Buried hills. Stratigraphic and porosity type fields. Petroleum discovery methods. Geological considerations in recovery methods. Valuation of oil and gas properties. Index.

Note. A useful, well-organized survey of the current knowledge of petroleum geology Outstanding features are the tabulations by region and geological strata of known petroleum deposits, the review of the prevailing theories of the origin and accumulation of petroleum, the detailed descriptions of the features of a considerable number of developed fields, and the thorough outline of discovery methods. Footnote references to related literature are included. The author has assumed that the reader will understand geological concepts and terminology however, the presentation is not highly technical.

LANDES, KENNETH KNIGHT

Petroleum geology New York John Wiley & Sons, Inc., 1951 660 p illus 24 cm $11 00 6797

Contents The profession of petroleum geology Part I, Techniques of the petroleum geologist Exploration. Exploitation. Part II, Geologic occurrence of petroleum Physical and chemical properties of oil and gas. Origin and evolution of oil and gas. Migration of oil and gas. Accumulation reservoir rocks—traps. Part III, Present and future oil supplies Distribution of oil and gas fields—United States. Distribution of oil and gas fields—exclusive of the United States. Future oil supplies. Appendix. Index.

Note. This book is both college textbook for upperclass students preparing to specialize in petroleum geology and a reference book. The third part of the book—which is the part having the most reference value—accounts for about one-half of the space. In this part the main oil fields of the world are discussed from the geological viewpoint. The discussions are fairly detailed and are accompanied by maps and in many cases diagrams of the geological formations. Throughout the book, the related literature is cited in footnotes, and at the end there is a useful annotated list of important books and documents.

LEVORSEN, A I.

Geology of petroleum San Francisco W H. Freeman & Company, 1954 703 p. illus. 24 cm $8 00 6798

Contents Part I, Introduction Introduction and summary The occurrence of petroleum. Part II, The reservoir The reservoir rock. The reservoir pore space. Reservoir traps—general or structural—stratigraphic—combination—salt domes. Part III, The petroleum pool Reservoir fluids—water oil, gas. Reservoir conditions—pressure and temperature. Reservoir mechanics. Part IV The geologic history of petroleum The origin of petroleum. Migration and accumulation of petroleum. Part V Applications Subsurface geology The petroleum province. The petroleum prospect. Appendix. Index.

Note. An authoritative and thorough introduction to basic and applied petroleum geology It is designed primarily as textbook for advanced college students of geology but is of interest also to graduate geologists who are beginning to work in the field Among other things it includes expert advice on the application of geological data to the finding of new pools. There are hundreds of well-drawn graphs and diagrams. Both selected lists of general literature and extensive lists of specialized books and papers are included in the chapters.

LEVORSEN, A. I , AND OTHERS, editors

Stratigraphic type oil fields. Edited by A. I. Levorsen assisted by N Wood Bass, north midcontinent states Ross L Heaton, Rocky Mountain states W S W Kew California D Perry Olcott, south mid-continent states Theron Wasson eastern states. [illegible] graphical representations of PVT relationships, and [illegible] bibliography of [illegible] references. The author is on the staff of the [illegible] Research Corporation.

URES, LESTER CHARLES
Petroleum production engineering—oil field development. Fourth edition. New York McGraw Hill Book Company 1956. 792 p. illus. 24 cm. $12.50. 6811

Contents: Properties and occurrence of petroleum in nature. Practices of oil-field development. Drilling equipment and methods—general features. Drilling equipment—supporting structures. Cable-drilling equipment and methods. Rotary drilling—power equipment and [illegible]. Rotary-drilling equipment. Rotary drilling—the circulating system and its control. Rotary-drilling practice. Rotary drilling—special methods and equipment. Casing, casing design, casing methods, and casing equipment. Exclusion of water from wells. Fishing tools and methods. Well-logging methods and records. Well-surveying methods—range and methods. Well sampling—inspection of formation samples. Well-completion methods. Name index. Subject index.

Note: A standard engineering college textbook originally developed in the author's classes at the University of California. It [illegible] work to two other volumes written by the author and also designed primarily for college instruction, *Oil field exploitation*, 2nd ed., New York, 1953 and *Petroleum production economics*, New York, 1954. However, it may be said to stand independently. It presents [illegible] broad and fairly detailed picture of present-day techniques of drilling oil wells and conditioning them for the production of petroleum. The various techniques of well logging are described compactly and references to additional literature are supplied for all of them. The same is true for methods of completing wells. Extensive, well-selected literature lists are special features of this edition. Inclusion of [illegible] name index to the cited literature adds to its value as [illegible] reference book for graduate engineers. In comparison to the third edition, the book has been reorganized somewhat, revised to cover recent developments and literature, and provided with new indexes.

ZABA, JOSEPH AND W T DOHERTY
Practical petroleum engineers handbook. Fourth edition, revised and enlarged. Houston, Texas Gulf Publishing Company 1956. 818 p. illus. 23 cm. $14.00. 6812

Contents: General engineering data. Design. Prime movers, power transmission, compressors. Tubular goods. Drilling. Production. Transportation. Index.

Note: A reference book for operators, engineers, superintendents, foremen, and others engaged in petroleum production. It contains mainly of charts, tables, formulas, and other engineering data relating to the design of derricks, working pressures, connecting equipment, [illegible] and fire extinguishers, pump data, and pipelines. No attempt [illegible] made to deal with the chemistry and refining of petroleum. The third edition was published in 1949. Various sections and tabulations were revised and 141 pages of matter added in the fourth edition.

GEOPHYSICAL PROSPECTING

DIX, C HEWITT
Seismic prospecting for oil. New York Harper & Brothers 1952 414 p. 21 cm. (Harper's geoscience series Carey Croneis, editor) $8.00 6813

Contents: Introduction and general orientation. Summary of exploration methods commonly used. Summary of seismic methods currently used. Routine seismic crew operation—cost reduction. Efficient exploration programs. Routine philosophy. Basic technical tools. Datum corrections. Velocity measurements. Depth and dip computations. Strike-dip determinations. Presentation of results. Interpretations. Picking reflections. Refraction prospecting. Line refraction work. The physical processes involved. Basic physics reviewed. Propagation of seismic pulses. Recording. Bibliography. Index.

Note: Scientific knowledge and practical know-how have been expertly coalesced in this work. Although other methods are described, most of the space [illegible] devoted to seismic prospecting by the reflection method. Field techniques are described, but the main emphasis [illegible] on the interpretation of the records of the field work. No previous acquaintance [illegible] with seismic prospecting has been assumed. However, there is much in the book that is of interest to persons [illegible] considerable experience [illegible] with seismic prospecting. An unusual feature is the inclusion of mathematical lemmas and computations on the illustrations themselves. This makes [illegible] substantial part [illegible] the work available to readers [illegible] who do not know English. A comprehensive bibliography is included.

DOBRIN, MILTON BURNETT
Introduction to geophysical prospecting. New York McGraw Hill Book Company Inc. 1952 435 p. illus. 24 cm. $8.00 6814

Contents: General introduction. Gravity prospecting—fundamental physical principles. The earth [illegible] gravity and the concept of isostasy. Instruments for measurement of gravity. Gravity field measurements and reductions. The interpretation of gravity data. Magnetic prospecting—fundamental principles and instruments. The magnetism of the earth. Magnetic field measurements and their interpretation. Prospecting [illegible] the air-borne magnetometer. Basic physical principles of seismic [illegible] propagation. Earthquakes and the earth's internal constitution. Seismic instruments and the organization of seismic surveys. The seismic refraction method. The seismic reflection method. Electrical prospecting methods. Prospecting for radioactive minerals. Integration of geophysical methods as illustrated by case histories. Geophysical well-logging methods. Radio position location for geophysical surveys. Current research in geophysical exploration and the relation of geophysics to industry. Index.

Note: Current techniques in geophysical prospecting for petroleum and minerals are described in this book for advanced students in geology and mining engineering and for graduate engineers in these fields [illegible] find themselves in need of an introductory survey. Even though the work [illegible] an introduction, [illegible] the range of material is unfolded on scientific principles, instruments, methods of making observations and of interpreting them for the various established geophysical techniques. In addition, literature references to more extended treatments of particular phases are furnished. The author is Senior Research Technologist on the staff of the Magnolia Petroleum Company.

MOONEY, HAROLD M., AND W W WETZEL
The potentials about a point electrode and apparent resistivity curves for a two- three- and four layered earth. Minneapolis The University of Minnesota Press, 1956 146 p. illus. 23 cm. $4.50 set of master resistivity curves, $15.00 both, $18.00. 6815

Contents: Use of the tables and curves. Mathematical basis for the tables and curves. Tables. Bibliography.

Note: This work pertains to the geophysical technique of measuring the electrical resistance of buried soil and rock as [illegible] means of determining geologic structure. Essentially it consists of [illegible] separately packaged set of "Master Resistivity Curves" for "2 two-layer horizontal structures, 150 three-layered horizontal structures, and 1,000 four-layered cases [illegible] table of coefficients for use in numerical evaluation of the integral [illegible] and tables of the potential function [illegible]. The tables make it possible to compute apparent resistivity curves for any electrode arrangement, the master curves greatly simplify most such calculations. The set is of interest to geologists and specialists in geophysics.

NETTLETON LEWIS LOMAX, editor
Geophysical case histories. Volume I—1948. A collection of 60 papers by 61 authors assembled from papers published by the Society of Exploration Geophysicists, The American Association of Petroleum Geologists, and The American Institute of Mining and Metallurgical Engineers together with much new material. Tulsa, Okla. Society of Exploration Geophysicists, 1949 671 p. illus. 25 cm. $7.00. 6816

Note. A reference book written by an engineer who spent many years of his professional career in the petroleum industry. It covers the practical technical terms of the industry including terms from geology, chemistry, mechanics, electrical engineering, etc. commonly found in petroleum literature used in the petroleum industry. It includes some of the jargon such as "Christmas tree," but little of the slang. Definitions are expressed in technical terms. Approximately 3600 words and phrases are defined in this fourth edition, the last one completed by the author before his death.

PRATT, WALLACE EVERETT, AND DOROTHY GOOD, editors

World geography of petroleum. Princeton Published for the American Geographical Society by Princeton University Press, 1950 464 p illus 26 cm $9 00 6805

Contents (abridged) Part I, Petroleum in the ground, by E. Stebinger. Part II, The functional organization of the petroleum industry by W. B. Heroy. Part III, The world's petroleum regions. The Western hemisphere: The Caribbean area as a whole, by W. E. Pratt. Venezuela, by G. Zuloaga. Trinidad, by A. J. Frede. Mexico, by O. B. Knight. Colombia, by G. Barrow. North America, by A. I. Levorsen. The Eastern hemisphere: The Middle East as a whole, by G. M. Lees. Saudi Arabia and Bahrein, by M. Steineke and M. P. Yackel. The Union of Soviet Socialist Republics, by E. Stebinger. Europe west of the U. S. S. R., by L. C. Reed. Indonesia, British Borneo, and Burma, by L. Sweunis. The world as a whole. Petroleum in the polar areas, by W. E. Pratt. Petroleum on the continental shelves, by W. E. Pratt. Part IV. Aspects of utilization: The availability of petroleum—today and tomorrow, by K. F. Mather. Geographical aspects of petroleum use in World War II, by the Office of the Army-Navy Petroleum Board of the Joint Chiefs of Staff. World patterns of civilian utilization, by J. W. Frey. A statistical survey, by A. Van Burkalow. Appendix. Bibliography. Abbreviations. Note on glossaries. Conversion factors. Index.

Note. In this work, geography, petroleum geology, economics, and utilization have been combined in a successful synthesis. The result is an important background book that reads as easily as any standard work on economic geography and is suitable for both geographers and general readers. Original maps and much other reference material is included.

RISTER, CARL COKE

Oil! Titan of the Southwest. Norman University of Oklahoma Press 1949 467 p illus 24 cm $6 95 6806

Contents: Foreword, by E. DeGolyer. Texas' oil-spring era. The Red Man's hidden wealth. From Paola to Neodesha, Kansas. Corsicana, the curtain raiser. Queen of the Neches. Exploiting other salt domes. Red Fork, Cleveland, and Glenn pool. Louisiana in the news. Exploring the Red River uplift. Oklahoma steals the show. The Ranger oil boom. Desdemona and Breckenridge. Along the Mexia fault zone. Competition in oil. An Osage Monte Carlo. Arkansas' El Dorado. Texas forges ahead. Greater Seminole. Oklahoma City's bonanza field. Panhandle oil and gas. Permian basin discoveries. Fabulous East Texas. Finding new horizons. Oil at war. Oil conservation and control. An era of specialization. The impacts of petroleum. Appendix. Glossary. Bibliography. Index.

Note. A well-documented history of the petroleum industry in the southwestern United States of America from its beginnings. In addition to historical descriptions the author gives much information about the financial and economic aspects. The names of individuals and companies connected with the development occur frequently. Many interesting illustrations are included.

ROGERS, WALTER FRANCIS

Composition and properties of oil well drilling fluids. Houston Gulf Publishing Company 1948 525 p illus. 23 cm $10 00 6807

Contents. Introduction to drilling fluids. Drilling equipment and the drilling fluid. Testing equipment, methods and procedure. Specifications for drilling fluid materials. Charts and tables, mud weights and volumes. Mining and manufacture of bentonites, clays and weighting agents. Rheological and wall building properties of drilling fluids. Composition and properties of bentonite and clays. Viscosity reducing agents. Water-clay muds. Salt solutions, starch and gum muds. Oil-base muds. Sodium silicate muds. Prevention of lost circulation. Patent literature abstract. Bibliography. Author index. Subject index.

Note. A useful and authoritative summary of the theoretical and the practical knowledge pertaining to fluids and muds used in the drilling of oil wells. It is intended for young engineers who are just beginning to work in the field, and the author warns in the preface that it probably contains nothing which will be new to the expert. Nevertheless, there is a considerable amount of information which the engineer already experienced in the subject will find useful for reference. This includes fundamental data presented in graphs and tables, the lists of cited literature, and the descriptions of pertinent United States of America patents. The author is associated with the Houston Chemical Laboratory of the Gulf Oil Companies.

RUSSELL, WILLIAM L

Structural geology for petroleum geologists. New York McGraw Hill Book Company, Inc., 1955 427 p illus. 24 cm $7 75 6808

Contents. Introduction. Maps and cross sections. Physical principles and model studies. Folds. Faults. Joints and fractures. Unconformities. Salt domes. Buried hills and compaction. Sedimentary structures. Structural significance of lithology. Regional structures. Superficial structures. Structure of continental shelves. Dating structural events. Classification of traps for oil and gas accumulation. Structural factors in petroleum prospecting. Laboratory problems. Index.

Note. A complementary work to the author's *Principles of petroleum Geology* New York, 1951. It deals comprehensively and specifically with those aspects of structural geology which are of interest to petroleum geologists. Appropriately, the main emphasis is on topics which are directly related to oil finding; however some tangential matter is included too, for instance a discussion of the manner of deposition of sediments. The main topics are covered in considerable detail. Furthermore, their importance is usually pointed out in such statements as, "... It is generally recognized that open joints and fractures, when they occur in productive petroleum reservoirs, are extremely important in both petroleum geology and petroleum engineering." Extensive bibliographies are included in most chapters, and the names of the authors of the listed literature are included in the index.

SHAW, SILAS FREDERICK

Gas-lift principles and practices. Houston Gulf Publishing Company, 1939 156 p illus. 22 cm. $4 00 6809

Contents. History and invention. General principles controlling gas-lift operations. Lifting efficiency. Lift and submergence. Pressure. The eductor. Straight, or continuous gas-lift. Combination gas-lift flow. Intermittent gas-lift flow. Compressor plant installations. Gas-lift practices in various fields. Gas-lift practice in Seminole. Gas-lift practice in Oklahoma City, Oklahoma. Gas-lift practice in various fields and countries.

Note. In this technical work, the history and development of the process is discussed, and the fundamental principles that control the operation of the lift are emphasized. Data obtained from operations in the United States of America are presented. References are given at the end of most chapters. Diagrams and illustrations of the equipment are included.

STANDING, MARSHALL BURTON

Volumetric and phase behavior of oil field hydrocarbon systems New York Reinhold Publishing Corporation 1952 123 p illus. 29 cm. $10 00 6810

Contents. Introductory phase behavior and fluid flow concepts. Sampling methods and apparatus. Behavior of gases. Behavior of liquids. Vapor-liquid equilibria. Gas-condensate systems. Dissolved gas systems. Material balances. Glossary relating to hydrocarbon behavior. List of symbols. References. Appendix. General correlations of hydrocarbon behavior. Index.

Note. Pressure-volume-temperature relations of the hydrocarbon systems actually found in underground oil and gas reservoirs are covered in this book which was addressed not to chemists or other laboratory service but to petroleum engineers and geologists. The applications of laboratory tests to field conditions are the main theme. Problems such as good procedures in sampling are thoroughly discussed. There are 35 tables, 69 figures, practically all of which

Mining Engineering

Various Minerals

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on lime. Philadelphia American Society for Testing Materials 1940 118 p. illus. 23 cm. $1.00. 6822

Contents Lime investigations—an introduction to the symposium on lime, by J. R. Withrow. Variations in properties of dolomitic lime putties with methods of hydration, by J. E. Conley. The hydration of magnesian lime and the autoclave test, by F. C. Welch. Manufacturing lime for the glass industry, by A. H. Nuzum. Factors affecting milks of lime employed in industry, by D. R. Kaufmann. Quality of lime desired for water treatment, by C. P. Hoover. Prevention of after-precipitation in lime-treated industrial and municipal waters by threshold treatment, by O. Rice and others. Soil acidity and liming, by E. O. Fippen. Criteria for evaluation of agricultural ground limestone, by R. M. Salter and C. J. Schollenberger. Preliminary investigation of the determination of fineness in lime, by C. J. Koehler. Fundamental mechanics of calcination and hydration of lime and methods of control, by V. J. Azbe. Lime characteristics and their effect on construction, by W. C. Voss.

Note An extensive bibliography is given in Fippin's paper on soil acidity and liming and two other papers give short reference lists. The critical discussions following most of the papers contain further information on the subject.

BOERICKE, WILLIAM FAY

Prospecting and operating small gold placers. Second edition. New York John Wiley & Sons, Inc., 1936 144 p. illus. 19 cm. $4.25. 6823

Contents Introduction. How placer deposits have been formed. Examining placer ground, hints on prospecting. Panning, [illegible] estimating the values of [illegible] of gold and black sands. General information. The rocker its construction and operation. The long-Tom. Types of sluicing. Sluice-box construction the long-Tom. Cleaning-up recovery [illegible]. Methods of working placer ground. Under-currents and similar devices of fine gold from black sands, [illegible] amalgamation, [illegible]. Dry Use of mercury in placer mining, amalgamation. [illegible] mining claims placers. Placer mining machines. Location of placer mining claims. Bibliography [illegible], sale of placer gold, valuing placer property. Bibliography Appendix. Index.

Note Valuable information for the amateur as well as the more experienced placer miner. This second edition contains a number of important changes, chief among them being the reduction of all statements as to the value of gravel and gold quotations in terms of weight. The chapter [illegible] stated content in terms of weight. The chapter on placer mining machines has been entirely rewritten with much material added, and descriptions of few recent machines that have demonstrated their merit in the field are included. Diagrams and photographs are used liberally.

BUGBEE, EDWARD EVERETT

A textbook of fire assaying. Third edition. New York John Wiley & Sons, Inc., 1940. 314 p. illus. 23 cm. $6.25 6824

Contents Assay reagents and fusion products. Furnaces and furnace room supplies. Ore sampling. Balances and weights. Cupellation. Parting. The scorification assay. The crucible assay. The assay of complex ores and special methods. Sampling and assaying of bullion. The assay of solutions. The lead assay. The assay of ores and products containing metals of the platinum group. Practical assaying. Index.

Note The information in this book can be readily understood by the commercial assayer. The book starts with the fundamentals and the chemistry of all the reactions involved is clearly explained. The various sampling procedures for all types of precious metal ores and low-grade metallurgical products are described, together with standard practice for sampling and assaying all grades of gold and silver bullion. The third edition contains information as of 1940 with respect to the apparatus and reagents available for the assayer. Results of recent research, numerous new and special procedures for the assay of less common, but important ore mineral combinations and metallurgical products, data on the assay of metals of the platinum group, and new chapter on practical assaying are included also.

CAMERON, EUGENE N, AND OTHERS

Pegmatite investigations 1942–45 in New England. This report is based on work done jointly by Eugene N Cameron David M Larrabee, Andrew H McNair James J Page Glenn W Stewart, and Vincent E. Shainin. Washington D C. Government Printing Office, 1954 352 p. illus. (part col d) 29 cm (United States. Geological Survey Professional paper 255) $5 75 6825

Contents Introduction. Geologic setting of the deposits. Pegmatites. Mica deposits. Feldspar deposits. Beryl deposits. Descriptions of mines and prospects Maine. New Hampshire. Vermont. Connecticut. Bibliography Index.

Note The manufacture of [illegible] of equipment created shortages of mica, beryl, tantalite, and other pegmatite minerals early in World War II. The United States Geological Survey, under the sponsorship of the War Production Board, made an intensive study of New England pegmatite deposits beginning in 1942 and continuing into 1945. More than 300 pegmatite areas were mapped in detail and many others were given briefer examinations. Although the studies were chiefly concerned with mica and beryl pegmatites, much information on the occurrence of commercial deposits of feldspar and other pegmatite materials also is obtained. In the report resulting from these studies, the characteristics of the pegmatite mineral deposits of New England are discussed, and applications to mining, development and exploration are indicated. About five-sixths of the text is devoted to descriptions of individual mines and prospects. In addition to 119 maps, sections, and other illustrations in the text, there are 44 folding maps, plans, and sections in pocket.

FISCHER ELIZABETH C.

Annotated bibliography of the bauxite deposits of the world. Washington D C. Government Printing Office 1955 221 p. illus. 23 cm. (United States. Geological Survey Bulletin 999) $1.00 6826

Contents Introduction. Serials. Bibliography Index. Plate (folded, in pocket) Map showing the location of the principal bauxite districts of the world.

Note An annotated bibliography of more than 1,000 references on bauxite deposits of the world, with particular reference to their origin, mineralogy, stratigraphic position, physiographic setting, reserves, and production, dated through the year 1950. The entries are arranged alphabetically by author and the index provides both subject and geographical approach to the contents. The titles of the articles are given in the language of the original, but the annotations are written in English. Papers dealing with the technical aspects of the mining, processing, and uses of bauxite and those dealing with aluminum metal were not included unless they contain also information concerning the location, geology and mineralogy or reserves of the deposits.

GRIFFITTS W R. AND OTHERS

Mica deposits of the southeastern Piedmont, parts 1–11 This volume was printed as separate chapters, A–G inclusive based on investigations by W R. Griffitts, E. W Heinrich R. H. Jahns M. R. Klepper R. W Lemke, and J C. Olson. Washington, D C. Government Printing Office 1953 illus. 29 cm. (United States. Geological Survey Professional papers 248 A–G) Part A, $1.25 part B $0.60 part C, $1 75 part D $1.25 part E, $0.50 part F $1.50 part G $0 75 6827

Contents (abridged) Part i, General features, by R. H. Jahns and others. Part ii, Amelia district, Virginia, by R. W. Lemke and others. Part iii, Ridgeway-Sandy Ridge district, Virginia and North

—— Volume II—1956 A collection of 53 papers by 75 authors, assembled from papers published by the Society and the American Association of Petroleum Geologists, together with mostly new material. Edited by Paul L. Lyons Tulsa, Okla. Society of Exploration Geophysicists, 1956 676 p illus. 25 cm $7 00 6816A

Note. The purpose of the case history program of the Society of Exploration Geophysicists is to provide material by which geophysical surveys can be judged in the light of later development of the surveyed area as an aid in the interpretation and evaluation of other geophysical work. The papers published in these volumes deal mainly with the preliminary geophysical reconnaissance of various oil fields. They are concerned primarily with geophysics rather than geology but geological factors are given varying attention in the articles, ranging from none to considerable, depending upon the individual author. The authors presumed that the books' readers would have an understanding of the general principles and instrumentation by which seismic, gravity and magnetic surveys are carried out.

NETTLETON, LEWIS LOMAX

Geophysical prospecting for oil New York McGraw Hill Book Company, Inc., 1940 444 p illus. 23 cm $8 00 6817

Contents Part I, Gravitational methods. Fundamental principles and units. Gravity of the earth. Direct gravity-measuring instruments. The reduction of gravity measurements. The Eotvos torsion balance. Gravity calculations and interpretation. Isostasy Appendix I. Tables of normal gravity Gravity terrain correction charts and tables. Part II, Magnetic method Fundamental principles and units. Magnetism of the earth. Geomagnetic measuring instruments. Reduction of magnetometer observations. Magnetic calculations and interpretation. Part III, Seismic methods Fundamental principles. Theory of refraction shooting. Reflection shooting. The reduction of seismic observations. Seismic apparatus. Seismic field operations and interpretation. Appendix Derivation of equations for equal time circles. Part IV Electrical and miscellaneous methods and measurements in drill holes. Electrical prospecting methods. Electrical well logging. Miscellaneous prospecting methods and operations in wells. Part V Geophysical interpretation Geophysical interpretation.

Note. The purpose of this book is to provide in a single volume a connected presentation of the principles and practice of moder oil prospecting by geophysical methods. Particular care has been taken to explain clearly the necessary procedures for reducing field measurements to usable form.

SOCIETY OF EXPLORATION GEOPHYSICISTS

Cumulative index of the publications of the Society of Exploration Geophysicists Tulsa, Okla. The Society of Exploration Geophysicists 1948 127 p 24 cm. $2 50 6818

Contents Editorial note. Publications of the Society of Exploration Geophysicists. Officers of the Society of Exploration Geophysicists. Technical and editorial index—By authors—Index by subjects—Exploration General—Seismographic—Gravimetric—Magnetic—Electrical—Geochemical—Well measurements—Case histories—Miscellaneous—Reviews and new publications. Society round table section. Cumulative index of contents by volumes and numbers. Index of patent abstracts.

Note. A record of the literature published 1931 1947 by The Society of Exploration Geophysicists on the subject of geophysical prospecting. The present listing supersedes the previous one of 1940 which contained neither the index of patents nor the classification by subject. The volume has been published for the convenience of geologists and geophysicists—particularly those engaged in the search for new deposits of petroleum.

SOCIETY OF EXPLORATION GEOPHYSICISTS

Early geophysical papers of the Society of Exploration Geophysicists. Papers presented at meetings of the Society of Petroleum Geophysicists 1929 through 1935 reprinted from *Physics* and *Bulletin of the American Association of Petroleum Geologists* and *Journal of the Society of Petroleum Geophysicists.* Tulsa, Okla. Society of Exploration Geophysicists 1947 844 p illus 24 cm. $8 00 6819

Note. The chief motive for compiling this volume was to make available to new members of the Society papers that had been published elsewhere before the appearance of the first issue of the Society's *Geophysics.* Fifty-seven papers have been collected and reprinted without apparent change. Since many of the papers describe techniques or contain data that are still useful, the volume is one that should be added generally to library collections on geophysical exploration.

WYLLIE, M R J

The fundamentals of electric log interpretation New York Academic Press, Inc., 1954 126 p. illus. 21 cm. $4 50 6820

Contents (abridged) The theory of quantitative log interpretation. The practice of quantitative log interpretation. Selected bibliography Appendix Summary of logging techniques and their applications. Index.

Note. Electric logging in the sense in which the term is used in this book refers to group of techniques for the measurement of electrical resistances of rock formations and of electric potentials between adjacent formations. The measurements are made by specialized instruments lowered into the bore-holes of wells drilled to find oil and gas, and the interpretation of the log or record requires knowledge of electrical principles, and especially knowledge of the behavior of electric currents in rocks, water, drilling mud, etc. This book is a basic introduction. Log interpretation is covered as to fundamentals and common details, and the various developed systems of electric logging are described in reference to their applications, limitations and the necessary precautions in interpreting the logs produced by them.

VARIOUS MINERALS

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Coal preparation. Edited by David R. Mitchell Sponsored by the Seely W Mudd Memorial Fund. Second edition. New York The Institute 1950 830 p. illus. 23 cm. $8.00 6821

Contents. Economics of coal preparation, by J B. Morrow and D H. Davis. Characteristics of coal and its associated impurities, by H. F Yancey and others. Sampling, by T W Guy and R. E. Zimmerman. Use specifications for coal, by J R. Kerrick and others. Screening, by T Fraser and J S. Johnson. Breaking and crushing, by C. S. Jenkins and H. W Riley Preparation at the face, by J D Conner and M. H. Forester Hand picking, by D. H. Davis. Principles of gravity concentration, by B. D Thomas. Coal washers of the classifier type, by J Griffen. Launder washers, by C. P Proctor and J T Crawford. Jigs, by B. M. Bird and D. R. Mitchell. Concentrating tables, by E. W Gandrud. Dense-media processes, by B. M. Bird and D. R. Mitchell. Pneumatic coal cleaning, by E. C. Curtis and D R. Mitchell. Flotation, by R. E. Zimmerman. Miscellaneous processes, by D R. Mitchell and R. B. Hewes. Slurries, sludges, slimes and water treatment, by F P Hewes. Dewatering and thermal drying, by O R. Lancaster and others. Dedusting and dust collection, by T L. Garwood and F C. Lyons. Treatment of coal surfaces, by R. A. Sherman and J. M. Mark. Plant control and efficiencies, by R. E. Zimmerman. Loading, by D R. Mitchell and T Fraser. Index.

Note. A comprehensive treatise on the processing of coal from the time it is separated from the earth seam to its loading for delivery to the consumer. The book is useful to advanced students of mining engineering who are preparing for the coal industry and to men actively engaged in this industry. Many illustrations of equipment and many tables of data supplement the discussions. In the present edition, two entirely new papers have been substituted for two papers that appeared in the original edition published in 1943. Most of the other papers have been revised somewhat, and about half a dozen of them have been revised extensively. Some, but not all, of the bibliographies have been brought down to date.

Mining Engineering

Various Minerals

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on lime. Philadelphia American Society for Testing Materials 1940 118 p. illus. 23 cm. $1.00. 6822

Contents: Lime [illegible]—an introduction to the symposium on lime, by J. R. Withrow. Variations in properties of domestic lime putties with methods of hydration, by J. E. Conley. The hydration of magnesian lime and the autoclave test, by F. C. Welch. Manufacturing lime for the glass industry, by A. M. [illegible]. Factors affecting [illegible] of lime employed in industry, by D. [illegible]. Quality of lime desired for water treatment, by C. E. Washburn. Prevention of after-precipitation in lime-treated industrial and municipal waters by threshold treatment, by O. [illegible]. Criteria for soil acidity and liming, by E. O. Fippin. [illegible] by R. M. Salter and others. [illegible] of agricultural ground limestone, by [illegible]. Preliminary investigation of the determination of [illegible] C. J. Schollenberger. [illegible] in lime, by C. J. Koehler. Fundamental mechanics of [illegible] and hydration of lime and methods of control, by [illegible]. Lime characteristics and their effect on construction, by [illegible].

Note: An extensive bibliography is given in Fippin's paper on soil acidity and liming and two other papers give short reference lists. The critical discussions following most of the papers contain further information on the subject.

BOERICKE, WILLIAM FAY

Prospecting and operating small gold placers. Second edition. New York John Wiley & Sons, Inc., 1936 144 p. illus. 19 cm. $4.25. 6823

Contents: Introduction. How placer deposits have been formed. [illegible] placer ground, hints on prospecting. [illegible] the value of [illegible] of gold and black sands, estimating the value of [illegible]. General information. The rocker: its construction and operation. The long-Tom. Types of [illegible] construction. [illegible] Methods of working placer ground. Cleaning-up, recovery of fine gold from black sands, under-currents and similar devices. [illegible] Use of mercury in placer mining, amalgamation, retorting. Dry [illegible] Placer mining machines. Location of placer mining claims, [illegible] of placer gold, [illegible] placer property. Bibliography. Appendix. Index.

Note: Valuable information for the amateur as well as the more experienced placer miner. The second edition contains a number of important changes, chief among them being the revision of all statements as to the value of gravel and gold [illegible] of weight. The chapter [illegible] has been entirely rewritten with much [illegible] on placer mining machines has been entirely rewritten with much material added, and descriptions of [illegible] few recent machines that have demonstrated their worth in the field are included. Diagrams and photographs are used liberally.

BUGBEE, EDWARD EVERETT

A textbook of fire assaying. Third edition. New York John Wiley & Sons, Inc., 1940 314 p. illus. 23 cm. $6.25 6824

Contents: Assay reagents and fusion products. Furnaces and furnace room supplies. Ore sampling. Balances and weights. Cupellation. Parting. The scorification assay. The crucible assay. The assay of complex ores and special methods. Sampling and assaying of bullion. The assay of [illegible]. The lead assay. The assay of ores and products containing metals of the platinum group. Practical assaying. Index.

Note: The information in this book can be readily understood by the commercial assayer. The book starts with the fundamentals and the chemistry of all the reactions involved is clearly explained. The various assaying procedures for all types of precious metal ores and low-grade metallurgical products are described, together with standard practice for sampling and assaying all grades of gold and silver bullion. The third edition contains information as of 1940 with respect to the apparatus and reagents available for the assayer. Results of recent research, [illegible] new and special procedures for the assay of [illegible], but important [illegible] unusual combinations and metallurgical products, data on the assay of metals of the platinum group, and [illegible] new chapter on practical assaying are included also.

CAMERON, EUGENE N., AND OTHERS

Pegmatite investigations, 1942–45 in New England. This report is based on work done jointly by Eugene N. Cameron, David M. Larrabee, Andrew H. McNair, James J. Page, Glenn W. Stewart, and Vincent E. Shainin. Washington D. C. Government Printing Office 1954 352 p. illus. (part col d) 29 cm. (United States. Geological Survey Professional paper 255) $5 75 6825

Contents: Introduction. Geologic setting of the deposits. Pegmatites. Mica deposits. Feldspar deposits. Beryl deposits. Descriptions of mines and prospects: Maine, New Hampshire, Vermont, Connecticut. Bibliography. Index.

Note: The manufacture of [illegible] equipment created shortages of mica, beryl, tantalite, and other pegmatite minerals early in World War II. The United States Geological Survey, under the sponsorship of the War Production Board, made an intensive study of New England pegmatite deposits beginning in 1942 and continuing into 1945. More than 300 pegmatite areas were mapped in detail and many others were given briefer examinations. Although the studies were chiefly concerned with mica and beryl pegmatites, much information on the occurrence of commercial deposits of feldspar and other pegmatite minerals was also obtained. In the report resulting from these studies, the characteristics of the pegmatite mineral deposits of New England are discussed, and applications to mining, development and exploration are indicated. About five-sixths of the text is devoted to descriptions of individual mines and prospects. In addition to 159 maps, sections, and other illustrations in the text, there are 43 folding maps, plates, and sections in a pocket.

FISCHER, ELIZABETH C

Annotated bibliography of the bauxite deposits of the world. Washington, D. C. Government Printing Office, 1955 221 p. illus. 23 cm. (United States. Geological Survey Bulletin 999) $1.00 6826

Contents: Introduction. Serials. Bibliography. Index. Plate (folded, in pocket): Map showing the location of the principal bauxite districts of the world.

Note: An annotated bibliography of more than 1,000 references on bauxite deposits of the world, with particular reference to their origin, mineralogy, stratigraphic position, physiographic setting, reserves, and production, dated through the year 1950. The entries are arranged alphabetically by author, and the index provides both subject and geographical approach to the contents. The titles of the articles are given in the language of the original, but the annotations are written in English. Papers dealing with the technical aspects of the mining, processing, and uses of bauxite and those dealing with aluminum metal were not included unless they contain also information concerning the location, geology and mineralogy or reserves of the deposits.

GRIFFITTS W. R. AND OTHERS

Mica deposits of the southeastern Piedmont, parts 1–11. This volume was printed as separate chapters A–G inclusive, based on investigations by W. R. Griffitts, E. W. Heinrich, R. H. Jahns, M. R. Klepper, R. W. Lemke, and J. C. Olson. Washington, D. C. Government Printing Office 1953 illus. 29 cm. (United States. Geological Survey Professional papers 248 A–G) Part A, $1.25 part B $0.60 part C, $1 75 part D $1.25 part E, $0.50 part F $1.50 part G $0.75 6827

Contents (abridged): Part 1, General features, by R. H. Jahns and others. Part 11, Amelia district, Virginia, by R. W. Lemke and others. Part 111, Ridgeway-Sandy Ridge district, Virginia and North

—— Volume II—1956 A collection of 53 papers by 75 authors, assembled from papers published by the Society and the American Association of Petroleum Geologists, together with mostly new material. Edited by Paul L Lyons Tulsa, Okla. Society of Exploration Geophysicists, 1956 676 p illus. 25 cm. $7 00 6816A

Note. The purpose of the case history program of the Society of Exploration Geophysicists is to provide material by which geophysical surveys can be judged in the light of later development of the surveyed area as an aid in the interpretation and evaluation of other geophysical work. The papers published in these volumes deal mainly with the preliminary geophysical reconnaissance of various oil fields. They are concerned primarily with geophysics rather than geology but geological factors are given varying attention in the articles, ranging from none to considerable, depending upon the individual author The authors presumed that the books' readers would have an understanding of the general principles and instrumentation by which seismic, gravity and magnetic surveys are carried out.

NETTLETON, LEWIS LOMAX

Geophysical prospecting for oil New York McGraw Hill Book Company, Inc., 1940 444 p illus. 23 cm. $8 00 6817

Contents. Part I, Gravitational methods Fundamental principles and units. Gravity of the earth. Direct gravity-measuring instruments. The reduction of gravity measurements. The Eotvos torsion balance. Gravity calculations and interpretation. Isostasy Appendix I. Tables of normal gravity Gravity terrain correction charts and tables. Part II, Magnetic method Fundamental principles and units. Magnetism of the earth. Geomagnetic measuring instruments. Reduction of magnetometer observations. Magnetic calculations and interpretation. Part III, Seismic methods Fundamental principles. Theory of refraction shooting. Reflection shooting. The reduction of seismic observations. Seismic apparatus. Seismic field operations and interpretation. Appendix Derivation of equations for equal time circles. Part IV Electrical and miscellaneous methods and measurements in drill holes. Electrical prospecting methods. Electrical well logging. Miscellaneous prospecting methods and operations in wells. Part V Geophysical interpretation Geophysical interpretation.

Note. The purpose of this book is to provide in a single volume connected presentation of the principles and practice of modern oil prospecting by geophysical methods. Particular care has been taken to explain clearly the necessary procedures for reducing field measurements to usable form.

SOCIETY OF EXPLORATION GEOPHYSICISTS

Cumulative index of the publications of the Society of Exploration Geophysicists Tulsa, Okla. The Society of Exploration Geophysicists 1948 127 p 24 cm. $2 50 6818

Contents Editorial note. Publications of the Society of Exploration Geophysicists. Officers of the Society of Exploration Geophysicists. Technical and editorial index—By authors—Index by subjects—Exploration, General—Seismographic—Gravimetric—Magnetic—Electrical—Geochemical—Well measurements—Case histories—Miscellaneous—Reviews and new publications. Society round table section Cumulative index of contents by volumes and numbers. Index of patent abstracts.

Note. A record of the literature published 1931 1947 by The Society of Exploration Geophysicists on the subject of geophysical prospecting. The present listing supersedes the previous one of 1940 which contained neither the index of patents nor the classification by subject. The volume has been published for the convenience of geologists and geophysicists—particularly those engaged in the search for new deposits of petroleum.

SOCIETY OF EXPLORATION GEOPHYSICISTS

Early geophysical papers of the Society of Exploration Geophysicists. Papers presented at meetings of the Society of Petroleum Geophysicists 1929 through 1935, reprinted from Physics and Bulletin of the American Association of Petroleum Geologists, and Journal of the Society of Petroleum Geophysicists. Tulsa, Okla. Society of Exploration Geophysicists 1947 844 p. illus 24 cm. $8 00. 6819

Note. The chief motive for compiling this volume was to make available to new members of the Society papers that had been published elsewhere before the appearance of the first issue of the Society's *Geophysics*. Fifty-seven papers have been collected and reprinted without apparent change. Since many of the papers describe techniques or contain data that are still useful, the volume is one that should be added generally to library collections on geophysical exploration.

WYLLIE, M R. J

The fundamentals of electric log interpretation. New York Academic Press, Inc., 1954 126 p illus 21 cm $4 50 6820

Contents (abridged) The theory of quantitative log interpretation. The practice of quantitative log interpretation. Selected bibliography Appendix Summary of logging techniques and their applications. Index.

Note: Electric logging in the sense in which the term is used in this book refers to a group of techniques for the measurement of electrical resistances of rock formations and of electric potentials between adjacent formations. The measurements are made by specialized instruments lowered into the bore-holes of wells drilled to find oil and gas and the interpretation of the log or record requires knowledge of electrical principles, and especially knowledge of the behavior of electric currents in rocks, water drilling mud, etc. This book is a basic introduction. Log interpretation is covered as to fundamentals and common details, and the various developed systems of electric logging are described in reference to their applications, limitations and the necessary precautions in interpreting the logs produced by them.

VARIOUS MINERALS

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Coal preparation. Edited by David R. Mitchell. Sponsored by the Seely W Mudd Memorial Fund. Second edition New York The Institute, 1950 830 p. illus. 23 cm. $8 00. 6821

Contents Economics of coal preparation, by J B. Morrow and D H. Davis. Characteristics of coal and its associated impurities, by H. F Yancey and others. Sampling, by T W Guy and R. E. Zimmerman. Use specifications for coal, by J H. Kerrick and others. Screening, by T Fraser and J R. Johnson. Breaking and crushing, by C. R. Jenkins and H. W Riley Preparation at the face, by J D Cooper and M. H. Forester Hand picking, by D. H. Davis. Principles of gravity concentration, by R. D. Thomas. Coal washers of the classifier type, by J Griffen. Launder washers, by C. P Proctor and J T Crawford. Jigs, by R. M. Bird and D R. Mitchell. Concentrating tables, by B W Gandrud. Dense-media processes, by R. M. Bird and D R. Mitchell. Pneumatic coal cleaning, by E. C. Curtis and D R. Mitchell. Flotation, by R. E. Zimmerman. Miscellaneous processes, by D R. Mitchell and R. E. Zimmerman. Slurries, sludges, slimes and water treatment, by F F Hewes. Dewatering and thermal drying, by O. R. Lasseter and others. Dedusting and dust collection, by T L. Garwood and F C Lyons. Treatment of coal surfaces, by R. A. Sherman and J. M. Pilcher Plant control and efficiencies, by R. E. Zimmerman. Loading, by D. R. Mitchell and T Fraser Index.

Note. A comprehensive treatise on the processing of coal from the time it is separated from the earth seam to its loading for delivery to the consumer. The book is useful to advanced students of mining engineering who are preparing for the coal industry and to men actively engaged in this industry Many illustrations of equipment and many tables of data supplement the discussions. In the present edition, two entirely new papers have been substituted for two papers that appeared in the original edition published in 1943. Most of the other papers have been revised somewhat, and about half a dozen of them have been revised extensively Some, but not all, of the bibliographies have been brought down to date.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on lime. Philadelphia American Society for Testing Materials, 1940. 118 p. illus. 23 cm. $1.00. 6822

Contents: Lime investigations—an introduction to the symposium on lime, by J. R. Withrow. Variations in properties of dolomitic lime putties with methods of hydration, by J. E. Conley. The hydration of magnesian lime and the autoclave test, by F. C. [illegible]. Manufacturing lime for the glass industry, by A. H. [illegible]. Factors affecting milk of lime employed in industry, by D. [illegible]. Quality of lime desired for water treatment, by C. P. Hoover. Prevention of after-precipitation in lime-treated industrial and municipal waters by threshold treatment, by O. Rice and others. Soil acidity and liming, by E. O. Fippin. Criteria for evaluation of agricultural ground limestone, by R. M. Salter and C. J. Schollenberger. Preliminary investigation of the determination of fineness in lime, by C. J. Koehler. Fundamental mechanics of calcination and hydration of lime and methods of control, by V. J. [illegible]. Lime characteristics and their effect on construction, by W. C. Voss.

Note: An extensive bibliography is given in Fippin's paper on soil acidity and liming and two other papers give short reference lists. The critical discussion following most of the papers contain further information on the subject.

BOERICKE, WILLIAM FAY

Prospecting and operating small gold placers. Second edition. New York John Wiley & Sons Inc. 1936 144 p. illus. 19 cm. $4.25. 6823

Contents: Introduction. How placer deposits have been formed. Examining placer ground. Hints on prospecting. Panning: properties of gold and black sands; estimating the value of colors. The rocker: its construction and operation. General information on sluicing. Sluice-box construction: the long-Tom. Types of riffles. Methods of working placer ground. Cleaning-up: recovery of fine gold from black sands; under-currents and similar devices. Use of mercury in placer mining: amalgamation, retorting. Dry placers. Placer mining machines. Location of placer mining claims; leasing, sale of placer gold, selling a placer property. Bibliography. Appendix. Index.

Note: Valuable information for the amateur as well as the more experienced placer miner. This second edition contains a number of important changes, chief among them being the revision of all statements as to the value of gravel and gold particles having a stated content in units of weight. The chapter on placer mining machines has been entirely rewritten with much material added, and descriptions of a few recent machines that have demonstrated their worth in the field are included. Diagrams and photographs are used liberally.

BUGBEE, EDWARD EVERETT

A textbook of fire assaying. Third edition. New York John Wiley & Sons, Inc., 1940. 314 p. illus. 23 cm. $6.25 6824

Contents: Assay reagents and fusion products. Furnaces and furnace room supplies. Ore sampling. Balances and weights. Cupellation. Parting. The scorification assay. The crucible assay. The assay of complex ores and special methods. Sampling and assaying of bullion. The assay of tellurides. The lead assay. The assay of ores and products containing metals of the platinum group. Practical assaying. Index.

Note: The information in this book can be readily understood by the commercial assayer. The book starts with the fundamentals and the chemistry of all the reactions involved is clearly explained. The various assaying procedures for all types of precious metal ores and low-grade metallurgical products are described, together with standard practice for sampling and assaying all grades of gold and silver bullion. The third edition contains information as of 1940 with respect to the apparatus and reagents available for the assayer. Results of recent research, numerous new and special procedures for the assay of less common, but important ore mineral combinations and metallurgical products, data on the assay of metals of the platinum group, and a new chapter on practical assaying are included also.

CAMERON EUGENE N AND OTHERS

Pegmatite investigations, 1942–45 in New England. This report is based on work done jointly by Eugene N Cameron David M Larrabee Andrew H McNair James J Page Glenn W Stewart, and Vincent E. Shainin. Washington, D C. Government Printing Office 1954 352 p illus. (part col d) 29 cm. (United States. Geological Survey Professional paper 255) $5 75 6825

Contents: Introduction. Geologic setting of the deposits. Pegmatites. Mica deposits. Feldspar deposits. Beryl deposits. Descriptions of mines and prospects: Maine. New Hampshire. Vermont. Connecticut. Bibliography. Index.

Note: The manufacture of war equipment created shortages of mica, beryl, tantalite, and other pegmatite minerals early in World War II. The United States Geological Survey under the sponsorship of the War Production Board, made an intensive study of New England pegmatite deposits beginning in 1942 and continuing into 1945. More than 300 pegmatite areas were mapped in detail and many others were given briefer examinations. Although the studies were chiefly concerned with mica and beryl pegmatites, much information on the occurrence of commercial deposits of feldspar and other pegmatite materials also was obtained. In the report resulting from these studies, the characteristics of the pegmatite mineral deposits of New England are discussed, and applications to mining, development and exploration are indicated. About five-sixths of the text is devoted to descriptions of individual mines and prospects. In addition to 139 maps, sections, and other illustrations in the text, there are 48 folding maps, plans, and sections in a pocket.

FISCHER, ELIZABETH C

Annotated bibliography of the bauxite deposits of the world. Washington D C. Government Printing Office 1955 221 p. illus. 23 cm. (United States. Geological Survey Bulletin 999) $1.00 6826

Contents: Introduction. Serials. Bibliography. Index. Plate (folded, in pocket): Map showing the location of the principal bauxite districts of the world.

Note: An annotated bibliography of more than 1,000 references on bauxite deposits of the world, with particular reference to their origin, mineralogy, stratigraphic position, physiographic setting, reserves, and production, dated through the year 1952. The entries are arranged alphabetically by author and the index provides both subject and geographical approach to the contents. The titles of the articles are given in the language of the original, but the annotations are written in English. Papers dealing with the technical aspects of the mining, processing, and uses of bauxite and those dealing with aluminum metal were not included unless they contain also information concerning the location, geology and mineralogy or reserves of the deposits.

GRIFFITTS W R. AND OTHERS

Mica deposits of the southeastern Piedmont, parts 1–11 This volume was printed as separate chapters, A–G inclusive based on investigations by W R. Griffitts E. W Heinrich, R. H. Jahns, M R. Klepper R. W Lemke, and J C. Olson. Washington, D C. Government Printing Office 1953 illus. 29 cm. (United States. Geological Survey Professional papers 248 A–G) Part A, $1.25 part B $0.60 part C, $1 75 part D $1.25 part E, $0.50 part F $1.50 part G $0.75 6827

Contents (abridged): Part I, General features, by R. H. Jahns and others. Part II, Amelia district, Virginia, by R. W. Lemke and others. Part III, Ridgeway-Sandy Ridge district, Virginia and North

Carolina, by W R. Griffitts and others. Part IV Outlying deposits in Virginia, by W R. Griffitts and others. Part V Shelby-Hickory district, North Carolina, by W R. Griffitts and J C. Olson. Part VI, Outlying deposits in North Carolina, by W R. Griffitts and J C. Olson. Part VII, Hartwell district, Georgia and South Carolina, by W R. Griffitts and J C. Olson. Part VIII, Outlying deposits in South Carolina, by W R. Griffitts and J C. Olson. Part IX, Thomaston-Barnesville district, Georgia, by E. W Heinrich and others. Part X, Outlying deposits in Georgia, by E. W Heinrich and others. Part XI, Alabama district, by E. W Heinrich and J C. Olson.

Note A thorough study based largely on field work, of the pegmatite bodies of a region in southeastern United States of America and embracing portions of the states of Alabama, Georgia, South Carolina, North Carolina, Tennessee, and Virginia. The primary motive for the study as search for commercial deposits of mica and, as would be expected, the report contains much information pertinent to the economic geology and mining history of the region. It is fully illustrated and includes number of folding maps in colors. As noted in the sub-title, it is published in the form of separate parts or chapters, however general title page and preliminary pages containing Contents and lists of illustrations are available for those who wish to bind the parts as single volume. However there is no common index, all the parts having separate indexes.

JOHNSON, JESSE HARLAN

An introduction to the study of organic limestones. Revised edition Golden Colorado School of Mines, 1951 185 p illus. 23 cm (Colorado School of Mines. Quarterly Volume 46, no 2) $2 00 6828

Contents Foraminifera. Porifera-sponges. Coelenterata. Echinoderma. Bryozoa. Worms and worm limestones. Brachiopoda. Mollusca. Arthropoda. Calcareous algae.

Note. An illustrated guide designed to serve as an introduction to the study of organic limestones. For each of the ten groups discussed there are introduction and list of bibliographical references, together with notes as to chemical composition, structures, chief divisions, and descriptions of the major deposits. A feature of the publication is the set of 104 photographic plates showing the various types of calcareous organic debris to assist in recognition.

JOHNSTONE, SYDNEY J

Minerals for the chemical and allied industries. New York John Wiley & Sons Inc., 1954 693 p illus 23 cm. $12 50 6829

Note. A reference manual of primarily technical information on about 75 metals and other raw materials. The arrangement is alphabetical by name of substance. The alphabetical arrangement is supplemented by detailed general index. Generally speaking, each substance, such as asbestos, is the subject of separate chapter or monograph. However a few related substances are grouped for instance, "Talc soapstone, steatite and pyrophyllite. The typical account f each includes information on such points as principal ores, known deposits, world production, smelting or refining methods, uses and standard specifications. Also, there is selected bibliography Although few if any substances are included which are not covered in other standard chemical reference books, more information is given on each than is usually supplied in the manuals of wider scope.

LADOO, RAYMOND BARDEEN, AND W M MYERS

Nonmetallic minerals Second edition New York McGraw Hill Book Company, Inc. 1951 605 p 24 cm. $11 00 6830

Note. A useful reference book of information about such materials as asbestos, asphalts, borax, clays, feldspar fuller' earth, gypsum, limestone, mica, phosphate rock, sand and gravel, slate, uranium minerals, and vermiculite. Altogether 90 minerals and groups of minerals are considered. The information given on typical mineral or group includes chemical composition, general description, physical properties, known deposits, mining methods, statistics of production for recent years, uses, prices, and bibliography. The first edition of the book appeared in 1925 This edition contains largely new material.

LOW, ALBERT HOWARD, AND OTHERS

Technical methods of ore analysis, by Arthur J Weinig and William P Schoder, based upon the text by Albert H Low Eleventh edition New York John Wiley & Sons, 1939 325 p illus (part col'd) 23 cm. $6 50 6831

Contents. Semi-micro methods. Aluminum. Antimony Arsenic. Barium. Beryllium. Bismuth. Cadmium. Calcium. Chlorine. Chromium. Cobalt. Copper Fluorine. Iron. Lead. Magnesium. Manganese. Mercury Molybdenum. Nickel. Phosphorus. Potassium and sodium. Silicon. Sulfur Tin. Titanium. Tungsten. Uranium. Vanadium. Zinc. Selectiv analyses. Preparation and standardization of solutions. Tables. Bibliography Author index. Subject index.

Note. This revision retains, with corrections, all the original material of Dr Low's ork which is still valid. Subjects unrelated to ore analysis, such as boiler water coal and coke, steel, oil shale, and crude petroleum have been omitted, as has the chapter on apparatus and that on logarithms. Although the eleventh edition is about 60 pages shorter than the preceding one, it actually contains more material, since repetition has been eliminated by means of cross references, and more concise presentation has been used. Material added includes chapters on the application of semi-micro methods to ore analysis, selective analyses and beryllium. A complete bibliography on ore analysis is gi en. The preparation and standardization f solution ha been placed in separate chapter with cross references in the text. Recent, recognized procedures ha been included for the analysis of chromium, copper fluorine, magnesium, manganese, molybdenum, phosphorus, potassium, titanium, uranium, vanadium, and zinc The illustrations are all new

PARDEE, JOSEPH THOMAS, AND C F PARK, JR.

Gold deposits of the southern Piedmont. Washington D C Government Printing Office, 1948 156 p illus. 29 cm. (United States. Geological Survey Professional paper 213) $6 50 including portfolio of maps plans, and sections. 6832

Contents Introduction. Bibliography Geography General geology Physiography History of mining. Production. Gold deposits: Distribution. Classification Lode deposits. Placer deposits. Mine descriptions: Virginia mines. North Carolina mines. South Carolina mines. Georgia mines. Alabama mines. Index.

Note. This report is concerned with the gold mines in the southern Appalachian gold belt, which stretches 10 to 100 miles wide along the southeast front of the Appalachian Mountains from Virginia to Alabama. The gold deposits ha been divided for purposes of description into two main groups—lodes and placers Under the heading Mine descriptions, brief accounts are given of large number of mines and prospects, and few extensively developed deposits are described in detail. The geology of the region is described only in so far as the geology seems likely to shed light on the extent of the gold deposits and their possibilities for future production. With the paper comes a box of large folding maps and plans.

SELVIG, WALTER ALFRED, AND OTHERS

American lignites geological occurrence, petrographic composition and extractable waxes by W A. Selvig W H Ode B C Parks and H J O Donnell Washington D C Government Printing Office 1950 63 p illus 26 cm. (United States Bureau of Mines Bulletin 482) $0.35 6833

Content (abridged) Occurrence and geology of lignite deposits in the United States. General nature and use of montan ax Commercial production of montan wax in Germany and Czechoslovakia. Commercial production of domestic montan ax Investigations of waxes extractable from British lignite. In estigations of ... waxes extractable from American lignites. ... tractable from peat.

Published reports on laboratory investigations of American and Canadian lignites. Laboratory extraction method. Extraction yields. Petrography of lignite coal. Petrographic characteristics of attrital and xyloid lignite coal. Petrographic composition of lignite from Arkansas, Texas, North Dakota, and California. Investigation of petrographic components contributing to extraction yields. Appendix. Description of coal samples.

Note. Because of the shortage of montan wax at the close of World War [illegible] and the fact that industry in the United States has had to rely on imported wax in the past, an investigation [illegible] started in 1945 to determine probable yields of wax from domestic lignite. Results of the investigation and the properties of extractable waxes are described in this bulletin. Also discussed are the occurrence and geology of lignite deposits of the United States from which samples were obtained for wax extraction and the petrographic composition of lignites, particularly in respect to those components that contribute to wax yields.

NININGER ROBERT D

Minerals for atomic energy a guide to exploration for uranium, thorium and beryllium. Second edition. Princeton D Van Nostrand Company Inc., 1956. 367 p. illus. (part col'd) 24 cm. $8.50. 6834

Contents: Part I, What to look for—uranium, thorium, and beryllium, their minerals and deposits. *Introduction.* Mineral and ore deposits. The uranium ore minerals. The other uranium minerals. Production and other significant deposits of uranium. The thorium minerals. Production and other significant deposits of thorium. The beryllium minerals. Production and other significant deposits of beryllium. Part II, Where to look—evaluation of various areas of the world. Introduction. Shield areas of the world. Mesozoic. Other areas of granitic and metamorphic rocks. Principal mountain systems of the world. Broad plains areas of sedimentary rocks. Other areas of North America. Other areas of the world. Part III, How to look—prospecting preparation, equipment and regulations, radioactivity and use of the counter, evaluation and sale, prices and markets. Introduction. Radioactivity and its detection. Prospecting with the counter. How to evaluate [illegible] discovery. Marketing uranium, thorium, beryllium, and associated ores. Appendices. Uranium non-ore minerals. Other thorium minerals. Mineral identification. Lindgren classification of mineral deposits. Sample testing and analysis. Questions and answers. Sources of additional information and aid. Manufacturers of Geiger and scintillation counters. Laws and regulations applying to prospecting in the United States. Location of mining claims in some western states. Prices and markets in the United States. Information on Canada. Information on Australia. Information on United Kingdom and British colonial territories. Sources of information outside of the United States. Conversion correction factors. Index.

Note. The new interest in uranium ores caused by the discovery of nuclear fission and its successful exploitation led to the publication in the United States of America of numerous books addressed to amateurs on prospecting for uranium. This book is one of the better of the kind. It covers thorium and beryllium minerals as well as uranium. Colored pictures of uranium minerals are included. The geological conditions associated with deposits of these minerals are well described, and there is [illegible] broad survey of areas of the world which contain known deposits or seem on the basis of geology to be favorable areas for prospecting. Techniques of prospecting with Geiger and scintillation counters are described and the reader is told how to evaluate his discoveries. Information is included on the laws relating to prospecting and claim location in the United States, Canada and Australia.

PAGE, LINCOLN R. AND OTHERS compilers

Contributions to the geology of uranium and thorium by the United States Geological Survey and Atomic Energy Commission for the United Nations International Conference on Peaceful Uses of Atomic Energy, Geneva Switzerland, 1955 Compiled by Lincoln R. Page Hobart E. Stocking and Harriet B Smith. Prepared as a cooperative effort of the United States Geological Survey and the United States Atomic Energy Commission and published with the permission of the Commission. Washington D C. Government Printing Office 1956. 739 p. illus. 29 cm. (United States. Geological Survey Professional paper 300) $6.00. 6835

Note: Between 1944 and the holding of United Nations International Conference on Peaceful Uses of Atomic Energy in 1955, the United States Government carried on intensive investigations concerning the geology of fissionable elements. It is thought that no other group of materials has been so thoroughly studied in so short [illegible] time in the [illegible] history of the geological sciences. The [illegible] papers here published, most of [illegible] which were presented at the Geneva Conference, comprise an exhaustive review of the geology of fissionable materials in the United States of America. The publication is enriched by data acquired after the Conference and by contributions [illegible] which arrived too late for actual presentation at Geneva. The papers include abundant illustrations and bibliographical references.

SHEPARD ORSON CUTLER, AND WALDEMAR F DIETRICH

Fire assaying. New York McGraw Hill Book Company Inc., 1940 277 p. illus. 23 cm. $6.00. 6836

Contents: The scope of fire assaying. Sampling. Weighing. Cupellation. Parting. Theoretical discussion of assay fusions and related smelting processes. The crucible assay. The scorification assay. The assay of bullion for gold and silver. The assay of materials requiring preliminary acid treatment. Assay of solutions for gold and silver. The fire assay for the platinum metals. Fire assay methods for base metals. The accuracy of the fire assay for gold and silver. The preparation of gold and silver bullion from amalgam and cyanide precipitate. Assay equipment and supplies. Appendices. Minimum equipment for [illegible] small assay office. List of assay supplies and reagents. Assay supply houses.

Note. A standard practical book. It provides [illegible] working knowledge of the practice of fire assaying [illegible] about the need for [illegible] comprehensive understanding of the physico-chemical principles involved. It shows how to apply scientific principles in such matters as crucible charge calculations, cupellation, and scorification procedures; and presents workable procedures for the determination of gold and silver in almost any type of natural or artificial material, for the determination of the individual members of the platinum group, and for some base metals.

METALLURGY

GENERAL

AMERICAN SOCIETY OF MECHANICAL ENGINEERS

ASME handbook, metals properties Edited by Samuel L Hoyt Sponsored by the Metals Engineering Handbook Board of the American Society of Mechanical Engineers. New York McGraw Hill Book Company, Inc., 1954 433 p illus 26 cm. $11 00 6837

Contents Ferrous: Iron. Cast irons. Cast steels. Wrought steels. ASTM steels. AISI steels. Non-ferrous Copper and copper base alloys. Aluminum and aluminum base alloys. Nickel and nickel base alloys. Zinc and zinc base alloys. Lead and lead base alloys. Tin and tin base alloys. Magnesium and magnesium base alloys. Special alloys Super alloys, wrought. Super alloys, cast. Index.

Note One of the four parts of the *ASME handbook* this volume is a compendium of data on approximately 300 metals and alloys which are in common use as engineering materials. Within each section—the titles of which are given above—individual metals and alloys are treated individually with the information about each presented in modified tabular form. The data given are classified under such subheads as "Chemical composition "Characteristics, Uses, "Common commercial forms, Technological properties, Mechanical properties, "Treatment temperatures" and "Critical points. Sources are given for the data presented.

AMERICAN SOCIETY FOR METALS

Atom movements, a seminar on atom movements held during the thirty second National Metal Congress and Exposition, Chicago, October 21 to 27, 1950, sponsored by the American Society for Metals. Cleveland The Society, 1951 240 p illus 23 cm $5 00 6838

Contents Formal basis of diffusion theory by L. S. Darken. Chemical techniques and analysis of diffusion data, by C. Wells. Tracer and other techniques in diffusion measurements, by R. E. Hoffman. Mechanisms of diffusion, by H. B. Huntington. Diffusion in alloys and the Kirkendall effect, by J Bardeen and C. Herring. Volume diffusion—an empirical survey by C. E. Birchenall. Grain boundary and surface diffusion by D Turnbull. Diffusion and high temperature oxidation of metals, by C. Wagner Gas-metal diffusion and internal oxidation, by F N Rhines. Diffusion in sintering, by P Duwez. The migration of grain boundaries, by J E. Burke. Summary by R. F Mehl. Subject index.

Note The term "atom movements" as employed in the papers comprising this volume has reference to the phenomenon of diffusion, particularly diffusion in metals and alloys. Each paper has been prepared by an expert in the field and is based on review of the literature of the subject and on investigations conducted at research laboratories operated by the United States Steel Company the General Electric Company the Massachusetts Institute of Technology and similar organizations. Extensive bibliographies and an index are included. The book is addressed to professional metallurgists.

AMERICAN SOCIETY FOR METALS

Cold working of metals. A seminar on the cold working of metals held during the thirtieth National Metal Congress and Exposition, Philadelphia, October 23 to 29 1948 sponsored by the American Society for Metals Cleveland American Society for Metals 1949 364 p illus 23 cm $5 00 6839

Contents Introduction, by M. Gensamer Strain hardening—effects f alloying elements and microstructure, by C. S Smith. Macroresidual stresses in metals resulting from plastic deformation, by W M. Baldwin, jr Structure of slip bands and cold-worked metal, by R. D Heidenreich. The crystallographic mechanisms of translation, twinning and bending, by C. S. Barrett. Deformation textures, by R. M. Brick. Recrystallization textures, by C. G. Dunn. Dislocation theory by W Shockley Nucleation of deformation, by J H. Hollomon. The effect of strain histories on the work hardening of metals, by T E. Tietz and J. E. Dorn. Dynamics of slip bands, by C. Zener. Plastic after-effects, by J G. Leschen. Work hardening under combined stresses, by L. R. Jackson. Creep of metals, by J D Lubahn. Cold work and fatigue, by A. M. Freudenthal. The effect of plastic deformation and solid reactions, by A. M. Freudenthal. The effect of plastic deformation on solid reactions, by B. L. Averbach and M. Cohen. The fracture stress of metals as affected by plastic deformation, the stress system, and size, by D. J. McAdam, jr

Note. In spite of the practical implication in the title of this book, most of the papers contained in it are devoted to fundamental theories and research. Some of the information presented has been derived from recent investigations and is here published for the first time. The papers are addressed to professional metallurgists, particularly those who are concerned ith research or ith the fundamental aspects of metal-forming processes. They are accompanied by references to related literature.

AMERICAN SOCIETY FOR METALS

Controlled atmospheres. This book contains the papers and discussions constituting the symposium on controlled atmospheres presented before the twenty third annual convention of the American Society for Metals held in Philadelphia, Penna. October 20 to 24 1941 Cleveland The American Society for Metals, 1942 232 p illus. 23 cm $4 00. 6840

Content Fundamental features of controlled atmospheres particularly for the heat treatment of steel, by H. W Gillett and B. W Gonser Chemical equilibrium as a guide in the control of furnace atmospheres by J B Austin and M. J Day Prevention of oxidation type of reaction, ferrous metals, by A. G. Hotchkiss and H. M. Webber. Prevention of oxidation type of reaction in the heat treatment f copper and its alloys, by E. G. de Coriolis and W Lehrer Heat treatment of the chromium-carbon stainless steels, by W E. Mahin and W C. Troy Methods for determining the degree of carburization or decarburization and evaluating controlled atmospheres, by N K. Koebel. Surface effects accompanying the heating of carbon tool steel in oxidizing atmospheres, by R. D Stout and T Abe. Cost of controlled atmospheres—equipment, instruments and operating, by Edward E. Slowter Atmospheric control in the heat treatment of aluminum products, by P T Stroup. Atmosphere control in the heat treatment of magnesium products, by C E. Nelson.

Note. Although each of these papers is complete in itself, taken as whole they constitute practical and comprehensive guide to the use of controlled atmospheres in the heat treatment of metals. Included with each paper is an abstract and discussion of its contents. In some cases there is brief bibliography There is no index.

AMERICAN SOCIETY FOR METALS

Fatigue. A series of educational lectures on fatigue presented to members of the ASM during the thirty fifth National Metal Con

gress and Exposition Cleveland October 19 to 23 1953 Cleveland The American Society for *Metals*, 1954 121 p. illus. 24 cm. $3.00. 6841

Contents: Basic concepts of fatigue damage in metals, by T. J. Dolan. Fatigue failure under resonant vibration conditions, by B. J. Lazan. Fatigue characteristics of large sections, by O. J. Horger.

Note: Although originally addressed to metallurgists the three papers in this book contain information which is also of much interest to machine designers. The first paper is a general outline of what is known about fatigue failures, the terminology, the underlying metallurgy and the characteristic phenomena. The other two papers deal with the problems and conditions which though specialized are of much current interest, especially in relation to the design of high-speed machines. Lists of related references to which the text is keyed accompany each paper. The authors are all specialists who have made contributions to the fundamental knowledge of the fatigue of metals.

AMERICAN SOCIETY FOR METALS

Grain control in industrial metallurgy A series of four educational lectures on grain control in industrial metallurgy presented to members of the A.S.M. during the thirtieth National Metal Congress and Exposition Philadelphia, October 23 to 29 1948. Cleveland American Society for Metals, 1949 179 p. illus. 23 cm. $5.00. 6842

Contents. The fundamentals of recrystallization and grain growth, by J. E. Burke. Recrystallization and grain control in ferrous metals, by R. L. Rickett. Recrystallization and grain size control in copper and copper alloys, by H. Burghoff. Grain control in wrought aluminum and magnesium products, by J. T. Robbins, Jr. Glossary of terms used. Index.

Note. In this volume four experts associated with fundamental research in metallurgy discuss a subject of the highest importance in metallurgical design and metal-working. The papers are addressed to practical metallurgists and are essentially elementary in technical terminology of the current knowledge of the subject. They are supplemented by graphs, tabulated data, illustrations, and bibliographies.

AMERICAN SOCIETY FOR METALS

High temperature properties of metal a series of five educational lectures presented to members of the A.S.M. during the thirty second National Metal Congress and Exposition, Chicago October 23 to 27 1950 Cleveland The American Society for Metals 1951 176 p. illus. 24 cm. $4.00 6843

Contents: Creep of metals, by E. R. Parker. Stress rupture testing, by N. J. Grant. High temperature fatigue testing, by H. J. Gover. Methods of high temperature oxidation testing and evaluation of observations, by C. Wagner. Some experiences in service (power, oil and chemical plants) by J. J. B. Rutherford. Index.

Note. The papers in this book were addressed originally to professional metallurgists, but they are of interest also to engineers working on machine design, especially the design of gas turbine parts and other mechanisms that must operate at extremely high temperatures. In general, each paper is a summary of recent research, but all of the authors have also scanned the literature and incorporated the pertinent material. Each paper is accompanied by list of references.

AMERICAN SOCIETY FOR METALS

Impurities and imperfections. A seminar on impurities and imperfections held during the thirty-sixth National Metal Congress and Exposition, Chicago October 30 to November 5 1955 sponsored by the American Society for Metals. Cleveland American Society for Metals, 1955 231 p. illus. 24 cm. $6.00 6844

Contents: Lattice vacancies and interstitials in metals, by H. Brooks and G. McKay. Dislocations, by J. C. Fisher. Grain boundaries, substructures and impurities, by R. W. Cahn. *Effects of impurities and imperfections on crystal growth*, by B. Chalmers. Impurities and imperfections in metallic diffusion, by D. Lazarus. Role of structural impurities in phase transformations, by D. Turnbull. *Effects of impurities and imperfections on mechanical properties*, by E. R. Parker and J. Washburn. Influence of impurities and imperfections on the electrical properties of metals, by J. S. Koehler. Structure dependent chemistry of metal surfaces, by W. D. Robertson. Effects of impurities and imperfections in semiconductors, by J. A. Burton. Vacancies and alkali halide crystals, by R. Maurer. Radiation disarrangement of crystals, by F. Seitz and J. S. Koehler. Subject index.

Note. Scientists working in such branches of physics as crystallography and semi-conductor phenomena have made important contributions to the fundamental knowledge of metals in recent years. In this book, these advances are explained and interpreted for the benefit of specialists in metallurgy. The authors include both physicists and metallurgists. Literature references and some illustrations are included.

AMERICAN SOCIETY FOR METALS

Metal interfaces. A seminar on metal interfaces held during the thirty third National Metal Congress and Exposition Detroit, October 13 to 19 1951 sponsored by the American Society for Metals. Cleveland American Society for Metals, 1952 335 p. illus. 24 cm $6.00. 6845

Contents The electronic theory of metallic surfaces, by C. Herring. Theory of internal boundaries, by H. Brooks. Grain shapes and other metallurgical applications of topology, by C. S. Smith. Measurement of solid, gas and solid, liquid interfacial energies, by H. Udin. Measurement of solid, solid interfacial energies, by J. R. Bean. Energies and structure of grain boundaries, by K. T. Aust and B. Chalmers. Boundary migration during grain growth, by R. L. Fullman. Interface migration in recrystallization, by P. A. Beck. Stress relaxation across interfaces, by A. S. Nowick. Phase transformations at interfaces, by A. H. Geisler. Mechanical effects of interfaces, by B. Chalmers. Metal surface phenomena, by H. H. Uhlig.

Note This volume contains original papers on a topic which is of interest not only in metallurgy but also in physics and chemistry. They deal with the pertinent fundamental theory, techniques of quantitative measurements, the effects of interface phenomena on stress relaxation, mechanical properties, etc. Although addressed primarily to metallurgists, the presentation in most of the papers is on a level that assumes familiarity on the part of the reader with the fundamentals of current atomic physics. Extensive lists of references are included. Most of the authors are associated with teaching and research in United States of America universities and industrial research laboratories.

AMERICAN SOCIETY FOR METALS

Metals handbook, 1948 edition prepared under the direction of the Metals Handbook Committee, edited by Taylor Lyman. Cleveland The American Society for Metals 1948. 1444 p. illus. 28 cm. $15.00. 6846

Contents (abridged). Steel compositions and physical data. General articles. Constitution of alloys. *Advertising section. Index.*

—— 1954 supplement. Prepared under the direction of the Metals Handbook Committee. Taylor Lyman editor Carl H. Gerlach, associate editor Cleveland The American Society for Metals, 1954 184 p. illus. 28 cm. $5.00. 6847

Contents (abridged). Metals and applications. Design and application. Processing and testing. Index.

—— 1955 supplement. Prepared under the direction of the Metals Handbook Committee. Taylor Lyman, *editor*, Carl H. Gerlach, *associate editor*, John Parina, *associate editor*, Helen Lawton, *assistant editor* Cleveland The American Society for Metals, *1955* 208 p illus. 28 cm $6 00 6848

Contents (abridged) Metals and applications. Design and application. Testing and inspection. Index.

Note. A standard, comprehensive reference book for metallurgists, engineers and others who make use of technical information on metals. Both ferrous and non-ferrous metals and alloys are covered. Part of the information is conveyed in articles, part in tables, graphs, and data sheets. In addition to data on specific metals and alloys, there are articles and reports on heat treating, metal cleaning, fabrication methods, testing, etc.

AMERICAN SOCIETY FOR METALS

Modern research *techniques in physical* metallurgy A seminar on modern research techniques in physical metallurgy held during the 34th National Metal Congress and Exposition, Philadelphia, October 18–24, 1952, sponsored by the *American* Society for Metals Cleveland American Society for Metals, 1953 335 p illus 23 cm. $6 00 6849

Contents Optical microscopy by G. L. Kehl. Field emission microscopy by E. W Müller *Electron diffraction* and microscopy of metals, by R. D Heidenreich. X-ray diffraction techniques, by C. S. Barrett. The diffuse scattering of x-rays, by B E. Warren and B L. Averbach. Crystal orientation and pole figure determination, by A. H. Geisler Techniques and applications of neutron diffraction by C G. Shull. Crystal growth and crystal boundary techniques, by B. Chalmers. Deformation of single crystals, by E. R. Parker High speed strain measurements, by G. B. Ernst. The metallurgical use of anelasticity by C. Wert. Ferromagnetic domains, by H. J Williams. Radioactive tracers in physical metallurgy research, by M. B Bever Radiation damage of metallurgical research techniques, by S. Segall. Subject index.

Not A useful survey of present-day research techniques applicable to the field of metallurgy Instruments and procedures are specifically described and some of the authors have pointed out unrealized potentialities in metallurgy Rather extensive lists of literature references are included, and some of the papers are accompanied by discussion.

AMERICAN SOCIETY FOR METALS

Properties of metals in materials engineering *A series of eight educational lectures on* properties of metals in materials engineering presented to members of the A.S M during the thirtieth National Metal Congress and Exposition, *Philadelphia,* October 23 to 29, 1948 Cleveland American Society for Metals 1949 177 p illus 23 cm. $4 00 6850

Contents Introduction, by R. L. Templin. Fundamental concepts, by M Gensamer Behavior of metals under direct or nonreversed loading, by J R Low Jr Applications of fatigue data to machine design, by R. E Peterson. Determination of the state of stress, by W M. Murray *Analysis of stress in aircraft engines*, by W T Bean, Jr Testing to specific deflections (buckling) by E. C. Hartmann. Design for energy absorption, by W P Roop. Index.

Note. The lectures collected in this volume were addressed to practical metallurgists. Each of the lectures presents compact review of the current knowledge of the specific topic mentioned in its title. The text of each is supplemented by graphical and tabular presentations of engineering data and by references to the pertinent literature.

AMERICAN SOCIETY FOR METALS

Relation of properties to microstructure. A seminar on relation of properties to microstructure held during the thirty fifth National Metal Congress and Exposition, Cleveland, October 17 to 23, 1953, sponsored by the American Society for Metals. Cleveland American Society for Metals, 1954 270 p. illus. 24 cm. $6 00 6851

Contents Structure-sensitive properties, by J H. Hollomon. The effect of grain boundaries on mechanical properties, by M. Gensamer Principles of solution hardening, by E. R. Parker and T H. Hazlett. Effect of dispersions on mechanical properties, by J. E. Dorn and C. D Starr Theories of *dispersion hardening*, by E. W Hart. Structure and alloy design, by A. D Schwope. Interactions of dislocations and solute atoms, by A. H. Cottrell. The relation of microstructure to brittle fracture, by J R. Low Jr. The strength of glass-reinforced structures, by G. Slayter Effect of microstructure on corrosion, by H. H. Uhlig. Relation of magnetic *properties to microstructure*, by L. J Dijkstra. Structure and coercivity by J F Libsch. Subject index.

Note Recently gained information on dislocations in crystals and related phenomena is presented in this volume and is related to the design of alloys of metals and to other matters of concern to metallurgists. The first paper summarizes some of the results of research conducted on perfect crystals. *Lowe's paper* "The relation of microstructure to brittle fracture, is based on research in the behavior of metals at low temperatures. Inclusion of the paper on glass reinforced plastics is noteworthy since the participants in the seminar were metallurgists rather than technicians from the plastics industries. *Illustrations and lists of literature references* are included.

AMERICAN SOCIETY FOR METALS

Residual *stress measurements. A series of* four educational lectures on residual stress measurements presented to members of the ASM during the thirty third National Metal *Congress and Exposition, Detroit, October 15* to 19, 1951 Cleveland American Society for *Metals 1952 210 p. illus. 24 cm. $4 50 6852*

Contents The nature, origin, and effects of residual stresses, by R. G. Treuting. The measurement of residual stresses by J J. Lynch Residual stress states produced in metals by various processes, by H. B. Wishart. Relief and redistribution of residual stresses in metals, by D D. Richards. Index.

Note The four lectures assembled in this volume are not limited to residual stress measurements as the book title indicates—but include also discussions of such aspects as the nature and origin of residual stresses, their beneficial use in such well-known processes as hardening by heat treatment and by shot peening and their release in instances where they are undesirable. The book as a whole is essentially a first course in the subject for men who are thoroughly familiar with metallurgical terminology and basic concepts. Although it is primarily of interest to metallurgists who are concerned with the working of metals, it holds some interest for technical men in other fields such as structural engineering and machine design.

AMERICAN SOCIETY FOR METALS

Theory of alloy phases. A seminar on theory of alloy phases held during the thirty seventh National Metal Congress and Exposition, Philadelphia, October 15 to 21, 1955, sponsored by the American Society *for* Metals Cleveland *American Society for Metals, 1956 378 p.* illus. 24 cm. $6 00. 6853

Contents Band theory of bonding in metals, by J. C. Slater The X-ray spectroscopy of solids, by C. H. Shaw Intermediate phases and electronic structure, by T B. Massalski Crystal structure and atomic size, by F Laves. Bonding in the shell metals, by H. Brooks. The electronic structure of metals and alloys, by L. Pauling. Intermediate phases in alloys of the transition elements, by P Duwez. Ferromagnetism and crystal structure of iron alloys, by U Roessler and others Atomic and magnetic ordering in transition metal structures, by J S. Kasper Atomic magnetic moments of transition elements in solid solution alloys, by C. G. Shull. Discussion, by R. J. Weiss and K. J. Tauer

General

The structure of [illegible], by B. L. Averbach. [illegible], by R. A. Oriani. Alloy phase diagrams, by G. V. Raynor. Index.

Note: The title notwithstanding, [illegible] comprehensive theory of alloys is not presented in this volume. Instead the 13 authors have surveyed and discussed various aspects of alloys in the light of the underlying physical knowledge. Thus Slater's paper begins "The metallurgist expects the physicist to be able to apply … mechanics to the problem of the cohesive energy of metals," then goes on to present in condensed form from the metallurgist's viewpoint the present state of the solving of problems in energy bands. The papers are all addressed to metallurgists. Most are accompanied by extensive lists of [illegible] literature.

AMERICAN SOCIETY FOR METALS

Thermodynamics in physical metallurgy; a seminar on thermodynamics in physical metallurgy held during the thirty first National Metal Congress and Exposition, Cleveland, October 15 to 21 1949 sponsored by the American Society for Metals. Cleveland The American Society for Metals, 1950. 317 p. illus. 23 cm. $5.00 6854

Contents: The principles of thermodynamics, by P. W. Bridgman. The role of statistical mechanics in physical metallurgy, by C. Zener. Application of thermodynamics to heterogeneous equilibria, by L. S. Darken. Application of electromotive force measurements to phase equilibria, by F. J. Dunkerley. On equations of state and the phase diagrams of simple binary alloys, by A. W. Lawson. The thermodynamics of liquid metallic solutions, by J. Chipman. Physical factors affecting order in metallic systems, by C. E. Birchenall. Heterogeneous nucleation, by J. H. Hollomon. Phenomena accompanying precipitation from solid solutions of C and N in alpha-iron, by C. Wert. Eutectoid decompositions, by J. C. Fisher. Thermodynamics of the martensitic transformation, by M. Cohen and others. A nucleation problem in ferromagnetism, by L. J. Dijkstra. Principles of solidification, by D. Turnbull. Contribution of thermodynamics to metallurgical research and operations, by J. B. Austin. Subject index.

Note: A collection of papers on advanced topics in metallurgy. Although the papers are addressed primarily to professional metallurgists, they deal less with the everyday work of such folk than with the advancing fundamental knowledge from which industrial practices are eventually derived. Most of the papers are accompanied by excellent lists of references to related literature, and in a few cases a transcript of discussion is included. The volume is of interest not only to metallurgists but to physical chemists and physicists as well.

AMERICAN SOCIETY FOR METALS

Utilization of heat resistant alloys. A symposium presented at the University of Michigan, March 11 and 12 1954 in honor of Albert Easton White on his 70th birthday for his pioneering and outstanding contributions to the research and development of alloys for high temperature service. Cleveland American Society for Metals, 1954 288 p. illus. 24 cm. $6.00 6855

Contents: Creep and fracture at elevated temperatures, by N. J. Grant. Factors involved in using high temperature test data for selecting materials and proportioning parts, by C. L. Clark. Alloys and their properties for elevated temperature service, by H. C. Cross. Some calculations for design for creep conditions, by F. F. Cheney. Engineering practice for selecting materials and proportioning components operating at high temperatures in the steam power industry, by H. A. Wagner and J. A. Fleckl. Criteria in the selection of materials for aircraft-gas-turbines, by H. Harshall and L. Luna. Production and fabrication of heat resistant alloys from the producers' viewpoint, by C. T. Evans, Jr. Fabrication of high temperature alloy steel piping suitable for central station and oil refinery service, by R. W. Emerson. Jets—from blueprint to engines, by W. E. Jones and A. J. Eisenberg. Metallurgical variables influencing properties of heat resistant alloys, by J. W. Freeman and others. Development of and acceptance testing procedures against specifications, by A. W. F. Green. A chronological list of the publications of Albert Easton White, compiled by R. A. Ubbeloh[?].

Note: A collection of original papers written for the occasion mentioned in the book title. The papers range from short summaries of problems or procedure to rather full accounts of relatively broad areas, for instance, methods of evaluating creep and creep rupture data. Fairly extensive literature lists are included in many of the papers. The bibliography of White's own writings is apparently complete from 1911 through 1952.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on deformation of metals as related to forming and service. Presented at the fifty first annual meeting American Society for Testing Materials, Detroit Mich., June 22 1948 Philadelphia American Society for Testing Materials 1949 117 p. illus. 23 cm. (Special technical publication no. 87) $2.00. 6856

Contents: Introduction, by L. L. Wyman. Tests of ductility in ship structure, by W. P. Roop. Notch-sensitivity of ship plate—correlation of laboratory-scale tests with large-scale plate tests, by N. A. Kahn and E. A. Imbembo. Measurement of ductility in sheet metals, by J. R. Low Jr., and T. A. Prater. Hydraulic bulge testing of sheet metals, by W. T. Lankford. Notched bar tension tests on annealed carbon steel specimens of various sizes and contours, by M. L. Fried and G. Sachs.

Note: A collection of original papers by outstanding research metallurgists. It reflects the new fundamental knowledge of plastic deformation and flow of metals and contains descriptions of new tests which are useful in relating this knowledge to metallurgical and structural design. There is some emphasis on metallurgical problems in ship design, but the usefulness of the material is not limited to this field. The papers are accompanied by abstracts of the discussions at the meeting. Illustrations, and selected lists of references.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on metallography in color 1948. Presented at the fifty first annual meeting American Society for Testing Materials, Detroit, Mich., June 21 1948. Philadelphia American Society for Testing Materials, 1949 64 p. illus. (part col'd) 23 cm. (Special technical publication no. 86) $4.50. 6857

Contents: Introduction, by L. V. Foster. Metallography in color, by R. P. Loveland. Microscope optics for color metallography, by J. R. Benford. Quality and quantity of illumination in color metallography, by R. P. Loveland. Insert plates I to X, four-color process illustrations. Color metallography simplified, by M. Clegg, Jr. Some applications of color metallography, by W. D. Forgeng. The application of color photography to the study of nonmetallic inclusions, by A. M. Hall and E. E. Fletcher.

Note: In these papers are described various techniques which have been developed for making photomicrographs in color of metal specimens. The procedures are based on the research and experience of the authors, all of whom are experts in the fields of metallurgy and metallography. The illustrations include reproductions in color of 37 photomicrographs. Lists of references and discussions of the papers are included.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on rapid methods for the identification of metals. Presented at the fifty second annual meeting American Society for Testing Materials, Atlantic City N. J., June 28 1949 Philadelphia. American Society for

Testing Materials, 1950 77 p illus 23 cm. (Special technical publication no 98) $1 75 6858

Contents: Development, present state, and outlook of spot test analysis, by F Feigl. Electro spot testing and electrography, by H. W Hermance and H. V Wadlow Instruments for rapid metal identification, by R. R. Webster Separating alloys by relative spot tests, by H. Kirtchik. Rapid methods for the identification of copper-base alloys, by R. P Nevers. Rapid identification of metal finishes, by A. Lewis and D R. Evans. Examination of plated and protective coatings by electrographic analysis, by N Galitzine and S. E. Q Ashley A field test kit and procedure for use in the rapid identification of some nickel alloys and stainless steels, by H. B. Lee. Rapid tests for identifying alloy steels, by E. C. Kirkham. General discussion.

Note. A collection of short but valuable original papers on recent developments in rapid methods for the identification or analysis of metals. The various procedures are described explicitly for the information of professional metallurgists and analytical chemists. The papers are supplemented by illustrations and literature references.

BARRETT, CHARLES S

Structure of metals crystallographic methods, principles, and data. Second edition New York McGraw Hill Book Company, Inc., 1952 661 p. illus. 24 cm. (Metallurgy and metallurgical engineering series, Robert F Mehl consulting editor) $11 00 6859

Contents The fundamentals of crystallography The stereographic projection. X-rays. Diffraction of X-rays by crystals. Laue and fixed-crystal methods. Rotating-crystal methods and the reciprocal lattice. The powder method. The determination of crystal structure. Pole figures and orientation determinations. Determination of constitution diagrams with X-rays. Structure of metals and alloys. Superlattices. The electron theory of metals and alloys. Stress measurement by X-rays. The plastic deformation of metals. Dislocation theory The structure of cold-worked metal. Preferred orientations resulting from cold work. Preferred orientations after annealing. Orientations in castings and in deposited films. Anisotropy Age hardening and transformations. Diffraction of electrons, atoms, and neutrons. Appendices. Index.

Note. A substantial work which is used both as a text in crystallography for advanced students of metallurgy and as a reference tool by metallographers. It presents from the standpoint of metallurgy and metallography the fundamental knowledge and the techniques of crystallography and shows applications not only to the study of metals and alloys but also to their reactions to cold working and other treatments. It is well documented with footnote citations to pertinent literature. The appendices contain a variety of basic information on crystal structure, the intensity of X-ray reflections, etc. The first edition was published in 1943. The work was extensively revised for this edition, particularly in the discussion of such matters as creep, dislocation, ferromagnetism, and insulators and semiconductors. Literature references and tables have also been revised.

BRAY JOHN LEIGHTON

Non ferrous production metallurgy Second edition New York John Wiley & Sons Inc., 1947 587 p illus. 24 cm. $7 50 6860

Contents Introduction. Metals and ores. Smelting, slags, and fluxes Aluminum. Antimony Arsenic. Beryllium. Bismuth. Cadmium. Chromium. Cobalt. Copper Gold. Lead. Magnesium. Manganese. Mercury Molybdenum. Nickel. Platinum. Selenium and tellurium. Silver Tin. Tungsten. Vanadium. Zinc. Secondary metals. Marketing of bullion, ores, and concentrates. The use of physical chemistry in metallurgical processes. Index.

Note Engineering students are here offered the basic principles of the industrial metallurgy of twenty-four non-ferrous metals. Some emphasis is placed on the economic aspects, hence, in addition to adequate descriptions of smelting and refining methods, data are given on the history production, consumption, ore resources, and marketing of the metals discussed. In this edition the economic information has been broadened and brought up to date. New material on aluminum, magnesium, nickel and tin—resulting from developments during World War II—and the chapter on application of physical chemistry to metallurgical processes, have been added. The arrangement whereby all of the information about a metal is contained in one chapter makes the book also useful for reference.

BRICK, ROBERT MAYNARD, AND ARTHUR PHILLIPS

Structure and properties of alloys the application of phase diagrams to the interpretation and control of industrial alloy structures. Second edition. New York McGraw Hill Book Company Inc., 1949 485 p illus. 23 cm. (Metallurgy and metallurgical engineering series, Robert F Mehl, consulting editor) $8.00 6861

Contents: Requisite tools of the metallurgist. Commercially pure metals. Solid solutions copper-base alloys. Cold-working and annealing. Cast eutectic alloys. lead-base systems. Age-hardening: cast-and wrought-aluminum alloys. Alloys of magnesium. Phase transformations two-phase copper alloys. Iron-carbon alloys. normalized and annealed steels. Theory of heat treatment of steels. Heat-treated engineering steels plain carbon and alloy types. Carbon and alloy tool steels. Special corrosion- and heat-resistant alloys. Cast irons. Monotectics sintered metal powders. Generalizations. Index.

Note: A concise presentation of the knowledge from the field of physical metallurgy which is important to the understanding of alloys. The author's theme is that alloys can be studied and understood only against background of knowledge of the significance of phase diagrams, microstructures, the characteristic properties of the structures, and the effects of metal treating processes upon all three. The first edition of the book was comparatively brief It has been greatly expanded in order to suit it for use in college courses and also to increase its value as a reference book for men concerned with the specifications and uses of alloys in industry The illustrative matter now includes large number of excellently reproduced microphotographs.

BRIDGMAN, PERCY WILLIAMS

Studies in large plastic flow and fracture, with special emphasis on the effects of hydrostatic pressure. New York McGraw Hill Book Company, Inc., 1952 362 p. illus. 24 cm (Metallurgy and metallurgical engineering series Robert F Mehl consulting editor) $10 00 6862

Contents (abridged) Part I. Tests under hydrostatic pressure The tension of steel under pressure. Two-dimensional tension under pressure. Tension tests under pressure on materials other than steel. Simple compression under hydrostatic pressure. Punching under pressure. The collapse of thick, hollow cylinders of steel under external pressure. The effect of external pressure on cavities in brittle materials. Wire drawing and extrusion under pressure. Part II, Other tests involving large deformations. Simple compression. Two-dimensional compression. Torsion combined with simple compression. Shearing combined with approximately hydrostatic pressure. Part III, Plastic flow and fracture after prestraining. Simple tension after prestraining in tension. Simple tension after prestraining in simple compression. Simple compression after prestraining in two-dimensional compression. Torsion after prestraining in tension under pressure. Index.

Note. In this new book Professor Bridgman, whose experiments in the domain of high pressure are internationally famous, has synthesized and interpreted the results of an extensive series of experiments made with the explicit purpose of understanding better the nature of both the phenomena of fracture under conditions of high stress and the phenomena of the large plastic flow which often precedes such fracture. Although the book is in the nature of an interim report rather than statement of conclusions, it contains many interesting observations some of which can undoubtedly be turned to practical account in industry It is potentially of interest to several groups including professional physicists working in crystallography and the physics of metals and research metallurgists.

BURTON, MALCOLM S

Applied metallurgy for engineers. New York McGraw Hill Book Company Inc., 1956 407 p. illus. 23 cm $7 50 6863

Contents. The nature of metals. Methods of metallurgical examination. Mechanical testing. Phases, phase changes, and phase

Metallurgy

General

diagrams. Production of metals. Principles of heat treatment. Heat-treating techniques. Surface-hardening methods. Foundry metallurgy. Casting processes. Molding materials. Foundry technology. Theory of metalworking. Hot-working processes. Cold-working processes. Metallurgical bonding of metals. Welding processes. Brazing and soldering. Welding metallurgy. Gas and arc cutting. Powder metallurgy. Index.

Note: A college textbook designed as a broad introductory survey for students preparing for careers other than metallurgy. As these [illegible] industries, most of the chapters are devoted to processes of metalworking. These processes are described in simple terms, and the extensive exposition is supplemented by numerous illustrations. In the preliminary chapters an up-to-date though simplified [illegible] of basic atomic physics and other fundamental aspects of metallurgy is given. The organization and style of the book make it potentially useful as a text for self-instruction as well as for use in organized courses.

Clark Donald Sherman and Wilbur R. Varney

Physical metallurgy for engineers. New York D Van Nostrand Company Inc., 1952 567 p. illus. 24 cm $6 75 6864

Contents: Metallurgy in engineering. Metals and alloy systems. Plain carbon steels. Iron-carbon alloys. Heat-treatment of steel. Low-alloy steels. Case-hardening and surface treatment. Function of alloying elements in steel. Tool steels. Principles of corrosion. Corrosion- and scale-resistant steels. High strength heat-resistant alloys. Cast irons. Precipitation hardening and recrystallization. Copper- and nickel-base alloys. Light metals and their alloys. Metallurgy of mechanical working. Metallurgy of casting. Metallurgy of soldering, brazing, and welding. Appendixes: AISI-SAE low-carbon steel compositions—1951. AISI-SAE free-cutting steel compositions—1951. AISI-SAE alloy steel compositions—1951. Typical [illegible] for AISI-SAE alloy steels. Hardenability bands. Heat-treatments for AISI-SAE alloy steels. Typical end-quench and tempered end-quench curves. Approximate hardness conversion table. Index.

Note: A textbook on physical metallurgy as it applies to the selection, treatment, and use of metals and alloys in engineering practice with emphasis throughout upon principles. The authors are professors of mechanical engineering at the California Institute of Technology where the subject-matter of the text has been presented over a period of many years in a course on physical metallurgy for engineering students. A list of references and a set of questions conclude each chapter.

Clark, Frances Hurd

Metals at high temperatures. New York Reinhold Publishing Corporation 1950. 372 p. illus. 23 cm. $8.50 6865

Contents: Introduction and theoretical aspects. Test methods and equipment for elevated temperatures. Plain-carbon and low-alloy steels. Chrome irons, moderately alloyed austenitic steels. Highly alloyed austenitic steels. Cobalt-base alloys. Nickel-base alloys. Noncommercial alloys. Manufacturing processes. Lower melting alloys. Testing. Subject index.

Note: In the first chapter of this book the author presents a critical digest of the present knowledge of the plastic flow of the metals. The second chapter is devoted to test methods, but the remaining chapters are largely compilations of data gathered from the published literature. As might be expected, the greater part of the cited literature has been published in the past decade. About half of the text is made up of tabular and graphical presentations of data. The text is concise discussion. Statements in the text and most of the tables and graphs, also, are related by means of key numbers to citations of the source articles.

Darken Lawrence S and Robert W Gurry

Physical chemistry of metals. With a collection of problems by Michael B Bever New York McGraw Hill Book Company Inc., 1953 535 p. illus. 24 cm. (Metallurgy and metallurgical engineering series Robert F Mehl, consulting editor) $9 50 6866

Contents: Introduction. Gases. Solids. Solid solutions and intermetallic compounds. Liquids. The first law of thermodynamics. The second law of thermodynamics, entropy and free energy. The third law of thermodynamics. Fugacity, activity and the equilibrium constant. Solutions. Phase relations. Heterogeneous equilibria. Free-energy-composition diagrams. Temperature-pressure diagrams. Nitrogen in iron and steel. The iron-carbon system. Electrochemistry: reversible cells. Formal basis of diffusion theory. Kinetics of metallurgical processes. Problems. Index.

Note. A senior and beginning graduate level text in which the development of the thermodynamics of metals and metallurgical processes is based on atomic structure rather than on molecular structure. Metallurgical physical chemistry is presented as a combination of some atomistics with much chemical thermodynamics, a "new" science founded on metallurgical experience plus physical and physicochemical experience and theory. Emphasis is on thermodynamics; in fact, a large part of the book is devoted to classical treatment of the subject. However, by giving little space to nonideal gases or to aqueous solutions and solutions of organic substances, space has been gained to include an extensive treatment of pressure-temperature-composition relations in heterogeneous systems where several phases may be of variable composition. Rate diffusion and related phenomena also are covered as they have any application to metallurgy. The authors (except Professor Bever) are with the Research Laboratory of the United States Steel Corporation.

Doan Gilbert E.

The principles of physical metallurgy Third edition. New York McGraw Hill Book Company Inc., 1953 331 p 24 cm. $6 50 6867

Contents: Part I. The physics of metals: The states of aggregation. The physical properties of metals. The mechanical properties of metals—their change with temperature. Part II. Metallography: The crystal structure of binary alloys—the phase rule. The structure of binary alloys—quenching. Nonequilibrium in binary alloys. The properties of binary alloys. The structure of ternary alloys at equilibrium. The properties of alloys. Part III. Metal technology: The shaping of metals. The heat-treatment and surface treatment of metals. The testing of metals. Commercial alloys, processes and problems. Index.

Note: A standard work used primarily as a textbook in courses offered to engineering students. It presents from the standpoint of physics and physical chemistry the fundamental knowledge of the physics of metals and metallography, then relates it to the processes of metal fabricating, heat treatment, etc. Approximately two-thirds of the space is devoted to the basic knowledge, and one-third to the applications. The second edition was published in 1941. The scope and level of treatment was unchanged in this third edition, but important revisions have been made in the third chapter to bring it into conformity with present-day electronic and atomic theory. The author is Manager of Metallurgical Research for the Koppers Company.

Dowdell Ralph Lewis and others

General metallography by Ralph L. Dowdell Henry S Jerabek, Arthur C. Forsyth and Carrie H. Green. New York John Wiley & Sons, Inc., 1943 292 p. illus. 23 cm. $5 75 6868

Contents: Introduction. Crystallization and crystal structure. Alloy systems and constitution diagrams. Classification of constitution diagrams pyrometry. Mechanical properties. Metallographic control. Cold working, plastic deformation, strain hardening. Iron and steel. Nonferrous metals and alloys. Corrosion. Appendix. Index.

Note: For beginners in the field of metallography. This book covers, in detailed but compact style, the principles governing the behavior of ferrous and nonferrous metals and alloys, their properties, structures, and conduct when processed and subjected to heat. It gives in clear concrete terms the characteristics of important commercial alloys. Tables of physical and mechanical properties of metals and alloys have been presented for instant reference. Many of the tables are taken from the American Society for Metals, *Metals handbook*, Cleveland, 1939. Diagrams and illustrations, among them photomicrographs of typical metallic structures, are included.

Elberfeld John

Metallurgical materials and processes. New York Prentice Hall, Inc., 1948 188 p. illus. 24 cm. $3 75 6869

Contents The refining of metals. Mechanical properties of materials. The fabrication of metals. Grain structure. The equilibrium diagram. The iron-carbon constitution diagram. The heat-treatment of steel. Ferrous metals and alloys. Non-ferrous metals and alloys. Welding metallurgy The cleaning and coating of metals. Powder metallurgy Furnaces and their controls. Metal testing. Metallographic inspection. Appendix. Reference reading list. Index.

Note. An elementary presentation suitable for home study as well as vocational school use. The material is largely descriptive but the fifth and sixth chapters are devoted to theory The book will not interest the reader who is planning to become a professional metallurgist, but it will be helpful to practical workers in industry who want a reliable but easy-to-understand account.

EVERHART, JOHN LAURENCE, AND OTHERS

Mechanical properties of metals and alloys by John L. Everhart, W Earl Lindlief, James Kanegis, Pearl G Weissler, and Frieda Siegel. Washington, D C Government Printing Office, 1943 481 p illus. 27 cm (United States Bureau of Standards Circular C447) $3 50 6870

Contents Introduction. Selection of the data. Organization of the data. Definitions and discussion. Aluminum and aluminum alloys. Copper and copper alloys. Iron and steel. Lead and lead alloys. Magnesium and magnesium alloys. Nickel and nickel alloys. Tin and tin alloys. Zinc and zinc alloys. Miscellaneous metals and alloys. Appendix. References. Index.

Note A compilation of data presented in tabular or graphic form compiled originally to answer questions pertaining to properties of metals and alloys received at the National Bureau of Standards. The present edition is based on the Bureau's Circular C101 the second edition of which was published in 1924 The present edition contains additional data on the properties of metals at high and low temperatures, on electrical and thermal conductivities, and on thermal expansion in connection with welding problems. Also, the tables have been rearranged to facilitate the location of data on specific alloys. The bibliography contains 774 numbered items. The text is keyed to it to indicate the sources of the data.

GILLETT, HORACE WADSWORTH

The behavior of engineering metals New York John Wiley & Sons, Inc. 1951 395 p illus 24 cm. $8 50 6871

Contents (abridged) General considerations. Tests and specifications. Simulated service. Notches and surface stress, external and internal. The statistical approach. Chemical and physical properties. Tonnage steels. Wrought steels of intermediate strength. Heat treated steels. Cold-worked metals. Ferrous castings. Steel, cast and malleable irons. The graphitic family Important nonferrous cast alloys and their idiosyncrasies. Alternate casting methods. Light wrought alloys titanium and zirconium. Some less common and some precious heavy metals Metal behaviors as affected by hydrogen. Machinability Inhomogeneous, clad, and coated metals. Metal films and surfaces. Powders and objects made by powder metallurgy Bearing metals. Surfaces in severe service. Severe service at high and low temperatures. Alternate materials, cost, conservation, codes. Appendix Sources of more detailed information. Author index. Subject index.

Note Here the special knowledge of the physical metallurgist is interpreted for the users of metals who do not have special training in metallurgy The book can well be used by such persons as complement to the standard compilations of engineering data about metals. It is in no sense a reference book of data, but it does contain lucid discussions of such topics as the properties of structural steel and what affects these properties, methods of testing the properties of metals, magnetic properties of metals, and the effects of cold working. Many special points and "tricks of the trade" are included that would be hard to find assembled elsewhere. Good selected lists of references accompany the chapters.

GROVER, H J, AND OTHERS

Fatigue of metals and structures, by H. J Grover, S A. Gordon and L R Jackson Battelle Memorial Institute. Prepared for Bureau of Aeronautics, Department of the Navy Washington D C. Government Printing Office, 1954 394 p illus. 24 cm (Navaer 00–25–534) $1 75 6872

Contents. The nature of fatigue failures. Nomenclature of fatigue and the organization of data. "Scatter" and dependability of fatigue-test results. Fatigue damage. Fatigue under combined stresses. Stress concentrations. Surface effects. Effect of size and shape upon the fatigue strength of a part. Effect of high temperatures on fatigue strength. Miscellaneous effects. Fatigue characteristics of engineering materials. Methods of using fatigue data in design. Fatigue characteristics of structural and machine components. Fatigue characteristics of composite structures. Methods of detecting and combating fatigue. Appendixes. Typical service-fatigue failures. Statistical analysis of fatigue data. Tables. References.

Note. Because gusts, vibration, and other sources of repeated stress are unavoidable in aircraft, it is important to the aircraft industry to design structures and machine parts for optimum freedom from fatigue failures under repeated stressing. With the passage of time, much experience in designing to resist failure has accumulated, both with regard to the knowledge of the behavior of materials in fatigue and in regard to design use of data on material properties. As a result of the need to provide help to designers, the Navy Bureau of Aeronautics commissioned Battelle Memorial Institute to survey the present state of knowledge in this field and to prepare this book reporting the results. The book, directed particularly to the designer or engineer with limited practical experience in fatigue problems, provides an illustrated summary of present-day information and gives references to published literature for more complete information on the subject.

GUY, ALBERT G

Elements of physical metallurgy Reading, Mass Addison Wesley Publishing Co. Inc., 1951 293 p illus. 25 cm. $8.50 6873

Contents Introduction. A survey of metallurgy Atomic structure. Crystal structure. Equilibrium diagrams. Structure of alloys. Physical properties. Elasticity of metals. Plasticity of metals. Corrosion. Diffusion in metals. Recovery recrystallization and grain growth. Age hardening. Heat treatment of steel. Appendix. Literature of metallurgy Index.

Note. An introductory work for college students who have completed courses in basic physics, chemistry and calculus. The treatment includes considerable emphasis on phase diagrams and has other up-to-date features. A short bibliography is appended to each chapter and in addition there is a discussion of the principal guides to metallurgical literature and of methods of searching them for information on problems.

HAMPEL, CLIFFORD A, editor

Rare metals handbook. New York Reinhold Publishing Corporation 1954 657 p. illus. 24 cm. $12 00 6874

Contents The rare metals, by C. A. Hampel. The alkaline earth metals calcium, barium, and strontium, by C. L. Mantell. Beryllium, by B. R. F Kjellgren. Bismuth, by H. E. Howe. Boron, by H. S. Cooper Cadmium, by F O. McCutcheon and J R. Musgrave. Cobalt, by C. R. Whittemore. Gallium, by A. P Thompson. Germanium, by H. R. Harner Hafnium, by D. R. Martin and P J Pizzolato. Indium, by J. R. Mills and others. Lithium, by P E. Landolt. Manganese, by C. A. Hampel. Molybdenum, by L. F Yntema and A. L. Percy The platinum metals, by F E. Beamish and others. Rare earth metals, by H. E. Kremers. Rhenium, by A. D. Melaven Selenium, by J R. Stone and P K. Caron. Silicon, by D. W Lyon. Tantalum and columbium, by L. F Yntema and A. L. Percy Tellurium, by J. R. Stone and P K. Caron. Thallium, by H. E. Howe Thorium, by W C. Lilliendahl. Titanium, by H. R. Ogden and R. W Gonser. Tungsten, by L. F Yntema and A. L. Percy Uranium, by G. Meister Vanadium, by H. E. Dunn and others. Zirconium, by A. W Schlechten. Physical properties of metals, by C. A. Hampel. Index.

Note A reference book of descriptive information and technical data on the individual metals and groups of metals named in the chapter titles. The organization of most of the chapters follows this pattern an introduction in which physical and chemical properties are described, the origin of the name of the metal is discussed, and the basic facts on its discovery and early history are given occurrence and associations in natural ores, production and economic statistics for the world insofar as they are available metallurgy physical properties chemical properties, chemical analysis fabricating techniques (for metals used as an engineering material) other applications, and literature references. A considerable part of each chapter is written as narrative exposition,

however, extensive use has been made of tables in presenting physical and chemical data.

HAYWARD, CARLE REED

An outline of metallurgical practice. Third edition. This edition sponsored by American Smelting and Refining Company. New York, D. Van Nostrand Company, Inc., 1952. 728 p. illus. 24 cm. $11.50. 6875

Contents: Introduction. Copper. Lead. Zinc. Aluminum. Nickel. Tin. Mercury. Antimony. Arsenic. Bismuth. Cadmium. Cobalt. Magnesium. Beryllium. Gold. Silver. Platinum. Chromium. Tungsten. Manganese. Vanadium. Molybdenum. Zirconium. Titanium. Uranium. Iron and steel. Non-ferrous alloys. Index.

Note: This book meets a two-fold need: for engineers it is a reference book giving modern practices in extracting and refining metals and giving general information regarding the sources, uses, and important alloys of the metals; for students beginning the study of metallurgy it is a textbook covering metallurgical practice in outline. Because of advances in the field of metallurgy since the second edition was published in 1943, some sections of the book have been entirely rewritten for the third edition, and new chapters on titanium and uranium have been added. Some certain old-time processes, such as copper blast-furnace smelting and the puddling process for wrought iron, have been dropped. The 63 tables have been brought up to date. A special feature is made of the illustrations, of which there are more than 430, about one-third of them entirely new. The author advises a careful study of the illustrations, as in many instances they are substitutes for printed descriptions of processes or apparatus.

HENDERSON, J. G.

Metallurgical dictionary. By J. G. Henderson. Assisted by J. M. Bates. New York, Reinhold Publishing Corporation, 1953. 396 p. 24 cm. $10.00. 6876

Note: About 5,000 terms are defined in this reference book. A few widely established trade names, such as "Alclad," "Alnico," "Grasse," and "Magnaflux," are included but, generally speaking, trade names are not represented. Instead, the book covers terms (such as "fastener") which are strictly metallurgical, and the metallurgical meanings of more common terms, such as "Banding." Definitions are clearly worded and adequate. The typical length is three or four lines, but some are much longer. Abbreviations and symbols are covered in an appendix.

HEYER, ROBERT HARRY

Engineering physical metallurgy. New York, D. Van Nostrand Company, Inc., 1939. 549 p. illus. 23 cm. $7.00. 6877

Contents: Pure metals. Principles of alloying. White metal bearing alloys. Light alloys. Die castings. Copper and its alloys. Irons and carbon steels. Heat treatment of steel. Low and medium alloy steels. Surface treatment of steel. Steel castings. Welding. Cast iron. High alloy irons and steels. Tool steels.

Note: This college textbook explains the application of metallurgical principles in the production of alloys, in their processing, and in their various uses in engineering. This fundamental knowledge is expanded with many practical examples to show the student the direct application of metallurgical principles to the choice, or even the formulation, of an alloy for a specific engineering purpose, and the various steps in heat treatment and other methods of processing which are necessary to its preparation.

HOTCHKISS, A. G., AND H. M. WEBBER

Protective atmospheres. New York, John Wiley & Sons, Inc., 1953. 341 p. illus. 24 cm. $8.00. 6878

Contents: Typical protective atmospheres. Basic chemical reactions of gases used for furnace atmospheres. Atmospheres for preventing or reducing oxides. Atmospheres for preventing decarburization. Atmospheres for carburizing, carbon restoration, and nitriding. Instruments for analyzing, controlling, and measuring gases. Storage, distribution, and handling of gases. Applications of protective atmospheres. Remedies for protective-atmosphere ailments. Index.

Note: A "protective atmosphere" is a gas or mixture of gases, other than air, used to exclude air, or in place of it, in various industrial processes. Hydrogen, nitrogen, carbon dioxide, helium and dissociated ammonia are typical of the gases used in such applications as the prevention of decarburization and oxidation of metals being processed, the control of color, the control of restoration of carbon, the addition of nitrogen, etc. In this book, the field is covered from the viewpoint of technicians, such as plant engineers in charge of manufacturing operations. The book is a combination of background information and descriptions of practical techniques. Literature references are included. Much of the material was published originally in the *General electric review.*

HOYT, SAMUEL L.

Metal data. Revised edition of *Metals and alloys data book.* New York, Reinhold Publishing Corporation, 1952. 526 p. illus. 26 cm. $15.00. 6879

Contents: Test specimens. Hardness tests. The wrought steels. Heat treated steels. Cast steels. The cast irons. Stainless steels. Heat- and corrosion-resistant casting alloys. Super-alloys. The nonferrous alloys. Additional metals. General data. Index.

Note: A standard reference handbook for the use of advanced engineering students, graduate engineers, and metallurgists. The information contained is given primarily in the form of charts and tables classified under the headings listed above. The chapter entitled "General data" contains a variety of useful information on such topics as the properties of the chemical elements, the heat content of metals, pyrometric cones, weights of sheets and plates, and various compilations of conversion tables. The first edition was published in 1943. In the present edition, the nature of the book is the same, but the contents have been much extended. More than 275 tables have been added. The number of figures has been increased from 40 to 111 and there are almost 200 more pages.

HULTGREN, RALPH

Fundamentals of physical metallurgy. New York, Prentice-Hall, Inc., 1952. 395 p. illus. 22 cm. $7.00. 6880

Contents (abridged): Introduction. The metallic state. Phases and simple equilibrium phase changes. Non-equilibrium phase changes. Decomposition of austenite. Ternary phase diagrams. Deformation of metals. Recovery and recrystallization. X-ray metallography. Crystal chemistry of metals. The casting of metals. Hot working of metals. Heat treatment of steel. Surface hardening of steel. Powder metallurgy. Welding metallurgy. Oxidation and corrosion. Metallography of alloying elements in steel. Properties of steel. Cast iron. Copper and copper alloys. Light metals. Preparation and examination of microscopic sections. Hardness testing. Pyrometry. Macroscopic examination—radiography. Index.

Note: An introductory textbook for college courses. It represents the approach to physical metallurgy which stresses the physical and chemical principles common to all alloys rather than the description of specific alloys. Phases and phase changes, for instance, are discussed at considerable length. Except for those parts which are intended to be co-ordinated with laboratory work, the book is also suitable for home reading by engineers out of college and other persons who have the necessary technical background. The author is Professor of Metallurgy in the University of California.

JOHNSON, CARL G., AND WILLIAM R. WEEKS

Metallurgy. Chapter XVII, Titanium, zirconium, indium, and vanadium, by William R. Weeks. Fourth edition. Chicago, American Technical Society, 1956. 454 p. 22 cm. $5.50. 6881

Contents: Properties of metals and tests to determine them. Chemical metallurgy. Producing iron and steel. Physical metallurgy. The theory of alloys. Shaping and forming metals. Bearing metals. Light metals and alloys. Copper and its alloys. Steel—man's servant. Heat treatments for steel. Surface treatments. Alloy or special steels. Classification of steels. Cast iron. Powder metallurgy. Titanium, zirconium, indium, and vanadium. The literature of metallurgy. Glossary. Index.

Note: An introductory book intended chiefly for the instruction of men in industry such as machinists and foundry workers who lack formal education in metallurgy but who wish to know some-

thing about the main principles and processes of the field. It is used as a textbook in vocational schools and as an elementary reference book in libraries. The first edition was published in 1918, the third in 1946. This fourth edition differs from the third edition only by inclusion of the chapter by Weeks, which is named in the title.

KEHL, GEORGE LOUIS

The principles of metallographic laboratory practice Third edition New York McGraw Hill Book Company, Inc., 1949 520 p illus 24 cm (Metallurgy and metallurgical engineering series, Robert F Mehl consulting editor) $7 75 6882

Contents. Preparation of specimens for microscopic examination. Etching of specimens for microscopic examination. Metallurgical microscopes and photomicrography The principles f photography Macroscopic examination of metals. Hardness testing. Special metallurgical tests. The principles of pyrometry and pyrometric practice. Thermal analysis. Appendix. Index.

Note. Although designed and used as textbook, this work is also a useful and comprehensive treatise on metallography It includes no laboratory experiments but, instead, describes how things are done, and why in laboratories set up for the study of the physical and mechanical properties of metals and alloys. The exposition is compact, but is sufficiently full for most purposes. It is supplemented by excellent lists f references and by more than 200 illustrations and 61 tables. Substantial revisions were made in preparing this edition.

KEYSER, CARL A.

Basic engineering metallurgy theories, principles and applications. New York Prentice-Hall, Inc., 1952 384 p illus 22 cm $6 75 6883

Contents (abridged) The structure of metals. The solid state—freezing, solutions, diffusion. Mechanical properties and metal failure. Equilibrium diagrams. The hardening of metals. Annealing—recovery recrystallization, and grain growth. Phase changes in iron and steel. Heat-treating equipment and operations. The alloying elements in steel. The light metals. Copper and zinc. Miscellaneous metals. Primary methods of fabrication—casting—powder metallurgy Electroplating and electroforming. Secondary methods of fabrication—mechanical working—joining and associated operations—machining and finishing. Index.

Note: An introductory textbook for college students f engineering. Approximately one-third of the space is devoted to theoretical aspects such as the physics of the solid state. The remainder is divided between discussions of heat treatment, the engineering properties of particular metals, and the chief processes of metal fabrication. The discussions are necessarily somewhat generalized, but in most parts they are sufficiently detailed to inform engineering students and engineers who are not specializing in engineering metallurgy The book is adequately illustrated and contains occasional footnote references to related literature.

LESSELLS, JOHN M

Strength and resistance of metals. New York John Wiley & Sons Inc 1954 450 p illus. 24 cm. $11 50 6884

Contents Tension. The elastic-stage modification. Tensile properties at elevated temperatures. Hardness. Impact. Fatigue—normal conditions—Controlling factors. Fracture of metals. Strain hysteresis. Mechanical wear Theories of strength and working stresses. Author index. Subject index.

Note Potentially of interest both to advanced students of mechanical engineering and to graduate mechanical engineers, this book is compact, well-organized statement of the knowledge f the behavior of metals, especially steel, under stress f the kinds encountered in structures and machines. It is limited to properties and behavior which have been observed and measured experimentally and it does not cover mathematical analysis. A wide range of specific data is presented on the topics named in the chapter titles and on sub-topics, such as the effects of surface conditions on fatigue failures, the effects of abrasive wear etc. The two chapters on fatigue account for more than one-quarter of the book's length and reflect the author's own interest and research in this area. Literature references are given throughout and the names f authors of the cited papers and books have been brought together in the author index. Problems for students to solve are segregated at the back of the book.

LIDDELL, DONALD MACY, editor

Handbook of nonferrous metallurgy Prepared by a staff of specialists. Second edition. New York McGraw Hill Book Company Inc., 1945 2 v illus. 23 cm Vol I, $9.50, vol. II, $12 00 6885

Contents (abridged) Volume I, Principles and processes Drying, by R. J Russell. Crushing and grinding, by H. Hardinge. Sampling, by D M. Liddell. Screening, by A. F Reed. Classification, by J V N Dorr and F L. Bosqui. Concentration, by D. M. Liddell. Flotation, by S. J Swainson. Dewatering, by J. V N Dorr and F L. Bosqui. Filtration, by D F Irvin. Pyrometry by W F Roeser and M. S. Van Dusen. Roasting and sintering, by A. S. Dwight. Refractories, by F A. Harvey Separation of solids and liquids from gases, by P E. Landolt and F H. Viets. Briquetting applied to metallurgy by A. L. Stillman and D. M. Liddell. Plant layout, by P E. Barbour The electric furnace in nonferrous metallurgy by D M. Liddell. Applied electrochemistry by C. G. Fink. Index. Volume II, Recovery of the metals Aluminum, by R. J Anderson. Magnesium and beryllium, by D M. Liddell. The alkali and alkaline-earth metals, by A. C. Loonam. Arsenic, by W C. Smith. Antimony by C. Y Wang and G. C. Riddell. Bismuth by W C. Smith. Lead, by R. G. Bowman. Treatment of zinc crust and electrolytic slime, by T D. Jones. The metallurgy of copper by F R. Pyne. Refining of gold and silver bullion, by E. J Wagor Electrolytic refining of lead, by G. Rehberg. The electrolytic zinc process, by F Laist and others. Pyrometallurgy of zinc, by W R. Ingalls. Cadmium, by W R. Ingalls. Mercury by G. L Gould. Chromium, by E. Perkins. The metallurgy of manganese, by E. A. Herman. Cobalt, by A. B. Schad and others. Nickel, by D M. Liddell. Tungsten, vanadium, uranium, and molybdenum, by H. A. Doerner Metallurgy of radium and uranium, by H. A. Doerner. Tin, by R. L. Hallett. Minor and rare metals, by D M. Liddell. Appendix. Index.

Note A comprehensive survey of current practices in the reduction of ores and the refining of crude metals. It is written in the terminology of this branch of metallurgy and is designed as reference book for use by advanced students and graduate mining engineers. In the present edition, there are 43 chapters, each of which is the work of one or mor outstanding experts. Compared to the first edition, hich was published in 1926, the amount of new material varies considerably from paper to paper. Some papers are only slightly revised while others ha been extensively or wholly rewritten. The editor of the work notes that some new processes known to himself and the contributors were omitted for reasons f military security

LORD, JAMES OSBORN

Alloy systems an introductory text. New York Pitman Publishing Corporation 1949 380 p illus. 24 cm. (Pitman metallurgy series Frank T Sisco, advisory editor) $6 00 6886

Contents (abridged) The metallic state defined. How conditions of solidification affect metal structure. The use of the equilibrium diagram in the interpretation of microstructures. The phase rule and its application to alloys Deviations from equilibrium. The iron-carbon alloys. The equilibrium relations of iron and carbon. Structures of slowly cooled iron-carbon alloys. Methods of manufacture of iron and steel. The thermal critical points of steel. The microstructures of heat-treated steels—theories of hardening. The chemistry of the carburizing process and controlled furnace atmospheres. Heat treatment of carburized steel liquid-bath carburizing. The McQuaid-Ehn test—hardenability Specific characteristics of nickel steels and manganese steels. Specific characteristics of chromium steels and molybdenum steels. Specific characteristics of tungsten steels and of tungsten and molybdenum high-speed steels. Copper—manufacture and properties—metallography The copper alloys. Aluminum bronze and other bronzes. Aluminum and aluminum alloy Magnesium and magnesium alloys. Appendixes Crystallography of metal crystal lattices. A deri ation of the phase rule. A selected book list for collateral reading. The use of periodical literature in teaching physical metallurgy Index.

Note The pertinent aspects of physics and physical chemistry are stressed in this textbook. There is much emphasis on thorough understanding of thermochemical equilibria and the interpretation of

Metallurgy

General

phase diagrams. The theoretical and basic material is followed by specific discussions of alloy systems and related metallurgical topics. The book is designed to give undergraduate students [illegible] working knowledge of the physico-chemical bases of alloys and also some acquaintance with the properties of specific alloys of outstanding engineering importance.

MERLUB-SOBEL, M.

Metals and alloys dictionary New York Chemical Publishing Company Inc., 1944 238 p. 23 cm. $4.50. 6887

Note: This dictionary defines metallurgical terms used in the United States of America. It is intended for the use of lay persons as well as for persons [illegible] technical backgrounds. The definitions are on the [illegible] rather brief, and the list of terms [illegible] selective rather than exhaustive.

MONDOLFO L. F., AND OTTO ZMESKAL

Engineering metallurgy New York McGraw-Hill Book Company Inc., 1955 397 p. illus. 24 cm. $8.00 6888

Contents: Extraction of metals. Atoms and crystals. Equilibrium diagrams. Structure and properties of alloys. Casting principles. Casting practice. Plastic deformation and annealing. Plastic working practice. Phase transformations in the solid state. Annealing practice. [illegible] and heat-treatment practice. Joining. Powder metallurgy. Corrosion and protection. Iron and similar metals. Nonferrous metals. Index.

Note: An engineering college textbook that affords [illegible] broad [illegible] of present-day metallurgical theory and practice. It [illegible] designed for the instruction of engineering students [illegible] are preparing for careers in fields other than metallurgy. Basic knowledge pertaining to atomic structure and to crystals is introduced early in the [illegible]. However, most of the space is devoted to descriptions of [illegible] metal fabricating and treating processes. Selected literature references are included, and the book [illegible] adequately illustrated.

MURRAY WILLIAM M. editor

Fatigue and fracture of metals a symposium held at the Massachusetts Institute of Technology June 19–22 1950 Edited by William M. Murray With a foreword by Jerome C. Hunsaker New York Published jointly by the Technology Press of the Massachusetts Institute of Technology and John Wiley & Sons, Inc., 1952 313 p. illus. 24 cm. $7.95 6889

Contents: General survey of the problem of fatigue and fracture, by M. Gensamer. The fatigue problem in airplane structures, by H. L. Dryden and others. Brittle fracture and fatigue in ships, by F. Jonassen. Brittle fracture and fatigue in machinery, by R. E. Peterson. Internal stresses and fatigue, by O. J. Horger and H. R. Neifert. Designing for fatigue, by R. L. Templin. Fundamentals of brittle behavior in metals, by E. Orowan. Experimental study on temper brittleness of slightly alloyed carbon steel, by P. A. Jacquet and A. R. Weill. The statistical aspect of fatigue failure and its consequences, by W. Weibull. A review of cumulative damage in fatigue, by N. M. Newmark. Significance of transition temperature in fatigue, by C. W. MacGregor. The influence of metallographic structure on fatigue, by P. L. Teed. Fatigue at elevated temperatures, by N. J. Grant. The techniques of physical metallurgy for studying fatigue damage, by J. T. Norton.

Note: A collection of original papers which were presented first at [illegible] conference which was planned to focus attention upon the fatigue and fracture of metals as an engineering problem. Together they convey [illegible] picture of the developed knowledge and practical experience, summarize recent advances, and point out problems still in need of basic research.

NEWTON JOSEPH

An introduction to metallurgy Second edition. New York John Wiley & Sons Inc., 1947 645 p. illus. 23 cm. $7.50 6890

Contents: Part 1. Adaptive metallurgy. Metals. The physical properties of metals and alloys. Alloys. Fabrication. Heat treatment. Corrosion. Part II. Extractive metallurgy: The sources of metals. Ore dressing. Chemical principles. Fuels and refractories. Pyrometallurgy. Hydrometallurgy. Electrometallurgy. Summary. Index.

Note: An introductory text for college students [illegible] stresses basic principles rather than details of current practices. Because of its comprehensive [illegible] scope, it is also useful as [illegible] reference book and source of information for lay readers. The revisions and [illegible] writing in this edition account for 108 additional pages as compared to the first edition (1938). The brief sections on pyrometry and calorimetry of the earlier edition have been omitted, but the section on corrosion now forms [illegible] complete chapter. The chapters on sources of metals and ore dressing have been considerably expanded.

OSGOOD WILLIAM R. editor

Residual stresses in metals and metal construction. Prepared for the Ship Structure Committee under the direction of the Committee on Residual Stresses National Academy of Sciences—National Research Council. New York Reinhold Publishing Corporation 1954 363 p illus. 24 cm. $10.00. 6891

Contents: Effects of residual stresses on the behavior of structures, by F. Campus. Residual stresses in welded pressure-vessel [illegible], by M. Hetényi. Some typical cases [illegible] here residual stresses set up by welding appear to have contributed to ship structural failures, by D. Arnott. Residual stresses as [illegible] factor in ship fractures, by [illegible] Admiralty Ship Welding Committee. Some notes on typical residual stresses encountered in welded ships, by F. Field. Some considerations regarding the generation and importance of residual [illegible] stresses, by L. E. Benson. Residual stresses in welding, by W. Spraragen. The significance of residual stresses, by C. W. MacGregor. Some remarks on the influence of residual stresses on the brittle, plastic, and fatigue behavior of structures, by F. P. Bullard. The influence of residual stresses on the behavior of ductile structures, by M. R. Horne. Shakedown of [illegible]-plastic structures, by P. G. Hodge, Jr. Microstresses originated by the inclusions, by N. J. Petch. The effect of residual stresses on high-speed impact rupture, by J. Mikhalevich. Correlation of residual stresses [illegible] fatigue strength of machine elements and related phenomena, by O. J. Horger and H. R. Neifert. Effect of residual stresses on the failure of engineering materials, by D. Rosenthal. Residual stresses and static fracture, by W. M. Baldwin, Jr. Author [illegible] reply to Baldwin's comments on the "Effect of residual stresses on the failure of engineering materials," by D. Rosenthal. Measurement of residual stress, by D. Rosenthal. Residual stresses associated with [illegible] stress, by G. B. Greenough. Precautions to be used in the measurement and interpretation of residual stresses by X-ray techniques, by W. R. Hyler and L. R. Jackson. Complete determination of the state of residual stress in solid and hollow metal cylinders, by H. Bühler. Determination of residual stresses below the surface, by W. Soete and R. Vancrombrugge. Summary: Superposition, flow and fracture. Microstresses. Latent energy. Buckling. Variation of temperature. Fatigue. Measurement of residual stresses. Ships. Recommendations for research. References. Bibliographical sources. Index.

Note: The failure of several welded ships on the ways or while at sea during World War [illegible] focused the attention of metallurgists and engineers on residual stresses in metals and structures. This authoritative book is one of the results. The 22 papers were contributed by eminent American and British specialists. Embodied in them are descriptions of [illegible] case histories of structural failure due to residual stresses, the results of numerous investigations of such failures, and the best opinion available to date on the causes of such stresses and how to avoid or minimize them. The papers are all written on [illegible] high technical level and are accompanied by literature references.

POLUSHKIN E. P

Defects and failures of metals their origin and elimination. Princeton D Van Nostrand Company Inc., 1956. 399 p. illus. 23 cm. $12.50. 6892

Contents: Introduction. Segregation. Blowholes and porosity in metals. Pipe. Impurities in metals. Decarburization of steel. Scaling. Harmful effects of residual stresses in metals. Fatigue of metals. Flakes. Failures in heat treatment. The embrittlement of

metals. The origin of cracks. Defects in shape, surface and size of metals. Wear of metals. Corrosion. Index.

Note. The kinds of defects and failures discussed in this book are named in the above-quoted chapter titles. Each kind is discussed concisely and explicitly with particular attention to causes, detection, and harmful effects. In practically all instances, there are one or more illustrations of the defect under discussion. Most of the illustrations are reproductions of photographs, and many are from micro-photographs. The reproductions are high in quality. Each chapter includes an extensive bibliography. As an aid to use of the bibliographies, each one is indexed by kind of defect. The book is useful to engineers and metallurgists as a reference work.

PULSIFER, HARRY BRIDGMAN

Inspection of metals Cleveland The American Society for Metals, 1941 180 p illus. 23 cm $3 50 6893

Contents Ideals in steel-making. Tests for composition. Surface inspection. Hardness testing. Tensile testing including shear. Soundness testing. Macrographic patterns. Microscopic structures and patterns. Grain size testing. Coatings and corrosion testing. Impact, fatigue and creep testing. Specifications. Nonferrous metals testing. Welding of metals. Constitution and treatment of a metal and its alloys.

Note An authoritative and concise volume intended for those learning to inspect metals and who have only a limited knowledge of metal-making practices. The various tests are enumerated, together with a description of testing techniques, and an explanation of how findings may be interpreted. A brief list of books for the reader requiring additional information is included. There is an index.

QUENEAU, B R

The embrittlement of metals A series of four educational lectures on the embrittlement of metals presented to members of the American Society for Metals at the thirty seventh National Metal Congress and Exposition, Philadelphia, October 15 to 21, 1955 Bibliography on the embrittlement of metals by G A Ratz Cleveland American Society for Metals 1956 90 p. illus. 24 cm. $3 00 6894

Contents. The embrittlement of metals. Temper brittleness. Tempered martensite brittleness. Embrittlement of stainless steels. Bibliography Index.

Note. Some of the accumulated knowledge on embrittlement of metals is surveyed for graduate metallurgists in this short book. Most of the discussion pertains to embrittlement from various causes in low- and medium-carbon alloy steels, tempered martensite brittleness in hardened steels, and embrittlement in stainless steels. These topics are treated concisely but ample references are given to the related literature. In the published volume the verbal exposition is supplemented by numerous graphical representations of data and by a selection of micro-photographs of steel specimens.

RHINES, FREDERICK N

Phase diagrams in metallurgy, their development and application New York McGraw Hill Book Company Inc., 1956 340 p illus. 24 cm. (Metallurgy and metallurgical engineering series Robert F Mehl consulting editor, Michael B Bever associate consulting editor) $12 00 6895

Contents Introduction. Unary systems. Binary isomorphous systems. Binary eutectic systems. Binary eutectoid systems. Binary monotectic systems. Congruent transformation of alloys. Binary peritectic systems. Binary peritectoid systems. Binary syntectic systems. Complex binary phase diagrams. Ternary isomorphous systems. Ternary three-phase equilibrium. Ternary four-phase equilibrium, Class I.—Class II.—Class III. Congruent transformation in ternary systems. Complex ternary systems. Multicomponent systems. Pressure-temperature diagrams. Determination of phase diagrams. Appendixes. Index.

Note. An introduction to the topic of phase diagrams in metallurgy. It is intended primarily for undergraduate engineering college students preparing for careers in metallurgy. Although the author makes it clear that phase equilibria has a thermodynamic basis, the thermodynamic foundations are not emphasized. Instead, the various classes of phase systems of interest in metallurgy are described and diagramed, and the reader is afforded practice in the construction of such diagrams. The three chapters on four-phase systems constitute an unusually full treatment for an introductory book and, according to the author contain some material never before published. Shaded perspective drawings of unusual clarity are used in this group of chapters. The author is a member of the staff of the Metals Research Laboratory of Carnegie Institute of Technology

RINEHART, JOHN S, AND JOHN PEARSON

Behavior of metals under impulsive loads. Cleveland The American Society for Metals, 1954 256 p illus 24 cm $5 50. 6896

Contents Concept of impulsive loading. Properties of materials under conditions imposed by impulsive loading. Propagation of transient disturbances. Explosives and explosions. Characteristics of impulsive loads. Methods of observation and apparatus—nonphotographic. High speed photographic techniques. Inelastic behavior under nonimpulsive loading. Fracturing under impulsive loading. Plastic deformation under impulsive loading. Structural changes under impulsive loading. Behavior under impact. Practical application of explosives. Conclusions.

Note The main topic of this book is how metals in the form of plates and other simple structures react to the kinds of high transient loads applied by explosions. However the primary viewpoint is metallurgical rather than structural. Also there are brief discussions of the effects of explosive charges on rocks, etc. as in blasting. In early chapters the contrasting reactions of materials under static loads and impulsive loads are described, the laws governing the propagation of transient disturbances in elastic bodies are summarized and certain fundamental properties of explosives are outlined. Most of the rest of the book is devoted to descriptions of experimental techniques and the results of experiments. The bibliography is limited to literature cited in the text, nevertheless it is an extensive one.

ROGERS, BRUCE A.

The nature of metals Cleveland Published jointly by American Society for Metals and the Iowa State College Press, 1951 248 p. illus. 19 cm $4 00 6897

Contents. The metals. How atoms are arranged in metals. Alloys. More about alloys. Solidification. Movement of atoms in solid metals. Some effects of atomic movements. Iron, steel and the A1 transformation. The hardening of steel. How metals are deformed. Recrystallization. Oxidation and corrosion. Appendix. Some terms in crystallography. Glossary. References. Questions. Index.

Note A well-written semi-popular book. It is addressed to college students, scientists in fields other than metallurgy who are curious about metals and lay readers possessing some acquaintance with the terminology of chemistry and physics. It introduces the reader to the physical nature of metals, especially their crystal structure, and to their reactions to metalworking processes and the environment. There are 121 illustrations, and many of these are reproductions of microphotographs.

SACHS GEORGE, AND KENT R. VAN HORN

Practical metallurgy, applied physical metallurgy and the industrial processing of ferrous and nonferrous metals and alloys. Cleveland American Society for Metals, 1940 567 p. illus. 23 cm. $6 00. 6898

Contents The constitution of alloys. Grain structure of alloys and segregation. The crystal structure of metals and alloys. Phase changes in the solid state. Deformation and recrystallization. Residual stresses. Furnaces and general melting problems. Castings: special cast production. Castings mechanical properties. Castings. Mechanical working fundamentals. Melting alloys and methods. Ingots. Mechanical working. Mechanical working forging and extrusion. Mechanical working. Rolling, annealing and drawing, straightening and fabricating.

hat treatments. Heat treatment of steels. Heat treatment of nonferrous metals.

Note: The theory and practice of the making and shaping of commercial metals and alloys and the physico-chemical and physical relationships of metallurgy presented in concise and simplified manner. One-third of the volume deals with the general principles of physical metallurgy while the remainder of the volume discusses the actual processes of metal and alloy manufacture. An appendix contains binary constitutional diagrams of commercially important ferrous and nonferrous alloys. The numerous footnotes constitute an extensive bibliography. There is an index.

SAMANS, CARL HUBERT

Engineering metals and their alloys. New York, The Macmillan Company 1949 913 p. illus. 24 cm. $10 75 6899

Contents: General characteristics of the metallic engineering materials. The pure metal. Metallurgical methods. Production of the metals—magnesium, aluminum, and zinc—from their ores. The production of pig iron and cast iron. Iron and steel making. Production of the metals—copper, nickel, lead, and tin—from their ores. The theory of alloys. The principles of heat-treatment. Shaping and forming the metallic materials. Corrosion, its effects and control. Protecting metals against corrosion. Alloys used broadly because of ease of fabrication. Pipe, tubing, and castings resistant to water corrosion. Alloys resistant to chemical corrosion and the action of heat. Alloys for applications requiring high strength and toughness. Alloys resistant to general wear and abrasion. Tool metals. Bearing alloys. Alloys used because of their special physical properties. Index.

Note: Although intended primarily as a textbook, the comprehensiveness of this work makes it suitable for use also as a reference tool by practicing engineers. All phases of metallurgy are treated but about three-fourths of the space is devoted to engineering metallurgy. The book is especially outstanding for an extensive range of technical data relating to the properties of the eight major engineering metals and their alloys. As the chapter titles indicate, alloys are grouped and discussed from the standpoint of their uses. There are 143 figures, many of which are reproductions of photomicrographs. Selected references to additional literature are appended to the chapters.

SCHUHMANN, REINHARDT, JR.

Metallurgical engineering. Volume I. Engineering principles. Reading, Mass. Addison-Wesley Publishing Co., Inc., 1952 390 p. illus. 25 cm. (Addison-Wesley metallurgy series. Morris Cohen, consulting editor) $8 50 6900

Contents: The unit processes of chemical metallurgy. Stoichiometry. The heat balance. Metallurgical fuels. Combustion of fuels and heat utilization. Fluid flow. Steady heat flow. Unsteady heat flow. Phases in pyrometallurgical systems. Refractory materials. Appendix. Index.

Note: A college textbook in which the traditional approach to the teaching of extractive metallurgy has been discarded in favor of teaching the basic principles and unit processes. The importance of physical chemistry is demonstrated, and analytical and quantitative solutions of engineering problems are emphasized. In the first volume basic principles common to the unit processes of extractive metallurgy together with discussions of metallurgical fuels and refractory materials are covered. The book is based on experience in teaching at Massachusetts Institute of Technology where the author was Associate Professor of Metallurgy.

SISCO, FRANK THAYER

Modern metallurgy for engineers. Second edition. New York, Pitman Publishing Corporation, 1948 499 p. illus. 24 cm. (Pitman metallurgy series. Frank T. Sisco, advisory editor) $6.00. 6901

Contents (abridged): Metallurgy and engineering. The fundamental structure of metals and alloys. The manufacture of iron and steel. Fundamentals of the heat treatment of steel. The significance of the static properties of metallic materials. The significance of the dynamic properties of metallic materials. Carbon steel as an engineering material. Gray cast iron and malleable cast iron. Low-alloy steels as engineering materials. *Fundamentals of hardenability.* High-alloy steels as engineering materials. Tool steels, die steels, and cemented hard carbides. Light alloys as engineering materials. Copper and copper-base alloys as engineering materials. Corrosion and corrosion resistance. The effect of temperature on the mechanical properties of ferrous and nonferrous alloys. Questions. References. Index.

Note: A comprehensive survey of current ferrous and nonferrous metallurgical practice. It is suitable for engineering students and also for engineers who need a general knowledge of the subject. The use of highly technical phraseology has been kept to a minimum, and emphasis is given to the practical aspects and to descriptions of the structure and properties of metals and alloys, rather than to the theories of physical metallurgy. This edition has been revised and enlarged to include material on new techniques and alloys which have been developed since the publication of the first edition in 1941. Two new chapters dealing with the hardenability of metals have been added, and the 13-page annotated bibliography has been brought up to date and now includes a list of recommended periodicals.

SMITH, DONALD PRITCHARD

Hydrogen in metals. Chicago, The University of Chicago Press, 1948. 366 p. illus. 23 cm. (The University of Chicago Committee on Publications in the Physical Sciences) $10.00 6902

Contents: Introduction. Occlusion and occluding metals. Occlusive characteristics—specific permeability and dimensional changes. The course and rate of occlusion. Occlusive capacity and solubility. Occlusion in endothermic occluders—Fe, Co, Ni, Cr, Cu, Pt, Ag. Occlusion by palladium and the phases and phase-field limits of palladium-hydrogen. The electrical conduction of Pd-H. Electrode potential and the overstepping phenomenon of Pd-H. Exothermic occlusion by metals other than palladium—Ti, Zr, Th, V, Cb, Ta; Ce, La, Cr, Pr, Nd, Sa. Anomalous and nonoccluding metals—Mn, Cr (?), Mo (??), platinum group—Au, W; the "B" metals. Ternary hydrogen alloys. *Magnetic and chemical relations.* Survey—the metal and the hydrogen. Supplementary notes. General bibliography (serving also as author index). Subject index (including topics and systems).

Note: A critical survey of the published information pertaining to occluded hydrogen, that is, the absorption or retention of hydrogen by massive solid metals. Absorption rates from the gaseous state and from solutions are given, solubility data are shown in graphs and charts, and supersaturated states, as well as gas evolution upon heating, are considered. There is considerable emphasis on the known effects of occluded hydrogen upon the mechanical, electrical, and magnetic properties of metals and upon the crystal lattice. The localization and activation of hydrogen by metal are covered. The bibliography, which is keyed to statements in the text, contains 1,470 annotated references and covers in addition to the main subject borderline topics such as photo-electric theory.

SMITH, GEORGE V.

Properties of metals at elevated temperatures. New York, McGraw-Hill Book Company, Inc., 1950 401 p. illus. 23 cm. (Metallurgy and metallurgical engineering series. Robert F. Mehl, consulting editor) $9 75 6903

Contents (abridged): Plastic deformation of single crystals. Plastic deformation of polycrystalline metal. Creep of polycrystalline metals. The fracture of metals. Theories of flow and fracture. Tests and test equipment. Effect of chemical composition on creep. Effect of melting and deoxidation practice, heat-treatment, and grain size. Effect of varying temperature and load and of the state of stress. Changes during service-testing and microstructural changes. Design for elevated-temperature service. References. Appendix. Name index. Subject index.

Note: This book is a comprehensive presentation of the knowledge which has been accumulated in the last quarter-century pertaining to the effects of high temperature upon metals and to the design of metals and alloys for high-temperature service. It is devoted to basic knowledge rather than applications, and is intended for graduate metallurgists and physicists. The statements in the text are keyed to a bibliography of 444 references. The author is on the staff of the Research Laboratory of the U. S. Steel Corporation.

SMITH, MORTON C

Alloy series in physical metallurgy New York Harper & Brothers, 1956 338 p. illus. 24 cm. $6 00 6904

Contents Alloys in general the phase rule. Constitutional diagrams, simple eutectic-type alloys. Binary alloys showing mutual solid solubility Intermediate phases in binary alloy series. Binary alloys with limited liquid solubilities. Changes in solid alloys. Alloys of iron and carbon the steels. The cast irons. Ternary and higher alloys. Index.

Note A companion volume to the author's *Principles of physical metallurgy* described below It is a college textbook designed to be studied after that work or after an equivalent course in the fundamentals of physical metallurgy has been completed. It constitutes an introduction to the physical chemistry of alloy formation and to the characteristics of some of the most common alloys. The aim is a basic understanding of alloy formation. Most of the space is devoted to binary alloys however in the final chapter the reader is introduced to the subject of alloys of more than two components and to practical ways of constructing and interpreting constitutional diagrams for these complex systems.

SMITH, MORTON C

Principles of physical metallurgy New York Harper & Brothers, 1956 417 p illus. 24 cm $6 00 6905

Contents. The atom. Crystallography Crystal structures. Polymorphism. Crystal imperfections. Electrical and magnetic properties of metals. Deformation of metals. The effects of permanent deformation. The effects of elevated temperature. Fracture. Index.

—— Alloy series in physical metallurgy New York Harper & Brothers, 1956 338 p illus 24 cm $6 00 6905A

Content Alloys in general—the phase rule. Constitutional diagrams—simple eutectic-type alloys. Binary alloys showing mutual solid solubility Intermediate phases in binary alloy series. Binary alloys with limited liquid solubilities. Changes in solid alloys. Alloys of iron and carbon—the steels. The cast irons. Ternary and higher alloys. Index.

Note These complementary books reflect the current interest in the scientific bases of metallurgy They contain some descriptive material, but in both volumes fundamental knowledge and a scientific approach are emphasized. Considerable space is devoted to the basic facts of atomic structure and crystal formation. When strictly metallurgical phenomena and process are under discussion the exposition is rendered, in so far as possible, in terms of this fundamental knowledge. In spite of this emphasis most metallurgical topics are expounded in the terms used by practical metallurgists rather than physicists. Readers are supposed to study *Principles of physical metallurgy* first however the two books may be used independently They are suitable for use as textbooks in college courses and as background reading for working metallurgists.

STANLEY, JAMES K

Metallurgy and magnetism A series of three educational lectures on metallurgy and magnetism presented to members of the ASM during the thirtieth National Metal Congress and Exposition, Philadelphia, October 23 to 29 1948 Cleveland American Society for Metals 1949 156 p illus 23 cm. $4 00 6906

Contents. Magnetic theory and definitions. Types of magnetic materials. Factors affecting magnetic properties. Magnetic analysis—a metallurgical tool. Appendixes Conversion table. Testing of magnetic materials References. Index.

Note A short but informative introduction which is addressed to metallurgists rather than to physicists. The treatment assumes familiarity with metallurgical concepts, terms, and with the reading of engineering graphs. Essentially the work is an outline which is adequate in itself for the metallurgists who want merely general understanding of magnetism. However key numbers directly in the text refer to the bibliography which includes 237 references to patents and periodical articles.

STOUGHTON, BRADLEY, AND OTHERS

Engineering metallurgy a textbook for users of metals. Fourth edition. By Bradley Stoughton, Allison Butts and Ardrey M. Bounds. New York McGraw Hill Book Company, Inc., 1953 479 p illus. 24 cm. $7 50 6907

Contents Introduction. Metals as materials of construction. The sources of metals. Sizing and shaping metallic bodies. Welding and joining metallic bodies. Metallurgical inspection and testing. The theory of alloys. Heat-treatment of metals and alloys. Properties and uses of iron and steel. Properties and uses of nonferrous metals. Examples of application of metals in engineering service. Corrosion and its prevention. Producing and refining iron and steel—effects on properties. Producing and refining nonferrous metals. Furnaces, refractories, and fuels. Measurement of temperature in industrial operations. Some available motion pictures. Index.

Note An introductory survey of metallurgy from the standpoint of engineers who are concerned with the selection and working of metals. It was designed and is widely used as college textbook. In addition, it is suitable for reading by persons out of college who have some knowledge of basic scientific terminology It can be used by such readers, not only for general view of the field but also for information on specific topics, such as the cutting of metals by flame, and the properties of molybdenum. The third edition was published in 1938. Much new material has been incorporated in this fourth edition. To make room for it, the discussions of production and refining of metals has been considerably shortened. The bibliographical lists have been revised.

VAN ARSDALE, GEORGE D , editor

Hydrometallurgy of base metals. George D Van Arsdale, editor in-chief prepared with the assistance of the Dorr Company staff New York McGraw Hill Book Company, Inc., 1953 370 p illus. 24 cm. $9.50 6908

Contents Chemistry of roasting and leaching. Crushing, grinding, classification. Roasting practice. Leaching and solution separation. Solution purification and metal recovery Operating data from practice—copper—zinc—miscellaneous. The history of hydrometallurgy The future of hydrometallurgy Index.

Note. A detailed survey of practical processes for recovering such metals as copper lead, zinc, antimony and uranium from ores by leaching with solvent, then precipitating the metal from the solvent. Preparatory processes, such as crushing, grinding, and roasting are also covered in detail. The three chapters on operating data account for more than half of the book length. These chapters describe in detail the plants, processes, and experience in a variety of ore processing plants which have been in practical operation for some time. Included in the miscellaneous chapters are descriptions of plants for the treatment of cobalt and uranium. The book is addressed primarily to graduate mining engineers.

WILLIAMS, ROBERT SEATON, AND VICTOR O HOMERBERG

Principles of metallography Fifth edition. New York McGraw Hill Book Company Inc. 1948 319 p illus 23 cm (Metallurgy and metallurgical engineering series Robert F Mehl, consulting editor) $6.25 6909

Content The simple alloy diagram The alloy diagram and its meaning. The plastic deformation and annealing of metals. The nonferrous alloy of technical importance. Iron and steel. The macroscopic examination of steel. Laboratory methods. Appendix. Index.

Note A brief text intended for use by college students of engineering who will need knowledge of metallography but who do not plan to become physical metallurgists. It discusses the characteristics, properties, and methods of analysis of the major ferrous and non-ferrous alloys. Emphasis is placed on the applications of metallography In this edition the chief revisions are found in the chapter on non-ferrous alloys. Several new tables have been added to the appendix.

WILLIAMS, SAMUEL ROBINSON

Hardness and hardness measurements. Cleveland The American Society for Metals 1942 558 p. illus. 23 cm. $7.50 6910

Contents: Theories and definitions of hardness. Atomic structure in relation to hardness. Underlying conditions in hardness measurement. Wear resistance in relation to hardness. Early rebound and modern scratch hardness methods. Early penetration hardness methods. Brinell and Rockwell hardness testing methods. Pyramidal indenter method of hardness testing. Elastic properties as measures of hardness. Rebound methods of measuring hardness. Pendulum method of measuring hardness. Physical processes which occur at the point where hardness test is made. Hardness tests on various non-metallic materials. Portable hardness testers. Correlation between hardness and the magnetic properties of solid matter. Magnetic methods of testing hardness. Hardness and magnetostriction. Electrical properties as measures of mechanical hardness.

Note: The volume deals primarily with hardness of metals and will be of value to the metallurgist as a reference tool. There is a discussion of what is meant by hardness and how it is brought about, followed by detailed descriptions of testing instruments, methods of operation, and interpretation of results. The 41-page bibliography will serve as a comprehensive guide to the literature of the subject. There is an index.

WOLDMAN, NORMAN E

Engineering alloys names, properties, uses. Revised edition. Cleveland American Society for Metals, 1954 1,033 p 23 cm. $15.00. 6911

Contents: Section I, Alloy index. Section II, Alloy data. Section III, Directory of manufacturers and their alloys. Section IV, Key index to manufacturers. Section V, Useful data. Appendix.

Note: A comprehensive metallurgical and engineering reference book. It consists largely of tables. The data presented were, in most instances, supplied by the manufacturers of the alloys. The most important section is that on alloy data. It is over 630 pages long and it consists of a table giving, for each alloy listed, the trade name, composition, properties, uses, and a key number identifying the manufacturer. The first edition of the book was published in 1936 and the second edition in 1943. The present edition—actually the third—contains data on more than 7,000 proprietary alloys which were not included in the preceding edition. The special section on uses and applications that appeared in the first two editions were deleted, but the information on primary uses in Section II has been retained.

WULFF JOHN AND OTHERS

*Metallurgy for engineers casting, welding and working. By John Wulff Howard F Taylor and Amos J Shaler Illustrations by George E. Schmidt, Jr New York John Wiley & Sons, Inc. 1952 624 p illus. 22 cm. $7.25 6912

Contents (abridged): Crystalline structure and properties of metals. Impurity and solubility. Phase equilibrium and alloy systems. Industrial non-ferrous alloys. Alloys of iron and carbon. Heat treatment of steel. Methods for determining mechanical properties of metals. Mechanism of deformation and effects of deformation of metals. Electrical and magnetic properties of metals. Corrosion. Introduction to sand casting practices. Casting processes other than sand casting. The metal in casting. Melting—heat flow—gases in metals. Powder metallurgy. Welding. Brazing and soldering. Metal working by compression processes. Stretching, drawing, and bending processes. Metal cutting. Appendix. Index.

Note: The extraction of metals from their ores is not covered in this book, but otherwise it is an inclusive treatment particularly suited to the needs of engineering students and graduate engineers whose interest in metals is confined to their properties and working. There are brief but clear explanations of each topic. [illegible] of each procedure as investment casting. Selected literature references are included with each chapter. The appendix contains short tables of general usefulness in metal specification and design. The authors are members of the Department of Metallurgy of Massachusetts Institute of Technology.

ZENER, CLARENCE

Elasticity and anelasticity of metals. Chicago The University of Chicago Press, 1948. 170 p. illus. 23 cm. $5.00. 6913

Contents: Part I, Elasticity of metals: Formal relations between stress and strain. Low-temperature elastic constants in cubic metals. Temperature dependence of elastic constants. Micro-elasticity. Part II, Anelasticity of metals: Formal theory of anelasticity. Measurement of relaxation spectrum. Physical interpretation of anelasticity. Index.

Note: The first monograph published under the auspices of the Institute of Metals of the University of Chicago, which was set up in 1946 to correlate knowledge and research in the fields of chemistry, physics, and mathematics that is of interest in the study of metals. It deals chiefly with deviations from perfect elastic behavior, but elastic behavior is reviewed concisely as a prelude to the discussion of anelasticity. It embodies much original research by the author as well as the pertinent findings that have been published previously. Related literature is cited in numerous footnotes.

CORROSION

AMERICAN SOCIETY FOR METALS

Surface protection against wear and corrosion. Two series of educational lectures on surface protection against wear and surface protection against corrosion presented to members of the ASM during the thirty fifth National Metal Congress and Exposition, Cleveland, October 19 to 23 1953 Cleveland American Society for Metals, 1954 461 p. illus. 24 cm. $6.00. 6914

Contents: Introduction, by H. S. Avery. Surface protection against wear: Testing for wear resistance, by H. S. Avery. Selecting materials for wear resistance, by H. S. Avery. Electroplated coatings, by J. M. Hodderick. Anodized coatings, by J. M. Hodderick. Case hardening of steel by carburizing, by M. B. Bever and C. F. Floe. Case hardening of steel by carbonitriding and cyaniding, by M. B. Bever and C. F. Floe. Case hardening of steel by nitriding, by M. B. Bever and C. F. Floe. Diffusion treatments for wear protection, by M. B. Bever and C. F. Floe. Metallizing, by H. [illegible]. Selective heat treatment, by S. L. Case and H. J. Grover. Hard facing—Hard facing alloys—Tungsten carbide hard facing—Chromium carbide hard facing—Martensitic irons—Cobalt-base alloys—Nickel-base alloys—Martensitic and pearlitic steels—Austenitic stainless steels—Austenitic manganese steels, by H. S. Avery. Hard facing for hot wear resistance, by T. Gaynor. Surface protection against corrosion: Economic justification of protective coatings, by C. C. Harvey. Surface preparation and pretreatment of metals prior to painting, by A. J. Liebman. Organic coatings for normal service, by A. J. Eickhoff. Corrosion prevention by paint maintenance in severe industrial atmospheres, by K. Tator. Specifications for the painting of metals, by J. Bigos. Cathodic protection and galvanizing, by H. A. Robinson. Metallizing, by H. S. Ingham. Electrodeposited coatings, by F. Ogburn. Index.

Note: Essentially this book is an introductory text for working metallurgists and other technicians who are concerned in a practical way with the protection of metals against wear and corrosion. Little if any new information is presented; instead, the two parts are authoritative expositions of accepted and practical knowledge. Most of the authors are specialists associated with metallurgical research in industrial laboratories.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on atmospheric corrosion of non-ferrous metals. Presented at the Fifty eighth Annual Meeting American Society for Testing Materials, Atlantic City N J June 29 1955 158 p. illus. 23 cm. $2.75 6915

Contents: Introduction, by W. H. Finkeldey. Report of Subcommittee VI on atmospheric corrosion. Resistance of aluminum-base

alloys to 10-year atmospheric exposure, by C. J Walton and W King. Effect of 10-year marine atmosphere exposure on some aluminum alloys, by F M. Reinhart and G. A. Ellinger Effect of natural atmospheres on copper alloys 10-year test, by A. W Tracy The atmospheric corrosion of copper—results of 10-year tests, by D H. Thompson, A. W Tracy and J R. Freeman, jr. Atmospheric galvanic corrosion of magnesium coupled to other metals, by H. O Teeple. Galvanic couple corrosion studies by means of the threaded bolt and wire test, by K. G. Compton and A. Mendizza. The atmospheric corrosion of rolled zinc, by E. A. Anderson. The use of lead and tin outdoors, by G. O. Hiers and E. J Minarcik. Atmospheric corrosion behavior of some nickel alloys, by H. R. Copson.

Note Committee B-3 of the American Society for Testing Materials conducted a long program of exposure tests of non-ferrous metals and alloys aimed at providing information on possible correlations between accelerated laboratory tests of corrosion and atmospheric corrosion and the usefulness of changes in tensile properties as measures of corrosion, as well as the resistance of the metals and alloys to atmospheric corrosion. Twenty-four non-ferrous metals and alloys were exposed to the atmosphere in seven locations scattered across continental United States of America. The lengths of the exposure periods ranged from a little over 18 years to more than 20 years. Data on loss of weight of the exposed specimens, average corrosion rate, changes in tensile strength, etc., are tabulated in the Report of Subcommittee VI included in this volume. The other papers are, for the most part, interpretations of the data.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on atmospheric exposure tests on non ferrous metals. Pittsburgh spring meeting, American Society for Testing Materials, February 27, 1946 Philadelphia American Society for Testing Materials, 1946 145 p illus 23 cm $1 65 6916

Contents Introduction, by W H. Kirkebey The corrosion of rolled zinc in the outdoor atmosphere, by E. A. Anderson. The behavior of nickel and monel in outdoor atmospheres, by W A. Wesley Resistance of copper alloys to atmospheric corrosion, by A. W Tracy The use of lead and tin outdoors, by G. O. Hiers. The resistance of aluminum-base alloys to atmospheric exposure, by E. H. Dix, jr and R. B Mears. Tracking troubles in atmospheric corrosion testing, by P S. Olmstead, W K. Campbell, and H. G. Romig. General discussion. Appendices.

Note Data accumulated from ten years of atmospheric corrosion tests conducted in various parts of the United States of America by the A.S.T.M are made available in these papers. Each paper is accompanied by a report of the discussion at the meeting.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on corrosion of materials at elevated temperatures. Presented at the fifty third annual meeting American Society for Testing Materials Atlantic City, N J June 26 1950 Philadelphia American Society for Testing Materials 1951 121 p illus. 23 cm. (Special technical publication no 108) $1 50 6917

Contents Introduction, by C. T Evans, jr Coal ash corrosion of metals at elevated temperatures, by C. T Evans, jr Stress corrosion tests on turbo-supercharger materials in the products of combustion of leaded gasoline, by G. B Wilkes, jr Creep as surface dependent phenomenon, by M. R. Pickus and E. R. Parker The effect of environment on the stress-rupture properties of metals at elevated temperatures, by O. C. Shepard and W Schalliol. Preliminary studies of the effect of oxidizing sulfurous atmospheres on the rupture strengths of inconel "X" and inconel, by A. M. Talbot and E. N Skinner Hydrogenizing effect of steam on ferrous alloys at elevated temperatures, by C. A. Zapffe and F K. Landgraf. Oil ash corrosion of materials at elevated temperatures, by C. T Evans, jr. The growing rôle of protective coatings for metals in high-temperature service, by W N Harrison.

Note These original papers were written for the information of metallurgists and engineers engaged in the design and construction of machines and industrial equipment subject to extremely high temperatures. Based on investigations conducted by experts in the field, they provide technical information regarding the behavior of various engineering materials under elevated temperatures. Discussions are included, and the paper on oil ash corrosion contains an extensive bibliography

BORGMANN, CARL WILLIAMS, AND OTHERS

Corrosion of metals a series of five educational lectures on corrosion of metals presented to members of the A. S M during the twenty seventh National Metal Congress and Exposition, Cleveland, February 4 to 8, 1946. Cleveland American Society for Metals, 1946 181 p illus. 23 cm $3 50 6918

Contents. Basic principles of metallic corrosion, by C. W Borgmann. Effect of composition and environment on corrosion of iron and steel, by C. L Larrabee. Corrosion resistance of stainless steels and high nickel alloys, by W O. Binder Copper and copper alloys in corrosive environments, by H. L. Burghoff. Corrosion of light metals (aluminum and magnesium) by E. H. Dix, jr. Index.

Note The papers listed above summarize the latest available information and are supported with numerous charts, diagrams, tables of data, photographs, and literature references. They are addressed to professional metallurgists and other technical men in the metal industries.

BRASUNAS, ANTON DE S , AND E E STANSBURY, editors

Symposium on corrosion fundamentals a series of lectures presented at the University of Tennessee Corrosion Conference at Knoxville on March 1, 2, 3 1955 Knoxville The University of Tennessee Press, 1956 255 p. illus 24 cm $5 00 6919

Contents. Corrosion in metal structures, by E. E. Stansbury Nature of corrosion, by A. S. Brasunas. Atmospheric corrosion, by H. R. Copson. Coating for atmospheric corrosion protection, by J L Richardson. High temperature corrosion, by H. Inouye. Liquid metal corrosion, by E. E. Hoffman. Principles of cathodic protection, by M. Stern. Corrosion problems in steam power and in industrial boiler plants, by R. M. Lemon. Corrosion failures in chemical plants, by M. G. Fontana. Inhibition of metallic corrosion in aqueous media, by H. C. Gatos. Passivation of stainless steel, by N. A. Nielsen. The influence of mechanical factors on corrosion, by J. J. Harwood. Geometric factors in electrical measurements relating to corrosion and its prevention, by W J Schwerdtfeger and I. A. Denison. Cathodic protection principles of system design, by H. C. Van Nouhuys. Use of plastics and plastic liners for corrosion protection, by R. B. Seymour. Trade names. Index.

Note A fundamental and at the same time practical survey of metallic corrosion is presented in this book. The basic knowledge of the subject is emphasized, but it is closely related to anticorrosive practices in industry. The authors of the papers addressed themselves primarily to graduate engineers.

LOGAN, KIRK HAROLD

Underground corrosion. Washington, D C. Government Printing Office, 1945 312 p. illus. 24 cm. (United States. National Bureau of Standards. Circular C450) $3 00 6920

Contents Introduction. Investigations of underground corrosion. Causes of underground corrosion. Investigations by the National Bureau of Standards. Results of field tests on ferrous materials. Interpretation of results on ferrous materials. Results of field tests on miscellaneous nonferrous materials. Results of field tests on protective coatings. Laboratory studies of corrosion. Soil surveys and tests. Determination of the condition of pipe line. Tests of coatings. Prevention of corrosion. Cathodic protection. References. Appendices Cooperators with the National Bureau of Standards in the corrosion investigations. Description of soils at test sites. Methods employed in cleaning of the National Bureau of Standards soil-corrosion specimens. Accumulation of data, calculations, and methods of reporting the data. Construction of the Denison corrosion cell. Denison's modification of the Hickling apparatus for measuring potentials. Index.

Note: This circular is an assembly of the results of the National Bureau of Standards investigations of underground corrosion which began in 1922, and is published for the information of persons concerned with the installation and repair of underground structures. In addition to a report on research results at the National Bureau of Standards and elsewhere, the book presents a general discussion of the corrosion problem and the conclusions to be drawn from the data.

NATIONAL ASSOCIATION OF CORROSION ENGINEERS

Bibliographic survey of corrosion 1952–1953 a compilation of corrosion abstracts. Houston, Texas National Association of Corrosion Engineers, 1956 382 p. 28 cm. $12.50. 6921

Contents: General. Testing. Characteristic corrosion phenomena. Corrosive environments. Preventive measures. Materials of construction. Equipment. Industries.

Note: Listed here is the fifth volume in this useful bibliographic series which provides a guide to the world literature on corrosion. As would be expected from the subtitle, most of the entries include abstracts of the indexed articles. The abstracts vary in length from single sentences to several paragraphs. Each volume in the series is independent of the others and contains its own index to authors and to subjects.

ROBERTSON WILLIAM D editor

Stress corrosion cracking and embrittlement. A symposium arranged by the Corrosion Division of the Electrochemical Society, Boston, October 1954 New York John Wiley & Sons, Inc., 1956 202 p. illus. 24 cm. (The Electrochemical Society series) $7.50. 6922

Contents: The phenomenon and mechanism of stress corrosion cracking, by J. J. Harwood. The structure of grain boundaries, by B. Chalmers. Structural factors associated with the stress corrosion cracking of homogeneous alloys, by W. D. Robertson. Stress corrosion cracking in heterogeneous alloys, by L. Graf. Metallurgical aspects of stress corrosion cracking in aluminum alloys, by E. C. W. Perryman. The mechanism of stress corrosion cracking observed in a magnesium alloy, by D. K. Priest. The role of boundary adsorption in stress corrosion cracking, by R. Speiser and J. W. Spretnak. Stress corrosion cracking of austenitic stainless steels in aqueous chloride solutions, by T. P. Hoar and J. G. Hines. The phenomenon of stress corrosion cracking in austenitic stainless steels, by C. Edeleanu. Stress corrosion cracking of mild steels, by R. N. Parkins. On the mechanism of chemical cracking, by U. R. Evans. Hydrogen in iron and its alloys, by W. R. Heller. Ductility of steel with varying concentrations of hydrogen, by T. Toh and W. M. Baldwin, Jr. Laboratory techniques for the investigation of stress corrosion cracking, by H. R. Copson. Index.

Note: Although metallurgists working in the United States of America are predominant in the list of contributors to this volume, there are four contributions from England, one from Canada, and one from Germany. A cross-section of current international thought is presented. In many cases the authors have described the results of their own researches and have correlated them with the work of others. Together the 14 papers represent a major contribution to the knowledge of stress corrosion cracking and embrittlement of metals and alloys.

SPELLER, FRANK NEWMAN

Corrosion causes and prevention. Third edition. New York McGraw Hill Book Company Inc., 1951 686 p. 24 cm. $12.00. 6923

Contents (abridged): Nature and mechanism of corrosion—theories of corrosion. Influence of methods of manufacture and treatment. Influence of factors internal to the metal—composition. Influence of factors external to the metal—classification of corrosion. Principles and methods of corrosion testing. Prevention of corrosion in the [illegible] in closed water systems by removal of dissolved gases—in steam generators—in steam and hot-water heating systems—in chemical industries—underground. Stray-current corrosion (electrolysis). Cathodic protection. Appendix. Index.

Note: Since 1926, when the first edition was published, this work has been known as an authoritative, useful presentation of the knowledge of corrosion of the ferrous metals. It is written from the practical viewpoint, but the theoretical aspects are adequately outlined. In the present edition there are one new chapter and a fair amount of revision. The type has been reset.

UHLIG HERBERT HENRY editor

The corrosion handbook edited by Herbert H. Uhlig and sponsored by The Electrochemical Society Inc. New York John Wiley & Sons Inc., 1948. 1 188 p. illus. 23 cm. $16.00. 6924

Contents (abridged): Glossary of terms used in corrosion. Abbreviations. Corrosion theory. Corrosion in liquid media, the atmosphere, and gases. Special topics in corrosion. High-temperature corrosion. High-temperature resistant materials. Chemical resistant materials. Corrosion protection. Corrosion testing. Miscellaneous information. General tables. Index.

Note: This reference tool brings together a wide range of data and technical information—some of it hitherto unpublished—regarding the behavior of metals and alloys in various surroundings, and the methods utilized for corrosion control. Papers have been contributed by over 100 engineers and research workers, and related literature is widely cited. Although the theories of metal corrosion and corrosion testing methods are discussed, the material is concerned primarily with the practical aspects of the subject.

POWDER METALLURGY

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on powder metallurgy. Philadelphia The American Society for Testing Materials, 1943 22 p. illus. 23 cm. $1.50 6925

Contents: The fundamentals necessary to apply powder metallurgy, by C. Hardy. The effect of pressure on the properties of compacts, by C. W. Balke. The influence of homogenization upon the physical properties of copper-nickel powder alloys, by F. N. Rhines and R. A. Meussner. The effect of particle size on the shrinkage of metal compacts, by P. E. Kalischer. Alloy powders, by T. H. Lasher. Metal powder bearings in America, by J. F. Kuzmick. The hot pressing of metal powders, by W. M. Pratt.

Note: Brief technical papers which include results of original experimental research and references to the application of powder metallurgy to the mass production of machine parts.

CONFERENCE ON POWDER METALLURGY MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Powder metallurgy papers presented at the 1940 and 1941 conferences on powder metallurgy held at the Massachusetts Institute of Technology edited by John Wulff Cleveland The American Society for Metals, 1942 622 p. illus 23 cm. $7.50. 6926

Contents (abridged): Glossary of powder metallurgy, by the editor. Developments in metal powders and products, by H. E. Hall. Effect of time, temperature, and pressure upon the density of sintered metal powders, by F. C. Kelley. Powder production and classification, by D. O. Noel. Metallic catalysts, by P. H. Emmett. Magnetic powders and production of cores for inductance coils, by E. E. Schumacher. Determination of the surface area and the average particle size of finely divided metals by use of low temperature adsorption isotherms, by P. H. Emmett. The electron microscope as a metallurgical tool, by G. G. Harvey. Sintering furnaces, by H. M. Webber. Alloy steel from powders, by J. Wulff. Manufacture of tungsten metal, by P. E. Wretblad. Cemented carbides, by L. W. Engle. Patent survey of powder metallurgy by A. W. Deller. Subject index.

Note: This volume contains 33 papers by specialists on almost as many aspects of powder metallurgy. Most of the papers are accompanied by bibliographies.

GOETZEL, CLAUS GUENTER

Treatise on powder metallurgy New York Interscience Publishers, Inc., 1949–52 3 v illus 23 cm. Vol I, $21 00, vol II, $25 00 vol III, $25 00 Set, $66 00 6927

Contents (abridged) Volume I, Technology of metal powders and their products. Principles. History Methods of powder production. Characteristics and properties of powders. Methods of testing powders. Powder conditioning and function of addition agents. The molding of powders into solid forms. Dies and punches. Presses. Hot-pressing apparatus and techniques. Sintering practices. Subsequent working. Finishing treatments. Author index. Subject index. Volume II, Applied and physical powder metallurgy Refractory metals and alloys. Hard metals and compositions. Electrical materials and products. Magnetic materials and products. Materials for structural parts. Porous products. Friction products. Dental alloys. Comparison of physical properties of sintered and fused industrial metals and alloys. Stress analysis of sintered metal structures. Appraisal of testing methods for sintered metals. Theories of bonding and sintering. The future of powder metallurgy Author index. Subject index. Volume III, Classified and annotated bibliography: Part I, Literature survey Part II, Patent survey Patent cross index. Subject index. Name index.

Note A comprehensive survey of the science and technology of powder metallurgy It is based on the literature and on the author's personal experiences in the field. Although the pertinent theory is adequately covered, most of the space in Volumes I and II is taken up with the technical aspects. Manufacturing, fabricating, and testing methods are presented in detail. Statements in the text are keyed to the literature citations. There are 628 figures in Volumes I and II. The bibliography is classified and contains full indexes. There are 899 pages in this volume.

IRON AND STEEL

AMERICAN FOUNDRYMEN'S ASSOCIATION

Alloy cast iron handbook, reviewed and revised by the Alloy Cast Irons Committee, Gray Iron Division American Foundrymen's Association Second edition. Chicago American Foundrymen's Association 1944 282 p illus 23 cm. $4 50 6928

Contents. Metallurgical principles of the effects of alloying elements in cast iron. Effects of alloying additions on cast iron. Effects of alloys on the physical and mechanical properties of gray irons. Ladle inoculants. White and chilled iron castings. Heat treatment of alloy cast iron. Foundry practice for alloy cast irons. Specific applications of alloy cast irons. Index.

Note A book covering the manufacture, uses, and properties of modern alloy cast irons, with extensive bibliographies. Elements discussed include aluminum, bismuth, carbon, chromium, cobalt, copper magnesium, manganese, molybdenum, nickel, phosphorus, silicon, sodium, sulfur titanium, tellurium, tungsten, vanadium and zirconium. The second edition not only revises and brings up to date the 1939 edition but also emphasizes methods of conserving alloys which the war emergency made necessary

AMERICAN INSTITUTE OF MINING AND METALLURGICAL ENGINEERS

Basic open hearth steelmaking by the Physical Chemistry of Steelmaking Committee Iron and Steel Division, A I M E Second edition completely revised and enlarged. Edited by W O Philbrook and M B Bever in collaboration with H H Emerick and B M Larsen (Sponsored by the Seeley W Mudd Memorial Fund) New York The American Institute of Mining and Metallurgical Engineers 1951 940 p illus 26 cm. $8 00 6929

Contents: Part I, Practice Basic open-hearth furnaces, by H. K. Work and H. M. Banta. Survey of operations, by T S. Washburn. Open-hearth refractories, by R. B. Sosman and others. Open-hearth fuels, combustion, and instrumentation, by H. V Flagg and others. Raw materials, by T L. Joseph and others. Slag control, by W O. Philbrook and F M. Washburn. Charging and melting practice, by W O. Philbrook and others. Refining practice, by W O. Philbrook and others. Finishing and deoxidation practice, by H. B. Redding and R. K. Kulp. Molds and pouring practice, by H. J. Forsyth and L. G. Ekholm. Ingot structure and segregation, by J. W Halley Nonmetallic inclusions, by C. E. Sims. Properties of steel as influenced by constitution, by A. G. Forrest and R. W Farley Part II, Principles. Physical chemistry of high-temperature reactions, by J Chipman. Kinetics of metallurgical processes, by L. S. Darken. Physical chemistry of liquid steel, by J. Chipman. Physical chemistry of slag-metal reactions, by G. Derge and M. Tenenbaum. Physical chemistry of open-hearth refractories, by R. B. Sosman. Thermal changes in melting and refining, by L. S. Darken. Gas flow and heat transfer by B. M. Larsen. Combustion and utilization of fuel, by B. M. Larsen. Rates of open-hearth reactions, by B. M. Larsen. Index.

Note: In this book, the most important process for the manufacture of steel is described both for workers with only practical interests and for supervisors and metallurgists who need more basic understanding. The work is a co-operative one, and the authors of the various chapters are prominent metallurgists, chemists, etc., currently associated with steel manufacturing or with the teaching of metallurgy in colleges of engineering. Useful literature lists are included in the chapters. The first edition was published in 1944 Extensive revisions were made in preparing this edition, and the book is now about 300 pages longer

AMERICAN SOCIETY FOR METALS

Modern steels, manufacture, inspection, treatment and uses, a series of lectures organized by Pittsburgh Chapter, A. S. M., edited by Ernest E Thum Cleveland The American Society for Metals, 1939 374 p. illus. 23 cm $5 00 6930

Contents Raw materials and production of pig iron, by M. W Lightner Steel making process, by M. W Lightner. Steel pouring, by G. R. Fitterer Hot working, by E. E. Thum. Inspection and testing of steel, by G. R. Fitterer. Metallography by F H. Allison. Heat treatment, by A. W Demmler Alloy steels, stainless steels, and tool steels, by J P Gill.

Note: This series of papers on the manufacture, inspection, treatment and use of modern steels, prepared by experts in the field, will be of interest to both the metallurgist and general reader It is also intended for use as a college text and contains at the end of each section suggestions for additional reading and exercises. There is an index.

AMERICAN SOCIETY FOR TESTING MATERIALS

Symposium on evaluation tests for stainless steels, presented at the fifty second annual meeting of the American Society for Testing Materials Atlantic City June 30 1949 Philadelphia American Society for Testing Materials 1950 231 p. illus. 23 cm. (American Society for Testing Materials. Special technical publication no. 93) $2 50. 6931

Contents. Introductory summary by F L. LaQue. Present knowledge of low-carbon 18-8, by H. W Gillett. Corrosion resistance and mechanical properties of low-carbon austenitic stainless steels, by D C. Beck and others. Accelerated corrosion testing of chromium-nickel stainless steel weldments, by F K. Bloom and M. E Carruthers. An appraisal of methods for evaluating the corrosion resistance of stainless steels, by M. H. Brown and others. Some observations on tests for intergranular susceptibility of 18-8 Mo stainless steels, by H. Ebling and M. A. Scheil. Influence of carbon and molybdenum on the intergranular corrosion resistance of austenitic chromium-nickel steels with and without columbium, by W O. Binder and C. M. Brown. Comparative corrosion resistance of stainless steels in various acids, by E. B. Mears and others. Comparison of plant corrosion test results on austenitic stainless steels with results of Huey and Strauss tests, by H. O. Teeple. Results of some plant corrosion tests of welded stainless steels, by

G. F. Comstock. Testing multiple specimens of stainless steels in modified boiling nitric acid test apparatus, by W. R. DeLong. General discussion.

Note: The symposium of which this publication presents the papers was sponsored by A.S.T.M. Committee A-10 on Iron-Chromium, Iron-Chromium-Nickel, and Related Alloys. Its purpose was to present critical appraisal of some of the testing methods in use for evaluating certain corrosion-resistant characteristics of these alloys.

BAIN EDGAR COLLINS

Functions of the *alloying elements in steel.* Cleveland American Society for Metals *1939 312 p. illus. 23 cm. $5.00* 6932

Contents: Fundamental characteristics of steels. Alloying elements in unhardened steels. Effects of alloying elements in forming austenite. Effects of the elements in hardening steel. Effects of alloying elements in tempering.

Note: In this volume the author has undertaken to provide the reader with knowledge of the common alloying elements and their basic functions in steel. He directs special attention toward the improvement of the mechanical properties of steel, and toward those alloy steels which are usually hardened and tempered.

BRAY JOHN L.

Ferrous process metallurgy New York John Wiley & Sons, Inc., 1954 414 p. illus. 24 cm. $6.50 6933

Contents: Raw materials. The iron blast furnace. Wrought iron. The Bessemer process. The basic open hearth process. The acid open hearth process. Electric furnaces. Ingots and ingot molds. Index.

Note: An engineering college textbook about the making of iron and steel. Processes now in use and the equipment used in them are described in considerable detail and in lucid style. The viewpoint is that of engineers and other technicians engaged in steelmaking, and such aspects as the advantages and disadvantages of tilting open-hearth furnaces are discussed both expertly and practically. The book contains 90 figures, none of which is the reproduction of a photograph. In place of photographs the author has used clear line drawings which better illustrate principles and construction details.

BRIGGS CHARLES WILLERS

The metallurgy of steel castings. New York McGraw-Hill Book Company Inc., 1946. 633 p. illus. 23 cm. (Metallurgy and metallurgical engineering series Robert F Mehl, consulting editor) $12.00 6934

Contents: Basic practice for the production of steel for steel castings. Acid practice for the production of steel for steel castings. Gases, deoxidation, porosity and inclusions. Tapping and pouring. Liquid cast steel—liquid contraction and fluidity. The solidification of steel castings. Gates and risers. Contraction in the solid state. Hot-tear formation. Steel molding sands and cores. Effect of molten steel on sands, cores, and washes. Casting defects. Cleaning, chipping, and grinding of steel castings. Heat-treatment and metallography. Welding of steel castings. Inspection and properties. Index.

Note: A comprehensive survey of the technology of the manufacture of steel castings. Methods of making casting steel in converters, open-hearth furnaces, and electric furnaces are discussed and casting processes are described in detail. Technical and metallurgical control techniques as means of assuring quality are stressed. The author is Technical and Research Director of the *Steel Founders' Society of America.*

BULLENS, DENISON KINGSLEY AND OTHERS

Steel and its heat treatment, by D. K. Bullens and the metallurgical staff of the Battelle Memorial Institute. Fifth edition. New York John Wiley & Sons Inc. 1948–49 3 v illus. 23 cm. Vol. I, $9.75 vol. II $6.00 vol. III $10.50 6935

Contents (abridged): Volume I, Principles. Temperature conversion table. Steel numbering systems. Metallurgical journals. Section I, Terminology: Preliminary definitions. Equilibrium diagram. Nonequilibrium definitions and considerations. Metallographic structures and associated properties. Suitability of steel for heat treatment. Section II, Testing: Limitations of conventional tests. Conventional tests. Notched-bar impact testing. Special tests. Section III, Heat treatment in the pearlitic domain, below the critical range: Coldworked steel and its heat treatment. Precipitation hardening. Section IV Heat treatment involving transformation of austenite: Hardenability. S curves. So-called calculation of hardenability. Pretreatment of austenite, homogenization, overheating. Austenitic grain size and grain growth. Full annealing. Normalizing. Austempering, bainite, slack quenching. Quenching, martempering. Ms-Mf retained austenite. Spheroidizing, tempering, graphitization. Let us keep our eyes open. Index. Volume II, Tools, processes, control. Temperature conversion table. Steel numbering systems. Metallurgical journals. Section I, Control of surface conditions. Need for surface strength. Flame and induction hardening. Nitriding and cyaniding. Carburizing processes. Heat treatment of carburized steel. Controlled atmospheres. Fused baths. Section II, Heating and cooling: General considerations. Proper heating in forging and rolling practice. Sources of effective heat in heat treating. Control of the cooling phase. Section III, Heat treatment of ferrous castings. Quenching steel castings. Graphite and steels. Section IV Other applications of heat treatment. Heat treatment in relation to welding and machining. The human element. Index. Volume III, Engineering and special purpose steels. Section I, Engineering alloy steels. Limitations of carbon steels. Alloy effects on equilibrium and nonequilibrium diagrams. Alloying elements present in minor percentages. Behavior and costs of some individual alloying elements. Alloy steels for carburizing. Section II, Constructional alloy steels for heat treating: Simple alloy steels. Binary or double-alloy steels. Complex alloy steels. Steel castings. Toughness and workability at high hardness, quenching stresses and quenching cracks. Steels for quenched and tempered springs. Alloy steels for carburizing. Section III, Special steels: Nitriding steels. Steels for low-temperature service. Ferritic steels for high-temperature use, their properties and weldability. Austenitic steels for high-temperature use. Steels for corrosion and high-temperature resistance, especially corrosion. Steels for wear resistance. Carbon and intermediate tool and die steels. High-speed tool steels. Steels for magnetic uses. Index of steels. Subject index.

Note: The first edition of this work was published in 1916. As successive editions have appeared, it has become solidly established as a useful source of information for practical metallurgists, engineers, and other persons who desire reliable information about the heat-treating of steel. It is intended primarily for men who have picked up their knowledge of steel on the job, but appeals also to men who have studied metallurgy in college. Basic theory is treated in an elementary manner, and the various effects of heat treatment are related to it insofar as that is possible. Extensive bibliographies are included. This edition shows very extensive revision when compared to the fourth edition published in 1938.

CAMP JAMES MCINTYRE AND C B FRANCIS

The making, shaping and treating of steel a complete revision based on the original text. Sixth edition. Pittsburgh United States Steel Corporation, 1951 1584 p. illus. 23 cm. 6936

Note: A comprehensive reference book on the methods and products of the steel industry. It covers the basic chemistry and physics, the materials, and the processes of making pig iron and steel, the processes of forming the steel into commercially useful forms such as rails, structural shapes, sheets and wire, heat treatment, testing, and the special alloy steels. There are many illustrations and many graphical tabular presentations of data. The book is written in the terminology of the industry and is intended for the use of metallurgists, engineers and other readers with technical backgrounds in metallurgy. It was first published in 1920 and was gradually revised and enlarged in successive editions. The sixth edition represented a major revision. The seventh edition containing some revisions but not as many as the sixth edition was published in 1957 1,048 p., $7.50.

CASE, SAMUEL L., AND KENT R. VAN HORN

Aluminum in iron and steel. New York Published for The Engineering Foundation by John Wiley & Sons Inc. 1953 478 p. illus. [illegible] cm. (Alloys of iron research new monograph series) $13.00. 6937

Contents. Part I, Aluminum as deoxidizer in iron and steel The deoxidation of steel by aluminum. Oxide inclusions in steel deoxidized with aluminum. Sulphide and nitride inclusions in steel deoxidized with aluminum. The role of aluminum in austenitic grain-size control. Effect of aluminum on notch sensitivity and related properties of steel. Effect of aluminum on aging of steel. Some other consequences of the use of aluminum as deoxidizer Part II, Aluminum as an alloying element in iron and steel The constitution of binary and complex iron-aluminum alloys. The *manufacture of the simple* and complex iron-aluminum alloys. Aluminum in heat-resisting alloys. Aluminum in permanent-magnet alloys. The function of aluminum in nitriding steels. The aluminum coating of steel. Miscellaneous uses of aluminum as an alloying element in iron and steel. Bibliography Name index. Subject index.

Note. This new series under an old title is planned, according to its advisory committee, "to provide metallurgists and engineers with concise but comprehensive summaries of available data, as reported in the technical literature of the world, on the effect of selected metals on carbon steel and on simple and complex alloy steels and cast irons. This first volume on aluminum includes, in addition to the text, 341 references, arranged chronologically from 1897 to July 1952 many important phase diagrams, tables of useful data, graphs of research results, and photographs of particular microstructures. The first-named author is Technical Adviser for Battelle Memorial Institute, and the second-named is Director of Research for the Aluminum Company of America.

Comstock, George F

Titanium in iron and steel. New York Published for the Engineering Foundation by John Wiley & Sons, Inc., 1955 294 p illus 24 cm. (Alloys of iron research, monograph series, Frank T Sisco, director and editor) $9 00 6938

Contents Introduction. Titanium as deoxidizer in rimmed and killed wrought steels. The effects of titanium on nitrogen and sulphur in steel. Titanium in cast steel. Titanium in cast iron. General effects of titanium as the sole alloying element in pearlitic steels. Titanium in low-alloy steels. Carbide stabilization by titanium in low-alloy steels. Carbide stabilization by titanium in unalloyed steels or steels of less than 4% alloy content. Carbide stabilization by titanium in steels containing over 4% chromium. Titanium in precipitation-hardening steels and in complex heat-resisting alloys. Bibliography Name index. Subject index.

Note: An authoritative survey of the accumulated knowledge on titanium as deoxidizer and alloying element in iron and steel. Addressed to metallurgists who are working at the research and executive levels, the book is very compactly written and is designed primarily though not altogether, for reference. In addition to wide range of specific data, considerable amount of "know-how" is included for example, "with tilting furnace the slag should be held back until after the steel is tapped for if the alloy becomes coated with slag it is not effective as deoxidizer. The bibliography is arranged by year and all important statements and data in the text are keyed to it. The name index includes the authors of the cited literature.

Crafts, Walter, and John L Lamont

Hardenability and steel selection New York Pitman Publishing Corporation, 1949 279 p. illus 24 cm. (Pitman metallurgy series, Frank T Sisco, advisory editor) $6 00 6939

Contents. The hardenability pattern. Heating for hardening. The transformation of austenite. Quenching. Hardness and hardenability Hardenability test methods. Jominy hardenability control. Tempering after hardening. Mechanical properties and hardenability Factors in the selection of steel. Appendices. Bibliography Name index. Subject index.

Note: As these authors point out, the heat treatment of steel was known in ancient times and the operation of quenching and subsequent tempering are described rather fully in early classical writings. However, it is only in recent years [illegible] heat treating processes have been thoroughly studied and [illegible] correlated with conditions and results to the extent [illegible] of steel of a given composition can be predic[illegible] in the two decades, and especially in [illegible] has been made on the perfo[illegible] Leonardo[illegible] tury Laconically this book [illegible]

knowledge. It is organized and written primarily for engineers and other technically trained persons. The text is supplemented by a large amount of data presented tabularly and graphically The bibliography contains 139 references.

Enos, George Magee

Visual examination of steel. A series of three educational lectures presented to members of the American Society for Metals during the twenty first National Metal Congress and Exposition, Chicago, Illinois, October 23 to 27, 1939 Cleveland The American Society for Metals, 1941 123 p illus. (part col'd) 23 cm $3 00 *6940-1*

Contents. Surface of metals. Study and photography of rough surfaces at low magnifications. Fractures. Macro etching. Contact etching and printing, and other tests.

Note: This small volume is concerned primarily with one phase of metallographic technique, namely macroscopic examination in which the magnification is less than 10 diameters. The author has discussed good and poor techniques and their effect on the conclusions of the examiner Numerous photographs illustrate the various defects which occur in steel. There is brief bibliography and an index.

Grossman, M A.

Principles of heat treatment. A series of educational lectures on the principles of heat treatment of steels, first presented to members of the ASM during the seventeenth National Metal Congress and Exposition Chicago, 1935 and later extended to include the more recent developments Revised 1953 Cleveland American Society for Metals, 1953 303 p illus 23 cm. $6 00 *6942*

Contents Principles of hardening. Hardenability and quenching. Transformations during cooling. Tempering after quench-hardening. Normalizing and annealing. Case-hardening. Surface-hardening. Grain size. Determination of transformation diagrams. Appendix: The meaning of hardness, strength and toughness. References. Index.

Note In this book, written by an expert who was associated with the United States Steel Corporation during his lifetime, fundamental metallurgical phenomena are related to heat treatment methods and their effects upon steel. The various methods are specifically described but the main subject is why they transform steel as they do. The original lectures were addressed to metallurgists and the terminology of metallurgy was freely used. The book is nevertheless an introduction to its subject. It was first published in 1935 then revised in 1937 1940 and 1953

Hall, A. M

Nickel in iron and steel New York Published for The Engineering Foundation by John Wiley & Sons, Inc. 1954 595 p. illus. 24 cm (Alloys of iron research, new monograph series, Frank T Sisco director and editor) $14 00 6943

Contents Introduction. The melting and working of nickel alloy steels. Physical properties of irons and steels containing nickel. Metallography and heat treatment of wrought nickel steels—principles—practice. Room temperature tensile properties of quenched and tempered wrought nickel steels. Other room-temperature mechanical-property data on steels containing nickel. Effect of temperature on the mechanical properties of nickel steels. Corrosion of low-alloy steels and cast irons containing nickel. Welding steels containing nickel. Miscellaneous fabricating operations for steels containing nickel. Cast steels containing nickel. The history constitution, structure, and manufacture of cast iron containing nickel. The mechanical properties of cast irons containing nickel. Heat treatment, machinability wear resistance, and heat [illegible] of cast iron containing nickel. Bibliography Name Subject index.

Note: The second volume published of the new Alloys of Iron research monograph series. It is a compactly written reference volume on the iron and steel alloys generally classed as constructional steels and nickel cast irons. The first chapter is an outline of the main facts about the nickel minerals and the refining of nickel ores. The topics covered by the other 14 chapters are adequately indicated in their titles. In all chapters except the first, extensive use has been made of graphs and tables, hence, the quantity of information presented is greater than the number of pages might be taken to indicate. Literature sources are scrupulously given for all data. The bibliography is arranged chronologically and includes literature published as recently as 1933. The "Name Index" refers to citations of authors' writings both in the text and in the bibliography.

LUNDELL, GUSTAV ERNST FREDRICK AND OTHERS

Chemical analysis of iron and steel, by Gustav E. F. Lundell, James Irvin Hoffman and Harry Aaron Bright. New York John Wiley & Sons, Inc., 1931 641 p. illus. 24 cm. $11.50. 6944

Contents: Part I, General considerations. Part II, Methods for the determination of the constituents of irons and steels. Part III, Methods for the determination of oxygen, oxide inclusions, hydrogen and nitrogen. Part IV, Methods for the analysis of iron-alloys. Part V, Methods for the analysis of ores, limestones, fluorspar, refractories, slag, molding sands, and coal and coke. Index of authors. Index of subjects.

Note: This comprehensive book is intended chiefly for works chemists, whether those just beginning their career or those who have had considerable experience in the ferrous analysis field. The aim of the authors has been to give rapid methods suitable for routine analysis as well as methods that must be used in making analyses of the highest accuracy. Since no method of chemical analysis can be applied indiscriminately each procedure is discussed at sufficient length to enable the analyst to decide whether it can be applied to the determination in hand or, if not, whether it can be modified so as to be made suitable. Realizing that new alloys bring new problems, the authors have tried to lay down some general principles which will guide the analyst confronted with still newer alloys.

SAUVEUR, ALBERT

The metallography and heat treatment of iron and steel. Fourth edition. New York McGraw Hill Book Company Inc., 1935 531 p. illus. 27 cm. $15.00. 6945

Contents: Pure metals. Impure metals. Pure and impure iron. Wrought iron. Steel. Impurities in steel. The thermal critical points of iron and steel (their occurrence). The thermal critical points of steel (their causes). The thermal critical points of iron and steel (their effects). Cast steel. The mechanical treatment of steel. Heat treatment. Annealing and normalizing. The hardening of steel. The tempering of hardened steel. Theories of the hardening of steel. Miscellaneous heat treatments. The cementation and case hardening of steel. Alloy steels. Cast iron. Impurities in cast iron. Malleable cast iron. Constitution of metallic alloys. Equilibrium diagram of iron-carbon alloys. The phase rule. Appendixes: Manipulations. The optics of metallography. Tentative recommended practice for thermal analysis of steel. Index.

Note: A comprehensive treatment of the metallography of iron and steel, covering structure of metals, processes, manipulations, and apparatus. The book is intended primarily for students and for the manufacturers and users of steel, but it will also be of value to the interested layman. In this edition many of the chapters have been revised to meet recent developments, and two chapters have been added dealing with metallic crystals and the hardening of steel. There are numerous photographs of magnified cross-sections of various types of iron and steel.

SEABRIGHT LAWRENCE H.

The selection and hardening of tool steels. New York McGraw Hill Book Company Inc., 1950 263 p. illus. 24 cm. $7.00. 6946

Contents: Introduction, classification of tool steels: Primary steel requirements. Composite chemical analysis of steels in each group. Tool steels classified by wear-toughness ratio. Chemical composition of representative tool steels. The wear-toughness ratio in use. Recommended steels for various applications. Part I, Water-hardening steels: Group I, Maximum wear resistance—movement in hardening unimportant. Group II, General cutting tools—movement in hardening unimportant. Group III, General die work—movement in hardening unimportant. Group IV, Maximum toughness—movement in hardening unimportant. Part II, Oil- and air-hardening steels: Group V, Maximum wear resistance—movement in hardening important. Group VI, General cutting tools—movement in hardening important. Group VII, General die work—movement in hardening important. Group VIII, Maximum toughness—movement in hardening important. Part III, High-speed and hot-work steels: Group IX, Maximum wear resistance—resistance to high temperatures important. Group X, General cutting tools—resistance to high temperatures important. Group XI, General die work—resistance to high temperatures important. Group XII, Maximum toughness—resistance to high temperatures important. Appendix: Hardness conversion table. Temperature conversion table. Producers and distributors. Index of tool steels. Subject index.

Note: A compact reference book designed as a systematic guide to the composition and properties of the commercially available tool steels. Information on the heat-treatment and working of the individual steels is included also. The book will be useful to tool designers, metallurgists, and other technically trained people whose work requires an understanding of tool steels. In the "Index to tool steels" steels marketed in the United States of America, under trade names are identified and the names of the suppliers are given.

ZAPFFE, CARL ANDREW

Stainless steels an elementary text for consumers. Cleveland American Society for Metals 1949 368 p. illus. 23 cm. $5.00 6947

Contents: Historical background of the stainless steels. The corrosion resistance of the stainless steels. The metallurgical constitution of the stainless steels. Martensitic stainless steels. Ferritic stainless steels. Austenitic stainless steels. Production, fabrication and finishing. Glossary. Bibliography. Author index. Subject index.

Note: The consumers referred to in the title are not the ultimate purchasers of pots, pans, automobiles, etc., but manufacturers and purchasing agents who buy stainless steels for fabrication into finished products. The book provides a semitechnical description of the various important alloys known as stainless steels. The emphasis is on their properties, but a considerable amount of space is given also to the history of the stainless steels and to the ways in which they are manufactured. An excellent glossary and an extensive bibliography of the periodical and patent literature are included.

VARIOUS METALS

ABKOWITZ STANLEY

Titanium in industry technology of structural titanium. By Stanley Abkowitz, John J Burke and Ralph H. Hiltz, jr Princeton D Van Nostrand Company Inc., 1955 224 p. illus. 24 cm. $5 75 6948

Contents: Growth of the industry and production techniques. Properties of titanium and its alloys. Alloying and heat-treatment. Hot and cold shaping. Casting and powder metallurgy. Joining. Machining and grinding. Surface properties. Analytical and metallographic techniques. Selection of materials and applications. Index.

Note: A brief but authoritative outline of the present state of knowledge and practice pertaining to titanium as a structural material. There are two preliminary chapters which provide background information on the growth of the industry, methods of extracting and refining the metal, and the physical, chemical and mechanical properties of the refined metal and its alloys. The rest of the book is devoted largely to descriptions of fabricating processes. There are chapters on heat treating, shaping, casting, joining, machining, etc., and two short chapters on analytical techniques and on selection of titanium and its alloys for various applications. The authors are associated with the Watertown Arsenal Laboratory which has been a center for research in the metallurgy of titanium and the development of fabricating methods.

AMERICAN SOCIETY FOR METALS

Physical metallurgy of aluminum alloys. A series of five educational lectures on physical

metallurgy of aluminum alloys presented to members of the A. S M during the twenty eighth National Metal Congress and Exposition, Atlantic City Cleveland American Society for Metals, 1949 247 p illus 23 cm $5 00 6949

Contents Equilibrium diagrams of aluminum alloys, by W L. Fink. Metallography of aluminum alloys, by F Keller. Commercial aluminum casting alloys, by W E. Sicha. Commercial wrought aluminum alloys, by J A. Nock, Jr Thermal treatment of aluminum alloys, by E. H. Dix, Jr

Note A collection of lectures originally addressed to men concerned in practical ways with metallurgical research and design. The pertinent literature has been consulted and is referred to in the discussions. Especially impressive is the bibliography of 178 items on the determination and interpretation of equilibrium diagrams. The lecture on metallurgy includes many excellent microphotographs of structure.

AMERICAN SOCIETY FOR METALS

Zirconium and zirconium alloys. A symposium on zirconium and zirconium alloys presented to members of the ASM during the eighth Western Metal Congress and Exposition, Los Angeles March 23–27, 1953 Cleveland American Society for Metals, 1953 354 p illus 23 cm $7 50 6950

Content Zirconium ores, by O B Ralston The preparation of zirconium powder by H. S. Kalish. The extractive metallurgy of zirconium by the electrolysis of fused salts, by M. A. Steinberg and others. Some aspects of the iodide, or the hot wire, process for the manufacture of zirconium, by W M. Raynes The manufacture of zirconium sponge, by S. M Shelton and E. D Dilling. Consumable-electrode arc melting of zirconium metal, by W W Stephens and others. Fabrication of zirconium, by R. B. Gordon and W J Harford. Effect of hydrogen on the embrittlement of zirconium and zirconium-tin alloys, by W L. Mudge, Jr Determination of hydrogen in zirconium by the hot-vacuum extraction method, by R. K. McGeary A simplified procedure for the metallography of zirconium and hafnium and their alloys, by F M. Kain, Jr Recovery of cold-worked zirconium, by W A. Bostrom and S. A. Kulin. The solid solubility of tin in alpha zirconium, by G. R. Speich and S. A. Kulin. The system zirconium-silicon, by C. E. Lundin and others. The system zirconium-tin, by D J McPherson and M. Hansen. Observations on the alpha-beta transformation in zirconium, by E. E. Hayes and A. R. Kaufmann. Some properties of high purity zirconium and dilute alloys with oxygen by R. M Treco. The zirconium-nickel phase diagram, by E. T Hayes and others The zirconium-manganese phase diagram, by A. H. Roberson and E. T Hayes. A general comparison of the metallurgy of zirconium with that of better-known commercial metals, by A. D Schwope. The corrosion resistance of zirconium and its alloys, by L. B. Golden. Zirconium and nuclear reactors, by E. C. Miller Index.

Note. The metallurgy of zirconium and its alloys as of the close of 1952 is well surveyed in this volume. Literature references are included, and there are numerous illustrations, tables and graphs.

AMERICAN SOCIETY FOR TESTING MATERIALS

Elevated temperature properties of copper and copper base alloys Data compiled by and issued under the auspices of the Data and Publications Panel of the ASTM–ASME Joint Committee on Effect of Temperature on the Properties of Metals Prepared for the Panel by Clair Upthegrove and Henry L Burghoff Philadelphia American Society for Testing Materials 1956 244 p illus 28 cm. (American Society for Testing Materials. Special technical publication no 181) $5 50 6951

Contents Graphical presentations. Coppers. Brasses. Aluminum bronzes. Cupro-nickel and nickel brasses—cast, wrought, annealed, cold worked. Silicon bronzes—cast, wrought, annealed, cold worked. Tin bronzes—cast, annealed. Data sheets: Coppers. Brasses. Aluminum bronzes. Cupro-nickel and nickel brasses. Silicon bronzes. Tin bronzes.

Note. "This report is primarily a graphical summary of the elevated temperature data for coppers and copper-base alloys. The data for the coppers were limited to the wrought materials, while the data for the alloys are obtained from cast and wrought materials. The graphical presentations include, insofar as data are available, modulus of elasticity tensile strength, yield strength (0.5 per cent extension and 0.2 per cent offset) reduction of area, elongation, stress for creep rates for 0.000001 0.00001 and 0 0001 per cent per hr and stresses for rupture in 100, 1,000, 10,000 and 100,000 hr. Data sheets giving the original data for drawing the curves are included in the appendix. Also included are data sheets giving insufficient information for plotting or of such a nature as not to justify plotting, yet meriting inclusion on the basis of contributing to the limited information available on many of the coppers and copper-base alloys. The data sheets also give chemical composition, shape, sizes and processing information.

BARKSDALE, JELKS

Titanium, its occurrence, chemistry and technology New York The Ronald Press Company, 1949 591 p illus. 24 cm. $12 00 6952

Contents (abridged) The discovery of titanium. Geology and mineralogy of titanium. Production and imports of titanium-bearing ores. The chemistry of elemental titanium and its oxides. The chemistry of titanium salts. Organic compounds of titanium. Methods of chemical analysis of titanium compounds. Production of sulfate solutions of ilmenite for pigment manufacture. Hydrolysis of titanium sulfate solution. Filtering and washing hydrous titanium dioxide, acid recovery Composite pigments. Calcining, milling, and processing titanium dioxide to produce pigments. Colored titanium dioxide and titanate pigments. Chloride processes of pigment manufacture. Fluoride, nitrate, sulfide, and chloroacetate processes of pigment manufacture. Titanium pigment industry Uses of titanium pigments. Iron and steel. Nonferrous metals and alloys. Hard alloys. Electrical industry Ceramics. Mordants and dyes. Catalysts. Special applications. Literature cited. Index.

Note: A comprehensive survey of the science and technology of the metal titanium and its derivatives. A considerable part of the volume is devoted to the production of titanium pigment for use in paint and elsewhere as an obscuring or coloring material. However all of the reported uses are described, including such specialized applications as reagents in chemical analysis. The bibliography covers the international literature, including the patents. It runs to 77 pages and contains several thousand references.

BROWN, HIRAM, AND OTHERS

Aluminum and its applications by Hiram Brown with the collaboration of Alexander Klemin and others. New York Pitman Publishing Corporation, 1948 388 p. illus. 23 cm. (Pitman books on industrial materials and processes Alexander Klemin, advisory editor) $6.50 6953

Contents (abridged) Introduction to aluminum. Testing methods and definitions of terms. Aluminum alloys. Fabrication of aluminum alloys. Finishing of aluminum parts. Heat-treatment, aging, annealing, and stabilization A..., by E. H. Phillips. Aircraft engines, by M. H. Young. Aluminum castings for aircraft, by V. E. Woldman. Automoti... applications of aluminum alloys, by D. M. Biggs. Aluminum in railroads, by R. R. Borcelli. Resistance of aluminum-base alloys to marine exposure, by R. B. Mears and R. H. Brown. Aluminum in the electrical industry by R. A. Fry and W A. Graham. Aluminum in the chemical and related industries, by M F Walkinshaw. Aluminum, present and future, by A. A. Schwartz. Appendices. Index.

Note This semitechnical survey is especially suitable for executives and others who need specific and accurate information but do not need it in great detail. Many of the chapters are written by specialists in specific industries but the treatment in these conforms to the general pattern of the book. There are diagrams, sketches, illustrations of processes and definitions of technical terms, machines, and selected bibliographies.

Metallurgy

Various Metals

Butts, Allison editor

Copper the science and technology of the metal, its alloys and compounds. Prepared under the editorial supervision of Allison Butts, with chapters by specialists. New York Reinhold Publishing Corporation, Inc. 1954 936 p. illus. 24 cm. (American Chemical Society monograph series) $22 75 6954

Contents: The background of the copper industry, by L. Addicks. Copper minerals, ores, and ore deposits, by E. M. [illegible]. The concentration of copper ores, by F. L. Bosqui and others. Roasting, smelting, and converting, by W. R. Boggs. Anode furnace refining, by R. [illegible] and M. R. [illegible]. Copper slags and mattes, by C. R. Hayward. Thermodynamics of copper smelting, by R. A. [illegible]. Electrolytic copper refining, by C. W. Eichrodt and J. H. Schloen. Cathode melting and casting of merchant copper shapes, by R. H. [illegible]. Induction melting of copper and copper alloys, by [illegible]. Treatment of electrolytic copper refinery slimes, by J. M. Tama. The fire refining of copper, by H. R. Schloen and E. M. Elkin. The hydrometallurgy of copper, by J. O. [illegible], J. Miller. Copper and commercial forms of copper products, by S. [illegible]. The physical properties of copper-base alloys, by E. Cochran. Chemical properties and corrosion of copper, by J. S. Smart, Jr. [illegible], by F. T. Gilbert. The [illegible] of copper and copper alloys, by J. S. Smart, Jr. The physical effect of impurities in copper, by D. W. [illegible]. The isotopes of copper. [illegible] chemistry of copper, by J. [illegible] and R. E. [illegible]. Phase diagrams of copper alloy systems, by R. M. [illegible]. Magnetic properties of copper and copper alloys, by A. Butts. Copper-base foundry alloys, by W. Romanoff and others. Wrought copper alloys, by T. P. [illegible]. The making and Copper as an alloying element, by W. [illegible]. The making and casting of copper-base alloys, by W. Romanoff and others. Hot working of copper and copper alloys, by F. F. [illegible]. Cold working of copper and copper alloys, by W. T. [illegible]. Heat treatment of copper and copper-base alloys, by R. M. [illegible]. Machining characteristics of wrought copper and copper alloys, by R. [illegible]. Welding, brazing, soldering, and cladding of copper and its alloys, by A. N. Kugler. Production and use of copper by D. K. Crampton. Copper and copper alloys in the electrical industry, by L. V. Williams. Copper in the building industry by T. E. [illegible]. Automotive applications of copper and copper alloys, by E. W. Upham. The use of copper and copper alloys in ordnance, by A. L. Jamieson. Copper and copper-zinc alloy plating, by A. K. Graham. The simpler inorganic compounds of copper, by A. J. Renard, Jr. Copper as an agricultural fungicide, by J. D. Wilson. Copper powder and its applications, by D. S. [illegible]. Copper in organic chemistry, by R. A. [illegible] and H. Gilman. Copper in biology by F. F. Heyroth and J. Chabek. Copper in the production and nutritional quality of crops, by K. C. Beeson. Metallography of copper and its alloys, by F. R. Williams. The analytical chemistry of copper, by E. [illegible]. Name index. Subject index.

Note. Deviating from the most of the books in the American Chemical Society monograph series, this one [illegible] not [illegible] summary of the extant literature. Instead, the typical chapter is [illegible] survey of basic information and high points, accompanied by [illegible] selected list of references, and some chapters are very brief. Although the authors are specialists, the book [illegible] most useful as [illegible] cyclopedic reference for such persons as chemists, engineers, and purchasing agents who are not specialists in the metallurgy of copper but [illegible] are in need of fundamental information about the metal and its alloys.

Dean Reginald Scott

Electrolytic manganese and its alloys. New York The Ronald Press Company 1952 257 p. illus. 24 cm. $12.00 6955

Contents Production and properties of electrolytic manganese. Nonferrous alloys of electrolytic manganese. Ferrous alloys of electrolytic manganese. Index of names. Index of subjects.

Note The author of this technical monograph was [illegible] leading figure in the development of electrolytic manganese during his years of association with the United States Bureau of Mines. Here, he presents the current knowledge of both the metal itself and its alloys. The discussions of the production and properties of electrolytic manganese run to only 82 pages, hence, more than two-thirds of the book [illegible] given to descriptions of the alloys. These descriptions include [illegible] wide range of specific data on properties, heat treatment, and applications. The book is based on [illegible] digest of the periodical and patent literature, and each of the chapters is accompanied by long list of references.

Ellis Owen W

Copper and copper alloys a series of lectures on copper and copper alloys presented to members of the ASM during the twenty ninth National Metal Congress and Exposition, Chicago October 18 to 24 1947 Cleveland American Society for Metals, 1948. 184 p. illus. 23 cm $3.50. 6956

Contents. Historical development. The metallurgy of copper. The melting of copper and its alloys. Complex alloys of copper and zinc. Other alloys of copper. References. Index.

Note. In this book discussion is limited to the principles and processes in "the furnace metallurgy of copper and its alloys. No attempt is made to cover the properties and uses of the metals. It is written clearly but is definitely addressed to those [illegible] who are familiar with the subject. Many tables and diagrams are provided. References are made throughout to the 109 items listed in the bibliography at the end.

Everhart, John L.

Titanium and titanium alloys. New York Reinhold Publishing Corporation Inc., 1954 184 p. illus. 17 cm. $2 95 6957

Contents: Introduction. High purity titanium. Properties of commercial titanium. Properties of commercial titanium alloys. Heat treatment. Forming and fabricating. Joining. Machining and grinding. Cleaning and finishing. Applications. Appendix. Index.

Note A brief but authoritative survey of titanium as an engineering material. Currently used production and refining processes are outlined in the first chapter The rest of the space is devoted to matters of interest to engineers [illegible] who are concerned with the design of engines, airplane structures, etc. Selected literature references are included. The first version appeared as "Manual 82" in the May 1952, issue of Materials and methods, this book represents revised and considerably augmented new edition.

Grimaldi F S and others

Collected papers on methods of analysis for uranium and thorium. Compiled by F S. Grimaldi Irving May Mary H. Fletcher and Jane Titcomb. This report concerns work done on behalf of the U S. Atomic Energy Commission and is published with the permission of the Commission. Washington, D C. Government Printing Office 1954 184 p illus. 23 cm. (United States. Geological Survey Bulletin 1006) $1.25 6957A

Contents Summary of methods of analysis for the determination of uranium and thorium, by F S. Grimaldi and others. Methods for the complete decomposition of rock and ore samples to be analyzed for very small amounts of uranium and thorium, by M. D Foster and others. The Geological Survey cupferron precipitation-extraction method for the determination of very small amounts of uranium in naturally occurring materials, by F S. Grimaldi. The Geological Survey carbonate-phosphate-peroxide method for the determination of very small amounts of uranium in naturally occurring materials, by M. D. Foster and R. E. Stevens. Elimination of interference by nickel in the determination of uranium by means of zinc amalgam reductors, by F S. Grimaldi. The [illegible] fluorimetric determination of uranium in low-grade ores, by F S. Grimaldi and H. Levine. A volumetric filtering pipette, by F S. Grimaldi. A study of critical factors in the direct fluorimetric determination of uranium, by M. H. Fletcher. A direct fluorimetric method for the determination of small amounts of uranium in the field and laboratory by F S. Grimaldi and others. An improved fluorimeter for the determination of uranium in fluoride melts, by M. H. Fletcher and I. May A transmission fluorimeter for use in the fluorimetric method of analysis for uranium, by M. H. Fletcher and others. The design of the model [illegible] transmission fluorimeter, by M. H. Fletcher and others. A battery-powered fluorimeter for the determination of uranium, by I. May and M. H. Fletcher. Short routine direct method for the fluorimetric determination of uranium in phosphate rocks, by F S. Grimaldi and M. S. Getting. Fluorimetric determination of uranium in shales, lignites, and monazites after alkali carbonate separation, by N S.

Gatling and F S. Grimaldi. Noninterference of arsenate ion in the volumetric determination of uranium using the Jones reductor by J J Rowe. The fluorimetric determination of uranium in nonsaline and saline waters, by A. P Smith and F S. Grimaldi. The Geological Survey phosphate-fluoride-iodate method for the determination of very small amounts of thorium in naturally occurring materials, by F S. Grimaldi and J O Fairchild. The Geological Survey carbonate-iodate-iodine method for the determination of small amounts of thorium in naturally occurring materials, by J J Fahey and M. D Foster The determination of thorium in high-grade and low-grade ores, by F S. Grimaldi and C. M. Warshaw Mesityl oxide extraction method for thorium analysis, by H. Levine and F S. Grimaldi.

Note. Standard methods, refinements of standard methods and several new methods are described in the papers in this volume, which is a development of an extensive investigation of radioactive ores and other materials carried on in the United States of America in recent years. The first chapter presents a general discussion of uranium and thorium analysis, and is a useful introduction to the subject.

LEAD INDUSTRIES ASSOCIATION

Lead in modern industry manufacture, applications and properties of lead lead alloys, and lead compounds New York Lead Industries Association 1952 230 p illus 25 cm. $1 50 6958

Contents The history of lead. From mine to finished metals. Lead in modern living. Forms and fabricating processes. Lead storage batteries. Lead covered cable. Lead in modern chemical construction Corrosion resistance of lead and lead alloys. Composition of commercial pig lead. The soldering and welding of lead. Lead in modern plumbing Lead in modern architecture. Radiation protection Lead and lead alloy coatings. Soft solders. Bearing metals. Ammunition Other metallic lead products and alloys. White lead. Lead oxides. Tetraethyl lead. Other industrial lead compounds. White lead paints. Metal protecting lead paints. The safe handling of lead and its products. Specifications for lead, lead alloys and lead products. Physical constants of lead compounds. Index.

Note A miscellany of general, historical and technical information about lead. Anyone who is interested in the metals in general or lead in particular should find something of value in it, but it will be most useful to persons with technical interests in the subject. For instance the chapter on corrosion resistance is a compact statement of potential reference value to designers of chemical processing equipment. The chapters on specifications, properties and physical constants are largely composed of tables of reference data.

LI, K. C , AND CHUNG YU WANG

Tungsten its history, geology ore-dressing metallurgy, chemistry analysis applications, and economics Third edition. New York Reinhold Publishing Corporation, 1955 506 p illus 24 cm (American Chemical Society monograph No 94 William A. Hamor editor) $14 00 6959

Contents The history of tungsten. The geology of tungsten. The ore dressing of tungsten The metallurgy of tungsten. The chemistry of tungsten. Analysis of tungsten The industrial application of tungsten Substitution of tungsten. The economics of tungsten. Appendixes. Index.

Note The standard comprehensive monograph on tungsten. The second edition was published in 1947 and has been out of print for several years. In this third edition the scope of the work and the chapter titles are unchanged, but a considerable range of material has been added in several chapters and in the appendixes. The revision is not a complete one however Data on prices has been brought down to 1952 in contrast, the list of tungsten alloys originally based on a 1936 book by another author has been reprinted without change The type from which the book is printed was reset.

LUSTMAN, BENJAMIN, AND FRANK KERZE, JR., editors

The metallurgy of zirconium New York McGraw Hill Book Company Inc. 1955 776 p illus. 24 cm. (National nuclear energy series Division VII–Volume 4) $10.00 6960

Contents. Zirconium and its application in nuclear reactors, by H. Etherington and others. Application of zirconium for other uses, by R. L Jaffee. Occurrence of zirconium, by M. K. Kline. Zirconium production methods, edited by S. M. Shelton. Iodide-decomposition process for production, by Z. M. Shapiro. Melting and shaping of zirconium and its alloys, edited by R. B. Gordon. Joining and finishing of zirconium. Physical metallurgy of zirconium and its alloys, by A. R. Kaufmann and T T Magel. Zirconium alloy systems, edited by E. T Hayes. Mechanical properties of zirconium and its alloys, edited by F Foracher. Corrosion of zirconium and its alloys, edited by B. Lustman. Analytical chemical of zirconium, by E. R. Read. Appendixes: Metallography of zirconium, by H. P Roth. Industrial hygiene and safety by E. E. Barnes. Engineering data sheets. Glossary Contributing authors. Name index. Subject index.

Note. The current state of zirconium metallurgy including fabrication, is presented in explicit detail in this important work, which is based largely on research and development carried out under the sponsorship of the Atomic Energy Commission. The material included is not however limited to AEC-sponsored work or to nuclear energy applications. Uses which have been developed in other fields are covered in the chapter on applications for other uses. This is a short chapter but it has a bibliography of 66 references. Some of the chapters, for example that on corrosion, contain a wealth of data not previously collected into a single publication. The "Name index" includes the names of authors of all the literature cited in the reference lists and the subject index is an especially detailed one.

MATHEWSON C H , editor

Modern uses of nonferrous metals. Second edition Published for the Seeley W Mudd Fund. New York American Institute of Mining and Metallurgical Engineers, 1953 530 p illus. 21 cm. $7 00 6961

Contents The new industrial development and exploitation of metals and alloys, by Z. Jeffries. Aluminum, by F C. Frary Arsenic and antimony by K. C. Li. Beryllium, by C. B. Sawyer Bismuth, by W C. Smith and O. J Seeds. Chromium, by D. Sass. Cobalt, by B. E. Field and W A. Wissler Copper by D. K. Crampton. Gold, by F R. Carter Lead, by J O. Betterton revised by A. J Phillips. Magnesium, by J D. Hanawalt and W H. Gross. Manganese as a nonferrous metal, by R. S. Dean. Molybdenum, by R. S. Archer Nickel, by O. B. J Fraser and P D Merica. The platinum metals, by E. M. Wise. Quicksilver by C. N Schuette. Selenium and tellurium, by W E. Milligan. Silicon and germanium, by E. C. Schumacher Silver by R. H Leach. Tantalum and columbium, by D F Taylor Tin, by R. J Nekervis and B. W Gonser Titanium and zirconium, by W L. Finlay and R. I. Jaffee Tungsten by W P Sykes. Uranium, by C E. Smith. Vanadium, by A. U Seybolt. Zinc and cadmium, by W M. Peirce and E. A. Anderson. Index.

Note. The first chapter in this book is a brief essay on the relative abundance of metals, on the properties of the nonferrous metals that make them important in our civilization, and on the future of the nonferrous metals. Each of the other chapters is a survey of the current uses of the metal or group of metals named in its title. The book is designed primarily as a source of background knowledge for young metallurgists, but it is suitable also for reading and reference use by technicians and laymen. The first edition was published in 1935 Developments in nonferrous metallurgy such as the new importance of uranium have resulted in an increase in the number of chapters by five in the second edition. In addition, numerous revisions have been made in chapters retained from the first edition.

PAGONIS, GEORGE A

The light metals handbook. New York D Van Nostrand Company, Inc., 1954 2 v 24 cm. $10 00 6962

Contents (abridged) Volume I Part I, Magnesium and magnesium-base alloys. Classes of magnesium-base materials. Mechanical properties. Physical properties. Mechanical properties at elevated temperatures. Mechanical properties at low temperatures. Detailed properties of individual compositions. Heat treatment. Machinability. Joining methods. Part II, Aluminum and aluminum-base alloys. Classes of aluminum-base materials. Mechanical properties. Physical properties. Mechanical properties at elevated temperatures. Mechanical properties at low temperatures. Detailed properties of individual

compositions. Casting characteristics. Heat treatment. Machinability. Joining methods. Volume II: Tables on magnesium and magnesium-base alloys. Tables on aluminum and aluminum-base alloys.

Note: A reference work for engineers and technicians who select, hot-cast, or fabricate magnesium and aluminum alloys. It is of particular interest to men in these groups who are associated with aircraft manufacturing and other industries in which these light metals are extensively used. A wide range of data is presented, both on general classes of these alloys and on specific alloys with established designations. Nomenclature, specifications, properties, methods of working and joining are all covered. The data given on an individual alloy often fill two or more pages. The second of the two volumes is devoted entirely to tables of data.

RAUDEBAUGH, ROBERT JOHN

Nonferrous physical metallurgy. New York, Pitman Publishing Corporation, 1952. 345 p. illus. 24 cm. (Pitman metallurgy series) $7.00. 6963

Contents: Aluminum and its alloys. Magnesium and its alloys. Copper and its alloys. Nickel and nickel alloys. Alloys of cadmium, lead, tin, and zinc. Some less widely produced nonferrous metals and their alloys. Powder metallurgy and refractory-metal compounds. Author index. Subject index.

Note: A concise and practical account of the modern techniques employed in the processing, fabrication, and application of the more important nonferrous metals. Particular attention is given to recent developments in the field, such as the melting and casting of molybdenum, fabrication of ductile titanium, and the utilization of powdered metals. Numerous micrographs, tables of alloy properties and composition, and chapter bibliographies are included. Of interest primarily to metallurgical students and others requiring a review of modern metallurgical practices.

SHELTON, STEPHEN M., editor

Zirconium, its production and properties. Prepared by the staff of the Northwest Electrodevelopment Laboratory, Bureau of Mines, under the direction of Stephen M. Shelton. Washington, D. C., Government Printing Office, 1956. 180 p. illus. 26 cm. (United States. Bureau of Mines. Bulletin 561) $1.00 6964

Contents: Introduction. Zirconium ores, by A. J. Kauffman, Jr. Reduction processes, by A. H. Roberson. Magnesium-reduction process, by E. D. Dilling. Melting, by A. H. Roberson and R. A. Beall. Properties, by E. T. Hayes. Fabrication, by H. Kato. Alloys, by E. T. Hayes. Uses of zirconium metal, by J. H. McClain. Availability and cost of ductile zirconium, by E. D. Dilling. Analytical procedures: Chemical analysis, by W. F. Holbrook. Spectrochemical analysis, by D. M. Mortimore. Index of authors. Index of subjects.

Note: An illustrated technical report covering various phases of zirconium metallurgy in detail. Large-scale production of this metal was undertaken originally by the Northwest Electrodevelopment Laboratory of the Bureau of Mines at Albany, Oregon. Here the technical experience of the authors of this report was gained. Bibliographies appear at the ends of chapters.

SITTIG, MARSHALL

Sodium: its manufacture, properties and uses. With a chapter on the physical and thermodynamic properties of sodium, by George Wm. Thomson and Edward Garelis. New York, Reinhold Publishing Corporation, 1956. 529 p. illus. 23 cm. (American Chemical Society monograph series) $12.50 6965

Contents: Introduction. The manufacture of metallic sodium. Solubility and alloy formation. Handling metallic sodium. Uses of metallic sodium. The inorganic reactions of sodium. The use of sodium in organic reactions. The analytical chemistry of sodium. Physical and thermodynamic properties of sodium. Author index. Subject index.

Note: Publication of this volume reflects the current importance of sodium as an industrial chemical. In the chapters on reactions, many reactions are discussed which are of interest in the laboratory but have not yet found industrial application. However, the emphasis of the work as a whole is on the technology of sodium manufacture and on the industrial uses of the metal. Estimates of future uses, as in nuclear power plants, are included, along with information on established uses. The chapter on physical and thermodynamic properties is, with its appendix, a monograph within a monograph, being more than 140 pages long and providing a full range of data on these properties of metallic sodium. The volume is essentially a digest of the patent and journal literature published approximately to the end of 1954.

UDY, MARVIN J

Chromium. New York, Reinhold Publishing Corporation, 1956. 2 v. illus. 24 cm. $11.00 per vol., set $19.50 6966

Contents: Volume I. Chemistry of chromium and its compounds. Section I. General: History of chromium, by M. J. Udy. Mineralogy and geology of chromium, by T. P. Thayer. The analytical chemistry of chromium, by E. J. Serfass and R. F. Muraca. Relation of chromium to health, by A. M. Baetjer. Chromium in soils, plants, and animals, by O. K. Davis. Section II. Physical and chemical properties of chromium compounds: The physical and chemical properties of compounds of chromium, by M. C. Udy. Chromium chemicals—their industrial use, by M. Darrin. Production of chromium chemicals, by R. L. Copson. Chromium chemicals in the textile industry, by C. L. Howarth. Chromium chemicals in the tanning industry, by R. M. Lollar. Chromium chemicals in wood preservation, by H. W. Angell and W. H. Hartford. Chromium chemicals in corrosion prevention, by H. A. H. Pray. The manufacture and properties of chromium pigments, by V. H. Chalupski. Chromium chemicals in the graphic arts, by G. W. Jorgensen and M. H. Bruno. Chromium chemicals in the oil and gas industries, by M. Carcia. Index. Volume II. Metallurgy of chromium and its alloys. Section I. Recovery of chromium from its ores. Recovery of chromium from its ores, by M. J. Udy. European methods for production of ferrochromium, by H. H. Jensen. Electrowinning of chromium—chrome acid electrolyte, by M. J. Udy. Electrowinning of chromium from chromium-alum electrolytes, by R. R. Lloyd. Electroplating of chromium, by J. M. Hosdowich. Deposition of chromium by methods other than electrolysis, by M. J. Udy. Section II. Physical properties of chromium, its alloys and metallurgical uses: The physical and chemical properties of chromium, by M. C. Udy. Ductile chromium, by H. L. Gilbert and R. G. Nelson. Chromium in stainless steels, by V. N. Krivobok. Chromium in ferrous steels, by J. Strauss. Chromium in cast iron, by C. O. Burgess and H. E. Bruce. Chromium in high temperature alloys, by R. Sutton. Chromium in nickel-base alloys, by E. N. Skinner. Chromium in electrical-resistance alloys, by W. A. Gatward. Chromium in cobalt-base alloys, by H. Coon. Chromium in copper alloys, by F. R. Bound and E. I. Larsen. Chromium in titanium-base alloys, by M. C. Udy. Section III. Chromium in refractories. Chromium in refractories, by R. P. Heuer and others. Subject index.

Note: A comprehensive work written by 36 specialists. The chapters vary somewhat in organization and viewpoint but, generally speaking, each one is a compact digest of the published literature with the text keyed to a bibliography of source articles. Extensive tables of reference data are features of many of the chapters.

WHITE, D. W., JR. AND J. E. BURKE, editors

The metal beryllium. Cleveland, American Society for Metals, 1955. 703 p. illus. 24 cm. $8.00. 6967

Contents: Introduction, by C. B. Sawyer and B. R. F. Kjellgren. Importance of beryllium—A, Historical note on sources and uses of beryllium, by R. F. Griffith—B, The role of beryllium in the atomic energy program, by R. E. Fulder—C, The role of beryllium in industry, by N. W. Bass. Ores, by W. R. Griffitts and J. J. Norton. Reduction—A, Thermodynamic considerations in the preparation of beryllium metal, by H. H. Kellogg—B, The fluoride extraction of beryllium from beryl, by H. C. Kawecki—C, The sulphate extraction of beryllium from beryl, by C. W. Schwenzfeier, Jr.—D, The production of beryllium by the electrolysis of beryllium chloride, by C. R. Wichmann—E, Experimental reduction of beryllium, by T. T. Magel. Fabrication (chapter editor, H. H. Hausner)—A, The melting and casting of beryllium, by P. Corzine and A. R. Kaufmann—B, Fabrication of beryllium by powder metallurgy, by W. W. Beaver—C, Research and development in beryllium powder metallurgy, by H. H. Hausner and N. P. Pinto—D, Mechanical working of beryllium by extrusion, by P. Loewenstein and others—E, Mechanical working of beryllium by rolling,

forging and similar processes, by S. M. Bishop—F Machining of beryllium, by L. Duran—G Joining of beryllium, by D. C. Martin—H, Plating and cladding of beryllium, by J T Stacy Properties—A The physical and mechanical properties of beryllium metal, by D W Lillie—B The nuclear properties of beryllium, by J R. Stehn. The brittleness problem (chapter editor A. R. Kaufmann)—A, The relation of purity to brittleness in beryllium, by A. R. Kaufmann—B, Ductility of beryllium as related to single crystal deformation and fracture, by G. L. Tuer and A. R. Kaufmann—C, Ductility of beryllium as related to preferred orientation and grain structure, by J L. Klein and others—D Recovery and recrystallization of cold worked beryllium, by G. L. Tuer and others. Metallography by M. C. Udy Corrosion (chapter editor R. F Koenig)—A, Corrosion of beryllium in air by J L. English—B Corrosion of beryllium in water by J L. English—C, Corrosion of beryllium in liquid metals, by R. F Koenig. Alloys, by A. R. Kaufmann and P Cordino. Cermets and ceramics—A, Refractory compounds and cermets of beryllium, by W W Beaver—B, The refractory properties of beryllium oxide, by J F White. Health hazards, by M. Eisenbud. Analytical chemistry by C. J Rodden and F A. Vaci. Name index. Subject index.

Note. Research carried out under the auspices of the Atomic Energy Commission was the foundation for this treatise. More than half of the papers which make up the chapters were first prepared for presentation at a conference on beryllium cosponsored by the A.E.C. and the American Society for Metals in March 1954. However as printed in this volume, many of the conference papers have been revised and expanded also, additional papers written later have been included to round out the treatment. The point of view is primarily metallurgical, and the metallurgical aspects are covered thoroughly and in detail. The chapter on fabrication techniques and problems accounts for about one-fourth of the volume's length. Descriptions of experimental techniques and other matters of interest to scientists engaged in research on this metal are included. Nuclear and other properties of interest to physicists and engineers engaged in reactor design are described. Literature references are given. The Name index includes both the authors of chapters and the authors of cited literature.

SHIPBUILDING AND BOATBUILDING

Arnott David, editor

Design and construction of steel merchant ships written by a group of authorities. New York The Society of Naval Architects and Marine Engineers 1955 494 p illus. 28 cm. $14 00. 6968

Contents: Introductory by D. Arnott. Basic design, by J. F [illegible]. General arrangements and interior design, by V. N. [illegible]. Development of ship's structure, by D. [illegible] and R. I. [illegible]. Hull materials, by R. A. [illegible]. Structural design, by D. P. Brown. Hull materials, by A. A. [illegible]. Methods of joining structural parts, by A. A. [illegible]. Structural members—their function and design, by J. P. Comstock. Details of fittings, by D. T. Mallett and D. [illegible]. Cargo-handling, anchor, mooring and towing arrangements, by D. F. MacNaught. Anchor, mooring and towing arrangements, by J. W. Thompson. Hull piping systems, by C. E. [illegible]. Ventilation, heating and cooling, air conditioning, by D. K. Phillips. Lifesaving equipment, and electrical plant, by D. K. Phillips. Shipyard equipment and aids to navigation, by C. P. Murphy. Shipyard practice, by G. G. Holbrook. Hull preservation and maintenance, by J. W. Thompson. Glossary of hull terms. Index.

Note: The design and construction of present-day steel merchant ships is covered authoritatively and practically in this well-sponsored book. The necessity of designing merchant ships for specific trade and service conditions is emphasized, and a wide range of technical information is included to aid the ship designer in meeting this objective. The book is well illustrated and well indexed.

Baker, Elijah III

Introduction to steel shipbuilding Second edition. New York McGraw Hill Book Company Inc., 1953 398 p illus. 21 cm. $6 00. 6969

Contents: Strength of materials. Materials used in shipbuilding. Riveting and welding. Keels. Floors and double bottoms. Frames and framing systems. Shell plating. Deck beams. Pillars and girders. Decks. Bulkheads and flooring. Stem, stern frames, and rudder. Types of ships. Lines and offsets. Weight and displacement calculations. Stability. Trim, the inclining experiment, and damaged stability. Launching. Tonnage. Power and its measurement. Methods of determining power required. Propulsion. Propeller design. Testing the ship on trials. Maritime administration vessels. Glossary of shipbuilding definitions. Books recommended for advanced study. Index.

Note: A practical text developed originally for the instruction of apprentices in the employ of the Newport News Shipbuilding and Dry Dock Company. It describes the fundamental parts of present-day ships and outlines the basic design and construction techniques. Only simple mathematics is used, and the book is written in a style that makes it available to anyone with an interest in ships. The first edition was published in 1941. This edition is the result of considerable revision and expansion which included the addition of new chapters on the powering of vessels and the design of propellers. The number of illustrations was increased by 70.

Bradley Cliff

Building the small boat. New York The Macmillan Company 1946 222 p. illus. 21 cm. $3 49 6970

Contents: Building to design. Laying down. Getting out the parts. Setting up the frame. Planking. Finishing. Plywood. "[illegible]"—12'-0" [illegible] skiff. "[illegible]"—a 13'-0" [illegible]. "[illegible]"—a 14'-0" utility. "[illegible]"—an 18'-0" sportster. Index.

Note: An easily understood book of instructions for amateurs who are interested in constructing small wooden boats. By means of simple exposition and line drawings, the reader is told how to read simple blueprints, how to handle the necessary tools, how to do the specialized carpentry required, and how to assemble the various boat parts. Directions and working plans for building four small boats, rowboat, sailboat, an outboard motor boat, and an inboard motor boat, are included.

Chapelle, Howard I

Boatbuilding a complete handbook of wooden boat construction. New York W W Norton & Company Inc. 1941 624 p. illus. 25 cm. $10.00. 6971

Contents: Plans. Lofting. The backbone—setting up. Flat-bottom hull construction. V-bottom hull construction. Round-bottom hull construction. Lapstrake, and other construction methods. Joinerwork, plumbing, installation, sparmaking, and finishing. Tools and care, professional building. Index.

Note: A practical, well-written book on the construction of wooden boats. It is devoted primarily to amateur builders and beginners. The importance of planning the boat-building operation in advance is emphasized, and specific operations are explicitly described. Seventy pages are devoted to lofting. There are 116 figures, most of which contain several illustrations. Plans for 19 boats, ranging from a flat-bottomed rowboat to a 73-foot dragger are included.

Chapelle, Howard I.

Yacht designing and planning for yachtsmen, students and amateurs. New York W W Norton & Company Inc., 1936. 319 p. illus. 24 cm. $8.50 6972

Contents: Preface. Tools and materials. Preliminary design. The lines. The construction and joiner plans. The sail plan. Specifications. Appendix. Index.

Note: In this book for amateurs and yachtsmen who are not professional builders, the author has avoided the purely theoretical and has written a practical handbook which explains, with many drawings and diagrams, methods as actually carried out in the drafting room. The subject is treated from the point of view of American requirements and conditions.

Geiger, P H.

Noise-reduction manual. Originally prepared under the auspices of Office of Naval Research. Ann Arbor Engineering Research Institute, University of Michigan 1956 167 p. illus. 23 cm. $4 00. 6973

Contents: General procedures for noise reduction. Units useful in noise-reduction work. Sound absorption and insulation. Vibration damping. Vibration isolation. Instruments and techniques. Index.

Note: A manual of basic information and practical techniques applicable to the reduction of noise generated by engines, motors, machinery, etc. It grew out of a program of work and research sponsored by the United States Office of Naval Research; hence, most of the examples introduced in the discussions pertain to naval machinery. However the techniques of sound absorption, insulation and vibration damping which are described are as applicable to factories, repair shops, and other noisy enclosed places, as to

ships. The illustrations include drawings of devices for vibration insulation. Literature references are included in some of the chapters.

GERTLER, MORTON

A reanalysis of the original test data for the Taylor standard series Washington, D C Government Printing Office, 1954 308 p illus 22 × 28 cm (United States Navy Department. The David W Taylor Model Basin, Washington 7 D C Report 806) $3 50 6974

Contents. Notation. Formulas. List of tables. History of the Taylor standard series. Geometry of the Taylor standard series. Reduction of the original test data. Final presentation of data. Calculation of effective horsepower using revised contours. Validity of Taylor series comparisons. Use of the revised Taylor series contours with frictional-resistance formulations other than Schoenherr. References. Appendices Curves of half-breadth and waterline endings versus longitudinal prismatic coefficient for derived forms of the Taylor standard series. Contours of wetted-surface coefficients for standard series vessels. Curves of residual-resistance coefficient versus speed-length ratio and Froude number. Tables of the Schoenherr frictional-resistance coefficients versus Reynolds numbers. Tables of density and kinematic viscosity of water.

Note. Designed for the use of naval architects, this is a technical book, with many diagrams and tables, concerned with the subjects of ship resistance, ship propulsion, and ship models. It corrects errors discovered in the original test data for the Taylor standard series, the first of the mathematical series of ship forms to receive wide usage in the United States of America.

GOEHRING, EDWARD P

Marine piping handbook, for designers—fitters—operators Cambridge, Md Cornell Maritime Press, 1944 662 p illus 19 cm $6 00 6975

Contents. Pipes, fittings, flanges, and supports. Valves. Main and auxiliary machinery Hull drawings. Piping systems. Diagrammatic drawings and system calculations. Systems of drawings. Tables and information. Shipyard abbreviations and glossary Index.

Note. A text and reference book for designers, fitters, operating marine engineers, industrial and vocational teachers, and students. Complicated and exacting specifications are explained and analyzed, and all types of piping installation, large and small including high pressure, are treated.

HANSEN, EMIL M

Modern marine pipefitting Cambridge Md Cornell Maritime Press 1941 434 p illus 19 cm. $4 00 6976

Contents Introduction. Systems of drawing. Types of drawings. Symbols and conventions. Glossary of abbreviations and shipbuilding terms. General layout of ships. Ship structure. System of reading drawings Systems of piping Templates. Fabrication. Pipe-material classification. Valves and fittings. Types of joints and gaskets. Tests. Tools. Pipefitting practice. Glossary of pipefitting terms. Safety Useful tables and other data. Index.

Note A manual for marine pipefitters, giving methods of using plans and blueprints in the installation of piping, principally in naval vessels. It is designed primarily for new men in the work, and the author has endeavored to produce a work simple enough to obviate apprenticeship.

HANSEN EMIL M

Ship outfitter's handbook Cambridge Md Cornell Maritime Press 1943 291 p illus 23 cm $4 00 6977

Contents Systems of drawing. Types of drawings. Symbols and conventions. Glossary of abbreviations and shipbuilding terms. General layout of ships. Ship structure System of reading ship outfitting drawings. Ship outfitting jobs. Fabrication. Outfitting practice. Templates. Tests. Tools. Safety Tables and other data. Index.

Note This handbook is designed for beginners in ship outfitting. The layout and structure of ships are discussed and a method for effective use of blueprints is developed. There are numerous illustrations and a supplement of reproductions of working drawings.

LORD, LINDSAY

Naval architecture of planing hulls. Second edition Cambridge, Md. Cornell Maritime Press 1954 319 p illus. 24 cm $6 00 6978

Contents (abridged) Aspect ratio. Speed ratios. Loading of planes. Preliminary design. Lines. Weights. Hydrostatic calculations. Subdivision and flooding. Hydrodynamic calculations. Resistance and powering. Propulsion. Steering. Hull structure. Trials. Index.

Note. A manual of basic design principles and construction details for seaworthy speedboats, such as the PT boats of World War II fame. The author, a prominent naval architect with long experience in the design of such boats, shows that Froude's traditional speed-length ratio is not applicable to hulls that skim the surface, and advocates instead the use of several formulas involving speed-beam relationships. The constant angle plane, or monohedron, is advocated for planing bottoms as a means of providing constant lift and least suction. The book is a significant contribution to naval architecture.

MANNING, GEORGE CHARLES

Manual of ship construction, the fundamental principles of naval architecture for the operating personnel of the merchant service particularly those who are, or desire to become, officers. Princeton D Van Nostrand Company Inc. 1942 319 p illus. 22 cm. $4 00 6979

Contents. Ship language. Ship structure. Hull equipment and systems. Calculation of buoyancy and tonnage. Principles of stability Buoyancy and stability in damaged condition. Steering and rudders. Ocean waves and rolling. Propulsion. Appendix. Nomenclature of ships.

Note Prepared for the instruction of cadets in various maritime academies in the United States. It explains the characteristics of a ship and the methods of ship construction from the standpoint of operating officers—both deck officers and engineering officers. The fundamental principles are concisely explained, with numerous illustrations.

MANNING, GEORGE CHARLES

The theory and technique of ship design a study of the basic principles and the processes employed in the design of ships of all classes. New York Published by The Technology Press of The Massachusetts Institute of Technology and John Wiley & Sons, Inc. 1956 278 p. illus. 24 cm. $10 00 6980

Contents. Philosophy of ship design. Preliminary estimate of [illegible] of form. Preliminary displacement. Preliminary estimates of stability Preliminary lines and calculations. Design of general arrangements. Strength and weight calculations. Contract and final design. Appendices Computation of righting arms from principal dimensions and coefficients. Taylor's mathematical lines. Procedure in preliminary design. Index.

Note This new work supersedes the author's well-known *The basic design of ships*, New York, 1942. It is a new work rather than a revision although some material has been carried over from the older book. It is best described as an authoritative and compact introduction to the principles and techniques of present-day naval architecture. It deals with fundamentals and also with the important details. The greater part is technical and is addressed to advanced engineering college students who are preparing for careers in naval architecture. However, the first chapter and a few other sections are written in language intelligible to educated laymen. These parts of the book will be useful to readers outside the field of naval architecture who wish some knowledge of the problems and methods of ship design. The author is Professor of Naval Architecture at Massachusetts Institute of Technology

National Research Council

Bibliography of the submarine 1557 to 1953. Prepared by the Committee on Undersea Warfare National Academy of Sciences-National Research Council. Under the auspices of the Office of Naval Research. Washington, D C. National Academy of Sciences—National Research Council 1954 261 p. 24 cm. $1.50. 6981

Contents (abridged) General and historical non-technical. Special types of submarines. Design and construction—technical. Operations (other than warfare). Maintenance, repair, and related facilities. The submarine in war. Anti-submarine [illegible]. Data books. Author index.

Note: A comprehensive bibliography of the international literature. It is arranged under the main headings listed above, chronologically within those headings, and by nations under the [illegible] subdivisions. Many of the entries are briefly annotated.

Nowlin, Gordon A.

Connecting ships wiring. Boston Houghton Mifflin Company 1944 300 p. illus. 19 cm. $4.00. 6982

Contents: Part 1. Background information. Designating [illegible]. General [illegible] ship. Getting information about the job. General [illegible] information. Specific cable information. Part II. Lighting [illegible]. Designation of lighting circuits. Entering cables [illegible]. Connections. Distribution boxes. Testing the circuit. Part III. Interior communication circuits. Wiring [illegible] circuits. Part [illegible]. Cutting in and testing [illegible] circuits. Part V. The power system. Wiring and cutting in power circuits. Testing power circuits. Part [illegible]. Recent developments. Degaussing. New methods of [illegible] electrical cable ends. Index. Appendix.

Note: An interpretation of the principles and specifications governing the cutting in and connecting up of electrical equipment on board naval and commercial vessels. The practices described are standard procedures in the installation of electrical equipment and are applicable to most of the ships now being built in American yards. Electrical theory is purposely omitted and emphasis [illegible] upon the practical aspect of electrical wiring from the viewpoint of the beginning electrician and trainee.

Piper, John F

Marine electrical installation. Third edition. Cambridge Md. Cornell Maritime Press, 1943 450 p. illus. 19 cm. $3.50 6983

Contents: The modern vessel. Electrical systems. Tools. Temporary services. Electrical materials. Cable rack, hangers, and [illegible]. General wiring methods. Lighting systems. The power system. Interior communication systems. The generating plant. Laying out work. Conduit work and mechanical systems. Equipment [illegible]. Tests and trials. Appendices. Installation [illegible]. Tables and useful data. Elementary theory. Index.

Note: A handbook for the marine electrical worker. Electrical theory [illegible] discussed, and its practical application indicated. In the third edition new text material and new illustrations have been added, and sections have been provided on laying out, degaussing systems, and elementary theory.

Rabl, Samuel Suppler

Practical principles of naval architecture. Cambridge Md. Cornell Maritime Press, 1942 218 p. illus. 19 cm. $2.50 6984

Contents: Practical principles. Mathematics. Curves and graphs. The coefficients. Buoyancy and displacement. Centers and moments of gravity. Area and buoyancy. Stability, trim and the metacenter. Stability and trim calculations. Speed, resistance and power. The measurements of [illegible] ship. The inclining experiment. Launching. Strength of floating structures. Strength of materials. Curves of form, deadweight scale and capacity plan. Effect of flooded compartments. Appendices. Index.

Note: An elementary text and handbook for men in shipyards, [illegible] draftsmen, and men in the merchant marine. The author has included modern methods and also many [illegible] may be termed old fashioned, since many good ships still in use are constructed according to these older methods. This volume constitutes [illegible] second edition, revised, in which the chapter on the effect of flooded compartments [illegible] added. Additions have also been made [illegible] appendices on the admiralty coefficient and determining [illegible] by independent methods.

Rossell, Henry Eastin and Lawrence B Chapman editors

Principles of naval architecture. Written by a group of authorities. New York The Society of Naval Architects and Marine Engineers, 1939 2 v. illus. 28 cm. $6.00 per v. $11.00 set. 6985

Contents: Volume 1. Statics of naval architecture. Geometry of the ship, by W. Selkirk Owen. Freeboard, tonnage and capacity, by Harold F. Norton. Transverse stability, by S. A. Vincent. Longitudinal stability and trim, by John P. Macmillan. Subdivision of ships, by John P. Macmillan and John P. Comstock. Strength of ships, by David Arnott. Launching, by Henry H. W. Keith. Volume 2. Dynamics of naval architecture. The motion of ships among waves, by George C. Manning. Resistance and powering, by Kenneth S. M. Davidson. Propulsion and propellers, by Karl E. Schoenherr. Steering, by Karl E. Schoenherr.

Note: An authoritative publication containing information on various aspects of naval architecture. It [illegible] illustrated with diagrams, charts, and tables, and contains also practical examples and illustrations. It is intended both for naval architects and marine engineers and for students in naval architecture and marine engineering.

Society of Naval Architects and Marine Engineers

Historical transactions, 1893–1943 New York The Society of Naval Architects and Marine Engineers, 1945 544 p. illus. 28 cm. $3.50. 6986

Contents: David W. Taylor medalists. Part I. United States navy yards. Brief history of the Boston Navy Yard, by W. T. Tarrant. Brief history of the Cavite Navy Yard, by E. J. Dorn. The Charleston, S. C., Navy Yard, by W. M. [illegible]. Mare Island, then and now, by H. W. [illegible]. The New York Navy Yard, by J. H. [illegible]. Norfolk Navy Yard, by M. H. Simons. Pearl Harbor and its relation to the United States Navy, by F. A. [illegible]. The Philadelphia Navy Yard, by officers of the Industrial Department. The Portsmouth, N. H., Navy Yard, by J. G. Tawresey. The Puget Sound Navy Yard, by C. S. Freeman. Brief historical sketch of the navy yard at Washington, D. C., by E. W. Rea. Part II. Special types of vessels. The Pacific Coast steam schooner, by D. W. Dickie. Early American steamship lines, by F. J. Taylor. American merchant steamships, by C. E. Sewall. History of the United States coastwise steamers, by E. H. Rigg and A. J. Dickie. The development of steam navigation on Long Island Sound, by J. H. Gardner. History of tankers, by H. P. Frear. Outstanding New England types of fishing boats, [illegible], and yachts, by Q. Owen. Ferryboats, by E. Johnson. Part III. Private shipyards. History of Bath Iron Works Corporation, by W. S. Newell. History of Bethlehem [illegible] Fore River Yard, by H. E. Gould. History of Bethlehem's Wilmington plant—formerly the Harlan & Hollingsworth Corporation, by W. H. Collins. The Cramp shipyard, by W. Parrott. The Newport News Shipbuilding and Dry Dock Company, by R. L. Ferguson. The New York Shipbuilding Corporation, by J. F. Metten. History of the Pusey and Jones Corporation, by A. Q. Spitzenberger. The Roach shipyard, by W. P. Stephens and J. L. Rogers. Sun Shipbuilding & Dry Dock Company, by R. Haig. History of Bethlehem's San Francisco yard—formerly the Union Iron Works, by H. P. Frear. Part IV. The Navy Department and naval vessels. The organization of the Navy Department, by G. H. Rock. Types of naval ships, by H. E. Rossell. Medium-class warships of the United States Navy, by A. Crosby Brown. Revenue cutters, coast guard ships and lightships, by F. A. Hunnewell. Development of submarines in the United States, by A. I. McKee. Torpedo boats and destroyers, by H. P. Frear and W. S. Newell. Part [illegible]. Miscellaneous. Shipping on the Great Lakes, by J. C. Wonham. Development of transportation on the North Pacific Ocean, by A. F. Pillsbury. Water transportation on inland rivers, by V. B. Edwards and F. C. Cox. Part VI. Development and history. The development of marine engineering, by J. F. Nichols. The development and use of steel in shipbuilding, by E. F. Kenney. Developments in shipbuilding, by H. F. Morton. The development of marine welded [illegible], by J. H. King and E. S.

ships. The illustrations include drawings of devices for vibration insulation. Literature references are included in some of the chapters.

GERTLER, MORTON

A reanalysis of the original test data for the Taylor standard series Washington, D C Government Printing Office, 1954 308 p illus 22 × 28 cm (United States Navy Department. The David W Taylor Model Basin, Washington 7, D C Report 806) $3 50 6974

Contents Notation. Formulas. List f tables. History of the Taylor standard series. Geometry of the T ylor standard series. Reduction of the original test data. Final presentation of data. Calculation of effective horsepower using revised contours. Validity of Taylor series comparisons. Use of the revised Taylor series contours with frictional-resistance formulations other than Schoenherr Refer ences. Appendices Curves of half-breadth and waterline endings ersus longitudinal prismatic coefficient for derived forms f the Taylor standard series. Contours of wetted-surface coefficients for standard series vessels. Curves of residual-resistance coefficient versus speed-length ratio and Froude umber Tables of the Schoenherr frictional-resistance coefficients versus Reynolds numbers. Tables of density and kinematic viscosity of water

Note. Designed for the use of naval architects, this is a technical book, with many diagrams and tables, concerned with the subjects of ship resistance, ship propulsion, and ship models. It corrects errors discovered in the original test data for the Taylor standard series, the first of the mathematical series of ship forms to receiv wide usage in the United States of America.

GOEHRING, EDWARD P

Marine piping handbook for designers—fitters—operators. Cambridge Md. Cornell Maritime Press, 1944 662 p illus 19 cm. $6 00 6975

Contents Pipes, fittings, flanges, and supports. Valves. Main and auxiliary machinery Hull drawings. Piping systems. Diagrammatic drawings and system calculations. Systems of drawings. Tables and information. Shipyard abbreviations and glossary Index.

Note A text and reference book for designers, fitters, operating marine engineers, industrial and vocational teachers, and students. Complicated and exacting specifications are explained and analyzed, and all types of piping installation, large and small, including high pressure, ar treated.

HANSEN, EMIL M

Modern marine pipefitting Cambridge Md Cornell Maritime Press, 1941 434 p illus 19 cm. $4 00 6976

Contents Introduction. Systems of drawing Types of drawings. Symbols and conventions. Glossary of abbreviations and shipbuilding terms. General layout f ships. Ship's structure. System of reading drawings. Systems of piping. Templates. Fabrication. Pipe-material classification. Valves and fittings. Types of joints and gaskets. Tests. Tools. Pipefitting practice. Glossary of pipefitting terms. Safety Useful tables and other data. Index.

Note A manual for marine pipefitters, giving methods of using plans and blueprints in the installation of piping, principally in na al essels. It is designed primarily for new men in the work, and the author has endea ored to produce a work simple enough to obviate apprenticeship.

HANSEN EMIL M

Ship outfitter's handbook Cambridge Md Cornell Maritime Press 1943 291 p. illus. 23 cm $4 00 6977

Contents. Systems of drawing Types of drawings. Symbols and conventions. Glossary f abbreviations and shipbuilding terms. General layout of ships. Ship's structure System of reading ship outfitting drawings. Ship outfitting jobs. Fabrication. Outfitting practice. Templates. Tests. Tools. Safety Tables and other data. Index.

Note. This handbook is designed for beginners in ship outfitting. The layout and structure of ships are discussed and a method for effecti use of blueprints is developed. There are numerous illustrations and a supplement of reproductions of working drawings.

LORD, LINDSAY

Naval architecture of planing hulls. Second edition Cambridge Md Cornell Maritime Press, 1954 319 p illus. 24 cm $6 00. 6978

Contents (abridged) Aspect ratio. Speed ratios. Loading of planes. Preliminary design. Lines. Weights. Hydrostatic calculations. Subdivision and flooding. Hydrodynamic calculations. Resistance and powering. Propulsion. Steering. Hull structure. Trials. Index.

Note. A manual of basic design principles and construction details for seaworthy speedboats, such as the PT boats of World War II fame. The author prominent naval architect with a long experience in the design of such boats, shows that Froude's traditional speed-length ratio is not applicable to hulls that skim the surface, and advocates instead the use of several formulas involving speed-beam relationships. The constant angle plane, or monohedron, is advocated for planing bottoms as a means of providing constant lift and least suction The book is significant contribution to naval architecture.

MANNING, GEORGE CHARLES

Manual of ship construction, the fundamental principles of naval architecture for the operating personnel of the merchant service, particularly those who are, or desire to become, officers. Princeton D Van Nostrand Company Inc, 1942 319 p. illus. 22 cm. $4 00 6979

Contents Ship language. Ship structure. Hull equipment and systems. Calculation of buoyancy and tonnage. Principles of stability Buoyancy and stability in damaged condition. Steering and rudders. Ocean waves and rolling. Propulsion. Appendix. Nomenclature of ships.

Note Prepared for the instruction of cadets in various maritime academies in the United States. It explains the characteristics f ship and the methods of ship construction from the standpoint of operating officers—both deck officers and engineering officers. The fundamental principles are concisely explained, with numerous illustrations.

MANNING, GEORGE CHARLES

The theory and technique of ship design a study of the basic principles and the processes employed in the design of ships of all classes. New York Published by The Technology Press of The Massachusetts Institute of Technology and John Wiley & Sons Inc. 1956 278 p illus. 24 cm $10 00 6980

Contents. Philosophy of ship design. Preliminary estimate of displacement. Preliminary estimate of elements of form. Preliminary estimates of stability Preliminary lines and calculations. Design of general arrangements. Strength and weight calculations. Contract and final design. Appendices. Computation of rabbet areas from principal dimensions and coefficients. Taylor's mathematical lines. Procedure in preliminary design. Index.

Not This new work supersedes the author's well-known *The basic design of ships*, New York, 1945. It is a new work rather than re ision although some material has been carried over from the older book. It is best described as an authoritative and compact introduction to the principles and techniques of present-day na al architecture. It deals with fundamentals and also with the important details. The greater part is technical and is addressed to advanced engineering college students who are preparing for careers in na al architecture. However, the first chapter and a few other sections are written in language intelligible to educated laymen. These parts of the book will be useful to readers outside the field of na al architecture who ish some knowledge of the problems and methods of ship design. The uthor is Professor of Naval Architecture at Massachusetts Institute of Technology

NATIONAL RESEARCH COUNCIL

Bibliography of the submarine 1557 to 1953 Prepared by the Committee on Undersea Warfare National Academy of Sciences National Research Council. Under the auspices of the Office of Naval Research. Washington, D C. National Academy of Sciences—National Research Council, 1954 261 p. 24 cm. $1.50. 6981

Contents (abridged): General and historical-non-technical. Special types of submarines. Design and construction—technical. Operations (other than warfare). Maintenance, repairs, and related facilities. The submarine in war. Anti-submarine [illegible]. Data books. Author index.

Note: A comprehensive bibliography of the international literature. It is arranged under the main headings listed above, chronologically within these headings, and by nation under the chronological sub-divisions. Many of the entries are briefly annotated.

NOWLIN, GORDON A.

Connecting ships wiring. Boston Houghton Mifflin Company 1944 300 p. illus. 19 cm. $4.00. 6982

Contents: Part I, Background information. Designating interior [illegible] ship. Getting information about the job. General cable information. Specific cable information. Part II, Lighting circuits. Designation of lighting circuits. Entering cables into [illegible]. Connections. Distribution boxes. Testing the circuit. Part III, Interior communication circuits. Wiring interior communication circuits. Part IV, Cutting in and testing interior communication circuits. Part V, The power system. Wiring and cutting in power circuits. Testing power circuits. Part VI, Recent developments. Degaussing. New methods of making electrical cable ends. Index. Appendix.

Note: An interpretation of the principles and specifications governing the cutting in and connecting up of electrical equipment on board naval and commercial vessels. The practices described are standard procedure in the installation of electrical equipment and are applicable to most of the ships now being built in American yards. Electrical theory [illegible] purposely omitted and emphasis is upon the practical aspect of electrical wiring from the viewpoint of the beginning electrician and trainee.

PIPER, JOHN F

Marine electrical installation. Third edition. Cambridge Md Cornell Maritime Press, 1943 450 p. illus. 19 cm. $3.50. 6983

Contents: The modern vessel. Electrical systems. Tools. Temporary services. Electrical materials. Cable racks, brackets, and hangers. General wiring methods. Lighting systems. The power system. Interior communication systems. The generating plant. Laying out work. Conduit work and mechanical systems. Blueprint reading. Tests and trials. Appendices: Installation code. Tables and useful data. Elementary theory. Index.

Note: A handbook for the marine electrical worker. Electrical theory is discussed, and its practical application indicated. In the third edition new text material and new illustrations have been added, and sections have been provided on laying out, degaussing systems, and elementary theory.

RABL, SAMUEL SUPPLEE

Practical principles of naval architecture. Cambridge, Md. Cornell Maritime Press, 1942 218 p. illus. 19 cm. $2.50. 6984

Contents: Practical principles. Mathematics. Curves and graphs. The coefficients. Buoyancy and displacement. Centers and moments of gravity. Area and buoyancy. Stability: trim and the metacenter. Bulkhead and trim calculations. Speed, resistance and power. The measurements of [illegible] ship. The inclining experiment. Launching. Strength of floating structures. Strength of materials. Curves of form, deadweight scale and capacity plan. Effect of flooded compartments. Appendices. Index.

Note: An elementary text and handbook for men in shipyards, [illegible] draftsmen, and men in the merchant marine. The author has included modern methods and also some which may be termed old fashioned, since many good ships still in use were constructed according to these older methods. This volume constitutes second edition, revised, in which the chapter on the effect of flooded compartments [illegible] added. Additions have also been made to the appendices on the admiralty coefficient and determining [illegible] by independent methods.

ROSSELL, HENRY EASTIN AND LAWRENCE B CHAPMAN editors

Principles of naval architecture. Written by a group of authorities. New York The Society of Naval Architects and Marine Engineers, 1939 2 v. illus. 28 cm. $6.00 per v. $11.00 set. 6985

Contents: Volume I, Statics of naval architecture. Geometry of the ship, by W Selkirk Owen. Freeboard, tonnage and capacity, by Harold F Norton. Transverse stability, by R. A. Vincent. Longitudinal stability and trim, by John F Macmillan. Subdivision of ships, by John F Macmillan and John P Comstock. Strength of ships, by David Arnott. Launching, by Henry H. W Keith. Volume II, Dynamics of naval architecture: The motion of ships among waves, by George C. Manning. Resistance and powering, by Kenneth S. M. Davidson. Propulsion and propellers, by Karl E. Schoenherr. Steering, by Karl E. Schoenherr.

Note: An authoritative publication containing information on various aspects of naval architecture. It is illustrated with diagrams, charts, and tables, and contains also practical examples and bibliographies. It is intended both for naval architects and marine engineers and for students in naval architecture and marine engineering.

SOCIETY OF NAVAL ARCHITECTS AND MARINE ENGINEERS

Historical transactions 1893–1943 New York The Society of Naval Architects and Marine Engineers, 1945 544 p. illus. 28 cm. $3.50 6986

Contents: David W. Taylor medalists. Part I, United States navy yards: Brief history of the Boston Navy Yard, by W T. Tarrant. Brief history of the Cavite Navy Yard, by R. J. Davis. The Charleston, S. C., Navy Yard, by W M. Sanders. Mare Island, then and now, by H. W Linnehan. The New York Navy Yard, by J. H. Watt. Norfolk Navy Yard, by M. K. Simmons. Pearl Harbor and its relation to the United States Navy, by F A. Stevens. The Philadelphia Navy Yard, by officers of the Industrial Department. The Portsmouth, N. H., Navy Yard, by J G. Tawresey. The Puget Sound Navy Yard, by C. S. Freeman. Brief historical sketch of the navy yard at Washington, D. C., by E. W Rae. Part II, Special types of vessels: The Pacific Coast steam schooner, by D. W Dickie. Early American steamship lines, by F J. Taylor. American merchant steamships, by C. R. Kroll. History of the United States coastwise steamers, by E. H. Rigg and A. J. Dickie. The development of steam navigation on Long Island Sound, by J. M. Gordon. History of tankers, by H. F Frear. Outstanding New England types of fishing boats, whalers, and yachts, by G. Owen. Ferryboats, by E. Johnson. Part III, Private shipyards: History of Bath Iron Works Corporation, by W S Newell. History of Bethlehem Fore River Yard, by H. E. Gould. History of Bethlehem's Wilmington plant—formerly the Harlan & Hollingsworth Corporation, by W H. Collins. The Cramp shipyard, by W Purnell. The Newport News Shipbuilding and Dry Dock Company, by H. L. Ferguson. The New York Shipbuilding Corporation, by J. F Metten. History of the Pusey and Jones Corporation, by A. G. Spiegelhalter. The Roach shipyard, by W P Stephens and J. L. Bogert. Sun Shipbuilding & Dry Dock Company, by R. Haig. History of Bethlehem's San Francisco yard—formerly the Union Iron Works, by H. F Frear. Part IV, The Navy Department and naval vessels: The organization of the Navy Department, by G. H. Rock. Types of naval ships, by H. E. Rossell. Monitor-class warships of the United States Navy, by A. Crosby Brown. Revenue cutters, coast guard ships and lightships, by F A. Hunnewell. Development of submarines in the United States, by A. I. McKee. Torpedo boats and destroyers, by H. F Frear and W S. Newell. Part V, Miscellaneous: Shipping on the Great Lakes, by J. C. Workum. Development of transportation on the North Pacific Ocean, by A. F Pillsbury. Water transportation on inland rivers, by V R. Edwards and F C. Cole. Part VI, Development and history: The development of marine engineering, by J. F Nichols. The development and use of steel in shipbuilding, by E. F Kenney. Developments in shipbuilding, by H. F Norton. The development of marine watertube boilers, by J. M. King and R. S.

Cox. History of United States navigation and vessel inspection laws, by H. C. Shepheard. The American Bureau of Shipping 1862 1942 by J L. Luckenbach. Formation of the Society of Naval Architects and Marine Engineers, by W P Robert.

Note This volume as planned and ritten as an outline of the history of shipbuilding and shipping, ith emphasis on developments in the United States. The papers are not reprints but were expressly written for the collection. Most of them are illustrated and are accompanied by lists of pertinent literature and by discussions.

SWANSON, WILLIAM ELMER

Modern shipfitter's handbook. Second edition, revised and enlarged Cambridge, Md. Cornell Maritime Press, 1941 309 p illus 19 cm $3 50 6987

Contents Outline of ship construction. Blueprint reading. Mold loft. Structural shop and anglesmithing. Assembly Erection. Launching. Tools and their uses. Riveting. Rigging. Welding. Safety Glossary l construction terms. Tables. Appendix. Index.

Note. A pocket-size manual written from the point of view of the worker and the learner Working operations are illustrated by the use of drawings. New in this second edition is the appendix which covers tank or box assembly welded corners, winch house assembly port and deck lights, cylinder assembly stack construction, masts, derrick posts, etc.

TOMLINSON, JOSEPH L

Shipbuilding blueprint reading Chicago American Technical Society, 1942 208 p illus. 28 cm $3 00 6988

Contents (abridged) Shop arithmetic. Plates showing profile of modern cargo ship and midship section. Glossary of ship terms. Plates showing profile and deck plan, and abbreviations used on ship drawings. Typical ship drawings. Symbols and abbreviations. Developing the shape of the ship. Ship lines. Ship parts. Drawing projections. Welding and abbreviations. Deck beam bracket. Bulwark bracket. Gusset and floor bracket. Side stringer. Watertight flat deck. Rivet gages for channels and angles. Thickness and weight of steel plate. Engine foundation. Bow frame. Oil-tight bulkhead. Main deck plating. Fore-castle deck. Midship transverse frame. Forepeak profile.

Note: A wire-bound textbook with explanations, illustrations, and test questions, covering shop mathematics, nomenclature, abbreviations, and working drawings of the modern cargo vessel.

TULIN, ADAM F

Practical shell developing for steel shipbuilders, a manual for loftsmen, shipfitters, hull draftsmen and others who deal with steel ship construction. Second edition. New York Simmons-Boardman Publishing Corporation 1941 158 p illus. 24 cm. $4 00 6989

Contents. Shell plate developing and expanding. Sight edge expansions. Transferring fore and aft lines from the body Lining in frame lines. Lining in butts. Thickness plotting. Stretching and drawing templates. Miscellaneous. Bow table. Index.

Note. An advanced manual for loftsmen, shipfitters, hull draftsmen, and others who deal with steel ship construction. The modern center spot squaring method and the edge squaring method of shell developing are made clear with the aid of scale drawings and worked out examples. No theoretical treatment is given as the loftsman using the book is assumed to have had at least six months' experience.

MARINE ENGINEERING AND SEAMANSHIP

Conference on Ships and Waves

Proceedings of the first Conference on Ships and Waves, Hoboken, New Jersey October 1954 Edited by J W Johnson. Richmond, Calif. Council on Wave Research and Society of Naval Architects and Marine Engineers, 1955 509 p. illus. 27 cm. 6990

Contents: Part 1, The theory, measurement and prediction of sea waves. On the theory of irregular waves, by R. A. Fuchs. A technique for ocean wave measurement, by H. O. Farmer and [illegible]. Short time prediction. Prediction of wave motion, by R. R. Putz. [illegible] stochastic [illegible] of sea surface heights—prediction of [illegible], by L. J. Cote. Wave forecasting, by T. Saville, Jr. Wave [illegible] at the Hydrographic Office, by J. F. [illegible] and J. J. Schule, Jr. The ratio of the sea-surface wind to the gradient wind, by P. W. Johnson. Climatological data on the generation and propagation of waves in the North Atlantic, by F. E. DeLeonibus. Part 2, Theory of ship motion in a seaway: Progress of theoretical investigation of ship motions in a seaway, by G. P. Weinblum. On some recent developments in the theory of ship motions, by M. St. Denis and W. J. Pierson, Jr. Ships in a seaway, by J. J. Stoker and A. S. Peters. A linear theory of ship motion in irregular waves, by R. A. Fuchs. The oscillations of ships in solitary waves, by R. A. Fuchs and R. A. MacCamy. Forces and moments on submerged bodies moving under waves, by W. R. Cummins. Short time prediction of the motion of a ship in waves, by J. T. Fleck. Progress in theoretical and experimental studies of ship slamming, by V. G. Szebehely. Application of electronic computers to scientific problems, by J. J. [illegible]. Part 3, Laboratory equipment for model tests: The design of wave channels, by J. M. Caldwell. Wave machines, by J. [illegible]. Resistance tests and motion observations on models in a seaway, by F. H. Todd. Irregular waves in model tanks, by E. V. Lewis. Observation of ship motions by model testing, by B. V. Korvin-Kroukovsky. Resistance tests in waves by models, by E. Numata. Equipment for testing model ships and seaplane hulls in choppy seas, by E. F. Schade. Part 4, Model and prototype observations on ship motion: Observations on ship motions at sea, by A. C. [illegible]. Laboratory studies of the motion of freely floating bodies in non-uniform and uniform long crested waves, by O. [illegible]. Amphibious structures in the surf, by D. A. Patrick and R. L. Wiegel. Model studies of amphibious structures in the surf, by H. W. Iversen and R. C. Crooke. Model investigations of seaplanes in waves, by J. B. Parkinson. Forces on moored ships due to wave action, by J. T. O'Brien. Mooring cable forces caused by wave action on floating structures, by K. K. [illegible]. Distribution patterns of wave heights, ship motions and hull stresses, by N. H. Jasper. Waves of translation in operating towboats, by L. A. Baier.

Note: A large amount of research, much of it carried out in recent years in the United States of America, is represented by the papers in this volume. Papers such as Szebehely's on ship slamming survey the extant knowledge, covering both the published literature and recent research, and point out areas in need of research. Bibliographies are included in most of the papers. The publication is of interest to naval architects, oceanographers, applied physicists and applied mathematicians.

Cornell, Felix M and Allan C. Hoffman editors

American merchant seaman's manual for seamen by seamen. Fourth edition revised and enlarged. Cambridge, Md. Cornell Maritime Press, 1946 834 p. illus. (part col d) 19 cm. 6991

Contents. Marlinespike seamanship. Wire and wire splicing. Blocks and tackle. Deck seamanship. Cargo stowage and handling. Canvas work. Paints and painting. Ground tackle. Steering gear. Examination guide for lifeboatmen and able seamen. Handling small boats under oars. Handling small boats under sail. Signals. Tankerman guide. Construction and stability. Navigation (revised by Capt. [illegible]) Weather. Ship sanitation and first aid. The rules of the road. Safety. Consular regulations affecting [illegible] seamen. Laws pertaining to merchant seamen. General information. Index.

Note: A comprehensive handbook intended both for practical use on shipboard and as a textbook or self-instruction guide in preparation for such certificate examinations as A.B., Lifeboatman, and Tankerman. It is widely used in maritime service training schools in the United States of America. Typical examination questions are included. International code flags are reproduced in color. The fifth edition was published in 1957 836 p., $7.00.

Crenshaw R. S jr.

Naval shiphandling By R. S Crenshaw, jr Aided by James S. Russell and others. Annapolis United States Naval Institute 1955 395 p illus 27 cm. $4.50 6992

Contents: Seaman's eye. Forces affecting the ship. The destroyer. Mastering the situation. Handling alongside. Anchoring. Mooring. Handling at sea. Radar, sonar and CIC. Special maneuvers at sea. Restricted waters. Cruisers and battleships. Carriers. Submarines. Large amphibious and service ships. Landing ships. Arctic shiphandling. Pilots and tugs. Shiphandling tips. Mariners at work. Appendix: Propeller side forces. Resistance and power. Index.

Note: The art of handling ships at sea, in harbors and other restricted areas is covered in detail in this textbook. The handling of all classes and types of naval ships is covered. Much of the information contained in the book is applicable also to the handling of merchant ships. A large fraction of the 146 figures are diagrams of specific maneuvers. The title page bears the names of 16 authorities who contributed to the volume in addition to the author.

Gillmer, Thomas C

Fundamentals of construction and stability of naval ships. Annapolis The United States Naval Institute 1956 370 p. illus. 26 cm. $5.50. 6993

Contents. Planning and building the ship. Definitions and geometry of the ship. The ship's structure. The strength of ships and their structural material. Resistance, propulsion and steering. Buoyancy. Equilibrium and initial stability. Overall stability. Weight effects on stability. Impaired stability. Control of damage. Wave motion in water. Ship motion among waves. Dynamic stability. Dynamically supported craft. Submersible craft—the submarine. Appendices: Approximate method of integration in ship calculations. Computations for effective horsepower and propulsion theory. Lost buoyancy and free communication. Index.

Note: A textbook prepared for the use of midshipmen during their last year in the Department of Marine Engineering at the United States Naval Academy. It is concerned primarily with the stability of naval ships and is designed to provide information that will be useful in their control when stability or structure, or both, are damaged. In short, it deals with the portion of the area of naval science sometimes called damage control. Because of the importance of a fundamental knowledge of ship structure to officers responsible for the control of damaged ships, it contains a large part of discussions of topics from naval architecture. Portions of the book have been taken from other texts published by the United States Naval Institute. The author is Associate Professor of

Marine Engineering on the faculty of the United States Naval Academy

HEUVELMANS, MARTIN

Cargo deadweight distribution Cambridge, Md. Cornell Maritime Press, 1945 86 p illus 19 cm. $2 00 6994

Contents Problems of weight distribution. General cargo. Stability or vertical weight distribution. Free surface correction. Complex cargo. Résumé. Special considerations in stowage. General cargo plan Safe stowage and despatch. Interdependence of stowage and weight distribution. Deadweight scale. Trim scale. Conclusion.

Note A brief book for stevedores, ship's officers, and others directly concerned with the loading of ships. It is not intended to replace more comprehensive books on ship stowage. Instead, it deals as concisely as possible with practical methods of planning the distribution of cargo so as to obtain good stability and trim.

KING, RENO C, JR.

Practical marine engineering Second edition. Englewood Cliffs, N J Prentice-Hall Inc., 1956 541 p. illus 22 cm $7.35 6995

Contents. Introduction to the marine power plant. Boiler construction—general requirements. Construction of Scotch boilers. Water-tube boilers. Combustion. Boiler operation and maintenance. Boiler water problems. Reciprocating steam engines. Steam turbines. Electricity Refrigeration. Pumps and unfired pressure vessels. Miscellaneous equipment. Respiratory apparatus. Fire-fighting equipment rules and regulations. Engine-room mathematics. Index.

Note. A standard text on the marine steam power plant. As the table of contents indicates, it covers also other marine machinery such as pumps, which is the concern of operating marine engineers. It is used in preparation for examinations and is so organized and written that it is suitable for self-instruction as well as for study in organized courses. The first edition was published in 1948. The most noteworthy change in this second edition is the addition of the chapter titled, "Engine-room mathematics. The chapter on fire-fighting has been completely rewritten. There are a few changes in other chapters but, generally speaking, the revision of these has not been extensive or thorough. For example, the following passage from the first edition appears unchanged in the second edition "There is no great barrier to prevent the gas-turbine from becoming popular for marine as well as for industrial use. As this book is being prepared, tests are being run on gas-turbines, marine power plants."

KING, E R, AND J V NOEL, JR

Ship handling Princeton D Van Nostrand Company Inc., 1954 219 p illus. 24 cm. $5 00 6996

Contents Introduction. Factors in ship handling. Bridge personnel and procedures. Anchoring and mooring. Making a landing. Leaving a pier or another ship. Ship handling in restricted waters. Ship handling at sea. Emergency ship handling. Handling of special naval types Ship handling in ice. Index.

Note. The handling of ships is described in a practical and detailed manner in this book, whose authors hold the rank of Commander in the United States Navy The handling of both naval and merchant ships under all possible conditions is clearly explained, and the exposition is made interesting by the inclusion of incidents from actual experience. The book is even more inclusive than the chapter titles indicate. For example, the chapter on emergency shiphandling covers the following exigencies avoiding collision, steering casualties, heavy weather man overboard, bringing aboard survivors, and the handling of damaged ships.

KNIGHT, AUSTIN M

Modern seamanship Twelfth edition. Rewritten and revised by Ralph S Wentworth assisted by John V Noel jr and officers of the U S Naval Academy the U S Coast Guard Academy officers and civilian specialists in the Bureau of Ships and in the Bureau of Naval Personnel Navy Department With chapters on weather prepared by Frederick L Caudle. Princeton D Van Nostrand Company, Inc., 1953 606 p. illus. 24 cm. $7 50 6997

Contents. Part I, The sea and the ship Waves and surf. Types of ships. The hull. Methods of propulsion and steering. Instruments for navigation. Boats. Landing ships and landing craft. Ground tackle and anchoring. Mooring. Part II, Shiphandling: General principles of ship control. Docking and mooring—handling alongside. Station keeping. Handling boats. Towing and replenishment at sea. Salvage. Ice seamanship. Part III, Rules of the road, by R. S. Wentworth Principles and application. Lights and shapes of identification, Rules 1 16. Steering and sailing rules, Rules 17-32. Part IV Weather by F L. Caudle: The atmosphere and its circulation. Clouds, fog, and stability Weather elements, instruments, and reports. Weather of the middle latitudes. The tropical cyclone—thunderstorms—tornadoes. Appendices. Rope and cordage. Knotting and splicing. Mechanical appliances aboard ship. Index.

Note For several decades this book has been an official text at the United States Naval Academy Although it contains information that is useful to merchant seamen, it is designed primarily for instruction and reference use by naval officers and seamen. It describes explicitly and in detail the principles and techniques of naval seamanship and is fully illustrated. The first edition was published in 1901 and the 11th edition in 1945. In comparison to the 11th edition, the number of pages in this 12th edition are substantially fewer. Nevertheless, it contains two new chapters, and many of the chapters carried over have been revised. The scope and purpose are unchanged.

JONES, CECIL MORGAN

Small boat engine manual, selection, installation, maintenance, operation. Cambridge, Md. Cornell Maritime Press, 1948. 276 p. illus. 19 cm. $4 00. 6998

Contents (abridged) Choosing the right engine. How engines work. Cylinder blocks, crankshafts, connecting rods, and pistons. Valves, camshafts, and timing gears. Carburetors and fuel pumps. Electrical systems. Storage batteries. Transmission systems. Lubricating, cooling and fuel systems. Diesel fuel injectors, pumps, nozzles, blowers. Propellers, shafting, rudders. Auxiliary power plants, combination units, lighting. Trouble shooting—gasoline engines—Diesel engines. Laying-up, recommissioning, insurance, the motorboat act. Index.

Note: A carefully written book of factual information and instructions for the motorboat owner who personally operates and maintains his own craft. The author thoroughly covers the installation, operation, care, and minor repair of inboard two-cycle and four-cycle gasoline and Diesel engines. The chapter on trouble shooting is conveniently arranged in a series of typical situations involving engine failure, for each of which the cause or trouble is listed and the possible reasons for it are mentioned, after which the proper remedies are prescribed.

LABBERTON, JOHN MADISON, editor

Marine engineers handbook prepared by a staff of specialists. With the general engineering fundamentals reproduced from Mechanical engineers' handbook, Lionel S. Marks, editor in-chief New York McGraw Hill Book Company, Inc., 1945 2 013 p. illus. 20 cm. $20 00 6999

Contents Mathematical tables. Weights and measures. Mathematics. Mechanics of rigid bodies. Stresses in framed structures. Friction. Hydraulics. Dimensional analysis. Theory of models. Thermal properties of bodies and thermodynamics. Transmission of heat. Vibration. Mechanical properties of materials. Mechanics of materials. Pipe line problems. Materials of engineering. Machine elements. Pipe and pipe fittings. Power generation. Boilers. Steam engines. Steam turbines. Internal combustion engines. Hulls. Propellers. Reduction gears. Deck machinery Electric drive. Heating and ventilating. Pumps and compressors. Fans. Electrical engineering. Measuring instruments. Refrigeration. Ships' trials. Index.

Note. This handbook was planned as [illegible] successor to Sterling's *Marine engineers' handbook* New York, 1920, and included in it is the section on reciprocating engines that appeared in the older book. This section has been reset but not revised. The topics (as distinguished from the sections on general engineering reproduced from Marks' *Mechanical engineers' handbook*) are new. As in the older book, the sections are by various authorities and

as aged. The work is designed mainly for students of marine engineering and graduate engineers concerned with ship design and operation rather than for marine operating engineers.

LA DAGE, JOHN H.

Merchant ships a pictorial study By John H. La Dage, with C. L. Sauerbier G. N Steiner M. W Hirschkowitz, and A. E. Flore. Cambridge Md. Cornell Maritime Press, 1955. 481 p. illus. 29 cm. $15.00 7000

Contents (abridged) Part I, Living and working aboard ship, by J. La Dage. Part II, Types of merchant ships, by J. La Dage. Part III, Ship structure, by J. La Dage. Part IV The handling and stowage of cargo, by C. L. Sauerbier. Part Deck operations, by M. W J. La Dage and others. Part VI, Engineering operation, by M. W Hirschkowitz. Part VII, Docking and repairing the ship, by G. N. Steiner and J. La Dage.

Note: An unusual book which consists almost entirely of pictures (all of them reproductions of photographs) and well-written, explanatory captions. Some of these captions are short, but in many instances they are generous paragraph or two in length. As the part-titles quoted above indicate, most aspects of merchant ships including building and repairing are covered.

LA DAGE, JOHN H. AND LEE VAN GEMERT

Stability and trim for the ship's officer Second edition. Princeton D Van Nostrand Company Inc., 1956 216 p. illus. 22 cm. $5.85 7001

Contents: What is stability? Calculation of metacentric height (GM). The calculation of KM. The inclining experiment. Stability at large angles of inclination. Free surface. Damage stability Trim. Stability and trim computers and tables. Practical stability and trim considerations. Marine disasters due to loss of transverse stability Bibliography Appendix. Index.

Note: Ship's officers need thorough grasp of ship stability principles, both in order to avert capsizing the severely damaged vessel and in order most effectively and most safely to stow the cargo. The book has been produced to give ship's officers and candidates for mate's and master's licenses complete knowledge of the subject. The writing is compact, and the book contains considerably more information than the relatively small number of pages would indicate. The first-named author Chief of the Section of Naval Architecture in the United States Merchant Marine Academy and the co-author was formerly an instructor on the faculty of the same Academy. The first edition was published in 1944. In preparing this edition two chapters were extensively revised, and the chapter entitled "Practical stability and trim considerations" was added.

LATHAM, ROBERT F

Naval boilers. Second revised edition, completely rewritten. Annapolis Md. United States Naval Institute, 1956 180 p. illus. 28 cm. $5.50. 7002

Contents: Introduction to naval boilers. History and development of boilers. Modern express boiler design and construction. Operational boiler types. Boiler water treatment. Supplying heat to the boiler Principles of boiler operation and maintenance. Bibliography Index.

Note: A textbook developed at the United States Naval Academy and used there in course taken by first-year midshipmen. It covers in descriptive style the construction features and operating principles of steam-generating equipment used in vessels of the United States Navy Much of the material is, of course, applicable to similar equipment in merchant vessels. The preceding edition was published in 1949. The book was extensively reorganized and rewritten for this edition. Among the noteworthy additions is the chapter on the history of boilers.

LEDERER, EUGENE H.

Port terminal operation. Cambridge Md. Cornell Maritime Press, 1945 450 p. illus. 23 cm. $5.00. 7003

Contents (abridged) Part I, Port terminal management. Port terminal facilities. Port administration. Port services. Facilities for interchange between rail and water. Fuel and supplies. Port and harbor facilities. U. S. line administration. U. S. line organization. Handling cargo on the dock. Pier management. Warehousing. Storage precautions. Part II, Stevedoring Administration and operation. Handling ship cargo. Stevedoring charges. Part III, Stowage Responsibilities in stowage. Stowage problems and procedures. Part IV Lighterage and harbor boats. Lighterage operation. Rules governing boating operations. Towage Marine cableways. Cable. Harbor boat operation. Care and handling of rope. Up-keep and operation of motorcraft. Appendices. Suggested further reading. Port terminal safety code. Outline for specifications for repairs. Index.

Note. A comprehensive, practical manual designed for all persons concerned with the handling and stowage of ships' cargo. There is somewhat more emphasis on management principles, but details of the actual handling of cargo are also covered. Photographs and diagrams that illustrate correct and incorrect procedures, equipment for loading and unloading, and of harbor marine equipment supplement the text.

OLSON LOUIS B

Olson's small boat seamanship. New York D Van Nostrand Company Inc. 1956 417 p. illus. (part col d) 24 cm. $7.50. 7004

Contents: Boating is fun. Boating is more fun when you keep out of trouble What is boat? Types of boats. Waterways. Weather. Tide and current. Waves, sea, swell, breakers, and surf. Selecting your first boat. Materials of construction. Design and workmanship. Equipment. Navigation The chart. The magnetic compass. Aids to navigation. Piloting. Offshore navigation. Government services to boatmen. Marlinspike seamanship. Seamanship Rules of the road. Handling boat. Additional notes. Safety in boat. Search and rescue. Survival. First aid resuscitation, swimming. Signals and communications. Caring for your boat. Legal obligations and rights of boatmen financing, insurance. Comfort aboard. Courtesy flags boating organizations. Afterword. Index.

Note. A well-written book addressed primarily to owners of small boats but of interest to anyone who likes to learn well the handling of small sailing or power craft. It is more comprehensive than might be expected in book for beginners and amateurs and is written with authority The author is Rear Admiral in the United States Coast Guard and is Commander of the Third Coast Guard District.

OSBOURNE, ALAN editor

Modern marine engineer's manual. Cambridge, Md. Cornell Maritime Press, 1945–46. 2 v illus. 19 cm. Vol. I, $8.50 vol. II, $6.50 7005

Contents: Volume Mathematics and mechanics. Safety Engineering materials, pipe fittings and packing. Thermodynamics. Combustion. Boilers, boiler operation and maintenance. Reciprocating engines. Marine steam turbines. Bearings and shafting. Lubrication. Condensers. Pumps. Volume II, Marine Diesel engines. Modern marine refrigeration. Heating. Ventilation. Insulation. Steering gear and deck machinery. Modern marine electricity Instruments. Propellers and propulsion. Tests and trials. Tables. Index.

Note. A technical manual of marine machinery and Diesel engines for engineers and others concerned with the design or operation of merchant ships. A special section, 243 pages long, in the second volume, deals with Diesel engines.

PLUMMER, CARLYLE J

Ship handling in narrow channels. Cambridge, Md. Cornell Maritime Press 1945 107 p. illus. 19 cm. $2.00. 7006

Contents: Making suction an asset. Anchoring. Mooring. Best trim for maneuvering. Using tugs advantageously Use of anchors to maneuver. Conclusion.

Note Much original information on the handling of ocean-going vessels in narrow channels is contained in this small book. Some of the special problems discussed are getting away from bank in spite of suction, meeting and passing other ships, floating grounded vessel, dropping anchor to break sheer, and docking with right fair tide. The book is based on the author's own experience as pilot and ship's officer and is written for pilots and junior deck officers.

RIESENBERG, FELIX

Standard seamanship for the merchant service 627 illustrations Second edition New York D Van Nostrand Company, Inc., 1936 942 p illus (part col'd) 22 cm $10 00 7007

Contents Types of vessels. The hull. Ropes, knots, splices. Blocks and tackles. Steamer rigging, cargo gear. Sailing ship rigging, sails, canvas work. Deck machinery Holds, peaks, tanks. Stowage. Carriage of live stock. The tanker Passenger vessels. Boats. Compass, lead, log, piloting. The bridge. Rules of the road at sea. Ground tackle. Handling steamer. Handling a sailer Weather at sea. Safety on board ship. Ship maintenance.

Note This textbook is used for the instruction of cadets in various maritime academies in the *United States of America*. It explains the navigation and general handling of ships at sea, with particular attention to the needs f merchant marine officers. Safety devices and safety appliances are discussed in considerable detail.

SAUERBIER, CHARLES L

Marine cargo operations New York John Wiley & Sons, 1956 548 p illus 24 cm $12 00 7008

Contents: Shipowner's organization for cargo procurement, stowage, care, and delivery Cargo responsibility Principles of stowage. Planning the stowage. Stowage of the cargo. The ship's loading and discharging equipment. Materials handling principles and equipment. The ventilation of cargo holds. Research and development in the industry Index.

Note A broad and at the same time fairly detailed view of present-day marine cargo handling is presented in this book. The primary point f view is that of shipmasters and deck officers of cargo-carrying vessels. Responsibility for cargo is adequately covered, but the greater part of the space is given to such matters as stowage, loading and discharging and materials handling. The chapter on ventilation of cargo holds is also a long one. The main thesis is that scientific principles can and should be applied to all phases of handling and transportation of marine cargo. The uthor is member of the faculty of the United States Merchant Marin Academy and the book is organized so that it may be used as text. However it can be recommended to anyone who is concerned in a management capacity with marine cargo including even the officers of companies that ship goods by water

SEWARD, HERBERT LEE, editor

Marine engineering Written by a group of authorities New York The Society of Naval Architects and Marine Engineers 1942–44 2 v illus 28 cm $6 00 per v $11 00 set. 7009

Contents Volume Design and main propulsion units Propelling machinery by J R. Burkhardt. Power and revolutions, by J R. Burkhardt. Procedure in general design, by Benjamin Fox. Boilers, by E. G. Bailey and T B Stillman Reciprocating steam engines, by J C. Workman and J Lyell Wilson Steam turbines, by A. R. Smith and W E Blowney Diesel engines, by Louis R. Ford. Reduction gears, by C. R. Waller and A. Peterson. Propellers and shafting, by Richard H. Tingey Materials and metallurgical engineering, by Paul Ffield. Index Volume II, Principles and auxiliaries. Heat engineering and thermodynamics, by J Kenneth Salisbury Dynamic effects, by Frank M Lewis. Heat exchangers Part I Steam condensers, by Asa B Stevens. Part 2 Shell and tube heat exchangers, by Joseph Price and Eugene P Worthen. Pumps, blowers, compressors and ejectors, by Mark L. Ireland, Jr Distilling plants, by Joseph Price. Refrigeration, air conditioning, ventilation and heating, by H. E. Parker Piping, by Jakob L. Bergvall. Hull machinery by John Flodin. Electric propulsion, by Harry C. Coleman. Electric plant, by H. Franklin Harvey Jr. Lubrication, by A. Dudley Hall Trials, by Walter E. Thau. Index.

Note A comprehensive treatment of marine engineering, intended for the reader and student who is reasonably familiar with the underlying scientific principles and who has some acquaintance with merchant ships. The basic subjects of thermodynamics, theoretical and applied mechanics, and machine design are omitted although reference is occasionally made to these theories in developing certain analyses. The material is arranged for use as textbook for both organized classes and self-instruction. There are many detailed design drawings, performance charts, and tables of specifications in each chapter Theory is presented in considerable detail and examples of calculations are worked out. Extensive bibliographies are included at the end of each chapter

SHULTERS, EARL S

Marine air conditioning and refrigeration. Cambridge, Md Cornell Maritime Press, 1952 357 p 21 cm. $6 00 7010

Contents Marine air conditioning and refrigeration. Living accommodations conditioning. General cargo hold conditioning. Cargocaire silica gel plant. Kathabar plant. Refrigeration. Ship's service stores refrigeration. Cargo refrigeration. Freon-12 refrigeration plant. CO_2 refrigeration plant. Insulation. Appendices. Index.

Note A practical book designed for the instruction of marine operating personnel who are responsible for operation and maintenance of shipboard air conditioning plants. It contains several chapters on the general aspects of marine air conditioning and refrigeration, but most of the space is devoted to the chapters hich deal individually with specific types of plants. Each of these is described as to component parts, refrigeration cycle, properties of the refrigerant, and techniques of operating and repair. The book supersedes the author's *Modern marine refrigeration*, second edition, 1942.

SUMMERILL, JOHN F

Tanker manual Drawings by Richard Naylor New York Cornell Maritime Press 1947 150 p illus 19 cm. $3 00 7011

Contents The tanker Design and construction. Transfer operations. Tank cleaning. Classifications of oils. Maintenance. Dry cargo handling and stowage. Fire protection and prevention. Regulations for construction of tank vessels. Review questions. Useful tables and data. Index.

Note. Although the responsibilities and work of both officers and crew on a tanker have many similarities to those on vessel that carries dry cargo, there are also important differences. The purpose of this useful little volume is to explain those differences to experienced seamen. The proper methods of handling and carrying "black and "white" oils, vegetable oils, molasses, and latex are fully described. Among the 50 pages of tables are lists of conversion factors, pipe and cylinder capacities, specific gravities of oil, and data on pounds per gallon, barrels per ton, and cubic feet per ton.

TURPIN, EDWARD A, AND WILLIAM A. MACEWEN

Merchant marine officers handbook. New revised edition. Cambridge, Md Cornell Maritime Press 1950 828 p. illus. (part col'd) 18 cm. $7 00 7012

Contents. Everyday labors of a ship's offic r Instruments and accessories used in navigation. Piloting. Tides and currents. Sailings. Celestial navigation. Meteorology Cargo. Shiphandling. Cargo gear. Ground tackle. Signals. Rules of the road. Ship construction, maintenance and repair Tonnage and stability Fire. Emergencies. U S. navigation laws. Engineering for deck officers. First aid and ship sanitation. Appendices Examinations required for licensed officers. Enlistments in the Naval Reserve. Mathematics. Tables and useful information. Index.

Note. This book is both a reference book for use on shipboard and text for candidates for licenses as ship's officers. The day-to-day duties of ship's officers are described and a large amount of reference information on the topics listed in the above contents is compactly presented. The level of treatment presupposes familiarity with the fundamentals of seamanship. The volume is ell indexed. The first edition was published in 1942 For the present edition the volume was somewhat reorganized and various sections re revised.

UNITED STATES NAVAL ACADEMY

Naval auxiliary machinery Revised 1952 Annapolis United States Naval Institute 1952 262 p illus. (part col d) 28 cm $4 00 7013

Contents: Piping, fittings and valves. Packing and heat insulating materials. Pumps and air ejectors. Blowers. Heat exchanger equipment. Condensers. Distilling plants. Feed water systems. Fuel oil

systems. Refrigeration equipment. Compressed air systems. Centrifugal oil purifiers. Control instruments. Machinery outside the engineering spaces. Fire-fighting equipment. Appendix: Additional pumps. Additional forced draft blowers. Additional feed water systems and standard units. Index.

Note: A textbook prepared for use in the United States Naval Academy, the publication covers not only the pumps, blowers, distilling plants, and the oil and water systems, but also the appurtenances essential to their continued effective operation as part of the naval engineering plant, such as piping, valves, fittings, and insulating materials. Also discussed in the light of their contribution to the ship's primary function are the refrigeration and compressed air systems. Coverage likewise extends to important shipboard machinery located outside the engineering spaces, such as the steering gear, windlasses, and weight-handling equipment. Emphasis is upon the details of construction and the operating principles of the machinery.

UNITED STATES. NAVAL ACADEMY

Naval turbines, revised 1952. Annapolis, United States Naval Institute, 1952. 128 p. illus. 28 cm. $4.50. 7014

Contents: Elementary principles. Descriptive classification. Details of construction. Turbine accessories. Measurements and adjustments. Main propulsion turbine control and cruising arrangements. Auxiliary turbines and their control. Lubrication. Main propulsion shafting and propellers. Appendix: Additional turbine classifications. Additional turbine accessories and auxiliaries. Additional measurements and adjustments. Main propulsion turbine overspeed control. Index.

Note: Prepared primarily for the use of midshipmen of the United States Naval Academy, this textbook covers the details of construction and the operating principles of main propulsion and auxiliary turbines used aboard modern naval vessels. The subject matter is presented in a descriptive manner in order to familiarize the student with the machinery he will encounter aboard ship and to provide a background for the theoretical studies in subsequent courses in fluid mechanics and thermodynamics. The text is illustrated with extremely clear diagrammatic drawings and two folding plates giving design details of different types of turbines. The book is included in the bibliography for promotion examinations of officers of the *United States Navy* and should be of value also to any machinists or engineers concerned with turbines on naval ships. The publication is a revision of *Naval turbines* published by the United States Naval Institute in 1949.

WHEELER, W. L., JR.

Medical care of merchant seamen; a handbook of ship and aircraft sanitation and emergency medical aid. Second edition. Cambridge, Md. Cornell Maritime Press, 1945. 112 p. illus. 18 cm. $2.50. 7015

Contents: How to render medical care at sea. The maintenance of the human body. The medicine chest. Specific diseases and their therapy. Surgical first aid. Miscellaneous conditions—diagnosis and treatment. Childbirth at sea. Care of survivors. Rescuing a drowning person. Tanker precautions. Radio pratique. Radio messages requesting medical advice. Ship's hospital and dispensary. Medical first aid in aviation. Glossary. Index.

Note: A reference handbook intended for the use of seamen who possess little or no medical knowledge. It is written in plain language and the advice and instructions given are based on those materials and resources which are ordinarily available on ships and in lifeboats. Originally published for use during World War II, it has been considerably expanded in scope in this edition in order to cover the medical emergencies most commonly encountered on ships in peacetime. There are now 18 figures.

RIESENBERG, FELIX

Standard seamanship for the merchant service 627 illustrations Second edition New York D Van Nostrand Company Inc., 1936 942 p illus (part col'd) 22 cm. $10 00 7007

Contents. Types of vessels. The hull. Ropes, knots, splices. Blocks and tackles. Steamer rigging, cargo gear Sailing ship rigging, sails, canvas work. Deck machinery Holds, peaks, tanks. Stowage. Carriage of live stock. The tanker Passenger vessels. Boats. Compass, lead, log, piloting. The bridge. Rules of the road at sea. Ground tackle. *Handling a steamer* Handling a sailer. Weather at sea. *Safety* on board ship. Ship maintenance.

Note. This textbook is used for the instruction of cadets in various maritime academies in the United States of America. It explains the navigation and general handling of ships at sea, with particular attention to the needs of merchant marine officers. Safety devices and safety appliances are discussed in considerable detail.

SAUERBIER, CHARLES L

Marine cargo operations New York John Wiley & Sons, 1956 548 p illus 24 cm. $12 00 7008

Contents Shipowner's organization for cargo procurement, stowage, care, and delivery Cargo responsibility Principles of stowage. Planning the stowage. Stowage of the cargo. The ship's loading and discharging equipment. Materials handling principles and equipment. The ventilation of cargo holds. Research and development in the industry Index.

Note A broad and at the same time fairly detailed view of present-day marine cargo handling is presented in this book. The primary point of view is that of shipmasters and deck officers of cargo-carrying vessels. There are now 18 figures.

NAVIGATION

AGETON, ARTHUR AINSLEY

Dead reckoning altitude and azimuth table. Third edition. Washington, D C Government Printing Office, 1943 49 p. illus 24 cm. (United States. Hydrographic Office. Publication no 211) $0 90 7016

Note. The Ageton dead reckoning tables, known familiarly as "H.O 211 have several distinct features as follows the dead reckoning position of the ship is used for working sights and plotting lines of position there is no interpolation for practical navigation the azimuth is most positively determinate and the solution is short, simple, and uniform under all conditions. This third edition contains two additional problems to illustrate the use of the table, and one additional use has been included. Miscellaneous conversion and correction tables are printed on the end papers.

AGETON, ARTHUR AINSLEY

Manual of celestial navigation. Princeton D Van Nostrand Company, Inc., 1942 103 p illus 24 cm $4 50 7017

Note This book gives tables for two methods of navigation, with examples of their use. There is an original arrangement of tables for solution of problems in celestial navigation from an assumed position, and there is also new application of this author's older methods published in H.O. 211 This second method solves sights from the dead reckoning position of ship. The material in this book offers all the advantages, with improvements, of H.O 211 and includes a method as fully universal as H.O. 214.

BOK, BART JAN, AND FRANCES WOODWORTH WRIGHT

Basic marine navigation Boston Houghton Mifflin Company 1952 422 p illus 25 cm $6 25 7018

Contents Introduction to marine navigation. Aids to navigation. Charts and publications. The lead and the log. The compass and its errors. Compass compensation. Tides and currents. Piloting. Dead reckoning and the sailings. The maneuvering board. Marine meteorology The sextant. The basis of celestial navigation. Time-keeping and the Nautical Almanac. Navigation by the sun N vigation by the stars. Solving the astronomical triangle. Navigation in emergencies. Problems. Recommended books for further study Answers to problems. Complete Ageton tables.

Note A simple treatment of coastwise and offshore navigation. The section on coastwise navigation emphasizes piloting, dead reckoning, the use of the compass, compass-corrections and compass-compensations, tides and currents. In the chapter on celestial navigation tabular methods are used. Much attention is given to the taking of sights. Chapters on weather and on navigation in emergencies are included.

BROUWER, DIRK, AND OTHERS

Spherographical navigation by Dirk Brouwer Frederic W Keator and D A. Mc Millen foreword by Captain P V H Weems New York The Macmillan Company, 1944 200 p illus 19 cm $4.00 7019

Contents The earth. The celestial sphere. Time and the use of the air almanac. The instruments used. Elementary plotting on the sphere. The fix. Daytime navigation. Polar flights. Day's work problem. Special use of the sphere. Plotting problems. Appendix.

Note. A manual of instruction on a simple system of celestial navigation. Practically no calculations are required and no tables are necessary except the *American air almanac* or the *United States nautical almanac.* A solution of the spherical triangle is made for the computed altitude based upon either the dead reckoning position or an assumed position. Aside from the simplification of the solution provided by the method, and the speed with which a solution can be obtained, the advantage lies in the ease with which it can be learned. This is largely due to the fact that the learner has visual picture of his problem before him at all times. Twenty-one figures illustrate the text.

CUGLE, CHARLES HURST

Cugle s practical navigation Sixth edition, completely revised by I J Stephens. New York E P Dutton & Company, 1952 823 p. illus. 25 cm. $15 00 7020

Contents (abridged) The international and inland rules of the road. Extracts from general rules and regulations (ocean and coastwise) and navigation laws of the United States. Deck officer's information. Stability and hull construction. Mathematics of navigation. Explanation of tables in the American practical navigator (Bowditch) Chart navigation. Dead reckoning and day's work. Speed of ship by wheel and percentage of slip. Construction of mercator chart. Middle latitude sailing. Great circle sailing. Time. Latitude by meridian altitude of sun. Meridian passage of star. Meridian passage of planet. Meridian passage of moon. Latitude by Polaris. Deviation by time azimuth of sun. Deviation by star planet and moon. Longitude by star Longitude by planet. Longitude by moon. The line of position. Intersection of lines of position by computation. Tides and currents. Identification of stars.

Note A standard book of rules and problems for students and amateur navigators, first published in 1924. The treatment is elementary and practical, and only essential theory is included. This edition has been revised to conform with the change in format of the *American nautical almanac* introduced in 1950. The Greenwich hour angle (G.H.A.) system of computing time is now employed, and new material has been added on the magnetic compass, electronic aids to navigation, and fuel conservation.

DIMICK, CHESTER EDWARD, AND CUTHBERT C HURD

Mathematics for mariners. New York D Van Nostrand Company Inc. 1943 253 p. illus 22 cm. $3 50 7021

Contents: Numerical calculations. Logarithms. Use of tables. Equations. Geometry Trigonometry Trigonometric functions of large angles. The general oblique triangle. Vectors. Relative displacement and velocity Tables. Index. Practice maneuvering board sheets.

Note. The authors of this text are officers in the United States Coast Guard and teachers in the United States Coast Guard Academy They ha prepared this text to teach or review the basic essentials of mathematics required for courses in navigation, gunnery seamanship, and elementary engineering. Elementary problems from these fields are used throughout the text to illustrate the application of the mathematical methods. A number of special developments, including the maneuvering board sheets that are used for convoy and fleet problems, are presented and explained.

DUTTON, BENJAMIN

Navigation and nautical astronomy Tenth edition. Prepared for the instruction of midshipmen at the United States Naval Academy Original edition (1926) by Commander Benjamin Dutton, U S Navy Revised by Com-

under Edwin A. Beito, U S Naval Reserve under the direction of the Head of Department of Seamanship and Navigation United States Naval Academy Annapolis United States Naval Institute 1951 850 p. illus. (part col'd) 26 cm. $6.00. 7022

Contents: Preliminary definitions; chart projections. Instruments used by the navigator. Magnetic compass errors. The sailings. Publications and charts. Dead reckoning and piloting. Electronic navigation. Nautical astronomy. Lines of position from celestial observations. The marine sextant; correction of sextant altitudes. Compound clocks and intervals. Finding t, d, and [illegible]. The complete solution for celestial line of position. Latitude observations. Sun, moon, azimuths, [illegible] star identification curves of [illegible] azimuths. The practice of navigation. Air navigation. Polar navigation. Lifeboat navigation. The maneuvering board. Appendices. Index.

Note: A standard text and reference book of navigation and nautical astronomy for midshipmen and naval officers. The new edition is revised and enlarged, and includes complete explanation and discussion of the new type (1950) *nautical almanac*. The articles on the gyro compass and logs have been extensively revised; the chapter on the maneuvering board has been expanded and numerous minor changes have been made to include recent developments. The edition also marks the substitution to conform with the new practice, of "zone time" for "civil time." An interim edition, [illegible], was issued in 1957 [illegible] $6.00.

Lyon Thoburn C

Practical air navigation. Seventh edition. Annapolis, Md. Weems System of Navigation Inc., 1955 407 p. illus. 21 cm. 7023

Contents: The problems of air navigation. The earth—its form and features. Chart projections for air navigation. Charts and chart reading. Instruments. Lightplane navigation. Dead reckoning. Special problems of dead reckoning. Air navigation computers. The scope and problems of radio navigation. Radio bearings. The *LF/MF* radio range system. The VHF omnirange. Radio direction finding (ADF). Low approach and landing. Airways flying. Pressure pattern flight. Celestial navigation. Polar navigation. Appendix. Index.

Note: This is the second commercially published edition of a work whose first five editions were published by the United States [illegible] and Geodetic Survey and the United States Civil Aeronautics Administration. Its purpose is to teach the principles and techniques of aerial navigation to [illegible] preparing to become airplane pilots. It covers both visual navigation and instrument navigation and techniques appropriate to short flights in light aircraft as well as to the navigation of large aircraft under instrument flying conditions. It introduces the reader to all systems in current use, including pressure pattern flying. Such features as numerous worked examples of problems and clear style make it suitable for use in [illegible] organized instruction or home study. The first nine chapters are available from the same publisher as a separate book under the title *Practical dead reckoning navigation*, while the remaining eight chapters form another book entitled *Practical radio navigation*.

Mixter, George Webber

Primer of navigation. Third edition. With problems in practical work and complete tables. Revised for third edition by Ramon O Williams. New York D Van Nostrand Company Inc., 1952 553 p. illus. 24 cm. $3.50. 7024

Contents: Introduction. Tools of the trade. The magnetic compass. Errors of the compass. Compass adjustment. Gyro systems. Lights, buoys, and beacons. They prevent collisions. Piloting. Radio on board ship. Mariners' terms. Dead reckoning. Loran and radar. Outward bound. Lighthouses in the sky. Summer lines. Nautical astronomy. The sextant and its use. Altitudes and their corrections. The bubble sextant. Time. The chronometer and timekeeping. The Almanac and its use. The Air Almanac. Methods. The noon sight. Polaris. Azimuths. Solutions for [illegible]. Days with the sun. The stars. Planets and the moon. All [illegible] day. Zero hour. Appendix. Index.

Note: A comprehensive text for students of navigation and experienced seamen. Navigational methods are presented as simply as possible, and the treatment requires no mathematical knowledge beyond simple arithmetic. All tables necessary for solving the numerous problems and exercises are included. Like other texts on navigation published since 1950, this volume has been revised to conform with the changes made in the 1950 edition of the *American nautical almanac*. A chapter on electronic navigation and a brief biography of George Mixter, who died in 1947, have been added to this edition.

Polowe, David

Navigation for mariners and aviators. Cambridge Md Cornell Maritime Press, 1942 516 p. illus. 24 cm. $5.00. 7025

Contents (partial): Part I, Piloting and dead reckoning. A brief history of navigation. The compass. Chart navigation for mariners. Piloting. Dead reckoning. Fog. Storms. [illegible], tides, currents, [illegible]. Part II, Celestial navigation. *Informal definitions and discussions.* The sextant. The chronometer. Time. Analysis of the *American nautical almanac*. How to find the ship's latitude. Ship's longitude and compass error. The day's work at sea. Practical astronomy. Part III, Appendices: Rules to prevent collisions of vessels. International rules. Inland rules. Boundary lines of the high seas. Pilot rules. Pilot rules for the Great Lakes. New motorboat law and amendments. Questions on the rules of the road. Examinations for licensed deck officers. Excerpts from the *Nautical almanac*. Polowe's compact useful tables. Dreisonstok's navigation tables for mariners and aviators. Index.

Note: Compiled for use by amateur and professional mariners, aviators, and students. A section of questions and answers is given to aid those preparing for mate's and master examinations. All the celestial navigation is worked by the short method of H O. no. 208 (Dreisonstok) because one formula [illegible] made to serve all purposes. Designed to be complete in itself the book contains the necessary tables and all pages from the *nautical almanac* used in working the sample problems.

Rabl Samuel Suppler

The star atlas and navigation encyclopedia. New York Cornell Maritime Press, 1946 161 p. illus. 29 cm. $5.00. 7026

Contents: Mathematics. Speed and distance—bearings. The compass. Latitude, longitude and charts. Nautical astronomy. Time and the Nautical almanac. Old time navigation methods. Modern navigation methods. Plotting the position. The sailings. The stars. Star finding methods. Primitive navigation. Index.

Note: This book is an agreeable combination of theory, practice, and star lore. It is aimed chiefly at owners of small yachts [illegible] to navigate their own craft, and amateurs [illegible] to instruct themselves in navigation. In addition to the adequate practical discussions of navigational essentials, the author has illustrated and described very briefly such modern aids and methods as the gyrocompass, radar and loran. His chapter on mathematics includes an interesting discussion of the use of graphic methods in the solution of navigation problems. The star index, star charts, and the drawings of constellations are features that will appeal to anyone interested in astronomy as well as to navigators.

Simonsen Svend T

Blue water navigation. New York Cornell Maritime Press, 1947 198 p. illus. 23 cm. $3.50 7027

Contents: The celestial sphere. Time. American nautical almanac. The sextant. Finding latitude at noon. Finding longitude at noon. Lines of position. Ageton method. Deviation of compass by azimuth of sun. Great circle sailing. Star identification. Intercept and azimuth by H. O. 214. Streamlined navigation. Solutions to practice problems. Excerpts from *American nautical almanac*. H. O. 211 tables.

Note: A textbook originally used by the Army during World War [illegible] and now revised for study at home as well as in classes. The discussion is confined to navigation with the sextant, chronometer and standard tables, and neither logarithms nor trigonometry is employed. Uses of the *American nautical almanac*, the *American air almanac*, H. O. 71, H. O. 211 H. O. 214 are illustrated in worked examples; and the *Rude star identifier* and *Rabl star finder* are described. For student navigators [illegible] do not have access to the sea, the author outlines the making and use of an artificial horizon. Enough excerpts from the *American nautical almanac* and H. O. 211 tables have been included for purposes of study. There [illegible] numerous number of practice problems with answers.

UNITED STATES NAUTICAL ALMANAC OFFICE

The air almanac, 1957, September December Washington, D C Government Printing Office, 1956 487–732, 60 p illus 25 cm. $2 00 7028

Note This publication is now produced jointly by H. M. Nautical Almanac Office, Royal Greenwich Observatory and the Nautical Almanac Office, United States Observatory The British and American editions are printed and published separately but are identical in content. They appear three times a year and furnish navigators with a convenient and reliable source of astronomical data required for aerial navigation.

UNITED STATES NAUTICAL ALMANAC OFFICE

The American nautical almanac for the year 1958 Issued by the Nautical Almanac Office, United States Naval Observatory under the authority of the Secretary of the Navy Washington, D C Government Printing Office, 1956 276, xxxv p illus. 25 cm $2 00 7029

Note This standard work is published annually and presents the data for the practice of astronomical navigation at sea. In addition to the tables which occupy most of the pages, there is an eight page explanation in which the use of the tables is discussed and illustrated by examples. Beginning with this issue, it became identical in content with the British *Abridged nautical almanac*, although printed separately in the United Kingdom and the United States of America.

UNITED STATES NAVY HYDROGRAPHIC OFFICE

Air navigation Washington, D C Government Printing Office, 1955 717 p illus. (part col'd) 25 cm (H O Pub no 216) $7 50 7030

Contents Earth and its coordinates. Chart projections. Aeronautical chart interpretation. Instruments. Elementary plotting. Wind and its effects. Dead reckoning procedure. Visual flight planning and procedure. Lines of position, bearings and fixes. Relative motion. Radio. Radar Hyperbolic navigation systems. Cruise control. Pressure pattern navigation. Navigational astronomy Measurement on the celestial sphere. Time. *Air almanac* Sight reduction. Sextant. Special methods. Complete solution by various methods. Star identification Compass systems. Polar navigation. Appendixes List of Government publications. Abbreviations and symbols. Conversion factors. Loran extracts. *Air almanac* extracts. H. O 249 extracts. H. O. 214 extracts. H. O. 211 extracts. H. O. 208 extracts. H. O. 218 extracts. Index.

Note A comprehensive and authoritative textbook. It was developed primarily for the use of airmen navigators in the United States Navy but is useful to any man who is studying aerial navigation in preparation for a career in the field. It is useful also as a reference book to navigators. It is written so as to introduce the reader to the subject and to prepare him for work as a navigator It includes many worked examples of navigational problems, several thousand illustrations, and an excellent bibliography including a bibliography of the manuals, tables and charts pertaining to aeronautical navigation which are available from the United States Government.

UNITED STATES NAVY HYDROGRAPHIC OFFICE

American practical navigator An epitome of navigation and nautical astronomy Originally by Nathaniel Bowditch. (Revised edition of 1938) Published by the United States Hydrographic Office under the authority of the Secretary of the Navy Washington, D C Government Printing Office, 1939 777 p. illus 26 cm. (H. O Pub no 9) 7031

Contents Part I, Text and appendixes: Abbreviations. Index to Part I. Navigation definitions. Navigation instruments and accessories. The compass error Piloting. The sailings. Dead reckoning. Nautical astronomy definitions. Nautical astronomy instruments. Time and the *nautical almanac*. Observed altitude corrections. Latitude. Longitude. Azimuth. The Sumner line of position. Short tabular methods of navigation. The practice of navigation at sea. Marine surveying. Tides. Ocean currents. Ocean waves. Winds. Cyclonic storms. Ice movements in the North Atlantic. Appendixes. Part II, Tables.

Note This standard reference work by the American mathematician and navigator Nathaniel Bowditch (1773–1838) first appeared in 1802 and has been a publication of the United States Hydrographic Office since 1866. Part I contains abundant examples of short tabular methods for solving observations of celestial bodies in navigation. Part II consists of 42 tables covering essential navigational data. It has been revised many times and a new revision was scheduled for publication in 1957

UNITED STATES NAVY HYDROGRAPHIC OFFICE

Navigation dictionary Washington, D C. Government Printing Office, 1956 253 p. 23 cm (United States. Navy Hydrographic Office. H. O Publication no 220) o p. 7032

Note Approximately 7,000 terms are defined in this authoritative work. In addition, there are seven pages of abbreviations and their meanings.

UNITED STATES NAVY HYDROGRAPHIC OFFICE

Sight reduction tables for air navigation. Volume I (Selected stars) Epoch 1960 0. Volume II (Latitudes 0°–39) (Declinations 0°–29) Volume III (Latitudes 40°–89) (Declinations 0 –29) Washington, D C. Government Printing Office, 1952–1957 3 v 30 cm. (H. O Pub no 249) Vol. I $2.25 vol II, $2.25 vol. III $2 50 7033

Note A series of tables planned for use with the *Air almanac* Volume I, for selected stars, is arranged for entering with latitude the hour angle of Aries (and the appropriate star name) The unique arrangement minimizes the time and effort required in sight reduction, and greatly facilitates rapid positioning in flight. The present star selection and format are the same as those employed in the previous edition for Epoch 1955.0. All data in the present volume have been recomputed for Epoch 1960.0. As in the preceding edition, the azimuth is measured from true north and refraction is not included. Volume II, for latitudes 0° 39° and Volume III, for latitudes 40°–89° provide complete data for the reduction of sights of sun, moon, planets, and stars within the declination range of these bodies, extending from the zenith to the horizon and below In contrast with Volume I, azimuth angle is tabulated instead of azimuth. Due to the format of Volumes II and III, the data and hence the tables are considered permanent in scope and character The arrangement of both volumes, with entering arguments of latitude, declination and hour angle is similar to that of the volumes of H. O. Pub. No. 214 Tables of computed altitude and azimuth. The latter series of tables is perhaps the most comprehensive available for the accurate reduction of marine observations.

UNITED STATES. NAVY HYDROGRAPHIC OFFICE

Tables of computed altitude and azimuth. Washington D C. Government Printing

Office, 1952 9 v. 30 cm. (H. O. Pub. no. 214) Vols. I–IX, $3.00 each. 7034

Contents: Volume I: Latitudes 0° to 9° inclusive. Volume II: Latitudes 10° to 19° inclusive. Volume III: Latitudes 20° to 29° inclusive. Volume IV: Latitudes 30° to 39° inclusive. Volume V: Latitudes 40° to 49° inclusive. Volume VI: Latitudes 50° to 59° inclusive. Volume VII: Latitudes 60° to 69° inclusive. Volume VIII: Latitudes 70° to 79° inclusive. Volume IX: Latitudes 80° to 89° inclusive.

Note: A standard reference set for marine navigation. It consists of tabulated solutions of the astronomical triangle, so arranged as to yield the navigator his computed altitude and azimuth by inspection. The tables are applicable equally to sights of the sun, moon, planets, and navigational stars, and inasmuch as they are designed for use in connection with celestial bodies of declinations both of the same name as and contrary name to the latitude, they apply both to the northern and southern hemispheres. The arrangement is on the basis of whole degrees of latitude, the data for each degree occupying a section of twenty-four pages, with two additional pages for star identification. Declination arguments in whole and half degrees head the main columns of each page, while hour angle arguments in whole degrees appear at the sides. Within the limits of each declination column are four groups of figures representing the altitude, the multiplier for hour-angle difference, and the azimuth. The primary method for which the tables were originally designed is the solution for lines of position. The set was first issued 1936–41. In the 1952 reprint listed here "the basic information remains unchanged. Some modification has been made in the descriptive text, and the illustrative examples have been changed to reflect recent advances in the *Nautical almanac*."

WEEMS, PHILIP VAN HORN

Marine navigation. New York D. Van Nostrand Company Inc., 1940. 443 p. illus. (part col'd) 23 cm. $6.75 7035

Contents: Preface. Introductory remarks. Position, direction and distance on the earth's surface. Charts. The magnetic compass. The gyro-compass. Instruments and aids to navigation. Chart navigation or "piloting." Piloting. Dead reckoning. Radio navigation. Meteorology for navigators. Celestial navigation—definitions and equipment. Time and hour angle. The theory of celestial navigation. Nautical almanacs. The sextant. The chronometer. Converting observations to positions. Selected methods of celestial navigation. Resulting lines of position. Practical navigation—a day's work. Appendices: Sources of information and equipment. Useful navigational formulas. Extracts from the Nautical and Air almanacs. Index.

Note: This basic textbook was developed for courses given at the Weems Institute of Navigation. It teaches the tabular methods of navigation that are official in the United States Navy and other United States services. It emphasizes those topics that are most important in practical navigation, such as piloting, chart navigation, and the various aids to navigation that are so widely used. For each important method, this book explains the definitions and principles, the equipment and instruments used, and the working procedure.

WILLIAMS, RAMON O., AND GEORGE WEBBER MIXTER

Navigation problems and solutions. Practical work—solutions—plotting—almanac data. New York D. Van Nostrand Company Inc. 1951 162 p. illus. 28 cm. $5.00 7036

Contents: Dead reckoning. Sumner line work. Noon sight problems. Latitude by Polaris. To solve for LOP. Work with the sun. Three star fixes. Planet and moon work. Practical work. Maneuvers in plot. Excerpts from Nautical almanac. Excerpts from Air almanac. Excerpts from H. O. no. 214.

Note: A useful collection for student navigators. It contains a wide variety of problems which are similar to those given in Naval Reserve Officers training courses in the United States of America. Detailed solutions of these problems and almanac tables used in working out the solutions are both included.

ZWENG, ALLAN C.

Practical manual of the E-6B computer. Third revised edition. North Hollywood Calif. Pan American Navigation Service 1955 133 p. illus. 27 cm. $3.00 7037

Note: A study guide and instruction manual for the E-6B computer, a mathematical instrument which is very widely used in solving problems in air navigation. In the expositions manipulations of the computer in solving various problems are explained step by step. Many worked examples are included and there are several hundred practice problems for the student. The first edition appeared in 1944. Added to this edition are some new problems and descriptions of two new computers, the E-6C and the E-10.

ZWENG, CHARLES A., AND JOHN DOHM

Flying the omnirange: a pilot's guide to the *omnidirectional radio range distance measuring equipment*, and the course line computer. Third edition. North Hollywood Calif. Published jointly by Pan American Navigation Service and Weems System of Navigation, Annapolis Maryland 1955 153 p. illus. 23 cm. 7038

Contents: The VHF system. How omnirange works. SFO to BUR by omnirange. Approach and let down. Omnirange receivers. Accuracy and maintenance. Distance measuring equipment. The course-line computer. TACAN. Appendix. Index.

Note: A practical textbook addressed to pilots and student pilots. It is clearly written and well illustrated. The preceding edition was published in 1952. The book has been completely revised for this third edition. A fourth edition was published in 1957. $4.00.

AERONAUTICS

GENERAL

BAUGHMAN, HAROLD EUGENE

Baughman's Aviation dictionary and reference guide. Revised by Ernest J Gentle & Charles Edward Chapel Third edition Los Angeles Aero Publishers, Inc, 1951 653 p illus 24 cm $7 50 7039

Contents (abridged) Dictionary Definitions, 2nd edition. Abbreviations. New definitions, 3rd edition. Reference guide Radar information. Illustrated nomenclature. Useful tables. Radio range orientation. General structural symbols & formulae. General aerodynamics symbols & formulae. Specifications. Materials. Shop mechanics. Safety rules.

Note A standard reference book. In this edition the main dictionary has not been revised but a supplement containing 3,000 new terms has been added on pages 263–338. Various changes including some omissions have been made in the "reference guide" section. The reduction in length by approximately 230 pages has been accomplished mainly by leaving out Civil Aeronautics Administration material readily available elsewhere.

FOGG, ROBERT STEVENS, AND OTHERS

Seaplane flying and operations by Robert S Fogg, William D Strohmeier and Daniel J Brimm, jr New York Pitman Publishing Corporation 1949 218 p illus 24 cm (Pitman books on private and business flying, Alexander Klemin advisory editor) $4 50 7040

Content Foreword, by Admiral R. E. Byrd. Introduction. Section I, Fundamentals of water flying Types f water aircraft. Taxiing and sailing. Docking procedure. Take-offs. Elements of flight. Landing. Securing and handling. Cross-country flying and general technique. Section II, Design, construction, and maintenance Engineering considerations. Preparation, installation check ing. Inspection maintenance, and repair Section III Seaplane bases Types f seaplane bases. How to operate a successful seaplane base. Appendix. Index.

Note A practical book for the noncommercial flyer and also for persons interested in going into the business of operating seaplane bases. The special techniques of handling planes designed to land on and take off from water are discussed from the beginner' standpoint.

GAMBLE, WILLIAM BURT, compiler

History of aeronautics a selected list of references to material in The New York Public Library New York The New York Public Library 1938 325 p 25 cm $2 00 7041

Contents Bibliography Traditional and literary accounts. General works. Lighter-than-air craft Balloons Airships. Heavier-than-air craft Airplanes and ornithopters. Seaplanes Gliders and gliding. Parachutes. Helicopters and autogiros Kites. Engines. Propellers Airplane flights. Military aeronautics. World War Civil aeronautics. Air mail. Polar expeditions. Associations and conferences. Jurisprudence. Aeronautics and science. Photography and surveying. Animal flight. Women in aeronautics. Miscellaneous. Index of authors. Index of subjects.

Note. This is list of over 5,000 references to books and periodical articles in many languages dealing with the history of aeronautics. In cases where title is not self-explanatory one- or two-line annotations are included.

HALPINE, CHARLES GREHAM

A pilot's meteorology Second edition Princeton D Van Nostrand Company, Inc. 1953 351 p illus. 23 cm. $5 00 7042

Contents. Introduction. The atmosphere—its characteristics, composition, and structure. The elements of meteorology and their measurement. Cloud types and obstructions to vision. Variations of temperature and their effects. Circulation f air—currents and winds. Air masses, fronts and disturbances—their development and effect. Weather reports. Weather maps. Weather forecasts. Ice formation of aircraft. Pressure-pattern flight or aerologation, by Robert M. Mansfield. Glossary Appendices: Explanation of teletype symbol weather reports. Winds aloft maps. Highest and lowest temperatures. Precipitation areas and amounts. 700-millibar constant pressure chart. Continental weather map. Airport weather maps (1 3) Beaufort scale. Index.

Note. A standard introduction to meteorology for student pilots and others who are interested in meteorology and eather forecasting from the standpoint of their applications in aeronautics. The level f treatment assumes no previous instruction in meteorology on the part of the reader On the other hand, the instruction is carried far enough to enable the reader who studies it thoroughly to understand the elements of weather observation and forecasting, to interpret the various cloud types in terms of their eather indications, and to understand official weather reports and weather maps. The book is organized for use as text. It is also suitable for self-instruction. It contains review questions, an extensive glossary and an appendix of weather maps reproduced in reduced scale. The first edition appeared in 1941 The terminal chapter, written by R. N Mansfield, is new in this second edition. Revisions and augmentations hav been made in other chapters, particularly in those on eather reports and maps. Some of the illustrations are new

HEFLIN, WOODFORD AGEE, editor

The United States Air Force dictionary Princeton N J D Van Nostrand Company, Inc 1956 578 p 25 cm $4 75 7043

Note. An authoritative dictionary hich was developed by the Research Studies Institute of the United States Air University The terms included were selected on the basis of systematic reading of variety of literature used by Air Force personnel, including such varied documents as official regulations, manuals, orders, engineering and scientific reports, official news releases and correspondence. Terms from the common language appear to be included only when they have special meanings in military aviation. Some slang terms in general use have been included, but most of the terms are those in good standing in the specialized language.

HUNSAKER JEROME CLARKE

Aeronautics at the mid-century New Haven Yale University Press 1952 116 p. illus. 22 cm $3 00 7044

Contents Fifty years of development. Air transportation. Social and political effects.

Note. A readable résumé of the past, present, and possible future of air transportation. The author traces the development of aircraft, and discusses various aspects f the present air transportation business, including fares, safety the human factor utomatic control, airports, and pri ate flying. The influence of the airplane on cities and on rural areas is touched on, and its effect on nations in peace and in war is elaborated at some length. The book is one of series of olumes based on the Dwight Harrington Terry Foundation Lectures on Religion in the Light of Science and Philosophy given at Yale University The author is Emeritus Professor of Aeronautical Engineering in the Massachusetts Institute of Technology

Note. The complex history of the first 50 years of American aviation is ably recounted in this book, published in connection with the 50th anniversary of the Wright brothers' famous first flight. All of the men (and women) who played prominent roles, whether as inventors, manufacturers, or only stunt fliers, are at least mentioned, and the more eminent ones are presented in full stature. The authors have found room also for accounts of the major technical developments, patent litigations, political and military maneuverings that affected the development of aviation, and even "human interest" facts about the magnates who organized the Wright Company. The book is both panoramic and easy to read. A generous number of pictures ranging from early unsuccessful flying machines to the latest delta-wing planes is included. There is an adequate index.

NICOLSON, MARJORIE HOPE

Voyages to the moon. New York The Macmillan Company, 1948. 297 p illus. 21 cm. $4 00 7052

Contents. The discovery of a new world. Supernatural voyages. Flight by the help of fowls. Wanton wings. Flying chariots. Variations on a theme. Epilogue. Bibliography Index.

Note. In this volume, an outstanding educator presents the results of her own explorations into man's fictional attempts to fly as these appeared in English publications of the seventeenth and eighteenth centuries. Despite the title, the subject is not flight to the moon exclusively but flight by man anywhere and by any means which should have been feasible, such as with the aid of angels or birds, by means of wings attached to the body or by chariots that flew as well as rolled. The book is based on extended research, but it is not primarily a scholar's tool. Rather it is aimed at educated general readers who find entertainment in exploring the ways of man's imagination. To aid the graduate student or scholar who insists on using the book, there is an extensive annotated bibliography

NORTHROP AERONAUTICAL INSTITUTE

Aircraft basic science. By the Technical Development Staff of Northrop Aeronautical Institute. Revised edition Charles Edward Chapel, chief editor Ralph D Bent, associate editor New York McGraw Hill Book Company, Inc. 1953 440 p illus 29 cm. (Northrop Aeronautical Institute series of aviation texts) $8 00 7053

Contents Theory of flight. Aircraft structural components. Blueprint reading. Aircraft plumbing. Fundamentals of aircraft electricity Aircraft storage batteries. Aircraft generators. Aircraft motors. Aircraft electrical systems. Pressure and mechanical instruments. Electrical instruments. Index.

Note The Northrop Aeronautical Institute, located in Hawthorne, California, is associated with Northrop Aircraft, Inc. This book is one of a series prepared by members of its staff It is designed for the practical instruction of student aircraft mechanics. A clear and thorough expository text is supplemented with large number of illustrations. The first edition was published in 1948 this second edition contains few changes.

PIPER, WILLIAM THOMAS

Private flying today and tomorrow in collaboration with D J Duffin. New York Pitman Publishing Corporation 1949 295 p illus. 24 cm (Pitman books on private and business flying Alexander Klemin advisory editor) $5 00 7054

Contents: Foreword, by L. Collins. What is private flying? How private flying grew The role of women in flying. What the personal plane can do. Your personal plane. Buying, renting, and the flying club. Operating costs and insurance. Learning to fly Cross-country flying. Airports—the key to privat flying. The future of private flying. Appendix Organization of flying clubs. Index.

Note. Practically every aspect of private flying is discussed in this book. The chief subtopics are named in the chapter titles quoted above. Also included are such things as complete picture sequence showing the various steps in taking small plane aloft and performing various standard maneuvers with it, a factual description with photographs of all of the light private planes and a few heavier ones being manufactured in the United States of America when the book was being written a survey of the many uses of light planes with special emphasis on their use in agriculture and model constitution and set of by-laws for flying clubs. The author is president of the Piper Aircraft Corporation.

UNITED STATES CIVIL AERONAUTICS ADMINISTRATION

Flight instructors' handbook. Washington, D C. Government Printing Office 1956 137 p illus. 27 cm. (United States. Civil Aeronautics Administration C.A.A technical manual no 105) $1 50 7055

Contents Part I, Fundamentals of teaching which apply to flight instruction. Instructor—student relationships. Basic instruction procedures. Tips on good instruction techniques. The learning process. Part II, Training curriculum and flight instruction procedures: The flight syllabus. Flight training procedures and maneuvers. Flight rule and flight test preparation. Transition training for different makes and models of aircraft.

Note. A manual to serve as reference book for instructors of student pilots rather than as a text. It is a companion work to C.A.A. Technical manual no. 106, *Pilot' handbook*. Together they supersede C.A.A. Technical manual no. 100, entitled *Flight instruction manual* and issued in April 1951

UNITED STATES CIVIL AERONAUTICS ADMINISTRATION

Pilots' radio handbook. Revised March 1954 Washington, D C Government Printing Office, 1954 122 p illus 24 cm. (United States Civil Aeronautics Administration. C.A.A. technical manual no 102) $0.60. 7056

Contents Radio and the VFR cross-country flight. Basic receiver-transmitter facts. Enroute radiotelephone procedures. Flight assistance service. Radio weather. Tower procedures. Flying the LF/MF range. Radio range orientation. The omnirange system. Radio frequencies. The common system. Common system equipments. A lation-radio publications. Glossary of aeronautical terms.

Note. This handbook supersedes Civil Aeronautics Bulletin No. 29 published in 1941. It explains in simple language the operation and use not only of the standard air-to-ground communications equipment but also of distance-measuring equipment, the very high frequency omnidirectional radio range (VOR) and radar. The care, treatment, and tuning of radio receivers are covered in detail. The handbook "seeks to encourage all pilots to use that added margin of safety the radio, which by the simple flip of switch connects the pilot with the world's most advanced airways system, manned by airways specialists trained to top efficiency and on duty around the clock and every day in the year.

UNITED STATES MUNITIONS BOARD AIRCRAFT COMMITTEE ANC–9 PANEL ON PROPELLERS

Aircraft propeller handbook. Issued jointly by Department of the Air Force (Air Research and Development Command) Department of the Navy (Bureau of Aeronautics) and Department of Commerce (Civil Aeronautics Administration) Washington D C. Government Printing Office 1956 391 p. illus. 26 cm (ANC 9 bulletin) $2 25 7057

Contents Introduction. Aerodynamic design and propeller performance. Structural design of propellers. Propeller construction. Propeller hubs. Propeller accessories. Ice control. Propeller controls. Propeller installations. Propeller testing. Propeller production inspection. Propeller maintenance problems. Propeller maintenance tools and equipment. Propeller specifications and standards. Index. Bibliography

Note A comprehensive monograph on the theory, design, and performance of the modern aircraft propeller. Its stated purpose is to serve as a general guide in consideration of some of the most common problems associated with design, construction, and use of both military and commercial aircraft propellers.

UNITED STATES. WEATHER BUREAU

Pilots weather handbook. Revised December 1955. Washington, D. C. Government Printing Office, 1955 143 p. illus. 26 cm. (United States. Civil Aeronautics Administration. C.A.A. technical manual no. 104) $1.50. 7058

Contents: Introduction. Basic concepts. Temperature. Pressure. Station. Stability of the air. Clouds. General circulation—winds. Air masses. Frontal weather. Thunderstorms. Icing and turbulence. Fog and stratus clouds. Weather observations and instruments. Weather charts. Pilots weather information. Flight planning and weather. Flying weather in the United States. Sailplane weather. Meteorological glossary.

Note: Originally issued in July 1944, this handbook supersedes Civil Aeronautics Bulletin no. 25, published under the title *Meteorology for pilots*, in 1943. The new handbook gives the pilot the authoritative source of information needed to prepare for the CAA pilot qualification examinations and to help him cope safely with the weather problems he encounters in actual flying. It takes into account important advances made during recent years in weather science, including new knowledge about aircraft icing, the structure of thunderstorms, the jet stream, and clear-air turbulence. The language is simple and the text is illustrated with 148 drawings, figures, charts, and maps.

VARNEY ALEX

The psychology of flight. New York D Van Nostrand Company Inc., 1950 269 p. 21 cm. $5.00. 7059

Contents: Why pilots behave as they do. Adapting to the new environment. Why we get off the beam. The case of the absent-minded pilot. Learning to relax. Learning to observe. Developing skill. Learning to coordinate. The building of confidence. The making of judgment. How a pilot can control his emotions. The need to win. The psychology of errors. When death strikes. The psychology of luck fever and checkride. The psychology of [illegible]. The psychology of instrument flying. The temperament of the pilot. The personality of the pilot. The key to power. Index.

Note: An advanced book addressed to student pilots and experienced pilots alike. In it the author, who has had a long and varied experience as a pilot and as head of a flying school, skillfully discusses the attitude of [illegible] and shows not only what causes difficulties in learning to fly but what leads experienced pilots into accidents. The book is not a scholarly one—in fact there is no documentation. Nevertheless, it belongs in the pilot's personal library and in library collections used by student [illegible].

ZWENG CHARLES A., AND ALLAN C ZWENG

Airline transport pilot rating 8th revised edition. North Hollywood, Calif Pan American Navigation Service, 1956 354 p illus. 26 cm. $5.50 7060

Contents: The airline pilot. Instruments. Instrument flying. Flying the [illegible] ILS and radar. Dead reckoning. Charts and chart reading. Radio communications and navigation aids. Radio [illegible]. Meteorology. Weather maps and reports. Weight and balance. Turbo-jet, turbo-prop, and compound engines. Air traffic control. Civil Air Regulations. Typical multiple-choice examinations. Index.

Note: A widely-used textbook and study guide. Its purpose is to assist pilots in preparing for the written examination given by the Civil Aeronautics Administration for the airline transport pilot rating. It presents the basic and technical knowledge that comes within the scope of that examination in a form that is convenient for study and review. The body of information presented is, of course, useful to anyone in need of professional grade technical information on the piloting of large aircraft, especially under United States of America conditions. Also included are the texts of the pertinent Civil Air Regulations and a large selection of questions (with answers) typical of the C.A.A. examination questions. The book was first published in 1943 and has been revised frequently. This eighth edition is the result of a major revision.

ZWENG, CHARLES A.

Flight engineers manual with typical multiple-choice questions and answers for the flight engineer examination. Third edition revised. North Hollywood Calif. Pan American Navigation Service, 1954 304 p. illus. 26 cm. 7061

Contents: The flight engineer's certificate. Fundamentals you should know. Aerial flight and aerodynamics. Fundamentals of aircraft engines and propellers. General maintenance and operation. Operation of a typical four-engine aircraft. Cruise control and performance charts. Flight instruments and computers. Aircraft loading and weight and balance. Civil Air Regulations for the flight engineer. Representative multiple-choice questions and answers for the flight engineer's examination. Index.

Note: A textbook designed to aid men in preparing for the Civil Aeronautics Administration written examination for the flight engineer's certificate. It presents the range of knowledge applicable to flight engineer's work on four-engine aircraft, and includes, in addition, a long section of multiple-choice questions which are typical of those asked on the C. A. A. examination. It was first published in 1947 and new editions appear frequently. A sixth edition containing the same number of pages was published in [illegible], $5.00.

ZWENG CHARLES A.

Flight instructor the standard methods of flight instruction, including flight maneuvers for primary and advanced training, and typical written and oral examinations for the flight instructor rating. 11th revised edition. North Hollywood, Calif Pan American Navigation Service 1955 262 p. illus. 26 cm. $5.00 7062

Contents: Fundamentals of instructing. Aerodynamics or theory of flight. Load factors on the airplane. *Principles of safe flying.* The use and care of the parachute. Flight instruction preliminaries. Elementary instruction in flight maneuvers. Intermediate and accuracy maneuvers. Advanced maneuvers. Acrobatic instruction. Cross-country flying. Instruction in night flying. Multi-engine instruction. Do's and don'ts for the instructor. Advice for the pilot. Civil Aeronautics Manual 50—Airman Agency Certificates (approved flying schools). Typical multiple-choice questions for the flight instructor written exam. The flight instructor oral examination. Index.

Note. The specific purpose of this manual is to help licensed airplane pilots prepare themselves for U. S. Civil Aeronautics Administration's examinations for flight instructor rating. It incorporates considerable material supplied by the CAA. It is revised frequently and in this 11th edition was also somewhat extended in scope.

AERODYNAMICS

BONNEY E. ARTHUR

Engineering supersonic aerodynamics. New York McGraw Hill Book Company Inc., 1950 264 p. illus. 24 cm. $6.50. 7063

Contents: Compression and expansion waves. One-dimensional flow—nozzles and diffusers. Two-dimensional characteristics. Airfoil characteristics. Bodies of revolution. Supersonic wind tunnels. Component design and performance. Index.

Note: An introduction to this specialized field of aerodynamics. Although mathematics is freely used in the exposition, the work is not a mathematical treatment of the subject. Rather, it is a statement of the basic physical principles combined with illustrations of their application in the design of aircraft. It is suitable for upper-class engineering students and also for engineers out of college who have studied courses in standard subsonic aerodynamics.

DAILEY, CHARLES LEE, AND F C WOOD

Computation curves for compressible fluid problems New York John Wiley & Sons Inc, 1949 33 p illus 29 cm $3 75 7064

Contents Section I, Energy relations and heat addition functions Point functions of local Mach number Heat addition in a constant area channel. Section II Plane shock and expansion relations Plane shock relations, Prandt Meyer expansion. Section III Cone flow relations—Taylor Maccoll theory

Note A collection of 26 charts which depict graphically the behavior of air as it flows past bodies moving at high rates of speed and under varying conditions of pressure, density and temperature. The material has been prepared for the use of aeronautical engineers concerned with the design of wind tunnel nozzles and diffusers, jet engine design and performance calculations, and with other problems involving compressible fluid flow The manual is intended to complement H. Liepmann and A. Puckett's *Introduction to aerodynamics of compressible fluid*, New York, 1947 which provides a detailed discussion of the theoretical aspects of the subject.

DEAN, ROBERT C, JR

Aerodynamic measurements. With contributions by David Z Baily and others Cambridge, Mass Massachusetts Institute of Technology, Gas Turbine Laboratory 1953 272 p illus 28 cm $8 00 7065

Contents Error determination and treatment of data. Temperature measurement. Pressure measurements. Velocity measurements. Flow direction measurements. Hot-wire anemometry Mass-flow measurements. Humidity measurements. Optical measuring techniques. The fundamental principles of dynamic measurement. Appendixes Review of fluid mechanics. Bibliography Psychrometric charts.

Note. A valuable presentation of scientific fundamentals and laboratory techniques. It was developed by "straining the literature in the course of the work of the Gas Turbine Laboratory of Massachusetts Institute of Technology and several staff members of this laboratory are listed on the title page as contributors. Instruments and techniques are adequately described however the main emphasis is on the fundamental relations. The volume is well illustrated and there is an excellent bibliography arranged in accordance with the chapter arrangement.

DOMMASCH, DANIEL O, AND OTHERS

Airplane aerodynamics by Daniel O Dommasch, Sydney S Sherby and Thomas F Connolly New York Pitman Publishing Corporation 1951 520 p illus 25 cm 7066

Contents (abridged) The atmosphere. Fundamental dynamics and thermodynamics of air Airfoil theory Wing theory Drag. The propeller Aircraft propulsion. The basic performance problem. Special performance problems. Maneuvers. Theory and design of control surfaces. Longitudinal stability and control. Lateral and directional stability and control. Seaplane problems. Appendixes Characteristics of representative NACA airfoils. Properties of the NACA standard atmosphere. Index.

Note An unusual integration of aerodynamic theory practical problems in airplane design, and airplane characteristics and performance. It is the outgrowth of material prepared for courses for experienced pilots, offered by the Test Pilot Training Division of the Naval Air Test Center In essence, it is a presentation of the fundamental principles of airplane flight for men with extensive experience in flying planes. Greater attention is given to the broader aspects, but minor details, such as the effects of application of brakes during the landing run, also are analyzed. A second edition was published in 1957 558 p., $7 75

EMMONS, HOWARD W

Gas dynamics tables for air New York Dover Publications Inc., 1947 46 p illus. 24 cm. $1 75 7067

Contents Tables Isentropic gas dynamics functions for air. Gas dynamics functions for normal shocks. Characteristics table. Acoustic velocity-temperature table. Graphical presentation of tabulated functions: Pressure ratio vs. mach number Velocity ratio vs. mach number Dynamic pressure vs. mach number. Area ratio vs. mach number. Density ratio vs. mach number. Mass velocity (or mass flux, flow per unit area) vs. mach number Temperature ratio vs. mach number Acoustic velocity ratio vs. mach number. Ratio of stagnation pressure downstream of a normal shock to the stagnation pressure upstream of the shock vs. mach number before the shock. Ratio of stagnation pressure downstream of a normal shock to the static pressure upstream of the shock vs. mach number upstream of the shock (this is the so-called Rayleigh pitot tube formula) Mach number downstream of a normal shock vs. mach number upstream of a normal shock. Ratio of velocities downstream and upstream of normal shock vs. mach number upstream of shock. Pressure ratio for a normal shock vs. mach number upstream of a normal shock. Acoustic velocity ratio for a normal shock vs. mach number upstream of the normal shock. Temperature ratio for a normal shock vs. mach number upstream of the normal shock. Density ratio for a normal shock vs. mach number upstream of the normal shock. Mach angle vs. mach number. Property angle vs. mach number. Variation of acoustic velocity with the temperature of air.

Note. A reference pamphlet of tables and graphs. The work is intended for aeronautical engineers who are engaged in the design of high-speed aircraft, and is based in part on research sponsored by Pratt and Whitney at Harvard University

FERRI, ANTONIO

Elements of aerodynamics of supersonic flows New York The Macmillan Company 1949 434 p. illus. 24 cm $10 00 7068

Contents: General considerations. Theory of two-dimensional flow—potential flow—characteristics system—small disturbances. Theory of shock waves. Theory of two-dimensional flow—interaction and reflection of shock waves and expansion waves. Theory of two-dimensional flow—characteristic theory for rotational flow Measurement of the physical quantities of a supersonic flow Supersonic profiles. Two-dimensional diffusers. Supersonic diffusers. General considerations for three-dimensional phenomena. Aerodynamic phenomena for body of revolution, analyzed by using the theory of small disturbances. Phenomena for conical bodies—hodograph system. Characteristic system for three-dimensional phenomena. Pressure drag of supersonic wings. Lift and induced drag of supersonic wings. Appendix. Index.

Note. This book deals chiefly with the physical phenomena of gas flow that are of significance in the prediction of the aerodynamic behavior of planes, projectiles, missiles, wind tunnel elements, etc., when air (or other gases) passes over their surfaces at supersonic speeds. The physical phenomena, the mathematical computations, and the applications are covered from the viewpoint of mathematicians and engineers concerned with aeronautical research and design. Although introductory to the subject, the book is written on the graduate-professional level. The author is Professor of Aerodynamics at the Polytechnic Institute of Brooklyn.

HEMKE, PAUL EMIL

Elementary applied aerodynamics. New York Prentice-Hall Inc. 1946 231 p. illus. 23 cm. (Prentice-Hall aeronautical engineering series K. D Wood editor) $4 50 7069

Contents. Units and dimensions. Physical properties of air. Flow of an ideal fluid. Lift and moment of an airfoil in an ideal, two-dimensional flow Three-dimensional flow around an airfoil Induced effects. Viscosity effects. Airfoils and their properties. Compressibility effect on airfoil characteristics. Propellers. Performance of conventional airplane. Helicopters. Index.

Note. A descriptive and analytical treatment of introductory aerodynamics for engineering students who have already had calculus, physics, and mechanics. Some of the chapters, for example the one dealing with ideal-fluid flow are rigorously developed, while others, such as those on compressibility effects and helicopters, are handled more simply Illustrative examples are freely used, and there are numerous problems as well as selected footnote references to related literature.

HOLLAND, RAY, JR.

The physical nature of flight. New York W W Norton & Company, Inc. 1951 287 p illus. 22 cm $1 49 7070

Contents (abridged) The atmosphere. Lift. Drag. Impact. Friction. The practical aspects of air flow Pressures. The vortex. Flow separations cause trouble. The stall made harmless. Wing sections

and [illegible]. Why planes require long wings. The tail [illegible] of [illegible]. Stability. Flight efficiency. How fast? Looking ahead. Index.

Note: This book on [illegible] flight and the control of planes is outstanding for clear, well-conceived [illegible] of both general [illegible] and details. The whole anatomy of the subject is carefully dissected and described. The meanings of such terms as "lift," drag, and "[illegible]" are explained in simple terms and [illegible]. It is suitable for lay readers, pilots, and even students who desire a general rather than [illegible] introduction.

KÁRMÁN, THEODORE VON

Aerodynamics selected topics in the light of their historical development. Ithaca Cornell University Press 1954 203 p. illus. 23 cm. $4.75 7071

Contents: Aerodynamic research before the era of flight. The theory of lift. Theories of drag and skin friction. Supersonic aerodynamics. Stability and aeroelasticity. From the propeller to the space rocket. Index.

Note: A brief, authoritative account of the historical development of the body of basic theory that underlies the design and [illegible] of present-day heavier-than-air craft. It is concerned with the research and theory rather than the performance of actual airplanes. The range in time is from the earliest attempt to understand flight down to the still-unrealized man-carrying space rocket. The story is an interesting one, and it is written in [illegible] that makes it [illegible] to anyone who knows the basic terminology of present-day aeronautics.

KÜCHEMANN, DIETRICH AND JOHANNA WEBER

Aerodynamics of propulsion. New York McGraw Hill Book Company Inc., 1953 340 p. 24 cm. (McGraw Hill publications in aeronautical science Jerome C. Hunsaker consulting editor) $9.00. 7072

Contents: Introduction. One-dimensional treatment of the basic [illegible] of propulsion. Two-dimensional [illegible] flow problems. Air intakes. Fairings of finite length. The ducted propeller. The [illegible] engine. The turbojet engine. Installation of jet engines. Jet problems. Aerodynamic propulsion in nature. [illegible]. Appendix. Index.

Note: A survey of the subject in which is incorporated the advances in the knowledge of propulsion aerodynamics which have resulted from investigations relating to the development of practical turbojets and to jet engines in recent years. However, it is not limited to jet engines, but includes the aerodynamics of fairings for piston engines and of propellers. The style is technical, and the book is intended for advanced students of aeronautical engineering and graduate engineers. Good bibliographies are included, and there are many citations of German literature. The authors were formerly associated with the Aerodynamische Versuchsanstalt Göttingen and are now residents of Great Britain.

KUETHE, ARNOLD MARTIN AND J. D. SCHETZER

Foundations of aerodynamics. New York John Wiley & Sons, Inc. 1950 374 p. 23 cm. $6.50 7073

Contents: The fluid medium. Kinematics of [illegible] fluid field. Dynamics of [illegible] fluid field. The flow about [illegible] body. The thin airfoil. Finite wing. Introduction to compressible fluids. The energy relation. Some fundamental aspects of isentropic flow. Waves. Airfoils in compressible flow. Introduction to the dynamics of viscous fluids. Laminar flow in tubes and boundary layers. Turbulence. Turbulent flow in tubes and boundary layers. Transition from laminar to turbulent flow. Some aspects of viscous compressible flows. Aerodynamic characteristics of wings. Appendix. Problems. Author index. Subject index.

Note: An outstanding college textbook in which the fundamental theory and concepts of aerodynamics are compactly surveyed. As the chapter titles indicate, perfect, viscous, and compressible fluids are all covered. The treatment assumes no previous acquaintance with aerodynamic concepts or terminology but the reader will need a sound knowledge of calculus. The authors are members of the Department of Aeronautical Engineering of the University of Michigan.

LIN, C. C.

The theory of hydrodynamic stability. New York Cambridge University Press, 1955 155 p. illus. 22 cm. $4.75 7074

Contents: Introduction. Stability of Couette motion. Stability of plane Poiseuille motion. General theory of hydrodynamic stability. Boundary layer over [illegible] flat plate. Other nearly parallel flows. Examples of stability problems of interest in astrophysics and geophysics. Mathematical theory for the stability of parallel flows. Bibliography. Author index.

Note: Hydrodynamic stability is [illegible] problem of such concern in the design of aircraft, [illegible] and other systems [illegible] it is desirable to avoid turbulence in the flow of [illegible] fluid such as air or water. This monograph presents the general theory in its present state of development and also the mathematical techniques of handling the problem. The entire field is not covered, rather the author has limited his treatment largely to Couette motion, plane Poiseuille motion, and to boundary layers. Various applications are suggested or illustrated, but the book is properly classed as applied mathematics rather than applied design. There is [illegible] long bibliography and statements in the text are keyed to it. The author is Professor of Mathematics at Massachusetts Institute of Technology.

MILES, EDWARD ROY CECIL

Supersonic aerodynamics a theoretical introduction. New York McGraw Hill Book Company Inc., 1950. 255 p. illus. 23 cm. $6.50 7075

Contents: Fundamental theory. Description and discussion. The potential equation. Characteristics in the plane. Linear theory of plane flow. The linear potential equation in three dimensions. Shock waves. Cones in supersonic flow. The method of characteristics for axially symmetric supersonic flow. Potential flow in the hodograph plane. Comparisons of adiabatic and shock flow [illegible] conclusions.

Note: In this work the current knowledge of aerodynamic laws and behavior at supersonic speeds is presented for advanced students of aeronautical engineering and for engineering school graduates already employed in the field. The emphasis is on mathematical methods in solving the problems involved, and [illegible] good part of the text is concerned with the solutions of nonlinear partial differential equations. Both computational and graphical methods of solution are considered. A knowledge of basic fluid dynamics is essential to understanding the text.

MISES, RICHARD VON

Theory of flight. With the collaboration of W. Prager and Gustav Kuerti. New York McGraw Hill Book Company Inc., 1945 629 p. illus. 23 cm. (McGraw Hill publications in aeronautical science Jerome C. Hunsaker consulting editor) $9.00 7076

Contents (abridged): Part I, Equilibrium and steady flow in the atmosphere. The atmosphere at rest. Bernoulli's equation—[illegible] and circulation. Momentum and energy equations. Perfect and viscous fluids—types of flow. Air resistance, or parasite drag. Part II, The airplane [illegible]. Empirical airfoil data. The wing of infinite span. The wing of finite span. Part III, Propeller and engine. Part IV, Airplane performance. Analytical methods of performance computation. Special performance problems. Part [illegible] Airplane control and stability. Moment equilibrium and static stability. Nonuniform flight. Dynamic stability of an airplane. Bibliographical and historical notes. Index.

Note: An outstanding textbook written for persons who are familiar with elementary mechanics and calculus. It is suitable for use in the later years of undergraduate engineering courses and in the first year of graduate courses. The treatment of the special topics is not intended to be exhaustive but is reasonably detailed nevertheless. A limited number of problems to be solved are included. The bibliographical and historical notes collected at the end of the volume trace the development of important theories and cite the fundamental literature.

PAI, SHIH I

Fluid dynamics of jets. Princeton D. Van Nostrand Company Inc., 1954 227 p. illus. 24 cm. $6.00. 7077

Contents Flow of a jet of inviscid and incompressible fluid. Subsonic flow of a jet of inviscid fluid. Supersonic flow of a jet of inviscid fluid. Laminar flow of a jet of viscous fluid. Turbulent flow of a jet of incompressible fluid. Turbulent flow of jet of compressible fluid. Jet mixing of gases of different kinds. The stability of a jet of incompressible fluid. Stability of a jet of compressible fluid. Appendix Fundamental equations of fluid dynamics. Author index. Subject index.

Note. An authoritative and important book. Although limited to the phenomena and theory pertinent to "the steady flow of jet of gas issuing from a nozzle into the surrounding stream at rest or in uniform motion, the material presented has implications for most fields of engineering in which fluid dynamics finds applications. The chapter titles given above indicate the organization of the material. In each of the chapters, the theoretical relationships are developed and are buttressed by the data derived from experiments. Literature references are given. The book is of interest to engineers and scientists working at the research level as well as to graduate students. The author is a member of the faculty of the Institute for Fluid Dynamics and Applied Mathematics of the University of Maryland.

PAI, SHIH I

Viscous flow theory I, Laminar flow Princeton D Van Nostrand Company, Inc., 1956 384 p illus. 24 cm. $7 75 7078

Contents Physical properties of gases and simple kinetic theory of gases. Generalization of laws of friction and of heat conduction. Fundamental equations of fluid dynamics of viscous compressible fluids. Some exact solutions of Navier-Stokes equations. Reynolds laws of similarity and dimensional analysis. Properties of the Navier Stokes differential equations. Theory of very slow motion. The boundary layer equations. Exact solutions of two-dimensional boundary layer equations of steady flow Approximate solutions of two-dimensional boundary layer equations of steady flow. Axially symmetrical and three-dimensional boundary layer flows. Unsteady flows in boundary layer. Boundary layer flows with suction and with injection. Linearized theory of viscous compressible fluid. References. Author index. Subject index.

Note: An important contribution to fluid dynamics. It deals with the theory of real fluids which are viscous and compressible. This theory is of special importance in high-speed aerodynamics, but also finds applications in other fields such as lubrication of machinery and heat transfer The treatment is analytical, and much of the book is concerned with the derivation and solution of pertinent equations. The literature, including the author's own extensive publications, is cited. Volume II, covering turbulent flow was published in 1957

PERKINS, COURTLAND D, AND ROBERT E. HAGE

Airplane performance, stability and control. New York John Wiley & Sons Inc. 1949 493 p. illus. 24 cm. $7 50 7079

Contents. Part I, Airplane performance Introduction. Drag estimation. Propulsion. Airplane performance. Part II, Airplane stability and control Static longitudinal stability and control stick-fixed. Static longitudinal stability and control stick-free. Maneuvering flight. Directional stability and control. Dihedral effect and lateral control. Longitudinal dynamics. Lateral dynamics. Appendix. Index.

Note. A sound presentation of aerodynamics as applied to airplane design in the subsonic range. It is addressed both to aeronautical engineering students enrolled in college courses and to graduate engineers already engaged in airplane design. It was developed over period of years while the authors were associated with the Boeing Airplane Company and Princeton University

POPE ALAN

Aerodynamics of supersonic flight, an introduction New York Pitman Publishing Corporation 1950 184 p. illus. 24 cm. (Pitman aeronautical publications aeronautical engineering series) $6 00 7080

Contents. Fundamental relations. Flow in duct. Two-dimensional flow The oblique shock. Approximate theories. Supersonic wind tunnels. Three-dimensional flow Appendix. Standard atmosphere. Index. Answers to problems.

Note: A brief survey of current theory and experimental methods. According to the author it is designed for use in one-semester college courses offered to students who wish to test their own interest in supersonic aerodynamics and thus determine whether to pursue the subject further. Previous college courses in calculus and elementary dynamics are assumed. The author's style is clear the book is well organized and very generously illustrated.

POPE, ALAN

Basic wing and airfoil theory New York McGraw Hill Book Company, Inc., 1951 294 p illus 24 cm $6 50 7081

Contents Vector analysis. Complex variables and Fourier series. The stream function. Other flow functions. The Joukowski transformation. Airfoil construction and pressure distribution. Thin-airfoil theory. Thick-airfoil theories. The finite wing. The monoplane wing. The field about the wing. Spanwise load distribution for arbitrary wings. Miscellaneous applications of perfect fluid theory Appendixes. Index.

Note A textbook designed for use in engineering college courses offered to advanced undergraduate students. The treatment is intermediate in level between the frankly introductory texts and the graduate-level treatises. The author is a member of the faculty of the Daniel Guggenheim School of Aeronautics of the Georgia Institute of Technology

POPE, ALAN

Wind tunnel testing Second edition. New York John Wiley & Sons, Inc., 1954 511 p. illus. 22 cm $8.50 7082

Contents The wind tunnel. Wind-tunnel design. Instrumentation and calibration of the test section. Model force, moment, and pressure measurements. Testing procedure. Wind-tunnel-boundary corrections. The use of wind-tunnel data. Small wind tunnels. Non-aeronautical use of the wind tunnel. Rotor testing. Transonic and transonic testing. Supersonic-wind-tunnel testing. Answers to problems. Appendix Numerical constants and conversion of units. Index.

Note A standard work, first published in 1947 It is organized for use as textbook in college engineering courses, however, its scope is wide enough to make it of interest also to graduate engineers who are beginning work in wind-tunnel design or use. Both theory and practice are adequately covered, and the expository text is well supplemented by illustrations and literature references. This second edition is nearly 200 pages longer than the first. Chapters carried over have been extensively revised and five new chapters added. The last three chapters are especially noteworthy as they cover the use of the wind tunnel at speeds greater than that of sound. The chapter on non-aeronautical uses refers to the wind-tunnel testing of boats, automobiles, bridges, buildings and shingle roofs (!) and is an indication of the many potential applications of wind-tunnel testing techniques.

RAUSCHER, MANFRED

Introduction to aeronautical dynamics. New York John Wiley & Sons Inc. 1953 664 p. illus. 26 cm $12 50 7083

Contents Kinematics of point. Dynamics of particle. Dynamics of groups of particles. Fundamental equations of fluid motion. Stream function and velocity potential. Fluid motion about simple bodies. Transformations. Airfoils. Airfoils in three dimensions. Viscosity Kinematics of rigid bodies. Dynamics of rigid bodies. Oscillations of systems with one degree of freedom. Oscillations of systems with more than one degree of freedom. Reading list. Problem solutions. Index.

Note. A textbook developed during many years of teaching at the Massachusetts Institute of Technology and designed for use in the junior year A substantial grounding in the fundamentals of both solid dynamics and fluid dynamics is skillfully interwoven with applications in aeronautical engineering. A wealth of equations and solved problems is included in the expository text.

SCANLAN, ROBERT H, AND ROBERT ROSENBAUM

Introduction to the study of aircraft vibration and flutter New York The Macmillan Company, 1951 428 p illus. 24 cm $10.00. 7084

Contents (abridged) Basic mathematical techniques. The Lagrange equations of motion and vibration theory. The linear [illegible] equations of motion [illegible]. The two-degree-of-freedom system. [illegible] system. Coupled beam vibration. Two-dimensional bifurcated system. [illegible] flutter theory. Experimental flutter theory. Three-dimensional flutter theory [illegible]. Normal (coupled) modes of vibration and flutter analysis. Normal (coupled) modes of vibration. [illegible] of flutter stability determinant. Wing torsional divergence. [illegible] reversal and effectiveness. Instrumentation and testing. Bibliography. Appendices: General equations governing subsonic and [illegible]. Subsonic incompressible theory of the forces on an [illegible] in two dimensions. Oscillating air forces in subsonic compressible flow. Oscillating air forces in supersonic flow. [illegible] compressible flow. Oscillating air forces in supersonic flow. Index. Table of subsonic incompressible aerodynamic coefficients. Index.

Note: An introduction to a specialized though highly important aspect of aeronautical engineering. It deals mainly with classical theory and problems. However, there is a chapter on swept-back theory and some discussion in the appendices of analysis of divergence and flutter under conditions of compressible flow. The mathematics employed includes matrix algebra. The book is suited to [illegible] and graduate engineering students and to professional engineers in need of an introduction to this special field. The bibliography runs to 13 pages.

Sears, W. R., editor

General theory of high speed aerodynamics. Princeton Princeton University Press 1954 758 p. illus. 25 cm. (High-speed aerodynamics and jet propulsion. Board of editors. Theodore von Kármán chairman Hugh L. Dryden and others) $15.00 7085

Contents: Part A, On the foundation of high speed aerodynamics, by T. von Kármán. Part B, Mathematical aspects of flow problems of hyperbolic type, by K. O. Friedrichs. Part C, Small perturbation theory, by M. A. Heaslet and H. Lomax. The wave equation and methods of solution. Two-dimensional supersonic steady state flow. Three-dimensional supersonic steady state flow. Axially symmetric supersonic steady state flow. Slender airplane theory. Unsteady [illegible]. Reciprocity relations and reverse flow theorems in aerodynamics. Small perturbation theories of transonic and hypersonic flows. Part E, Higher approximations, by M. J. Lighthill. Part F, Plane subsonic and transonic potential flows, by Y. H. Kuo and W. R. Sears. Part G, The method of characteristics, by A. Ferri. Introductory considerations. Two-dimensional potential flow. Axially symmetric rotational flow. Characteristics methods for problems in three independent variables. Linearized characteristics methods. Part H, Supersonic flows with shock waves, by A. Ferri. Two-dimensional and axially symmetric flow with shock waves. Transonic flow. Conical flow. Index.

Note: A graduate-level presentation of accumulated knowledge which [illegible] to the aerodynamics of high-speed aircraft and rockets. It [illegible] addressed to graduate students of engineering and physics and to graduate engineers and applied physicists preparing for or at work on design and research in this field. It is part of an important series which [illegible] planned for completion in twelve volumes, however [illegible] may be used independently.

Shapiro, Ascher H

The dynamics and thermodynamics of compressible fluid flow In two volumes. New York Ronald Press Company 1953–54 2 v 24 cm. $16.00 per vol $30.00 per set. 7086

Contents. Volume [illegible] Part I, Background. Foundations of fluid dynamics. Foundations of thermodynamics. Introductory concepts to compressible flow. Part II, One-dimensional flow. Isentropic flow. Normal shock waves. Flow in constant-area ducts with friction. Flow in ducts with heating or cooling. Generalized one-dimensional continuous flow. Part III, Introduction to flow in two and three dimensions. The Equations of motion for steady irrotational flow. Part IV, Subsonic flow. Two-dimensional, subsonic flow with small perturbations. Hodograph method for two-dimensional, subsonic flow. Three-dimensional, subsonic flow. Part [illegible] Supersonic flow. Two-dimensional, supersonic flow with small perturbations. Method of characteristics for two-dimensional supersonic flow. Oblique shocks. Appendices. Theory of characteristics. Tables of compressible-flow functions. Index. Volume [illegible] Part [illegible] Supersonic flow. Axially symmetric supersonic flow. Supersonic flow past wings of finite span. Hypersonic flow. Part VI, Mixed flow. The hodograph method for mixed subsonic-supersonic flow. Transonic flow. Drag and lift at transonic speeds. Part VII, Unsteady motion in one dimension. Unsteady one-dimensional, continuous flow. Unsteady one-dimensional shock waves. Part VIII, Flow of real gases with viscosity and heat conductivity. The laminar boundary layer. The turbulent boundary layer. Boundary layers in tubes and in the presence of shock waves. Index for volumes [illegible] and II.

Note: Although organized as [illegible] textbook with the traditional problems to be solved appended to most chapters, this treatise can also be [illegible] as [illegible] reference book of practical methods. Theory and rigorous analysis have not been slighted, but there is emphasis on methods of analysis, working formulas, etc., of [illegible] to the working engineer. In line with this emphasis is the presentation in graphical form of the results of most of the analyses discussed in the text. Many of the applications indicated are in the field of aerodynamics in the supersonic range, but the scope of the work is broad enough to make it of interest to engineers and scientists working in any field that includes problems in compressible fluid flow. The author is Professor of Mechanical Engineering in the Massachusetts Institute of Technology.

Wood Karl D

Technical aerodynamics. Third edition. Ann Arbor Mich. Published by the author distributed by Ulrich s Book Store, 1955 510 p. illus. 23 cm. $7.50 7087

Contents: Introduction. Fluid statics and zero-flow thermodynamics. Fluid dynamics and thermodynamics of flow. Frictionless incompressible flow. Frictionless compressible flow. Incompressible boundary-layer flow. Compressible and heat-conducting boundary-layer flow. Aerodynamic test facilities. Airfoils and aspect ratio effects at low speeds. Airfoil compressibility effects. Airfoil viscosity effects. High-lift devices. Airfoil selection. Drag estimates and power calculation. Aeronautical power plants. Airplane propellers. Helicopter performance. Airplane performance. Convertiplanes. Missile performance. Stability and control. Appendices. Answers to problems. Index.

Note. A general and at the same time reasonably detailed introduction to aerodynamics. It is designed for the instruction of engineering students [illegible] are preparing for careers in the design of aircraft. A considerable range of reference material, such as graphical representations of the characteristics of current NACA airfoils, is included in the appendix. The preceding edition was published in 1947. In this third edition, the book has been well revised to keep it abreast of the progress in airplane development. It now contains information on jet-propelled airplanes, missiles, helicopters and other topics not included or not covered so fully in the preceding edition. A complementary work *Airplane design*, 10th edition, 1954, also published by the author and distributed by the University Book Store, Boulder Colorado, is available.

AIRCRAFT STRUCTURES

Aero Publishers Inc., editors

Aircraft template development, compiled and edited by Aero Publishers, Inc. and associated aeronautical staff. First edition revised. Los Angeles Aero Publishers, 1942 312 p. illus. 23 cm. $4.00. 7088

Contents: Templates and their uses. Aircraft factory nomenclature and related subjects. Mathematics for the template maker. Elementary drafting. Engineering drafting. Principles of mathematical development. Tools and equipment used by the template maker. Typical aircraft parts and their flat pattern developments. Photographic reproduction of templates. Trade ethics and safety precautions. Tables and charts. Glossary.

Note: An introduction to the fundamental principles of aircraft template manufacture. Written for both the student and the active worker, its purpose is to provide material for classroom instruction which can be used in conjunction with technical shop experience. There are numerous blueprints of typical aircraft parts, together with related problems and exercises. An appendix includes [illegible] glossary, decimal and metric equivalents, drill sizes, and [illegible] table of trigonometric functions.

Anderson Newton H.

Aircraft layout and detail design with a foreword by C. T Reid. Second edition. New York McGraw Hill Book Company Inc., 1946 437 p illus. 21 cm. $7.00 7089

Contents (abridged) Requirements for [illegible] good layout. Descriptive geometry of aircraft layout. Airfoils. General design considerations.

Connections. Forgings. Castings. Machined fittings. Fundamental principles of fitting analysis. Strength calculations for riveted and bolted joints. Bending. Torsion. Shear and its application to thin web beams. Columns. Appendix. Index.

Note. More than 100 pages of new material have been added in the present edition of this work. The single chapter on fabrication methods that appeared in the first edition has been expanded to form four chapters covering the design of forgings sand, permanent mold and die castings, machined fittings extrusions and sheet metal. Other added material includes information on mechanical properties of materials, plotting of bending-moment and shear diagrams, and new illustrations and problems. The book is designed as a text for advanced courses in engineering schools and for courses offered to men already at work as draftsmen in the aircraft industry

ASHMEAD, GORDON B

Aircraft production methods Philadelphia Chilton Company, 1956 293 p illus. 23 cm. $7 50 7090

Content Introduction to aircraft production Master plaster pattern and foundry Sheet metal preparation. Sheet metal forming: The drop hammer etc. The draw press, etc. Bending rolls, etc. The Guerin process. The Verson-Wheelon press. Heat treatment. Surface treatment. Tooling for production with plastics. Optical tooling. Assembly tooling. Welding. Machining: The machine shop. Duplicating, etc. Spar milling, etc. Carbon cutting manufacture, etc. Chemical milling. Exhaust stack line. Landing gear Plastics. Inspection. Summary Index.

Note Rather than the systematic treatise promised by the title, this book is essentially a pictorial presentation of standard and novel methods of producing aircraft parts and structures. It contains 314 figures, all of which are reproductions of photographs of manufacturing operations or of manufacturing operations or of manufactured parts. In comparison to the superb array of illustrations, the text is slight.

BARTON, MILLARD VERNON

Fundamentals of aircraft structures. New York Prentice Hall, Inc, 1948 298 p illus. 24 cm (Prentice-Hall aeronautical engineering series K D Wood editor) $5 00 7091

Contents Part I, Aircraft loads and design specifications Design requirements. Aircraft loads. Part II, Structural analysis Behavior of loaded material. Load transmission in single span beams and cantilever beams. General structural relationships and elastic energy Load transmission in multiple span beams. Frames and rings. Part III Structural stability Columns and beam columns. Compressive strength of thin sheet members. Part IV Stress analysis Bending. Combined bending and shear Torsion. Combined torsion, bending and shear Combined stresses and allowable stresses. Connections. General design considerations. Index.

Note Essentially an introduction to the basic principles of stress analysis as applied to the problems of aircraft design and construction. The book is written for aeronautical engineering students and describes the behavior of specific airplane structural members under various conditions of stress and strain, and outlines the methods for calculating the values of such strains. The treatment requires a knowledge of integral and differential calculus. Problems to be solved and short bibliographies accompany most of the chapters.

BISPLINGHOFF RAYMOND L, AND OTHERS

Aeroelasticity By Raymond L Bisplinghoff, Holt Ashley and Robert L Halfman. Reading Mass Addison Wesley Publishing Company Inc 1955 860 p illus. 23 cm (Addison Wesley series in mechanics Eric Reissner consulting editor) $14 50 7092

Contents. Introduction to aeroelasticity Deformations of airplane structures under static loads. Deformations of airplane structures under dynamic loads. Approximate methods of computing natural mode shapes and frequencies. Aerodynamic tools—two- and three-dimensional incompressible flow Aerodynamic tools—compressible flow Wings and bodies in three-dimensional unsteady flow Static aeroelastic phenomena. Flutter Dynamic response phenomena. Aeroelastic model theory Model design and construction. Testing techniques. Appendices Mathematical tools. References. Author index. Subject index.

Note. Aeroelasticity is in this work treated strictly from the viewpoint of aeronautical engineering. Undoubtedly some of the material is applicable to the study of other structures exposed to aerodynamics forces, such as bridges, but these applications are not mentioned. Deformation of airplane structures under static and dynamic loads, analysis of the behavior of airfoils, wings, and aircraft bodies under various ideal and actual conditions, flutter model theory model design and construction, and testing techniques for both full scale aircraft structures and models are all covered. The treatment is at a graduate level. Mathematics including matrix algebra is used extensively

COXEN, HARRY HERSCHELL, AND OTHERS

Aircraft sheet metal blueprint reading, by Harry H Coxen, Gerald E Jackson, and Gilbert D Masters Chicago American Technical Society, 1944 132 p illus. 27 cm. $2 75 7093

Contents (abridged) Abbreviations used on aircraft sheet metal blueprints. How a drawing describes an object. Scale and size of drawings. Reading simple three-view drawing. Kinds of drawings, and what they represent. Dimensions, what they indicate, and where they are found on drawings. Sectional drawings. Practical questions based on typical sheet metal drawings. Blueprints. Channel section. Bracket side. Frame angle. Seat bracket. Rudder nose section. Flare bracket. Frame, fuselage.

Note. A practical text for use in training classes for aircraft workers. The authors have designed the book for students who have not had training in mechanical drawing and who do not intend to acquire such training before entering the industry

FREUDENTHAL, ALFRED M, editor

Fatigue in aircraft structures Proceedings of the International Conference held at Columbia University, January 30 31 and February 1, 1956 New York Academic Press Inc. 456 p illus 23 cm. $12 00 7094

Contents Part I, Physical theories of fatigue Mechanism of fatigue, by W A. Wood. The mechanism of fatigue in aluminum and aluminum alloys, by P J E. Forsyth. Experiments relating to the origin of fatigue cracks, by N Thompson. On the effects preceding fatigue failure of high-strength aluminum alloys, by R. F Hanstock. Performance of metal under repeated loading, by M. Hempel. Part II, Prediction of fatigue life and fatigue strength Fatigue cracks as stress raisers and their response to cyclic loading, by C. E. Phillips. Scatter of fatigue life and fatigue strength in aircraft structural materials and parts, by W Weibull. Accumulation of fatigue damage, by A. M. Freudenthal and R. A. Heller. Performance fatigue testing with respect to aircraft design, by E. Gassner Structural fatigue research and its relation to design, by P D Brooks. The elements of a helicopter fatigue substantiation program, by H. T Jensen. Part III, Prevention of fatigue failure The relationship between load spectra and fatigue life, by B. Lundberg and E. Eggwertz. Fatigue testing in relation to transport aircraft, by R. J Atkinson. Fatigue engineering in aircraft, by P Kuhn. Some remarks on the French approach to the problem of fatigue, by J Cavillon. Aspects of fatigue design of aircraft structures, by F Turner The extent of the fatigue problem in aircraft design, by H. Giddings. Practical aspects of fatigue in aircraft structures, by R. L. Schleicher Aircraft structural fatigue research in Australia, by W W Johnstone and A. O. Payne. Author index. Subject index.

Note A collection of major importance in contemporary aircraft design. The 19 papers in it delineate the status of the fatigue factor in the design of aircraft structures at the time of the conference mentioned in the book's title. Six countries are represented in the lists of authors. All of the contributors are specialists; furthermore, other specialists participated in the discussions of the papers, and excerpts from these discussions are included in the volume. Several of the authors have described laboratory tests on structural elements and whole structures in considerable detail. Illustrations are included of some test set-ups. Literature references are included in the papers.

FUNG, Y C

An introduction to the theory of aeroelasticity New York John Wiley & Sons Inc. 1955 490 p illus. 24 cm. $10.50 7095

Contents: Fundamentals. Some aeroelastic problems in civil and mechanical engineering. Divergence of lifting surface. Steady-state aeroelastic problems in general. Flutter phenomenon. Fundamentals of flutter analysis. Engineering flutter analysis and structural design. Transient loads, gusts. Buffeting and stall flutter. Applications of Laplace transformation. General formulation of aeroelastic problems. Fundamentals of non-stationary airfoil theory. Oscillating airfoils in two-dimensional incompressible flow. Oscillating airfoils in two-dimensional compressible flow. Unsteady motions. Model—experiments. Appendixes. Index.

Note: Aeroelasticity defined in this book as the study of the effect of aerodynamic forces on elastic bodies. It is synthesis and further development of knowledge and methods from aerodynamics and structural analysis. At the present time, it is of greatest interest in aeronautical engineering, but it has potential application in any field of engineering where steel or other elastic structures are exposed to the wind. This book by faculty members of the California Institute of Technology presents a fairly detailed account of the present state of the field. Primarily about airplanes in connection with design, it includes also some practical nonaeronautical matter such as tabulation of means for prevention of flutter. Most of the chapters contain extensive bibliographies. It is potentially of interest both to graduate students of aeronautical engineering and to graduate engineers and scientists already at work in aeronautical research and design. Designers of suspension bridges will find of interest.

GERARD GEORGE

Minimum weight analysis of compression structures. New York New York University Press, 1956. 194 p. illus. 22 cm. $6 00 7096

Contents: Minimum weight analysis of elements. Behavior of compression structures. Stringer, panel-rib construction. Wide-column construction. Plate construction. Sandwich construction. Cylindrical shell construction. Comparative efficiency in bending. Practical considerations. Structural efficiencies of materials. Ideal stress for minimum weight. Appendix: Review of literature on minimum weight analysis. Bibliography. Index.

Note: Analytical methods for obtaining minimum weight designs of the various types of constructions used in the wings of modern supersonic aircraft are the subject of this book. The principal types considered are named in the titles of the third to the seventh chapters listed above. However the analytical methods presented are applicable to other types as well. The book is intended for graduate students of aeronautical engineering and for graduate engineers already at work in the aircraft industry. It contains a number of graphs and tables of reference value and a selected, chronological, annotated bibliography of the significant literature from 1919 to 1955. The author is a member of the staff of the Research Division of the College of Engineering of New York University.

KUHN PAUL

Stresses in aircraft and shell structures. New York McGraw Hill Book Company Inc., 1956. 435 p. illus. 24 cm. (McGraw Hill publications in aeronautical science. Jerome C. Hunsaker consulting editor) $14 00 7097

Contents: Part 1, Methods of analysis: Preliminary topics. Elementary theories. Diagonal tension. Shear lag. Two-spar structures. Four-flange shells under torsion (with restrained warping). Multi-stringer single-cell shells under torsion (with restrained warping). Cutouts in plane panels and box beams—in circular cylinders. Part 2, Experimental evidence: Tests and their evaluation. Verification of elementary theories. Diagonal-tension tests. Shear-lag tests. Torsion-box tests. Cutout tests. Appendix. Index.

Note: An important book on the stress analysis of aircraft structures and other stiffened-shell structures. The author is Assistant Chief of the Structures Division of the National Advisory Committee for Aeronautics and its contents are based in part on the results of research conducted by the Division and in part on the literature. The subject is treated at the level of graduate engineers engaged in aircraft structural design and research, however, both elementary and advanced methods of analysis are presented. The reliability of the various approaches is indicated. Diagonal tension is given special attention. About one-fourth of the book is devoted to summaries of experimental evidence in support of the methods of analysis presented in the main part.

LE MASTER, CLARENCE ALLEN

Aircraft sheet metal work how to do blueprint reading, template layout, patterns for bends, riveting, soldering, brazing welding, drop hammer work. Chicago American Technical Society 1944 387 p. illus. 24 cm. $4.50. 7098

Contents: Hints for safety and production. Tools. Files and their uses. Blueprint reading. Measuring and measuring tools. Template layout and bench work. Pattern development for bends. Rivets and riveting. Skin fitting. General fabrication. Soldering, brazing, and welding. Use of drop hammer. Assembly repairs, techniques, projects. Aluminum and related metals. Steel in aircraft construction. Index. Decimal equivalent table.

Note: A beginning textbook aimed at the training of aircraft sheet metal workers. The first chapter deals with safety rules, and other preliminary chapters deal with the accumulation of kit of tools, blueprint reading, and measuring. The various operations in metal work are then treated step by step. The treatment throughout is on practical basis.

NEVILLE, LESLIE E.

Aircraft designers' data book. New York McGraw Hill Book Company Inc. 1950. 534 p. illus. 29 cm. $12.50. 7099

Contents: General design characteristics. Wing and auxiliary surface design. Empennage design. Fuselage, body and hull design. Landing gear design. Control systems. Fuel and lubrication systems. Power-plant installations. Miscellaneous design details. Rotating-wing aircraft. Turbine engines. Index.

Note: A reference book for both engineers and draftsmen employed in the design of airplanes. It contains many hundreds of drawings, together with a small number of photographs, of the mechanical details of the structures and mechanisms of a wide range of modern airplanes. Compact discussions of structures are also included. Condensed specifications of United States military, personal, and transport aircraft and of leading Canadian, British and French planes are tabulated in the appendix. Most of the material has been compiled from Aviation and Wings.

NILES ALFRED S AND JOSEPH S NEWELL

Airplane structures. Volume I. Fourth edition. New York John Wiley & Sons, Inc., 1954 607 p. illus. 24 cm. $7 75 7100

Contents: General design requirements. Reactions, shears, and bending moments. Beam deflections. Continuous and restrained beams. Properties of materials. Simple bending. Torsion. Truss analysis. Graphical methods. Ties, columns, and compression panels. Buckling effects in beams. Combined stresses. Connections. Deflections, dummy-unit-load method. Introduction to statically indeterminate structures. Appendices. Index.

—— Volume II. Third edition. New York John Wiley & Sons, Inc., 1943 439 p. illus. 24 cm. $6 75 7101

Contents: Statically indeterminate structures. Beam-columns. Incomplete tension fields. Shell analysis. Curved beams and rings. Critical loads. Torsional column failure. Allowable stress data. Bibliography. Index.

Note: A standard text designed for students and others who have completed introductory college courses in calculus and basic structural theory. It covers stress analysis in such structures as aircraft with high strength-weight ratios, and its chief purpose is to prepare students for practical work in airplane structural design. Without slighting fundamental and theoretical aspects, the authors have given adequate attention to empirical and practical methods. Also, they have criticized currently used methods where criticism is due, for instance, "Many of the fatigue analyses currently available must be used with caution." The third edition was published in 1943. The fourth edition of Volume represents very extensive revision in expository text, bibliographies, and problems. In recognition of the fact that the book is sometimes used for self-instruction, partial answers to the problems are included in the appendix. The current edition of Volume is the third as listed above.

NORTHROP AERONAUTICAL INSTITUTE

Aircraft maintenance and repairs. Revised edition By the Technical Development Staff of Northrop Aeronautical Institute Charles Edward Chapel, Ralph D Bent, James L. McKinley New York McGraw Hill Book Company, 1955 444 p illus 29 cm. $8 00 7102

Contents. Fundamentals of aircraft hydraulics. Flow control valves. Pressure control valves. Hydraulic systems. Hydraulic brake actuating systems. Landing gear. Heat-treating and inspection of metals. Aircraft gas-welding equipment. Gas-welding techniques. Gas-welding techniques for ferrous metal. How to weld aluminum alloys. Aircraft construction and repair by welding. Aircraft sheet-metal tools, machines, and methods. Aircraft layout work. Aircraft riveting. Aircraft sheet-metal repairs. Aircraft woodworking tools and machines. Glue, screws, and nails for aircraft woodwork. Construction and repair of wooden aircraft. Fabric covering. Dope and its application. Aircraft wire and cable work. Assembly and rigging. Weight, balance, and loading. Index.

Note An established practical text, developed at leading school for the training f aircraft mechanics. The explicit elementary style and the numerous illustrations make it suitable for home study as well as for use in organized courses. The first edition was published in 1949 In this revised edition the chapter titles are nearly identical, and the number of pages is the same. However some revisions have been made. The chapter on riveting has been largely rewritten and re-illustrated. Important and moderately extensive changes have been made in the chapter on construction and repair of wooden aircraft, but in most chapters the only revision is the substitution of an illustration or the addition of paragraph or two of new matter.

PEERY, DAVID J

Aircraft structures. New York McGraw Hill Book Company Inc., 1950 566 p 24 cm. $7 75 7103

Contents (abridged) Equilibrium of forces. Inertia forces and load factors. Shear and bending-moment diagrams. Beams with unsymmetrical cross sections. Analysis of typical members of semimonocoque structures. External loads on the airplane. Mechanical properties of aircraft materials. Joints and fittings. Design f members in tension, bending, or torsion. Design of compression members. Design of webs in shear Special methods of analysis. Appendix. Index.

Note A textbook written primarily for use in undergraduate work in engineering colleges. The uthor who is Professor of Aeronautical Engineering at the University of Michigan, has emphasized basic structural theory and methods of analysis. Little material has been included on the design of specific airplanes or the properties of specific materials. The chapters are supplemented by good lists of related literature.

SECHLER, ERNEST EDWIN

Elasticity in engineering Galcit aeronautical series New York John Wiley & Sons Inc. 1952 419 p illus 24 cm $10 00 7104

Contents Part I, Fundamental equations and analysis methods. Introduction. Uniform stress conditions. Non-uniform stress conditions. Strain conditions. Stress-strain relations. The stress function. Elastic energy principles. Part II, Engineering problems in stable structures Two-dimensional stress problems. Theory f simple beams. Continuous and redundant structures. The torsion problem. Stable plates and shells. Part III, Engineering problems in instability Columns. Beam columns. Instability of plates and shells. Index.

Note An intermediate-level text for engineering college students and graduate engineers. Methods of analysis which ha proved useful in connection with the design f aircraft structures are emphasized, but the usefulness of the methods covered is not limited to the aeronautical field.

SHANLEY, FRANCIS REYNOLDS

Basic structures. New York John Wiley & Sons, Inc., 1944 392 p illus. 22 cm. $5 50 7105

Contents: Structural analysis methods. Forces and moments. Force transmission. Equilibrium and reactions. Stability constraints, and redundancies. Behavior of materials under load (physical properties) Axially loaded members. Transverse forces. Truss analysis. Shear webs. Curved shear webs. Torsion. Bending—symmetrical. Unsymmetrical bending. Bending (special cases) Bending deflections. Combined bending and shear. Combined shear and torsion. Combined bending and axial loading. Combined stresses. Joints. References. Appendix. Answers to problems. Index.

Note: This textbook for students and practicing engineers deals with the basic principles of structural engineering, with special reference to aeronautics. The use of calculus and advanced mathematics has been avoided, and numerous practical problems and answers are given for each chapter. An appendix includes tables and diagrams relating to the properties of materials under various conditions of stress and strain. There are three pages of references.

SHANLEY, FRANCIS REYNOLDS

Weight-strength analysis of aircraft structures. New York McGraw Hill Book Company Inc., 1952 394 p illus 24 cm. (The Rand series) $8 50 7106

Contents Part I, Principles of optimum structural design Methods of analysis. Principles of structural design for minimum weight. General instability of stiffened shells in pure bending. Minimum weight of stiffened cylindrical shells in pure bending. Effect of torsional-stiffness requirements on wing structural weight. Part II, Structural-weight equations. General weight-analysis methods. Weight analysis of the sheet-stringer-rib type of wing structure. Effective depth of airfoil sections. Evaluation of integration factors. Inertia and shear reduction factors. Wing ribs and secondary structure. Nonoptimum structural weight. Weight analysis of thick-plate type of wing structure. Weight analysis of thin-wing structures. Weight analysis of fuselage and shell structures. Part III, Material properties and behavior Analysis of stress-strain-time relations. Stress-strain-time properties of some aircraft materials, by L. R. Jackson and others. Inelastic-column theory Principles of creep buckling. Effect of creep on column deflection, by T P Higgins, jr. Index.

Note. An important treatise for aircraft designers and stress analysis. It presents methods of analyzing and predicting the structural weight of aircraft and missiles. Part discusses methods by which the minimum weight can be determined for any material and conditions of loading. These principles of design for minimum weight are utilized to derive weight equations for wing and fuselage structures, the subject matter of Part II. A number of reports prepared in the course of investigations f new materials and extreme operating conditions are included in Part III. These reports demonstrate engineering methods by which the effects of temperature and time can be included in structural design and weight calculations. While not designed as a textbook, certain of its parts have been used by the author as basis for graduate course in structures, and some problems used in this course have been included in Parts and II. Bibliographical references appear at the ends of most chapters.

TEICHMANN, FREDERICK KURT

Airplane design manual Third edition. New York Pitman Publishing Corporation 1950 382 p illus. 24 cm (Pitman aeronautical publications aeronautical engineering series) $8 00 7107

Contents: Procedure in design. Types of airplanes Airfoil selection Preliminary weight estimate. The three-view The balance diagram. The cockpit. Instruments and equipment. The passenger cabin. Heating and entilating. Soundproofing. The power plant. Design of the wing The landing gear Tail surfaces. Control systems. The fuselage. Preliminary performance calculations. Elementary longitudinal stability calculations. Materials of construction. Appendix. Weight data. Miscellaneous design data on American airplanes. Airplane data. Materials design data. Index.

Note. An introduction to practical design of airplanes and their component parts. Although moderate amount of mathe- ing with wing design) many topics are discussed without the use of mathematics at all. The book is particularly suitable for such readers as production workers in airplane manufacturing plants and draftsmen, especially those who must gain their knowledge of the subject in home study In this revised edition there is fair amount of new material including discussions of jet engines, recent research in seating arrangements, and new structural materials.

Titterton George F

Aircraft materials and processes. Fifth edition. New York. Pitman Publishing Corporation, 1956. 398 p. illus. 23 cm. $7.50 7108

Contents: Definitions. Testing aircraft materials. Steel and its alloys. Aircraft steels—properties and uses. Heat treatment of steel. Surface hardening. Shaping of metal. Corrosion-resisting steels. Nickel alloys. Copper and its alloys. Wrought aluminum alloys. Aluminum-alloy castings. Magnesium alloys. Metal-joining processes. Corrosion and its prevention. Wood and glue. Fabrics and dope. Paints. Transparent materials. Rubber and synthetic rubber. Titanium and its alloys. High temperature problems. Selection of materials. Appendices: Weights of common aircraft materials. Standard gages. Standard sizes, weights and tolerances of round steel tubing. Standard sizes, weights, and tolerances of round aluminum-alloy tubing. Streamline tubing. Strength of steel cable. Zonals. Index.

Note: A wide range of practical information and engineering data on the materials used in aircraft and the processes of fabricating them is covered in this standard book. The level of treatment is introductory in the sense that the author has not assumed on the part of his readers previous acquaintance with aircraft manufacturing. On the other hand the book contains sufficient basic information to make it useful as a reference book in technical libraries and on the desks of engineers and technicians in the aircraft industry. The fourth edition was published in 1951. This fifth edition is 42 pages larger and contains expanded sections on high temperature problems and titanium as well as many new and revised items of data. The author is an engineer on the staff of the Grumman Aircraft Engineering Corporation.

AIRCRAFT ENGINES

American Society for Testing Materials

Symposium on materials for gas turbines. Forty-ninth annual meeting, American Society for Testing Materials, Buffalo N. Y., June 24–28, 1946. Philadelphia American Society for Testing Materials, 1946 199 p. illus. 23 cm. $3.00. 7109

Contents: Introduction, by R. L. Mochel. Heat-resisting metals for gas-turbine parts, by H. C. Cross and W. F. Simmons. High-temperature alloys developed for aircraft turbosuperchargers and gas turbines, by J. W. Freeman, and others. Chromium-base alloys, by E. M. Parke and F. P. Bens. Metallurgy of high-temperature alloys used on current gas turbine designs, by P. B. Badger, Jr., and W. O. Sweeny Jr. Alloys and ceramic materials for high-temperature service, by H. C. Cross. Resistance of iron-nickel-chromium alloys to corrosion in air at 1600 to 2200 F by A. deS. Brasunas, and others. Comparative properties of aluminum alloy sheet at elevated temperatures, by A. E. Flanigan, and others. Tensile and creep strengths of some magnesium-base alloys at elevated temperatures, by A. A. Moore and J. C. McDonald.

Note: A compilation and condensation of governmental and industrial wartime research in the field of heat-resisting metals and alloys. Photographs of alloy micro-structures, phase diagrams, charts, drawings, and data tables are included. The references cited include patents, government reports, scientific and technical journals, and books. The work is intended for metallurgists and metallurgical engineers.

Casamassa, Jack V., editor

Jet aircraft power systems, principles and maintenance. New York McGraw Hill Book Company Inc., 1950 338 p. illus. 23 cm. $6.50. 7110

Contents (abridged): History and design of jet machines. The modern gas turbine engine (turbo jet). Gas turbine propeller combination (turbo prop). Athodyds—pulse and ram jets. Rockets. Theory and evaluation. Jet propulsion theory. Air inlets, casing, and exhaust systems. Thrust augmentation methods. Materials for gas turbines. Gas turbine fuel systems. Lubrication systems. Ignition and starter systems. Servicing and operation. Production problems. Inspection, maintenance, and overhaul. Jet transports. Addenda. Principal jet engines developed by Pratt & Whitney Aircraft. Cooling for "hot" parts. Boeing designs for jet transports. Lockheed proposals for jet transports. Jet fuel (proposed). Russian jet designs. Glossary. Appendix. Visual aids. Index.

Note: An introductory textbook designed for men who are preparing for employment as mechanics on jet aircraft engines. Descriptions of the types of such engines and of their component parts comprise about two-thirds of the book. Only about one-third is devoted to inspection, maintenance, and overhaul operations. There are numerous special features of value to the beginner, including numerous illustrations, study questions, references to other reading, and a glossary of jet terms.

Driggs Ivan H. and Otis E. Lancaster

Gas turbines for aircraft. New York The Ronald Press Company 1955 349 p. illus. 24 cm. $10.00 7111

Contents: Perspective. Fundamentals. Cycle analysis of gas turbines. Flow of compressible fluids in ducts and passages. Compressors. Turbines. Combustion. Gas-turbine performance. Control problems. Aircraft performance analysis. Early development of gas-turbine engines. Problems. Appendix. Index.

Note: Design methods for jet and turboprop aircraft engines and methods of analyzing the performance of such engines are the two subjects covered in this authoritative book. Although organized so that it may be used as a graduate-level text, the viewpoint is essentially that of the practicing engineer. The chapter on cycle analysis, for instance, is not limited to the ideal gas cycle but includes also modifications such as are found in all developed engines. The theoretical and mathematical material is supplemented by a moderate amount of descriptive matter on engine elements, as well as on complete engines. The first-named author is Chief Scientist, United States Naval Air Development Center and the second-named is Assistant Director of the Research Division of the U. S. Navy's Bureau of Aeronautics.

Durham Franklin P

Aircraft jet powerplants. New York Prentice-Hall Inc., 1951 326 p. illus. 22 cm. $6.25 7112

Contents: Introduction. Principles of thrust and the energy equation. Thermodynamic properties of air and gas. Turbojet engine processes. Turbojet engine performance. Turbopropeller engine processes and performance. Duct flow and the inlet diffuser. Air compressors. Combustion chambers or burners. Nozzle flow and the jet nozzle. Turbines. The ramjet engine. The rocket motor. Appendix. Index.

Note: A college textbook intended for upperclass students in engineering colleges. The main types of jet powerplants, such as the turbojet engine, turbopropeller engine, and the rocket, are described very briefly in the first chapter. After this introduction, the theory and the performance characteristics of jet engines and their component parts are covered. Algebra and calculus are both used in the mathematical computations, and the treatment assumes previous courses in thermodynamics and fluid mechanics.

Finch Volney Cecil

Jet propulsion—turbojets. Millbrae, Calif. The National Press, 1948. 328 p. illus. 22 cm. $5.50. 7113

Contents: History and development. Thermodynamic considerations. Performance of compressor-turbine jet propulsion engines. Efficiencies of gas turbines and jet powerplants. Graphical solution of the performance of turbojets. Effects of temperature, humidity, icing, and dust upon turbojet performance. Mean specific heats for aircraft gas turbines. Centrifugal compressors. Axial-flow compressors. Aircraft gas turbine design. Fuel systems and fuels for jet airplanes. The combustion chamber. The combustion process. Lubrication of turbojets. Thrust augmentation. Materials. Appendix. Index.

Note: A compact introduction which is suitable for use by intermediate students of engineering and by persons out of school who understand calculus and are accustomed to reading graphs. Fundamental engineering theory is presented from the standpoints of thermodynamics and aerodynamics, and specific data are furnished on such aspects as efficiency and on design factors. The book is based on the published literature including a number of papers and reports of wartime research. Good lists of selected references accompany the various chapters. The appendix contains a range of useful data on alloys, fuels, etc.

FIOCK, ERNEST FRANK, AND CARL HALPERN

Bibliography of books and published reports on gas turbines, jet propulsion, and rocket power plants, 1910 through 1953 Washington, D C Government Printing Office 1951–54 2 parts 23 cm. (United States National Bureau of Standards Circular 509 and Supplement) Main work, $0 25, Supplement, $0 50 7114

Contents Main work, 1910–1950 Introduction Classification of recent power plants. Rating of jet engines. Scope and arrangement of the bibliography Bibliography: Books, 1910 through 1950 Gas turbines and jet power plants. Atomic energy Periodical reports, 1940 through 1950: Development and future role. Theory and performance. Turbojet and propjet engines. Other types of gas turbines. Intermittent or pulsejets. Ramjets. Compounding and thrust augmentation. Rockets. Jet-propelled helicopter rotors and propellers. Compressors and their components. Turbines and their components. Combustion and combustion chambers. Thermal properties f working media. Aerodynamic factors. Metallurgy machining, and welding. Ceramic materials in gas turbines. Research programs. Nomenclature. Atomic energy Miscellaneous. Supplement, 1950–1953 Scope and arrangement of the bibliography Bibliography Books, 1950 through 1953: Gas turbines and jet power plants. Atomic power Periodical reports, 1950 through 1953 Jet propulsion. Turbojet and propjet engines. Other types of gas turbines. Intermittent or pulsejets. Ramjets. Rockets. Engine components. Compound engines. Thrust augmentation. Engine noise. *Metallurgy* and *fabrication*. Ceramics and metal-ceramics. Aerodynamic factors. Thermal properties of working media. Jet turbine- and rocket-propelled aircraft. Guided missiles and drones. Anti-icing. Interplanetary considerations. Test *facilities*. Research programs. Atomic power Miscellaneous.

Note A bibliography of books and periodical articles mainly in the English language, but including some titles in German, French, and Italian. The works ar listed under the headings noted above within each group they are arranged by year of publication. Periodical references prior to 1940 are not included. Circular 509 is revision of Circular 482 The latter was issued in 1949 and listed publications through 1948. The Supplement, which is nearly double the size of the main work, reflects the increased attention to the subject in the recent periodical literature.

HERMANN, RUDOLF

Supersonic inlet diffusers and introduction to internal aerodynamics. Minneapolis Minneapolis Honeywell Regulator Company Aeronautical Division, 1956 378 p illus 23 cm. $16 00 7115

Contents Various diffuser types, their functions and applications in supersonic aerodynamics. Diffuser with the normal shock in front—flow process, efficiency and the starting or swallowing process in one-dimensional analysis. Diffuser with the normal shock swallowed—flow process and efficiency in one-dimensional analysis. The two-dimensional symmetric multiple shock diffuser with wedge of constant angle installed in a duct. The two-dimensional multiple shock inlet diffuser with equal upper and lower wedge angles. Analysis of a two-dimensional multiple shock system for optimum pressure recovery Comparative evaluation of two-dimensional unsymmetric multiple shock inlet diffusers composed of wedges with unequal angles or angular steps. The axially symmetric spik inlet diffuser—basic analysis of on-design mach number operation. The axially symmetric spike inlet diffuser—experimental data and comparison with analysis. Appendix of numerical tables. References. Terminology Index.

Note. An important treatise on the internal dynamics of such structures as the inlet diffusers used on turbojets and ram jet aircraft engines. It was based on an extensive program of study and experimental research, and it presents range of results not previously published. It is directed to applied scientists and engineers who are working at the research and top design levels in jet engine and missile design. The author is Professor of Aeronautical Engineering in the Uni ersity f Minnesota.

KATZ, ISRAEL

Principles of aircraft propulsion machinery New York Pitman Publishing Corporation 1949 477 p illus. 24 cm. (Pitman aeronautical publications, Alexander Klemin, advisory editor) $7 00 7116

Contents (abridged): Part I, Orientation. General classification. The principal commercial-transport and heavy military piston engines. The principal low- and medium-powered piston engines. The principal gas-turbine powerplants. Part II, Development. Early engines. A critical evaluation of powerplant progress. Current developments. Part III, Fundamental aspects. Principles of pulse jets. Piston-engine cycles. Continuous-combustion cycles. A better fuels. Part IV Performance Performance criteria and reliability Power availability Operating characteristics. Response to controls. Maintenance ease. Part V Piston engines: Principal moving parts. Fixed parts. Valve systems. Engine accessories. Bearings and lubrication. Ignition systems. Cooling systems. Part VI, Gas turbines. Turbo-powerplant composition. Gas-turbine accessory systems. Turbo-power plant controls and operating techniques. Part VII, Advanced power plants Rocket motors. Part VIII, Application: Installation principles. Engine testing and instrumentation. Index.

Note. A well-organized introduction to aircraft engines of all types. It is designed primarily as an introductory text for use in engineering colleges, but it reads so easily that it is suitable for certain groups of readers who are not in college. Theory is stressed, but it is well leavened with descriptive material. Most chapters are short, and a considerable part of the exposition is expressed in the form of tabulated "points. There is a generous number of illustrations.

LISTON, JOSEPH

Power plants for aircraft. New York Mc Graw Hill Book Company, Inc., 1953 577 p. illus 24 cm $9 00 7117

Contents. Basic requirements and achievements. Utilization of available energy Fuels. Charge handling. Cylinder and burner phenomena. Performance. Turbine engine characteristics. Structural and mechanical requirements. Index.

Note An engineering college textbook in which the main emphasis is on matters that are basic to all types of airplane engines from piston to jet. Such aspects as combustion in cylinders and burners are covered specifically and in fair detail, and are supplemented by references to source articles in which fuller treatments are available. Since the book is intended for upperclass engineering students, familiarity with basic thermodynamics and engineering mathematics is assumed. Graphs are used freely in the exposition. The author is *Professor of Aeronautical Engineering* in Purdue University

NORMAN, CARL ADOLPH, AND R. H ZIMMERMAN

Introduction to gas-turbine and jet propulsion design. New York Harper & Brothers, 1948 286 p illus 24 cm $5 00 7118

Contents Introduction. Fundamental mathematics. Approximate gas-turbine analysis. Accurate computations. Entropy expansion, compression, and gas chart. Combustion chambers. Turbines and turbine details. Compressors. Materials and general design considerations. Aircraft power plants. Stationary marine, and locomotiv plants. Rockets. Appendix Derivation of disk formulas. Index.

Note In this excellent textbook the authors hav strive to present the subject simply and concretely so that the book will have appeal for engineering students. Basic principles and problems are explored thoroughly for an introductory work, and the many examples of practical and experimental applications are related directly to design problems. The reader will need an understanding f ordinary algebra and some familiarity with graphs.

NORTHROP AERONAUTICAL INSTITUTE

Aircraft power plants by the technical development staff of Northrop Aeronautical Institute. Charles Edward Chapel Ralph D Bent, James L. McKinley Revised edition. New York McGraw Hill Book Company 1955 392 p. illus 29 cm. $8.00. 7118A

Contents. Power-plant progress. Internal-combustion engine principles. Fuel and fuel systems for aircraft. The float-type carburetors.

The pressure-injection type of carburetor. Supercharging and induction systems. Aircraft-engine classification, construction, and operation. Aircraft-engine lubricants. Engine-starting systems. Ignition systems. Valve and ignition timing. Engine control systems. Engine instruments. Propellers for light planes. Propeller inspection, maintenance, and repair. The principles of jet propulsion. Use of the gas turbine. Modern turbojet engines. Jet engine systems, operation and inspection. Acknowledgments. Index.

Note: The mechanism, maintenance, repair, and inspection of aviation engines and propellers is explained in clear and thorough manner in this book, which is one of a three-volume series designed for use in the training of student aircraft mechanics. Numerous self-pointed illustrations are a special feature. The first edition was published in 1946. Material was added on fuels, ignition systems, jet and turbojets in this second edition.

SMITH C. W.

Aircraft gas turbines. New York John Wiley & Sons, Inc., 1956 448 p. illus. 24 cm. (General electric series) $8.75 7119

Contents: Introduction. Elementary principles of aircraft propulsion. The Brayton cycle. Cycles derived from the basic Brayton cycle. Other gas turbine cycles. Elementary gas dynamics. Theory of flow in ducts, nozzles, and diffusers. Intake and exhaust systems of aircraft gas turbine power plants. Transfer of energy between fluid and rotor. Centrifugal compressors. Axial-flow compressors. Turbine and exhaust systems. Combustion chamber. Dynamics of dynamic similarity. Working criteria. Control and accessories. Stresses and materials. General performance and limitations. Appendix. Bibliography. Index.

Note: An excellent introduction to gas turbine engineering. As the title indicates, turbines for use in aircraft are emphasized, but much of the material is equally applicable to the other varieties of gas turbines including large stationary units designed for power plants. The treatment is broad and fundamental. Topics such as the Brayton cycle, fluid flow in ducts, nozzles and diffusers, and compressor theory have been given most of the space. Embodied in the theoretical material is a good deal of specific information on mechanical details, for instance descriptions and comparisons among the types of exhaust nozzle for the discharge of air. The level of treatment assumes that the reader will have had considerable undergraduate education in mechanical engineering but no earlier assumption was made in relation to courses in gas dynamics and aerodynamics. The bibliography is selected though fairly extensive and arranged in accordance with the book chapters.

THORNER, ROBERT H

Aircraft carburetion. New York John Wiley & Sons, Inc., 1946. 393 p. illus. 22 cm. $5.00. 7120

Contents: Introduction. Principles of physics that apply to carburetion. Basic carburetion. Introduction to diaphragm carburetors. Float carburetors. Bendix-Stromberg injection carburetors. The Chandler-Evans carburetor. Comparison of float, Holley, Stromberg, and Chandler-Evans carburetors. Testing aircraft carburetors. Flight operation. Index.

Note: The general principles of aircraft carburetor construction and operation are presented here clearly by means of discussions covering several representative types of carburetors. The book is designed for pilots, flight engineers, airplane engine mechanics, and other persons who need basic understanding of how carburetors work. It is not, however, a maintenance or repair manual. There are many excellent photographs, cut-away diagrams, and charts. The author is Research and Consulting Engineer of the Holley Carburetor Company.

ZUCROW MAURICE JOSEPH

Principles of jet propulsion and gas turbines. New York John Wiley & Sons, Inc., 1948. 563 p. illus. 24 cm. $8.50. 7121

Contents: Review of fundamental principles. Momentum and energy relationships for fluids. Thermodynamics of gas flow. Thermodynamic properties of air. Airplane performance calculations. The airplane propeller. The gas-turbine power plant. The gas-turbine type of thermal jet engine (the turbo-jet engine). Air compressors. Turbine characteristics. The combustion chamber. The rocket motor. Some aspects of high-temperature metallurgy. Index.

Note: An authoritative treatment of the fundamental theories and basic principles underlying the design and characteristics of gas turbines and jet propulsion engines. It was developed for use in ESMWT courses given during 1943 and 1944 to graduate engineers working in aircraft plants in the Los Angeles area. Certain data has had to be omitted for reasons of military security. Nevertheless, the book should be useful both to aeronautical engineering students and graduates. The references given at the end of each chapter constitute an extensive bibliography of the subject.

AIRCRAFT MAINTENANCE

BRIMM DANIEL JOHNSON AND H. EDWARD BOGGESS

Aircraft maintenance. Second edition. New York Pitman Publishing Corporation, 1950. 475 p. illus. 24 cm. (Pitman aeronautical publications Alexander Klemin, advisory editor) $5.50. 7122

Contents: Introduction. Aircraft woodwork. Aircraft metal work. Aircraft fabric work and finishing. Rigging, handling, maintenance. Aircraft hydraulics. Index.

Note: An introductory text for men who are preparing to become licensed aircraft mechanics. It is used both as a text in organized vocational classes and as a self-instruction book. The first edition appeared in 1942. The present edition represents a very extensive revision, with important changes in both the discussions and the illustrations. Also the publisher has given the book an improved format.

DRAKE, ROLLEN H.

Aircraft electrical systems, hydraulic systems, and instruments. New York The Macmillan Company 1949 393 p. illus. 24 cm. (Drake's aircraft mechanic series) $4.00 7123

Contents: Introduction. Part I, Aircraft electrical systems: Fundamentals of electricity. Glossary of electrical terms. Magnetism and magnetic effects. Sources of electric current. Generators and motors. Electric circuits. Electric devices. A typical aircraft electrical system. Starting systems. Engine electrical systems. Part II, Aircraft hydraulic systems: Hydraulic principles. Operation of the hydraulic system. Flow control valves. Pressure-control valves. Hydraulic brake systems. Types of hydraulic systems. Vacuum and de-icer systems. Part III, Aircraft instruments: Fundamental principles of aircraft instruments. Flight instruments. Automatic pilots. Navigation instruments. Engine instruments. The turbo-supercharger control system. Index.

—— Aircraft engine maintenance and service. New York The Macmillan Company, 1950 237 p. illus. 23 cm. (Drake's aircraft mechanic series) $4.00 7124

Contents: Introduction. Fuel, lubrication, ignition, cooling and induction systems. Glossary of terms used in aircraft engines. Inspection procedures. Periodic inspections. Trouble shooting. Engine overhaul. Disassembly. Cleaning and refinishing. Overhaul inspection. Magnetic inspection. Repair and replacement. Engine assembly. Engine installation, run-in, and storage. Propeller maintenance and service. Index.

—— Aircraft engines. New York The Macmillan Company 1948. 348 p. illus. 24 cm. (Drake's aircraft mechanic series) $4.75 7125

Contents (abridged): Fundamentals of internal combustion engines. Metals and alloys used in aircraft engines. Glossary of terms used in aircraft engines. Cylinders. Pistons assembly. Crankshafts. Valves and cams. Electrical fundamentals. Fuel and fuel systems. Lubricants and lubrication systems. Propeller fundamentals. Controllable-pitch propellers. Engine installation and cooling systems. Engine instruments. Starting and starting systems. Engine theory and operation. Jet propulsion. Index.

—— Aircraft maintenance and service New York The Macmillan Company, 1949 352 p illus 24 cm (Drake's aircraft mechanic series) $4 00 7126

Contents Introduction. Component parts of the airplane. Glossary Inspection. General maintenance of the airplane. The light airplane. Technical drawings. General safety practices. Glues, glued joints, and plywood. Dopes and finishes. Approved repairs. Woods used in aircraft. Metals used in aircraft. Alloys used in aircraft. Fabric-covered construction. Plywood construction. Typical wood and fabric repairs. Welded repairs. Drilling, burring, filing, and riveting in sheet-metal repairs. Layout and bend allowance. Forming sheet metal. Assembly Index.

—— Aircraft sheet metal. New York The Macmillan Company, 1947 233 p illus. 24 cm. (Drake's aircraft mechanic series) $4 75 7127

Contents (abridged) Aluminum and aluminum alloys. Magnesium and magnesium alloys. Iron and iron alloys. Glossary of terms used in aircraft sheet metal. Heat treatment of sheet metal. Tools and machinery General safety practices. Technical drawings. Layout. Bend allowance. Shrinking and stretching. Forming aluminum and aluminum alloys. Drilling. Riveting. Forming magnesium alloys. Forming corrosion-resistant alloys. Sheet-metal repairs. Index.

—— Aircraft welding New York The Macmillan Company, 1947 254 p. illus. 24 cm (Drake s aircraft mechanic series) $4 75 7128

Contents (abridged): Iron and iron alloys. Aluminum and aluminum alloys. Heat treatment. Glossary of terms used in aircraft welding. Technical dra ings. Methods of welding. General safety practices. Welding equipment. Flames used in welding and cutting. Fundamentals and technique of welding. Joints used in aircraft welding. Testing welded joints. Welding steel plate. Oxy-acetylene cutting. Welding aluminum and aluminum alloys. Welding copper and copper alloys. Welding of castings. Hard surfacing. Construction of a welded engine mount. Welded repairs to aircraft. Index.

—— Aircraft woodwork. New York The Macmillan Company, 1946 197 p illus 24 cm (Drake s aircraft mechanic series) $4 75 7129

Contents (abridged) Aircraft woods—their identification and uses. Selection of aircraft wood. Glossary of terms used in aircraft woodwork Plywood. Fundamentals of aircraft woodworking. Technical drawings and their interpretation Joints and laminations. Aircraft doping and finishing. General safety rules. Construction of root bay of fabric-covered wing. Construction of fabric-covered aileron. Wood propellers. Approved fabric repairs. Approved plywood repairs. Approved wing-structure repairs. Approved fuselage repairs. Index.

Note A series of practical, simply-worded beginner' textbooks, suitable for use in vocational courses and for self-instruction purposes. A particular effort has been made to include all material needed to meet the requirements of the Civil Aeronautics Administration aircraft mechanic's license. In each volume, numerous photographs and drawings form a valuable addition to the textual material. The series when completed will include volumes on aircraft electrical and hydraulic systems, instruments, and engine maintenance, and aircraft maintenance.

SIEGEL, PHILIP

The aircraft mechanic a manual for certificate candidates New York Pitman Publishing Corporation 1946 313 p illus 24 cm (Pitman aeronautical publications Alexander Klemin advisory editor) $4 50 7130

Contents. Civil air regulations, techniques, and practices. Aircraft propellers. Aircraft hydraulics. Aircraft rigging and assembly Aircraft wood, fabric, covering, and finishing. Aircraft sheet metal, riveting, welding, and soldering. Index. Answer key

Note. The contents of this volume and the arrangement are designed to assist mechanics in preparing for the examination for an aircraft mechanic certificate as set by the Civil Aeronautics Administration. The fundamental principles of each subject are briefly outlined, but most of the material deals with maintenance and repair operations that concern the mechanic in his daily work. A short bibliography and approximately 00 review questions of the multiple choice type follow each chapter

SPARTAN SCHOOL OF AERONAUTICS

Aircraft propellers. Tulsa, Okla. Spartan School of Aeronautics, 1954 252 p. illus. (part col'd) 28 cm. $8 00 7131

Contents. Introduction to propellers. Fixed and adjustable pitch type propellers. Maintenance and repair Counter weight propellers. Counter weight propeller governor Quick-feathering hydromatic propeller Hydromatic propeller governors. Blade de-icing. Index.

Note. A practical textbook containing much information on both fixed-pitch and adjustable-pitch propellers currently used on airplanes. It is an introduction to the subject, and is intended primarily for the use of students taking courses in preparation for careers as aircraft mechanics. It contains many detailed illustrations of mechanisms and numerous pictures of maintenance and repair operations. Most of the illustrations have been taken from manufacturers' publications, and the same is true of the instructions for repairs and maintenance. However it is convenient to have the material assembled and to have it explained in a coordinated manner.

UNITED STATES CIVIL AERONAUTICS ADMINISTRATION

Personal aircraft inspection manual. Washington, D C Government Printing Office 1950 81 p illus 26 cm. (United States. Civil Aeronautics Administration. C A. A technical manual no 101) $0 75 7132

Contents. Introduction. Part I, Inspection fundamentals. The maintenance process. The inspection process. The forces of attrition. General inspection information. Part II, Inspection techniques: Fuselage—hull. Cabin—cockpit. Engine—nacelle. Landing gear. Wing—center section. Empennage. Propeller Radio. Miscellaneous.

Note. This illustrated manual is designed for the use of student mechanics, pilots, and personal aircraft owners. It provides general guide for the inspection of personal aircraft and is intended to be employed in connection with manufacturers' service handbooks wherever possible. The details of inspection are described in simple, nontechnical language, and photographic illustrations are provided in abundance t show the exact area under discussion and points to be checked.

UNITED STATES DEPARTMENT OF DEFENSE. MUNITIONS BOARD AIRCRAFT COMMITTEE

Wood aircraft inspection and fabrication. Department of the Air Force Air Matériel Command Department of the Navy Bureau of Aeronautics Department of Commerce Civil Aeronautics Administration. Issued by the Subcommittee on Air Force-Navy-Civil Aircraft Design Criteria, Munitions Board Aircraft Committee. Washington D C. Government Printing Office 1951 335 p. illus. 26 cm (Bulletin ANC—19) $1.25 7133

Contents. Wood. Wood as an aircraft material. Identification of ood. General characteristics. Defects and blemishes. Requirements for ood in specific parts. Modified wood Plywood, laminated wood, compreg, impreg, heat-stabilized wood. Plywood. Glued laminated members. Resin-treated plywood and laminated wood (impreg and compreg) Heat-stabilized compressed wood (staypak) High-strength laminated paper plastic (papreg) Combination materials. Acetylated ood. Aircraft glues Kinds. Properties of aircraft glues. Use characteristics of aircraft glues. Control of glue quality Processing and fabrication Seasoning and storage of lumber Control of humidity in factories. Gluing. Bag-molded plywood and structures. Gluing and assembly operations. Temperature measurement. Machining, bending and other woodworking operations. Finishing wood in aircraft.

[illegible] manufacture. Miscellaneous: List of specifications. Glossary. Index.

Note: An illustrated bulletin for use in the inspection and fabrication of wood parts of military and commercial aircraft. The technical material, covering information on wood, modified wood, glues, and processing, [illegible] based chiefly upon the results of investigations conducted by the Forest Products Laboratory of the United States Forest Service. The bulletin was prepared jointly by the Laboratory and by the ANC-19 Panel on Sandwich Construction for Aircraft of the Subcommittee on Air Force-Navy-Civil Aircraft Design Criteria. Strength data and other design criteria are beyond the scope of this bulletin; for such data the reader is referred to *Bulletin ANC-18, Design of wood aircraft structures* (see below).

UNITED STATES. DEPARTMENT OF THE NAVY

Aviation structural mechanic handbook. Prepared by Naval Air Technical Training Command for publication by Bureau of Naval Personnel. Washington, D C. Government Printing Office 1953 259 p. illus. 20 cm. (Navy training courses. Navpers 10328) $0.70. 7134

Contents: Structural maintenance hand tools and bench equipment. Sheet metal, structural maintenance machines and power equipment. Sheet metal operations. Aircraft metals. Heat treatment and metallurgy. [illegible] Aircraft [illegible] Structural finishing and corrosion prevention. Aircraft [illegible] Oxygen [illegible] and repair. Inspection and repair. Nonmetallic materials. [illegible] Aircraft hydraulics. Naval aviation publications. Index.

Note: This handbook has three objectives: to provide [illegible] ready source of charts, tables, and specifications needed by the aviation structural mechanic; to furnish [illegible] source of information on materials and methods used in structural repair of naval aircraft; to provide [illegible] for the aviation structural mechanic to use in preparing for advancement in rating. It is one of [illegible] series of Navy training courses for aviation structural mechanics.

VALE, JOHN W., JR.

The aviation mechanic's aircraft manual with questions and answers. New York McGraw Hill Book Company Inc. 1949 748 p. illus. 21 cm. $6.75 7135

Contents (abridged): Tests of light and characteristics of the [illegible] identification, heat-treatment, and testing of metals. Aircraft [illegible] welding practice and general fusion of metals. Woods and glues used in aircraft construction. Aircraft fabrics and finishes. Aircraft [illegible] their repair and maintenance. Rubber seals used in airplanes, their repair and maintenance. Landing gears and special landing devices. Aircraft brakes, their care and maintenance. Aircraft electrical systems. Aircraft fuel systems. Parachute flares and other safety devices. The mechanics of aircraft control systems. Aircraft inspection and maintenance. Appendixes: Principal definitions and [illegible] AN parts. Tables. Index.

Note: A comprehensive handbook of practical information. The author has endeavored to cover in it all the topics which the student aircraft mechanic should be familiar with before taking the Civil Aeronautics Administration license examinations. The text is compact, easy to understand, and [illegible] supplemented by nearly 400 illustrations. Much of the exposition is cast in the form of questions and answers.

HELICOPTERS

GESSOW ALFRED AND GARRY C MYERS JR.

Aerodynamics of the helicopter New York The Macmillan Company 1952 343 p. illus. 22 cm. $6.00. 7136

Contents: The development of rotating-wing aircraft. An introduction to the helicopter. An introduction to hovering theory. Hovering and vertical-flight performance analyses. Factors affecting hovering and vertical-flight performance. Autorotation in vertical descent. Physical concepts of blade motion and rotor control. The aerodynamics of forward flight. Forward flight performance. The prediction and effects of rotor blade stall. An introduction to helicopter stability. An introduction to helicopter [illegible] problems. Appendixes. Index.

Note: A presentation for advanced students of aeronautical engineering [illegible] are preparing for careers in helicopter design and graduate engineers already at work in the industry. It is introductory to helicopter dynamics, but the reader will need previous education in basic aerodynamics. It is based largely on research done at the Langley Aeronautical Laboratory of the National Advisory Committee for Aeronautics—research in which the authors have had part. One of the appendixes contains [illegible] bibliography of NACA publications on rotating wing aircraft, and another contains selected list of other literature.

NIKOLSKY ALEXANDER A.

Helicopter analysis. New York John Wiley & Sons, Inc., 1951 340 p. 23 cm. $10.75 7137

Contents: Review of airscrew theory. The helicopter in steady vertical flight. Hinges, flapping, and feathering systems. Forward flight. Mathematical analysis of problems in dynamic stability. Theory of dynamic stability and control response of helicopters near hovering flight. Longitudinal stability of [illegible] laterally stabilized helicopter equipped with articulated blades in forward flight. The elastic analysis of rotor blades. References. Appendixes: The effect of second-harmonic flapping, twist, and triangular distribution of induced [illegible] theory. Second-harmonic terms for the solution of blade bending moments by the tabular method. Index.

Note: A valuable book for engineers concerned [illegible] helicopter design and for advanced students of aeronautical engineering [illegible] are preparing for work in this field. [illegible] addition to being [illegible] presentation of the current status of helicopter aerodynamic and stability analysis, it contains some material not published before. It has been developed from lectures given by the author to graduate students in the Aeronautical Engineering Department of Princeton University.

YOUNG RAYMOND A.

Helicopter engineering. New York The Ronald Press Company 1949 255 p. illus. 24 cm. $10.00 7138

Contents: Part I, Theory and performance of helicopters: Introduction to rotary-wing design. Development of the theoretical aspects of rotor-blade theory. Mechanics of the rotor system. Fundamental design considerations. General performance evaluation. [illegible] flight performance. Vertical flight performance. Jet reaction rotor blades. General theory of stability. Part II, Structural design—application and theory: Rotor-blade design. Rotor-blade stress analysis. Factors affecting helicopter design. Appendixes: General conversion tables. Nomenclature and definitions. References for further reading. Index.

Note: A useful presentation of the chief aerodynamic and structural problems in helicopter design and of accepted methods of solving them. The basic laws and theories of aerodynamics are discussed but only insofar as they have direct application to the problems of helicopter design. The author recognizes that some aspects of helicopter engineering are necessarily still based on "art or trial-and-error, and throughout the book he has taken care to point out the limitations of theory and to indicate where research or experiment must be undertaken. He is an aeronautical engineer on the staff of the Bureau of Aeronautics of the United States Navy and [illegible] member of the Subcommittee on Helicopters of the National Advisory Committee for Aeronautics; and the book is based both on experience and the published literature.

ROCKETS AND MISSILES

BONNEY E. ARTHUR AND OTHERS

Aerodynamics propulsion structures and design practice. By E. Arthur Bonney Maurice J Zucrow and Carl W Besserer Princeton D Van Nostrand Company Inc., 1956 595 p. illus. 23 cm. (Principles of guided missile design edited by Grayson Merrill) $12.50 7139

Contents (abridged): Part I, Aerodynamics: The place of aerodynamics in the guided missile. Atmospheric considerations [illegible]

sumed in guided missile design. Aerodynamic considerations in composite design. Supersonic aerodynamics relating to missile design. Aerodynamic characteristics of the airframe components. Aerodynamic characteristics of the full configuration. Aerodynamic loads. Wind tunnels and ballistic ranges. Flight tests and flight trajectories. Aerodynamic aspects of launching and boost phase. Part II, Propulsion Classification and essential features of propulsion engines for guided missiles. Momentum theory applied to propulsion. Elementary gas dynamics. Flow through nozzles. Flow through diffusers. The turbojet engine. The ramjet engine. Fundamentals of rocket engines. Part III, Structures and design practice Design criteria. Design for environmental conditions. Reliability concepts—reliability of guided missile elements. Packaging engineering. Composite design. Index.

Note The second volume published in series devoted to guided missile design. All of the parts and chapters are related to guided missiles hence, the part titled Aerodynamics" deals not with aerodynamics in general but with aerodynamics of missiles, and the same is true of the chapters on propulsion and structures. Much of the material is basic, for example, the discussion of flow through nozzles. However some specific information on developed rockets and rocket elements is included. Developments still classified for reasons of military security are of course not described. Fairly extensive literature references are given. This volume and the series as a whole is addressed to graduates, scientists and engineers who have recently entered or are about to enter research or design work on guided missiles.

HARVARD UNIVERSITY COMPUTATION LABORATORY

Tables for the design of missiles Cambridge, Mass Harvard University Press, 1948 226 p illus 28 cm. (The Annals of the Computation Laboratory of Harvard University Vol. XVII) $8 00 7140

Contents (abridged) Part I, Definitions of the tabulated functions. Part II, Method of computation. Part III, Interpolation in the tables. Part IV The use of the tables. Part V Non-standard ogives. Tables.

Note A set of ballistics tables with directions for their use in determining the flight characteristics of projectiles. The rapid computation of such typical mathematical factors in missile design as position of center of gravity volume, polar and transverse moments of inertia are made possible by use of the auxiliary functions whose variations are tabled here. The work is for ballisticians and was originally calculated for the U S. Navy by Harvard University's automatic sequence controlled calculator

LEY, WILLY

Rockets missiles, and space travel New York The Viking Press, 1951 436 p illus 24 cm 7141

Contents The beginnings of an idea. The decades of the great dreams. 'The rockets' red glare. Prophets with some honor The battle of the formulas. Success, failure, and politics. The return of the war rocket. Peenemünde. White Sands. The rocket into cosmic space The spaceship. Terminal in space. Appendixes: Rocket airplanes and rocket-assisted take-off. Notes and tables. Bibliography Index.

Note The first edition of this book, published in 1944 bore the simple title *Rockets* and ran to only 287 pages The next edition, published in 1947 was entitled *Rockets and space travel* and was 374 pages long. The book remains rather solid but quite readable survey for general readers and rocket enthusiasts and it still contains many reference features including full account of early rocket work in Germany (in which the author played an important part) historical accounts of the leading rocket societies of the world, and an annotated international bibliography of works on rockets. A revised and enlarged edition was published in 1957 528 p., $6 75

LOCKE, ARTHUR S

Guidance. In collaboration with Charles H Dodge and others New York D Van Nostrand Company, Inc 1955 729 p illus. 24 cm (Principles of guided missile design editor Grayson Merrill) $12 50 7142

Contents Fundamental problems of missile guidance. Prior developments. Terrestrial and celestial references. Transmission of radio waves. Emission, transmission and detection of the infrared. Mathematical groundwork. Servo system theory Tactical considerations. Measurements of missile motion. Detection and information gathering. Target considerations. The analysis of flight paths. Prelaunching and launching. The missile airframe. Economic considerations. Missile guidance systems. Bandwidth studies. Missile guidance bandwidth studies. Simulation, computation and telemetry The system concept. Index.

Note This book, the first in a series of basic treatises, is devoted to the problems and methods of guiding missiles while they are in flight. The variety of these is suggested by the chapter titles. In certain parts, the style and presentation are primarily descriptive but in others, in fact in the majority of chapters, the style is technical. In addition to the chapter entitled, Mathematical ground work, mathematical analysis is an important feature of other chapters such as those on servo systems. Although it can be assumed that considerable knowledge has been omitted because military authorities have not yet released it for publication, the book is a comprehensive and basic one for scientists and engineers working in the field or preparing for such work. The chief author was formerly associated with the Radar Division of the Naval Research Laboratory and his collaborators are still on its staff.

MERRILL, GRAYSON, AND OTHERS

Operations research—armament—launching By Grayson Merrill, Harold Goldberg, Robert H. Helmholz. Princeton, N J D Van Nostrand Company, 1956 508 p. illus. 23 cm (*Principles of guided missile design edited by Grayson Merrill*) $10 00 7143

Contents. Operations research National procedure. Fundamental problems. Determination of an operational requirement. Determination of performance specifications. Determination of operational suitability and best tactical doctrine. Mathematics of operations research. Some examples of operational analysis as applied to guided missiles. Armament. Armament, its definition and necessity National organization and determination of military characteristics for armament. Preliminary organization and required skills for armament research and development. Targets, target kills, and target vulnerability Warheads. Fusing requirements and fuse agents. Safety and arming requirements and safety and arming components. Armament systems engineering considerations. Evaluation and testing of armament systems. Launching: Elements of launching. Launching systems characteristics. Design principles. Index.

Note The third volume published in the series whose first two volumes are listed under Bonney and Locke above. It is devoted more to the planning and administrative aspects of missile development than to the engineering aspects however most of its contents are of interest to engineers engaged in missile research and development, if for no other reason than that engineers are now usually important members of planning and operations research teams. All three parts of the book contain information which is useful for orientation in this field and at this writing is not to be found in any other book.

ROSSER, JOHN BARKLEY, AND OTHERS

Mathematical theory of rocket flight, by J Barkley Rosser Robert R. Newton, and George L. Gross. New York McGraw-Hill Book Company, Inc. 1947 276 p. illus. 23 cm. $6 00 7144

Contents. The equations of motion of a rocket. Motion after burning. Motion during burning. Boundary conditions. Properties of the rocket functions. Appendices. A simplified theory of flow through a nozzle. Derivation of principle 1 Minor factors affecting the flight of rocket. Functions for use with an unstable rocket Functions for use with jet damping. Bibliography Glossary of symbols. Index.

Note. Technically this book is *Final report no. B 2-2 of the Allegany Ballistics Laboratory*, OSRD 5878. As its origin would suggest, the work was written primarily for persons with advanced training in science. The flight characteristics of rockets throughout the entire trajectory are described in detail, chiefly by means of complex mathematics. Many of the sections are preceded by rather brief non-mathematical explanations. These passages are intended to make the book useful to the non-mathematical reader but they account for such small fraction of the text that the book's use

primarily is as an introduction to the subject for scientists about to engage in rocket research for the first time.

SUTTON, GEORGE P

Rocket propulsion elements an introduction to the engineering of rockets. Second edition. New York. John Wiley & Sons, Inc., 1956. 483 p. illus. 22 cm. $10.25 7145

Contents: Classification and definitions. Rocket history. Nozzle theory and thermodynamic relations. Rocket propellant performance calculations. Heat transfer. Liquid propellants. Liquid propellant rocket thrust chambers. Liquid propellant rocket systems. Solid propellant rocket fundamentals. Solid propellants. Design of solid propellant rockets. Flight performance. Rocket testing. Reference bibliography. Index.

Note: A secondary text for engineering students and graduate engineers planning to specialize in the rocket and jet engine field. The basic principles of rocket propulsion are well covered, but emphasis is placed on the practical problems relating to the design and construction of rocket propulsion systems. The book is liberally scattered with illustrations of rockets and rocket parts, and with many review exercises and problems. In this edition the general scope and arrangement of the previous edition have been retained, but much new material incorporating developments since 1949 has been added. More specifically, there is a new chapter on heat transfer; the subject of solid propellants is now covered in three chapters instead of the former one; and the earlier chapter references have been combined and brought up to date to form an extensive bibliography of approximately 450 references.

WIMPRESS, R. N

Internal ballistics of solid fuel rockets—military rockets using dry-processed double-base propellant as fuel. New York McGraw Hill Book Company Inc., 1950 214 p. illus. 24 cm. $5.50. 7146

Contents: Nomenclature. Relation of internal to external ballistics. Characteristics of propellant gases. Burning properties of propellants. Steady-state flow of compressible fluids. Nozzle performance. Flow of gas inside rocket motors. Determination of reaction pressures in rocket motors. Design of propellant grains. Characteristics of burning in perforations. Ignition. Effect of physical properties of propellant on ballistic performance. End-burning grains. Static testing equipment. Heat transfer. Index.

Note: The contents of this book were developed largely in connection with investigations at the California Institute of Technology under contract with the Office of Scientific Research and Development during World War II. They pertain chiefly to the types of rockets fired from lightweight rocket-launching equipment in the course of land and aerial operations. No attempt was made to incorporate knowledge obtained by workers outside the project and there is no bibliography; nevertheless, the book represents an important contribution to the subject.

AIRPORTS

FROESCH, CHARLES, AND WALTHER PROKOSCH

Airport planning. New York John Wiley & Sons Inc. 1946 250 p. illus. 29 cm. $9.00. 7147

Contents: The airport and the community. Present and future aircraft. Airway and airport traffic control. Airport types. Fundamental airport requirements. Airfield planning. Airfield construction. Airport lighting. Airport building design. Hangar design. Special services. Special problems and miscellaneous facilities. Glossary. Index.

Note: This book indicates the relationship of airports to the communities they serve, and shows how the characteristics of aircraft affect the design of airports. Flexibility to meet the changing demands of new types of aircraft is stressed, and airport accessibility, size, obstructions, utilities, and necessary buildings are discussed. The work is primarily a survey of the factors influencing airport design, rather than a detailed manual of construction methods, and as such is intended for architects, engineers, contractors, airfield managers, and city planners. There are sectional plans, photographs and chapter bibliographies.

UNITED STATES. CIVIL AERONAUTICS ADMINISTRATION

Airport paving Washington, D C. Government Printing Office, 1956 56 p. illus. 26 cm. $0.40. 7148

Contents: I. Airport pavements, their functions and purposes. Types of pavements. Specifications and standards. Aeronautical and operational considerations. Stage construction of airport pavements. II. Soil investigations and evaluation. Soils and materials. Soil classification. Subgrade classification. Textural classification of soils. III. Pavement design: Factors influencing pavement thickness. Flexible pavements. Designing the flexible pavement. Rigid pavements. Designing the rigid pavement. Joints in concrete pavement. Reinforced concrete. IV. Multiple wheel undercarriage and equivalent single wheel load. Relationship between wheel arrangement and loading effects on flexible pavements. Determination of equivalent single wheel loads on flexible pavements. Determination of equivalent single wheel loads on rigid pavements. The [illegible]. Conversion factors for determining equivalent single wheel loads. V. Airport pavement overlays: Pavement condition survey. Subgrade and drainage. Preliminary design data. Flexible and bituminous overlays. Concrete overlays. Preparation of existing surface for the overlay. Materials and methods. VI. Pavements for secondary airports. Design of secondary airport pavements. Soil stabilization. Aggregate-turf.

Note: The purpose of this manual is to provide a guide for engineers whose responsibility includes the design of pavements for airports to serve aircraft engaged in civil flying. The manual contains all essential data required for the design of airport pavements to comply with CAA standards.

PHOTOGRAPHY

ABRAMSON, ALBERT

Electronic motion pictures, a history of the television camera. Berkeley University of California Press, 1955 212 p illus 23 cm $5 00 7149

Contents The camera of the future. Progress to 1900. *Experimentation and theory (1900–1923)* Television becomes reality (1923–1929) Early television systems and film. The introduction of the electronic camera. Improved cameras, film recording, and large screen television. Commercial operations (1946–1955) *Television film recording today* *Electronic motion pictures.* Notes. Glossary of terms. Index.

Note: Primarily this book is a compact history of the electronic, or television, camera. The significant steps in its development are recounted, and illustrations of the major early devices are included. Secondarily it is a survey of the new potentialities of motion picture making that have been made available by the electronic camera and associated developments, such as image recording on magnetic tape. Current techniques of making films for use on television are described in a semitechnical manner A long bibliography is included.

ADAMS, ANSEL

Camera & lens studio, darkroom, equipment. New York Morgan and Morgan, Inc., 1948 120 p illus 23 cm (Basic photo series 1) $3 75 7150

Contents (abridged) Selection of equipment. Setting up the camera. Camera adjustments. Lens coverage. Selection of lenses. Perspective. Wide-angle lens effects. Scale. Focus. Depth of field. Long-focus lenses and telephotography Shutters. Miniature cameras and lenses. Studio equipment. Copying. Darkroom equipment. Finishing room. Negative storage. Print storage. Print display devices. Insurance and legal precautions. Lens data. Filters. Field equipment. Index.

—— Natural light photography Basic photo 4 New York Morgan and Morgan, Inc 1952 118 p illus 24 cm. $3 00 7151

Content (abridged) Qualities of natural light. Film response and filters. *The polarizers. Visualization. Landscape Seascape. Still* and moving water Snow and ice. Foliage. Desert photography Clouds. The moon and moonlight. Naturalistic details. The miniature camera out of doors. Portraiture. *Synchro-sunlight.* Architecture and industry *Objects of art.* Index.

—— The negative exposure and development—*Basic photo 2* New York Morgan and Morgan Inc. 1948 120 p illus. 23 cm. $3 00 7152

Contents Description of terms used in this book. Light. The effect of light on the negative. The gray scale. Visualization. The exposure chart. Placement of values on the exposure scale. Obtaining optimum opacity Gamma. Fog. Lens flare and image contrast. *Speed rating of films. Exposure meters.* Developers and development. The stop bath. The fixing bath. Washing. Drying. Development of the miniature negative. Light sources included in the image. Copying. Some problems *of* interpretation. Special methods and treatments. Spotting and retouching negatives. Formulas. Negative defects. Index.

—— The print contact printing and enlarging Basic photo 3 New York Morgan and Morgan, Inc. *1950 120 p illus. 24 cm.* $3 00 *7153*

Note Four books in a series written by this author In the series the author presents a wide range of information on principles and techniques with the avowed purpose of helping his readers develop a personal approach to photography The material goes beyond the needs of the average amateur photographer but is well suited to meet the needs of both amateurs and professionals who wish to do work with a distinct individual quality

ANTHONY, ANNE J

Negative and print retouching for amateur and professional Illustrations by the author New York Greenberg Publisher, Inc., 1950. 138 p. illus. 27 cm. $5 50. 7154

Contents. Part I, Negative retouching "Look pleasant, please. The tools of the trade. The purpose and use of the retouching tools. The negative. The technique of pencil retouching. Dye retouching Etching. Summary of the fundamentals. Corrective retouching. Correcting mechanical and processing errors. Now it's up to you. Part II Print retouching Photographic papers. General print retouching —basic equipment. Retouching the glossy print. Retouching the semi-matte print. Retouching the matte print. Retouching the warm-tone and toned print.

Note. A practical guide to the art of correcting, improving, or altering a photograph by working on the negative or print. Necessary materials and tools are listed, and the detailed descriptions of each process are supplemented with numerous illustrations and before-and-after photographs. The material is primarily of interest to *the professional photographer but is sufficiently simplified to meet* the needs of the amateur.

BOND, FRED

Better color movies quick, simple answers to common problems of amateur movie makers. *Second edition San Francisco* Camera Craft Publishing Company 1955 159 p. illus (part col d) 24 cm $4 95 7155

Contents. Fundamentals of better color movies. Sunlight characteristics. Color and how to use it. Exposure calculations. Outdoor color movie problems. Sunsets, night street scenes, effects. Color movies by artificial light. Theatricals, indoor sports events. Filters for shooting color movies. *Flowers and gardens in color movies.* Color continuity or contrast. Editing and titling color movies. Lenses, angle of coverage, depth of field. Close-up movies of small objects. Better projection for better movies. Post script. Alphabetical index.

Note Written by a professional photographer this book is addressed to amateurs who have had some introduction to the taking of moving pictures. It presents basic information on colors, exposure, lighting by sunlight and artificial light, filters, etc., along with expert discussions of the problems of photographing scenes requiring special techniques.

BOND, FRED

Kodachrome and Ektachrome *color photography from all angles. Applicable to the common problems of all color photography enthusiasts 35 mm bantam 120 size, movie and cut sheet color films. All illustrations by the author,* except where otherwise designated. Fourth edition. San Francisco *Camera* Craft Publishing Company 1955 *252* p. illus. (part col d) *28 cm. $8 75* 7156

Contents. Color and art. Some characteristics of color. Color response. Color characteristics of color. Sunlight characteristics. [illegible] of light angle on color. Outdoor exposure calculations. The [illegible] good color pictures? Landscape problems in color. [illegible] color by artificial light. Photoflash in still color work—[illegible]. Problems and suggested solutions. Portraits, camera studies, still life. Photographing flowers and gardens in [illegible], special effects, trick shots. Filters for color color [illegible]. [illegible]—shooting and processing. [illegible]—print making and coloring. [illegible]—negatives and positives. Making [illegible] prints. Duplicating—copying—coloring. Checking lenses and [illegible]. [illegible]. Alphabetical index.

Note: A [illegible] book in which the author discusses the peculiar problems of color photography mainly from the viewpoint of the advanced amateur. Some technical information is included, but the main value of the work lies in the critical discussions of factors that must be considered in the taking of good color photographs. In its current edition it contains 16 color plates which are reproductions of color photographs and 161 black-and-white illustrations.

BOUCHER, PAUL E.

Fundamentals of photography with laboratory experiments. Third edition New York. D Van Nostrand Company Inc. 1955. 526 p. illus. (part col d) 24 cm $6 75 7157

Contents: Historical development and use of the hand camera. [illegible] and lens selection. Camera lenses and diaphragms. The [illegible] of lens. Camera shutters and shutter-speed measurement. Some properties of the photographic emulsion. The process of development. The control of negative contrast. Printing processes. Printing paper developers. Color characteristics of light filters and film. Enlarging or projection printing. The preparation of lantern and film slides for projection. Intensification and reduction. Toning and dye printing prints. Color photography. Ultraviolet and infrared photography. X-ray photography. Motion picture photography. Composition and better pictures. Portraits—outdoor and indoor. Copying, paper negatives, table-top and microfilm photography. Laboratory experiments. Appendix. Index.

Note: A broad, introductory view of the theory and practice of photography is presented in this book, which is used both as textbook [illegible] college courses and as reference book and guide for amateur photographers. Classroom needs are met by the inclusion of selected references for further reading, review questions and a series of laboratory experiments. For advanced amateurs, the book offers more basic theory than is found in the usual elementary guides for amateurs, reference information such as formulas for developers, and [illegible] directions for the various photographic procedures of both still and motion picture photography in black and white and in color. The second edition was published in 1947. For this third edition, numerous sections and three new chapters were added.

CAMERON JAMES ROSS

Motion picture projection and sound pictures. 12th edition. Coral Gables Cameron Publishing Company 1952 869 p. illus. 21 cm. $12.50. 7158

Contents (abridged): Early attempts at projection. Working principle of projection. Special purpose projection. Motion picture electricity. Light and lenses. Resistance in arc circuits. Open [illegible] [illegible] systems. Electronic-control arc lamp. Sound. Amplifier systems. Speaker systems. Picture projection. [illegible] sound equipment. RCA reproducing equipment. Motiograph. [illegible] projector. [illegible] projector. Radio projection. [illegible] pictures. Theatre television.

Note: A text addressed to operators of motion picture projection equipment and to men studying for that occupation. As the chapter [illegible] part of the book is devoted to background information on electricity, optics, etc., and part of it to very specific information about particular makes of projectors. The book is not well organized but is, nevertheless, widely used because of the specialized information included.

CAMERON JAMES ROSS

Sound motion pictures recording and reproducing. With chapters on motion picture studio and film laboratory practice. Seventh edition. Coral Gables Cameron Publishing Company 1950 879 p illus. 21 cm. $12.50. 7159

Contents (abridged): Historical—photography—photography and motion—sound transmission—elementary talking machines—recording and reproducing sound. Light and lenses. Sound. Electronic [illegible]. Studio practice. Editing. Rerecording. RCA recording system. Magnetic tape recorders. Disc recordings. Microphone technique. The motion picture camera. Composite photographic processes. History of animated cartoons. Motion picture laboratory. Film processing. Film production for television. Production with [illegible] lamps. Stereophonic reproduction. RCA. [illegible]. [illegible] [illegible] projector.

Note: A widely used handbook of background and practical information for men concerned with the recording, editing, and projection of sound motion pictures. A good deal of historical information is included along with the practical. In the chapters devoted to specific sound systems or projectors the information given is addressed particularly to operators of the machines. Not outstanding for style or organization, the book is nevertheless useful because of the wide range of specialized information in it.

CHAMBERLAIN KATHERINE

An introduction to the science of photography New York The Macmillan Company 1951 292 p illus. 24 cm. $7 00. 7160

Contents: How photography began. Making a print. Films and their processing. Cameras. Factors that influence the critical definition of the photographic image. Exposure and exposure meters. The [illegible] of photography. Projection printing. The reflection and refraction of light. The formation of images by pinholes and lenses. More photographic optics. The rendering of color in monochrome. Introductory considerations regarding color photography. The additive processes of color photography. Color transparencies by subtractive processes. Color prints. Appendix. Index.

Note: An elementary text designed to provide the amateur photographer with an understanding of what takes place during the various operations leading to the production of a photograph. Much practical information is given regarding the selection of cameras, the techniques of contact and projection printing, the use of exposure meters, etc. but emphasis is placed on the theory underlying photographic optics, formation of images, and making of negatives and prints. The fundamentals of color mixing and the different color processes are discussed at some length.

CLARK, WALTER

Photography by infrared its principles and applications. Second edition. New York John Wiley & Sons Inc., 1946 472 p. illus. 22 cm. $6 00 7161

Contents. The subject. The general practice of infrared photography. Photographic darkroom practice. Characteristics of photographic materials. Photographic sensitizing for the infrared. Herschel effect and indirect methods of infrared photography. Sources of infrared radiation. Examination and differentiation of materials by infrared. Medical infrared photography. Infrared photography applied to botany and paleontology. Infrared photomicrography. Special applications of infrared photography. Camouflage detection by infrared photography. Penetration of radiation through the atmosphere general and theoretical. Penetration of radiation through fog and haze, practical observations. Optical characteristics of materials in the infrared. Appendix I: Infrared materials available commercially. Appendix [illegible] Weights and measures—conversion tables. Appendix III. Kodak formulas for photographic processing solutions. Name index. Subject index.

Note: Very substantial revisions and additions have been made in this edition of the standard book in infrared photography. The chapter on camouflage detection by infrared has been added, the bibliographies have been revised to include literature published as late as 1945, and many parts of the original text have been rewritten or amplified. Although the book is designed primarily for practical photographers, [illegible] specialists in scientific and other advanced types of photography, it is also useful as a survey of the knowledge and literature of the subject. A third edition was in preparation in 1957

EASTMAN KODAK COMPANY

Abridged scientific publications from the Kodak Research Laboratories. Volume xxxII

1950 Rochester, N Y The Eastman Kodak Company 1954 320 p illus 24 cm. 7162

Note. Fifty-three technical papers on various topics pertaining to the theory and practice of photography are published in this volume, which is the 32nd in series of annual compendia of scientific papers issued by the Kodak Research Laboratories. The articles have all been published previously in standard scientific journals and are here given in an abridged form which is longer than the usual abstract but is shorter than the original article. References to the original source of publication are given in all cases. Author and subject indexes are included. The 33rd volume in the series covering papers published during 1951 was issued in 1957

EASTMAN KODAK COMPANY

How to make good pictures a guide for the amateur photographer Rochester, N Y Eastman Kodak Company, 1951 224 p illus (part col'd) 20 cm. 7163

Contents (abridged): The what, why and how Let's make a picture. Good and better pictures. Inside camera. Choosing your equipment. Pictures in full color Part II, Getting down to cases: Pictures right around home. Pictures about town. Pictures in the country Pictures from the air Picturing people. Pictures after dark. Sports and action pictures. Picturing flowers. Part III, Light in the dark room Developing, printing, and enlarging. Part IV Put your snaps to work: To get the most out of your pictures. General index and glossary of photo terms.

Note. A long-established and widely used book. It presents in simple form the elementary principles of photography for the amateur who wants to secure good snapshots in black-and-white or in color It is written in an elementary factual style and is limited largely to information of practical interest to that large group of photographers ho aim only at taking good snapshots. New editions are published frequently The 30th edition was issued by Random House in 1937 190 p., $1 95

EDGERTON, HAROLD E , AND JAMES R. KILLIAN, JR.

Flash! Seeing the unseen by ultra high speed photography Second edition Boston Charles T Branford Company 1954 215 p illus (part col d) 29 cm. $6 50 7164

Contents (abridged) The meaning of the pictures. Living motion. Bullets in action. Sports. Drops and splashes. In the service of science and industry Creatures in action. People in action. Supplementary data. Bibliography

Note The first edition of this book was pioneering publication on photography by electronic-flash lighting. Dr Edgerton, member of the faculty of the Massachusetts Institute of Technology has played an important role in the development of stroboscopic flash lamps for the taking of pictures. The book consists primarily of photographs taken by this method of lighting. However in this edition there is a technical appendix which contains an exposition of the theory of electronic flash lighting, survey of equipment, list of manufacturers in the United States of America and few other countries, and valuable description of light meter for use with electronic flash.

EVANS RALPH M AND OTHERS

Principles of color photography By Ralph M Evans W T Hanson jr and W Lyle Brewer New York John Wiley & Sons Inc. 1953 709 p illus 24 cm. $13 50 7165

Contents: Response of the eye to light in simple fields. Systems of color specification and measurement. Responses to light in complex fields. Visual processes and color photography Response of photographic materials. Color response of photographic materials. Photographic formation of the color image. Color photographic systems. Types of dyes and other colorants. Optical characteristics of colorants in combination Measurement of density Color sensitometry Analysis of color-sensitometric characteristics. Reproduction characteristics of a hypothetical subtractive color process. Duplicating. Copying a color photograph. Color reproduction theory for additive photographic processes—subtractive photographic processes. Bibliography Author index. Subject index.

Note: In this important book, theory is emphasized, but here theory is still lacking, the empirical knowledge is presented. The scope is not the mechanics of processes of color photography but the basic knowledge now vailable for the development of processes of color photography for understanding those in use and for conducting further research. The presentation is painstaking and detailed. Mathematics is freely employed in dealing with matters where the state of the knowledge permits mathematical proof. The bibliography is extensive. The authors are all members of the staff of the Color Technology Division of the Eastman Kodak Company and the first-named author is the Director of this unit.

FEININGER, ANDREAS

Advanced photography methods and conclusions New York Prentice-Hall, Inc., 1952 244 p illus. 29 cm. $7 50 7166

Contents. Part I, Thoughts about photography Part II, Experimentation. Part III, Observation. Part IV Imagination.

Note. An eminent American professional photographer has combined technical information with esthetic theorizing in this book, written for both amateur and professional photographers. Included is a chapter on building photographic equipment for special needs not satisfied by commercially available apparatus. His discussions of equipment are specific. His discussions of the artistic elements of photography are less concrete but are none the less valuable. The book is illustrated with a variety of outstanding photographs of various types.

FEININGER, ANDREAS

Feininger on photography New York Crown Publishers Inc., 1949 409 p. illus. 29 cm $4 95 7167

Contents. Part I, The technique of making photograph: The equipment of a photographer. The materials of photographer. The darkroom. The functions of the camera. The processing of negatives and prints. Learning from mistakes. Part II, The art of making photograph Contrasts and how to control them. Color and how to control it. Controlling space and perspective. Light and lighting. Motion. Planning and directing the picture story Composition and the importance of the "insignificant. Conclusions and the "photographic" techniques.

Note. An earlier and somewhat more technical book than the author's *Advanced photography* described above. It contains ry specific advice on such matters as buying and testing lenses, developing of negatives, and the control of light and shade. Though not reference book, a fair amount of reference material is included. Use for reference is hampered, however by the lack of an index. The book is of interest to advanced amateurs and to beginning professional photographers.

FEININGER, ANDREAS

Successful color photography Second edition Englewood Cliffs N J Prentice-Hall, Inc. 1955 271 p. illus. (part col'd) 23 cm. $4 95 7168

Contents The new medium. A survey for the beginner. The nature of color—of color perception—of the color film. How to take color photograph. How to process color film. Mistakes. How to learn through experimentation. How to present color photographs. Index.

Not Contending that color photography is distinctly different from black-and-white photography in its requirements and potentialities, the author of this book presents an elementary analysis of the psychological and technical differences, together with ide range of technical information. The book is addressed primarily to amateurs who are familiar with the techniques of black-and-white photography and are beginning to work with color The basic technology of color photography is well covered. In addition, the author has included many special points from his own extensive experience, together with an inspiring view of the potentialities of color photography for artistic and personal expression.

FEININGER, ANDREAS

Successful photography Englewood Cliffs N J Prentice-Hall Inc., 1954 249 p. illus. 24 cm. $4 95 7169

Content (abridged) Part I, General principles. Part II, Tools and materials. Part III, How to tak pictures. Part IV How to

ening and print. Part ... Learning from mistakes. Part vi, Practical plate density. Part vii, Learning from experience. Part viii, How to use photography Part ix, Appendix. Index.

Note: Although written by a professional photographer who is also the author of several books for professionals, this book is addressed to amateurs and beginners in photography The author has assumed that the reader will have had no previous introduction to photography and, therefore, has devoted the first part to basic principles. However, the contents of subsequent parts, although still elementary, are more advanced and more detailed than in some books written for the same audience. The reader is told what to do in carefully detailed steps. He is also told the reasons for the procedure.

GOSSET TOWNSEND

A guide to photographic control. New York. Duell, Sloan and Pearce 1948. 200 p. illus. 24 cm. $4.00. 7170

Contents: Preface Light in the darkroom. Part i: Control through aim. Part ii: Control when taking the picture. Part iii Control when processing the negative. Part iv Control when making the print. Conclusion. Bibliography Index.

Note: Management of the entire photographic process so as to produce the effect that is desired is the theme of this book. The author points out that a photograph can be planned to commemorate, to instruct, to entertain, or to provide vicarious thrills. Approximately the first one-fifth of the book deals with planning the photograph, but the remainder is concerned with technical matters such as correct exposure, the use of filters, artificial lighting and with developing, fixing, drying, enlarging, printing, etc. A number of formulas for photographic chemicals are given. The author is Director of Photography for Stephens College.

HARKNESS, NORRIS, AND ERNEST E. DRAPER

Table top photography New York Harcourt, Brace and Company 1940. 150 p. illus. 24 cm. $4 75 7171

Contents: Table top opportunities. Photographic equipment. Fundamentals of composition in pictorialism. The simpler picture. Fundamentals of more ambitious pictures. Backgrounds. Small details. Let's do one. Hints for the model builder. Movies in table top. Notes on the plates. Index.

Note: A practical guide to the art of making and taking table top photographs. The text is supplemented by numerous pictures and captions, illustrating the various steps in setting up a scene and the final result.

KAISER, JULIUS B

Make your own stereo pictures. New York. The Macmillan Company 1955 344 p. illus. 21 cm. $5 95 7172

Contents: What is stereo photography? Equipment. I. Single-lens camera. II, Single-lens cameras. The stereo camera. Composition for stereo. Technique—the outdoor scene. Adjusting lens separation. Technique—the closeup. Flash and floodlighting. Color. Making, mounting and viewing equipment. Mounting procedure. Principles of stereo projection. Projecting the stereo show. Stereo horizons. Index.

Note: A useful book on the techniques of taking and projecting stereoscopic photographs. It is addressed to amateur photographers as implied in the title. The discussions are as non-technical as possible, and the descriptions of techniques are explicit and detailed.

KING, WALTER S AND ALFRED L. SLADE

The airbrush technique of photographic retouching. New York The Macmillan Company 1954 115 p. illus. (part col d) 29 cm. $9.50. 7173

Contents: Meet the airbrush. Basic retouching principles. Industrial property and buildings. Machinery. Portraiture. Portrait montage. Display ads for newspapers. [illegible] effects—equipment. Converting a monochrome print to color. Retouching the color print. Some do's and some don't's. Examples from the studio of a master craftsman.

Note: A presentation of practical techniques based on the use of the airbrush in retouching photographs. It is intended for craftsmen who are already familiar with the commercial retouching by other methods. Over half of the space is devoted to series of pictures which show step-by-step how typical operations with the pencil airbrush are carried out.

LESTER, HENRY M , AND JOHN M CARROLL

Photo-lab-index the cumulative formulary of standard recommended photographic procedures. New York Morgan & Morgan, 1956 illus. 22 cm. $19 95 7174

Contents. Introduction and index. Ansco. Ilford. Gevaert. Special films. DuPont. Eastman Kodak. Haloid. Film data. Filter data. Illumination. Photopapers. Miscellany—weights, measures, conversions. Photographic chemicals. Cine data. Darkroom. Color data. Photographic optics. Defects in negatives and prints. Transparencies and slides. Copying. Photomechanical processes. Special processes. Photo words. Television.

Note: A standard manual of useful information and technical data on photographic procedures, processes and materials. It is designed primarily for reference in commercial photographic workshops. Part of the information, as in the section on weights and measures, is general. A substantial portion applies particularly to the products of individual manufacturers. The volume is issued in looseleaf format and is kept up-to-date by supplements issued quarterly. A fully detailed index which is revised frequently is included.

LOOTENS, JOSEPH GHISLAIN

Lootens on photographic enlarging and print quality All photographs by the author New York American Photographic Book Publishing Company 1944 258 p. illus. 22 cm. $4.50. 7175

Contents. In the beginning—how to get the proper negative. The enlarger. Choosing the right paper for the negative. The paper developer. More about developers. Fixing, washing, and drying. The test strip and how to use it—determining the proper negative for your equipment. The test strip—determining the proper contrast grade of paper for your negatives. Dodging and printing-in. Flashing for tone control. Chemical reduction. Print intensification. Combination printing. Photomontage. Photographic border printing. Retouching with new concepts. Pictures to make you think. Choosing the paper for your subject matter. Blue and brown toning. Formulary. Print quality questionnaire. Index.

Note: A manual intended to show the average photographer how to gain the optimum qualities of detail, contrast, tone, texture, and demarcation in enlargements from various types of negatives. Technical data on exposure, grade of paper, and development are given for all of the specimen enlargements used as illustrations, and various methods of montage, dodging, masking, retouching, and intensification are outlined.

LURAY HOWARD

"Strobo"—the lively light. Second edition, revised. San Francisco Camera Craft Publishing Company 1954 144 p. illus. 24 cm. $4.00. 7176

Contents (abridged) What it will and will not do. Basic electronics for photographers. Choosing a speed light. Exposure and development. Choice of film. Filters, exposure and development—color. Guide numbers and exposure meters. Applications to specific problems. The future. Glossary. Electronic symbols. Bibliography. Index.

Note: A brief, practical manual on the use of high-speed gaseous discharge lamps in taking photographs by flashlight. It was written for professional photographers, hence a preliminary chapter is devoted to an outline of the fundamental electronic principles. About three-fourths of the space is occupied by discussions of photographic techniques in which these high-speed lamps are advantageous. The illustrations include some remarkable examples of high-speed photography.

MCCOMBS, KENNETH MONROE

Commercial photography Chicago American Technical Society, 1951 363 p. illus. 22 cm. $5 00. 7177

Contents. Commercial photography as a career The first requirement—a camera. Technique of camera operation. Professional photographic films. The photographer's darkroom. Negative processing. Photographic printing. Print finishing procedures. Outdoor photography Night photography Composition in professional photography Models in photography Studio portraiture. Portraiture of special subjects. Third dimensional portrait lighting. Commercial fashion, and news photography Illustrative photography Color photography Legal aspects of photography How to sell pictures. New improvements in commercial photography Your future in professional photography Index.

Note. A very practical introduction. It is slanted particularly for students who are studying commercial photography in trade schools, but it is suitable also for those learning this business by themselves. Throughout, the book, the instructions are compact, specific, and often given in step-by-step style. The author is a successful commercial photographer who is head of the photography department of the Los Angeles Trade-Technical Junior College.

Mack, Julian Ellis, and Miles J Martin

The photographic process. New York Mc Graw Hill Book Company Inc, 1939 586 p illus (part col'd) 25 cm. $8 50 7178

Contents Introduction. Photographic optics. Lenses. Cameras and accessories. The photographic emulsion and the latent image. Exposure and the negative. Development of the negative and auxiliary processes. Color and its influence in photography Positive prints. Projection printing. Natural-color photography Scientific and technological photography Photochemical reproduction. Pictorial photography Appendix. Mathematics. Formulary Manual.

Note. A comprehensive treatment of photography presented simply enough for the student who is not trained in chemistry yet with sufficient scope and scientific rigor to justify its use in a course in photography at the college level. The details are considered as special examples of the general principles outlined, so that the student, instead of merely learning certain techniques, will be prepared to cope with new photographic problems as they arise.

Mees, Charles Edward Kenneth

Photography Second edition revised New York The Macmillan Company, 1942 227 p illus (part col'd) 22 cm. $3 95 7179

Contents. The history of photography The manufacture of photographic materials. Modern photographic practice. The formation of the photographic image. Tone values and their reproduction by photography Motion picture photography The photography of colored objects. Color photography Some applications of photography Index.

Note A brief but comprehensive study of both the art and the science of photography The work is not a handbook of photography but rather a nontechnical exposition of its beginnings, development, and present stage. Intended mainly for the general reader but of considerable interest to the amateur or professional photographer as well. None of the subjects is treated in any great detail, the main purpose being to present a general review of the whole subject in a simple and popular style. The second edition contains new material on the process of development, the formation of the latent image, and the tripack processes of color photography

Mees, Charles Edward Kenneth

The theory of the photographic process Revised edition New York The Macmillan Company 1954 1 133 p illus. 24 cm $21 50 7180

Contents. Part I, The photographic material edited by J A. Leermakers. The light-sensitive material, by H. Baines and R. Stauffer The size of the silver halide grains, by R. P Loveland. The preparation and properties of gelatin, by J Russell. Part II, The action of radiation edited by J H. Webb The sensitivity of the silver halide grains and their response to light, by W F Berg and J. H. Webb. The relation between the exposure given to light-sensitive layer and the density obtained after development, by P C. Burton. The reciprocity intermittency clayden, and Villard effects, by W F Berg. Solarization and the Herschel, Sabattier Albert and internal-image effects, by G. Kornfeld and G. W S. Stevens. The action of charged particles on the photographic emulsion, by J H. Webb. The latent image produced by X-rays, by G. Kornfeld. Part III, Optical sensitizing; edited by B. H. Carroll and L. G. S. Brooker Spectral sensitivity by M. Ellis and B. H. Carroll. Sensitizing and desensitizing dyes, by L. G. S. Brooker. The mechanism of optical sensitizing, by W West and B. H. Carroll. Part IV Development and the after-processes; edited by T H. James and A. Weissberger The mechanism of development, by T H. James. The developing agents and their reactions, by A. Weissberger The kinetics of development, by T H. James. The electrochemistry of developers, by A. Weissberger. Fixation and washing, by H. Baines. Reduction, intensification, and toning, by A. Murrlage. Part V The physics of the photographic process edited by L. A. Jones General sensitometry and the technique of sensitometric exposure, by J L. Tupper. Quantitative evaluation of the developed image, by J. L. Tupper and K. S. Weaver. The measurement of spectral sensitivity by J. L. Tupper. The interpretation of sensitometric results, by J. L. Tupper. The theory of tone reproduction, by C. N Nelson. The structure of the developed image, by G. C. Higgins. The sensitometry of color films and papers, by F Williams. Abbreviation of journal names. Author index. Subject index.

Note. Since the publication of the first edition in 1942, this book has been recognized as the standard critical summary in English of the scientific knowledge pertaining to photography It is of interest particularly to advanced students who are preparing for careers that will require a thorough knowledge of the physics and chemistry of photographic materials, but is used also by graduate physicists and chemists as a manual and guide to the scientific literature. Although about the same length as the first edition (1,124 pages in contrast to 1,133 pages) this edition is thoroughly revised. As the table of contents shows, the chapters are now all signed; furthermore, the preparation of each part was the responsibility of one or more editors. Generally speaking, space was made for new material by eliminating the historical information. As in the first edition, the chapters include substantial bibliographies to which the text is key-numbered. The author index includes all of the cited literature, the subject index is adequately detailed.

Morgan, Willard D, and Henry M Lester, editors

Leica manual and data book. Thirteenth edition. John S Carroll, Dorothy S. Gelatt, associate editors. New York Morgan & Morgan Publishers, 1955 456 p illus. (part col'd) 23 cm. $6 00 7181

Contents. Leica cameras and equipment. Lenses for the Leica. Films and exposure. Filters for black and white. Taking pictures outdoors. Indoors and artificial light. Developing the negative. Enlarging and printing. Selected color photographs. Color with the Leica. Copying and closeups. Slides and projection. Pictures for publication. Medical photography Appendixes: Leica camera models. Tables and formulas. Index.

Note This book is both a guide for amateur and professional photographers to the use of the Leica camera and a treatise on photography with miniature cameras. The full range of Leica cameras and accessory equipment is described, but the descriptions are accompanied by authoritative and useful information on photographic techniques and by many pages of reference data. The book was first published in 1935 and the twelfth edition was published in 1951 The nature of the book was changed somewhat in the thirteenth edition. The emphasis on special applications has been given up and the space has been used for more detailed information on picture-taking, developing, etc.

Mortensen, William

Mortensen on the negative. New York Simon and Schuster, 1940 283 p. illus. 25 cm. $6 00 7182

Contents (abridged) Part I, Equipment and materials. Part II, Optics. Part III, Sensitometry Part IV The nine negatives.

Note: This book is for the advanced amateur. It is written in a lively style and includes much information which is not often found in books for amateurs. The author endeavors first to tell his readers how to recognize a good negative, and second how to produce such negatives. He urges that the photographer keep his equipment and methods as simple as possible. The book has no index.

NEBLETTE, CARROLL BERNARD

Photography: its materials and processes. Fifth edition. New York D Van Nostrand Company 1952. 500 p. illus. 26 cm. $10.00 7183

Contents (abridged) Light sources for photography. Photographic optics. Photographic objectives. Photographic light filters. Photographic camera. Fundamentals of photochemistry. The photographic emulsion. Color sensitivity of photographic emulsions. The sensitometry and physical properties of negative materials. The silver halide grain, the mechanism of exposure, and the latent image. Photographic exposure effects. The theory of development. Photographic developers. Fixing and washing. Diffusion-transfer reversal process. Photographic sensitometry. Photographic tone reproduction. Reproduction of color in monochrome. Structure of the image. Exposure meters. Photographic exposure and exposure meters. Negative processing. Improvement of the negative. Printing processes. Principles of three-color photography. Three-color separation negatives. Subtractive printing processes. Screen and lenticular processes. Multilayer processes. Accuracy of color reproduction. Subject index. Author index.

Note A standard text and reference book on the technical phases of photography. This edition has been very substantially revised and rewritten. The emphasis has been shifted further towards materials and processes, and writings of 14 specialists in addition to the author have been included. The treatment of most topics [illegible] but informative. Literature references are included for most topics. The book is addressed to scientists, including but not limited to those who are preparing for research in photography and [illegible] such as photo-chemistry. Little space is devoted to the popular practice of photography; however, it contains much information that will be useful to those commercial photographers and serious amateurs who wish to know more about the scientific and technical bases of their craft.

NEWHALL, BEAUMONT

The history of photography from 1839 to the present day New York Simon and Schuster 1949 256 p 27 cm. $3 95 7184

Contents The daguerreotype. The [illegible] image. The mirror with a memory. Prints from paper. Portraits for the million. Pictorial effect. The faithful record. The conquest of action. Photography as an art. The straight approach. Documentary. Instant vision. Experiments in abstraction. For the printed page. In color. Sources of quotations. Selected bibliography. Index.

Note In 1937 the Museum of Modern Art, New York, organized an exhibition of photographs covering the period 1839 to 1937. The present volume is an expansion and elaboration of the catalogue which was prepared for the exhibition. As might be expected, emphasis is placed on the artistic aspects of the subject, but attention [illegible] given to the evolution of apparatus and techniques. Numerous reproductions of photographs taken with various types of equipment by famous photographers are included.

SIMMONS, ALBERT DIXON

Photography for sportsmen. New York D Van Nostrand Company Inc., 1951 172 p. illus. 24 cm. (A Van Nostrand sporting book edited and designed by Eugene V Connett) $5.00. 7185

Contents Snapshots. Field equipment. Exploring the world of color. Through the view finder. Getting close to nature. Fins, Fur, Feathers. Seeing the unseen through slow motion. Editing. Jungle [illegible]. Story shots for all.

Note A book on still and motion picture photography in the outdoors especially intended for sportsmen who take their cameras on hunting and fishing trips. The author has avoided technical language of photography [illegible] possible and has produced [illegible] text [illegible] illustrated with many of his own striking and [illegible] photographs.

SIPLEY, LOUIS WALTON

A half century of color New York The Macmillan Company 1951 216 p. illus. (part col'd) 26 cm. $8.00. 7186

Contents There is always [illegible] background. The new century moves forward. Post-war innovations. Color grows during the depression. The camera and the press. The dye-coupler takes over. Color rating and control systems. The half century closes.

Note In this lavishly illustrated book, the main steps in the development of color photography and color reproduction in the graphic arts are described by the director of the American Museum of Photography. An expertly written text, it is supplemented by many examples of color reproductions that represent high points in the development of these two arts. The illustrative matter was assembled at considerable cost and effort and probably [illegible] never be duplicated again in book form. Much of the historical information appears to have been derived at first hand from [illegible] have spanned the developments that are described. Although the book has considerable historical value, there are no literature references and no index.

SOCIETY OF MOTION PICTURE AND TELEVISION ENGINEERS

Principles of color sensitometry A report of the Color Sensitometry Sub-committee H E. Bragg and others C. F J Overhage, editor New York Society of Motion Picture and Television Engineers, 1950 72 p illus. 23 cm. $1.00. 7187

Contents Introduction. Sensitometric exposures. The processing of sensitometric tests. Quantitative evaluation of the image. Densitometer design principles. Transformations between integral and analytical densities. Interpretation of sensitometric results. Statistical aspects of color sensitometry. References.

Note Much of color sensitometry is built on basic principles familiar in sensitometry of black-and-white materials. Some principles are new. It is the object of this report to outline these principles and to describe the methods and instruments of color sensitometry in order to give the workers in the field of color motion picture photography [illegible] comprehensive view of the present state of the science as it applies to them. The treatment is not detailed, and in some places rigor has given [illegible] way to better understanding, but the coverage is intended to be comprehensive.

SQUIRE, LORENE

Wildfowling with a camera. Philadelphia J B Lippincott Company 1938. 262 p. illus. 30 cm. $7.50 7188

Contents I take pictures of ducks. Calendar of [illegible] prairie marsh. Birds of the water's edge. Geese. Northern [illegible]. Fall flight.

Note A book of photographs of wild ducks, geese, and other birds of the water's edge, mostly in flight. The emphasis in all of the pictures reproduced in this volume is upon artistic composition and setting, rather than upon scientific detail. Owing to a number of reasons, including use of telephoto lenses, trying conditions of light, and intentional use of soft-focus photography, the images are not [illegible] very sharp, but the pattern of bird flight, with its beauty and motion, is expressively recorded.

SUSSMAN AARON

The amateur photographer's handbook revised by the author and with revisions by Bruce Downes. Fourth edition. New York Thomas Y Crowell Company 1952 399 p. illus. (part col'd) 24 cm. $3 95 7189

Contents The growth of photography. The magic of light. All about the lens. The mystery of "f." The shutter. What camera shall I use? Introducing your first camera. Film and exposure. The picture. Portraits and close-range work. Action and flash photography. All about filters. How to take pictures of children. Developing. Printing. Fun with your camera. Lantern slides and transparencies. Three-dimensional pictures. What [illegible] next? Color photography. Hints and suggestions. Supplemental glossary. Index.

Note A practical and well-written manual designed to assist the amateur photographer obtain good pictures with [illegible] minimum of experience and equipment. The treatment is broad rather than detailed, and in the descriptions of methods and techniques the theoretical aspects of the subject are not emphasized. On the other hand, there is [illegible] wide range of practical technical data.

UNITED STATES BUREAU OF NAVAL PERSONNEL

Photography Prepared by Standards and Curriculum Division, Training, Bureau of Naval Personnel Navy training courses. Edition of 1947 Published by Navy Department, Washington, D C Washington, D C. Government Printing Office, 1947 2 v illus 20 cm (Navpers 10371–10372) Vol 1, $1 00, vol 2, $0 75 7190

Contents: Volume 1, Fundamentals The Navy photographer Light and lenses. View cameras and hand cameras. Negative materials. Shooting techniques. Photographic chemicals and solutions. Film development. Contact and projection printing. Negative and print troubles. Flash photography Filters. Infrared photography Making identification photographs. Copying. Portraiture and group photography Lantern slides. Photography with Fab-screens. Quiz. Answers to quiz. Appendix. Index. Volume II, Specialized fields Color photography Aerial cameras. Aerial film. Aerial photography—the "know how" Stereoscopy—depth in pictures. Motion picture cameras. Motion picture processing. Motion picture technique. Motion picture projectors. Care of equipment. Administration, regulations, records. Quiz. Answers to quiz. Index.

Note. A two-volume handbook written in relatively simple language. The volumes were prepared for classroom use by the Naval Air Technical Training Command and the Training Publications Section of the Bureau of Naval Personnel. The work contains detailed directions and suggestions for all phases of naval photography and may be of value also to those outside the Navy who require a manual covering all the fundamentals of photography The 1947 edition differs from that of 1945 chiefly in its containing indexes not present in the original edition.

FOOD TECHNOLOGY

ADVANCES IN FOOD RESEARCH. Volume IV Edited by E. M. Mrak and G F Stewart. Editorial board, E. C. Bate-Smith and others. New York. Academic Press, Inc. 1953 457 p. illus. 24 cm. $9.00. 7191

Contents: Wiltshire bacon, by N. E. Gibbons. Work methods design and work simplification, by L. E. Davis. Nutritional stress factors and food processing, by S. Lepkovsky. The chemistry of chlorophyll (with special reference to foods), by S. Aronoff. Flavor problems in edible fats, by H. J. Dutton. Fish preservation in tropical fish, by A. G. van Veen. The effects of heat upon the nutritive value of protein, by E. E. Rice and J. F. Beuk. Insects attacking stored products, by A. E. Michelbacher. The use of sorbic acid in processing foods, by J. C. Rosenfeld. Author index. Subject index.

—— Volume v Edited by E. M. Mrak and G. F Stewart. Editorial board E. C. Bate-Smith and others. New York Academic Press, Inc., 1954 538 p. illus. 24 cm. $11.50 7192

Contents: Oxidative rancidity and discoloration in meats, by B. M. Watts. The chemistry of the sugar-amine reaction and its relationship to food problems, by H. Gehman and E. M. Osman. The chemistry and technology of the pretreatment and preservation of fruit and vegetable products with sulfur dioxide and sulfites, by M. A. Joslyn and J. B. S. Braverman. Statistical methods in food research, by B. Ostle and R. G. Tischer. Flavonoid compounds in foods, by E. C. Bate-Smith. The color problem in foods, by G. Mackinney and C. O. Chichester. Composition of wine—organic constituents, by M. A. Amerine. Author index. Subject index.

—— Volume vi. Edited by E. M. Mrak and G. F Stewart. Editorial board, E. C. Bate-Smith and others. New York Academic Press, Inc., 1955 398 p. illus. 24 cm. $9.00 7193

Contents: Applications of research to problems of candy manufacture, by L. F. Martin. Bacterial spoilage of meat with special reference to Californian conditions, by R. H. Vaughn. Microbiological implications in the handling, slaughtering, and dressing of meat animals, by J. C. Ayres. Microbiological problems of frozen food products, by G. Borgstrom. Potato granules, development and technology of manufacture, by R. L. Olson, and W. O. Harrington. The thermal destruction of vitamin B1 in foods, by K. T. H. Farrer. Tunnel dehydrators for fruits and vegetables, by P. W. Kilpatrick, and others. Author index. Subject index.

Note. The scope of this series is apparent from the chapter titles listed above. Each of the chapters, or papers, is a critical review of the literature pertinent to its topic. Recent literature is emphasized, however, the authors are not limited to the reviewing of the literature of a specified span of time but cover whatever is necessary to their topics. Extensive bibliographies are included in all of the chapters. The treatment is on a professional level.

AMERICAN ASSOCIATION OF CEREAL CHEMISTS

Cereal laboratory methods, with reference tables. Fifth edition. St. Paul American Association of Cereal Chemists, 1947 341 p. illus. (part col d) 24 cm. 7194

Contents: Wheat and other whole grains. Experimental milling. Wheat flour, semolina and similar products. Feeds and feeding stuffs. Rye flour. Experimental malting. Malt. Enzymatic and physical-chemical methods. Vitamin assay methods. Baking methods. Bread. Experimental macaroni processing. Macaroni products. Fats and shortening materials. Leavening agents. Yeast foods, bleaching agents and flour improvers. Sanitation methods. Appendices. Glossary of cereal chemical terms. Statistical principles and experimental errors. Preparation and standardization of solutions. Reference tables. Index.

Note. A compilation of standard methods for specialists in cereal chemistry and others such as public health workers who are concerned with the inspection and laboratory examination of cereal products. It describes laboratory procedures in detail and contains supplementary information. The first edition was published in 1922 and revisions were published approximately every six years to 1947. A sixth edition was in preparation in 1957.

AMERINE, MAYNARD ANDREW AND LOUISE B WHEELER

A check list of books and pamplets on grapes and wines and related subjects, 1938–1948. Berkeley and Los Angeles University of California Press, 1951 240 p. 24 cm. $5 00 7195

Contents: Check list. Addendum. Subject index. Index of authors, editors, and translators not alphabetically listed. Index of country or state of publication. Bibliography.

Note: A comprehensive bibliography within the decade covered. It is international in scope and includes both books, pamphlets, and government publications but not articles in journals, except in instances where an article was also issued separately. The main arrangement is alphabetical by name of author.

AMERINE, MAYNARD ANDREW AND M A. JOSLYN

Table wines, the technology of their production in California. Berkeley and Los Angeles University of California Press, 1951 397 p. illus. 24 cm. $4.50 7196

Contents: Introduction: Wines and grapes. Trends in the industry. The winery and its equipment: Design and construction. Equipment. Sanitation. Recommended procedures for making wines: From grapes to new wines. Clarifying and aging. Dry red wines. Dry pink wines. Dry white wines. Sweet table wines. Sparkling and carbonated wines. Preparing wines for market: Finishing operations. Testing and analyzing. Wine disorders. Winery by-products. Technological principles: Composition of grapes. Composition of table wines. Alcoholic fermentation. Preparation of fermentation. Appendices: Forms and reference tables. General references and citations. Index. List of illustrations. List of tables.

Note: An inclusive survey of good practices. It is addressed particularly to managers, chemists, and other technicians associated with the table wine industry in the state of California. However, most of the information presented is applicable also to wineries in other regions. Typical equipment is described and illustrated, but this phase of the subject is not covered comprehensively. The text is supplemented by 38 tables of reference data and a 27-page international bibliography.

ANDERSON JOHN ANSEL, editor

Enzymes and their role in wheat technology New York Interscience Publishers, Inc., 1946. 371 p. illus. 23 cm. (American Association of Cereal Chemists. Monograph series. Volume 1) $6.50. 7197

Contents The general chemistry of enzymes, by W M Sandstrom. Amylases, by M L. Caldwell and M. Adams. Applications of the amylases in milling and baking technology by E. Kneen and R. M. Sandstedt. Esterases, by H. E. Longenecker Esterases in relation t milling and baking, by B Sullivan. Oxidizing enzyme systems, by E. S. Guzman Barron. Oxidizing enzyme systems of wheat and flour by B Sullivan. Proteases, by A. K. Balls and M. W Kies. Role of proteases in baking, by F C. Hildebrand. The mechanism of alcoholic fermentation by C. H. Werkman. Yeast fermentation, by Lawrence Atkin, and others. Author index. Subject index.

Note. The initial volume in a series of monographs projected by the American Association of Cereal Chemists. Except for the generalized discussion of the first paper only those particular enzymes which are of interest to cereal chemists have been treated. Of the tw papers devoted to each class of enzyme, the first review present knowledge of both the animal- and plant-derived enzyme, while the second discusses the role of that enzyme in heat processing and tilization. The papers are monographic in style and organization and are accompanied by long bibliographies of the related literature. The fact that the titles of the journal articles are included as part of the bibliographical information deserves special mention.

ASHBROOK, FRANK G

Butchering, processing, and preservation of meat. New York D Van Nostrand Company, Inc., 1955 318 p illus 22 cm $4 75 7198

Contents Man s eating customs. Meat characteristics. Food planning. Preslaughter considerations. Butchering hogs. Butchering cattle. Butchering sheep and lambs. Dressing game animals. Handling hides and skins. Cutting the carcass. Dressing poultry and wild fowl. Procuring, cleaning, and cutting fish. Preserving meat, fowl, and seafood. Meat products and by-products. Helpful references. Publications f the Department of Agriculture. Publications of the Department of the Interior Motion pictures produced by the Departments of Agriculture and the Interior. Reference books. State game departments. United States Agricultural Experiment Stations.

Note. A practical book on the farm butchering and preservation of meat, which is useful both as guide for farm families producing their own meat and as a textbook for teachers and students in agricultural colleges and high schools. It covers all necessary steps from the slaughter of the animal until it is ready for the icebox or locker and devotes space to poultry fish, and game as well as to cattle, hogs, and sheep. Practical instructions for slaughtering, cleaning, and freezing the meats are accompanied by numerous photographic and diagrammatic illustrations.

ASSOCIATION OF FOOD INDUSTRY SANITARIANS, INC

Sanitation for the food preservation industries. Prepared by the Association of Food Industry Sanitarians, Inc. in cooperation with the National Canners Association. Editorial committee Stephen M Anderson and others New York McGraw Hill Book Company Inc, 1952 284 p illus. 24 cm (McGraw Hill series in food technology editor Frank K Lawler) $7 00 7199

Contents Organization of the sanitation program. Inspection techniques. Housekeeping. Animal and bird pests. Insect pests. Sanitary significance of microorganisms. Water supply Construction and maintenance of buildings and equipment. Cleaning. Chlorination. Employee facilities and industrial hygiene. Feeding and housing f employees. Waste treatment and disposal. Laboratory aids. Glossary of terms. Index.

Note. An officially sponsored manual which makes available practical information on efficient methods of establishing and maintaining optimum conditions f cleanliness in plants devoted to the canning, freezing, and dehydrating of foods. Organized in modified outline form and written in simple language, it can be comprehended by anyone with secondary school education. On the other hand, its scope is sufficiently broad to make it useful to management personnel as well as to workers. Literature references are included.

BATES, FREDERICK JOHN, AND OTHERS

Polarimetry, saccharimetry and the sugars, by Frederick J Bates and associates. Washington, D C Government Printing Office, 1942 810 p. illus. 23 cm. (United States. National Bureau of Standards. Circular 440) $4.25 7200

Contents Part I, Polarized light, polarimeters, saccharimeters, and accessory apparatus Introduction. Polarized light. Measurement of rotation in circular degrees. Measurement of rotation in sugar degrees. Temperature corrections and control. Accessory apparatus. Part II, Raw and refined sugars and sugar products: Polarization of raw and refined sugars. Clerget method. Chemical methods for the determination of reducing sugars. Analysis of sugar mixtures. Analysis of special products. Determination of pentoses. Densimetry Refractometry Determination of moisture. Determination of ash. Electrical conductance of sugar solutions. Measurement of hydrogen-ion concentration. Colorimetry Measurement of turbidity Viscosity of sugar solutions. Solubility of the common sugars. Boiling points of sucrose solutions. Candy tests. Preparation and purification of pure sugars. Purity Packing of sucrose. Part III, Preparation and properties of the sugars and their derivatives: Optical activity configuration, and structure in the sugar group. Mutarotation and sugars in solution. Methods for the preparation of certain sugars. Methods for the preparation of certain sugar derivatives. Crystallography of the sugars. Melting points. Part IV General information: Standard samples. Tests. Part V Appendixes. Index.

Note This circular supersedes National Bureau of Standards *Circulars* nos. 12 and 44 dated 1906 and 1917 respectively The main object of the treatise is to explain the application and manipulation of polarized light for industrial, analytical, and theoretical purposes. An attempt is made to answer as far as possible the numerous requests made to the Bureau over a period of years for information on the theory and application of polarized light in the chemistry of the sugars. The general subjects of magneto and electro optics in relation to polarized light are omitted as lying beyond the province of the work. The material is based mainly on a survey of the technical literature of the field, and each chapter is followed by a list of references cited in the text. There are 149 tables of chemical and physical data relating to the sugars and summary of United States customs regulations governing the eighing, taring, sampling, classification, and polarization of imported sugars and molasses.

BLANCK, FRED C, editor

Handbook of food and agriculture. New York Reinhold Publishing Corporation, 1955 1 039 p. illus. 24 cm. $15 00 7201

Contents. Soils, by E. Winters. Soil fertility by C. L. W Swanson. Soil microbiology by C. Thom. Fertilizers, by A. L. Mehring. Insecticides, fungicides and herbicides, by C. C. Roan. Growth regulants, their nature and action, by L. P Miller Enzymes, by C. V Smythe. Oxidative rancidity and antioxidants, by R. W Riemenschneider The essential nutrients, by D. M. Hegsted. Storage of agricultural raw products, by R. T Porter Food preservation, by C. R. Fellers. Effect of canning and dehydration on the utrition values of foods, by L. E. Clifcorn and G. T Peterson. Food spoilage and deterioration, by H. E. Goresline Cereals and cereal products, by C. O Harrel and D. M. Dicks. Dairy products, by B. H. Webb. Vegetable fats and oils, by E. W Eckey Sea foods, by H. L. A. Tarr Animal products, by H. R. Kraybill. The chemistry of plants, by L. B. Rockland. Poultry products, by H. Lineweaver and A. A. Klose. Food engineering, by J H. Nair. Food packaging, by C. O. Ball. Food quality and quality control, by A. Kramer Disposal of food plant wastes, by N H. Sanborn. Chemicals in foods, by C. N Frey Food, drug, and cosmetic act, by P B. Dunbar. Appendix. Index.

Note The title notwithstanding, this is reference book for food technologists and others who are interested in the food processing industries. The chapters on agricultural topics account for only 315 pages, and they are intended as background information for food technologists. The typical chapter is about 33 pages long and is concise survey of basic aspects and includes bibliography of substantial length. The appendix of the olume contains wide range of information on laws, regulations, utrition standards, organizations interested in food, etc. Also included here is 16-page classified bibliography

BLUMENTHAL, SAUL

Food products. Brooklyn, N. Y. Chemical Publishing Company, Inc., 1947. 986 p. 22 cm. $12.00. 7202

Contents: Basic food ingredients. Milk and milk products. Condensed, cream, cider and tea. Dessert powders and puddings. Eggs, dressings and pickles. Fish, food foods, health food, meat, food, soy products, baking powder. Pie fillings and pies. Cookies, biscuits and cakes. Flavors, syrups and beverages. Fruits and vegetables. Canned goods. Jams and preserves. Plant sanitation and [illegible] food control. Composition of foods and prevention of [illegible]. Preservation of foods by dehydration and freezing. Weights and measures. Chemical dosimetry. Abbreviations. Bibliography. Index.

Note: A revised and expanded version of the author's *Food manufacturing*, 1942. It is particularly suited to executives of food manufacturing firms and to persons who are considering entering the business. It presents the manufacture of food as a series of operations governed by well-defined physical, chemical, and bacteriological principles. Hundreds of formulas for the preparation of food products on a commercial scale are included.

BROWNE, CHARLES ALBERT, AND F. W. ZERBAN

Physical and chemical methods of sugar analysis; a practical and descriptive treatise for use in research, technical, and control laboratories. Third edition. New York, John Wiley & Sons, Inc., 1941. 1,353 p. illus. 23 cm. $22.50. 7203

Contents: Sampling of sugar and sugar products. Determination of moisture in sugar and sugar products by methods of drying. Densimetric methods of analysis. Principles and uses of refractometry. Polarized light: theory and description of polariscopes. Theory and description of saccharimeters. Polariscopic determination. Specific rotation of sugars. Methods of sample preparation. Methods of direct or double polarization. Special methods of saccharimetry. Miscellaneous physical methods as applied to the examination of sugars and sugar solutions. Qualitative methods for the identification of sugars. Reduction methods for determining sugars. Special quantitative methods. Combined methods and the analysis of sugar mixtures. Special methods for miscellaneous carbohydrate products. Appendix of sugar tables. Author index. Subject index.

Note: A practical and descriptive treatise for use in research, technical and control laboratories dealing with sugar. The book is a revision of the formerly published *Handbook of sugar analysis*. No attempt is made to describe all the apparatus and methods used in sugar analysis; careful selection has been made, and full discussion of these is given. Emphasis has been placed upon principles; apparatus and modifications are left to the individual chemist. Important newer physical and chemical methods for the examination of sugars and sugar products are clearly outlined. A section on the pH determination of sugar products has been added. Since the substances that accompany sugars exert great influence upon the chemical composition and properties of sugar products, greater attention is devoted in the present volume to some of the more important of these extraneous impurities for their bearing on questions of origin and chemical treatment. References to special works and to original articles are helpful. Brief descriptions of older methods are given, for historical interest.

CRUESS, WILLIAM VERE

Commercial fruit and vegetable products; a textbook for student, investigator and manufacturer. Third edition. New York, McGraw-Hill Book Company, Inc., 1948. 906 p. illus. 23 cm. (McGraw-Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $12.00. 7204

Contents (abridged): Microorganisms in relation to fruit and vegetable products. Brief history of canning. Tin and glass containers. General considerations in establishing a cannery. Washing, blanching, and peeling fruits and vegetables. Grading fruits and vegetables for canning. Sirups and brines used in canning. Exhaust and vacuum. Canning of fruits. Pickling and canning of olives. Canning of vegetables. Spoilage of canned foods. Unfermented fruit beverages. Fruit and vegetable sirups and concentrates. Fruit jams, butters, preserves, and confections. Sun drying of fruits. Dehydration of fruits. Dehydration of vegetables. Vinegar manufacture. Pickles. Olive and coconut oils. Utilization of waste fruits and vegetables and disposal of waste. Waters. Frozen-pack fruits and vegetables. Vitamins. Plant pigments and related compounds. Enzymes of fruits and vegetables. Plant sanitation. Index.

Note: A standard manual of information on commercial canning and preserving. Widely used as a textbook, it serves equally well as a reference book on the technology of the industry. The topics mentioned in the chapter titles are discussed in considerable detail, and in addition each chapter is accompanied by an extensive list of the related literature. Much new material is presented in this edition, which is about 100 pages longer than the second edition (1938).

FRANDSEN, JULIUS HERMAN, AND D. HORACE NELSON

Ice creams and other frozen desserts. Amherst, Mass., J. H. Frandsen, 1950. 318 p. illus. 24 cm. $5.25 7205

Contents: History, development, and importance of the ice cream industry. Food value of ice cream. Classification of ice creams, sherbets, and ices. Composition and properties. Ice cream ingredients. Stabilizers and emulsifiers. Flavoring and coloring materials. Calculation of ice cream mixes. Restandardizing and calculating some unusual mixes. Calculating cost of mixes, amount of overrun, per cent overrun, etc. Making and processing the mix. The freezing process. Packaging, hardening, and shipping. High fat and high serum solids ice cream. Ices and sherbets. Fancy molded ice creams, novelties, and specialties. List of formulas. Defects, scoring, and grading. Sanitation. Refrigeration. Some laboratory tests often used in ice cream plants. Soda outlets. Formulas for soda fountain use. Reference material. Index.

Note: A manual of the commercial manufacture of ice cream, particularly as it is done in the United States of America. Formulas are included for a variety of flavors of standard ice creams and also for novelty types, such as spumoni, fruit [illegible], sherbet, and water ice. Also, there are formulas for syrups and toppings used in making the ice cream dishes and drinks that are sold at soda fountains. Soda fountain recipes are included because many manufacturers of ice cream maintain such retail outlets.

GORTNER, WILLIS ALWAY, AND OTHERS

Principles of food freezing, by Willis A. Gortner, Frederick S. Erdman and Nancy K. Masterman; edited by L. A. Maynard. New York, John Wiley & Sons, Inc., 1948. 281 p. illus. 22 cm. $4.50. 7206

Contents (abridged): A foreword, by L. A. Maynard. Part I, The product—Frozen food. An introduction to food freezing. The raw material. Processing for freezing. Packaging for freezing. Freezing rates and food quality. The storage of frozen food. Cooking frozen foods. Part II, The consumer and his needs: Home freezing. The patron and the community locker plant. Part III, The engineering of food freezing: The role of heat in engineering design. Construction of low-temperature space. Refrigeration for low temperatures. The freezing process. Freezing equipment for the home. Locker plants. Freezing for commerce. Author index. Subject index.

Note: A biochemist and food scientist, an engineer, and a home economist co-operated on a survey of community and home frozen-food services, equipment, and operation, and present in this book a digest of their findings and of the investigations of others. The result is not a handbook of the details of processing but rather a discussion of the conditions that insure nutritious, palatable and economically produced frozen food. The basic principles in selecting, processing, freezing, and storing food which will apply alike to large-scale commercial freezing plants, community lockers, and farm and home units are outlined. Consideration is given to the human as well as to the mechanical factors; for example, there is considerable discussion of dos and [illegible] on home freezers. Advantages and disadvantages of methods, equipment, and management are discussed, differing opinions are objectively considered, technical points are explained.

Food Technology

HALLIDAY, EVELYN GERTRUDE, AND ISABEL TILTON NOBLE

Hows and whys of cooking Third revised edition Chicago The University of Chicago Press, 1946 328 p. illus 21 cm $5 50 7207

Contents Vegetables. Factors which contribute toward success in the preparation of muffins, cakes, biscuits, and pastry Muffins. Cakes containing shortening. Angel-food and sponge cakes. Baking-powder biscuits. Pies. Candy Ice-cream. Beef. Meal planning. Index.

Note This work is a successful combination of chemistry and traditional cook book material. Its distinguishing quality is that cooking is viewed as an application of science and the various manipulations and processes are explained and described as carefully as the procedures outlined in a chemistry laboratory text. A considerable part of the space is given over to tested recipes. The book is used in homes, commercial food establishments, and in college courses in domestic science. The present edition contains newly added information on baked foods, the cooking of vegetables, and number of new recipes.

HEWSTON, ELIZABETH M, AND OTHERS

Vitamin and mineral content of certain foods as affected by home preparation By Elizabeth M Hewston, Elsie H Dawson, Lucy M Alexander and Elsa Orent Keiles, Bureau of Human Nutrition and Home Economics, Agricultural Research Administration Washington, D C Government Printing Office, 1948 76 p illus. 26 cm. (United States. Department of Agriculture. Miscellaneous publication no 628) $0 40 7208

Contents. Purpose and plan of study Preliminary studies on 20 common foods Preparation, cooking, sampling. Methods of analysis for 20 foods. Results on 20 foods. Summary and conclusion on 20 foods. Potatoes. Carrots. Green peas. General summary Literature cited. Appendices A simple and rapid method for moisture determination using infrared lamps. Extraction of riboflavin from navy beans. Interfering substances in the determination of riboflavin in fresh and cooked peas.

Note. What constitutes good cooking from a nutritive standpoint? T help answer this question, the study reported in this pamphlet was made. Preliminary studies were made on the cooking of 20 foods, including egetables, meats, poultry breads, and cereals methods of preparation and cooking in general home use were employed. Measurements were made of loss from cooking of selected nutrients, including ascorbic acid, thiamine, nicotinic acid, riboflavin, carotene, and minerals. The results are presented both in text and in tables. More comprehensive studies were made of potatoes, carrots, and peas, and the results similarly reported.

HONIG, PIETER, editor

Principles of sugar technology Houston Elsevier Publishing Company, 1953 767 p illus 25 cm. $15 00 7209

Contents Part I, Physical and chemical properties of sugars and nonsugars. Chemical properties of sucrose, by H. Hirschmüller Physical properties f sucrose, by H. Hirschmüller Physical and chemical properties of the reducing sugars (dextrose and levulose) by E. J McDonald. The non-nitrogenous organic acids of sugar cane, by L. F Martin. The nitrogen-containing nonsugars (the amino acids and proteins) by L. F Wiggins. The complex organic nonsugars of high molecular weight, by L. F Martin. The lipids of sugarcane, by R. T Balch. Color and colored nonsugars, by T R. Gillett. Inorganic nonsugars, by P Honig. The agents used in sugar manufacture, by K. D Dekker The physical and technical conditions in sugar manufacture (temperature, density and *p*H) by G. W Payne. Part II, Purification f technical sugar solutions. Chemical technology of the purification process, by P Honig. Fundamental reactions of the clarification process, by J H. P yne. Technology of the clarification process, by J G. Davies. Clarification of cane juices by means of the sulphitation process, by J Marches. The carbonation process, by P Honig. Middle juice carbonation, by T Y Chou. Ion exchange, by J. H. Payne. Author index. Subject index.

Note. Greater precision in terminology and better attention to basic science and to scientific methods of gathering and presenting data are the themes which run through the book, which is a comprehensive and detailed presentation of the chemistry and technology of sugar and sugar manufacture. The typical chapter is a self-contained monograph based on the literature and keyed to an extensive bibliography The information presented has been selected critically but in many instances opposing iews are presented. In the chapters on technology sugar making processes are described explicitly and there are numerous diagrams of equipment setups. The indexes do not match the quality of the text. A brief sampling turned up several omissions of authors names, and the subject index has been inexpertly done.

HUGHES, OSEE

Introductory foods. Third edition. New York The Macmillan Company, 1955 551 p illus 22 cm. $4 75 7210

Contents Introduction. Fruits and fruit preparation. Vegetables and vegetable preparation. Milk and milk products other than butter and ice cream. Eggs and egg cookery Meats and meat cookery Frosted foods. Carbohydrates and carbohydrate cookery Beverages. Fats and oils. Salads and salad dressings. Gelatin. Freezing and frozen desserts. Batters and doughs. Food preservation. Meal planning. Meal service. Appendices. Index.

Note. A standard textbook designed for use in introductory courses offered by college departments of home economics. The various classes of foods are described with emphasis on their nutritive values. Basic food preparation and preservation techniques are discussed. Much information that is generally useful in buying and preparing food is included. The second edition appeared in 1949. Several chapters were revised and the number of illustrations was increased for this third edition.

HUNZIKER, OTTO FREDERICK

Condensed milk and milk powder Prepared for factory, school and laboratory Seventh edition completely revised. La Grange, Illinois O F Hunziker, 1949 630 p. illus. 24 cm. $7 00 7211

Contents (abridged) Chemical composition and reaction of milk. Physical properties of milk. The milk condensery Thermodynamics of milk condensing. Description of the acuum pan. Steam requirements for forewarming and condensing. Factory sanitation. Quality of milk supply and its control. Sweetened condensed milk: Definition, intake and standardization. Condensing the milk. Sweetened condensed skim milk—condensed whey Packaging. Evaporated milk. Inspection, standardizing and forewarming. Irradiation, fortification, homogenization. Cooling, standardizing, canning. Sterility and heat stability Viscosity color flavor, mineral deposits. Plain, superheated, frozen condensed milk. Concentrated buttermilk, sour skim milk. Sterilized sweet milk and sweet cream. Composition and ferments of concentrated milks. Concentrated milk defects. The dried milk industry Milk drying systems. Thermodynamic and engineering aspects. Manufacture of dried whole milk. Manufacture of dried buttermilk. Manufacture of dried whey Manufacture of dried malted milk—dried ice cream—dehydrated sweetened condensed milk. Yield, composition, properties of dried milks. Keeping qualities of dried milks. Vitamins in milk and milk products. Manufacture of milk sugar of commerce. Factory tests and analyses. Index.

Note: As in previous editions, this volume presents the latest available information on apparatus and processes that will be of interest to advanced students, research workers, and plant managers concerned with large-scale commercial dairy operations. Numerous illustrations of equipment are again included, and the statistical data and official standards ha been revised through 1948. The material is based on the author's own experience and on a review of the literature of the subject, and in this re ision more than 600 references to world literature are provided.

JACOBS, MORRIS BORIS

The chemical analysis of foods and food products. Second edition. New York D Van Nostrand Company Inc., 1951 902 p. illus. 23 cm $12 00 7212

Contents General methods. Physical chemical methods. Coloring matters in foods. Chemical preservatives in foods. Metals in foods.

JACOBS, MORRIS BORIS

The chemical analysis of foods and food products. Second edition. New York D Van Nostrand Company Inc., 1951 902 p. illus. 23 cm $12 00 7212

Contents General methods. Physical chemical methods. Coloring matters in foods. Chemical preservatives in foods. Metals in foods.

Food Technology

Contents (abridged) Preservation of foods by freezing. Preparation [illegible] for fruits. Thawing and using frozen fruits. Processing [illegible] for vegetables. Thawing and cooking frozen vegetables. [illegible] of meat for freezer storage. Selection. Slaughtering. [illegible] Aging. Cutting. Wrapping. Labeling. Freezing. Storage. [illegible] Thawing and cooking frozen meat. Poultry. Eggs. Fish. Miscellaneous products. Freezing of cooked food. Care of frozen foods [illegible]. Packaging materials. A partial list of manufacturers of supplies for frozen food lockers. Sanitation. [illegible] Cartons and containers. Stockinet. Heat-sealing equipment. [illegible] references.

Note Intended for the housewife as well as for locker-plant operators, the pamphlet contains complete and detailed information as to what to freeze and how to prepare it. It includes general [illegible] for such matters as maximum length of time frozen products [illegible] be left before using, methods of defrosting, and [illegible] are not suitable for preservation by freezing. Separate instructions are given for each variety of fruits and vegetables.

MILLER, ALBERT RAUCH
Meat hygiene. Philadelphia Lea & Febiger 1951 420 p. illus 24 cm. $7.50 7223

Contents History. Elements of meat hygiene. Ante-mortem inspection. Post-mortem inspection. Trichinosis. Physical and chemical characteristics of meat and the principal organs. Factors relating [illegible] Facilities for inspection. Materials [illegible] in plant operation. [illegible] Preparation of meat and meat food products. Meat [illegible] Adulteration and misrepresentation. Deteriorative changes [illegible] Organized meat hygiene control. Appendix. Bibliography. Index.

Note A college text and reference manual designed primarily for use by students of veterinary medicine and graduate veterinarians. It [illegible] useful also to public-health officers and other persons who are concerned with the sanitary handling of meat. Although the [illegible] phase is emphasized, most of the processes involved in the slaughtering of animals and the processing of their meat are described in some detail. Hence, the book is also [illegible] description of meat packing as it is currently practiced in the United States of America. The author is Chief of the Federal Meat Inspection Service of the United States Department of Agriculture.

NATIONAL RESEARCH COUNCIL
The use of chemical additives in food processing. Prepared by the Food Protection Committee of the Food and Nutrition Board. Washington, D C. National Academy of Sciences—National Research Council, 1956 91 p. 24 cm. (National Academy of Sciences —National Research Council. Publ. 398) $2.00. 7224

Contents Introduction. Part I. Technological benefits of intentional additives. Cereal products. Processed fruits and vegetables. Beverages. Dairy products. Confections, sweeteners, and sugars. Meat products and fats. Discussion. Part II. Intentional additives used [illegible] processed foods. Preservatives. Antioxidants. Sequestrants. Surfactants. Stabilizers, thickeners. Bleaching and maturing agents. Buffers, acids, alkalies. Food colors. Nonnutritive sweeteners. Nutrient supplements. Flavoring agents—aromatic chemicals, essential oils and others. Miscellaneous. Chemical additive index.

Note One of [illegible] series of reports on chemical additives in foods by the Food Protection Committee. It [illegible] survey of the extent of use and technological benefits of use of intentional chemical additives, excluding treatment chemicals and naturally occurring substances used as additives. It presents concisely the names of chemicals used, their purposes such as "[illegible]," "[illegible] agent," "buffer," and data on levels of use, standards and regulations governing usage.

NATIONAL RESEARCH COUNCIL. ADVISORY BOARD ON QUARTERMASTER RESEARCH AND DEVELOPMENT
Dry whole milk a symposium sponsored by the Quartermaster Food and Container Institute for the Armed Forces Quartermaster Research and Development Command, U S. Army Quartermaster Corps. Oriental Institute University of Chicago September 22 23 1954 Edited by J M. McIntire W K. Stone and Martin S. Peterson. Advisory Board on Quartermaster Research and Development Committee on Foods. Washington D C. National Academy of Sciences—National Research Council, 1955 194 p. illus. 23 cm. Gratis. 7225

Contents Introduction—the problem in review. Importance of dry milk products to the Armed Forces, by J. D. Peterman. Purpose and scope of the symposium, by D. K. Tressler. Review of Quartermaster contract research work on flavor aspects of dry whole milk, by J. M. McIntire. Chemical aspects: Chemistry of dry milk products during processing and storage, by R. Jenness and S. T. Coulter. Chemical changes in fat and lactose of milk products with special reference to flavor, by S. Patton and others. Physicochemical properties of the proteins in skimmilk powder, by K. K. Fox and others. Manufacturing and processing: Development and manufacture of dry cream products, by O. F. Garrett. Fundamentals of spray drying, by W. R. Marshall, jr. Dependability: Review of research on the dependability of dry whole milk at the Quartermaster Food and Container Institute, by W. K. Stone. The influence of processing procedures on the dispersing properties of dry milks, by U. S. Ashworth. Methods for improving the dependability of dry whole milk, by H. A. Hollender. Effect of processing on particle size of dry milk and relationship to dependability, by A. M. Swanson. Final considerations: Production of powdered milk products and the inspection service, by M. C. Lockwood. The current status of nonfat dry milk solids, by R. J. Remaley. Summary of discussion, by S. T. Coulter.

Note Although the symposium whose proceedings are published in this volume was primarily concerned with the need of further research on dry whole milk as a food product of value to the Armed Forces of the United States of America, the papers presented are of interest throughout the milk products industry. Participants in the symposium were actively engaged in research on dry milk products, and the results of recent investigations are reported in many of the papers. The title notwithstanding, the papers were not limited to dry whole milk, but included, as well, dry milk from which the fat is removed before dehydration. Transcripts of discussion are included for each paper and several of the papers contain extensive bibliographies.

OWEN, WILLIAM LUDWELL
The microbiology of sugars, syrups and molasses. A reference book for the raw sugar manufacturer or refiner and for all industries engaged in the manufacture, storage or commercial utilization of sugars, syrups and molasses. Published by Barr-Owen Research Enterprises. Minneapolis Burgess Publishing Company 1949 275 p. illus. 22 cm. $5.00. 7226

Contents Source of microorganisms in factory juices. The microbial flora of sugar cane and beet juices. Typical fermentations of cane and beet juices. Fermentation of diffusion juices from sugar beets. The appraisal of the microorganisms in cane juices and beet diffusion juices. The progressive decomposition of microorganisms incident to the manufacturing process. The microbiology of syrups. The microbiology of raw sugars. The deterioration of blackstrap molasses in storage. Author index. Index.

Note This publication brings together information from the voluminous literature on the microbiology of sugar and sugar products and provides for sugar technologists and other scientists interested in the subject [illegible] convenient source of references applicable to problems connected with fermentation in sugar manufacture and the deterioration of sugars or syrups and molasses. The last chapter, which covers the deterioration of blackstrap molasses in storage, deals with [illegible] chemical rather than [illegible] microbiological phenomena, but is included in the book because of the economic importance to the sugar industry of preventing this type of loss, for which microorganisms have sometimes been held responsible. The author is director of the William L. Owen Laboratories, Baton Rouge, and bacteriological consultant for [illegible] number of Louisiana industrial concerns, including sugar refineries.

teriologist of the staff of the Research Laboratories of Swift & Company

JOSLYN, MAYNARD ALEXANDER

Methods in food analysis applied to plant products New York Academic Press, Inc., 1950 525 p illus. 23 cm $10 50 7217

Contents (abridged) Statistical analysis, errors, expression of results. Sampling. Moisture content and total solids. Ash content and ashing procedures. Extraction methods and separation processes. Densimetric methods. Refractometric methods. Polarimetry and saccharimetry Colorimetry and spectrophotometry Potentiometric and related methods. *pH* and buffer capacity Viscosimetric and other physical methods. Acidimetry Alcoholometry Carbohydrates. Pectins and pentosans. Tannins. Organic nitrogenous compounds. Index.

Note. A work in which basic physical and chemical principles and techniques, rather than specific laboratory procedures, are discussed. Also, the author has assumed that his readers will be concerned more with the estimation and control of the quality of food products than with the detection of adulteration. The book is addressed to upperclass and graduate college students who understand the principles and techniques of qualitative and quantitative analysis. It is written in the style of a monograph, with keyed references from the text to extensive bibliographies. For chemists already at work in the field, especially those concerned with manufacturing, it is a useful survey of applicable techniques and a guide to the literature.

LOWE, BELLE

Experimental cookery from the chemical and physical standpoint. Fourth edition New York John Wiley & Sons, Inc., 1955 573 p. illus. 23 cm $7 50 7218

Contents The relation of cooking to colloid chemistry Food acceptability Sugar cookery Frozen foods. Fruits and vegetables. Pectic substances, jelly jam. Gelatin. Meat and poultry Emulsions. Milk and milk products. Eggs. Starch, flour, and bread. Batters and doughs. Fats and oils. Index.

Note Cookery and related methods of food preparation are presented from a scientific standpoint in this standard textbook. The basic physics and chemistry are described and the results of many experimental studies are incorporated with references to the source articles. Experiments for students to make in college laboratories are included. The book is used primarily in the instruction of college students of home economics, and is useful also to technical personnel in the food processing industries as survey and guide to the literature.

MCGINNIS, R A., editor

Beet sugar technology New York Reinhold Publishing Corporation 1951 574 p illus 24 cm $14 00 7219

Content (abridged) History Growing sugar beets. The tare laboratory Storage of beets. The diffusion process. Juice purification—fundamental chemistry—first carbonation—second carbonation—adsorbing and absorbing agents. Evaporators and fuel economy Crystallization. Packaging and storage. Special sugar products. Lime and carbon dioxide production. The saccharate processes. The pulp drier Waste disposal and by-product recovery The boiler house. Technical accounting and process control. Appendixes. Glossary of technical terms in common use in the beet-sugar factory Laboratory thickening test sample data and calculations. Books relating to beet-sugar agriculture and beet-sugar manufacture. Author index. Subject index.

Note. Although primarily treatise on the manufacture of beet sugar the first 132 pages of this volume are devoted to the history of the industry the culture of sugar beets, and other facets of the subject which are not parts of the actual manufacturing process. Thus the book provides rounded view of the subject. The chapter on the growing of sugar beets is only 48 pages long and includes 10 references to literature. In contrast, the manufacturing process is fully described with special attention to those unit operations which are peculiar to the manufacture of beet sugar Discussions are included of special aspects such as liquid sugar The volume is the work of many authors, some of whom wrote whole chapters and others parts of chapters. Authorship of the various chapters and parts are indicated in the volume. Each chapter includes references to journal literature in addition to the bibliography of books in the appendix.

MARKLEY, KLARE STEPHEN, editor

Soybeans and soybean products. New York Interscience Publishers, Inc., 1951 2 v illus. 24 cm. (Fats and oils, a series of monographs on the chemistry and technology of fats, oils, and related products, editorial board A E Bailey and others) $14.50 per vol. 7220

Contents Vol. I. Production: History of soybean production, by W J Morse. World soybean production and trade, by E. L. Burtis. Structure and composition Structure and genetic characteristics of the soybean, by L. F Williams. Chemical composition of soybean seed, by W J Morse. Chemical composition of soybean oil, by B. F Daubert. Chemical characteristics of soybean oil, by S. T Bauer Physical properties of soybean oil, by M. E. Jefferson. Proteins and other nitrogenous constituents, by S. J. Circle. Other constituents of the soybean, by B. F Daubert. Nutritive factors in soybean products, by H. H. Mitchell. Processing: Grading and evaluation of soybeans and derived products, by E. Freyer. Handling and storage of soybeans, by L. E. Holman. Biological processes in stored soybeans, by M. Milner Mechanical processing of soybeans, by L. F Langhurst. Vol. II. Solvent extraction practices, by L. F Langhurst. Utilization of soybean products. Production and utilization of lecithin, by J Stanley Processing of edible soybean oil, by J W Bodman and others. Nutritional value of soybeans and soybean products, by H. J Deuel, Jr. Edible soybean oil products, by H. C. Black and K. F Mattil. Soybean oil by-products, by R. W Lehmann and N D. Embree. Nonedible soybean oil products, by T F Bradley Soybean oil meal for livestock and poultry by J W Hayward. Soybean protein food products, by R. S. Burnett. Soybean protein industrial products, by R. S. Burnett. Other soybean products, by J M. Smith and F O. Van Duyne. Author index, Volumes I-II. Subject index, Volumes I-II.

Note. Each of the 25 monographs in this comprehensive work has been prepared by an expert, and is well documented with literature references. Although the levels of the monographs vary the work as a whole is technical and is designed for professional workers in fields where a knowledge of soybean processing or soybean products is essential.

MARSHALL, ROY E

Cherries and cherry products. New York Interscience Publishers, Inc., 1954 283 p. illus 23 cm (Economic crops, a series of monographs on the chemistry physiology and technology of food and food products Z I Kertesz editor) $8 50 7221

Contents The history of the cherry The cherry industry Species, groups and varieties. Development and structure of the fruit. Some environmental factors affecting cherry production. Some management factors affecting cherry production. Diseases and insects and their control. Chemical and physiological changes in cherry fruits. Fruit maturity and fruit handling. Factors affecting the post-harvest life of the cherry Pretransit treatment and transportation. Preservation by canning. Preservation by freezing. Brined cherries and their products. Cherry juice. Dehydration of cherries. Standards and grades for cherries. Author index. Subject index.

Note A very compact presentation based on the literature and keyed throughout to citations of source articles. Although horticultural information—some of it rather detailed—is included, economic aspects and food technology are emphasized. Results reported in literature published as late as 1953 are included. The book will be valuable to such technicians as the research personnel of canneries and frozen-food processing plants, county agricultural agents, and specialists in economic crops.

MATLACK, MARION BROOKS

Instructions on processing for community frozen food locker plants. Revised edition. Washington D C. Government Printing Office 1948 52 p. illus. 26 cm (United States. Department of Agriculture Miscellaneous publication no 588) $0 15 7222

graphs on the chemistry physiology and technology of food and food products Z. I. Kertesz, editor) $9 75 7232

Contents (abridged): History and distribution of the apple Kind Cultivation of apples. Distribution of the apple industry in the United States and Canada. Varieties of apples. Tree characteristics. Fruit characteristics. Development and structure of the apple fruit. Some environmental and cultural factors affecting the chemical composition and physiology of apples. Chemical changes and physiology of apple fruit on the tree. Chemical changes and physiology of apple fruit after harvest: Transpiration (water loss) Carbohydrates. Acids. Nitrogen compounds. Minerals. Fats, oils, and waxes. Color compounds. Enzymes. Vitamins. Organic emanations from apples. Composition of internal atmosphere of apples. Respiration. Fruit maturity and quality. Prestorage treatments of apples. Cleaning apples. Grading apples. Wrapping and waxing apples. Carbon dioxide treatment of apples. Processing of apples. Storage of apples in fresh state. General considerations of apple products manufacture: Chemical constituents affecting products manufacture. Nutritional value of apples and apple products. Preparation and preservation of apples: Development of dried, canned, and frozen apples. Apples used for drying, canning, and freezing preservation. Fruit preparation. Preservation by drying. Preservation by canning. Preservation by freezing. Preservation with chemicals. Apple juice, sirup, and concentrate. Fermentation products of apples: Cider. Apple wine. Apple brandy. Industrial alcohol. Cider vinegar. Miscellaneous fermentation products. Jelly, butter and other apple confections. Apple pomace. Composition. Preservation. Utilization. Appendix. Author index. Subject index.

Note: In this treatise the chief emphasis is on the chemistry physiology and processing of the apple fruit after it has been harvested. However, certain preharvest aspects which affect the chemistry and physiology after harvest are discussed. The chapters pertaining to storage and to the manufacture of apple products account for more than half of the book's length. Much of the information on manufacture has been collected from such sources as patents and articles in journals. There are over 900 literature references.

SPENCER, GUILFORD LAWSON AND GEORGE P MEADE

Cane sugar handbook a manual for cane sugar manufacturers and their chemists Eighth edition, revised, rewritten, and enlarged. New York John Wiley & Sons, Inc., 1945. 834 p. illus. 22 cm. $16.50. 7233

Contents (abridged): Manufacture of raw sugar: Economic phases of the sugar industry. Raw material. Extraction of the juice. Steam plant and fuel. Purification of the juice. Chemical reagents used in sugar processes. Evaporation and heating. Preservation of the juice and sirup during shutdowns. Crystallization of the sugar. Purging, packing, and warehousing the sugar. Blackstrap molasses and edible sirups. Keeping and refining qualities of raw sugar. Sugar refining. Sugar analysis and chemical control of the factory: Sugars and other constituents of the cane. Optical methods in sugar analysis. Double polarization methods—Clerget sucrose. Chemical methods in sugar analysis. Hydrogen-ion (pH) control. Color and turbidity in sugar products. Sampling and averaging. Analyses of the sugar cane. Analyses of the juice. Analyses of the sirup, massecuites, and molasses. Analyses of sugars. Analysis of the filter press cake. Analysis of the bagasse. Checking factory waste and boiler feed water for sugar. Definitions and expressions used in sugar house work. Chemical control. Sugar house calculations. Methods of cane purchase. Fermentation and microorganisms in sugar manufacture and refining. Analyses of limestone, lime, sulfur, and sulfurous acid. Analyses of flue gases. Special reagents. Reference tables. Index.

Note: A technical survey of the various phases of cane sugar manufacture and refining, written primarily for the control chemist. This edition has been considerably enlarged with introduction of the material on the theory and practice of crystallization in cane, blackstrap molasses and edible sirups, and the manufacture of refined sugars. Other chapters on methods of cane purchase, composition of cane, uses of bagasse, warehousing of sugar, and vegetable carbon processes in refining have been revised and expanded.

STORCK JOHN AND WALTER DORWIN TEAGUE

Flour for man s bread a history of milling. Illustrated by Harold Rydell. Minneapolis University of Minnesota Press, 1952 382 p. illus. 27 cm. $7.50 7234

Contents: The hoe [illegible] shall follow. Dust makes the man. The grinding of wild grains begins. Grain cultivation begins. Farming and milling tools appear—and bread. The grain empires. Milling becomes [illegible] business. Water turns the millstones. Man masters the [illegible] for milling. Man [illegible] new power resources. Milling comes to America. Oliver Evans invents the automatic mill. Westward ho! Automatic milling and the powder start [illegible] revolution in American milling. Rollers and gradual reduction advance the milling revolution. The automatic all-roller gradual-reduction mill completes the revolution. The business side of milling gains importance. The modern mill and its flour. The new era of organization and research. Looking forward. Vocabulary of milling terms. References and notes. Index.

Note: A well-documented, popular history of the development of flour milling. The main theme [illegible] the chain of improvements in technical processes from the earliest hand-stone methods to the highly mechanized, efficient, and sanitary modern mill. In the early chapters, [illegible] here the authors have leaned heavily on archeological accounts of early civilizations, the account has [illegible] decided antiquarian flavor. In the later chapters, there is more emphasis on major inventions and the contributions of prominent millers. Also, there are frequent mentions of the names of large milling companies in the United States of America. The book is an outgrowth of [illegible] project [illegible] hence, liberal use is made of illustrated matter including not only pictures but also few charts and maps. The References and notes are arranged according to chapter and constitute bibliography of source materials on flour milling.

TANNER, FRED WILBUR

The microbiology of foods. Second edition. Champaign Ill Garrard Press, 1944 1 196 p. illus. 24 cm. $12.50 7235

Contents: Food preservation. The bacteria. Yeasts and molds. Bacteriology of water and sewage. Microbiology of milk. Bacteriological milk analyses. Pasteurization of milk. Microbiology of cream and butter. Microbiology of cheese. Microbiology of frozen desserts, ice cream, and similar products. Microbiology of concentrated milk. Fermented milks. Intestinal microbiology. Microbiology of fruits and fruit products. Microbiology of vegetables and vegetable products. Microbiology of tomato products. Microbiology of bread. Fermented foods. Microbiology of sugar and sugar products. Microbiology of fish and shellfish. Meat and meat products. Microbiology of eggs and egg products. Microbiology of canned foods. Microbiology of miscellaneous food products. Microbiological methods of assaying food for vitamins. Culture media. Index.

Note: The book is both [illegible] comprehensive manual of tests and methods of analysis and [illegible] guide to the literature. In this second edition, the subjects of mycology and microbiology has been greatly expanded. All of the major methods of analysis found up to the time of the preparation of this edition have been included with full discussion and details.

TRESSLER, DONALD KITELEY AND CLIFFORD F EVERS

The freezing preservation of foods. Second edition revised and enlarged. Westport, Conn. The Avi Publishing Company Inc., 1947 932 p. illus. 21 cm. 7236

Contents (abridged): Food freezing—present importance and potentialities. Cold storage, sharp freezers and sharp freezing. Quick freezing and the quick freezing systems. Freezing cabinets and walk-in freezers. Frozen food locker plants. Packaging materials and problems. Adaptability of vegetables and vegetable varieties to freezing. The freezing of vegetables. Adaptability of fruits to freezing. The preparation for freezing and freezing preservation of fruits. The manufacture and freezing of fruit juices. The preparation of foods for home freezing. The preparation and freezing of meat—poultry—fish—shellfish. The freezing of dairy products. Precooked frozen foods. The storage, transportation and marketing of frozen foods. The nutritive value of frozen foods. The cooking and serving of frozen foods. The microbiology of frozen foods. The importance of quality control and standards in the frozen foods industries. Appendix. Index.

Note: The standard presentation of this subject for use in the commercial industry. In spite of the fact that the emphasis is on commercial practices, the book does contain directions which are presented simply enough so that they can be followed by householders interested in full-scale freezing for their own use. The

PARKER, MILTON E, AND OTHERS

Elements of food engineering By Milton E Parker with the collaboration of Ellery H Harvey and E S Stateler Volume one. New York Reinhold Publishing Corporation, 1952 386 p illus 24 cm $8.50 7227

Contents Engineering factors in food processing. Agricultural and nutritional aspects of food production. Foods and food processing. The food-processing industry Refined foods processing Wheat and corn flours—rice and oats milling—minor cereal flours—fats and oils—sugars, syrups, starches, and gums—food protein derivatives—spices, essential oils, condiments, and flavoring extracts—beverages and fermentation products—salts. Index.

—— Volume two-three, Unit operations By Milton E Parker, with the collaboration of Ellery H Harvey and E S Stateler New York Reinhold Publishing Corporation 1954 2 v 24 cm. Vol 2, $8 50, vol 3, $6 75 7227A

Contents Volume two. Section I, Assembly of raw materials: Materials handling. Separating. Section II, Preparation of raw materials Cleaning. Separating (continued) Disintegrating. Separating (continued) Pumping. Section III, Conversion of raw materials Mixing. Heat exchange. Heating applications. Refrigerating applications. Index. Volume three. Section III, Conversion of raw materials (continued): Evaporating and distilling. Dehydration and drying. Controlling. Section IV Treatment of final products Coating, decorating, and forming. Packaging—materials—methods. Index.

Note. A treatise on the engineering aspects of present-day large-scale food processing, designed for study and reference use by college students who are preparing for technical positions in the food processing industries and by engineers and technicians already employed in these industries. The first volume is devoted largely to technical descriptions of processes and products of principal segments of the industry The other two volumes provide rather detailed descriptions of the unit processes and the machinery used in the industry The chapters on packaging contain numerous illustrations of typical packages.

PARKER, MILTON E

Food plant sanitation. New York Mc Graw Hill Book Company, Inc, 1948 447 p illus. 23 cm (McCraw Hill series in food technology L. V Burton chairman) $7.50 7228

Contents Role of sanitary practice in quality control. Sanitary aspects of buildings and equipment. Sanitary aspects of water supply Wastes disposal and utilization. Establishment and development of sanitary practices. Employee training in sanitary practices. Maintaining sanitary practices. Salient legal aspects of pest control. Safe and effective insect control. Safe and effective rodent control. Fungicides, germicides, and sanitizers. Effective detergency Effective cleaning practice and operations. Sanitary packaging practice. Sanitary aspects of packaging materials. Appendix Excerpts from U S laws and regulations. Index.

Note A practical guide to the techniques of sanitary food handling, from the time the raw material is received at the factory until it is processed and packaged ready for delivery The book is based on a study f current practices and will be of value to anyone connected with the food industries. It discusses general methods for establishing and maintaining sanitary conditions in food plants and offers specific instructions for pest control measures and the provision of physically clean and sanitary food contact surfaces. The discussions of the relative effectiveness of various insecticides, detergents, cleansers and packaging materials are useful feature of the book.

PRESCOTT, SAMUEL CATE, AND BERNARD E PROCTOR

Food technology New York McGraw Hill Book Company Inc., 1937 630 p illus. 23 cm. $9 00 7229

Contents Introduction. Wheat and milling. Corn and corn products. Minor cereals. Vegetables. Fruits. Sugars and sirups. Meat and meat products. Fish and fish products. Poultry and eggs. Milk. Dairy products. Baking. Canning. Refrigeration. Dehydration. Salt, vinegar and pickled products. Vegetable oils, mayonnaise. Fruit juices. Jellies and jams. Confectionery Coffee, tea, and spices.

Note. The material in this volume is based largely on courses given by the authors at the Massachusetts Institute of Technology chemistry and engineering in the preparation of food products. It deals with the economic applications of biology physics, and discusses the sources, preparation for market, and methods of quantity handling of various types of foods. The fundamental principles of manufacturing and treatment, rather than detailed descriptions of individual processes, are emphasized.

PYLER, ERNST JOHN

Baking science and technology, by E J Pyler In collaboration with the staff of the Siebel Institute of Technology, in two volumes Chicago, Ill. Siebel Publishing Company, 1952 2 v illus. 24 cm $15 00 7230

Contents (abridged) Volume I. Part I, Basic science: The carbohydrates. Fats and oils. The proteins. The enzymes. The vitamins. Yeast, molds and bacteria. Part II, Materials of baking: Wheat flour Miscellaneous flours. Sugars and syrups. Plastic baking fats. Milk and milk products. Eggs and egg products. Bibliography I. Volume II Part III, Baking technology: Dough mixing. Fermentation. Dough make-up. The baking process. Rye bread production. Physical and chemical testing methods. Part IV Aspects of cake baking: Cake ingredients. Flavor Cake baking technology Part V Bakery equipment. Flour handling equipment. Dough handling equipment. Oven equipment. Cooling, slicing and wrapping equipment. Bakery sanitation. Appendix. Bibliography II. Subject index.

Note A comprehensive account of the basic principles and processes underlying the baking industry and of the chief ingredients used. It is based on Siebel's *Manual for bakers and millers*, 1924, but the material has been so thoroughly revised and rewritten as to constitute new work. Emphasis is placed on bread making, but other types of baking are also discussed from the point of view of the chemical reactions involved, the quality and properties of the ingredients, and the equipment and techniques employed. Numerous photographs of bakery equipment and an extensive bibliography are included.

SHERMAN, HENRY CLAPP

Food products. Fourth edition. New York The Macmillan Company, 1948 428 p. illus. 22 cm. $5 50 7231

Contents. The chief constituents and functions of food. General principles of food, control and management. Milk. Milk products other than butter. Eggs. Meats and meat products. Poultry game, fish, and shellfish. Grain products. Vegetables. Fruits. Nuts. Edible fats and oils. Sugars, sirups, and confectionery Food adjuncts, unclassified food materials, and extra foods. The problem of the best use of food—with some aspects of food economics. Appendices Simple statistical treatment of data. Food values and their variations. Index.

Note: A broad study of foods and food products. The typical chapter deals with single type of food and includes. (1) an account of its production and market preparation, plus details of marketing and storage methods, and discussion of its relative economic importance, (2) sanitation, inspection and purity standards, (3) general composition, mineral content, and structural items, (4) special characteristics, digestibility nutritive value, and dietary importance. Several pages following each chapter are devoted to recommended reference and suggested readings covering all aspects of the subject—nutritional, chemical, and technological. Revision of these reading lists and modification of the tabulated data concerning amino acids in food proteins represent the major changes in this edition. The volume is designed for professional dietitians, college students of nutrition, and the advanced general reader.

SMOCK, ROBERT MUMFORD, AND A M NEUBERT

Apples and apple products. New York Interscience Publishers Inc. 1950 486 p. illus. 22 cm. (Economic crops a series of mono-

The treatment of some topics is brief; for instance, there are only five pages on insect pests. On the other hand, abundant literature references are given, there being nearly 400 such in the book. Topics related to marketing, for example ripening methods, are treated more fully but even in these parts only the main facts are outlined.

VON LOESECKE, HARRY WILLARD

Drying and dehydration of foods. Second edition. New York Reinhold Publishing Corporation, 1955 300 p. illus. 22 cm. $7.50 7243

Contents: Types of dehydrators. Sun-drying and dehydration of fruits. Dehydration of vegetables. Dehydration of eggs, milk, butter and cheese. Dehydration of meat, fish, beef blood and gelatin. Dehydration of miscellaneous foods. Plant sanitation. Nutritive value of dried and dehydrated foods. Packaging and storage. Reconstitution of dehydrated foods; some analytical methods. Index.

Note: Publication of the first edition of this book in 1943 established it as the standard American treatise on its subject. The second edition has the same scope as the first. The book is a survey of published literature and experience, and is written from the standpoint of the commercial food preservation industry. Most of the chapter titles in the second edition are identical with those in the first, and the length of the book is about the same. However, the revision has been thorough, and new matter appears in most chapters. One chapter in the former edition, that on costs, has been dropped, and a new chapter entitled "Dehydration of miscellaneous foods" has been inserted in its place. Data on production have been revised, and many new techniques are described. The literature references have been revised in accordance with the changes in the text.

WINTON, ANDREW LINCOLN AND KATE BARBER WINTON

The analysis of foods. With 208 illustrations. New York John Wiley & Sons, Inc., 1945 999 p. illus. 22 cm. $16.50. 7244

Contents: Introduction. Part I, General microscopic methods. General physical methods. General chemical methods. Organic elements. Constituent groups—water (volatile matter), protein, fat (ether extract); nifext (nitrogen-free extract); fiber; ash. Water. Protein. Fat. Nifext. Fiber. Ash. Alcohols. Vitamins. Natural colors. Artificial colors. Chemical preservatives. Part II, Special methods. Cereal foods. Fatty foods. Vegetable foods. Fruit foods. Saccharine foods. Alcoholic beverages. Dairy products. Animal foods. Alkaloidal products. Food flavors. Leaven. Salt. Index.

Note: A comprehensive manual of both official and nonofficial chemical methods for qualitatively and quantitatively determining the basic constituents of foods. The necessary laboratory apparatus and stock reagents are discussed, and physical methods of analysis such as those involving the use of the microscope, refractometer, polariscope, and colorimeter are also mentioned. Procedures are described in great detail to enable the laboratory worker to follow them correctly. Some very common methods and tests that are adequately described in other standard analytical manuals, for example, the Liebig method for determination of carbon and hydrogen, are not covered. Extensive lists of the international literature appear throughout the book, and the text is keyed to them. The work is designed as a reference book for professional analytical chemists and as a textbook for advanced chemistry students.

ZIEGLER, P THOMAS

The meat we eat. Fourth edition, revised. Danville Ill. The Interstate Printers and Publishers 1956 553 p. illus. 23 cm. $4.00. 7245

Contents (abridged): Part one: Federal and state meat inspection. Hog slaughter. Cattle slaughter. Lamb slaughter. Veal and calf slaughter. Packing house by-products. The preservation, smoking and storing of meats. Cold storage and refrigerated food lockers. Dressing poultry and game. Part two: Meat as a food. Federal meat grading. Cutting pork and rendering lard. Sausages. The beef carcass. Preparing and serving meats. Meat judging. Meat identification. Appendix: Organizations that promote meat. Index.

Note: A practical manual in which most of the space is given to descriptions of slaughtering methods adaptable to farms and small slaughter houses and to the preparation of meat for use as human food. Such techniques as the slaughtering of hogs and the cutting up of the carcass are described very specifically. Related matters, such as the value of meat as food and governmental grading and inspection of meat, are discussed more briefly. There are more than 233 figures, many of which are reproductions of photographs of slaughtering and cutting-up operations. Selected literature references are included.

appendix includes a range of useful information on such topics as standards for frozen foods, tests for quality and laws relating to the operation of frozen food locker plants. A third in edition in two volumes was published in 1937 Vol. I Fresh Foods, $12.00 Vol. II, Precooked and prepared foods, $10.00.

TRESSLER, DONALD KITELEY, AND JAMES McW LEMON

Marine products of commerce, their acquisition, handling, biological aspects and the science and technology of their preparation and preservation In collaboration with A. E Alexander and others Second edition, revised and enlarged. New York Reinhold Publishing Corporation, 1951 782 p illus. 24 cm. $20 00 7237

Contents (abridged) The ocean, its potentialities and products. Salt from sea water Magnesium, bromine and other products from sea water The red algae of economic importance. The brown algae. The precious coral industry Economic importance of the world' fisheries. American fishing gear and fishery methods. Fish and shellfish as food. Refrigeration and freezing of fish. The principles of fish salting. Canning of fish and fish products. Fish meal and oil. Fish liver oils. Fish glue and isinglass. Manufacture of leather from marine sources. The oyster industry of the world. The clam industry of the United States. The American shrimp industry The lobster fishery Marine turtles and terrapins. The whaling industry Seal fisheries. Commercial sponges. Index.

Note A cyclopedic reference book that is unique in its field. The first edition was published in 1923 The viewpoint and scope of the present edition are essentially the same as the first, but the contents f the book are new Under chapter titles, such as are given above, both economic and technical information are presented. The chapters are supplemented by bibliographies that include the periodical and patent literature.

TURNBOW, GROVER DEAN, AND OTHERS

The ice cream industry by Grover Dean Turnbow, Paul Hubert Tracy and Lloyd Andrew Raffetto Second edition. New York John Wiley & Sons, Inc., 1947 654 p illus. 24 cm. $7 00 7238

Contents. The history and development of the ice cream industry Classification and recipes. Composition of the mix. Selection of milk products. Sweetening agents. Mix stabilizers. The use of eggs in ice cream. Standardization of ice cream mixes. Mix preparation. Freezing ice cream with the batch freezer Freezing ice cream with the continuous freezer Flavoring ice cream. Hardening ice cream. Packaging and delivering. Ice cream specialties and novelties. Sherbets and ices. Sanitary control of ice cream plants. Washing and sanitizing. Food value of ice cream. Ice cream defects. Physical and chemical properties of ice cream mixes. Merchandising. Plant costs and records. Engineering in the ice cream plant. Laboratory tests used in the ice cream industry Appendix. Index.

Note A comprehensive treatise on commercial methods f manufacturing and marketing ice cream. It is suitable for use both as a text in organized courses in schools and as reference manual in the industry The present edition represents an extensive rewriting and enlargement of the first edition published in 1928. New material has been added on the composition and standardization of mixes, the selection of ingredients, freezing, hardening, packaging, delivery sanitary control, and merchandising. Reference lists f related literature, some f them containing as many as 150 entries, are appended to most of the chapters. The authors are former or present university professors.

UNITED STATES AGRICULTURAL RESEARCH ADMINISTRATION

Experimental compression of dehydrated foods Washington D C Government Printing Office 1948 57 p illus. 26 cm (United States Department of Agriculture. Miscellaneous publication 647) Gratis 7239

Contents Introduction. Definitions of terms. General problems in food compression. Procedures and equipment. Results of compression studies on specific dehydrated vegetables. Compression of specific dehydrated fruits. Compression of spray-dried whole egg powder Results of compression tests on cereal and soya flours. Summary of compression conditions for specific foods and volume reductions effected by compression. Storage behavior of compressed food products. Preliminary experiments on the use of in-package desiccants with compressed dehydrated foods. Prescribe compression. Unsolved problems. Literature cited.

Note This publication reports the results of investigations on compressed dehydrated foods undertaken during World War by the Bureau of Agricultural and Industrial Chemistry the Bureau of Plant Industry Soils, and Agricultural Engineering, and the Bureau of Human Nutrition and Home Economics. Problems of handling, transportation, and storage of food for overseas shipments led to the need for reducing the bulk of such foods as far as possible. The experiments were carried on over a two-year period. The results form a groundwork for further advances in food-compression techniques.

UNITED STATES PUBLIC HEALTH SERVICE

Manual of recommended practice for sanitary control of the shellfish industry Recommended by the United States Public Health Service 1946 Prepared by direction of the Surgeon General. Washington, D C. Government Printing Office, 1946 44 p illus. 23 cm (United States. Public Health Service. Public health bulletin no 295) $0 15 7240

Contents Introduction. General administrative procedures. Definitions. Growing areas. Harvesting and handling. Preparing for market, processing Shucking and packing plant. Shucking room. Packing and shipping room. Index.

Note A guide for state and local health authorities who exercise supervision over the sanitary quality of shellfish shipped in interstate commerce. It enumerates and describes the specific items of sanitation recommended.

VAN HOOK, ANDREW

Sugar its production technology, and uses. New York The Ronald Press Company, 1949 155 p illus. 22 cm. (A volume of the Humanizing science series edited by Jaques Cattell) $3 25 7241

Contents Sugar and the sugars. Production—cane Production—beet. Commercial and trade aspects By-products. recent and anticipated developments. History Index.

Note. This book brings together in readable form, with many illustrations, the essential facts about the growing, processing, and refining of sugar the scientific basis of its technology its uses both present and potential, and brief history of sugar from ancient times to the present day It is especially suited for those outside the sugar industry who want or need well-rounded picture of the sugar industry and its background.

VON LOESECKE, HARRY WILLARD

Bananas chemistry physiology technology Second revised edition New York Interscience Publishers Inc 1950 189 p illus. (part col d) 22 cm (Economic crops a series of monographs on the chemistry physiology, and technology of food and food products Z. I Kertesz, editor Volume I) $6 00 7242

Contents. History and growth of the trade. Structure and development. Commercial storage and ripening methods. Banana physical changes during ripening. Transportation of bananas. Chemical products. Nutritive value in health and disease. Diseases and insect pests of bananas. World banana production and trade. Author index. Subject Index.

Note. An inclusive survey of economic, horticultural, and nutritional information on one of the world's most important fruits.

The treatment of most topics is brief; for instance, there are only three pages on insect pests. On the other hand, abundant literature references are given, there being nearly 400 such in the book. Topics related to marketing, for example ripening methods, are treated most fully but even in these parts only the main facts are outlined.

VON LOESECKE, HARRY WILLARD

Drying and dehydration of foods. Second edition. New York Reinhold Publishing Corporation, 1955 300 p. illus. 22 cm. $7.50 7243

Contents: Types of dehydrators. Sun-drying and dehydration of fruits. Dehydration of vegetables. Dehydration of eggs, milk, butter and cheese. Dehydration of meat, fish, beef blood and gelatin. Dehydration of miscellaneous foods. Plant sanitation. Nutritive value of dried and dehydrated foods. Packaging and storage. Inspection of dehydrated foods, some analytical methods. Index.

Note: Publication of the first edition of this book in 1943 established it as the standard American treatise on its subject. The second edition has the same scope as the first. The book is a survey of published literature and experience, and is written from the standpoint of the commercial food preservation industry. Most of the chapter titles in the second edition are identical with those of the first, and the length of the book is about the same. However, the revision has been thorough, and new matter appears in most chapters. One chapter in the former edition, that on costs, has been dropped, and a new chapter entitled "Dehydration of miscellaneous foods" has been inserted in its place. Data on production have been revised, and many new techniques are described. The literature references have been revised in accordance with the changes in the text.

WINTON, ANDREW LINCOLN AND KATE BARBER WINTON

The analysis of foods. With 208 illustrations. New York John Wiley & Sons Inc. 1945 999 p. illus. 22 cm. $16.50 7244

Contents: Introduction. Part I, General microscopic methods. General physical methods. General chemical methods. Organic elements. Constituent groups—water (volatile matter); protein; fat (ether extract); nifext (nitrogen-free extract); fiber; ash. Water. Protein. Fat. Nifext. Fiber. Ash. Alcohols. Vitamins. Natural colors. Artificial colors. Chemical preservatives. Part II, *Special methods.* Cereal foods. Fatty foods. Vegetable foods. Fruit foods. Saccharine foods. Alcoholic beverages. Dairy products. Animal foods. Alkaloidal products. Food flavors. Leaven. Salt. Index.

Note: A comprehensive manual of both official and unofficial chemical methods for qualitatively and quantitatively determining the basic constituents of foods. The necessary laboratory apparatus and stock reagents are discussed, and physical methods of analysis such as those involving the use of the microscope, refractometer, polariscope, and colorimeter are also mentioned. Procedures are described in great detail to enable the laboratory worker to follow them correctly. Some very common methods and tests that are adequately described in other standard analytical manuals, for example, the Liebig method for determination of carbon and hydrogen, are not covered. Extensive lists of the international literature appear throughout the book, and the text is keyed to them. The work is designed as a reference book for professional analytical chemists and as a textbook for advanced chemistry students.

ZIEGLER, P THOMAS

The meat we eat. Fourth edition revised. Danville Ill. The Interstate Printers and Publishers, 1956 553 p. illus. 23 cm. $4.00 7245

Contents (abridged): Part one: Federal and state meat inspection. Hog slaughter. Cattle slaughter. Lamb slaughter. Veal and calf slaughter. Packing house by-products. The preservation, smoking and storing of meats. Cold storage and refrigerated food lockers. Dressing poultry and game. Part two: Meat as a food. Federal meat grading. Cutting pork and rendering lard. Sausages. The beef carcass. Preparing and serving meats. Meat judging. Meats identification. Appendix: Organizations that promote meat. Index.

Note: A practical manual in which most of the space is given to descriptions of slaughtering methods adaptable to farms and small slaughter houses and to the preparation of meat for use as human food. Such techniques as the slaughtering of hogs and the cutting up of the carcass are described very specifically. Related matters, such as the value of meat as food and governmental grading and inspection of meat, are discussed more briefly. There are more than 330 figures, many of which are reproductions of photographs of slaughtering and cutting-up operations. Selected literature references are included.

TEXTILES

AMERICAN VISCOSE CORPORATION

Rayon technology (including acetate) handbook for textile mills. Prepared by the Textile Research Department, American Viscose Corporation Second edition. New York McGraw Hill Book Company, Inc., 1953 344 p illus 23 cm. (Textile technology series. C W Bendigo consulting editor) $7 00 7246

Contents Rayon and acetate on the cotton system—worsted system—woolen system. Rayon and acetate from yarn to fabric. Standard fabric constructions. Rayon and acetate in knitting mills—dyeing and finishing. Industrial applications. Textile chemicals. Appendix. Index.

Note The methods of processing rayon and acetate staple into yarn the preparation of their yarns for weaving and knitting operations dyeing, and the calculations involved in producing the finished fabric are covered in detail in this book. The chapter on industrial applications covers uses of these fibers in such classes of goods as rubber paper and plastics. The book is intended for mill men and other technical personnel already familiar with the textile technology of cotton silk and wool. The first edition was published in 1948. This second edition contains two new chapters and many revisions in the chapters carried over from the first edition.

ATWATER, MARY MEIGS

The shuttle-craft book of American hand weaving, being an account of the rise devel opment, eclipse, and modern revival of a na tional popular art together with information of interest and value to collectors, technical notes for the use of weavers & a large collec tion of historic patterns With illustrations Revised edition. New York The Macmillan Company 1951 341 p illus. 23 cm. $7 50 7247

Contents Origins and development. Weaving horizons—the scope of this book. Beginner's problems. Design of the fabric. Choice of pattern and color. Setting up the loom. Adjustments, knots, the tie-up. Weaving. The plain weave. The twill weave. The four harness overshot weave. Additional four-harness weaves. The summer and-winter weave. The "spot or Bronson weave. Double-faced twill and damask. The double weave. Leno. Rug-making. Pick-up weaving Finishes. Index.

Note This is the completely revised edition of standard handbook on American weaving first published in 1928. It gives an account of the history of hand-weaving, its origin, development, decline, and modern revival It also gives instructions for weaving and other information including advice on the choice of looms and materials. Patterns for weaving are presented in technical diagrams and in photographic reproductions. Writing on the basis of long experience with the craft of hand-weaving, the author gives detailed directions for the fundamental processes, gives accounts of the weaves and patterns current in colonial North America, and supplies information on weaves from the southwestern United States of America, Mexico, Guatemala, and Peru. The author does not endeavor to cover Scandinavian weaving, tapestry weaving, draw loom weaving, or fly-shuttle weaving. Although beginners without other instruction may find the work somewhat advanced, the book is to be recommended for any persons seriously interested in the practice of hand-weaving.

BENDURE, ZELMA, AND GLADYS PFEIFFER

America's fabrics, origin and history, manufacture characteristics and uses. Photographic layout by Crystal Stephen, fabric photographs by Nat Messik. New York The Macmillan Company 1946 688 p. illus. (part col'd) 24 cm $10 00 7248

Contents. America's fabrics. Wool. Cotton. Linen. Minor vegetable fibers. Silk. Rayon. Other synthetics. Asbestos. Yarn. Weaving. Knitting. Twisting. Felting. Chemistry Pretreatments. Dyeing. Printing. Finishing. Home fabrics. Fabrics defined. Testing and standards. Index.

Note. An encyclopedic survey designed to provide information for persons who are not specialists in textile technology such as students, manufacturers who use fabrics, interior decorators, consumers, and persons connected with the selling of textile products. A wide range of information is covered from how the basic fibers are produced to the qualities and uses of the finished fabrics. Fabrics of minor importance are included along with those of major importance. The book is lavishly illustrated with views of textile machinery manufacturing operations, and fabrics.

BERKLEY, EARL ESCO, AND OTHERS

Structure determined by X ray and strength of cotton fiber, by Earl E Berkley, Orville C. Woodyard, H. D Barker Thomas Kerr, and C J King Washington D C. Government Printing Office, 1948 64 p. illus. 23 cm. (United States. Department of Agriculture Technical bulletin no. 949) Gratis. 7249

Contents. Experimental background of X-ray method. Relation to yarn strength. Influence of growing conditions. Influence of species and varieties. Outline of X-ray method. Literature cited.

Note. In comparing cotton samples for selection in breeding, the X-ray method supplements rather than replaces strength methods. The X-ray technique serves also as a research tool in determining reasons for differences in strength and other properties and in comparing natural and synthetic fibers. This study on the development of the X-ray method shows X-ray measurement to be valuable tool in cotton-breeding and general fiber-research. The pamphlet is illustrated by tables, graphs, charts, and photographs.

BLACK, MARY E

Key to weaving a textbook of hand-weaving techniques and pattern drafts for the beginning weaver Revised and enlarged. Milwaukee The Bruce Publishing Company 1949, 324 p illus. 27 cm. $6 50 7250

Contents. The loom. Preparing the loom. General information. Two-harness weaves. Three-harness weaves. Four-harness weaves. Five-harness weaves. Six-harness weaves. Eight-harness weaves. Weaving homespuns. Floor coverings. Bibliography. Glossary of weaving terms. Weaving terms in foreign languages. Index.

Note The author of this detailed and fully-illustrated text is Director of the Handicrafts Division, Department of Trade and Industry Nova Scotia. As indicated, the book is written for the beginner and provides descriptions of the various types of looms and methods of setting them up. The greater part of the volume, however consists of instruction for weaving specific patterns and varieties of textures. In this edition new material has been added on warping, threading, two-harness weaving, and weaving of narrow webs on wide looms. The final chapter on floor coverings is also new.

Textiles

CARMICHAEL, W L., AND OTHERS

Callaway textile dictionary by W L. Carmichael, George E. Linton, and Isaac Price. La Grange, Ga. Callaway Mills 1947 392 p. illus. 20 cm. $4.00. 7251

Note. Between 5,000 and 6,000 terms are defined in this dictionary. The average definition is less than [illegible] in length, and is generally simple and non-technical. The compilers have confined themselves to the component of woven fabrics and yarns, including the processes of dyeing and finishing, and the nature and manufacture into finished [illegible] of natural and synthetic fibers. In addition to these definitions, many colors and trade chemicals are included and are defined from a textile point of view. There are approximately 25 illustrations showing textile raw materials, processing machinery and typical weaves.

HARRIS, MILTON editor

Handbook of textile fibers. Washington, D. C. Harris Research Laboratories, Inc., 1954 356 p. illus. 28 cm. $12.50 7252

Contents: Textile terms and definitions. Fiber types and sources. Composition and structure of textile fibers. Chart of fiber properties. Physical properties of textile fibers. Chemical properties of textile fibers. Effect of biological agents. Identification of textile fibers. Yarn numbering and count systems. Chemical and engineering tables. Economic and production data. List of textile periodicals. Index.

Note: A useful though somewhat miscellaneous compilation of commercial and technical information. The glossary defines approximately 1,200 terms; the lists of man-made fibers give names of manufacturers in the United States of America and other countries, and the section entitled "Composition and structure of textile fibers" includes 14 microphotographs of cross sections and longitudinal views of textile fibers. The sections on physical and chemical properties cover [illegible] wide range of data and are the heart of the volume. Together they are 136 pages long. The economic and production data are worldwide.

HESS, KATHARINE PADDOCK

Textile fibers and their use. Fifth edition. Chicago J B Lippincott Company 1954 547 p. illus. 21 cm. $5.50. 7253

Contents (abridged). Section one, Textile construction, finish and design: How fabrics are constructed. How yarns are constructed. How processing alters and reduces cloth. How dyes are applied to textiles. How design is obtained in fabrics. Section two, The textile fibers. Textile fibers—their classification and essential properties. Cotton and flax. Wool and other hair fibers. Silk, the queen of fabrics. Asbestos, other seed hairs. Linen and other bast and leaf fibers. Synthetic fibers—science in competition with nature. Section three, Textiles and the consumer. The consumer and the textile market. How to select fabrics for clothing and household use. The care of fabrics. Appendix. Index.

Note: Although primarily [illegible] textbook for college courses in home economics, this book [illegible] used also for information by lay consumers of textiles. It is introductory to the study of textile fibers, but presents nevertheless [illegible] wide range of facts on not only fibers and their properties, but also on their processing. The latter chapters on selection and care are written strictly from the consumer viewpoint. The first edition was published in 1931 and the fourth edition in 1948. The fifth edition is the result of considerable revision, particularly in the discussions of such topics as the synthetic fibers and special finishes for fibers and fabrics.

HEYN A. N J

Fiber microscopy a textbook and laboratory manual. New York Interscience Publishers Inc. 1954 419 p. illus. 18 cm. $5.50 7254

Contents: The microscope and its manipulation. Preparation and examination of the untreated fiber. Cotton. Flax and hemp. Ramie and jute. Mounting and staining of whole fibers. Microscopy. Recording of observations. Wool and other animal hair fibers. Hand sectioning. Rayons. Resolving power. Silk. Mechanical sectioning. Bast fibers. Leaf fibers. Regenerated protein and alginate fibers. Synthetic fibers. Mineral fibers and starches. Fiber identification. Polarizing microscope—investigation of submicroscopic structure. Special optical methods. List of reagents. Index. Selected fibers—photomicrographs.

Note: An introduction to the use of the microscope in textile testing and manufacturing. It was written for use as [illegible] textbook and is organized so that it can be used as [illegible] elementary as well as advanced course. The exposition of most points is sufficiently explicit and clear so that the reader [illegible] he must study the subject by himself can use the book to advantage, especially if he has access to laboratory apparatus. The author [illegible] he is [illegible] member of the faculty of the School of Textiles of Clemson College, has included literature references and other material [illegible] which has reference value for laboratory technicians already at work in the field.

JACKSON LLOYD HAROLD

Yarn and cloth calculations. New York Textile Book Publishers, Inc., 1947 198 p. illus. 21 cm. $4.25 7255

Contents: Yarn numbering systems. Converting from one yarn system to another. Ply yarns and resultant counts. Grey cloth calculations. Warp calculations. Filling calculations. Cloth calculations. Theory of fabric construction. Calculations based on fabric tests. Fabric analysis. Index. Engineering constants for textile equipment.

Note: A practical and valuable tool for anyone connected with the manufacture of textile fabrics or who is studying to enter the industry. It explains the various yarn systems and illustrates the mathematical calculations relating to cloth construction and fabric analysis with numerous worked examples. Review problems are also given at the end of each chapter.

KASWELL ERNEST R.

Textile fibers, yarns, and fabrics a comparative survey of their behavior with special reference to wool. New York Reinhold Publishing Corporation, 1953 552 p. illus. 24 cm. $11.00. 7256

Contents: Part 1, The inherent properties of textile fibers. The tensile properties of fibers. The torsional repeated stress properties of fibers. Fiber stresses and deformations other than tensile. Friction. Moisture absorption properties of fibers. Thermal properties of fibers. The stability of fibers to environmental conditions. The microbiological properties of fibers. The dyeing characteristics of fibers. Part 2, The properties of textile structures which are dependent upon fabric geometry as well as upon inherent fiber characteristics: Yarn and fabric geometry. Compressional resilience. Thermal transmission properties of textile structures. Air permeability. Moisture transmission. Water repellency and water resistance. Crease retention, wrinkle resistance, and dimensional stability. Abrasion and wear resistance. Felting and shrinkage. Fabric soiling, soil removal, laundering, and dry cleaning. Fabric hand. Fabric drape. Luster. Bibliography. Author index. Subject index.

Note. A reference volume of wide scope. Its origin is told in the following excerpt from the preface: In January 1950, the Wool Bureau, Inc., requested Fabric Research Laboratories, Inc., to survey the literature relative to the properties of the wool fiber, the relationship of these fiber properties to the functional characteristics of wool textiles, and to ascertain wool's relative position in the field of textile fibers. In ascertaining "wool's relative position," the author and his assistant searched the literature for technical information on all fibers, including the synthetics and have presented what they found in [illegible] compact text which is supplemented by 171 tables. If there is an unwarranted bias in favor of wool, it is difficult to find. For example, it is clearly shown that nylon is superior to wool in abrasion and wear resistance. References to the source publications are given for all important statements and data.

KETTERING JAMES H. AND RITA M KRAEMER

Commercial cotton-bleaching processes and their effect on fabrics. Washington, D C. Government Printing Office, 1947 37 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no 941) Gratis. 7257

Contents: Introduction. Literature review. Constituents removed. Mill processes. Materials. Methods of evaluating fabrics. Discussion of results. Summary and conclusions. Literature cited.

TEXTILES

AMERICAN VISCOSE CORPORATION

Rayon technology (including acetate) handbook for textile mills. Prepared by the Textile Research Department American Viscose Corporation Second edition New York McGraw Hill Book Company Inc., 1953 344 p illus. 23 cm. (Textile technology series C W Bendigo, consulting editor) $7 00 7246

Contents Rayon and acetate on the cotton system—worsted system—woolen system. Rayon and acetate from yarn to fabric. Standard fabric constructions. Rayon and acetate in knitting mills—dyeing and finishing. Industrial applications. Textile chemicals. Appendix. Index.

Note The methods of processing rayon and acetate staple int yarn the preparation of their yarns for eaving and knitting operations dyeing, and the calculations involved in producing the finished fabric are covered in detail in this book. The chapter on industrial applications covers uses of these fibers in such classes of goods as rubber paper and plastics. The book is intended for mill men and other technical personnel already familiar with the textile technology of cotton, silk and wool. The first edition was published in 1948. This second edition contains two new chapters and many revisions in the chapters carried over from the first edition.

ATWATER, MARY MEIGS

The shuttle-craft book of American hand weaving, being an account of the rise devel opment, eclipse, and modern revival of a na tional popular art together with information of interest and value to collectors technical notes for the use of weavers & a large collec tion of historic patterns. With illustrations. Revised edition. New York The Macmillan Company 1951 341 p illus. 23 cm. $7 50 7247

Contents Origins and development. Weaving horizons—the scope of this book. Beginner's problems. Design of the fabric. Choice of pattern and color. Setting up the loom. Adjustments, knots, the tie-up. Weaving. The plain eave. The twill eave. The four harness overshot weave. Additional four-harness weaves. The summer-and-winter weave. The "spot" or Bronson eave. Double-faced twill and damask. The double weave. Leno. Rug-making. Pick-up weaving. Finishes. Index.

Note This is the completely revised edition of standard handbook on American weaving first published in 1928. It gives an account of the history of hand-weaving, its origin, development, decline, and modern revival It also gives instructions for weaving and other information including advice on the choice of looms and materials. Patterns for eaving are presented in technical diagrams and in photographic reproductions. Writing on the basis of long experience ith the craft of hand-weaving, the author gives detailed directions for the fundamental processes, gives accounts of the weaves and patterns current in colonial North America, and supplies information on weaves from the southwestern United States of America, Mexico, Guatemala, and Peru. The author does not endeavor to cover Scandinavian weaving, tapestry eaving, draw-loom eaving, or fly-shuttle eaving. Although beginners ithout other instruction may find the work somewhat advanced, the book is to be recommended for any persons seriously interested in the practice of hand-weaving.

BENDURE, ZELMA, AND GLADYS PFEIFFER

America s fabrics, origin and history manufacture characteristics and uses. Photographic layout by Crystal Stephen, fabric photographs by Nat Messik. New York The Macmillan Company 1946 688 p. illus. (part col'd) 24 cm. $10 00 7248

Contents. America's fabrics. Wool. Cotton. Linen. Minor vegetable fibers. Silk. Rayon. Other synthetics. Asbestos. Yarns. Weaving. Knitting. Twisting. Felting. Chemistry Pretreatments. Dyeing. Printing. Finishing. Home fabrics. Fabrics defined. Testing and standards. Index.

Note An encyclopedic survey designed to provide information for persons ho are not specialists in textile technology such as students, manufacturers who use fabrics, interior decorators, consumers, and persons connected with the selling of textile products. A wide range of information is covered from how the basic fibers are produced to the qualities and uses of the finished fabrics. Fabrics of minor importance are included along ith those of major importance. The book is in fully illustrated with views of textile machinery manufacturing operations, and fabrics.

BERKLEY, EARL ESCO, AND OTHERS

Structure determined by \ ray and strength of cotton fiber by Earl E. Berkley, Orville C Woodyard H. D Barker, Thomas Kerr, and C. J King Washington D C. Government Printing Office 1948 64 p. illus. 23 cm. (United States Department of Agri culture. Technical bulletin no 949) Gratis. 7249

Content Experimental background of X-ray method. Relation to yarn strengths. Influence of growing conditions. Influence of species and varieties. Outline of X-ray method. Literature cited.

Note: In comparing cotton samples for selection in breeding, the X-ray method supplements rather than replaces strength methods. The X-ray technique serves also as research tool in determining reasons for differences in strength and other properties and in comparing natural and synthetic fibers. This study on the development of the X-ray method shows X-ray measurement to be valuable tool in cotton-breeding and general fiber-research. The pamphlet is illustrated by tables, graphs, charts, and photographs.

BLACK, MARY E

Key to weaving a textbook of hand weaving techniques and pattern drafts for the beginning weaver Revised and enlarged. Milwaukee The Bruce Publishing Company 1949 324 p illus. 27 cm. $6 50 7250

Contents The loom. Preparing the loom. General information. T o-harness eaves. Three-harness eaves. Four-harness eaves. Five-harness weaves. Six-harness eaves. Eight-harness weaves. Weaving homespun. Floor coverings. Bibliography Glossary of eaving terms. Weaving terms in foreign languages. Index

Note The author of this detailed and fully-illustrated text is Director of the Handicrafts Division, Department of Trade and Industry Nova Scotia. As indicated, the book is ritten for the beginner and provides descriptions of the various types of looms and methods of setting them up. The greater part of the volume, however consists of instruction for eaving specific patterns and varieties of textures. In this edition new material has been added on arping, threading, two-harness eaving, and weaving of narrow webs on wide looms. The final chapter on floor coverings is also new.

Note A comprehensive manual on the use of the microscope in textile [illegible]. The book describes the available equipment [illegible] its advantages and limitations and its application, including the preparation of specimens, new and improved techniques, fabric, yarn, and fiber analysis, etc.

SIU, RALPH GUN HOY

Microbial decomposition of cellulose with special reference to cotton textiles. New York. Reinhold Publishing Corporation, 1951 531 p. illus. 22 cm. $14.00. 7263

Contents: Part I, Introduction: Cellulose decomposition in nature. Part II, Structure and properties of cotton fabrics: Morphological, physical and chemical features of cotton fibers. Structural features of cotton fabrics. Part III, Causal organisms: Morphological and taxonomic aspects. Effect of nutritional and environmental factors on cellulolytic activity of microorganisms. Part IV Mechanism of degradation: Gross attack on fabrics. Biochemical transformation of cellulose molecules. Part [illegible] Methods of prevention: Theoretical considerations. Methods for testing microbiological resistance of cotton fabrics. Prevention of microbiological damage by physical barriers. Prevention of microbiological damage by toxic inhibitors. Prevention of microbiological damage by chemical modification. Author index. Index of microorganisms. Subject index.

Note: A synthesis of scientific information on the deterioration and destruction of cellulosic materials by bacteria and fungi. The author [illegible] discussions of basic matters, such as causal organisms, are [illegible] of interest to anyone concerned [illegible] the topic, but his [illegible] and his information on prevention of deterioration are largely restricted as the title indicates to cotton textiles. The [illegible] documentation is indicated by the fact that there are approximately 1,200 names in the author index. The author is Research Director of the Pioneering Research Laboratories of the U. S. Army Quartermaster Corps.

SKINKLE, JOHN HENRY

Textile testing physical chemical and microscopical. Second edition revised and enlarged. New York Chemical Publishing Company Inc. 1949 353 p. illus. 22 cm. $7.75. 7264

Contents: Part [illegible] Physical testing: Statistical analysis. Moisture determination. *Fiber testing. Yarn testing. Fabric testing*: construction—properties dependent upon the space—water and fabric relationships—tactile and draping qualities (handle)—serviceability, wear, abrasion. Strength and strength testing of fibers, yarns, and fabrics. Part II, Chemical testing: Introduction and general considerations. General and inorganic extraneous matter. Organic extraneous matter. *Fiber mixtures*. Swelling and damage in cellulose fibers. Damage to wool. Damage to silk. Part III, Microscopical testing: Identification. Quantitative microscopical determinations. Index.

Note: In its second edition this useful manual has been enlarged by 64 pages and improved by thorough revisions of text and format. The most important addition [illegible] scheme of analysis to identify organic matter in finishing agents, in which the presence or absence of certain groups [illegible] determined first, then each group is analyzed for its individual components. The lists of references have been extended.

SPEEL, HENRY C editor

Textile chemicals and auxiliaries. New York Reinhold Publishing Corporation 1952 493 p. 24 cm. 7265

Contents: Part I, The nature and processing of fabrics. The physical and chemical nature of fibers, by R. K. Roberts. Preparation of fibers and fabrics, by S M Edelstein and others. Chemical aspects of textile dyeing and printing. Technology of pigment application, by V W Chase. Textile finishing, by H H Mosher. Fabric stabilization, by E. C Pfeffer, Jr. Coated fabrics, by E W K Schwarz and J A Bennett. Part II, *Raw materials in fabric processing*. Water, by V J Calise. Fats, oils, and waxes, by F P Greenspan. Starches, gums and glues. Solvents and other organic chemicals, by C P McClelland. Surfactants, by K. D. Langley and E I [illegible] Soap, by G. W [illegible] Sulfated oils and fats, by R. A. Pingree. Anionic surfactants (sulfates, sulfonates and others) by J. W McCutcheon and H. C. Speel. Non-ionic surfactants, by H. C. Speel. Cationic finishing agents, by R. W Ashley. Synthetic resins, by J. E. Lynn and A. S. Nyquist. Cellulose finishes, by J. A. Clark. Water-resistant treatments, by R. A. Pingree. Flameproofing, by R. W Little. Mothproofing and mothproofing agents, by H. Luttringhaus. Miscellaneous auxiliaries, by H. C. Speel. Author index. Subject index.

Note: A handbook of basic and practical information [illegible] the emphasis on the latter. In both the chapters on processes and those on materials the presentation is descriptive and concise. However, each chapter is supplemented by an extensive bibliography. Citations of patents are included in some of the bibliographies. The book is useful as [illegible] survey for technically trained persons [illegible] *beginning* work in the textile industry and as [illegible] desk reference book for technologists already established in this industry or in the chemical manufacturing industry. A second edition [illegible] published in 1957 543 p., $13.50.

VON BERGEN WERNER, AND HERBERT R MAUERSBERGER

American wool handbook a practical text and reference book for the entire wool industry. *Second enlarged edition*. New York Textile Book Publishers, Inc., 1948. 1,055 p. illus. 19 cm. $8.80 7266

Contents: Foreword, by A. Boss. Historical and economic background. Sheep breeds—sheep raising. *Physical properties of wool*. Chemical nature and properties of wool. Specialty hair fibers. Reclaimed wools and secondary raw materials. Grading and production of wool. The marketing of wool. Sorting, scouring and carbonizing. Blending and woolen carding. Spinning woolen yarns. Worsted carding, combing, topmaking. English and French worsted drawing. Worsted yarn spinning. Processes preparatory to weaving. Weaving of woolens and worsteds. Woolen and worsted weaves. Dyeing, *bleaching and printing*. Wet finishing operations. Dry finishing operations. Manufacture of carpets and rugs. The manufacture of felts. *Physical and chemical testing*. Bibliography. Subject index.

Note: The [illegible] scope of the first edition (1938) of this book has been retained, but most chapters now include descriptions of new processes and machinery and recent data on the economics of wool production. The chemical and physical properties of wool and the latest methods developed to prevent shrinkage are presented in two chapters instead of one. Other additions include [illegible] description of continuous solvent degreasing and wool grease recovery processes, twist tables for woolen and worsted yarns, an explanation of the American system of spinning, matching of colors, and new mothproofing methods. The bibliography has been expanded from 11 to 21 pages. The work, designed primarily for use in the raw wool and textile industries, is useful also for reference in libraries.

WARD, KYLE, JR. editor

Chemistry and chemical technology of cotton. New York Interscience Publishers, Inc., 1955 782 p. illus. 24 cm. $20.00. 7267

Contents: The chemistry of the cotton: Composition, by J. D. Guthrie. Chemical properties of cotton cellulose, by C. M. Conrad. Sizing, by F G. La Piana. Bleaching, by E. I. Valko. Dyeing, by R. K. Fourt. Printing and related processing of cotton fabrics, by A. E. Hurst. Mercerization, by C. F Goldthwait. Water-resistant treatments, by *H. A. Schuyten*. Fire resistance, by J. M. Church and S. Coppick. Treatment of cotton to provide mildew and rot resistance, by G. A. Greathouse and C. J. Wessel. The use of resins for creaseproofing, shrinkproofing, glazing, and embossing cotton fabrics, by D. H. Powers. Treatment of cotton for the rubber industry by E. T Lessig and others. Testing and evaluation of cotton textiles, by R. K. Worner. The laundering of cotton fabrics, by J. F Oesterling. Chemical changes in cotton fabrics during processing and use, by J. D. Dean. Glossary. Author index. Subject index.

Note: Aside from the first chapter, this composite treatise is concerned with the chemical engineering aspects of cotton as textile material. The individual chapters are monographic in nature and are, in most cases, based on [illegible] survey of the related literature and include references to sources. On the other hand, several of the chapters contain few literature citations. The level of treatment suits the book to teaching and reference use by chemists and technicians employed in the textile processing industries. The editor is associated with the Institute of Paper Chemistry and the contributors are, for the most part, on the staffs of research organizations and manufacturing companies in the United States of America.

Note. Because of the importance of bleaching in the purification of cotton, the Southern Regional Research Laboratory of the Department of Agriculture investigated the chemistry of the various bleaching operations as applied commercially in order to improve the processes and raise the quality of the resultant fabric. The part of the program here reported is the survey of 11 representative modern commercial bleach processes. The report includes comparison of the different methods the determination of what is accomplished in each step and of the characteristics or quality of acceptable or marketable fabrics and a discussion of some measurable properties of the fabrics, especially those indicating deterioration.

LINTON, GEORGE E

The modern textile dictionary New York Duell, Sloan and Pearce, 1954 772 p illus. 24 cm. $12 50 7258

Note A reference book of broad scope within its designated field. Terms pertaining to fibers, fabrics and finishes are found along with terms pertaining to the history of costume, to laundering and cleaning of textiles, to tailoring, names of animals that produce textile fibers, names of textiles used in the chemical industry etc. The terms are arranged in alphabetical order and are defined, but etymology and pronunciation are not indicated. There are few reproductions of drawings in the text itself. In addition, there is a 32-page insert of illustrations on coated paper The pictures in this section include portraits of men who have had large influence on the textile industry photomicrographs of textile fibers, photographs of textile manufacturing operations and machines, and diagrams of fabric constructions.

MAUERSBERGER, HERBERT R , AND OTHERS

American handbook of synthetic textiles, American synthetics handbook, a practical text and reference book for the entire textile and related industries By Herbert R. Mauersberger and twenty collaborators Over 430 tables, charts flowsheets, and illustrations New York Textile Book Publishers, Inc., 1952 1,216 p illus 20 cm $9 80 7259

Contents Historical background. Economics and statistical background, by S. B. Hunt. Preparation of cellulose. Cellulosic fiber yarn and tow processes. Manufacture of nylon yarns and staple. Manufacture of synthetic fibers, filaments and yarns (other than nylon) Processing of synthetic staple. Winding, coning and filling preparation. Warping and warp sizing. Throwing and twisting, by V A. Schiffer Weaving of synthetic fabrics. Synthetic grey goods constructions. The manufacture of knit goods, by G. A. Urlaub. Dyeing of synthetics, by A. R. Macormac. Dye nomenclature, by A. R. Macormac. Synthetic piece goods printing, by H. P Newmann. Finishing of synthetic fabrics, by L. Shapiro. Performance standards for rayon fabrics, by J Labarthe, jr. Identification of synthetic fibers by X-ray diffraction, by A. N J Heyn. Books, bibliographies and literature references. Appendix. Index.

Note. The first edition of a useful reference book. It is addressed primarily to the personnel of the textile industry and is written largely in technical terminology A very wide range of information is included, running from an outline of the historical development of synthetic fibers and textiles to formulas for use in the printing of piece goods. A number of chapters contain bibliographies in addition to the general bibliography at the end of the book. The volume in hand contains approximately 100 pages of advertising which are not included in the pagination given above.

MAUERSBERGER HERBERT R editor

Matthews' textile fibers their physical microscopic, and chemical properties Sixth edition Prepared by a staff of specialists under the editorship of Herbert R. Mauersberger New York John Wiley & Sons 1954 1,283 p illus 24 cm. $18 50 7260

Contents: Introduction, by H. R. Mauersberger Cellulose—sources, constitution, and chemical properties, by P C. Scherer. Cotton—history growth, and statistics, by R. F Nickerson. Cotton fiber—microscopic characteristics, by T L. W Bailey jr Cotton fiber—physical properties, by R. F Nickerson. Cotton fiber—chemical properties, by C. F Goldthwait and J D Guthrie. The bast fibers, by B Montgomery The leaf fibers, by B. Montgomery Miscellaneous plant fibers, by A. C. Whitford. Paper fibers and yarns, by E. R. Chatterton. Wool—history grades, and statistics —Microscopic and physical properties—chemical nature and properties, by W von Bergen. Specialty hair fibers, by W von Bergen. Textile fur fibers, animal brush fibers, and down, by M. Bachrach. The silk fibers and yarns Worm silk, by C. J. Bick—Spider silk, by J G. Albright. Regenerated rayon fibers, filaments, and yarns, by A. R. Macormac. Acetate fibers and yarns, by H. D Smith and H. R. Childs. Synthetic fibers, filaments, tow and yarns, by H. R. Mauersberger Mineral or inorganic fibers and yarns Asbestos, by A. S. Rossiter—Fibrous glass and filaments, by T S. Rogers. Identification methods and quantitative fiber analysis, by W Krauss. X-ray diagrams of natural and synthetic fibers, by A. N J Heyn. Fiber-testing methods, by E. R. Schwarz. Index.

Note. Used widely as text and reference book since the publication of the first edition 50 years ago, this standard work is already known to most persons with interests in the textile field. Comparing the sixth edition with the fifth, the scope and organization are not materially changed. Two chapters, the second and third of the fifth edition, have disappeared as separate entities, and the two former chapters on identification methods and fiber analysis have been combined. The chapter on X-ray diagrams has been newly added. All other chapters of the sixth edition were represented by equivalents in the fifth edition. The amount of revision in these ranges from none at all, as in the chapter on the physical properties of the cotton fiber to a complete rewriting by new author as in the chapter on the leaf fibers (entitled "Structural or hard vegetable fibers") in the fifth edition. Obviously complete rewriting of the book has been avoided, and the old plates have been saved where possible but where new developments have made chapters or smaller sections of text obsolete, the necessary revision has been carried out.

MERRILL, GILBERT ROSCOE, AND OTHERS

American cotton handbook a practical text and reference book for the entire cotton industry, by Gilbert R. Merrill, Alfred R. Macormac and Herbert R. Mauersberger Second revised edition. New York Textile Book Publishers Inc., 1949 943 p. illus. 20 cm. $8 50 7261

Contents Historical background. Economic and statistical background of cotton growing and manufacturing, by J. R. Walker. Cellulose and the cotton fiber The cotton plant its cultivation and varieties. Ginning, cleaning and marketing. Opening and picking. Carding and combing. Drawing and roving operations. Standard and long draft spinning. Winding and twisting. Spooling, warping and slashing. Weaving of cotton grey goods. Knitgoods manufacture. Bleaching and processes preparatory to dyeing. Dyes and cotton dyeing. Printing piece goods. Cotton goods finishing. Physical testing of fibers, yarns and fabrics, by E. R. Schwarz. Chemical testing, by L. P Sheehan. Nomenclature of cotton dyes. Bibliography Subject index.

Note. A comprehensive technical and economic reference book. By far the greater portion of space is given to manufacturing processes. Substantial changes were made in preparing this edition. Several chapters which appeared in the first edition do not appear in this one. These include such useful chapters as the one on cotton grey goods construction, the one on the laundering of cotton materials, and the glossary of cotton terms. On the other hand, treatments are now included of such operations as bleaching, dyeing, printing, and finishing. The most notable change is found in the bibliography which has been approximately tripled in number of entries.

SCHWARZ, EDWARD ROBINSON

Textiles and the microscope. New York McGraw Hill Book Company Inc., 1934 329 p illus. 23 cm. $6 00 7262

Contents. Introductory Microscopes for textile research. Manipulation of the microscope. Illumination for the microscope. Accessory equipment. Micrometry Specimen mounting. Preparation of cross sections. Recording data. Photomicrographic apparatus. Photomicrographic technique. Stereoscopic photomicrography Polarized light Applications of polarized light. Fabric analysis. Yarn analysis. Fiber analysis Appendix.

MISCELLANEOUS TECHNOLOGY

GENERAL

BEITAL, LOUIS C.

Packaging engineering. New York Reinhold Publishing Corporation, 1954 [illegible] p. illus. 23 cm. $9.50. [illegible]69

[illegible]

KINGERY ROBERT E.

How-to-do-it books a selected guide. Second edition revised. New York. R. R. Bowker Company 1954 62 p. 23 cm. $4.50. 7[illegible]0

Note: A useful guide to available books, pamphlets, government documents, etc. on a very wide range of topics, many of which fall in the larger areas of handicrafts, building, repairing, gardening, farming, etc. [illegible]

CLEANING

BERG NORBERT J

Wetcleaning. Silver Spring. Md. National Association of Dyers and Cleaners of the United States and Canada, 1945 288 p. illus. 20 cm. $3.50 7271

Contents. The wetcleaning process. Equipment. Water. Soaps and synthetic wetcleaning detergents. [illegible]

Note: A practical manual written for workers in drycleaning plants. [illegible]

[illegible] garments, and there is also information on the use and care of equipment.

HARRIS JAY C

Detergency evaluation and testing. New York Interscience Publishers, Inc., 1954 [illegible]10 p. illus. 19 cm. $3.[illegible]5. [illegible]

Contents (abridged) Introduction. [illegible]

Note: The contemporary status of the evaluation of detergents and related cleaning methods is well surveyed in this small manual. [illegible]

MAHER, JENNIE WISNESKI

Silk finishing. Revised edition. Silver Spring Md. National Association of Dyers and Cleaners of the United States and Canada, 1943 2[illegible]8 p. illus. 19 cm. $3.50. 7273

Contents. Introduction. Equipment and accessories for general finishing. Equipment and accessories for specialty finishing. Fibers and fabrics. [illegible] General finishing. Finishing the decorative details. Special problems of the finisher. [illegible] Specialty finishings: Velvets, knit blocking, pleating and fluting. The sewing department. Inspection, assembly, and packaging. [illegible] Index.

Note: A working manual and reference book for students and workers in the drycleaning industry. It deals with the restoration of the original appearance, shape, and size of silk garments by applying steam, water, air, and chemicals and solvents, in conjunction with heat and pressure, using hand and mechanical methods. The revised edition has been prepared to serve also as a textbook in the association vocational school at Silver Spring, Maryland.

NIVEN WILLIAM W., JR.

The fundamentals of detergency Under the sponsorship of the American Institute of Laundering New York Reinhold Publishing Corporation, 1950. 256 p. illus. 24 cm. $6.50. 7274

WEINDLING, LUDWIG

Long vegetable fibers, manila sisal, jute, flax and related fibers of commerce. New York Columbia University Press, 1947 311 p illus 24 cm $5 00 7268

Contents The uses and development of vegetable fibers. Characteristics of vegetable fibers. Economic aspects of the industry. Manila hemp cultivation. Manila hemp commercial practices. Sisal cultivation. Sisal commercial practices. Istle, New Zealand, and Mauritius fibers. Cordage and other hard-fiber manufactures. The cordage industry in the United States and Canada. Jute cultivation. Jute manufacturing. Jute industry Flax cultivation. Linen manufacturing and the linen industry Hemp. Sunn hemp and ramie. Index.

Note: In this book, over-all pictures are given of the industries based on the fibers that are mentioned in the chapter titles. Cultivation of the plant from which the fiber is produced, preliminary treatment of the fiber; its marketing, the technology of spinning, weaving and related processes, uses, economic aspects such as the number of persons employed in the world industry and prices over a period of years are among the topics covered. However, the economic aspects are emphasized. There are a few footnote references to pertinent literature but, unfortunately no bibliography of account. The illustrations are relatively few

NATIONAL FIRE PROTECTION ASSOCIATION

NFPA handbook of fire protection Crosby Fiske-Forster Robert S. Moulton, editor Eleventh edition. Boston National Fire Protection Association, International, 1954 1,560 p. illus. 17 cm. $10.50. 7281

Contents (abridged) Fire losses and fire protection engineering. Common and miscellaneous hazards. Ovens and furnaces. Air conditioning and blower systems. Flammable liquids. Plastics and film. Dust explosions. Fire-resistive construction. Flameproofing and protective treatments. Protection of records. Existing buildings. Fire extinguishers. Fire pumps. Water tanks. Automatic sprinkler protection. Extinguishing agents and systems. Signaling systems and devices. Hydraulic calculations. Appendix. Index.

Note A cyclopedic reference book on fire hazards and fire protection. In the field of protection it describes methods and devices which have won recognition as standard in the United States of America. It contains also many tables of reference data. In the present edition, the volume is organized in 23 chapters, selection of which listed by title above. Early editions were by E. W. Crosby, E. A. Fiske, and H. W. Forster hence the subtitle.

HANDICRAFTS

BAXTER, WILLIAM THOMAS

Jewelry gem cutting and metalcraft. Third edition, revised and enlarged. New York McGraw-Hill Book Company Inc., 1950. 334 p. illus. 21 cm. $4 95 7282

Contents: Metalcraft. Jewelry making. The art of gem stone cutting. Identification of gem stones and gem minerals. Dealers. Magazines devoted to mineralogy and gem cutting. Books of interest. Index.

Note The techniques of jewelry making and gem cutting described in this volume are based on methods taught by the author in his classes at Woodrow Wilson High School, Washington, D C. The material is thus written for the guidance of novices and amateur craftsmen. This edition follows the pattern set by the previous editions and employs numerous photographs to supplement the detailed working instructions. New sections have been added on facet cutting of gem stones, centrifugal casting, and making spoon-handled forks and spoons. The list of equipment dealers and the brief bibliography have been brought up to date.

DAKE, H. C.

The art of gem cutting complete. Sixth edition. Spokane J D Simpson & Company 1936. 128 p. illus. 23 cm. $2 00 7283

Contents (abridged) Gem cutting as a hobby. Part I, Cabochon cutting. Part II, Facet cutting. Part III, Gemology. Part IV, Special lapidary technic. Part V, Useful lapidary notes.

Note A booklet of instructions and miscellaneous related information for amateur lapidarists. The information given covers details of the tools and equipment required. A variety of gem cutting and polishing techniques is described. Included is some material of "hobby" nature, particularly portraits and photographs of the workshops of amateur gem cutters, and textual accounts of experiences in their hobby. The book is not well organized, nor is there an index. Nevertheless, it has a wide appeal as indicated by the fact that six editions have been published since 1938.

HOME, RUTH M.

Ceramics for the potter Peoria Charles A. Bennett Company Inc., 1952 229 p. illus. 24 cm. $5.00 7284

Contents: From elements to clays. Clays: their classification and use—their characteristics. The effects of heat on clays. Clay resources of the world. Bodies from naturally occurring clays. Blended-paste porcelain—soft-paste porcelain. From slips to glazes. The porcelain glaze. Odds and ends of glazes. Glass. Enamels. Shaping. Pattern and colour. Kilns. The future of pottery. Appendices. Bibliography. Index.

Note This book is a blend of historical, scientific, and technical information rendered in terms that anyone—layman or professional—with serious interest in pottery can understand. Although the text includes some mathematical and chemical symbols, it is written in a pleasant lucid style and is designed for straight reading. Basic technical data of a reference nature, such as atomic weights, chemical composition of clays and glaze formulas, are collected in the appendices.

HUNT WALTER BERNARD

Indian silversmithing. Milwaukee Bruce Publishing Company 1952 160 p. illus. 27 cm. $5.50 7285

Contents (abridged) Tools and equipment. Concha buttons. Money clips. Tie clasps and hair clips. Lapel pins and brooches. Rings. Tarnishing or antiquing. Turquoise in Indian jewelry. Channel work. Ear ornaments. Concha belts. Neckerchief slides. Appliqued work. Pill and stamp boxes. Oval and round saltcellars. Bracelets. Arm guards or ketoh. Belt buckles. Squash-blossom necklaces. Wrist-watch bands. Miniature vases and canteens. Index.

Note. A good book on a class of handicraft articles popular with amateur jewelry makers. The tools and the operations of making with silver and turquoise, jewelry articles patterned after those made by the Navajo Indians and other tribes in the Southwest, are described clearly for beginners. There are 70 figures and four plates in color, all of which appear to be reproductions of photographs. In addition, there are 43 plates of reproductions of drawings made by the author. The author is an authority on American Indian crafts and many authentic designs are shown. However, the inclusion of such articles as salt-cellars and an antique tea strainer indicates that the book is not limited to articles of Indian origin.

KENNY JOHN B

The complete book of pottery making. With photographs and drawings made especially for this book by the author New York Greenberg Publisher Inc., 1949 252 p. illus. (part col d) 27 cm. $7 50. 7286

Contents. Introduction to clay Getting started. The potter's wheel. Plaster of paris. Molds. Slip casting. More about plaster. Clay and clay bodies. The fire. Glazes. Mixing glazes. Decoration. Do potters eat? Index.

Note. A detailed and practical guide to the art of pottery making for both the beginner and advanced craftsman. The author progresses gradually from the elementary operations performed by hand and on the wheel to the more difficult techniques of making molds, firing, and glazing. Numerous sketches and photographs showing the various stages of each process constitute an important feature of the book. A final chapter discusses the possibilities of pottery making as a career.

NORTON F H.

Ceramics for the artist potter Cambridge Addison-Wesley Publishing Company Inc. 1956. 320 p. illus. 27 cm. $10.00 7287

Contents (abridged) Part 1, How we do it: Forming by hand. Forming on the wheel. Forming by casting and pressing. Finishing. Drying. Biscuit firing. Glazing. Part 2, Why we do it: Application of design theory to pottery. Clays. Nonplastic ceramic materials. Ceramic bodies. Mold making. Temperature measurement. Ceramic sculpture. Control of shrinkage, warpage, and cracking. Compounding glazes. Color and its measurement. Ceramic stains. Special methods of decoration. Pottery equipment. Glossary of ceramics terms. Appendix. Index.

Note: Written by a professor in the Department of Ceramics in Massachusetts Institute of Technology this book is addressed to amateurs and is particularly suitable for those who want to learn pottery-making without the guidance of an instructor. The first (and shorter part) explains the basic techniques. The second part is for craftsmen who wish to make fine pottery or at least to understand how such pottery is made. It discusses design, materials and advanced techniques. The whole book is written in a simple direct style and is exceptionally well illustrated. It contains a variety of useful reference data including formulas for glazes and a directory of suppliers of equipment. References to other literature are included in the chapters of both parts.

Content (abridged) Part I Fundamental considerations of the detergent process Introduction and historical review Nature and properties of detergents. Chemistry of unbuilt detergent solutions. Surface activity of unbuilt detergent solutions. Nature and properties of builder solutions. Electrical phenomena in detergency Influence of builders on the nature and surface activity of detergent solutions. Part II, Practical considerations of the detergent process: Separation of soil from fabric. Dispersion of soil in the detergent solution. Stabilization of dispersed soil. Present knowledge of detergency vs. present washroom practice. Appendix. The theory of Castle and Palmer on the effect of electrolytes on surface activity Author index. Subject index.

Note. In this new book, the chemical and physical principles which underlie surface activity and detergent action are discussed for the benefit of chemists and other persons in such industries as laundering, textiles, and printing inks. Theory is presented compactly but adequately for the purpose. The relations between theory and application are carefully drawn, with most illustrations taken from the laundry industry Although the book is not for chemists, some knowledge of fundamental chemistry including physical chemistry is necessary to follow the exposition. There are some footnote references to related literature.

NIVEN, WILLIAM W , JR., editor

Industrial detergency New York Reinhold Publishing Corporation, 1955 340 p illus 24 cm. $8 75 7275

Contents Introduction. The fundamentals of detergency Detergent materials, by H. M. Gadberry The laundry industry by L. G. Johnston. Drycleaning, by H. M. Gadberry and W W Niven, Jr Textile processing, by M. H. Gurley Jr Foods and beverages, by J F Greer. The dairy industry by J R. Perry Dishwashing, by H. M. Gadberry Metals industries, by M. J Stutzman. General industrial cleaning, by H. M. Gadberry Author index. Subject index.

Note How to manage the cleaning of diesel locomotive interiors is one of the many cleaning problems discussed in some detail in this book. The central theme is cleaning on an industrial scale or in the course of industrial operations, and three of the chapters are largely devoted to general aspects. The greater part of the space is dedicated to the specialized cleaning problems of particular industries—those named in the chapter titles and others. Problems, materials, and techniques are all discussed, with the main emphasis on the management viewpoint and strong secondary emphasis on mechanical and chemical aspects. There are numerous pictures of cleaning apparatus and techniques, and a generous sprinkling of literature citations.

CLOCKS AND WATCHES

FRIED, HENRY B

The watch repairer's manual. Princeton D Van Nostrand Company Inc. 1949 307 p illus 24 cm $6 50 7276

Contents The modern watch. Cleaning and overhauling watch movement. How to case watch. Adjusting cannon pinion. Mainspring repairs, How to make a stem. Fitting a balance staff. How to make balance staff Adjusting balance staff How to true balance wheel. How to poise balance wheel. Replacing a pallet jewel. Replacing a roller jewel. Causes of overbanking (out of action) Adjusting pallet-guard fingers. How to put watch in beat. Collecting and studding hairspring. General repairs. Trouble shooting. Appendices. Bibliography Index.

Note An excellent book whether it is used as text or reference manual. All watch repairing operations which the average watchmaker will need to know are described explicitly and the majority of them are also illustrated in clear generously-proportioned drawings. The book is suitable for use either in organized courses or in home study The author is executive secretary of the Horological Society of New York.

KELLY, HAROLD CALEB

A practical course in horology Peoria Chas. A Bennett Co Inc 1944 192 p illus. 20 cm. $3 25 7277

Contents: Wheelwork. Gearing. Lever escapement. Controlling mechanism. Train problems. Jeweling. Making balance staff. Pivoting. Fitting balance springs. Escapement adjusting. Cleaning and oiling. Preliminary notes in adjusting. Position adjusting. Adjustments to isochronism. Adjustment to temperature. Practical work of adjusting.

Note. A clearly written manual designed for the man actually engaged in watchmaking or repairing and for students. The book is divided into three main parts: general principles, practical repairing, and adjusting. Review questions are given at the end of each chapter the answers to which are embodied in the text. A brief bibliography and a nine-page glossary of terms are appended.

RAWLINGS, ARTHUR LIONEL

The science of clocks and watches. Second edition. New York Pitman Publishing Corporation, 1948 303 p. illus. 23 cm. $6 95 7278

Contents. Time and its measurement. Oscillatory motion. The pendulum. Dissipation of energy by swinging pendulum. Escapements and other impulse devices. Electric pendulum clocks. Escapement errors. Balance-wheel clocks and watches. Isochronism of balance-wheel movements. The marine chronometer. The four-hundred-day clock. Gear trains. Weights, mainsprings, and their accessories. Friction and lubrication. Striking clocks. Perpetual calendars. On the selection and management of a domestic clock. On the selection of a good watch. Synchronous electric-motor clocks and the quartz-crystal clock. Harmonic motion in a cycloidal path and the calculation of circular error. Bibliography Index.

Note. In its second edition, this work has been substantially revised and enlarged. There is newly added material on the photographic zenith tube, a summary of records of the Shortt "free pendulum" clocks, the Hamilton marine chronometer quartz-crystal clocks, the radio time signal service, and the poising of watch balances. The chapters on striking clocks and on perpetual calendar clocks are also new additions. The work remains a well written technical treatise that will be of primary interest to specialists and advanced hobbyists, but parts of it, for example the chapter on the selection and management of domestic clock, are written for the layman.

FIRE PREVENTION

BOND, HORATIO, AND WARREN Y KIMBALL

Industrial fire brigades training manual. Second edition. Boston National Fire Protection Association, International, 1954 158 p. illus. 28 cm $3 25 7279

Contents Plant fire protection. Fire causes and hazards. Making forcible entry Handling rope. Using fire extinguishers. Handling ladders. Handling hose. Producing effective fire streams. Salvage practice. Rescue work and emergency equipment. Care and inspection of plant fire brigade equipment. Fire fighting. Index.

Note. This manual is designed primarily for use in classes in industrial establishments where employees are assigned to carry out fire fighting duties. Emphasis is put on training classes, drills, and the need for utilizing the availability of modern developments in fire prevention and fighting. Illustrations and diagrams are well selected for the purpose of instruction. It is one of the many publications on fire prevention and fire-fighting issued by the association.

NATIONAL FIRE PROTECTION ASSOCIATION

The national fire codes. Boston National Fire Protection Association International 1955–56 4 v illus. 22 cm. 7280

Contents (abridged) Volume I, Flammable liquids and gases. Volume II, Combustible solids, dusts, chemicals and explosives. Volume III, Building construction and equipment. Volume IV Extinguishing equipment.

Note "The National Fire Codes are compilations of standards developed by the National Fire Protection Association, International, non-profit technical and membership organization devoted to the reduction of loss of life and property by fire. These standards are purely advisory as far as the National Fire Protection Association is concerned, but are widely used as basis of good practice by property owners and others in the United States, Canada and other countries. New editions, containing important revisions, appear frequently New editions of all four volumes were published in 1957 $4.00 per volume.

Contents (abridged). Basement waterproofing. Bookcases. Chairs [illegible] and spot removal. Concrete mixing, patching, cleaning. Electric wiring and lighting installation instructions. Fireplaces and chimney, windows and screens. Floors and flooring. Furniture repair and finishing, with upholstery repairing. Glass and glazing. Hinges and doors. Lattice-work. Oil burners, care and adjustment. Paint and painting. Plaster and plastering. Refrigerators, electric. Roofs and roofing. Sewing machines, upkeep and adjustments. Tile, floor and wall. Toasters, electric, troubles and remedies. Vacuum cleaners, troubles, care. Washing machines, repairs and replacements, troubles and remedies. Weatherproofing. Woodworking. Index.

Note: A handy summary of practical information pertaining to maintenance and repairing of domestic and household articles. Several small construction projects also are covered. Most of the articles are brief, but some of them run to 20 pages. As the table of contents (abridged above) indicates, the range of topics is wide. The main arrangement is alphabetical but there is also an index [illegible] the book.

WHITMAN ROGER BRADBURY

First aid for the ailing house. Fourth revised edition. New York McGraw Hill Book Company Inc., 1946. 394 p. illus. 21 cm. 7295

Contents: Home heating. Plumbing. Concrete. Painting. Metal work. Walls. Roofs and windows. Inside walls. Floors. Interior woodwork and [illegible]. Waterproofing. Insects. [illegible] and [illegible]. Cleaning—spot and stain removal. Furniture. [illegible] Outdoor damage. Miscellaneous. Information on [illegible]. Index.

Note: A handbook of practical information for homeowners who [illegible] to do their own maintenance and repairing. It is based on a syndicated newspaper column that has appeared for many years in [illegible] newspapers in the United States of America. The fifth edition was published in [illegible], [illegible] p., [illegible].

KNOTS AND SPLICES

ASHLEY CLIFFORD WARREN

The Ashley book of knots. Garden City Doubleday and Company Inc., 1944 620 p. illus. 28 cm. $12.50. 7296

Contents: On knots. Occupational knots. Knob knots, single-strand, stopper or terminal, single-strand lanyard, single-strand knots, multi-strand stopper or terminal, multi-strand lanyard, [illegible] lanyard, multi-strand buttons tied in hand, multi-strand buttons tied on table. Single-loop knots. Double- and multiple-loop knots. The noose. Knots tied in the bight. Clove hitch and other crossing knots. Binding knots. Turk's-head knots. Round knots (multi-strand bends). Bending and [illegible]. Hitches to spar and rail (right-angle pull). Hitches to mast, [illegible] and other (lengthwise pull). Hitches to stake and [illegible], pile and bollard. Ring hitches. Hooks, beckets, and toggles. Miscellaneous hitches. Occasional knots. Lashings and seizings. [illegible] and other knot coverings. Flat or two-dimensional knots. Fancy knots—square knotting. Tricks and puzzles. Long and short splices (multi-strand bends). Eye splices (multi-strand [illegible]). Odd splices. Chain and crown sennits. Flat sennits. [illegible]. Practical [illegible]. Decorative [illegible] (applied knots). Bibliography. Glossary. Index.

Note: Over 3,800 knots, sennits and splices are described and drawn by the author-artist, with emphasis on the practical uses of the knots. There are [illegible] bibliography and [illegible] glossary [illegible] knot terms.

DAY CYRUS LAWRENCE

The art of knotting and splicing. Second edition revised. *Annapolis, Md.* U S Naval Institute, 1955 224 p. illus. 27 cm. $5.00 7297

Contents: Introduction. Some elementary considerations. Knots and bends. *Fixed loops.* Running knots and nooses. Hitches and [illegible] knots. Miscellaneous operations. Splicing. End knots and multi-strand knots. Turk's-heads. Sennit. Bibliography and index.

Note: The excellence of the illustrations, picturing successive stages in the tying of knots and loops enough to demonstrate the sequences clearly distinguishes this book from other manuals on the same subject. The introduction includes [illegible] rather detailed account of the history and folklore of knots, information on the strength and security of knots, and explanations of technical terms used in the text. The first edition, [illegible], reflects [illegible] experience of the author *Sailor's Knots,* 1935, was published in 1947. In this second edition there are two new plates and additional literature references have been added to the bibliography.

GRAUMONT RAOUL, AND JOHN HENSEL

Encyclopedia of knots and fancy rope work. Fourth edition, completely revised and enlarged by Raoul Graumont. Cambridge, Md. Cornell Maritime Press 1952 690 p. illus. 25 cm. $10.00. 7298

Contents. Notes on the history of knots and rope making. Elementary rope work. [illegible] knotting. End rope knots. Rope splicing. [illegible]. Turk's heads. Sennit braiding. Ornamental knotting. [illegible], fringes, and needle-work. Useful rope designs. Miscellaneous knotting. Splicing [illegible] rope. *Appendix.* Terminology. Glossary. *Index. Appendix Index.*

Note. A reference book of the rope knotting and splicing lore of land and sea. Included are descriptions, instructions for tying, and photographic illustrations of knots, ties and splices of interest to seamen, soldiers, surgeons, farmers, etc. In this edition, there are 347 plates most of which have been reproduced from photographs. The typical plate shows eight or even more examples of rope work.

GRAUMONT RAOUL AND ELMER WENSTROM

Fisherman's knots and nets. New York Cornell Maritime Press 1948. 203 p. illus. 21 cm. $3.00. 7299

Contents: Angler' and all fisherman's knots. Commercial fishermen knots. Fishing traps and seines. Netmaking and repairing. Index.

Note: Four hundred and thirty-seven examples of knot tying and net making are included in this book for the amateur and professional fisherman. Photographs and diagrams supplement the text and clearly illustrate each of the described knots, nets, hitches, tackles, bends, and splices.

GRAUMONT RAOUL

Handbook of knots. New York Cornell Maritime Press 1945 194 p. illus. 18 cm. $2.00. 7300

Contents (abridged). Hitches. Bends. Sheepshanks. Bowlines. [illegible] knots. [illegible] and ornamental knots. General knots. Sennit braiding. Eye and cut splices. Splices, grommets and whippings. General knot work. [illegible]. Rope cuffs and [illegible]. Rope ladder making. Methods of [illegible]. Various types of [illegible]. Net making and [illegible]. Blocks and tackles. Terminology. Care and handling of rope. Glossary. Index of knots. Index of knots by job and hobby.

Note: A pocket-size text on rope tying intended for both beginners and experts. It provides clear instructions on [illegible] over 400 knots useful in some 30 trades and sports. It is illustrated with more than 40 full-page plates of photographs showing the knots described. The index of knots by job and hobby is [illegible] particularly useful feature.

GRAUMONT RAOUL AND JOHN HENSEL

Splicing wire and fiber rope. New York Cornell Maritime Press, 1945 114 p. illus. 25 cm. $3.00. 7301

Contents: List of illustrations. Wire splicing. Rope splicing. Terminology. Glossary. Index.

Note: This description of the varied methods used in splicing wire and fiber rope is well illustrated with numerous explanatory diagrams and photographs. The authors have attempted to include every known type of wire and rope splice. There is [illegible] short section on the [illegible] of blocks.

SINKANKAS, JOHN

Gem cutting, a lapidary's manual. Princeton, N J D Van Nostrand Company, Inc., 1955 413 p illus (part col'd) 23 cm. $8 95 7288

Contents How to get started. Sawing. Grinding and lapping. Sanding and polishing. Other cutting processes and equipment. Money-saving shortcuts. Cabochon gems. How to cut cabochons. Faceted gems. Faceting equipment. How to cut faceted gems. The nature of gemstones. The description and treatment of individual gemstones. Collecting gem material. Miscellaneous useful information. Appendices. Index.

Note. An outstanding book on gem cutting as an amateur handicraft. It describes modern techniques fully and supplies up-to-date information on suitable stones and sources of supply. Some of the techniques are essentially hand methods, requiring only simple equipment, but methods based on modern power machinery also are fully described. There are 94 figures and considerable range of reference data on weights and measures, gem minerals, societies of lapidarists, etc.

HOUSEHOLD REPAIRING

BEDELL, EARL L , AND ERNEST G GARDNER

Household mechanics. Second edition. Princeton D Van Nostrand Company, Inc., 1945 241 p illus 29 cm. $5 00 7289

Contents Woodworking. Metalworking. Painting and finishing in the home. Care of electric appliances. Water supply and waste disposal. The care of doors. The care of windows. Using concrete, mortar and plaster Using rope and twine. The home workshop. Index.

Note. The first edition of this manual, published in 1937 was planned for use in vocational school courses. Although the second edition is still (except for the final chapter) organized in jobs, each f which is organized as teaching unit, more attention has been paid to the needs of the homeowner who does his maintenance work, with the result that the book is now also satisfactory manual of instructions for numerous simple household repairs. The instructions for each operation are clear and explicit, and there are numerous illustrative drawings.

CROUSE, WILLIAM HARRY

Home guide to repair upkeep and remodeling New York Grosset and Dunlap Inc , 1954 358 p illus 23 cm $1 98 7290

Contents Carpentry Painting. Plastering. Wallpaper hanging. Concrete. Brick and stone masonry The electrical system. Plumbing —water gas, sewerage. Linoleum and tilework. Heating, ventilating, and air conditioning. Care and repair of floors. Inside walls and ceilings. Doors and windows. Outside walls. Roofs. Basements. Attic rooms. Building garage. Adding wing. Care and repair of furniture. Fire and other hazards. General insurance regulations. Insect and vermin control. Care of grounds. Features of prefabricated homes. Other upkeep and repair jobs. Index.

Note Simple and practical directions for the performance of many maintenance and repair operations are given in this book, which is addressed to householders who wish to do such tasks themselves or to understand how they should be done. Some of the topics, for example, building an extension to an existing house, are treated superficially but in most cases the information given is adequate to the purpose. This issue is reprint of the original edition issued by the McGraw-Hill Book Company in 1948.

HAWKINS, REGINALD R , AND CHARLES H ABBE

Home mechanic's outdoor handbook. New York Garden City Books 1954 490 p illus 21 cm $2 95 7291

Contents Driveways. Walks, stepping stones, steps, curbs, edgings. Terraces. Walls, tree ells and boxes, window ells, compost enclosures. Outdoor fireplaces, grills, incinerators Fences, gates, stiles. Breezeways, arbors, and trellises foot bridges and other small structures. Small buildings. Garden pools. Swimming pools. Sprinkling systems. Tennis courts other recreation areas. Outdoor lighting. Basic operations. Planning the grounds. Bibliography Index.

Note. A manual of information on how to build driveways, terraces, outdoor fireplaces, and many other structures hich enhance the utility and beauty of the well-kept yard. It is written primarily to enable homeowners to design and build such structures themselves, but the suggested plans and construction details will be helpful also to those who have the actual work done by others. Much practical information is included which is not readily available elsewhere. The chapter on basic operations discusses such matters as stump removal, grading, concrete-making, and masonry operations. Numerous sketches and working designs are included. Although practically all of the typical garden structures are covered, the book is essentially one for the average homeowner rather than the garden hobbyist.

THE HOME MECHANIC'S HANDBOOK an encyclopedia of tools, materials, methods, and directions. New York Garden City Books, 1954 804 p illus 21 cm $3 95 7292

Contents. Painting and decorating section. Knowing paint. Brushes and other painting equipment. Color in painting and decorating. Color mixing and use. Exterior painting. Interior home painting. Finishing with stain, shellac, and varnish. Decorative paint finishes. Wall papering. Automobile refinishing. Woodworking section The common woods and their uses. Woodworking tools and how to use them. Materials used by the woodworker. Hints for the woodworker Wood turning. Repair jobs and projects. Metalworking section The common metals and their uses. Metal working tools and their uses. Hints for the metal worker Using the engine lathe. Metal projects. Plumbing section Pipe, pipe fittings, valves, fixtures, and insulation. Tools used in plumbing work. Pipe measuring, cutting, threading, and installation. House plumbing jobs. Masonry section Concrete. Plastering. Stucco. Bricklaying materials and tools. Bricklaying operations. Glossary of bricklaying terms. Concrete blocks. Glass blocks. Electrical section: Brief sketch of electrical principles. Electrician's tools. General operations in electrical work. Signalling systems. Electrical wiring with BX cable. Electrical wiring in rigid conduit. Electrical appliances. Fixed electrical equipment.

Note The home mechanics to whom this book is addressed are the multitudes of persons who make things in home workshops without benefit of advice or assistance from skilled craftsmen, or perform repairs about their dwellings. The information included is in general what this class of reader needs: discussions of tools and their care common materials, their uses, standard dimensions, and working directions for making such things as concrete walks, specific and detailed directions for repairing leaky faucets, hanging wallpaper etc. There are more than 700 illustrations, some of which are rather poorly reproduced. This issue is reprint of the original edition published by the D. Van Nostrand Company in 1945.

KINNEY, RALPH PARSONS

The complete book of furniture repair and refinishing Easy to follow guide with step-by step methods. New York Charles Scribner's Sons 1950 240 p illus. 25 cm. $3.50. 7293

Contents Restoration. Repairs. Removing old finish. Preparing for new finish. Refinishing. Reviving old finishes. Enameling and "antiquing" furniture finishes. More about materials. Tools for the beginner. More hand tools. Sharpening and care of tools. Care and storage of paints and brushes. The home workshop—hints and shop practice. Care of furniture. Formulas. Reference books. Acknowledgments. Index.

Note One of the better books on this subject for amateur craftsmen. The restoration and refinishing of old furniture are emphasized, but part of the material is applicable as ell to the finishing of new furniture and to the finishing or refinishing of articles of wood other than furniture. Most of the text consists of concise discussions of specific points or detailed directions for specific operations. Many of the illustrations have been made from photographs of refinished antique furniture.

MANLY, HAROLD PHILLIPS, editor

Drake s householders' cyclopedia, a 'how to-do-it" book construction installation, maintenance and repair home buildings their equipment, furnishings and accessories. Chicago Frederick J Drake & Co. 1948 646 p. illus 20 cm. $5 00 7294

and Webster 1954 [illegible] p. illus. (part col'd) [illegible] cm. $3.[illegible] 7309

Contents: [illegible] Index.

Note: A [illegible] guide and reference book for homeowners and [illegible] who do painting and related kinds of finishing and [illegible] around their own homes. Materials, equipment and techniques are described in simple language.

UNITED STATES. BUREAU OF RECLAMATION

Paint manual for the control of paints and painting. First edition, revised reprint, December 1955 Washington, D. C. Government Printing Office, 1954 [illegible]03 p. illus. 24 cm. $1.75. 7310

Contents: Paints and paint materials. Introduction. [illegible] Index.

Note: A practical manual based on the extensive experience of the United States Bureau of Reclamation. It describes paints and painting practices used by the Bureau in the finishing and maintenance of structures in its charge. The descriptions are explicit and useful. The specifications listed in the appendix are issued by various units of the Federal Government.

VANDERWALKER, FRED NORMAN

Drake's cyclopedia of painting and decorating; methods, tools materials for home and the workshop, finishing walls, floors, furniture, automobiles, boats, houses etc. data for arts and crafts workers. Chicago Frederick J Drake & Co., 1945 358 p. illus. 20 cm. $3.00. 7311

Note: In this book no attempt is made to treat any subject exhaustively but practical information is given on some 150 topics, ranging from acoustic ceiling painting to washing painted walls and [illegible]. Considerable attention [illegible] devoted to paint [illegible] and mixing colors. An extensive index makes this [illegible] ready reference manual on materials, tools, and work procedures.

VANDERWALKER, FRED NORMAN

Wood finishing, plain and decorative methods, materials, and tools for natural, stained, varnished, waxed, oiled, enameled, and painted finishes antiqued, stippled, streaked, and rough glazed finishes stain making formulas. Revised edition. Chicago Frederick J Drake & Co., 1944 361 p. illus. 19 cm. 7312

Contents: Wood finishing in general. Preparation of new and old surfaces. Stains in general. Factory prepared stains. Water stains. Chemical water stains, acid and alkaline. Color pigment water stains. [illegible] Oil stains. Varnish [illegible] Varnish and shellac. Varnishing, rubbing, polishing. Varnish defects and their causes. [illegible] Index.

Note: A practical manual of materials and methods. [illegible]

WAKELING ARTHUR, editor

Wood finishing and painting step by step over 500 complete up-to-date practical schedules for furniture and woodwork, walls, floors and all types of interior and exterior surfaces, including masonry and metal. Also boat and auto finishes. New York The Home Craftsman Publishing Corporation, 1955 55 p. [illegible] cm. $3.95 7313

Contents: Part 1. Interior surfaces. Furniture. Specialty finishes. [illegible] Index.

Note: A reference book of "schedules" or directions for specific finishing and refinishing operations. [illegible]

PAPER

AMERICAN PAPER AND PULP ASSOCIATION

The dictionary of paper including pulps, boards paper properties and related paper making terms. Second edition. New York American Paper and Pulp Association, 1951 393 p. 24 cm. $6.50. 7314

Contents: Philosophy of definitions. Classification and definitions of pulps. Classification of waste materials used in the paper and board industries. Definitions of papers, boards, and papermaking terms. Bibliography.

Note: More than 3,000 terms employed in the various branches of the paper industry are defined in this semi-official work. The definitions, though prepared by experts in the field, are designed for use by both laymen and technically trained readers. As in the previous edition, the majority of the terms refer to types of paper and include concise information on methods of manufacture, history, uses, and properties. The changes made in this revision are of [illegible] nature and include an expansion of the introductory chapters on pulps and waste materials, the insertion of some new terms, and revision of the two-page bibliography.

CASEY, JAMES P

Pulp and paper chemistry and chemical technology. New York Interscience Publishers, Inc., 1952 2 v. illus. 24 cm. $18.00 per vol. Set, $33.00. 7315

Contents: Volume 1, Pulping and papermaking: Cellulose and hemicellulose. Lignin. Pulpwood. Pulping. Bleaching. Fiber preparation. Nature of fiber bonding. Sheet formation. Fillers and loading. Internal sizing. Surface sizing. Wet strength. Coloring. Microbiology. Water. Author index. Subject index. Vol. II, Properties of paper and converting: Properties of paper. Use of statistics in the paper industry. Pigment coating. Printing. Laminating and pasting. Internal treatment of paper with resinous materials. Coating with resinous materials. Resins. Corrugating. Author index. Subject index.

Note: A comprehensive treatise in which papermaking is treated as essentially a chemical process. However, there is little in it of chemical theory. Instead, the author has presented detailed information on the various processes that enter into the manufacture of

LEATHER

O'FLAHERTY, FRED, AND OTHERS, editors

The chemistry and technology of leather Volume 1—Preparation for tannage. Edited by Fred O'Flaherty William T Roddy and Robert M Lollar New York Reinhold Publishing Corporation, 1956 495 p illus. 23 cm. (American Chemical Society monograph series) $14 00 7302

Contents. Introduction, by F O'Flaherty Histology of animal skins, by W T Roddy Non-protein constituents of skin, by R. M. Koppenhoefer The chemical structure and macromolecular organization of the skin proteins, by J H. Highberger Preservation of hides and skins, by F L. DeBeukelaer Washing and soaking, by A. W Goetz. The practice of unhairing, by W Merrill. The mechanism of unhairing, by H. B. Merrill. The chemistry of liming, by R. M. Lollar The practice of bating, by H. R. Wilson. Bating, by J Pfannmuller The acid and base binding properties of proteins, by R. Saxon and M. Harris. Pickling, by R. Stubbings. Skin degreasing, by K. G. A. Pankhurst. Author index. Subject index.

Note. The first volume published of projected four volume treatise on the chemistry and technology of leather As indicated in the above table of contents, it is a collaborative work comprised of chapters written by individual authors. The chapters in this first olume very somewhat in style, but most are essentially critical digests of published literature with all important statements keyed t literature citations. An exception in this volume is Goetz' chapter "Washing and soaking, which is the statement of an expert unsupported by published literature. The chapters are addressed to such readers as chemists and top-level technicians already at work in the leather industry and advanced students preparing for this field.

ORTHMANN, AUGUST CARL

Tanning processes. Chicago The Rumpf Publishing Company, 1945 414 p 23 cm. $12 50 7303

Contents (abridged) Calf leather Goatskins. Sheepskins. Chrome side leather tanning. Patent leather Chrome retan sole leather Pigskin. Horse hide tannages. White leather Harness leather. Vegetable tanned sole leather Miscellaneous leathers. Coloring and coloring materials. Fatliquoring. Leather finishing materials. Chemicals used in the tannery Vegetable tanning materials. Water in the tannery Index.

Note A practical work written by an experienced leather man and designed for practical tanners. Many formulas are given in full, and the properties of their chief ingredients are described. There are occasional references to related literature but no systematic bibliography

MODEL MAKING

HERTZ, LOUIS H.

Advanced model railroading New York Simmons-Boardman Publishing Corp 1955 340 p illus 24 cm $4 95 7304

Contents Going forward with model railroading. Elements of control. Propulsion and control. Signaling and interlocking. More about signaling and interlocking. Electronic controls. Electric-eye devices. Modelmaking from scratch. Construction, conversion, and super-detailing. Castings and patternmaking Tools and machining. Salvaging parts and using junk materials. Live steamer construction. Model railroading, today and tomorrow Keeping posted. Index

Note. This book by ell know writer on model railroading covers variety of topics as the above table of contents shows. Of special interest are the chapters on controls, casting and machining. Some of the material is of potential interest to model builders, both amateur and professional, who work in other fields. The book is adequately illustrated and well indexed

JOHNSON, GENE

Airplane model building New York Cornell Maritime Press, 1946 141 p illus. 23 cm $3 00 7305

Contents. Getting started. Tools and materials. Model kits. Flight theory Gliders and stick models. Solid scale models. Built up scale and flying models. Covering. Finishing and painting. Gasoline engines. Miscellany Helicopters. Control line flying. Model clubs. Index.

Note: An elementary manual designed especially for the beginning model builder. The language is simple, and the instructions for cutting, shaping, and assembling the various parts are explicit. There are 61 full pages of illustrations and set of removable full-scale plans for constructing 11 different models including the Sikorsky R-6 helicopter the Piper Cub cruiser—model J3, and the Aeronca "K" seaplane. The chapter on gas engines is brief and discusses only methods for selecting an engine of proper displacement.

JOHNSON, GENE

Ship model building Second edition. Cambridge, Md. Cornell Maritime Press, 1953 273 p illus. 23 cm. $3 50 7306

Contents (abridged) Hull blocks. Blocking and profiling. The cradle-bowsprit. Propellers. Planking. Bulwarks. Rails. Channels. Ladders. Ventilators. Anchors. Steering wheels. Hatches. Companionway hoodings. Lifeboats and other small stowed boats. Ship's bells. Funnels. Wireless antennas. Fog horns and bells. Miscellaneous fittings. Masts. Yards. Sails. Old-time guns. Modern armaments. Bases. Painting. Tools. Index.

Note A book that appeals to all he are interested in ships and ship models. The processes in model building are explained, from hull shaping and laying out to more complicated tasks. Suggestions are given for the preparation of home-made tools and devices, where ready-made ones are not available. The illustrations are special feature. In this second edition, there are 147 full-page plates, each of which contains reproductions of several drawings of details of ship and ship model construction.

WINTER, WILLIAM J

The model aircraft handbook. Third edition. Illustrations by H. A. Thomas, Paul Plecan and Bruce Wennerstrom. New York Thomas Y Crowell Company, 1953 200 p. illus. 20 cm. $3 50 7307

Contents Types of model planes. Preparation of working plans. Aerodynamics and proportions. Construction. Landing gears and pontoons. Propellers. Covering. Miniature gas engines. Tanks. Rubber models. Control-line models. Jet models. Free-flight models. Radio control. Flying and adjusting. Scale models. Payload models. Glossary Index.

Note. A standard book on model airplane design and construction. It introduces the reader to this field and provides wide range of information on aircraft details and model construction techniques. There are many scores of drawings, including airfoil and wing sections.

PAINTING

CREWDSON, FREDERICK M

Spray painting industrial and commercial Wilmette Ill. Frederick J Drake and Company 1948. 169 p. illus. 19 cm. 7308

Contents Common paint pigments. Paints and enamels. Oil and spirit varnishes. Shellac. Lacquer Synthetics. Equipment. The technique of spraying. Spraying standard materials. Spraying defects, their cause and remedy Bronzes and their application. Flock, or suede finishes. Striping and lettering Pearl lacquer, the aristocratic finish. Automatic spraying. Electrostatic spray painting. Agricultural spraying. Automobile spray painting. The sprayer's "ten commandments. Index.

Note. This manual provides simple descriptions and outlines of the materials and techniques of spray painting. It is intended for men in the craft. The present edition contains some useful material that did not appear in the 1941 edition. A new edition was scheduled for publication in 1957

DEVOE HOME DECORATING INSTITUTE

Do-it yourself guide to successful home painting and decorating New York Simon

Note: The *manufacture of pulp and paper* prepared by the Joint Executive Committee of the Vocational Education Committees of the Pulp and Paper Industry of the United States and Canada, was published during 1921–3 in five volumes. During 1922–29 second edition was issued of volumes 3, 4, and 5, and during 1937–39 third edition of the same volumes appeared. The present work is [illegible] revision and expansion of these three volumes. The [illegible] has not been so much rewritten as revised by interpolating and [illegible] the text of the third edition. Much new material including new tables and illustrations has been added. It is still intended for [illegible] workers in pulp and paper manufacturing industries. Although designed both for school use and home study the treatment [illegible] so authoritative and thorough that the work is in [illegible] small encyclopedia of pulp and paper manufacture.

KANTROWITZ, MORRIS SAMUEL, AND OTHERS

Permanence and durability of paper: an annotated bibliography of the technical literature from 1885 A.D. to 1939 A.D., by Morris S. Kantrowitz, Ernest W. Spencer and Robert H. Simmons. Washington, D. C. Government Printing Office, 1940. 114 p. 23 cm. (United States. Government Printing Office. Technical bulletin no. 22) $0.15 7325

Contents: Introduction. Annotated bibliography of paper permanence and durability. Subject index. Author index.

Note: A listing in reverse chronological order of 290 articles that appeared in more than 120 paper trade journals and magazines published in the United States and abroad. More than half of the articles listed were published between 1930 and 1939. An annotation [illegible] or describes each article included. Foreign titles are translated into English. The publication is intended to serve as [illegible] ready reference source to librarians, paper chemists, and others seeking [illegible] of information in the field.

MOSHER, ROBERT H., editor

Specialty papers: their properties and applications. Prepared by a staff of specialists under the editorship of Robert H. Mosher. New York. Chemical Publishing Company Inc., 1950. 520 p. illus. 23 cm. $10.00. 7326

Contents (*abridged*): Gift wraps, fancy box and packaging papers, by R. H. Mosher. Decorative papers. Display papers and lamp shade stock, by R. H. Mosher. *Paper drapes*, by J. C. Pickering. [illegible] papers, by B. Kahanan. Functional and protective papers. [illegible] packages, by J. J. Aaron. Metal-parts wrappers, by R. H. Mosher. High-gloss specialty papers. Flint-glazed papers, by R. [illegible]. Friction-glazed papers, by R. H. Mosher. Brush-enamel papers, by F. C. Haywood. Miscellaneous decorative papers. Metal-[illegible] papers, [illegible] coated and printed papers, etc., by R. H. Mosher. Miscellaneous functional papers. Photosensitive papers, by C. E. C. [illegible]. Asphalt and waterproof papers, by M. L. [illegible]. Waxed papers, by A. M. Worthington. Gummed and [illegible] tapes and labels, by F. W. Jarrell. Carbon papers, by [illegible]. *Films*, by W. R. Allen. Metal-foil papers, by J. [illegible]. Glossary, by R. H. Mosher. Index.

Note: Each chapter in this work contains information on the history, properties, uses, and manufacture of [illegible] specific type of specialty paper. Practically all of the chapters are accompanied by [illegible] bibliographies. The book appears to be the only [illegible] treatment of the subject.

MOSHER, ROBERT H., editor

The technology of coated and processed papers. Prepared by a staff of specialists under the editorship of Robert H. Mosher. New York. Chemical Publishing Company Inc., 1952. 733 p. illus. 22 cm. $15.00 7327

Contents: Introduction, by R. H. Mosher. Theory of high polymers and their application to the paper-converting industry, by R. [illegible]. Chemistry of paper coatings and instruments for the measurement of their flow properties, by F. Dewey. Water-soluble coatings, by R. H. Mosher. Solvent coatings and solvent-recovery systems, by M. Baron. Water-dispersion coatings, by R. H. Mosher. Hot-melt coatings, by R. C. Miller. Organosol and plastisol coatings, by J. M. Parsons. Paper-converting machinery, by F. W. Egan. Printing inks and printing processes, by R. H. Mosher. Adhesives and lamination processes, by F. C. Campion. Saturating agents and paper saturation, by W. A. Abramowitz and others. Machine production of printing papers and resin-treated specialties, by R. H. Mosher. The testing of raw stock, raw materials and specialty papers, by R. H. Mosher. Index.

Note: A companion volume to R. H. Mosher, ed., *Specialty papers: their properties and applications*, described above. The title published first describes the papers themselves, and this one is devoted mainly to the technology of their manufacture. Each chapter is the work of [illegible] specialist associated with the paper converting industry or with [illegible] supplier to this industry and is accompanied by [illegible] bibliography. A wide range of information on present-day materials and processes is presented. There are 102 tables of useful data and 130 figures. The editor is General Manager of the Miami Valley Coated Paper Company.

TECHNICAL ASSOCIATION OF THE PULP AND PAPER INDUSTRY

Pulp and paper manufacture: bibliography and United States patents, 1954. Compiled by Jack Weiner. New York. Technical Association of the Pulp and Paper Industry, 1955. 752 p. 23 cm. 7328

Contents: List of journals covered. Bibliography. Patents. Author index. Subject index. Patent index.

Note: An annual classified bibliography of the international journal literature and United States patents, compiled at the Library of the Institute of Paper Chemistry. The arrangement is alphabetical by subject. Adequately full references are given to the original journal publications, but there are no annotations in the section covering this literature. However, the section of patents contains, in addition to the citation, date of issue, etc., the claim that was published in the *Official Gazette* of the United States Patent Office; thus there is some description of the content of each patent. The annual editions are cumulated from time to time into volumes that cover several years.

WEST, CLARENCE JAY

Alkaline processes. Part II, Black liquors. Appleton. The Institute of Paper Chemistry, 1952. 377 p. 27 cm. (The Institute of Paper Chemistry. Bibliographic series. No. 178) $10.00. 7329

Contents: Books. General articles. Analytical methods. Evaporation. Combustion. Causticizing. Lime sludge. Soda and sulfur losses. Distillation. Purification methods. Uses. Stream pollution. Instrumentation. Odors. Author index. Patent index.

Note: An extensive listing of books and periodical articles which describe the various methods employed for the recovery and utilization of waste liquors produced in the manufacture of pulp. The 2,261 references are annotated and grouped according to the above-indicated subjects.

WEST, CLARENCE JAY

Paper testing. Second edition. Appleton. The Institute of Paper Chemistry, 1949. 182 p. 27 cm. (The Institute of Paper Chemistry. Bibliographic series. No. 139–144) $5.00. 7330

Contents: Introduction. General articles. Bending strength. Bursting strength. Compressibility. Creasing quality, brittleness. Folding endurance. Stiffness, softness, rigidity. Stress-strain properties. Stretch, elasticity. Tearing strength. Tensile strength. Wet tensile strength. Author index. Patent index.

Note: A comprehensive listing of all the important articles relating to the methods of testing the strength of papers. The entries are annotated and grouped as indicated above. In this edition the number of references has been increased from 224 to 480.

pulp and paper including only the strictly mechanical, on the physical and chemical properties of paper the kinds and properties of paper coatings, etc. There are many hundreds of footnote references to the literature.

GRAFF, JOHN HENRY

A color atlas for fiber identification Appleton The Institute of Paper Chemistry, 1940 27 p illus (part col'd) 36 cm. $12 50 7316

Note. In this work the colors produced in reactions between fibres important in the paper industry and standard stains are illustrated in color Also included are directions for preparing and using the stains.

GRAFF, JOHN HENRY

Microscopy of pulp and paper Appleton, Wisconsin The Institute of Paper Chemistry, 1952 398 p 27 cm (The Institute of Paper Chemistry Bibliographic series Number 177) $15 00 7317

Note A bibliography which is complementary to the author's *Pulp and paper microscopy* issued by the same publisher in 1942 The arrangement is alphabetical by name of author and there are fully detailed author and subject indexes. Each entry is annotated. The international literature has been covered and the coverage is essentially complete through 1949 In addition some references have been added to material that appeared during 1950.

HUNTER, DARD

Papermaking the history and technique of an ancient craft. Second edition, revised and enlarged New York Alfred A Knopf, 1947 611 p illus 24 cm $15 00 7318

Contents (abridged) Writing substances of the ancients. Ts'ai Lun and the invention of paper The first text printing upon paper The hand-mould. The maceration of materials for papermaking. Early papermaking processes and methods. Paper a sacred material. The paper and the papermakers of Europe and America during the early years of printing. Ancient watermarks. Latter-day watermarks. Papermaking materials. The paper-machine and its inventors Printing revolutionizes papermaking. Handmade papers vs. machine-made papers. The watermarking of machine-made papers and the use of watermarks in detecting forgery Present-day papermaking by hand in Europe. Chronology of papermaking, paper and the use of paper Bibliography Notes. Index.

Note. A comprehensive history that deals mostly with paper making techniques but also pays some attention to the social and cultural importance of paper as a writing and printing material. It is intended for students of cultural history and general readers. The chapters on the watermarking of machine-made papers and present-day papermaking by hand in Europe are new in this edition, and certain other parts of the book, including the bibliography have been revised or expanded.

HUNTER, DARD

Papermaking in pioneer America. Philadelphia University of Pennsylvania Press 1952 178 p illus. 24 cm $6 50 7319

Contents The beginning of papermaking. Equipment and operation of early mills. Pennsylvania, 1690. New Jersey 1726. Massachusetts, 1728. Maine, 1731 35. Virginia 1744 Rhode Island, 1764. Connecticut, 1766. New York, 1768. Maryland, 1776. North Carolina, 1777 New Hampshire and Vermont, 1777–93 Delaware, 1787 Kentucky 1793 Western Pennsylvania, 1796. South Carolina, 1806 Ohio, 1807 Georgia, 1810. Tennessee, 1811 Nathan Sellers—pioneer paper-mould maker American papermakers, 1690–1817 Check list Index.

Note. A scholarly account, based on extensive research, of the beginnings of the manufacture of paper in the United States of America. The accounts of early papermaking in the various states account for most of the volume. The list of papermakers includes both individuals and firms.

INSTITUTE OF PAPER CHEMISTRY

Catalog of the library, September, 1940 Decennial index—*Library notes* volumes 1–10 1930–1940 Appleton The Institute of Paper Chemistry, 1940 672 p 21 cm. (Institute of Paper Chemistry affiliated with Lawrence College, Appleton, Wisconsin. Bulletin) $25 00 7320

Contents Catalog of the library Periodicals. Books and pamphlets. Author index. Decennial index—*Library notes*, volumes 1 10 Author index. Subject index.

Note. This volume is in two parts, the library catalog occupying the first third, the ten-year index to the Institute's *Library notes* occupying the last two thirds. The books and pamphlets in the library are listed alphabetically under subject, followed by an author index of 23 pages. The author index to *Library notes* covers 113 pages, followed by subject index of 191 pages. The volume is of value as bibliography of paper chemistry as well as being an essential tool to those maintaining a file of *Library notes*.

JOINT TEXTBOOK COMMITTEE OF THE PAPER INDUSTRY OF THE UNITED STATES AND CANADA

Pulp and paper manufacture, prepared under the direction of the Joint Executive Committee on Vocational Education representing the pulp and paper industry of the United States and Canada. J Newell Stephenson, editor in-chief Volume 1 Preparation and treatment of wood pulp. New York McGraw Hill Book Company, 1950. 1,043 p. illus. 23 cm. $10.00. 7321

Contents Structure and properties of pulpwood. Preparation of pulpwood. Manufacture of mechanical pulp. Manufacture of sulphite pulp. Manufacture of alkaline-process pulps. Treatment of pulp. Bleaching of wood pulps. Testing of wood pulp. Index.

—— Volume 2 Preparation of stock for paper making New York McGraw Hill Book Company, 1951 587 p. illus. 24 cm. $7 50 7322

Contents Pulping of rag and other fibers. Wastepaper; beating and refining. Fiber stock preparation deinking processes. Beating and refining. Fiber and loading. Sizing of paper Paper coloring. Semi-chemical, high yield chemical, and special groundwood pulping processes. Bibliography Index.

—— Volume 3 Manufacture and testing of paper and board New York McGraw Hill Book Company, 1953 945 p illus. 24 cm. $11.00 7323

Contents Papermaking machines. Auxiliary apparatus and operations preliminary to paper machines. The Fourdrinier section. Press part. Cylinder machines, vats, and presses. The dryer part. Calenders, slitters, and winders. The paper-machine drive. Specialty papermaking machines. Paper-production calculations. Appendix Handmade papers. Finishing of paper Coated papers. The coating process. Gummed papers. Waxed and lacquer-coated papers. Paper testing Physical tests. Microscopy of paper Chemical tests. Bibliography Index.

—— Volume 4 Auxiliary paper mill equipment. New York McGraw Hill Book Company Inc., 1955 732 p. illus 24 cm. $9.00 7324

Content Instrumentation and process control. Pumps, pumping apparatus, and agitation equipment. Materials handling. Heating and ventilation. Steam. Water Electrical equipment. Bearings and lubrication Bibliography Index.

upon the equipment of American railways. Second edition. New York Simmons-Boardman Publishing Corporation, 1955 242 p. illus. 23 cm. $5.75 7339

Contents The mechanics of train operation and train braking. Wear of wheels. Railway car axles. Locomotive and car truck design—oil journals and riding qualities. Draft gear. Conclusion. Index.

Note A discussion of the braking of railway trains presented from the standpoint of railway mechanical engineering. All aspects of the subject are covered, including the forces involved in train retardation, the principles and mechanical features of the various types of brakes, the weight of equipment, stresses in wheels and axles. A theory is advanced to explain the development of thermal cracks in wheel treads. The first edition, based on lectures given at the Massachusetts Institute of Technology, was published in 1941. For the second edition the book was revised so as to include reference to present-day railway equipment and to take into account the revised rules of the Association of American Railroads.

VAN METRE, T WILLIAM, AND RUSSEL GORDON VAN METRE

Trains, tracks and travel. Ninth edition. New York. Simmons-Boardman Publishing Corporation, 1956. 501 p. illus. 24 cm. $4 95 7340

Contents Clearing the way. Our railroad system. The railroad track. The steam locomotive. The electric locomotive. Diesel-electric and gas turbine locomotives. Freight cars. Passenger train cars. The [illegible] story. Passenger stations and terminals. Freight terminals. Railroad shops and engine terminals. The operation of trains. Railroads and national security. Index.

Note An expertly written, popular account of railroads in the United States of America, their history, rolling equipment, and operation. It appeals to young people, railroad fans, and general readers. The first edition was published in *1926*, and the succeeding editions portray [illegible] gradual but major evolution in the equipment of American railroads. The present edition, written in collaboration with the author's son, contains several new chapters in addition to thoroughly revised parts of several *chapters carried over from the* eighth edition, 1950.

WOODWORKING

CRAMLET ROSS C.

Woodwork visualized. Milwaukee The Bruce Publishing Company 1950 158 p. illus. 27 cm. $2.50. 7341

Contents (abridged) Tool identification and classification. Lumber. Saws. Planes. Chisels. Knives. Wood files. Layout tools. Boring tools. Fastening tools. Driving tools. Scraping tools. Tool sharpening. Joinery. Fastenings. Hardware. Finishing. Projects. Index.

Note An introductory book to the common hand woodworking operations and to the tools with which they are performed. It is included here because of the unusual method of presentation. Almost the entire space is given to [illegible] series of plates on which tools and operations are shown in exceptionally clear drawings. The drawings are accompanied by legends that explain the tool or operation.

DAHL, ALF AND J DOUGLAS WILSON

Cabinetmaking and millwork tools materials, construction, layout. Second edition. Chicago American Technical Society 1956. 352 p. illus. 22 cm. $6.50 7342

Contents The cabinetmaker's work. *Safety practices* in cabinetmaking. Woodworking tools. Cabinet and millwork joints. Fundamentals of blueprint reading. Board measure. Fundamentals of stock billing. Rod layout. Steel square layout. Geometrical shop layout jobs. Lumber, adhesives, veneers, and plywood. Standards of construction, sizes, and design. Layout and construction of cabinet work. Doors. Windows and sash. Window sash, and door frames. Interior trim and exterior woodwork. Stair layout. Appendix. Index.

Note A practical text on the making of wooden cabinets, doors, windows, interior trim, etc. It is designed for the instruction of vocational school students and apprentice carpenters who are preparing to specialize in interior woodwork and cabinetmaking. Some previous introduction to carpentry tools and carpentry practices appears to have been assumed, however, there is one chapter in which the hand and machine tools used in cabinetmaking are described. The book is very fully illustrated. The first edition was published in 1951. In this second edition the first 221 pages appear to be identical with those of the first edition, but beginning with the 13th chapter all of the material is newly added.

FABBRO MARIO DAL

How to make built-in furniture. New York F W Dodge Corp. 1955 262 p. illus. 26 cm. $6 95 7343

Contents (abridged) General instructions. Built-in furniture designs. Index.

Note The building of such furniture and fixtures as bookshelves, radiator enclosures, bars, room dividers, clothes closets and kitchen cabinets is covered in this book. In the first part, matters of general *applicability such as taking measurements*, selecting lumber, anchoring furniture to floors, walls and ceilings, and finishing wood are covered. The second and much longer part is devoted to drawings, dimensions, lists of materials and specific instructions for the building of *102 built-in furniture pieces*. All of the pieces described have been designed to fit harmoniously into rooms furnished in the modern style; however some of them, especially the bookshelves and cabinets, will suit other styles of decoration as well. The book *is specifically addressed to amateur craftsmen* who are interested in constructing furniture for their own homes.

HAINES, RAY EDWARD, *AND OTHERS*

The wood-turning lathe. By Ray E. Haines, John V Adams John G Miller Robert L. Thompson, and Raymond Van Tassel. New York D Van Nostrand Company Inc., 1952 132 p. illus. 26 cm. (The home work shop series) $3.50. 7344

Contents History and basic principle of the lathe. The home workshop lathe. Basic tools and accessories—*their care and use*. Basic operations. Advanced and special operations. Projects. Index.

Note An introductory book for home mechanics. In it the wood-turning lathe, the tools and accessories used with it, and the basic operations on it are described clearly and simply. Both tools and operations are also shown in pictures. The chapter on projects accounts for more than half of the space. It contains detailed descriptions, including lists of materials and dimensioned drawings, for [illegible] variety of useful articles such as lamps, salt and pepper shakers and small tables.

HJORTH HERMAN

Machine woodworking. Milwaukee The Bruce Publishing Company 1937 371 p. illus. 23 cm. (The Hjorth series of woodworking texts) $3.25 7345

Contents Preface. Historical development of woodworking machinery. Circular saws. Operations performed on [illegible] universal or variety circular saw. Band saws and jig saws. Planing and scraping machines. Shapers and routers. Mortisers, borers, and tenoners. Wood-turning lathes. Sanding machines. Gas-motor machinery and equipment. Installation and maintenance. References. Index.

Note A textbook for technical, trade, and vocational schools, useful also as [illegible] handbook for the practical trade-trained shopman and for the largely self-trained home *craftsman*. *Review* questions are given at the ends of the chapters. The author has also written *Principles of woodworking* (described below)

HJORTH HERMAN

Principles of woodworking. Revised and enlarged. Milwaukee The Bruce Publishing Company 1948 445 p. illus. 24 cm. $4.50 7346

Contents: History of woodworking tools. Hand tools. Machine tools. The sharpening of tools. Planing and squaring to dimensions. Grooved joints. Dowel joints. Lap or halving joints. Mortise-and-

WEST, CLARENCE JAY
Pulping processes Parts I–IV Appleton, Wis. The Institute of Paper Chemistry, 1949–54 4 v 27 cm. (The Institute of Paper Chemistry Bibliographic series. Nos 172–175) Vol 1–3, nos 172–174, $5 00 each, vol. 4, no 175 $10 00 7331

Contents (abridged) Part I, Nitric acid process. Part II, Chlorine process. Part III, Ammonia, magnesium, and sodium bases for sulfite pulping. Part IV Semichemical processes.
Note An extensive bibliography of articles, books, and patents descriptive of the various types of pulping processes which have been studied experimentally or which are in actual commercial use. The entries are annotated and within each subgroup are arranged alphabetically by author Each volume includes patent and author indexes.

WEST, CLARENCE JAY
Slime control and prevention. Appleton The Institute of Paper Chemistry, 1949 76 p 27 cm. (The Institute of Paper Chemistry Bibliographic series No 170) $5 00 7332

Note A bibliography of periodical articles and manufacturers' literature on the control of slime in pulp and paper plants. References relating to the treatment of processing water or the preservation of moist pulp are not included. The entries are annotated and arranged alphabetically by author

WEST, CLARENCE JAY
Wet strength of paper Second edition Appleton The Institute of Paper Chemistry, 1951 155 p 27 cm. (The Institute of Paper Chemistry Bibliographic series. No 168) $5 00 7333

Note A bibliography of books, articles and patents on the treatment of paper to give it wet strength and on the testing and uses of such paper The entries are annotated. In this edition, there are 391 references as compared with 177 in the first edition. An index to the listed patents is provided.

RAILROAD OPERATION

BRUCE, ALFRED W
The steam locomotive in America its development in the twentieth century New York W W Norton & Company, Inc. 1952 443 p illus 24 cm. $8 50 7334

Contents Railways, railroads, and locomotives. Early development of the steam locomotive. The steam locomotive industry General development of the steam locomotive, 1901 to 1950. The basic development of power transmission, 1901 to 1950. Development of basic elements. Progressive development of individual types of steam locomotives Development of special-service locomotives Growth and development of the steam locomotive. The competitors of the steam locomotive The future design of the steam locomotive Résumé. Index.
Note Although the sub-title of this book indicates a limitation in time to the present century the earlier development of the steam locomotive from its beginnings to the close of the 19th century is adequately outlined Beginning with 1900, the author gives a detailed account. His chapter on the development of basic elements is over 150 pages long and in it he has described fully the evolution of such parts of the steam locomotive as the boiler mechanical stokers, grates, engines, valves, driving wheels, etc. Inserted pages near the center of the volume contain reproductions of photographs of 168 typical locomotives, and legends under the photographs supply technical details. There is no bibliography

DRENNAN, C M
Air brake study course New York Simmons-Boardman Books 1954–1955 3 v illus. 28 cm Vols I and II, $4 75 per vol, vol. III, $6 75 7335

Contents (abridged) Volume I, ABC's of airbrakes, with air brake dictionary: Section I, Train brake control. Section II, Air brake fundamentals. Section III, Air brake dictionary Index. Volume II, car air brakes. Section I, Car air brake devices. Section II, Freight car brakes. Section III, Passenger car brakes. Index. Answers to quizzes. Volume III, Locomotive air brakes: Section I, Locomotive devices. Section II, Locomotive brake equipments. Section III, Locomotive brake equipments with electric controls. Section IV Locomotive braking force control. Index. Answers to quizzes.
Note. These three volumes constitute a practical course in the principles and operation of air brakes currently used on railroad equipment in the United States of America. They are addressed to railroad men and are composed of simple diagrammatic illustrations, short, straightforward explanations of the illustrations, and numerous review questions.

HENRY, ROBERT SELPH
This fascinating railroad business. Second edition revised. New York The Bobbs-Merrill Company, 1943 520 p illus. 22 cm. $4.00. 7336

Contents The road of rails. Evolution of track. Laying out the line. Beneath the rails. Rails of steel. Behavior of track. Above valley stream, and road. Under mountain and river. Structures along the way Carriers of the word. Guardians of the way The first hundred years of steam. Steam—second century Oil, gas, and juice. Train cars. Houses on wheels. Keeping them running. Terminals and trains. Service of supply Growth of the service. Selling the service. "The Company" The company's business. Railroad men. The iron war horse. The business of railroading. An "anatomy" of American railroads. Acknowledgments. Index.
Note A historical work, written mainly for the general reader. Although considerable emphasis is placed on the development of railroads as a business, construction, equipment, and railroad organization are also treated.

MCGOWAN, GEORGE F
Diesel-electric locomotive handbook—electrical equipment. New York Simmons-Boardman Publishing Corporation, 1951 290 p illus. 21 cm. $2 75 7337

Contents The electric transmission. Electrical fundamentals. The electric generator The traction motor Exciters, auxiliary generators, motor blowers, dynamic braking. Batteries. Contractors, etc. Electro-motive division electrical equipment. Alco-General Electric electrical equipment. Lima-Hamilton locomotive electrical equipment. Baldwin Locomotive electrical equipment. Fairbanks, Morse electrical equipment. Index.

—— Diesel-electric locomotive handbook—mechanical equipment. New York Simmons-Boardman Publishing Corporation 1951 262 p. illus. 21 cm. $2 75 Set, $4.85 7338

Contents The development of the Diesel-electric locomotive. Fundamentals. Lubricating and cooling. Fuel systems—fuel. Pistons, piston rings, liners. Connecting rods, bearings, crankshafts. Valves, timing, heads. Governors. The steam generator The air compressor. The American Locomotive Company Diesel engine. The Baldwin Locomotive Diesel engine. The electro-motive Diesel engine. The Fairbanks-Morse Diesel engine. The Lima-Hamilton Diesel engine. The gas-turbine locomotive. Index.
Note Practical books suitable for use in home study by operating and maintenance personnel, especially those preparing to take qualifying examinations for more responsible positions. They are organized in short paragraphs, each of which is introduced by a caption in heavy type. Other aids to facilitate study are a liberal number of good illustrations and numerous electric circuit diagrams. According to the preface, the chapters devoted to specific locomotives have been thoroughly checked for accuracy by the manufacturers.

SILLCOX, LEWIS K
Mastering momentum a discussion of modern transport trends and their influence

upon the equipment of American railways. Second edition. New York Simmons-Boardman Publishing Corporation, 1955 242 p. illus. 23 cm. $5 75 7339

Contents. The mechanics of train operation and train braking. Railway car wheels. Railway car axles. Locomotive and car truck design—all sections and riding qualities. Draft gear. Conclusion. Index.

Note. A discussion of the braking of railway trains presented from the standpoint of railway mechanical engineering. All aspects of the subject are covered, including the forces involved in train operation, the principles and mechanical features of the various types of brakes, the weight of equipment, stresses in wheels and axles. A theory is advanced to explain the development of thermal cracks in wheel treads. The first edition, based on lectures given at the Massachusetts Institute of Technology, was published in 1941. For the second edition the book was revised so as to include information on present-day railway equipment and to take into account the revised rules of the Association of American Railroads.

VAN METRE, T WILLIAM AND RUSSEL GORDON VAN METRE

Trains, tracks and travel. Ninth edition. New York Simmons-Boardman Publishing Corporation, 1956 501 p. illus. 24 cm. $4 95 7340

Contents: Clearing the way. Our railroad system. The railroad track. The steam locomotive. The electric locomotive. Diesel-electric and gas turbine locomotives. Freight cars. Passenger train cars. The streamliner story. Passenger stations and terminals. Freight terminals. Railroad shops and engine terminals. The operation of trains. Railroads and national security. Index.

Note: An expertly written, popular account of railroads in the United States of America, their history, rolling equipment, and operation. It appeals to young people, railroad fans, and general readers. The first edition was published in 1926, and the successive editions portray gradual but major evolution in the equipment of American railroads. The present edition, written in collaboration with the author's son, contains several new chapters in addition to thoroughly revised parts of several chapters carried over from the eighth edition, 1950.

WOODWORKING

CRAWLEY ROSS C.

Woodwork visualized. Milwaukee The Bruce Publishing Company 1950 158 p. illus. 27 cm. $2.50. 7341

Contents (abridged) Tool identification and classification. Lumber. Saws. Planes. Chisels. Knives. Wood files. Layout tools. Boring tools. Holding tools. Driving tools. Scraping tools. Tool sharpening. Joinery. Fastenings. Hardware. Finishing. Projects. Index.

Note: An introductory book to the common hand woodworking operations and to the tools with which they are performed. It is included here because of the unusual method of presentation. Almost the entire space is given to a series of plates on which tools and operations are shown in exceptionally clear drawings. The drawings are accompanied by legends that explain the tool or operation.

DAHL, ALF AND J DOUGLAS WILSON

Cabinetmaking and millwork tools, materials, construction, layout. Second edition. Chicago American Technical Society 1956 352 p. illus. 22 cm. $6.50 7342

Contents: The cabinetmaker's work. Safety practices in cabinetmaking. Woodworking tools. Cabinet and millwork joints. Fundamentals of blueprint reading. Board measure. Fundamentals of stock billing. Rod layout. Steel square layout. Geometrical shop layout jobs. Lumber, adhesives, veneers, and plywood. Standards of construction, sizes, and design. Layout and construction of cabinet work. Doors. Windows and sash. Window sash, and door frames. Interior trim and exterior woodwork. Stair layout. Appendix. Index.

Note: A practical text on the making of wooden cabinets, doors, windows, interior trim, etc. It is designed for the instruction of vocational school students and apprentice carpenters who are preparing to specialize in interior woodwork and cabinetmaking. Some previous introduction to carpentry tools and carpentry practices appears to have been assumed. however there is one chapter in which the hand and machine tools used in cabinetmaking are described. The book is very fully illustrated. The first edition was published in 1953. In this second edition the first 111 pages appear to be identical with those of the first edition, but beginning with the 11th chapter all of the material is newly added.

FABBRO, MARIO DAL

How to make built in furniture. New York F W Dodge Corp., 1955 262 p illus. 26 cm. $6 95 7343

Contents (abridged) General instructions. Built-in furniture designs. Index.

Note. The building of such furniture and fixtures as bookshelves, radiator enclosures, bars, room dividers, clothes closets and kitchen cabinets is covered in this book. In the first part, matters of general applicability such as taking measurements, selecting lumber, anchoring furniture to floors, walls and ceilings, and finishing wood are covered. The second and much longer part is devoted to drawings, dimensions, lists of materials and specific instructions for the building of 102 built-in furniture pieces. All of the pieces described have been designed to fit harmoniously into rooms furnished in the modern style; however some of them, especially the bookshelves and cabinets, will suit other styles of decoration as well. The book is specifically addressed to amateur craftsmen who are interested in constructing furniture for their own homes.

HAINES RAY EDWARD, AND OTHERS

The wood-turning lathe. By Ray E Haines, John V Adams John G Miller Robert L. Thompson, and Raymond Van Tassel. New York D Van Nostrand Company Inc. 1952 132 p. illus. 26 cm. (The home workshop series) $3 50 7344

Contents. History and basic principle of the lathe. The home workshop lathe. Basic tools and accessories—their care and use. Basic operations. Advanced and special operations. Projects. Index.

Note. An introductory book for home mechanics. In it the wood-turning lathe, the tools and accessories used with it, and the basic operations on it are described clearly and simply. Both tools and operations are also shown in pictures. The chapter on projects accounts for more than half of the space. It contains detailed descriptions, including lists of materials and dimensional drawings, for a variety of simple articles such as lamps, salt and pepper shakers and small tables.

HJORTH HERMAN

Machine woodworking. Milwaukee The Bruce Publishing Company 1937 371 p. illus. 23 cm. (The Hjorth series of woodworking texts) $3.25 7345

Contents: Preface. Historical development of woodworking machinery. Circular saws. Operations performed on universal or variety circular saw. Band saws and jig saws. Planing and scraping machines. Shapers and routers. Mortisers, borers, and tenoners. Wood-turning lathes. Sanding machines. Glue-room machinery and equipment. Installation and maintenance. References. Index.

Note. A textbook for technical, trade, and vocational schools, useful also as a handbook for the practical trade-trained shopman and for the largely self-trained home craftsman. Review questions are given at the ends of the chapters. The author has also written *Principles of woodworking* (described below)

HJORTH HERMAN

Principles of woodworking. Revised and enlarged. Milwaukee The Bruce Publishing Company 1948 445 p. illus. 24 cm. $4.50 7346

Contents: History of woodworking tools. Hand tools. Machine tools. The sharpening of tools. Planing and squaring to dimensions. Grooved joints. Dowel joints. Lap or halving joints. Mortise-and-

WEST, CLARENCE JAY

Pulping processes Parts I–IV Appleton, Wis The Institute of Paper Chemistry, 1949–54 4 v 27 cm. (The Institute of Paper Chemistry Bibliographic series Nos 172–175) Vol 1–3, nos. 172–174, $5 00 each, vol. 4, no 175, $10 00 7331

Contents (abridged) Part I, Nitric acid process. Part II, Chlorine process. Part III, Ammonia, magnesium, and sodium bases for sulfite pulping. Part IV Semichemical processes.

Note An extensive bibliography of articles, books, and patents descriptive of the various types of pulping processes which have been studied experimentally or which are in actual commercial use. The entries are annotated and within each subgroup are arranged alphabetically by author Each volume includes patent and author indexes.

WEST, CLARENCE JAY

Slime control and prevention. Appleton The Institute of Paper Chemistry, 1949 76 p 27 cm. (The Institute of Paper Chemistry Bibliographic series No 170) $5 00 7332

Note. A bibliography of periodical articles and manufacturers' literature on the control of slime in pulp and paper plants. References relating to the treatment of processing water or the preservation of moist pulp are not included. The entries are annotated and arranged alphabetically by author

WEST, CLARENCE JAY

Wet strength of paper Second edition. Appleton The Institute of Paper Chemistry, 1951 155 p 27 cm (The Institute of Paper Chemistry Bibliographic series No. 168) $5 00 7333

Note A bibliography of books, articles and patents on the treatment of paper to give it wet strength and on the testing and uses of such paper The entries are annotated. In this edition, there are 391 references as compared with 177 in the first edition. An index to the listed patents is provided.

RAILROAD OPERATION

BRUCE, ALFRED W

The steam locomotive in America its development in the twentieth century New York W W Norton & Company Inc. 1952 443 p illus 24 cm $8 50 7334

Contents. Railways, railroads, and locomotives. Early development of the steam locomotive The steam locomotive industry General development of the steam locomotive, 1901 to 1950. The basic development of power transmission, 1901 to 1950 Development of basic elements. Progressive development of individual types of steam locomotives. Development of special-service locomotives. Growth and development of the steam locomotive. The competitors of the steam locomotive The future design of the steam locomotive Envoi. Index.

Note Although the sub-title of this book indicates a limitation in time to the present century the earlier development of the steam locomotive from its beginnings to the close of the 19th century is adequately outlined. Beginning with 1900, the author gives a detailed account. His chapter on the development of basic elements is over 130 pages long and in it he has described fully the evolution of such parts of the steam locomotive as the boiler mechanical stokers, grates, engines, valves, driving wheels, etc. Inserted pages near the center of the volume contain reproductions of photographs of 168 typical locomotives, and legends under the photographs supply technical details. There is no bibliography

DRENNAN, C M

Air brake study course. New York Simmons-Boardman Books 1954–1955 3 v illus 28 cm. Vols I and II $4 75 per vol vol. III, $6 75 7335

Contents (abridged) Volume I, ABC's of airbrakes, with an brake dictionary' Section I Train brake control. Section II, Air brake fundamentals. Section III, Air brake dictionary Index. Volume II, car air brakes. Section I, Car air brake devices. Section II, Freight car brakes. Section III, Passenger car brakes. Index. Answers to quizzes. Volume III, Locomotive air brakes Section I, Locomotive devices. Section II, Locomotive brake equipments. Section III, Locomotive brake equipments with electric controls. Section IV, Locomotive braking force control. Index. Answers to quizzes.

Note: These three volumes constitute practical course in the principles and operation of air brakes currently used on railroad equipment in the United States of America. They are addressed to railroad men and are composed of simple diagrammatic illustrations, short, straightforward explanations of the illustrations, and numerous review questions.

HENRY, ROBERT SELPH

This fascinating railroad business. Second edition revised. New York The Bobbs-Merrill Company, 1943 520 p. illus. 22 cm. $4 00. 7336

Contents. The road of rails. Evolution of track. Laying out the line. Beneath the rails. Rails of steel. Behavior of track. Above valley stream, and road. Under mountain and river. Structures along the way Carriers of the word. Guardians of the way The first hundred years of steam. Steam—second century Oil, gas," and juice. Train cars. Houses on wheels. Keeping them running. Terminals and trains. Service of supply Growth of the service. Selling the service. "The Company" The company's business. Railroad men. The iron war horse. The business of railroading. An "anatomy" of American railroads. Acknowledgments. Index.

Note A historical work, written mainly for the general reader. Although considerable emphasis is placed on the development of railroads as business, construction, equipment, and railroad organization are also treated.

MCGOWAN, GEORGE F

Diesel-electric locomotive handbook—electrical equipment New York Simmons-Boardman Publishing Corporation, 1951 290 p illus. 21 cm. $2 75 7337

Contents. The electric transmission. Electrical fundamentals. The electric generator The traction motor Exciters, auxiliary generators. Electric motor blowers, dynamic braking. Batteries. Contactors, etc. Electro-motive division electrical equipment. Alco-General Electric electrical equipment. Lima-Hamilton locomotive electrical equipment. Baldwin Locomotive electrical equipment. Fairbanks, Morse electrical equipment. Index.

—— Diesel-electric locomotive handbook—mechanical equipment New York Simmons-Boardman Publishing Corporation, 1951 262 p illus 21 cm $2 75 Set, $4.85 7338

Contents. The development of the Diesel-electric locomotive. Fundamentals. Lubricating and cooling. Fuel systems—fuel. Pistons, piston rings, liners. Connecting rods, bearings, crankshafts. Valves, timing, heads. Governors. The steam generator The air compressor. The Baldwin The American Locomotive Company Diesel engine. The Electro-motive Diesel engine. The Lima Locomotive Diesel engine. The electro-motive Diesel engine. The Lima-Hamilton Diesel engine. Fairbanks-Morse Diesel engine. The gas-turbine locomotive. Index.

Note. Practical books suitable for use in home study by operating and maintenance personnel, especially those preparing to take qualifying examinations for more responsible positions. They are organized in short paragraphs, each of which is introduced by a caption in heavy type. Other aids to facilitate study are the caption in heavy type. Other aids to facilitate study are numerous electric circuit diagrams, number of good illustrations and numerous electric circuit diagrams. According to the preface, the chapters devoted to specific locomotives have been thoroughly checked for accuracy by the manufacturers.

SILLCOX, LEWIS K

Mastering momentum a discussion of modern transport trends and their influence

INDUSTRIAL ENGINEERING

GENERAL

ABRUZZI, ADAM

Work, workers and work measurement. New York Columbia University Press 1956 318 p. 24 cm. $7.50. 7352

Contents: Part I. Work measurement, theory, practice, and fact. The basic problems of tolerance. The nature of time study. The [illegible] of [illegible] procedures. Work measurement in practice. Part II. A work measurement theory: procedures, applications, and results. The problems of time measurement. The nature and function of [illegible] standardization. Production rates in the short term. Interpreting short-term studies. Production rates in the long term. Interpreting long-term studies. [illegible] studies of production activity. Measuring and estimating delays. Part III. The theory of human work, levels, tasks, and observations. The nature of standard data systems. Standard element estimation and related problems. Standard data estimation and related problems. The fundamental character of work. The nature of work fatigue. Fatigue, skill, and work. Principles and admonitions. Bibliography. Index.

Note: The author's *Work measurement*, 1952, was widely acclaimed as an important contribution to the theory and methodology of work measurement. In that book he was chiefly concerned with presenting evidence to show that previously accepted methods of timing and standard data were invalid and with describing valid procedures. In this book, which is a successor to *Work Measurement*, he has expanded his material into a complete theory of work that includes not only measurement methodology but also an analysis of the nature of work and of fatigue and a forecast of the new nature of workers in the era of automation. Again the author is very critical of the theories and methods of classical industrial engineering.

ALFORD, LEON PRATT

Principles of industrial management. Revised edition. Revised and rewritten by H. Russell Beatty New York The Ronald Press Company 1951 779 p. illus. 24 cm. $6.75 7353

Contents (abridged): The background of modern industrial management. The effects of mechanization. Expansion of industry in the United States. The ownership of industry. Planning—objectives and policies. Organization for control. Organization for operation. Simplified practice and engineering standards. Control of purchasing. Inventory control. Production planning and control. Quality control. Inspection. Motion and time study. Classification and symbolization. Cost accounting. Maintenance of buildings and machinery. Personnel administration. Wage and salary administration. Employment and personnel services. Industrial safety—accident and disaster prevention. Index of names. Index of subjects.

Note: An unusually comprehensive and thorough presentation of the basic principles and practices of industrial management. The book, although intended primarily for use as a college text, has considerable value as a reference manual for the practicing executive. Emphasis is placed on fundamentals, but numerous illustrations of actual management techniques are included. This edition, a revision of *Principles of industrial management for engineers*, New York, 1940, has been extensively rewritten and enlarged. New chapters have been added on industrial leadership and marketing, and the sections on quality control and motion and time study have been greatly expanded—changes which account for almost 330 additional pages.

ALFORD, LEON PRATT AND JOHN R. BANGS, editors

Production handbook. Staff editor George E. Hagemann. New York The Ronald Press Company 1944 1,676 p. illus. 19 cm. 7354

Contents: Plant organization. Production planning and control. Production control systems. Purchasing. Materials control and standardization. Storekeeping. Time study and operation analysis. Motion study—work simplification. Inspection. Quality control. Plant layout. Machinery. Tools, jigs and fixtures. Materials handling. Job evaluation. Merit rating. Wage plans. Job estimating. Classifications and symbols. Principles of management. Plant maintenance. Measures of performance. Manufacturing costs. Factory budgets. Plant personnel. Index.

Note: This manual covers intensively the problems of directing the men, materials, and machines of a manufacturing establishment. It deals with more effective turning out of product, living up to time schedules, working under the requirements of budgets, and other factors entering into the planning and control of efficient production under present-day conditions. It is designed to be of practical daily use to the manufacturing men for whom it is primarily intended, and also to be readily understandable and helpful to others beside those with specialized technical background. Eighty-nine executives and professional men are listed as its contributing and consulting editors. The second edition, under the editorship of Gordon B. Carson, Dean of the College of Engineering of Ohio State University, was published in 1958, 1,744 p., $18.00.

APPLE, JAMES MACGREGOR

Plant layout and materials handling. New York Ronald Press Company 1950. 367 p. illus. 23 cm. $7.00. 7355

Contents (abridged): The plant layout function. Production planning. Introduction to the materials handling problem. Materials handling equipment. Materials handling and related functions. Operations planning. Layout planning. Service departments. Checking and approving the layout. Plant location. Industrial plant buildings. Appendix: Conveyor data. Lift trucks. Materials handling surveys. Railroad and highway transportation. Building construction and service facilities. Plant layout template and model standards. Bibliography. Index.

Note: In this work, plant layout and materials handling are presented as elements in industrial engineering. Much emphasis is put on co-ordination of the plant layout and the materials handling systems with the over-all plan and function of the plant. Typical equipment is discussed and illustrated, but this matter is incidental to the main theme. The book is suitable for use both as a textbook and as an introduction or "refresher" for practicing engineers.

BARNES, RALPH MOSSER, AND NORMA A. ENGLERT

Bibliography of industrial engineering and management literature to January 1 1946. Fifth edition. Dubuque Wm. C. Brown Company 1946 136 p 28 cm. $3.00. 7356

Contents (abridged): Books and bulletins. Articles and papers. Abbreviations of titles of magazines and papers used in bibliography. Classification of articles and papers by subjects.

Note: The present edition of this standard bibliography contains 4,163 entries. The scope is not exhaustive, but the compilers have apparently attempted to list all of the important books and articles published in the English language and some of the material published in other languages, especially in French and German. The entries are not annotated. "The classification of articles and papers by subject" is in effect a detailed subject index to the individual articles.

BETHEL, LAWRENCE L. AND OTHERS

Industrial organization and management, by Lawrence L. Bethel, Franklin S. Atwater George H. E. Smith, Harvey A. Stackman, jr

tenon joints. Miter joints. Dovetail joints. Miscellaneous constructions. Gluing and clamping. Metal fastenings. Wood turning. Surface decoration. Upholstery Wood finishing. Wood. Applied projects.

Note A manual for vocational and secondary school students, and for adults with whom woodworking is a hobby The operation and use of the principal hand- and machine-woodworking tools are described clearly and in detail, with emphasis in their application to cabinetmaking. In this edition, several of the chapters, such as those dealing with machine tools and wood turning, have been expanded, and new chapters have been added on the history of woodworking tools and the making of miter joints.

HOARD, F E , AND A. W MARLOW

The cabinetmaker's treasury New York The Macmillan Company, 1952 267 p illus. 26 cm. $6 50 7347

Contents Essential processes in cabinetmaking. Chairs. Stools. Tables. Beds. Cupboards. Chests. Desks. Mirrors and dressing glasses. Clock cases. Period characteristics of English and American furniture. Glossary

Note A book addressed to craftsmen (both amateur and professional) with some previous experience in woodworking. Certain fundamental operations, such as the making of joints, the construction of bracket feet, fluting and reeding of turnings, and carving are discussed briefly in the first chapter The rest of the book is devoted to scaled drawings of furniture pieces and to fairly detailed procedures for making the pieces. Altogether there are 102 full-page plates of drawings. The book is especially suited to the needs of skilled amateur craftsmen who are interested in the making of fine furniture.

KLENKE, WILLIAM W

The art of wood turning Completely revised. Peoria, Ill. Chas A. Bennett Co Inc., 1954 186 p illus 23 cm $3 85 7348

Contents Selecting lathe. Tools and equipment. Grinding and sharpening. Spindle turning. Design in wood turning. Darning ball. Sandpapering in the lathe. Finishing. Things to make. Combination turning. Index.

Note. This book contains simple, practical advice on the choice of lathe, clear descriptions of the basic woodturning operations, and host of projects ranging from the simple to the complex. Dimensioned line drawings are included for each project and in some instances there is also photograph of the finished article. Projects range from simple articles such as candlesticks to complex ones such as Windsor style chairs and four-poster beds. Some matter has been carried over from previous editions, but the book has been revised from end to end both in text and pictures and printed in a ew format. An excellent book for the home craftsman with a oodworking lathe.

MARGON, LESTER

Construction of American furniture treasures measured drawings of selected museum pieces with complete information on their construction and reproduction 38 full-page plates, 344 detail drawings and more than 40 photographs of the work of the most famous early American cabinetmakers. New York The Home Craftsman Publishing Corporation, 1949 167 p illus. 30 cm. $4 95 7349

Note: Measured drawings constitute the outstanding feature of this book. As indicated in the title, the furniture depicted is American and all of the pieces illustrated are now in the collections of museums or historic houses. Each piece represented is shown in a photograph, then its dimensions and construction details are shown in one or more plates of drawings. The book is intended for amateur craftsmen and cabinetmakers who are interested in making replicas of historic furniture consequently the illustrations are accompanied by detailed directions for construction and finishing of the pieces.

PELTON, B W

Furniture making and cabinet work, a handbook. New York D Van Nostrand Company, Inc. 1949 596 p. illus. 24 cm. $7 95 7350

Contents. Cabinetmaking. Indoor furniture construction. Outdoor furniture. Built-in furniture and conveniences. Furniture finishing. Veneers and inlays. Upholstery and seat weaving. Restoration, repair and refinishing. Salvaging discarded furniture. Principles of interior decoration. Indoor remodeling. Index.

Note. Practical and detailed instructions for the amateur craftsman in the art of constructing a wide variety of indoor and outdoor furniture. Each project includes a dimensioned drawing, list of materials required, and step-by-step construction methods. The project section is preceded by description of basic woodworking operations and tools. The final chapters, although less detailed than the ones on furniture, provide information on the basic steps in room remodeling and interior decoration.

SHEA, JOHN GERALD, AND PAUL NOLT WENGER

Woodworking for everybody Second edition. Princeton D Van Nostrand Company Inc. 1953 207 p illus. 28 cm. $4.25 7351

Contents (abridged) The story of wood. Shop equipment. Processes. Joinery Woodworking machinery Tool sharpening. Wood finishing. Safety first. Index.

Note. An informative, well-illustrated introduction to woodworking. It is used both as textbook in high school manual arts classes and as manual of information for amateur and hobbyist woodworkers. It describes tools and techniques and provides dimensioned drawings and working directions for about sixty projects.

Ronald Press Company 1947 819 p. illus. 24 cm. $5.50. 7363

Contents (abridged): Part I, Organization and operation of industrial enterprises: Principles of organization. Principles of management. Analysis of the industrial problem. The company organization. Controller's department. Engineering department. Purchasing department. Material control—storekeeping. Manufacturing department. Inspection division. Power and maintenance division. Sales department. Management of personnel relations. Part II, Production control and time study: Tool control. Production control. Routing. Planning. Time study. Part III, Illustrations from practice: An illustration of the layout and arrangement of a textile mill. A system of dispatching (Chrysler Corporation). Bibliography. Index.

Note: A college textbook which provides a broad introduction to the problems and methods of practical management of industrial enterprises. Methods followed by outstanding corporations in the United States of America are emphasized. The author is Chairman of the Department of Management and Industrial Relations of the School of Commerce of New York University.

FOLTS, FRANKLIN E.

Introduction to industrial management text, cases, and problems. Fourth edition. New York. McGraw Hill Book Company 1954 684 p. illus. 23 cm. $6.75 7364

Contents (abridged): Part I, Economics of production: Specialization of labor (division of labor). Simplification. Standardization. Diversification. Expansion. Integration. Part II, Factors of production: Raw materials supply. Plant location. Plant layout. Power. Job standards and wage payment methods. Part III, Control of the production process: Product development and introduction. Planning and scheduling. Quality control. Organization. Index. Alphabetical list of cases and problems.

Note: A standard textbook, first published in 1933 and published in third edition in 1949. It teaches industrial management largely by the case method, that is to say by the study and discussion of "case histories" selected to illustrate specific problems in industrial management. The author is a member of the faculty of the Graduate School of Business Administration of Harvard University.

HEMPEL, EDWARD HENRY editor

Small plant management. A guide to practical, know-how management. A Small Plant Committee research study prepared under the auspices of the Management Division of the American Society of Mechanical Engineers. Edited by Edward H. Hempel chairman Small Plant Committee, A. S. M. E. New York. McGraw Hill Book Company Inc. 1950. 548 p. illus. 24 cm. $7.00 7365

Contents: The project and its findings, by J. K. Louden. Part I, Small plants as economic factors: The economic and industrial importance of small plants, by A. D. H. Kaplan. Small plant financing and banking, by E. D. Rosen. Community progress created by small plants, by J. Colbert. Government interest in small plants, by C. F. Hughes. Part II, Management tasks: Old and new concepts of management, by E. H. Hempel. Top management planning for the small plant, by E. H. Hempel. Organizing the small plant, by J. D. Mooney. Operating the small plant, by A. Ehlrecht. Supervising and controlling the small plant, by T. A. Marshall, Jr. Part III, How to solve the important problems of small plant management: How to fulfill the legal requirements, by J. R. Tiffany and S. Warne. How to get best workers and labor relations, by W. R. Mansfield. How to get along with the union, by W. Gomberg. How to buy best facilities and materials, by H. T. Coster. How to obtain best productivity, by F. Capps. How to do technical research, by F. W. Miller. How to get best sales, by A. E. DuPuget. How to do and use accounting, by C. W. Bennett. How to pay and save in taxes, by E. J. Donahue. How to make savings and use profits, by J. K. Louden. Part IV, Small plant future: The general outlook for small plants in the United States, by E. E. Shaw. Small plant opportunities in Latin America and other countries, by J. J. [illegible]. Bibliography and suggestions for small plant management library. Index.

Note: This book of up-to-date management techniques was written after more than a year of study of the factors leading to the successful management of small factories and shops. The Small Plant Committee of the Management Division of the American Society of Mechanical Engineers outlined 20 topics for inclusion and selected 20 authors to cover the approved topics. The resulting work contains detailed information and practical advice on all phases of the business operation of small industrial concerns. While prepared especially for plants employing less than 100 persons the book should be useful also to the managers of small plants with more employees.

IRESON WILLIAM GRANT

Factory planning and plant layout. New York Prentice-Hall Inc., 1952 385 p. illus. 22 cm. $6.00 7366

Contents: Introduction to factory planning. Product analysis for factory planning. Economic analyses in factory planning. Principles of layout and departmentalization. Methods and procedures in factory planning. Common errors in layout. The layout of auxiliary departments. Materials handling. Materials-handling equipment and applications. Factory services. Factory buildings and building features. Planning personnel facilities. Management aspect of factory planning. Problems in factory planning and plant layout. Appendices. Index.

Note: The planning and layout of small and medium-size factories is emphasized in this well-written book. The treatment is introductory and is intended chiefly for college students taking first courses in the subject. The discussion of any one aspect is usually brief, but the information given is well selected and is presented in straightforward manner. Good bibliographies accompany the chapters. There are 114 illustrations.

IRESON WILLIAM GRANT AND EUGENE L. GRANT editors

Handbook of industrial engineering and management. Englewood Cliffs, N J Prentice Hall Inc., 1955 1,203 p. illus. 24 cm. $16.00. 7367

Contents: Structure of business organizations, by E. Dale. Managerial economics, by J. Dean. Engineering economy, by P. T. Norton, Jr. Manpower management and employment relations, by D. Yoder. Motion and time study, by M. E. Mundel. Factory systems and procedures, by L. P. Bell. Industrial climatology, by R. K. Lindsey. Factory planning and materials handling, by W. G. Ireson. Industrial standardization, by L. R. Moore. Tool engineering, by L. E. Doyle. Industrial safety, by R. E. Donovan. Industrial hygiene, by O. E. Byrd. Industrial statistics, by A. H. Bowker and G. J. Lieberman. Inspection and quality control, by W. H. Lewis. Industrial operations research, by A. W. Swan. Industrial budgeting, by R. Villers. Trade unions and industrial engineering, by W. Gomberg. Index.

Note: Some of the features—for example, interest tables—of this book are strictly reference in nature, but it is not primarily a reference book. Despite close printing and a two-column page, there are 1,183 pages of textual matter of almost 70 pages per chapter. The typical chapter is a compact, critical appraisal of the current status of a phase of industrial engineering. It will contain formulas, graphic and tabular presentation of data, etc., if the topic calls for them, but most of the matter will be narrative discussion intended for reading. Such a chapter as Gomberg's "Trade unions and industrial engineering" could stand alone as a book, also, it requires as close reading for comprehension as any book on industrial engineering. The volume is well indexed, and each chapter is equipped with a preliminary outline to facilitate the finding of sub-topics. Several of the chapters contain bibliographies of some length, but there is no general bibliography or even an attempt to list the major literature of the field. This is unfortunate, since readers attracted to the volume will undoubtedly wish to read more on some topics.

JOHNSON FORREST HAYDEN, AND OTHERS

Job evaluation by Forrest Hayden Johnson Robert W Bolse, Jr and Dudley Pratt Illustrated by J Gurney Miller New York John Wiley & Sons, Inc., 1946. 288 p. illus. 22 cm. $4 90 7368

Contents (abridged): Building a job-evaluation plan. Typical factory job-evaluation plan. Typical clerical and technical job-evaluation plan. The job-evaluation manuals. Relating job evaluation to

Third edition New York McGraw Hill Book Company, Inc., 1956 719 p illus 24 cm. (McGraw Hill industrial organization and management series L C Morrow, consulting editor) $6 75 7357

Contents (abridged) Industrial America—role of management, government and labor Industrial risk and forecasting. Product research and development. Product improvement and engineering. Production planning. Physical facilities. Production control. Materials control. Quality control. Plant engineering. Methods analysis and control. Principles of industrial relations. Personnel management. Employee training. Wage and salary administration. Financial controls. Coordinating the enterprise. Bibliography Visual bibliography Index.

Note. This book is both an introductory textbook for college students of industrial management and a manual of information for lawyers, accountants, and others whose dealings with industry require knowledge of the fundamentals of industrial organization and management. Generally speaking, the chapters are organized on the following framework: (1) statement of fundamental and background information, (2) case examples illustrating the application of principles, (3) discussions of controversial issues and of the outlook for the f ture, and (4) problems and questions taken from actual situations that have arisen in industry The second edition was published in 1950. In preparing the third edition, there was some reorganization of the material, numerous sections were revised, and information was added on number of topics including automation and operations research.

BETHEL, LAWRENCE L , AND OTHERS

Production control, by Lawrence L. Bethel, Walter L Tann, Franklin S Atwater, and Edward E Rung Second edition. New York McGraw Hill Book Company, Inc , 1948 289 p illus. 24 cm. $5 00 7358

Contents The concept of control. Organization for control. Production forecasting. Product development. Production analysis. Relating budgeting to production. Routing of operations and processes. Scheduling production. Dispatching. Follow-up—expediting. Control of materials. Classification and identification. Quality control. Relating cost to production. Coordination. Appendices. Bibliography Index.

Note. An introductory text. The first edition was designed for use in classes offered to newcomers in the field during the great increase in factory staffs in the United States of America during World War II. In this edition, the book has been revised to adapt it to the needs of men preparing for peace-time industry A broad but practical view of the subject is given. The various basic operations in the planning and control of production of manufactured goods in American factories are explained clearly but, as is appropriate in a brief introductory work, are not covered in great detail. Many useful forms for production records are shown in the appendices. The bibliography although limited to books, runs to four pages and lists further reading on all the major branches of the topic.

BROADED, CHARLEY HOOKER

Essentials of management for supervisors. New York Harper & Brothers 1947 239 p illus 22 cm. $5 50 7359

Contents (abridged) The planning function. The organizing function. The command function. The control function. The co-ordinating function. Building confidence. Developing initiative. Correcting mistakes (reprimanding) Adjusting people to new situations. Getting co-operation. Work simplification. The supervisor instructs. Summary of the four phases of supervision. Evaluation of supervisory practices. Related references. Index.

Note. An introductory guide to the techniques of successful supervision of personnel in business enterprises. Its brief and concise text is popularly written and arranged in fashion to make it not only easy to understand but also easy to remember. T this end, the key points are recapitulated at the end of each section dealing with one of the main phases of supervisory activity The analysis of the various functions and requirements of a supervisor is preceded by brief explanation of the basic principles of free enterprise economy and business operation. A series of check charts and short list of selected bibliographical references are appended.

BUCKINGHAM, EARLE

Production engineering New York John Wiley & Sons, Inc., 1942 268 p. 23 cm. $5.00. 7360

Contents. Introduction. Section I, Preparation for production Production design. Planning the equipment. Tool design. Testing the design and equipment. Section II, Production operation and control. Planning and operating for production. Selecting, training, and direction of operators. Quality control. Cost reduction. Section III, Supporting activities: Standardization. Factory costs for the engineer Process development. Product development. Summary Index.

Note Descriptive in character, this work discusses the problem of production from an engineer's viewpoint. It clearly shows the engineer's position in an industrial organization and gives the relation which he bears to other functional groups within a large company It shows the object of production engineering and its relationship to the many other activities of an industrial organization, and describes how the work of production is the co-ordinated result of the efforts of many individuals.

CANNING, RICHARD G

Electronic data processing for business and industry New York John Wiley & Sons, Inc., 1956 332 p illus. 24 cm. $7.00 7361

Contents Electronic data processing—a new management tool. Patterns of data processing. Summary of electronic data processing machines. Programming typical clerical operations. The systems study The electronic system—initial design—detailed design. The role of operations research. Equipment characteristics. Management's program for obtaining reliable system. Appendices: Overcoming barriers to the acceptance of new ideas and methods, by E. Tannenbaum. Casting out nines. Bibliography and references. Index.

Note. A complete illustrated summary of electronic data processing intended more for the businessman or industrial engineer than as a textbook. There is concentration on the following questions. (1) What is electronic data processing? (This is answered by the presentation of the basic pattern of data processing systems and the major subdivisions within the basic pattern.) (2) What can it do for a company? (This is answered by the presentation of examples of the use of electronics in business and discussion of the characteristics of the various types of equipment from the user's point of view) (3) How should company proceed to investigate it? (This is answered by the description of a program for developing logical cours of action within the company.) As much as possible the author has used the language of management and has avoided the technicalities of the electronic equipment.

CLEETON, GLEN URIEL, AND CHARLES W MASON

Executive ability, its discovery and development. Yellow Springs Ohio Antioch Press, 1946 540 p 22 cm. $4.50 7362

Contents (abridged) The executive problem. Executive functions. Executive qualities. Measurement of executive traits. Prediction of executive success. Development of executive ability Hints to prospective executives. Executive attitudes and emotional nature. Executive control of personnel. Modern executive techniques. The executive in democracy Appendix. Bibliography Norms for executive check list for self-evaluation. Norms for interest test. Norms for executive attitude questionnaire. Index of names. Index of organizations. Subject index.

Note A fully developed study of the characteristics, functions, and duties of executives in democratic society A considerable part of it is based upon the principles of psychology and there are full descriptions of such psychological topics as tests for discovering and measuring executive ability The responsibilities of executives to modern society are discussed at length. The book was first published in 1934, but the present edition has been so thoroughly revised and enlarged that it is essentially new work. It is suitable for use as a text in college courses and also as professional reading for both young and mature executives out of school.

CORNELL WILLIAM BOUCK

Organization and management in industry and business. Third edition. New York The

Industrial Engineering

General

[illegible] Labor-management relations, by D. E. Farr and K. Cusick. Product-classification methods, by E. G. Brisch. Part I, C. Lee. Product-classification methods, by L. C. Turner. [illegible] and design. Plant location, by L. C. Turner. Plant layout, by R. Muther. Replacement of machinery and equipment, by R. Muther. Production-line techniques, by R. Muther and E. T. Schnee. Tool and gage design, by R. A. [illegible]. Fixture design, by R. Fulton. Tool and gage design, by J. P. Watson and [illegible]. Measurement-device design, by J. P. Watson and [illegible]. Other aspects of industrial engineering. [illegible] Estimating data and costing procedures, by F. P. Stark, Jr. Slide-rule cutting speed and feed charts, by C. F. Stephenson. Curves and nomographs, by R. P. [illegible], by F. E. MacArthur. Curves and nomographs, by G. D. Wilkinson. Office methods and standards, by L. C. Pratt. Housekeeping [illegible] methods and standards, by L. C. Pratt. Economic-lot-size determination, by [illegible], by F. R. Alvarez. Operator training [illegible]. Safety, by H. W. Heinrich. Supervisory training in work simplification, by L. M. Gilbreth. Suggestion systems, by E. K. Roberts, Jr., by A. E. Magnuson. Suggestion systems, by E. K. Roberts. Personnel testing, by E. [illegible] procedures, by W. Scott. Operations research, by R. O. Ferguson and M. J. McCreath. Preparation of effective reports, by R. Frank. [illegible] methods, by O. Dusenbury. Nonindustrial [illegible] of industrial engineering, by L. M. Gilbreth. The [illegible] of automation, by H. L. Waddell. Index.

Note: The broad scope of this handbook for graduate industrial engineers is apparent from the chapter titles, which are listed in [illegible] Many of the chapters on such topics as methods [illegible] For the most part, the handbook is especially noteworthy. For the most part, the individual chapters are concise statements in typical handbook style of fundamentals and useful data. When appropriate they contain worked examples of typical problems, useful forms, charts and tables. Literature references are included in most of them.

MOORE, FRANKLIN G

Production control. New York McGraw Hill Book Company Inc., 1951 455 p. illus. 24 cm. $6.50. 7374

Contents: Production control defined. Types of production. Types of production control. Forecasting and scheduling. Authority in [illegible]. Basic information required for order control. Determining, drawing numbers, and identification systems. Determining [illegible] and materials requirements in order control. Programs for [illegible] in order control. Initiating production and controlling [illegible] in progress with order control. Flow control. Block and load control. Mechanical tabulation. Reproduction of forms and [illegible] systems. Relationships of the production control department with other departments. Value of production control. Cases and problems. Bibliography. Index.

Note: This introduction to the basic principles and methods of production control is designed for use in college courses in business and management. In order to illustrate why certain procedures are followed various techniques and forms employed in industry are described in detail. Numerous flow charts and 70 case studies and selected problems are included. The author is a faculty member of the University of Michigan.

MUTHER, RICHARD

Practical plant layout. With a foreword by Harold B Maynard. New York McGraw Hill Book Company Inc., 1955 363 p. illus. 29 cm. $12.00. 7375

Contents (abridged): Part I. The nature of plant layout. Part II. Factors influencing plant layout. Material factor. Machinery factor. Man factor. Movement factor. Waiting factor. Service factor. Building factor. Change factor. Part III. How to plan the layout. Approach to layout engineering. Get the facts. Diagram the flow. Measure the time involved. Visualize the layout. Evaluate alternative layouts. Part IV. Mastering and training for plant layout. Appendixes. The operation process chart. The flow chart. The number of machines required. Aisle widths. Classification of industrial material-handling equipment. Suggestions for office layout and office spacing. Suggestions for arranging small or servicing machine shop. Railroad clearances and freight-car dimensions. Highway truck dimensions. Index.

Note: The complex process of planning the arrangements of layouts of factories and related industrial establishments, such as warehouses, is treated analytically and in detail in this book. According to the author, there are eight important factors to be considered in the planning of any layout. These factors are presented and discussed individually in the book's second part. The steps in planning a layout are explained in equal detail in the third part. The author emphasizes the importance of collecting facts on such aspects as materials to be stored, sequence of operations, and material and space requirements for individual operations. The use of visual aids, such as templates and three-dimensional scale models, both in planning layouts and in presenting them to management and operating personnel is well explained. The appendixes contain a wide range of useful reference information. There are numerous illustrations but no systematic bibliography.

PLANTY, EARL GERALD, AND OTHERS

Training employees and managers for production and teamwork by Earl G Planty William S. McCord and Carlos A. Efferson. With a foreword by Robert W Johnson. New York The Ronald Press Company 1948. 278 p. 24 cm. $5.00. 7376

Contents (abridged): Part I. Training—what it is and what it does. Part II. Organizing, installing, and administering a training program. Position of training in company organization. Who should teach? Qualifications of the training director. What to teach. Mechanics of the training program. Part III. Teaching and the training program: Teaching aids. Selecting and improving the training staff. Aims and objectives of management, supervisor, and executive training. Technical and professional training. Trade and machine training. Office and business training. Special training problems of the small company. The integrated program. Selected references. Index.

Note: The theme of this volume is that a well-planned program of in-service training is an effective means of improving plant efficiency, employee morale, and labor-management relations in industrial firms. Based on the authors' experience in establishing and conducting industrial training programs, it describes and [illegible] the techniques and programs which have proved successful. The very practical discussions of what training can and cannot accomplish, and the descriptions of methods of organization, administration, and actual training programs are useful to training directors, executives, personnel managers, and others concerned with training work in industry.

PROBST, JOHN BERNARD

Measuring and rating employee value. New York The Ronald Press Company 1947 166 p. illus. 24 cm. $6.00 7377

Contents (abridged): Part I. Employee rating plans in general: Ratings and their purposes. Types of rating plans. A critical analysis of rating plans. Part II. An improved rating system: The Probst system in operation. Testing a rating system. Statistical analysis of ratings. Part III. The system in practice. Special experimental tests of rating methods. Filling supervisory and key positions. Measuring personal fitness. Appendixes: Origin and development of the scoring stencils and formula scales in the Probst rating system. Time studies. Los Angeles statistical chart and data. The order of lay-off. Oral interviews—analysis of a six-year study. An experimental test in England with the Probst rating system. Directions for conducting an experimental test in measuring the worth of employees. Index.

Note: The greater part of this book is concerned with the rating system developed by the author and known by his name. The system is described, and illustrations are given of the forms that are used. The procedures of making the ratings, checking, and interpreting them are discussed. A number of examples of actual results of using the system in various types of organizations, including governmental, are incorporated in the discussion.

ROETHLISBERGER, FRITZ JULES AND WILLIAM J DICKSON

Management and the worker an account of a research program conducted by the Western Electric Company Hawthorne Works, Chicago with the assistance and collaboration of Harold A. Wright. Cambridge, Mass. Harvard University Press 1939 615 p. illus. 24 cm. $6.00. 7378

Contents: Part I. Working conditions and employee efficiency: Introduction. Planning the relay assembly test room. Experiment with rest pauses. Experiment with shorter working days and weeks. Testing the fatigue and monotony hypotheses. Testing the effects of wage incentives. The test room operators. The relay assembly test room supervision. Part II. A plan for the improvement of employee relations: Growth and development of the

pay scales. Assigning employees to evaluated jobs. The system in operation. Appeal procedure. Recognition of individual merit. Bibliography Index.

Note. A job-evaluation system that combines features of the ranking, factor-comparison and point systems is presented. The plan reflects the authors experiences in several companies, including Boeing Aircraft. It is based on analyses of the jobs by the job-evaluation department and a committee on which the workers are represented. Jobs are analyzed for such factors as mental ability experience and training required, complexity of duties, responsibilities, physical effort, working conditions, and unusual hazards, point values are assigned to these factors. Analysis procedures are discussed in detail.

KIMBALL, DEXTER SIMPSON, AND DEXTER S KIMBALL, JR.

Principles of industrial organization Sixth edition New York McGraw Hill Book Company, Inc., 1947 531 p illus. 23 cm. (McGraw Hill industrial organization and management series, L C Morrow, consulting editor) $6 50 7369

Contents. The background of industry The industrial revolution. The economic and social effects of inventions. The growth of industrial enterprises. Other industrial tendencies. Formation and maintenance of policies. Industrial ownership. Location, arrangement, and construction of industrial plants. Principles of organization. Coordination and executive control system. Classification and identification. The control of production. Operation standardization —time and motion studies. Purchasing. Stores and stock. Standards and standardization. Attainment of standards—inspection. Principles of cost finding. The depreciation of wasting assets. Equipment policies. The compensation of labor Job evaluation and merit rating. Measures of management. The mechanization of industry Industrial relations. Industrial democracy Résumé—science in industry Index.

Note. This work has become widely known and used as a good introductory survey of the basic principles and practice of industrial organization and management with considerable emphasis upon the social functions and obligations of industry Its chief use is as a college textbook, but it is useful also as a source of information for mature readers. Numerous minor revisions have been made in this edition and in various parts, e.g., the discussion of labor unions, complete sub-sections have been rewritten. The chapter on job evaluation and merit rating is new and the reference lists have been revised.

KOEPKE, CHARLES AUGUSTUS

Plant production control. Second edition. New York John Wiley & Sons Inc., 1949 568 p illus 24 cm $7 50 7370

Contents (abridged) An analysis of some production factors. Organization for production control. Ordering, receiving, storing, and issuing materials. Standardization to aid production. Small tools and tool cribs. Plant capacity maintenance, and repair Coordination of sales and manufacturing. Planning for the production program. Scheduling and releasing orders. Measures of factory performance. Index.

Not This text discusses primarily the concepts and problems f controlling and planning production, that is, the flow of materials through a commercial enterprise. Such phases of industrial engineering as design and layout and time and motion study are not discussed in detail. Discussion questions and bibliographies are given at the end f each chapter The work will be of value to industrial and design engineers and to all production control personnel. This edition has been extensively rearranged and also revised to incorporat the current practices for controlling production.

LYTLE CHARLES WALTER

Job evaluation methods Second edition New York The Ronald Press Company 1954 507 p illus 24 cm $7 50 7371

Contents A minor function becomes major one Policy and organization. Methods and techniques. Choosing job characteristics Selling the project. Setting up measuring scales. Job analysis—describing and specifying. Rating the jobs Classifying the jobs. Locality surveys—setting the general age level. Building the rate structure. Operating and adjusting. Merit rating. Applying evaluation to office and supervisory positions. Applying evaluation to executive and professional positions. Incentives vital to man—job and control. Index.

Note A modern, comprehensive, and systematic survey of the field of job evaluation. Suitable for use in senior or graduate courses in colleges of engineering and commerce, the book is useful also to persons in industry who wish to learn the principles and fundamentals before proceeding to the exact ways in hich job evaluation plans are devised, set up, and made to operate smoothly The author presents the subject of job evaluation analytically according to the functional steps comprising the evaluation procedure, each chapter being confined to a single phase of the hole procedure. The second edition has been revised throughout.

MALLICK, RANDOLPH W , AND ARMAND T GAUDREAU

Plant layout planning and practice. New York John Wiley & Sons Inc., 1951 391 p. illus. 25 cm. $8 00 7372

Contents (abridged) Part I, Approach to plant layout The role of plant layout in management. Ascertaining the need for a relayout. Basis for designing a plant layout. Techniques of plant layout engineering. Part II, Planning the processing departments: Framework of plant layout procedure. Determining the capacities for the design. Analyzing, balancing, and routing the operations. Planning and equipping the work station. Internal transportation of plant material. Part III, Designing plant service facilities. Receiving, shipping, and warehouse areas. Storerooms and storage facilities. Test areas, inspection points, and dispatch stations. Maintenance facilities, tool cribs, and sprinkler systems. Power and lighting systems. Planning office layouts. Employee service facilities. Part IV Justifying the layout project: Buildings for housing the plant layout. Presenting the proposal to the management. Bibliography Index.

Note. An outstanding work on this subject. Well organized, well written, and very generously illustrated, it is designed for practical use by corporation executives and plant engineers. The material is applicable both to the design of new layouts and the redesign of established ones.

MAYNARD, H. B , editor

Industrial engineering handbook. New York McGraw Hill Book Company, Inc., 1956 1,513 p illus 23 cm. $17.50 7373

Contents. Part I, The industrial engineering function: Development of industrial engineering, by L. F Urwick. The scope of the industrial engineering function, by T A. Marshall Jr. Organizing for industrial engineering, by H. G. Crockett. Management's use of industrial engineering, by J K. Louden. The foreman's part in industrial engineering, by P Carroll. Selling—a necessary skill for the industrial engineer by G. H. Elliott. Industrial engineering terminology definitions approved by ASME Work Standardization Committee. Part II, Methods. Methods engineering, by W Rodgers. Processing and operation planning, by I. R. Grass. Process-chart procedures, by W R. Mullee and D. B. Porter Operation analysis, by G. J. Stegemerten. Motion study by A. R. Shaw Making and using industrial motion pictures, by E. C. Mead. Material handling, by R. W Mallick. Methods laboratory by R. S. Fries. Part III, Work measurement Standardization of work measurement, by R. Presgrave. Methods of measuring time by R. S. Bulla. Stop-watch time study by A. E. Shaw Performance rating, by C. A. Anderson. Work sampling, by C. L. Brisley Measurement of machine interference, by K. O. W Sandberg. Frequency studies, by N. M. Mitchell. Memo-motion study by G. D. Wolfe. Standard data and charts, by P Carroll. Time formulas, by L. B. Grella. Measurement of storeroom, janitor and shipping and receiving work, by C. W Fenton. Planning and measuring maintenance and construction work, by F F Middleswart. Uses of time standards, by J. W Dargan. Administrative procedures and clerical routines, by W K. Hodson. Part IV Predetermined-elemental-time standards: Use of predetermined-elemental-time standards, by R. Stelly Methods-time measurement, by J L. Schwab. The work-factor system, by J. H Quick and others. Basic motion timestudy by R. Presgrave and G. B. Bailey Motion-time analysis, by A. B. Segur Part V Wage payment: Industrial relations and industrial engineering by E. N Hay Wage-incentive plans, by J O. P Hummel and J W Nickerson. Group systems of wage payment, by H. B. Maynard. Job evaluation, by D. J Chesler and others. Merit rating by M. W Richardson. Wage administration, by R. D. Cook. Part VI, Control procedures Production planning and control, by T M. Landy The Gantt chart, by W Clark. Inventory control, by R. F Neuschel. Quality control, by J. Manuele. Cost control, by E. J. A. J Bergfeld and D P Streeter Budgetary control, by

[illegible] Control and the automatic factory—continuous manufac[illegible] in intermittent manufacturing and the [illegible] effects of automation. The computers. Operations research and linear programming. Appendix. Index.

Note: This [illegible] up-to-date college textbook for industrial engineering. It presents the basic theoretical principles, and applications of these principles, in the field of production control, which is [illegible] in modern manufacturing concerns of all [illegible]. Emphasis is placed on the interrelationship between production control and the other functions of manufacturing. Each chapter [illegible] summary and conclusions [illegible] and detailed questions. The book also includes many actual [illegible] such as Bell and Howell Company, Eli Lilly and Company, the Ford Motor Company and the General Electric Company as well as smaller manufacturing companies.

YOUNGER, JOHN AND JOSEPH GESCHELIN

Work routing, scheduling and dispatching in production. Third edition. New York The Ronald Press Company 1947 168 p. illus. 24 cm. $4.50. 7385

Contents: Work routing. Instruction forms. Economics of [illegible]. Analysis of operations. Importance of the machine. [illegible] of production equipment. Economics of mass production. [illegible] Cost accounting for planning. [illegible] Job shop planning. The Gantt chart in work [illegible]. Centralized versus decentralized planning. [illegible] Tools, jigs, and fixtures. Planning [illegible] Materials handling. Production personnel. [illegible] Planning for expansion or [illegible]. Rhythm in manufacturing. Sundry problems. Index.

Note: A reference manual for business executives, particularly [illegible] concerned with expediting production in order to lower costs and achieve maximum output. The volume is suitable also as [illegible] textbook for students of industrial engineering. The [illegible] is practical, however, the fundamental principle underlying each step in the routing process is carefully explained, and examples of [illegible] operations are cited from the experiences of [illegible] manufacturing concerns. In modernizing the work for the third edition practically every chapter has been rewritten and [illegible] new illustrations representing the latest practices.

TIME AND MOTION STUDY

BARNES, RALPH MOSSER

Motion and time study. Third edition. New York. John Wiley & Sons, Inc., 1949 559 p. illus. 24 cm. 7386

Contents (abridged): History of motion and time study. Extent [illegible] motion and time study may be profitably used. Process analysis. Activity charts—man and machine charts. Operation analysis. Fundamental hand motions. Motion study and micromotion study equipment. Making the motion pictures. Fatigue. The relation of motion and time study to wage incentives. Stop-watch time study—time study equipment—making the time study—determining the rating factor—determining allowances and time standard. Determining time standards from elemental time data and formulas. Determining time standards for die and tool work. Determining time standards for assembly operations. Motion and time study training programs. Appendixes. Bibliography. Index.

Note: A thorough study of the basic principles and methods of motion and time study. It is devoted almost exclusively to [illegible] techniques and each phase of the subject is well [illegible] with case studies drawn from various manufacturing fields. Revisions and changes in this edition are largely based on the author's survey of eighty factories. New chapters on process analysis, [illegible] process charts, activity charts, and machine charts have been added, and numerous action photographs are now included. The fourth edition was published in 1958, 665 p., $8.25.

BARNES, RALPH MOSSER

Motion and time study applications. Second edition. New York John Wiley and Sons, Inc., 1953 188 p. illus. 28 cm. $2.90 7387

Contents (abridged): The changing concept of industrial engineering. Employment, wages and price trends, from the annual report of the Eastman Kodak Company. Motion study training programs for supervisors and foremen, by H. Engstrom. Motion study applied to clinical dentistry. Process chart for manufacturing [illegible] bracket. Motion study research. How level affects pin-positioning [illegible] one-hand and two-hand work—A study of [illegible] A study of the [illegible] small parts. Which pedal is best. A study of the development of skill during performance of [illegible] factory operation. A study of eye movements in inspection work. Folding paper cartons. The development of an improved method for [illegible] Harvesting vegetables and preparing them for market. Industrial application of the ratio-delay method.

Note: A complementary book to the author's *Motion and time study*, described above. Essentially it is a collection of "case" [illegible] in other words, concrete examples of techniques and [illegible] applications of motion and time study and of research pertaining to them. Some of the material has been reprinted from other publications but much of it is original. The book is suitable for use in college courses and other instruction and for home study by persons who have had some introduction to the field.

BARNES, RALPH MOSSER

Work methods manual. New York John Wiley & Sons Inc. 1944 136 p. illus. 22 cm. $3.50. 7388

Contents: Introduction. Developing [illegible] better method. The job breakdown. Process charts—flow diagrams. Activity charts—man and machine charts. Operation analysis—right- and left-hand charts. Fundamental hand motions—motion analysis—[illegible] charts. Ten principles of motion economy. Putting the new method into effect. Index.

Note: A compact yet complete and practical presentation of the principles of work simplification and motion economy. The style is nontechnical, and the material is suitable for use by supervisors, foremen, and workers. Motions and methods used in performing various manual jobs are analyzed. The text is supplemented by clear pertinent illustrations.

CARROLL, PHIL

Timestudy for cost control. Third edition. New York McGraw Hill Book Company Inc., 1954 301 p. illus. 23 cm. $5.00 7389

Contents: What [illegible] Management includes control. Use standard data. Build your standards department. Type of [illegible] Equip and train your men. Take element timestudies. Define work content. Rate performance. Train men to rate. Apply [illegible] factors. Set element standards. Plan your [illegible]. Analyze the variables. [illegible] What work should be done. [illegible] your standard data. Chart standard data. Build working data. How to set and record standards. Apply work standards. [illegible] results through measurement. Maintain consistent standards. Extend your [illegible] to control. Manual of reference data. Index.

Note: A practical book on the use of "standard times" as [illegible] of work performed. It deals with the usefulness of time study not only in connection with wage incentive plans but also as a means of acquiring [illegible] thorough knowledge of the products, equipment and methods used in [illegible] plant. However, the primary subject is how to build up correct standard time data as [illegible] means of controlling costs and how to apply these data [illegible] maintaining good employee relationships. Methods applicable to small plants [illegible] there is not enough time study work to justify the hiring of specialists are emphasized and are explained in detail. The third edition has the same organization and scope as the second edition published in 1941 however, new information has been added in several chapters.

CARROLL, PHIL

Timestudy fundamentals for foremen. With a foreword by Glenn Gardiner Second edition. New York McGraw Hill Book Company Inc., 1951 209 p. illus. $3.50 7390

Contents: What timestudy gives to industry. Why you should understand timestudy. How to begin [illegible] timestudy. Looking at the job details. How long does it take? How long should [illegible] take? How to set consistent element times. What job details repeat? How to set standards. Be sure to explain timestudy. Incentive plans explained. You can improve methods. How your job changes. Are you looking ahead. Selected references. Index.

Note: A small book written in simple language. Its purpose is to acquaint foremen and supervisors with the basic principles and methods of conducting timestudies. The explanations of how such

interviewing program. The practical operation of the plan. The urgency and tone of industrial topics. Part III, A conceptual scheme for the understanding of employee dissatisfaction. The analysis of complaints. The interviewing method. Complaints and personal equilibrium. Attitudes within the supervisory organization. Complaints and social equilibrium. Part IV Social organization of employees. Method and procedure in studying a shop department. The output situation in the bank wiring observation room. The supervisory situation in the bank wiring observation room. Interemployee relations in the bank wiring observation room. The internal organization of the group in the bank wiring observation room. Social control of work behavior. Formal vs. informal organization. Part V Applications to practice of research results. An industrial organization as a social system. A restatement of the human problems of management. Implications for personnel practice. Index.

Note. A continuous, chronological history of a series of experiments carried on over a five-year period among industrial workers. The experiments were designed to disclose the causes of poor morale and inefficiency and to help determine methods of improvement. The book includes detailed records of many personal interviews of workers by investigators.

RYAN, THOMAS ARTHUR

Work and effort, the psychology of production. New York The Ronald Press Company, 1947 323 p illus. 24 cm. $5 25 7379

Contents Introduction. The meaning of efficiency or economy of work. Measuring the cost of work. I, Metabolism and muscular fatigue. II, Fatigue in sedentary work. III, Physiological tests of effort and fatigue in sedentary work. Statistical indices of efficiency. Specific factors in governing efficiency and productivity. Work methods and efficiency. Incentives and motives. "Nervous" fatigue and boredom. Time standards and rate setting. Merit rating and job evaluation. Psychological problems in accident control. Skill and practice. Index of names. Index of subjects.

Note. In this work, numerous investigations that have been made to discover the psychological factors in the productivity of industrial workers are described and the conclusions drawn from them are stated. The research methods used in the investigations are evaluated. The objects are to state what is currently known about the psychology of efficient work, to point out areas where knowledge is still insufficient, and to describe sound methods of research. Sources and other related literature are cited in footnotes. The book is suitable for college students who are studying industrial management. It is also of interest to graduate psychologists and personnel directors in industry.

SHUBIN, JOHN A., AND HUXLEY MADEHEIM

Plant layout, developing and improving manufacturing plants. Englewood Cliffs, N J Prentice-Hall, Inc., 1951 433 p illus. 24 cm $5 75 7380

Contents Survey for establishing an enterprise. Product design and selection of equipment. Industrial processes. Management policies and layout objectives. Plant location and its influence on plant layout. Plant layout tools and techniques. Combining the elements of production—product layout and process layout. The layout of a new plant. Revising and improving existing plant layout. Materials handling. Industrial building. Index.

Note This book, a textbook for college students of engineering and management, presents the principles, techniques, and procedures connected with the selection and layout of new plant facilities and the modification of existing facilities to create additional output capacity or turn out new products. Numerous diagrams, photographs, and actual cases are included to illustrate the wide application of the principles and practices. Review questions are included at the end of most of the chapters.

SMYTH, RICHARD C., AND MATTHEW J MURPHY

Job evaluation and employee rating New York McGraw Hill Book Company Inc. 1946 255 p illus. 23 cm. (McGraw Hill industrial organization and management series L. C. Morrow consulting editor) $5 00 7381

Contents. Part I, Job evaluation. Purpose and significance. Ranking and grading methods of job evaluation. Factor-comparison method of job evaluation. Point method of job evaluation. Comparison of job-evaluation systems. Job descriptions. Installing and maintaining the job-evaluation plan. Employee classification. Labor market wage survey. Determining the wage scale. Basic wage administration policies. Part II, Merit rating. Introduction to merit rating. Types of merit-rating plan. Some statistical and psychological problems in rating. Developing the merit-rating plan. Administering the merit-rating plan. Index.

Note A concise but useful study of the outstanding types of systems used in industry in the United States of America at the time the book was written. Considerable attention is paid to the details of establishing a rating system in an organization and to the psychological aspects of fair administration of it.

SPRIEGEL, WILLIAM R

Spriegel and Lansburgh Industrial management. 5th edition New York John Wiley & Sons, Inc., 1955 640 p illus. 24 cm. $6 75 7382

Contents (abridged) Part I, Introduction: The historical background of modern industry. Basic managerial decisions. Part II, Organization structure. Part III, The product: Product development and research. Processes and materials. Inspection for quality control. Part IV The plant and equipment. Plant location. The factory building and plant layout. Material handling. Machines and equipment. Lighting. The maintenance department. Part V Motion and time study. Part VI, Wage payments—basic relation of employer and employee. The basis of industrial wages. Special forms of wage payments. Part VII, Buying, selling, and cost control. Part VIII, Material and production control. Part IX, Personnel administration and management (industrial relations): The organization and policies of the personnel division. Employee service activities. Business training. Management and organized labor. Industrial safety. Bibliography. Index.

Note. A successful presentation of the problems, ideals and methods of modern industrial management. Both the theoretical and practical aspects are covered. The book is used widely in college courses and also as an introductory survey for business executives, labor leaders, and supervisory personnel. The first two editions were written by Richard H. Lansburgh, and he was coauthor of the third edition, while Professor Spriegel wrote the fourth and fifth editions. The chapter on job evaluation was added in this fifth edition, various revisions were made in the chapters carried over and a selection of literature published since the fourth edition was written was added to the bibliography.

STANWAY, H GEDDES

Applied job evaluation a manual of installation and operating methods. New York The Ronald Press Company, 1947 81 p. illus. 24 cm. $4 00 7383

Contents The basis of job evaluation. Step procedure in job evaluation. Installation and administration of a job evaluation plan. Review of methods of job evaluation. Reference reading. Index.

Note The material in this practical book is based on the author's long personal experience in setting wage rates and job standards, first as a steel mill union official, then as head of an industrial engineering department, and later as a consulting management engineer. The book is designed to meet the specific needs of executives, supervisors, and personnel men who are not specialists in job evaluation but who must understand and possibly even institute and administer a job evaluation program. Samples of the necessary forms and charts are included.

VORIS, WILLIAM

Production control. Text and cases. Homewood Ill. Richard D Irwin, Inc., 1956 413 p illus. 24 cm. $7.20 7384

Contents The function of production control and its place in the organizational structure of a manufacturing concern. The interrelationship of functions in a manufacturing concern. The types of industries, manufacturing, control, and definitions of key manufacturing terms. The production control department—its functions, its personnel, and its structure. The sales and manufacturing forecasts. Production control in intermittent manufacturing. Inventory control. Production control in the small company. Visual and mechanical control in manufacturing. Production control in continuous manu-

[illegible]. Control and the automatic factory—continuous manufacturing. Automation in international manufacturing and the economic effects of automation. The computers. Operations research and linear programming. Appendix. Index.

Note: This [illegible] an up-to-date college textbook for industrial engineers. It presents the basic theoretical principles, and applications of these principles, in the field of production control, [illegible] in [illegible] technical [illegible] in modern manufacturing concerns of all [illegible]. Emphasis [illegible] placed on the interrelationship between production control and the other functions of manufacturing. Each chapter contains ample illustrative figures, [illegible] summary and conclusions [illegible], and detailed questions. The book also includes many actual [illegible] [illegible] from organizations such as Bell and Howell Company, Eli Lilly and Company, the Ford Motor Company, and the General Electric Company, as well as smaller manufacturing companies.

YOUNGER, JOHN, AND JOSEPH GESCHELIN
Work routing, scheduling and dispatching in production. Third edition. New York The Ronald Press Company 1947 168 p. illus. 24 cm. $4.50. 7385

Contents: Work routing. Instruction forms. Economics of [illegible]. Analysis of operations. Importance of the machine. Economics of production equipment. Economics of mass production. [illegible]. Interrelation of work routing, standardization, and cost [illegible]. Cost accounting for planning. Coordination of engineering and production. Job shop planning. The Gantt chart in work routing. Centralized versus decentralized planning. Company policies. Quality control. Scheduling. Tools, jigs, and fixtures. Planning [illegible] the sales curve. Materials handling. Production personnel. Planning the new building. Planning for expanding or lowering production. Rhythm in manufacturing. Sundry problems. Index.

Note: A reference manual for business executives, particularly those concerned with expediting production in order to lower costs and achieve maximum output. The volume is suitable also as a college textbook for students of industrial engineering. The treatment [illegible] practical, however, the fundamental principle underlying each step in the routing process is carefully explained, and examples of its successful operation are cited from the experiences of representative manufacturing concerns. In modernizing the work for the third edition practically every chapter has been rewritten and [illegible] with new illustrations representing the latest practices.

TIME AND MOTION STUDY

BARNES RALPH MOSSER
Motion and time study Third edition. New York. John Wiley & Sons, Inc., 1949 559 p. illus. 24 cm. 7386

Contents (abridged): History of motion and time study. Extent [illegible] which motion and time study may be profitably used. Process analysis. Activity charts—man and machine charts. Operation analysis. Fundamental hand motions. Motion study and micromotion study equipment. Making the motion pictures. Fatigue. The relation of motion and time study to wage incentives. Stop-watch time study—time study equipment—making the time study—determining the rating factor—determining allowances and time standard. Determining time standards from elemental time data and formulas. Determining time standards for die and tool work. Determining time standards for assembly operations. Motion and time study training programs. Appendixes. Bibliography. Index.

Note: A thorough study of the basic principles and methods of motion and time study. It is devoted almost exclusively to [illegible] techniques and each phase of the subject is well illustrated with case studies drawn from various manufacturing fields. Revisions and changes in this edition are largely based on the authors' survey of eighty factories. New chapters on process analysis, using process charts, activity charts, and machine charts have been added and numerous action photographs are now included. The fourth edition was published in 1958, 665 p., $7.25.

BARNES RALPH MOSSER
Motion and time study applications. Second edition. New York John Wiley and Sons, Inc., 1953 188 p. illus. 28 cm. $2 90 7387

Contents (abridged): The changing concept of industrial engineering. Employment, wages and price trends, from the annual report of the Eastman Kodak Company. Motion study training program for supervisors and foremen, by H. Engstrom. Motion study applied to clinical dentistry. Process chart for manufacturing mounting bracket. Motion study research. How bend affects pre-positioning time—A study of one-hand and two-hand work—A study of time used to position small parts. Which pedal is best. A study of the development of skill during performance of [illegible] factory operation. A study of eye movements in inspection work. Folding paper cartons. The development of an improved method for sorting personal laundry. Harvesting vegetables and preparing them for market. Industrial application of the ratio-delay method.

Note: A complementary book to the author's *Motion and time study* described above. Essentially it is [illegible] collection of "case" material in other words, concrete examples of techniques and applications of motion and time study and of research pertaining to them. Some of the material has been reprinted from other publications but much of it is original. The book is suitable for use in college courses and other instruction and for home study by persons [illegible] have had some introduction to the field.

BARNES RALPH MOSSER
Work methods manual. New York John Wiley & Sons Inc., 1944 136 p. illus. 22 cm. $3.50. 7388

Contents: Introduction. Developing [illegible] better method. The job breakdown. Process charts—flow diagrams. Activity charts—man and machine charts. Operation analysis—right- and left-hand charts. Fundamental hand motions—motion analysis—flame charts. Ten principles of motion economy. Putting the new method into effect. Index.

Note: A compact yet complete and practical presentation of the principles of work organization and motion economy. The style is nontechnical, and the material is suitable for use by supervisors, foremen, and workers. Motions and methods used in performing various manual jobs are analyzed. The text is supplemented by clear pertinent illustrations.

CARROLL PHIL
Timestudy for cost control. Third edition. New York McGraw Hill Book Company Inc., 1954 301 p. illus. 23 cm. $5.00 7389

Contents: What measures output? Management initiates control. Use standard data. Build your standards department. Types of men. Equip and train your men. Take element timestudies. Define work content. Rate performance. Train men to rate. Apply other factors. Set element standards. Plan your selection. Analyze the variables. Separate setup time. What work should be done. Write up your standard data. Chart standard data. Build working data. How to set and record standards. Apply work standards. Seek results through measurement. Maintain consistent standards. Extend your domination to control. Manual of reference data. Index.

Note: A practical book on the use of "standard times" as measures of work performed. It deals with the usefulness of time study not only in connection with wage incentive plans but also as means of acquiring [illegible] thorough knowledge of the products, equipment and methods used in [illegible] plant. However, the primary subject is how to build up correct standard time data as [illegible] means of controlling costs and how to apply these data [illegible] maintaining good employee relationships. Methods applicable to small plants [illegible] there is not enough time study work to justify the hiring of specialists are emphasized and are explained in detail. This third edition has the same organization and scope as the second edition published in 1943 however, new information has been added in several chapters.

CARROLL, PHIL
Timestudy fundamentals for foremen. With a foreword by Glenn Gardiner Second edition. New York McGraw Hill Book Company Inc., 1951 209 p illus. $3.50 7390

Contents: What timestudy gives to industry. Why you should understand timestudy. How to begin [illegible] timestudy. Looking at the job details. How long does it take? How long should it take? How to set consistent element times. What job details repeat? How to set standards. Be sure to explain timestudy. Incentive plans explained. You can improve methods. How your job changes. Are you looking ahead? Selected references. Index.

Note: A small book written in simple language. Its purpose is to acquaint foremen and supervisors with the basic principles and methods of conducting timestudies. The explanations of how such

a study is applied and what it can accomplish are given clearly and simply Numerous charts and cartoons help to enliven and clarify the textual material. The first edition was published in 1944. This second edition is an extensive revision. The chapter on incentive plans, in particular has been revised and enlarged, and the bibliography now includes books published since 1944

DERSE, JOSEPH C

Machine operation times for estimators, standard data and methods. New York The Ronald Press Company, 1946 156 p illus 24 cm. $6 00 7391

Contents Benefits of detailed estimating. Imposed limits on estimating with standard data. Element breakdown applicable to turret lathes and screw machines. Fundamental steps in the estimating of turret lathe and screw machine jobs. Turret lathe and screw machine cases. Estimating engine lathe operations. Estimating of drill press operations. Estimating of milling operations. Estimating of gearcutting operations. Production grinding estimating. Estimating a complete part. Index.

Note: For the estimator of machine jobs in metal-working plants this book provides time studies which are the results of experience and long periods of testing. Accompanying the data are details of the operations performed, and of the conditions under which the tests took place. There are instructions for adapting the standard data to individual conditions and for making allowances in applying standard data to varying types of machines. The book is well illustrated, with photographs of the machines described, together with tables of specifications for those machines.

GEPPINGER, H C

DMT Dimensional motion times. Development and application New York John Wiley & Sons Inc., 1955 100 p illus. 28 cm. $5 00 7392

Contents. Section I, Development of DMT: Definition. Scope of application. Contribution of DMT to the field of industrial engineering. General motion terms and combinations. DMT training requirements. The need for the dimensional approach. DMT research and development. Section II, Introduction to DMT tables: Motion classifications, codes, and descriptions. Grasping rod-type parts from trays. Grasping block-type parts from trays. The effect of contour irregularities on grasping times. Scattered grasp. Isolated grasp. Comparison of grasping times for jumbled, scattered, and isolated parts. Hole and pin positioning. Section III, The DMT tables Explanation of motions and tables. Data sheet DMT 1. Data sheet DMT-2 Data sheet DMT-3. Data sheet DMT-4. Data sheet DMT 5 Section IV Typical application and problems. The effect of part size and target diameter on cycle time. The significance of the basic motion cycle. Methods analysis by DMT Supplemental applications. Other cases of positioning. Section V Special applications Weight factors. Momentary pressure or force. Focus and inspect. Section VI Developing standards and improving methods *Steps for analyzing production methods.* Establishing and computing production standards. Design and methods economies characterized by DMT Index.

Note. The author of this original work is Supervisor of Motion and Time Study Training for General Electric Company Bridgeport, Connecticut, where thousands of tests were conducted over a two-year period with a view to finding a common and simple yardstick for grasping movements made by workers in manufacturing operations. DMT (dimensional motion times) is shown to be a practical and systematic procedure for measuring and analyzing factory processes that have been subdivided into specific operations and that, because of their volume of production, conform to a standardized method of operation. The data established are the result of "actual laboratory tests, conducted under closely controlled conditions, with a great number of accurately dimensioned parts and necessary fixtures. The book is addressed to professional industrial engineers and specialists in time and motion study

GOMBERG, WILLIAM

A trade union analysis of time study Second edition New York Prentice-Hall, Inc. 1955 318 p illus 22 cm (Prentice-Hall industrial relations and personnel series Dale Yoder, editor) $5 00 7393

Contents Part one Parallel development—industrial engineering and collective bargaining through World War II. The time study problem today Time study in the field of scientific systems. Time study as a scientific system. How accurate a time-measuring instrument is wanted? Mechanical sources of variation. Accounting for the fatigue factor. Psychological sources of variation. Sociological sources of variation. Conclusion of part one. Part II Defining the job—present practices, time and motion study Analyzing and accounting for allowance in the raw data. The "normal" worker. S.A.M. rating study Standard data. A look backward. A look forward. Appendix. Bibliography Index.

Note: This book by the Director of the Management Engineering Department, International Ladies' Garment Workers' Union, analyzes the rational basis behind industrial time-study practice from the standpoint of trade-unionism. The author re-examines the nature of the scientific method and the nature of the problem posed by time study compares contemporary time-study techniques with the requirements of a scientific technique, and examines the possibility of applying such a scientific technique to everyday rate problems. When the original edition of the book appeared in 1948, its presentation of statistical methods of treating time-study data was an innovation. In the second edition, published 1955, the author includes developments in the field of work-measurement techniques during the period between 1948 and 1955. Meanwhile, support for the hypotheses of the author had arisen from other sources. Part one covers the theoretical requirements for a science of time study Part two compares existing time-study practice with the scientific ideal in time study The book is especially addressed to the active time-study practitioner

HADDEN, ARTHUR A., AND VICTOR K. GENGER

Handbook of standard time data, for machine shops. New York The Ronald Press Company, 1954 473 p 23 cm. $10.00 7394

Contents (abridged): Part I, Machinability of metals. Part II, Handling elements and allowances. Part III, Lathes (Turning) Part IV Milling. Part V Drilling. Part VI, Grinding. Part VII, Precision boring (Boring) Part VIII, Broaching. Part IX, Horizontal and vertical boring mills. Part X, Planers and shapers. Part XI, Punch press. Part XII, Arc welding. Part XIII, Gear cutting. Part XIV Assembly Part XV Power sawing. Appendix. Combined manual elements. Inspection—checking frequency Production time tables. Example of standard development. Glossary of terms used in standard data. Index.

Note: Standard times for the performance of operations in machine shops are presented in this work. The data are based on thousands of time studies made during the course of 25 years' professional practice in time study by the authors and the staff of their company McClure, Hadden & Ortman, Inc. The times given presume the use of standard equipment operated by the average man. Machine shop operations are covered in detail, for example "Wheel dressing time," and "Power press—handling parts in tote box," as well as times for machine feeds. Methods of using the data are fully explained.

LESPERANCE, J P

Economics and techniques of motion and time study Dubuque Wm. C. Brown Company, Inc., 1953 258 p. illus. 23 cm. $4.50. 7395

Contents (abridged) Definition and scope of scientific management. The method or approach of motion and time study analyst. Phase number one (-six) of motion study master plan. Introduction to time study by analysis and time study by synthesis. Suggested pattern for related functions in time study by analysis. The purpose and method of stopwatch reading, of electric-clock reading and of wink counter or microchronometer reading. The measurement of tempo. The analysis of working conditions including the analysis of the fatigue problem. Time study by synthesis. A summary and comparison of time study by analysis and synthesis. Bibliography Index.

Note. A relatively brief but nevertheless useful presentation of the methods and detailed techniques of motion and time study. The subject is covered from the viewpoint of management, but attention is given also to the human relations aspect. Cost aspects are considered, especially in a chapter devoted to a discussion of the presentation of a revised method based on the results of motion and time study to top management. Actual techniques of motion and time study are described very explicitly with illustrations of typical time study diagrams, therblig charts, timing devices, etc.

MAYNARD, HAROLD BRIGHT, AND G J STEGEMERTEN

Operation analysis. New York McGraw Hill Book Company Inc., 1939 298 p. illus. 23 cm. $5.00. 7396

Contents: Preface. The function of methods engineering in industry. Approach to operation analysis. Limitations of operation analysis. Types of methods study. Field of application of the types of methods study. Process charts. The operation process chart. Flow process charts. The analysis sheet. Use of the analysis sheet. Operation analysis: purpose of operation. Complete list of all operations performed on part. Inspection requirements—material [illegible] material handling—set-up and tool equipment—[illegible] common problems for operation improvement. Man and machine process charts. Plant-layout practices. Operation analysis—working conditions and methods. Operation-analysis check sheet. Progress process chart. Index.

Note: A description of the procedure for conducting operation analysis. It is designed for students of methods engineering, [illegible] and other men connected with the productive activities of any industrial enterprise. The authors have tried to make operation analysis [illegible] specific, systematic procedure which would [illegible] results in the form of methods improvements.

MORROW, ROBERT LEE

Time study and motion economy with procedures for methods improvement. New York. The Ronald Press Company 1946 338 p. illus. 24 cm. 7397

Contents: Recent problems of methods change. Operation analysis. The process charts and diagrams. Right- and left-hand process charts. How to do more work with less effort. Inspection plans. [illegible] techniques. Fundamentals and uses of time study. Time-study equipment. Time study procedure. Terms used in time study. Leveling and rating. Synthetic leveling. Fatigue in industry. The [illegible] study. The [illegible] study. Final computations. The standard data method. Organizing and training time study personnel. How to secure employee, union, and management cooperation. Straight-line production. Automatic machine studies and work assignments. Feeds and speeds for the cutting of metals. [illegible] selected time method. Index.

Note: Most of this book deals with practical, up-to-date techniques that have been tested in many types of manufacturing plants. It [illegible] simply and carefully worded, and although directed mainly at managers of small factories, it is suitable also as [illegible] for regular college courses in the subject. The descriptions of [illegible] and of ways for obtaining employee, union, and management cooperation are particularly useful. No bibliography is included, but there are occasional footnote references. A second edition under the title *Motion economy and work measurement* was published in 1957. 446 p., $7.50.

MUNDEL, MARVIN E.

Motion and time study principles and practice. Second edition. Englewood Cliffs N J Prentice-Hall Inc., 1955 575 p. illus. 24 cm. $7.00 7398

Contents: What motion and time study can accomplish. The human factor. The scope of motion and time study. How to start the analysis. Process chart—product analysis—man analysis. Work [illegible] analysis. Process chart—combined analysis. Operation charts. Multiple-activity analysis—man and machine charts—multi-man charts. Micromotion study. Micromotion study and therbligs. Memomotion study. Cyclegraphic and chronocyclegraphic analysis. Time study—introduction. Direct time study—definition of standard time. Recording the standard practice. Recording the time values. Rating. [illegible] rating. Objective rating. Allowances. Synthesized time standards—elemental data—basic data. Statistical time standards. Applying motion and time study standards. Appendix: Data on human [illegible]. Problems. Bibliography. Index.

Note: A systematic and practical introduction to time and motion study is provided in this college textbook. The basic principles that underlie all successful motion and time studies are presented, and [illegible] examples from many industries and types of work are described in detail, so that the reasoning behind the application of procedures may be seen. Techniques are fully described. The illustrations include numerous reproductions of charts and other forms. The first edition was published in 1950. Several chapters have been added in this second edition, and revisions have been made in those carried over. Literature published since 1950 is added to the bibliography, which is now 33 pages long.

MYERS, HERBERT J

Simplified time study for factory supervisors shop stewards and cost men. New York The Ronald Press Company 1944 140 p illus. 22 cm. $3.50 7399

Contents: A need for brief and simple instructions. Who should know about time study. The time study equipment. First steps in time study. Another simple step. Leveling factors. Allowances. Making the time study—hand operation. Time study of machine operation. Time study calculations. Accumulating basic data for future use. Making use of basic time standards. Some further considerations. Other methods and [illegible] goal. Index.

Note: A guide for the factory supervisor, foreman, shop steward, or cost man, rather than for the professional time study engineer. The object is to simplify the subject of time study for the layman. There are numerous photographs, drawings, charts, diagrams, and examples of time study sheets.

NADLER, GERALD

Motion and time study New York McGraw Hill Book Company Inc., 1955 612 p. illus. 24 cm. $7.50 7400

Contents: Section 1, Introduction to motion and time study: The philosophy of motion and time study. Approach to motion and time study problems. Section 2, Goal determination: Defining the problem. Section 3, Analysis of work: Starting the analysis. Product process chart. Form process chart. Man process chart. Operation chart. Multi-activity chart. Therblig and simo charts. Other analysis techniques. Section 4, Application of principles of methods design. Areas and principles of methods design. Applying the check list. Section 5, Selection of feasible solution: Factors involved in selection. Evaluation worksheet. Illustrations. Section 6, Formulation of methods design: Proposed charts. Section 7, Review of methods design: Necessity and procedures for review. Section 8, Test of methods design: Methods of testing. Section 9, Installation of methods: Requirements of good installation. Section 10, Standards setting: Concepts and problems of standards setting. Recording [illegible] and method. Timing. Pace comparison (rating). Difficulty comparison. Allowances. Standard data. Applying and controlling standards. Problems. Bibliography. Motion-picture bibliography. Index.

Note: An up-to-date and detailed textbook covering the entire field of motion and time study. It sets forth [illegible] procedures for motion and time study, which has proved successful in all types of work and has the advantage of being readily understood. New techniques are described, and the results of new research in the field of motion and time study are presented. Illustrations in the text are clear and plentiful. As it presents [illegible] thorough overview of the subject, the volume should be of interest and value to industrial engineers as well as to teachers and students of industrial engineering.

NIEBEL, BENJAMIN W

Motion and time study An introduction to methods, time study and wage payment. Homewood, Ill. Richard D Irwin, Inc., 1955 433 p. illus. 23 cm. $7.20 7401

Contents: Methods, time study and wage payment today. Development of motion and time study. Operation analysis. Process charts. Motion study. Micromotion study. Taking motion pictures for micromotion study and film analysis. Synthetic basic motion times. Determination of factory cost. Time study requirements. Time study equipment. Elements of time study. Performance rating. Allowances. The standard time. Standard data. Formula construction. Work sampling studies. Establishing standards on indirect work. Uses of time standards. Sign-level wage payment plans. Characteristics of sound wage incentive system. Training for methods, time study and wage payment. Appendix: Glossary of terms. Collection of helpful formulas. Special tables. Bibliography. Index.

Note: A college textbook for students of industrial engineering in the areas of methods, time study and wage payment. The author emphasizes fundamental principles in describing procedures used in conducting proved methods programs and proved techniques of work measurement. The requirements and methods of installation of wage payment plans are discussed in detail. Many illustrated examples and case histories are given in the text. Sets of text questions and several questions are included at the ends of most chapters.

NORDHOFF, WILLIAM A.

Machine shop estimating New York Mc Graw Hill Book Company, Inc., 1947 486 p illus. 21 cm. $8 00 7402

Contents The machine-shop estimator and his function. The estimator's tools. How to make tables and use them. What goes into an estimate. Machining elements—turning and allied operations. Machining elements—boring and allied operations. Machining elements—facing and allied operations. Machining elements—threading and tapping operations. The turret lathe family Automatic screw machines and turret lathes. The vertical turret lathe. The machine-shop lathe (engine lathe) The automatic lathe. The light boring mill. Drilling machines and drill operations. Milling machines and milling operations. Profilers and routers. Shapers. Grinders and grinding operations. Tapping and threading. Broaching machines and broaching. Hobbing machines—gears, splines, and serrations. Power hack saws and abrasive-cutoff machines. Oxyacetylene metal cutting. Appendices. Index.

Note. A useful manual that is based on material originally prepared at the Douglas Aircraft Company for the speedy training for new workers during World War II. The treatment is concise and practical. A considerable part of the text is given over to descriptions of machine tools and their functions. This material is augmented by an imposing number of data tables useful in estimating and by reproduction of photographs of machines, diagrams, charts and forms for the recording of data.

SYLVESTER, LAWRENCE ARTHUR

The handbook of advanced time-motion study New York Funk & Wagnalls Company, 1950 273 p illus 24 cm $5 00 7403

Contents. Introduction. Part I, The theory of work and the causes of deviations in rates of production: The nature of human work. Work can be measured. The concept of a fair day's work. The theory and nature of individual differences. The effects of variable conditions. A summary of theory Part II, Advanced practice of time-motion engineering: The human side of time-motion study Personal contacts. Tools and equipment. How to take a time-motion study Predicting base and standard time values. Standard data versus job time study Maintaining standardized conditions. Administration of the time-motion department. Conclusion Looking forward. Acknowledgments. Index.

Note. The author president of a management engineering firm, has written this book primarily for graduate industrial engineers and others, such as union stewards, who have professional interests in time-motion studies. Human work is regarded as having three components. 1 Mechanical component—Force × distance. 2 Human component pace (rhythm) and skill, etc. 3. Conditional component —posture, light, heat, ventilation, hazards, and interruptions. The basic importance of the human element and of industrial relations is stressed. Examples of the application of the methods discussed in various industries are given in graphic or tabular form. Statistical interpretations of the various results of time-motion studies are included.

QUALITY CONTROL

BOWKER, ALBERT H, AND HENRY P GOODE

Sampling inspection by variables. New York McGraw Hill Book Company Inc. 1952 216 p 24 cm. $5 00 7404

Contents. Introduction. General principles of sampling inspection by variables. Properties of the variables plans. Installation of the variables plans. Operation of the variables plans. Plans for use when the standard deviation of the product is known. Procedures for two-sided specification limits. Illustrative applications The use of control charts in sampling inspection Construction of sampling plans and standard procedure. The mathematics of sampling inspection by variables. Appendix. Computing techniques and methods of applying the acceptance criteria. Tables and charts. Index.

Note. A manual of inspection plans based on the measurement of a variable or variables—a basis of inspection that is in contrast to the system of rejection or acceptance on the basis of specified attribute. Most of the book is devoted to the design, installation, and operation of practical and statistically sound plans. The book is organized along the lines of and complements *Sampling inspection*, New York, 1948.

BUTTERBAUGH, GRANT ILLION

A bibliography of statistical quality control, supplement. Seattle University of Washington Press, 1951 141 p. 23 cm. $2 00. 7405

Contents. Part I, Periodical literature. Part II, Manuals, monographs, pamphlets. Part III, Books. Index of authors. Index of subjects.

Note. A supplement to the author's *Bibliography of statistical quality control* issued by the same publisher in 1946. The original work and the supplement together record 1437 periodical articles, books, and manuals published in the English language. Most of the entries are accompanied by an annotation several lines in length. A few of the entries have very short annotations and some are not annotated.

DODGE, HAROLD FRENCH, AND HARRY G ROMIG

Sampling inspection tables single and double sampling New York John Wiley & Sons, Inc., 1944 106 p illus. 22 cm. $3 75. 7406

Contents Introduction. A method of sampling inspection. Single sampling and double sampling inspection tables. Using double sampling inspection in manufacturing plant. Sampling inspection tables. Index. Charts.

Note A reprint of three articles which appeared originally in the *Bell System technical journal*. The purpose of the papers is to outline sampling inspection methods for the use of manufacturers, which will be satisfactory to both producer and consumer from the points of view of inspection costs and the elimination of defective products.

ENRICK, NORBERT L

Quality control a manual of quality control procedure based upon scientific principles simplified for practical application in various types of manufacturing plants. Second enlarged edition. New York The Industrial Press, 1954 181 p illus. 23 cm. $4 50 7407

Contents Part I: Fundamentals of inspection. Procedure in installing lot-by-lot inspection. Sampling continuous products. Installing process inspection. Special control charts for use when equipment is old and worn. Applying quality control in the plant. Tolerances and allowances in interchangeable manufacture. Mass production gaging. Use of inspection data in establishing specifications. Management aspects of quality control. A typical case history Statistical basis of modern quality control. Mathematical theory of control charts. Part II Further discussion of product variability Control charts computed from center lines. Acceptance control charts. Control charts for per cent defective product. Analysis of variance. Common interchangeable terms. Appendix. Index.

Note A simplified, largely nonmathematical explanation of statistical quality control methods, and the manner of their application in industry It is intended to serve as practical guide for plant inspectors, and such theoretical matters as the law of probability and the science of statistics are segregated in two chapters. These chapters are not essential to the understanding or use of the rest of the volume, and may be omitted by the reader if he is not mathematically prepared for them. The first edition was published in 1948. Most of Part II has been added in this second edition. This part includes a simplified explanation of the analysis of variance and extends the range of control charts.

FEIGENBAUM, ARMAND VALLIN

Quality control principles practice, and administration. New York McGraw Hill Book Company Inc. 1951 443 p. illus. 24 cm (Industrial organization and management series, L. C Morrow, consulting editor) $7 50 7408

Contents: The principles of quality control. Part I, Quality control—tool of management: What is "quality control"? What are

the [illegible] in controlling quality? What are the jobs of quality control? What is the organization of quality control? Part II. The statistical point of view: Frequency distributions. Control charts. Sampling tables. Special methods. Part III. Applying quality control in the plant: New-design control. Incoming-material control. Product control. Special process studies. Part IV. Introducing quality control into the plant: Selling the quality-control program. Summary of modern quality control. Index.

Note: An over-all presentation of quality control from the management and administrative viewpoint. It is primarily practical text, based on experience with quality control in numerous industries during World War II and after. The necessity for keeping the quality control program within bounds so that it does not cost more in time or money than its results justify is emphasized. A wide variety of practical procedures, relating not only to inspection but to record-keeping and follow-through, is described. The author is secretary of the Quality Control Co-ordinating Committee of the General Electric Company.

Grant, Eugene Lodewick

Statistical quality control. Second edition. New York, McGraw Hill Book Company, Inc., 1952. 557 p. 24 cm. (McGraw Hill industrial organization and management series, L. C. Morrow consulting editor) $7.00 7409

Contents (abridged): Part I, What will statistical quality control do? Objectives of statistical quality control. Some representative applications. Part II, The Shewhart control chart for variables: Some fundamental statistical concepts. Why the control chart works—examples of processes in control—examples of processes out of control. Directions for simple $\bar{X}$ and R charts. The selection of rational subgroups. Part III, Other Shewhart control charts: Some fundamentals of the theory of probability. The control chart for fraction defective. The control chart for defects. Part IV, A statistical approach to acceptance procedures. Some statistical aspects of tolerances. Some fundamental concepts in acceptance sampling. Acceptance sampling by attributes. Acceptance sampling by variables. Part V, Making statistical control work: Some cost aspects of quality decisions. Organizing for statistical quality control. Appendices. Glossary of symbols. Bibliography. Tables. Name index. Subject index.

Note: A standard exposition of the theory and methods that form the basis for quality control procedures. It is intended for persons such as plant executives and industrial engineers who expect to make practical use of control charts and sampling plans. The wide applicability of quality control to a large variety of economic and industrial operations is demonstrated, and analyses of actual case histories in industry are included. In this edition, two chapters have been rewritten, and the number of problems for the reader to solve has been much increased. Answers have been given to some of the problems for the benefit of persons studying the book at home. Relatively minor changes are in various other parts. The author is Professor of Economics of Engineering at Stanford University.

Heide, John D

Industrial process control by statistical methods. New York, McGraw Hill Book Company, Inc., 1952. 297 p. illus. 24 cm. $6.00. 7410

Contents: Introduction. Presentation of data. Process frequency distributions. Control charts. Limit lines. Operating specifications. Technical problems. Study of process data. Factory installation. Practical program aids. Factory interpretation of charts. Organization and administration. Quality reporting and quality rating. Evaluation of test procedures and test results. Appendices. Index.

Note: A practical book on statistical quality control written primarily for personnel in manufacturing establishments who will be directly concerned with the use or supervision of statistical quality control procedures. Quality control is correctly presented as a logical basis for mass production. The reader is first introduced to its statistical bases and to the design of control charts. In the later chapters various practical steps in installing a quality control program and using it in the factory are treated. The author holds the position of Industrial-Statistical Analyst with the United States Rubber Company.

Juran, Joseph M, editor

Quality-control handbook. New York, McGraw Hill Book Company, Inc., 1951. 800 p. illus. 24 cm. (McGraw Hill industrial organization and management series, L. C. Morrow consulting editor) $12.00 7411

Contents: Economics of quality, by J. M. Juran. Specifications of quality, by J. M. Juran. Organizing for quality, by C. E. Scott, Jr. Introducing statistical quality control in a going plant, by D. Shainin. Acceptance of quality, by J. M. Juran. Control of quality by J. M. Juran. Assurance of quality, by J. M. Juran. Statistical methods in the quality function, by J. W. Enell. Paper work in the quality function, by J. M. Juran. Applications of electric accounting machines to quality control, by International Business Machines Corporation. Quality control of textile production, by J. C. Wintermeier. Quality control in the chemical process industries, by C. A. Bicking. Quality control in aircraft manufacture, by J. G. Rutherford. Quality control of electron tubes, by Sylvania Electric Products, Inc. Vendor inspection, by D. Shainin. Quality control in screw-machine operations, by L. A. Seder. Appendices. Glossary of symbols. Tables and charts. Index.

Note: It is important to notice that this book deals with the whole subject of quality control rather than with the statistical aspects only. However, the latter are adequately treated, not only in the chapter on statistical methods but in sections in other chapters. The book is intended for executives and others in industry who are directly concerned with the control of quality of manufactured products and with organizing and administering quality control programs in manufacturing plants. It is a practical, direct treatment, full of useful information for its intended readers.

Kennedy, Clifford W

Quality control methods. New York, Prentice-Hall Inc., 1948. 243 p. illus. 24 cm. $6.00. 7412

Contents (abridged): Part I, Acceptance sampling: Sample size. Sampling tables. Double sampling. Sequential sampling. Part II, Batch control—per cent defective methods: Grand lot system. The error inherent in sampling. Practical applications of per cent defective methods. Part III, Distributions and the standard deviation: Frequency distributions. The standard deviation. Estimating lot quality. Part IV, A range and range: Comparison between standard deviation and average-range methods. Interpretation and use of charts. Practical application of average-range method. Part V, Guide to the administration of methods. Where and how to start quality control techniques. Commercial examples of applications. Bibliography. Appendix. Index.

Note: An introductory exposition in which the basic principles and techniques of quality control are explained in some detail and with the use of frequent references to common experience. The treatment is very elementary nevertheless it is adequate for many persons who wish only to make practical use of the knowledge in a small manufacturing plant or to understand procedures in operation in a large establishment.

Rice, William B

Control charts in factory management. New York, John Wiley & Sons, Inc., 1947. 149 p. illus. 23 cm. (Wiley mathematical statistics series) $3.90. 7413

Contents: Statistical quality control—what it is and what it does. The role of inspection. Statistical control. $\bar{X}$ and R charts. p and pn charts. Case histories of control charts. Organization of statistical-quality-control program. Index.

Note: An introductory treatment but not a popularization. It is written in the terminology of the subject, but the author has covered only those aspects that are of interest to executives of manufacturing organizations and other persons who need a practical rather than a statistician's understanding of control charts. Charts based on the inspection of variables and the inspection of attributes are both discussed; and the exposition is pointed up with fifteen case histories from industry. The last chapter tells how to install a statistical-quality-control program in a factory.

SAFETY

Alden, John Leslie

Design of industrial exhaust systems. Second edition. New York, The Industrial Press, 1948. 252 p. illus. 22 cm. $3.50 7414

NORDHOFF, WILLIAM A.

Machine shop estimating New York Mc Graw Hill Book Company, Inc., 1947 486 p. illus. 21 cm. $8 00 7402

Contents. The machine-shop estimator and his function. The estimator's tools. How to make tables and use them. What goes into an estimate. Machining elements—turning and allied operations. Machining elements—boring and allied operations. Machining elements—facing and allied operations. Machining elements—threading and tapping operations. The turret lathe family Automatic screw machines and turret lathes. The vertical turret lathe. The machine-shop lathe (engine lathe) The automatic lathe. The light boring mill. Drilling machines and drill operations. Milling machines and milling operations. Profilers and routers. Shapers. Grinders and grinding operations. Tapping and threading. Broaching machines and broaching. Hobbing machines—gears, splines, and serrations. Power hack saws and abrasive-cutoff machines. Oxyacetylene metal cutting. Appendices. Index.

Note. A useful manual that is based on material originally prepared at the Douglas Aircraft Company for the speedy training for new workers during World War II. The treatment is concise and practical. A considerable part f the text is given over to descriptions f machine tools and their functions. This material is augmented by an imposing umber of data tables useful in estimating and by reproduction of photographs of machines, diagrams, charts and forms for the recording of data.

SYLVESTER, LAWRENCE ARTHUR

The handbook of advanced time-motion study New York Funk & Wagnalls Company, 1950 273 p illus. 24 cm. $5 00 7403

Contents: Introduction. Part I, The theory of work and the causes of deviations in rates of production The nature of human work. Work can be measured. The concept of a fair day's work. The theory and nature of individual differences. The effects of variable conditions. A summary of theory Part II, Advanced practice of time-motion engineering The human side of time-motion study Personal contacts. Tools and equipment. How to take a time-motion study Predicting base and standard time values. Standard data versus job time study Maintaining standardized conditions. Administration of the time-motion department. Conclusion Looking forward. Acknowledgements. Index.

Note The author president of management engineering firm, has written this book primarily for graduate industrial engineers and others, such as union stewards, who have professional interests in time-motion studies. Human work is regarded as having three components 1 Mechanical component—Force × distance. 2 Human component pace (rhythm) and skill, etc. 3 Conditional component —posture, light, heat, ventilation, hazards, and interruptions. The basic importance f the human element and of industrial relations is stressed. Examples of the application of the methods discussed in various industries are given in graphic or tabular form. Statistical interpretations of the various results of time-motion studies are included.

QUALITY CONTROL

BOWKER ALBERT H , AND HENRY P GOODE

Sampling inspection by variables. New York McGraw Hill Book Company Inc. 1952 216 p 24 cm $5 00 7404

Contents Introduction. General principles of sampling inspection by variables. Properties f the variables plans. Installation of the variables plans. Operation f the variables plans. Plans for use when the standard deviation of the product is known. Procedures for two-sided specification limits. Illustrative applications. The use of control charts in sampling inspection Construction of sampling plans and standard procedure The mathematics of sampling inspection by variables. Appendix. Computing techniques and methods f applying the acceptance criteria. Tables and charts. Index.

Note: A manual of inspection plans based on the measurement of variable or variables—a basis of inspection that is in contrast to the system of rejection or acceptance on the basis of a specified attribute. Most of the book is devoted to the design, installation, and operation of practical and statistically sound plans. The book is organized along the lines of and complements *Sampling inspection*, New York, 1948.

BUTTERBAUGH, GRANT ILLION

A bibliography of statistical quality control, supplement. Seattle University of Washington Press, 1951 141 p 23 cm. $2 00. 7405

Contents. Part I, Periodical literature. Part II, Manuals, monographs, pamphlets. Part III, Books. Index of authors. Index of subjects.

Note: A supplement to the author's *Bibliography of statistical quality control* issued by the same publisher in 1946. The original work and the supplement together record 1437 periodical articles, books, and manuals published in the English language. Most of the entries are accompanied by an annotation several lines in length. A few of the entries have very short annotations and some are not annotated.

DODGE, HAROLD FRENCH, AND HARRY G ROMIG

Sampling inspection tables single and double sampling New York John Wiley & Sons, Inc., 1944 106 p. illus. 22 cm. $3 75 7406

Contents Introduction. A method of sampling inspection. Single sampling and double sampling inspection tables. Using double sampling inspection in manufacturing plant. Sampling inspection tables. Index. Charts.

Note A reprint of three articles which appeared originally in the *Bell System technical journal*. The purpose of the papers is to outline sampling inspection methods for the use of manufacturers, which will be satisfactory to both producer and consumer from the points of view of inspection costs and the elimination of defective products.

ENRICK, NORBERT L.

Quality control, a manual of quality control procedure based upon scientific principles simplified for practical application in various types of manufacturing plants. Second enlarged edition New York The Industrial Press, 1954 181 p illus 23 cm $4 50 7407

Content Part I Fundamentals of inspection. Procedure in installing lot-by-lot inspection. Sampling continuous products. Installing process inspection. Special control charts for use when equipment is old and worn. Applying quality control in the plant. Tolerances and allowances in interchangeable manufacture. Mass production gaging. Use of inspection data in establishing specifications. Management aspects of quality control. A typical case history Statistical basis of modern quality control. Mathematical theory of control charts. Part II. Further discussion of product variability Control charts computed from center lines. Acceptance control charts. Control charts for per cent defective product. Analysis of variants. Common interchangeable terms. Appendix. Index.

Note. A simplified, largely nonmathematical explanation of statistical quality control methods, and the manner of their application in industry It is intended to serve as practical guide for plant inspectors, and such theoretical matters as the law of probability and the science of statistics are segregated in two chapters. These chapters are not essential t the understanding or use of the rest of the volume, and may be omitted by the reader he is not mathematically prepared for them. The first edition was published in 1948. Most of Part II has been added in this second edition This part includes simplified explanation of the analysis of variance and extends the range of control charts.

FEIGENBAUM, ARMAND VALLIN

Quality control principles, practice and administration. New York McGraw Hill Book Company Inc. 1951 443 p. illus. 24 cm (Industrial organization and management series L. C. Morrow consulting editor) 7408
$7 50

Contents. The principles of quality control. Part I, Quality control—tool of management. What is quality control"? What are

DALLA VALLE, JOSEPH MARIUS

Exhaust hoods. Second edition revised and enlarged. New York The Industrial Press, 1952. 146 p. illus. 24 cm. $3.50 7420

Contents: Theory of flow of gases into an opening. Velocity characteristics of common types of unobstructed openings. Velocity contours of hoods with special boundary conditions. Criteria for determining hood effectiveness. Canopy type hoods. Hoods for dust and mist control—total enclosures and screening. Hoods for dust control—partial enclosures for grinding. Hoods for dust control—miscellaneous. Hoods for control of fumes, vapors and gases. Booth-like structures for fumes, vapors and gases. Grille-type openings under suction. Hoods for woodworking machinery. Examples of hood design calculations. Hood entrance losses. Essentials of hood construction. Index.

Note: A practical work on the design and uses of hoods and canopies used to carry off dusts, fumes, etc., generated during manufacturing and other processes. It is based on laboratory research and practical design experience and includes discussions of both the aerodynamic aspects and the practical ones. Typical hoods for a variety of applications are illustrated. The first edition appeared in 1946. Additional ordinates, several new chapters, and a number of new illustrations have been incorporated in this edition.

DALLA VALLE, JOSEPH MARIUS

The industrial environment and its control. New York Pitman Publishing Corporation, 1948. 225 p. illus. 23 cm. $5.00 7421

Contents: Problems and trends. Psychrometry. The atmospheric environment. Illumination and radiant energy. Noise, vibration, and fatigue. The thermal environment. Industrial ventilation. Design of local exhaust hoods. Design of exhaust systems. Measurement of air flow. Air pollution. Industrial dust collection. Appendix. Index.

Note: A compact treatment which is aimed chiefly to engineers who may be called upon to design ventilating systems and other devices which may affect the health of workers in factories. In other words, the book is written for the type of specialist who is coming to be known as industrial health engineer and who is an engineer rather than a medical man. The material is authoritative and well presented, but the range of topics is somewhat less broad than might be expected.

GUELICH JOSEPH

Chemical safety supervision New York Reinhold Publishing Corporation, 1956 221 p. illus. 23 cm. $4.50. 7422

Contents (abridged): How to investigate a chemical accident. Teaching the doctor chemistry. Special first aid for chemical accidents. What you should know about occupational disease. An eye safety program that works. Demonstrations you can perform. Water. Protect the man—clothing—equipment. Receiving and storing chemicals. Transferring and moving chemicals. Handling flammables—a serious problem. Working tanks safely. Safe sampling, gauging methods and air testing. What labels can teach you. Tank car safety. Your responsibility to the public. Disaster planning. Laboratory safety—a check list. Help from the insurance company. Chemical hazards—an inspection check list. The future of chemical safety. Reference material for chemical safety. Index.

Note: A practical manual of precautions and practices designed to avoid accidents in chemical manufacturing plants and other industrial establishments where hazardous chemicals are handled. It is addressed to supervisors and is written in a direct, simple style. Cartoon-type illustrations are used to drive home important points. The appendix of reference material lists books, pamphlets, catalogs, publications of the Manufacturing Chemists Association and of the National Safety Council which are pertinent to safe practices in the handling of chemicals.

GRAY DWIGHT E AND JOHN H. MARTENS

Radiation monitoring in atomic defense. New York D Van Nostrand Company Inc., 1951 122 p. illus. 21 cm. $3.50 7423

Contents: Part I. Background information. What is atomic energy? What is nuclear radiation? What kinds of hazards do atomic explosions produce? What radiation hazards result immediately from an atomic explosion? What radiation hazards continue after an atomic explosion? What basic protective measures can be taken against atomic explosions? How are nuclear radiations detected and measured? Part II. Instruments and equipment. Basic considerations. The Geiger counter survey meter. The ionization chamber survey meter. The proportional alpha counter. Pocket chambers and dosimeters. Film badge dosimeters. The AEC emergency monitoring kit. Future defense monitoring instruments. Bibliography. Index.

Note: A short, clearly written nonspecialist's book on the detection and measurement of dangerous radioactive radiation and on the instruments which are used for such detection and measurement. It is addressed primarily to civil defense personnel whose duties will include the protection of others from dangerous radiation in times of emergency. It should be of interest also to laboratory workers who handle radioactive materials and to safety personnel in industrial establishments where use is made of such materials.

HEINRICH HERBERT WILLIAM

Industrial accident prevention a scientific approach. Third edition. New York McGraw Hill Book Company, Inc., 1950. 470 p. illus. 24 cm. $8.00. 7424

Contents: Principles of accident prevention. Basic philosophy of accident prevention. Safety organization—first aid and hospital—creating and maintaining interest. Facts and fact finding. Accident analysis. Selection of remedy. Application of remedy—corrective action. Machine, prime-mover and power-transmission guarding. Process and procedure revision. Personal protective devices. Illumination and color. Occupational disease. Motor-vehicle fleets. Safety psychology. Fatigue. Education. Formula for supervision. Accident statistics. Summary. Appendixes: Chronology of industrial accident prevention. Background of industrial safety. Standards for mechanical guarding. Illustration of industrial interest. Causes of compensated accidents. Relation of age to industrial injuries. Bibliography. Index.

Note: In this text for students and safety engineers emphasis is placed on the basic principles and methods of accident prevention, rather than on detailed discussions of specific safety measures. Descriptions of protective devices and case histories are included, but only to illustrate how an accident situation may be analyzed and corrected. On the other hand, administrative aspects, such as methods of persuading top management to institute or supplement the safety program in a plant, are covered in some detail. The major changes evident in this edition include newly added chapters on motor-vehicle fleets, solving supervisory problems, personal protective devices, and a section on safety education courses. Books published since 1941 have been added to the bibliography.

HEMEON W C L.

Plant and process ventilation. New York The Industrial Press, Inc., 1955 437 p. illus. 24 cm. $9.00 7425

Contents: Objectives and general considerations. Dynamic properties of airborne contaminants. Dispersion mechanics—pollution, entrainment, induction. General principles of local exhaust. Local exhaust and exterior hoods. Control velocities and X-distance for exterior hoods—booths. Air flow in materials-handling systems. Exhaust for hot processes. Characteristics of free air jets—blow and exhaust systems—air curtains. General ventilation. Design of duct systems. Exhaust systems for dust. Evaluation and control of heat exposures. Field observations—reliability of design data. Fans, injectors, natural draft chimneys and roof ventilators. Exhaust air cleaning—dust collection. Index.

Note: The main subject of this important book is the analysis of factory ventilation problems in terms of the quantity of air required for adequate ventilation and the best flow patterns for the moving air. The illustrations include many diagrammatic representations of flow patterns related to typical situations found in industry. Principles and techniques of designing duct systems, selecting fans, etc., are covered more compactly. In fact, the mechanical material, though presented in sufficient detail for the needs of experienced engineers, is definitely subordinated to the analytical material. Worked examples of typical problems are included in both the analytical and design parts. The author is Engineering Director of the Industrial Hygiene Foundation of America, Inc., and a recognized specialist on control of industrial dusts.

Contents. Flow of fluids. Hoods for dust control. Hoods for fume, smoke and vapor control. Air flow through hoods. Pipe resistance. Piping design. Dust separators. Low pressure conveyors. Centrifugal exhaust fans. Axial flow fans. Structural details and system planning. Field measurements and their interpretation. Index.

Note. A manual prepared for the guidance of engineers, factory supervisors, and others responsible for the selection design or construction of exhaust systems used in the removal of industrial dusts and fumes. The volume stresses the practical aspects of the subject but contains considerable data on air flow and other theoretical aspects. The chapters on hoods for fume, smoke and vapor control and axial flow fans have been added in this edition.

AMERICAN FOUNDRYMEN'S SOCIETY

Engineering manual for control of in-plant environment in foundries. Des Plaines, Ill. American Foundrymen's Society 1956 145 p illus 29 cm $7 75 7415

Contents. Introduction to principles of foundry ventilation and industrial hygiene problems. Exhaust hoods and system design. Practical design of sand handling ventilation systems. Molding and core making problems. General principles of ventilation for melting and pouring operations. Cleaning room. Industrial hygiene and miscellaneous control measures. Radiation. Welding and woodworking. Dust and fume collectors, fans and motors. Maintenance and testing. Engineering data. Name and address of state territorial and provincial regulatory agencies. Glossary Bibliography Index.

Note. An authoritative work developed by the Dust Control and Ventilation Committee of the American Foundrymen's Society Good practices in the control of dusts are the main subject, but other environmental factors that affect the health, safety and comfort of workers in foundries are dealt with in some degree. The chapter on radiation covers rather fully the control of radiant heat from the industrial hygiene standpoint and contains also an adequate discussion of the control of ultraviolet radiation from electric arcs. On the other hand although radiation from such equipment as X-ray testing devices is mentioned as hazard, protection techniques are not discussed. Ventilation principles, practices and equipment are covered thoroughly and explicitly Engineering data for the design of systems are furnished, and there are descriptions and illustrations of hoods, dust collectors, fans, electrostatic precipitators, etc.

AMERICAN STANDARDS ASSOCIATION SECTIONAL COMMITTEE ON A SAFETY CODE FOR CRANES, DERRICKS, AND HOISTS

American standard safety code for cranes, derricks and hoists Approved by American Standards Association January 1943 New York Published by The American Society of Mechanical Engineers 1943 91 p. illus 19 cm. $2 50 7416

Contents (abridged) Part I, Construction and installation General rules. Overhead and gantry cranes. Jib and pillar cranes. Locomotive crawler and motor-truck cranes. Derricks. Simple drum hoists. Overhead electric hoists and base-mounted electric hoists. Air hoists. Sheaves, pulleys, slings, chains, and ropes. Part II, Inspection, testing, and maintenance. Part III, Operation.

Note. The purpose of this code is to present co-ordinated set of rules to serve as guide for state and municipal authorities. The suggestions leading to accident prevention are given both as mandatory and as advisory provisions, and compliance with both types may be required of employees by their employers. The code also finds application in industry serving as guide to both manufacturers of equipment and to the purchasers and users of the equipment. It was reviewed and reaffirmed without change by the sponsoring society in 1952.

ASSOCIATED GENERAL CONTRACTORS OF AMERICA, INC

Manual of accident prevention in construction. Fourth revised edition Washington D C The Associated General Contractors of America Inc., 1952 257 p. illus. 24 cm. $3 00 7417

Contents Introduction. Accident prevention organization. Housekeeping. Sanitation. First aid. Demolition. Arc welding. Gas welding and cutting. Flammable gases and liquids. Handling and storage of materials. Excavation. Shoring. Barricades. Explosives. Pile driving. Form construction and concrete placement. Hoists, cranes, and derricks. Steel erection. Masonry Scaffolding. Ladders. Power saws. Hand tools. Road and street construction. Motor graders, bulldozers and tractors. Conveyors and cableways. Equipment upkeep. Motor trucks. Garages and repair shops. Tunnels. Shafts. Compressed air work. Boilers. Unfired pressure vessels. Railroad construction. Quarries and gravel pits. Laying pipe line. Boats and barges. Temporary electrical installations. Fire hazards and prevention. Protective clothing. Camp housing and sanitation. Occupational diseases. Inspection. Reference tables. Alphabetical index.

Note. A practical and clearly presented guide to safe ways of performing construction work. The text is supplemented by numerous photographs, diagrams, and specifications and throughout the book emphasis is placed on the importance of educational work and of proper organization and methods. This edition includes new sections on housekeeping, welding, power saws, flammable gases and liquids, bulldozers and tractors, and boats and barges. Reference tables of weights and safe working loads are included.

BLAKE, ROLAND P, editor

Industrial safety By T O Armstrong and others. Second edition Englewood Cliffs, N J Prentice-Hall Inc. 1953 474 p. illus. 23 cm. $6 50 7418

Contents. By W H Kesler Introduction to safety engineering. Brief history of industrial safety in America. Accident cost. Appraising safety performance. Circumstances surrounding accidents. Analyzing causes of accidents. Fundamentals of accident prevention. By R. P Blake. Accident distribution. The elements of an effective safety program. By M. A. Glabel Job safety analysis. Plant inspection. Accident investigation. Layout and arrangement; purchasing for safety Plant housekeeping. Maintenance. Handling material. Hand tools. Low-voltage electrical hazards. By S. W Homan Fundamentals of machine guarding. Guarding of transmission machinery Guarding of woodworking machines. Guarding metal-working machines. By R. P Blake The prevention of falls. Methods of promoting safe practice. By T L. Armstrong Appraising employee attitude toward safety Safety organization. Safety education and training. By R. P Blake Safety and health standards and rules. By C. B. Bosler Accident records and reports. First aid. Personal protective equipment. Fire prevention and protection. Bibliography Index.

Note. This book is used both as textbook for safety engineering classes and reference book for foremen and others who are directly responsible for the operation of safety programs. It provides practical view of principles and practices, and is well organized for both study and reference. The first edition was published in 1943. Two chapters were added and several others were revised in preparing this second edition.

BRANDT, ALLEN DEMMY

Industrial health engineering New York John Wiley & Sons Inc., 1947 395 p. illus. 24 cm. $7 50 7419

Contents Industrial atmospheric contaminants and their industrial hygiene significance. Evaluating industrial atmospheric health hazards. Principles of control and methods employed. General ventilation. Local exhaust ventilation—hood design. Design of local exhaust systems. Collectors. Exhausters. Measuring air flow in industrial ventilation. Control measures for common operations and for an industry Exhaust systems—specific design data and illustrations of installations. Respirators and protective clothing. Heating, ventilating, and air conditioning for temperature, humidity comfort, and odor control. Radiant energy Industrial illumination. Industrial noise and its control. Plant sanitation and hygiene. Bibliography Appendix. Index.

Note The author who is Industrial Hygiene Engineer of the Bethlehem Steel Company defines his specialty as "the science of maintaining the worker's environment at condition conducive to good health, that is keeping all harmful environmental exposures away from workers. His work contains comprehensive discussion of practical methods of protecting workers, and it is written from the point of view of the engineer directly in charge of the program. The text is supplemented by diagrams, many tables of useful data, and 12-page bibliography

ing Office, 1956. 280 p. illus. 23 cm. (United States. Department of Labor Bulletin no 67) $1.00. 7431

Contents: Introduction to industrial safety. Development of the industrial safety movement. The States' part in safety. Accident cost. Accident causes. Appraising safety performance. Accident reports and records. Safety — responsibility of management. Arousing and maintaining safety interest. Safety organization. Safety education and training. Plant inspection. Job safety analysis. Accident investigation. Planning layout and arrangement. Plant housekeeping. Maintenance and safety. Handling materials. Hand tools. Low voltage electrical hazards. The prevention of falls. The importance of safeguarding machinery. Safeguarding power transmission apparatus. Point-of-operation guarding. Common explosion hazards. Fire prevention and protection. Lighting and color. Personal protective equipment. Technical report preparation. Safety standards.

Note: Safety subjects presents the fundamentals of safe operating practices for industrial establishments. The publication was originally prepared for use as a textbook for safety-training courses sponsored and conducted by the Bureau of Labor Standards for state factory inspectors. The course is scheduled for 130 hours, and the text includes material for a course of that length. At the ends of the chapters appear questions for class use. In addition to its use as a textbook, the bulletin can also be used to advantage by foremen, safety engineers, and others responsible for safety in manufacturing plants.

YAFFE, CHARLES D., AND OTHERS, editors

Encyclopedia of instrumentation for industrial hygiene. Prepared and issued cooperatively by the University of Michigan Institute of Industrial Health and School of Public Health and the Occupational Health Program of the Public Health Service, U. S. Department of Health, Education and Welfare. Technical editors Charles D Yaffe, Dohrman H. Byers, Andrew D Hosey Ann Arbor University of Michigan, Institute of Industrial Health, 1956 1,243 p. illus. 32 cm. $30.00. 7432

Contents (abridged): Instruments for sampling and analyzing air for contaminants in industrial environments. Laboratory type instruments of specific application to industrial hygiene. Instruments specially designed for atmospheric pollution evaluation and meteorological measurements. Instruments for measuring air velocity and pressure, etc. Instruments for measuring ionizing radiation. Instruments for measuring ultraviolet, visible and infrared energy. Appendix. Subject index. Name index.

Note: Instruments exhibited at the Symposium on Instrumentation in Industrial Hygiene held at the University of Michigan, May 24–27 1954, together with a few additional instruments, are described in this volume. Generally speaking, for each instrument, information is given on uses, operating principle, dimensions and weight, performance characteristics, manufacturer or other source, price in the United States of America as of 1954, and operating, calibrating and maintenance procedures. One picture of the described instrument is included and, in most instances, there are additional illustrations. In each of the seven sections of the book, the descriptions of individual instruments are preceded by several signed papers on measurement problems and techniques of the field covered by the section.

MATERIALS HANDLING

HETZEL, FREDERIC VALERIUS, AND RUSSELL K. ALBRIGHT

Belt conveyors and belt elevators. Third edition, revised and enlarged. New York John Wiley & Sons, Inc., 1941 439 p illus. 23 cm. $5.50 7433

Contents: Section I, Belt conveyors. General description of component parts. Development of belt conveyors. Belts and belt manufacture. Supporting and guiding the belt. Driving the belt. Design of belt conveyors. Tension and take-up devices. Loading the belt. Discharging from the belt. Protecting and cleaning the belt. Weighing and sampling. Package conveyors. Particular uses of belt conveyors. Life of belts. When to use belt conveyors. Section II, Belt elevators. General description. Centrifugal discharge elevators. Elevator buckets. Continuous bucket elevators. Belts for elevators. Fastening buckets to belt. Driving belt elevators. Elevator boots. Inclined elevators. Appendixes: Weights of materials bought and sold by the bushel. Weights of minerals, ores, chemicals. Weights of miscellaneous materials. Index.

Note: This book offers explicit and comprehensive information on how to select, install, and operate belt conveying machinery. It covers broad principles and specific details, explains theoretical angles, and describes the methods of efficient practice. Considerable space is given to the operation and maintenance of plants under a variety of circumstances as met with in practice. Tables of sizes, capacities, power consumption and other useful data are printed in convenient form.

HUDSON WILBUR G

Conveyors and related equipment. Third edition. New York John Wiley & Sons, Inc., 1954 524 p. illus. 24 cm. $9 75 7434

Contents: General principles. Screw conveyors. Flight and apron conveyors. The bucket elevator. The skip hoist. Bucket carriers. Cable hoists. The continuous-flow conveyor. Pneumatic and hydraulic conveyors. The belt conveyor. Aerial tramways. Storage and transport. Bins and bunkers. Unloading water-borne cargoes. Crushers, hammermills, and pulverizers. Screens, feeders, and gates. Car unloaders. Weighing. Chains, drives, drive groups, motors. Power-plant coal and ash handling. Some problems and solutions. Dust explosion hazards. Appendixes. Index.

Note: A standard work used both as a text in engineering colleges and as a reference book in engineer's offices and plant libraries. It covers materials handling equipment, not only conveyors but also related devices such as car dumpers, scales, and pallets. The second edition was published in 1949 and was 448 pages long. Although a considerable portion of the material in this third edition is identical with the second edition, the book has been adequately revised. Numerous small additions have been made at the ends of many chapters. In some cases the added material relates to new devices or devices which have taken on new importance in recent years. Changes have been made also in the illustrations and in the tables.

IMMER JOHN R.

Materials handling New York McGraw Hill Book Company Inc., 1953 591 p. illus. 24 cm. $8.50. 7435

Contents (abridged): Part I, Introduction: History. Principles. Part II, Motion and time study: Work simplification. Time study and standard times. Part III, Materials handling equipment: Horizontal) fixed routes. Overhead movement of materials. Vertical movement of materials. Horizontal movement—nonfixed path. Industrial storage facilities. Part IV, Packaging section: Packaging methods and materials. Research in packaging and materials handling. Part V, Analysis: How to solve a handling problem. Methods of analysis. Types of surveys. Determination of handling costs. Part VI, Organization: Production control. Integration of equipment. Safety. Part VII, Special handling problems: Machine operations. Warehousing activities. Assembly. Air cargo handling. Railroad and truck handling. Handling bulk materials. Appendix: Selected sources of information. Bibliography of magazine references. References to specific industries. Index.

Note: The general principles of efficient materials handling, the organizational and cost aspects, and the technical details of typical installations are covered in this engineering college text. There is considerable emphasis on management aspects, especially in the co-ordination of materials handling with related matters such as work simplification. The [illegible] figures include many photographs and diagrams of equipment and installations. An unusual feature is the inclusion in the appendix of a classification scheme for information about materials handling.

STOCKER, HARRY E.

Materials handling: principles, equipment and methods. Second edition. Englewood

INDUSTRIAL HYGIENE FOUNDATION OF AMERICA, INC

An annotated bibliography on noise, its measurement effects and control. Pittsburgh Industrial Hygiene Foundation of America, Inc., 1955 364 p 22 cm. $7 50 7426

Contents Measurement of sound and noise Instruments—standards—calibration—performance. Techniques—standards—methods—use of instruments. Evaluation—interpretation of results—surveys. Effects of noise General effects—auditory—psychological—fatigue—adaptation. Effects on workers—special occupations—acoustic trauma. Effects from specific sources—industrial—civilian—military Measurement of hearing loss Instruments Techniques. Evaluation. Reduction and control of noise Methods. Examples of noise reduction and control. General. Index of subjects. Index of authors.

Note Although not represented as comprehensive, this bibliography lists 2336 journal articles, pamphlets and books that bear on noise as problem in public and industrial health. Annotations are given for representative publications in each section, but the majority of entries are not annotated. Good subject and author indexes are included.

MANUFACTURING CHEMISTS' ASSOCIATION, INC

Guide for safety in the chemical laboratory Prepared by and published for The General Safety Committee of the Manufacturing Chemists' Association, Inc., Washington, D C New York D Van Nostrand Company, Inc., 1954 234 p illus 22 cm. $4 50 7427

Contents General rules for laboratory safety Laboratory design and equipment. Handling glassware. Handling and storage of containers. Miscellaneous hazards. Flammability Chemical hazards. Toxicity Radiation safety and contamination control in the laboratory Pressure vessel hazards. Clothing and personal protective equipment. Laboratory first aid and suggestions for medical treatment. The packaging and transportation of chemicals. Literature references. Index.

Note A manual of basic information. In it are outlined good safety practices, safety features to be incorporated when chemical laboratories are designed, the chief hazards in chemical laboratories, and suggestions for first aid and medical treatment. In addition, protective clothing and equipment are described, and there is selected bibliography of publications containing safety information. The book is essentially self-contained with most of the topics being covered concisely and adequately Many of the 39 plates are reproductions of photographs of laboratories and equipment designed for safety

NATIONAL SAFETY COUNCIL

Accident prevention manual for industrial operations Third edition Chicago National Safety Council Inc. 1955 1,339 p illus 23 cm $18 00 7428

Contents Basics of safety Safety organization. Safety committees. Removing the hazards from the job. Human behavior and industrial safety Safety education. Maintaining employee interest in safety Public relations and publicity for safety Accident records and injury rates. Accident investigation, analysis and cost. Workmen compensation insurance Sources of help for the safety man. Industrial buildings and plant layout. Plant construction and maintenance. Boilers. Pressure vessels. Refrigeration equipment. Handling and storage of materials Hoisting apparatus and conveyors. Elevators and plant railroads. Power trucks and tractors. Ropes, chains, and slings. Principles of guarding and transmission guards. Metal forming and shearing. Machine tools. Woodworking machinery Guarding equipment in selected industries. Local exhaust systems and ventilating. Welding and cutting. Hand and portable power tools. Electrical hazards. Flammable liquids. Fire prevention. Fire extinguishment and control. Emergency action plans. Personal protective equipment. Industrial sanitation and personnel facilities. Medical, nursing and first-aid services in industry Industrial hygiene. Industrial poisons. Table of chemical hazards. Motorized equipment. Safety engineering tables. Index.

Note A comprehensive reference book of principles and good practices. It is written for use by safety engineers and foremen or anyone else who has an interest in good safety practices. Although illustrations are not special feature, there is a large number of them. This third edition is the result of major revision and reorganization of the preceding edition. The purpose of the book remains the same, but much new material was added. The volume is now organized in 44 separately paged sections, but there is a detailed index covering all the sections.

SAX, NEWTON IRVING, AND OTHERS

Handbook of dangerous materials. Assisted by M J O'Herin and W W Schultz. New York Reinhold Publishing Corporation 1951 848 p 26 cm 7429

Contents References. List of abbreviations and symbols. General chemicals. Explosives. Fungus diseases and fungicides. Radiation and radiation hazards. Shipping regulations. General index.

Note. A work of interest to factory managers, safety personnel, and industrial physicians. The first part is an alphabetically arranged compilation of materials that are hazardous to human beings because they are poisonous, cause allergic reactions, or are explosive. The following points are covered for most of the materials included: hazardous properties, storage and handling, synonyms, chemical formula, chemical and physical properties, shipping regulations. The writeups of many of the materials include one or more literature references, but literature references are not always given. The section on fungus diseases includes much information on diagnosis and treatment. The section on shipping regulations is reprint without editorial comment of the current regulations pertaining to explosive and hazardous materials of the Interstate Commerce Commission. A revised and enlarged edition under the title, *Dangerous properties of industrial materials*, was published in 1957 1 467 p., $19.50.

SIMONDS, ROLLIN H., AND JOHN V GRIMALDI

Safety management, accident cost and control. Homewood, Ill. Richard D Irwin, Inc., 1956 555 p illus 24 cm. $8.35 7430

Contents Section I, Introduction The problem and how to approach it. History Section II, Objectives, responsibility and organization Specific objectives. Responsibility for accident prevention. Organization. Section III, Accident cost analysis. Nature and importance of accident costs. How to find the cost of accidents in company Statistical data on uninsured costs. Section IV Motivating safety and locating the hazards. Motivation. Locating and defining accident sources. Section Accident-producing physical conditions and their control Layout and design. Machinery hazards and guards. Electricity and material handling and storage. Section VI, Health hazards and their control: Environmental control for health. Personal protective equipment. Section VII, Special problems and auxiliary functions. Employee selection, placement, and counseling. Employee training procedures. Psychological aspects of accident prevention. Auxiliary functions of the safety department. Control of catastrophes. Fire prevention and protection. Commercial vehicle fleet safety New product development. Waste disposal. Appendices Common industrial health hazards, their occurrence and properties. Properties of selected flammable materials. Index.

Note A college textbook of rather comprehensive scope. It presents a broad picture of the principles and techniques of safety management in industry including tangential matters such as catastrophe control, new product testing and disposal of industrial wastes. The theme of high costs of accidents and of poor safety management runs through the book. Nevertheless the book is addressed primarily to safety engineers (and to students preparing for careers in this field) rather than to top business executives. Numerous illustrations of safety devices and protective equipment are included. There are occasional references to pertinent literature but the bibliography is not a feature. The first-named author is Professor of Management in Michigan State University and his co-author is Director of the Industrial Division of the Association of Casualty and Surety Companies.

UNITED STATES BUREAU OF LABOR STANDARDS

Safety subjects Fourth edition. Revised 1956 Washington D C Government Print

AGRICULTURE

GENERAL

ADVANCES IN AGRONOMY Prepared under the auspices of the American Society of Agronomy Volume v Edited by A. G. Norman. New York. Academic Press, Inc., 1953 422 p. illus. 24 cm. $8.50. 7437

Contents: A half century of wheat improvement in the United States, by F. C. [illegible] and others. The soil organic fraction, by [illegible] Progress in agricultural engineering, by [illegible] Chemical weathering of minerals in soils, by M. L. Jackson [illegible] The changing pattern of agronomy and [illegible] and G. D. [illegible] Soil management [illegible] in Canada, compiled by R. R. McKibbin. [illegible] for conservation and productivity by G. R. [illegible] Author index. Subject index.

—— Volume vi. Edited by A. G. Norman. New York Academic Press, Inc., 1954 383 p. illus. 24 cm. $8.50 7438

Contents: Progress in forage improvement, by R. R. McCrabb and [illegible] Requirement and availability of soil water, by O. J. [illegible] A pattern for international co-operation in agriculture, by [illegible] New concepts of management of corn belt soils, by J. G. [illegible] Seed-bed requirements, coordinated by J. O. [illegible] Technological aspects of trace element usage, by A. A. [illegible] Crop adaptation and climate, by C. P. Wilsie and R. H. [illegible] Potassium in plant nutrition, by K. Lawton and R. L. Cook. [illegible] improvement, by J. R. Quinby and J. H. Martin. Author index. Subject index. Cumulative author index, Volumes i–vi. Cumulative subject index, Volumes i–vi.

—— Volume vii. Edited by A. G. Norman. New York Academic Press, Inc., 1955 431 p. illus. 23 cm. $8.80. 7439

Contents: Soil aggregation, by J. P. Martin and others. Recent changes in Swedish crop production, by E. Åberg. Mineral nutrition of plants as related to microbial activities in soils, by C. H. [illegible] Improvement of the sugar beet in the United States, by [illegible] Grass seeding viewed by pedologist, G. R. [illegible] and others. [illegible] to federal service to agriculture, by J. S. [illegible] The [illegible] of soil nitrogen by W. R. [illegible] and C. O. [illegible] Weed control in principal crops [illegible] by F. L. [illegible] the southern United States, by W. B. [illegible] Mineralization of organic nitrogen in soil, by G. W. [illegible] and D. A. Van [illegible] The place of microbiology in soil science, by A. C. [illegible] Author index. Subject index.

—— Volume viii. Edited by A. G Norman. New York Academic Press, Inc. 1955 423 p. illus. 24 cm. $8.80 7440

Contents. Field crop production and soil management in the Pacific Northwest, by M. B. [illegible] and others. Anhydrous ammonia as nitrogen fertilizer, by W. B. Andrews. Progress in grass breeding, by D. C. Smith. Molybdenum as fertilizer, by A. J. Anderson. The evolution of crop plants for winter hardiness, by [illegible] The determination of lime and fertilizer requirements of soils through chemical tests, by J. W. Fitts and W. L. Nelson. Tall fescue, by J. R. Cowan. The mineral nutrition of corn as related to its growth and culture, by L. B. Nelson. Organic soils, by J. R. Dawson. Author index. Subject index.

Note: This review series has been published annually since 1949. The individual reviews are topical rather than chronological. In other words, they present advances in selected areas of agronomy rather than the research results published in given year or any other arbitrary period of time. Topics pertaining to soils, fertilizers, and soil water appear more often than others, but other topics are covered as the need listed above indicate. Each paper is [illegible] review of published literature and is accompanied by an extensive bibliography.

BEYER, GLENN H.

Farm housing in the Northeast. A survey of facilities, activities, possessions, and preferences of families on owner-operated farms. The factual findings by Glenn H. Beyer with the assistance of the Northeastern Farm Housing Technical Committee. Ithaca Cornell University Press, 1949 458 p. illus. 24 cm. $4.50. 7441

Contents (abridged): Introduction and background: Methodology [illegible] Part i, Geographic distribution and economic groups of families [illegible] The present pattern of farmhouses. Age of dwelling units. Type of construction. Size of house. Equipment and facilities. Part ii, Household activities. Food preparation and preservation. Laundry work. Sewing. Entertaining. Part iii, Household inventories: Food. Clothing and sewing materials. Bedding and household linens. Need for additional storage space. Part iv General housing preferences. The dwelling unit. Equipment and furniture. Household activities. Part [illegible] Summary. Glossary. Index.

Note: An analytical presentation of the results of present housing facilities and housing needs of families living on farms in the states of Connecticut, Maine, Massachusetts, New Jersey, New York, Pennsylvania, Rhode Island, and West Virginia. The data were gathered largely by personal interviews. They throw light not only on housing requirements but also on household activities on farms. For example, information is included on the kinds and quantities of foodstuffs preserved in [illegible] year. The book is one product of [illegible] project which has as its ultimate goal the development of functional house plans suited to the needs of farm families in the region covered.

BLACK, JOHN DONALD AND OTHERS

Farm management by John D Black, Marion Clawson, Charles R. Sayre, and Walter W Wilcox. New York The Macmillan Company 1947 1,073 p. illus. 24 cm. $7.50. 7442

Contents (abridged): Part i, Introduction: The farm management function. The ends of farming. Farming in changing world. Part ii, Systems of farming: The management of one-crop farming. Specialized livestock farms. Diversified-crop farms. Feed-and-livestock farms. Crop-and-livestock farming. Production for use of the farm family. Part iii, Principles and methods of analysis: The location of agricultural production. Size of farms. Adjusting farm production to markets and prices. Farming costs. Accounts, records, and surveys. Part iv Problems of management: The management of farm equipment. The management of labor on farms. The management of land. The management of rented farms. Financing the farm business. The valuation of farm property. The role of public agencies in farm management. Part [illegible] Management by types of farming: Wheat farming. Cotton farming. Sugar and specialty crops. Fruit and nut farming. Vegetable farming. Dairy farming. Irrigation farming. Cattle ranching. Sheep ranching. Poultry farming. Part-time and self-sufficing farming. The management of farm woodland. Part-time and self-sufficing farming. Part vi, Finale: Agriculture in the national economy. Index.

Note: A comprehensive work written from the viewpoint that farming is business based on applied science. It is designed primarily for use as textbook in agricultural colleges, and the treatment assumes that the reader will have some knowledge of agricultural methods and of fundamental economic principles. The necessity for analyzing farm operations from the economic standpoint is constantly stressed, and variety of case histories of such analyses are included. The fifth part contains tabloid analyses of

Cliffs, N J Prentice-Hall, Inc. 1951 330 p illus. 23 cm $6 50 7436

Contents Part one, Materials-handling principles. Terminal time principle. Handling and mechanical-equipment principles. The performance principle. The principle of standardization. The principle of obsolescence. The flexibility principle and the speed principle. Dead weight, equipment details, maintenance and repairs. The principle of safety Straight-line and fatigue principle. Other principles of materials handling. Part two, Equipment and methods Fork trucks and pallets. Tractors and trailers. Conveyors. Cranes. Miscellaneous equipment. Selection of equipment. Plant layout and building design as related to materials handling. Organization and management. Index.

Note. A compact presentation of principles of materials handling in industrial establishments is combined with descriptions of types of equipment and standard methods in this book, which is an introductory survey for executives and foremen rather than comprehensive treatise for specialists. There is some emphasis on the economic aspects of materials handling. The first edition was published in 1951 Several chapters were rewritten for this edition.

Hambidge, Gove

The story of FAO. Princeton, D. Van Nostrand Company, Inc., 1955. 303 p. illus. [illegible] cm. $6.95 [illegible]450

Contents: Part I, The background. [illegible] Part II, FAO's growth and development. [illegible] New directions. Part III, Technical [illegible]: Near East and Africa. Far East. Latin America. Europe. Appendix. Some source material. Index.

Note: A detailed narrative history of the Food and Agriculture Organization of the United Nations, written by a staff member with the assistance of other staff members of the FAO and intended for the general reader. The general account is presented in the first [illegible] pages. The remainder of the book is devoted to region-by-region and country-by-country survey of the accomplishments of the FAO, including most of the large and some of the small projects undertaken. The details chiefly concern the countries of Asia, Africa, and Latin America, as the FAO deals in the main with the problems of countries that have not reached a high state of economic development. The story is an inspiring one of co-operative effort in many countries [illegible] hundreds, perhaps thousands, of scientists and other experts are joined in spreading agricultural knowledge and its practical application, and in helping effect changes in agrarian institutions to make new advances possible.

Haystead, Ladd, and Gilbert C. Fite

The agricultural regions of the United States. Norman, University of Oklahoma Press, 1955. 288 p. illus. [redacted] cm. $4.00. 7451

Contents: The nonexistent "typical" American farm. New England—land of abandonment. The Middle Atlantic states—prime market. Delmarva—[illegible] region. The Middle South—[illegible] belt. The Deep South—the shifting cotton belt. The corn-hog belt—backbone of democracy. The north Northcentral region—dairy-[illegible]

Hunt, Robert L.

Farm management in the South. Danville, Ill., The Interstate Printers & Publishers, 1953. 531 p. illus. 21 cm. $3.50. [illegible]453

Contents (abridged): Farming in [illegible] of southern agriculture. [illegible] of production. [illegible] farm power and equipment. [illegible] Specialized and diversified farming. [illegible] The farm layout. Cooperation in [illegible] of marketing farm products. Conservation and farm management. Appendix: Selected references. Glossary of terms. Index.

Note: An elementary textbook [illegible] introduction to the agricultural situation and to agricultural practices in the southern and southeastern states of continental United States of America. It is intended primarily for the instruction of students in agricultural courses at the high-school level. Many of the [illegible] figures are photographs of farming scenes and farming practices. There are [illegible] tables and many of these are presentations of economic data. In some instances, however, the economic data are old and do not fairly represent the recent agricultural situation in the area.

Iowa State College and the Iowa Agricultural Experiment Station

A century of farming in Iowa, 1846–1946 by members of the staff of the Iowa State College and the Iowa Agricultural Experiment Station. Published in commemoration of the one hundredth anniversity of Iowa's statehood. Ames, The Iowa State College Press, 1946. 357 p. illus. [illegible] cm. $5.00. 7454

Contents: An overture, by E. D. Ross. Struggle for land ownership, by W. G. Murray. The soil that grows the crops, by [illegible] and A. J. Englehorn. Growing the bumper corn crop, by G. F. Sprague and J. C. Cunningham. The fields of [illegible] grain, by H. D. Hughes. Forage crops that feed the livestock and [illegible] the soil, by H. D. Hughes and M. E. Heath. Winning the fight against plant diseases, by J. C. Gilman and M. [illegible]. Man and nature battle injurious insects, by Carl J. Drake. Weeds that chal-

the economic situations of the important types of farming in the United States of America. The bibliographical material consists of selected lists appended to the chapters.

BRUNNER, EDMUND DE SCHWEINITZ, AND OTHERS, editors

Farmers of the world the development of agricultural extension. Edited by Edmund de S Brunner, Irwin T Sanders, and Douglas Ensminger New York Columbia University Press, 1945 208 p 23 cm. $3 00 7443

Contents About the authors. Introduction What extension is, by D Ensminger and I. T Sanders. Nonliterate societies. Diversity and change in the culture of nonliterate peoples, by S. T Kimball. Extension work in the Pacific islands, by F M. Keesing. Peasant societies. Characteristics of peasant societies, by I. T Sanders. Promoting cooperative agricultural extension service in China, by Hsin-Pao Yang. Extension experience in India, by D. S. Hatch. Extension work among the Arab fellahin, by A. I. Tannous. Extension in the Balkans, by C. E. Whipple. Extension work in Latin America, by C. P Loomis. Euro-American society· Euro-American rural society by C. C. Zimmerman. Extension in the United Kingdom, by R. Rae. Agricultural extension services in northwest Europe, by P L. Yates and L. A. H. Pieters. Agricultural extension in the United States, by E. de S. Brunner and C. B. Smith. Conclusion The role of extension in world reconstruction, by M. L. Wilson and E. de S. Brunner Index.

Note A survey of the problems and experiences in various parts of the world in instructing rural people in improved agricultural practices and other matters that affect their well-being. Each author has discussed the problems in his particular region against the cultural background and economic situation of the farmers there. The primary aim of the volume is to aid in pointing the way to the most effective procedures.

BULLOCK, BENJAMIN FRANKLIN

Practical farming for the South. Second edition Chapel Hill The University of North Carolina Press, 1946 526 p. illus. 21 cm. $3 00 7444

Contents Part I, Plant production Soils and soil fertility Plant growth and reproduction. Plant propagation. Improvement of plants. The home garden. The home orchard. Field crops. The farm woodlot. The rural home and its surroundings. Part II, Animal production Feeding and care f farm animals. Improving farm animals. Milk production for the farm home. Pork production on the farm. The farm poultry flock. Honey bees on the farm. Part III, Farm financing and literature Credit for small farm operators. Farmers' cooperatives. Farm publications. Note on plowing. Appendices Farmers continue to plow What about DDT? Electricity on the farm. Battery brooders. Index.

Note The purpose of this volume is not only to be of use as a handbook to farmers and as a textbook to students but also to serve as an introduction to the basic principles of farming for the benefit of teachers and rural social workers. The common farm operations are discussed in detail, not only for the benefit of beginners but also to guide established farmers in good practices. The second edition covers certain subjects somewhat more fully than the original edition of 1944 and also includes discussion of later developments f general interest in the field of agriculture, such as rural electrification, new methods of insect control. Although written by Southerner the book does not particularly emphasize the "southern aspect, except for the sections dealing with such crops as cotton and tobacco. An excellent bibliography is included, which lists not only books and government pamphlets, with their publishers, dates and prices, but also farm magazines and papers.

CASTETTER, EDWARD FRANKLIN, AND WILLIS H BELL

Pima and Papago Indian agriculture. Albuquerque The University of New Mexico Press, 1942 245 p illus 23 cm. (New Mexico University School of Inter American Affairs. New Americana studies I) $3.50 7445

Contents (abridged) The Pimans. Land, climate and vegetation. Early basis of Piman subsistence. Piman cultivated crops. Selection, development, and ownership of land. Agricultural implements. Planting, irrigation and cultivation. Harvest, storage and seed selection. Cultivation and utilization of tobacco—a ceremonial crop. General ceremonial aspects of Piman agriculture. Bibliography Index.

Note: The material presented in this monograph is based upon field studies made by the authors among the Pima-Papago in the falls of 1938, 1939 and 1940, supplemented by data from the relevant historical, ethnographical, and archaeological literature. The account of the history of Pima and Papago agriculture and of the general basis of subsistence of these people represents a composite of ethnography archaeology and the history of agriculture, with the latter perhaps predominating. The territory covered lies largely within the area known as the Sonoran desert, lying partly in southern Arizona and northwest Mexico. The bibliography contains about 180 references.

CASTETTER, EDWARD FRANKLIN, AND WILLIS H. BELL

Yuman Indian agriculture, primitive subsistence on the lower Colorado and Gila rivers. Albuquerque The University of New Mexico Press, 1951 274 p. illus. 24 cm. $6 00 7446

Contents The country The people. General basis of subsistence. Agricultural implements. Cultivated crops. Agricultural techniques. Semicultivation of seed plants. Wild plant and animal products. Ritualism and group activities. Summary discussion, and interpretation. Bibliography Index.

Note: A complementary work to the authors' *Pima and Papago Indian agriculture*, Albuquerque, 1942 Agricultural crops and practices are the main topics, but these are described in their environmental and social setting. The first two chapters of the book are basic and account for approximately one-quarter of the total space. Agricultural practices are described in all the available detail. These include various techniques of food preservation; for example, methods of preparing pumpkins for indefinite storage. The book is of interest to students of anthropology as well as to readers interested in the history of agriculture.

FRIEDMAN, JOAN, AND RICHARD J FOOTE

Computational methods for handling systems of simultaneous equations with applications to agriculture. Agricultural Marketing Service, United States Department of Agriculture. Washington D C. Government Printing Office 1955 109 p illus. 26 cm. (United States Department of Agriculture. Agriculture handbook no 94) $0.55 7447

Contents Introduction. A 3-variable multiple regression problem. Elementary principles regarding matrices and determinants. Limited information approach for systems of simultaneous equations. Tests to be made after completing the analysis. Use of simultaneous equation models for analytical purposes. Coefficients of correlation for systems of equations. Literature cited. Appendix. Abbreviated Doolittle method. A general method. Additional comments on matrix multiplication. Glossary of terms

Note This handbook is designed to meet the needs of research workers who are without basic training in the use of systems of simultaneous equations in agricultural economic research but have an acquaintance with standard methods for handling single equation multiple regression analyses. It provides description of the steps in the more common types of problems and illustrates them.

PATTERSON DAVID DOUGLAS

Statistical technique in agricultural research. A simple exposition of practice and procedure in biometry New York McGraw Hill Book Company Inc., 1939 263 p. illus. 23 cm. (McGraw Hill publications in the agricultural sciences L. J Cole, consulting editor) $5.00. 7460

Contents: General principles. Analysis of variance. Goodness of fit and contingency tables. Diagrams. Correlation. Regression. Field experiments. Serial and perennial crop experiments. Recent developments in field experimentation. Selected bibliography. Appendix. Index.

Note: This book is an attempt to meet the demand for more elementary exposition of the statistical technique than is customarily found in the usual statistical textbooks. A detailed analysis of data drawn from representative series of experiments typical of some of the commonest statistical problems encountered by the average research worker in agricultural problems. No mathematics beyond elementary algebra is required.

RANGE, WILLARD

A century of Georgia agriculture 1850–1950. Athens University of Georgia Press, 1954 333 p. illus. 24 cm. $5 00 7461

Contents: Part I. The end of the Golden Age, 1850-1865. The last golden decade. Years of war. Invasion and the aftermath. Part II. The long depression, 1865-1900. Reorganization of labor and management. The cotton controversy. Attempts at diversification. The cultivation of cotton. The agrarian revolt. Evaluation of the long depression. Part III. The revolutionary new century, 1900-1950. The emergence of cotton. The continuation of diversification. The problem of marketing. The revolution in agricultural education. The revolution in agricultural credit. The landlord and the tenant. Notes. Bibliography. Index.

Note: A comprehensive account of the history of agriculture in [illegible] one which has been primarily an agricultural one since the white man first took up residence in it. The principal viewpoint is economic; nevertheless, much information is included on crops and practices, on education of farmers, etc. The book was based on [illegible] survey of the literature, and references are given to the [illegible] publications.

RICK, FRANKLIN MERINO

The 4-H story a history of 4-H club work. Ames The Iowa State College Press, 1951 308 p. illus. 24 cm. $3.00 7462

Contents (abridged): Times of the earliest pioneers. The government sponsors corn club. Corn clubs take hold in the South. Canning clubs get under way. The cloverleaf goes national. Club work grows in the North and West. Congress passes the Smith-Lever act. Club work with Negroes expands. The national committee is formed. Early days of the club congress. National camp established. 4-H crosses the seas. New legislation for extension. War, and the Bankhead-Flannagan act. Summing up. Bibliography. Index.

Note: The 4-H clubs, whose origin and development are recounted in this book, have been major influence in the education of young people for better living and for leadership in rural life. They have reached their widest development in the United States of America. This book is devoted mainly to the U. S. A., but there is some information on comparable organizations in other countries. It is written simple style and is of potential interest not only to persons directly concerned with the organization and guidance of 4-H clubs but also to persons with some general interests in rural life and agricultural betterment. There is bibliography.

SAUER, CARL O

Agricultural origins and dispersals. New York The American Geographical Society 1952. 110 p. illus 23 cm. (Bowman memorial lectures. Series two) $4.00 7463

Contents: Man—ecologic dominant. Planters of the Old World and their household animals. The planters of the New World. Seed and harvest. Herdsmen and husbandmen.

Note: A wide range of knowledge pertaining to the history of man control of plants and animals in agriculture is covered in the five lectures published in this volume. However, the author' primary theme was not but is known but but is not known or known only partly. A typical section is the three-page discussion entitled Problems in the distribution of Cucurbita," or squash, which the author shows to have been an important food plant in ancient American civilization, though probably of Asiatic origin. The author point of view is questioning one, and his topics are interesting. A short, selected bibliography is included.

SHANNON FRED ALBERT

The farmer s last frontier agriculture, 1860–1897 New York Farrar & Rinehart, Inc., 1945 434 p. illus. 24 cm. (The economic history of the United States. Volume V) $6.00. 7464

Contents: Nature and the farmer. Agricultural settlement in new areas. Disposing of the public domain. Land and labor in the new South. Southern crops and special problems. The progress of farm mechanization. The expansion of prairie agriculture. Special problems of prairie farmers. The livestock frontier and the Great-Plains farmer. Finance and marketing problems of the range country. Specialized agriculture and eastern adjustments. Governmental activity in agriculture. The agrarian uprising. Farmers' cooperative movements. The farmer and the nation. The literature of the subject. Appendix. Index.

Note: A well-documented history of American agriculture in the latter half of the 19th century. The emphasis throughout the work is on the economic aspects, but there is much specific information on prices of livestock and other crops and the earnings of farm labor, as well as on the larger economic aspects. However, there is also good deal of information on the farming techniques and agricultural implements of the period. The chapters on the settlement of the last large areas of public land are of special interest.

UNITED STATES. DEPARTMENT OF AGRICULTURE. OFFICE OF FOREIGN AGRICULTURAL RELATIONS

Agricultural geography of Europe and the Near East. By Lois B Bacon, Reginald G Hainsworth, Naum Jasny Clarence M Purves, Lazar Volin, and Clayton E. Whipple. Washington D C. Government Printing Office, 1948 67 p. illus. (part col d) 27 cm. (United States. Department of Agriculture. Miscellaneous publication no. 665) $1.50. 7465

Contents: Introduction. Explanation of maps and graphs. Production, trade, and consumption of agricultural products in Europe, excluding the Soviet Union. Climate: Average annual precipitation. The temperature and frost-free season. Natural vegetation. The soils of Europe. Soil profile. A, B, C horizons. Soil properties. Description of natural soil groups. Uplands. Lowlands. Mountains. Conclusion. The population of Europe and the Near East. Land utilization. The principal regions. Zone of summer rains. Zone of summer drought. The crop pattern. Intermediate crops. Light-soil, cool-climate crops. Root crops. Ample-moisture, cool-climate crops. Scant-moisture crops. Mediterranean crops. Crops of minor world importance. Conclusions. The livestock industry: Summer-rain zone. Summer-drought zone. Europe position in international agricultural trade. Wheat. Corn. Sugar. Tobacco. Cotton. Wool. Flaxseed. Olive oil. Other vegetable oils. Europe-United States trade.

Note: Maps and charts, some in color, show in graphic manner the agricultural geography of Europe and the Near East, including population, altitude, climate, vegetation, soils, and crop and livestock statistics. The brief texts accompanying the maps give economic, historical, or physical facts; [illegible] the subject is of basic importance, such as soils, rainfall, etc., there is additional information presented in the main body of the text. Accurate postwar figures on European agriculture not being available, the base period for data used in preparing most of the maps is 1935–37

lenge Iowa crops, by A. L. Bakke, and others. Hog raising—a big business, by W A. Craft and A. L. Anderson. Iowans feed beef cattle for market, by P S. Shearer The development of Iowa's high-producing dairy cattle, by C. Y Cannon. Sheep production in the livestock enterprises, by W F Le Grange. Horses pull Iowa into prominence by A. B Caine. Eggs and meat from Iowa poultry by George F Stewart. Combating animal diseases—and winning, by C Murray Growing fruits, vegetables, and flowers, by B. S. Pickett, and others. Trees of our times—and pioneer times, by G. B MacDonald. Bees—the beneficial insect, by F B. Paddock. Dairy product output from Iowa farms, by M. Mortensen. The marketing phase of Iowa farm living, by S. H. Thompson. The role of machinery in Iowa farming, by J B. Davidson. Trends in farm structures, by Henry Giese. Agricultural journalism in Iowa, by K. R. Marvin. The farm standard of living in Iowa, by E. E. Hoyt. Schools for the farm boy and farm girl, by M. L. Cushman. Farmers' organizations, by L. R. Schmidt. The pattern of farm management, by J Hopkins. Index.

Note This volume provides a detailed yet diversified account of the origins and growth of farm practices in a state where 213,000 farms embrace 95 per cent f the area of the state. Although limited to this one state, it is in many respects typical of the history of agricultural America during the past century

KLAGES, KARL HENRY WILLIAM

Ecological crop geography New York The Macmillan Company, 1942 615 p illus 24 cm. $7 00 7455

Contents (abridged) Part I, The social environment of crop plants. Part II, The physiological environment of crop plants. Part III, The ecological factors. Part IV The geographical distribution of crop plants. Author index. Subject index.

Note This book attempts to place the many problems incident to the distribution of crop plants on a physiological basis. It is intended for college students of crop ecology and plant geography and for agronomists in general, economists, geographers, and others. Bibliographies are given at the end of each chapter

MIGHELL, RONALD L General

American agriculture its structure and place in the economy For the Social Science Research Council in cooperation with the U S Department of Agriculture, Agricultural Research Service and the U S Department of Commerce, Bureau of the Census. New York John Wiley & Sons, Inc., 1955 187 p. illus 23 cm. $6 50 7458

Contents: Agriculture today and yesterday Agriculture in the total economic process. Dimensions of the agricultural plant. Structure of commercial farms—scale—type. Farm tenure and debt. Part-time and residential farms. Group interests in agriculture. Social features of the structure of agriculture. Changes and structural strain. Appendix. Publications from the 1950 Census of Agriculture. Bibliography Appendix tables. Index.

Note Although essentially a socio-economic account of agriculture in the United States of America as of 1950, this book is included here because of the light that it throws on such matters as types of farms and trends. Essentially it is a nontechnical interpretation of census data, designed for reading and reference by anyone in need of information on such topics as the importance of agriculture in the present economy of the United States, changes in types of farms and products over the past half-century, the dollar values of various products and the most characteristic types of agriculture for various regions. Although tables and graphs are used in the presentation, the information is conveyed largely in the form of a narrati text designed for straightforward reading.

Note A well-documented history of American agriculture in the latter half of the 19th century The emphasis throughout the work is on the economic aspects, but there is much specific information on prices of livestock and other crops and the earnings of farm labor as well as on the larger economic aspects. However, there is also a good deal of information on the farming techniques and agricultural implements of the period. The chapters on the settlement of the last large areas of public land are of special interest.

UNITED STATES. DEPARTMENT OF AGRICULTURE. OFFICE OF FOREIGN AGRICULTURAL RELATIONS

Agricultural geography of Europe and the Near East. By Lois B Bacon, Reginald G Hainsworth, Naum Jasny Clarence M. Purves, Lazar Volin, and Clayton E. Whipple. Washington, D C. Government Printing Office, 1948 67 p. illus. (part col d) 27 cm. (United States. Department of Agriculture. Miscellaneous publication no. 665) $1.50. 7465

Contents Introduction. Explanation of maps and graphs. Production, trade, and consumption of agricultural products in Europe, excluding the Soviet Union. Climate Average annual precipitation. The temperature and frost-free season. Natural vegetation. The soils of Europe Soil profile. A, B, C horizons. Soil properties. Description of natural soil groups. Uplands. Lowlands. Mountains. Conclusions. The population of Europe and the Near East. Land utilization The principal regions. Zone of summer rains. Zone of summer drought. The crop pattern Intermediate crops. Light-soil, cool-climate crops. Root crops. Ample-moisture, cool-climate crops. Scant-moisture crops. Mediterranean crops. Crops of minor world importance. Conclusions. The livestock industry Summer-rain zone. Summer-drought zone. Europe's position in international agricultural trade Wheat. Corn. Sugar. Tobacco. Cotton. Wool. Flaxseed. Olive oil. Other vegetable oils. Europe-United States trade.

Note Maps and charts, some in color, show in graphic manner the agricultural geography of Europe and the Near East, including population, altitude, climate, vegetation, soils, and crop and livestock statistics. The brief texts accompanying the maps give economic, historical, or physical factors where the subject is of basic importance, such as soils, rainfall, etc., there is additional information presented in the main body of the text. Accurate postwar figures on European agriculture not being available, the base period for data used in preparing most of the maps is 1935–37.

kings Iowa crops, by A. L. Bakke, and others. Hog raising—a big business, by W A. Craft and A. L. Anderson. Iowans feed beef cattle for market, by P S. Shearer The development of Iowa's high-producing dairy cattle, by C. Y Cannon. Sheep production in the livestock enterprise, by W F La Grange. Horses pull Iowa into prominence, by A. B Caine. Eggs and meat from Iowa poultry by George F Stewart. Combating animal diseases—and winning, by C. Murray Growing fruits, vegetables, and flowers, by B. S. Pickett, and others. Trees of our times—and pioneer times, by G. B MacDonald. Bees—the beneficial insect, by F B. Paddock. Dairy product output from Iowa farms, by M. Mortensen. The marketing phase of Iowa farm living, by S. H. Thompson. The role of machinery in Iowa farming, by J B Davidson. Trends in farm structures, by Henry Giese. Agricultural journalism in Iowa, by K. R. Marvin. The farm standard of living in Iowa, by E. E. Hoyt. Schools for the farm boy and farm girl, by M. L. Cushman. Farmers' organizations, by L. B Schmidt. The pattern of farm management, by J Hopkins. Index.

Note This volume provides a detailed yet diversified account of the origins and growth of farm practices in a state where 213,000 farms embrace 95 per cent of the area of the state. Although limited to this one state, it is in many respects typical of the history of agricultural America during the past century

KLAGES, KARL HENRY WILLIAM

Ecological crop geography New York The Macmillan Company, 1942 615 p illus 24 cm $7 00 7455

Contents (abridged) Part I The social environment of crop plants. Part II, The physiological environment of crop plants. Part III, The ecological factors. Part IV The geographical distribution of crop plants. Author index. Subject index.

Note. This book attempts to place the many problems incident to the distribution of crop plants on a physiological basis. It is intended for college students of crop ecology and plant geography and for agronomists in general, economists, geographers, and others. Bibliographies are given at the end of each chapter

MCGEE, R V

Mathematics in agriculture. Second edition. New York Prentice-Hall, Inc. 1954 208 p illus 22 cm. (Prentice-Hall mathematics series Albert A. Bennett, editor) $5 00 7456

Contents. Mathematical operations. Percentage. Equations. Lengths, areas, and volumes. Ratio and proportion. The right triangle and trigonometry Averages. Graphs. Special applications of practical measurements. Exponents logarithms the slide rule. Tables. Index.

Note. Mathematical concepts and techniques of use in agriculture are explained in this book together with many illustrations of their applications in this field. The first edition was published in 1941 The order and titles of the chapters are the same in this second edition but revisions have been made, especially in the problems.

MALONE CARL C

How to make your farm pay a practical guide for Midwest farm operators. Ames The Iowa State College Press 1950 371 p illus 24 cm $4 25 7457

Contents Who should farm. Where should you farm? Money-making—the management problem. Choosing the type and size of farm. Getting started. Laying out the cropping system. Fitting livestock into the farm plan. Making the most from your livestock. Putting the farm plan together When you go to market. Checking up on yourself Helpers—public and private. Around the family table. Index.

Note A reliable introduction to sound farm management practices for farms in the Corn Belt and adjacent farming regions in the area of the United States of America known as the Midwest. The region includes areas where several main types of farming are practised including the growing of corn, wheat, beef cattle and hog raising, dairying, and "mixed" farming. The main theme of the book is that farming is a business and farm management practices for the main types of farming, corn, cattle raising, and hog raising are discussed at length, with shorter discussions of other types of farming and crops. Record-keeping is emphasized and sample farms are included. The author is a faculty member of Iowa State College.

MIGHELL, RONALD L

American agriculture its structure and place in the economy For the Social Science Research Council in cooperation with the U S Department of Agriculture, Agricultural Research Service, and the U S Department of Commerce, Bureau of the Census New York John Wiley & Sons, Inc., 1955 187 p. illus. 23 cm $6 50 7458

Contents. Agriculture today and yesterday Agriculture in the total economic process. Dimensions of the agricultural plant. Structure of commercial farms—scale—type. Farm tenure and debt. Part-time and residential farms. Group interests in agriculture. Social features of the structure of agriculture. Changes and structural strain. Appendix: Publications from the 1950 Census of Agriculture. Bibliography Appendix tables. Index.

Note: Although essentially a socio-economic account of agriculture in the United States of America as of 1950, this book is included here because of the light that it throws on such matters as types of farms and trends. Essentially it is a nontechnical interpretation of census data, designed for reading and reference by anyone in need of information on such topics as the importance of agriculture in the present economy of the United States; changes in types of farms and products over the past half-century the dollar values of various products and the most characteristic types of agriculture for various regions. Although tables and graphs are used in the presentation, the information is conveyed largely in the form of a narrative text designed for straightforward reading.

NATIONAL RESEARCH COUNCIL

Proceedings First International Conference on the Use of Antibiotics in Agriculture, held under the auspices of The Agricultural Board and The Agricultural Research Institute, National Academy of Sciences—National Research Council 19–21 October 1955 Washington D C National Academy of Sciences—National Research Council 1956 278 p. illus 25 cm. (National Academy of Sciences—National Research Council. Publication 397) $2 50 7459

Contents (abridged) Retrospectives and prospectives, by R. J. Dubos. First session, Growth response in animals. Response of poultry to antibiotic supplementation of feeds, by J. McGinnis. Antibiotics for swine, beef cattle, sheep, and dairy cattle, by T J. Cunha. Influence of antibiotics on carcass quality of pigs, by H. Clausen. Summary by J. K. Loosli. Second session, Special biological problems: Test animals, by C. A. Baumann. High level use of antibiotics, by R. S. Pomeroy Antibiotics in reproduction, by N R. Ellis. Mutagenic effects of antibiotics, by J. J. Christensen. Summary by T C. Byerly Third session, Mode of action of antibiotics in animals. Fundamentals of mode of action of antibiotics in animals, by E. Freerksen. Mode of action of antibiotics in poultry by G. F Combs. Mode of action of antibiotics on animal growth (rats, swine, and ruminants) by K. R. Johansson. Mode of action of antibiotics—evidence from germfree birds, by T D. Luckey Summary by H. R. Bird. Fourth session, Crop usage. Improving plant health with antibiotics, by W J. Zaumeyer Summary by J. C Dunegan. Food preservation. Control of bacterial spoilage of fish with antibiotics, by H. L. A. Tarr The use of antibiotics in the preservation of foods other than fish, by F E. Deatherage. Summary by E. M. Mrak Fifth session, Public health aspects. Emergence of resistant strains in chronic intake of antibiotics, by M. Finland. Antibiotic residues, by W A. Randall. Summary by C. S. Keefer.

Note The conference of which this volume is the product represented a landmark in present-day agriculture. Scientists from 11 nations participated, and as the titles of the papers show a broad view of the subject was taken. The authors and titles of the formal papers are listed above. Not listed are the panel discussions of which there were six. Transcripts of these discussions are included in the volume. Literature references are included for most of the papers.

Soils and Fertilizers

Ames. Iowa State College Press, 1956 218 p. illus. 24 cm. $3.95 7471

Contents: Part I, Over-all methodological considerations. Methodological problems in fertilizer use, by E. O. Heady. [illegible] by G. L. Johnson. Part II, [illegible] by R. L. Anderson. [illegible] by C. R. Hildreth. [illegible] by D. D. Mason. Part III, [illegible] by J. T. Pesek. [illegible] by W. L. Parks. [illegible] by R. W. Kolmberg. [illegible] by D. B. Ibach. Part IV, Application [illegible] by E. G. [illegible] by R. C. Woodworth. [illegible] by E. L. [illegible] by E. O. Heady. Part [illegible] by T. P. Hignett. Index.

Note: Papers originally presented at [illegible] symposium sponsored by the Tennessee Valley Authority in June, 1955, [illegible] All contain literature references.

Baver, L. D.
Soil physics. Third edition. New York John Wiley & Sons, Inc., 1956 489 p. illus. 24 cm. $7.75. 7472

Contents: Introduction. The soil as [illegible] system. The [illegible] composition of soils. Physical behavior of soil-water [illegible] Soil structure. Soil air. Soil water. Principles of soil [illegible] Principles of soil drainage. Soil temperature. Physical [illegible] Index of authors. Subject index.

Note: A broad survey written primarily from the standpoint of [illegible] As in the earlier editions, extensive reference lists of the [illegible] The second edition was published in 1948. In this third edition, there are two new chapters [illegible]

Bear, Firman E., editor
Chemistry of the soil. New York Reinhold Publishing Corporation, 1955 273 p. illus. 24 cm. (American Chemical Society Monograph series. No. 126) $8.75 7473

Contents: Soil development, by [illegible] Chemical composition of soils, by [illegible] Colloid chemistry of soils, by S. J. Toth. Cation and anion exchange phenomena, by L. Wiklander. Soil organic matter, by G. K. Fraser. Soil fixation of plant nutrients, by L. T. Kardos. Oxidation-reduction processes in soils, by F. G. [illegible] Acid, alkaline, alkali, and saline soils, by D. Thorne and L. F. Seatz. Trace elements, by R. L. Mitchell. Soil chemistry and plant nutrition, by A. Mehlich and M. Drake. Appendix: Methods in soil analysis, by A. L. Prince. Index.

Note: Although plant nutrition is not discussed explicitly until the final chapter of this book, the central theme is nevertheless soil chemistry in relation to plant nutrition. In the chapters preceding that final one, the accumulated scientific knowledge bearing on the development of soils and on their complex chemistry is [illegible] Bibliographies of the related literature are included. The monograph [illegible] appendix [illegible] description of selected procedures for soil analyses, in which the methods are described in sufficient detail to guide soil chemists in laboratory work. The volume is primarily [illegible] reference book for graduate scientists [illegible] interest and work require scientific knowledge of soil chemistry; also, it will serve as [illegible] for graduate chemists about to enter such fields as soil analysis, food products analysis and manufacture of agricultural chemicals.

Bear, Firman E.
Soils and fertilizers fourth edition. New York John Wiley and Sons, Inc. 1953 420 p. illus. 24 cm. $6.50. 7474

Contents: Factors affecting plant growth. Nitrogen and mineral requirements of crops. Water requirements of plants. Origin and classification of soils. Chemical composition of soils. Some biological processes in soils. Some physical properties of soils. Soil water. Soil air. Soil solutions. Control of soil water. Plowing and cultivating. Organic matter. Soil conservation. Animal agriculture. Nitrogen resources. Phosphorus resources. Potassium resources. Calcium resources. Magnesium resources. Sodium resources. Sulfur resources. Trace elements. Mixed fertilizers. Selection and use of fertilizers. Yield potentialities of crop plants. Miscellaneous topics. Index.

Note: A standard work widely used as [illegible] text in introductory courses in agricultural colleges since the publication of the first edition in 1924. It provides [illegible] concise but readable survey of the accumulated knowledge pertaining to soil productivity and fertility. Due attention is given to chemical composition and physical properties of soils, water and air in soils, organic matter and plant nutrients, including trace elements. The third edition was published in 1942. For this fourth edition the book was somewhat reorganized and thoroughly rewritten with the addition of [illegible] Many of the tables, of which there are now 157, and more than half of the illustrations, of which there are now 104, are new. The majority of the references in the bibliographies are to literature published since 1942.

Beaumont, Arthur Bishop
Garden soils their use and conservation. Illustrated. New York Orange Judd Publishing Company Inc. 1948. 280 p illus. 22 cm. $4.00. 7475

Contents: Foreword. The soils that feed us. Garden soils and [illegible] Organic matter for garden soils. How to improve garden soils. Tillage of garden soils. Conservation of garden soils. Composts for the home garden. Soil fertility and fertilizers. The use of fertilizers. [illegible] Selected references. Appendix. Approximate content of certain plant nutrients in nitrogen, phosphoric acid, potash, calcium oxide, and magnesium oxide. Glossary. Index.

Note: Intended primarily for home vegetable gardeners, this book presents the findings of soil science and recent advances in knowledge of plant nutrition in as nontechnical language as is possible. Much of what is written may equally well be applied to flower gardening. The author was formerly Professor of Soils at the University of Massachusetts.

Collings, Gilbeart H.
Commercial fertilizers their sources and use. Fifth edition. New York McGraw Hill Book Company Inc., 1955 617 p. illus. (part col d) 23 cm. $8.50. 7476

Contents: Origin and development of use of commercial fertilizers. Source, production, and use of sodium nitrate. Manufacture and use of sodium nitrate—of ammonium sulfate—of ammonium nitrate—of synthetic nitrogenous fertilizers. Sources and uses of organic nitrogenous fertilizers—of the natural phosphates—of bone phosphate and basic slag. Manufacture and use of the superphosphates. Use of ammonia solutions as sources of nitrogen in mixed fertilizers. Production, manufacture, and use of the potash fertilizers. Fertilizers carrying the secondary essential elements—sulfur, calcium, and magnesium—the newer essential elements—elements not accepted as essential for plant growth. Adjusting soil reaction and fertilizer practice to crop requirements. Principles underlying the purchase of fertilizers—the use of fertilizers. Application of liquid fertilizers—of dry fertilizers, and their influence on germination and seedling growth. Bibliography. Index of proper names. Subject index.

Note: A comprehensive survey in which major aspects of the subject and minor ones, such as the fertilization of fish ponds, are all discussed. The title notwithstanding, barnyard manure and compost are included, as well as chemical fertilizers. The book is

UNITED STATES DEPARTMENT OF AGRICULTURE

Science in farming Washington, D C. Government Printing Office, 1947 944 p illus. 24 cm. (United States Department of Agriculture. Yearbook of agriculture 1943–1947) $2 25 7466

Contents (abridged) Backgrounds. Men who went before. What is farm research? Animals: Breeding better livestock. Drugs to control parasites. Animal diseases. New ideas in feeding. Thyroprotein for cows. Artificial breeding. Hormones in reproduction. Vitamin A for dairy cattle. What to feed a cow Advances in feeding calves. Cross-breeding dairy cows. Progress in hog production. Developments in sheep. News about goats. Breeding better poultry Feeding poultry Horses and mules. Plants: Genetics and farming. Plant growth regulators. Day length and flowering. About hydroponics Finer strawberries ahead. Healthier tomatoes. The story of hybrid onions. Breeding healthy potatoes. Soybeans for the South. New kinds of sugarcane. Saving our sugar beets. New kinds of tobacco. What makes cotton good? New varieties of wheat. Corn hybrids for the South. Disease-resistant oats. Tailor made sorghums. Grasses for hay and pasture. New legumes for the South. Trees. Better timber from farms. Hybrid forest trees. Forests for old fields. Soils. Better soils, better food. Organic matter in soils. Soil organisms and disease. Ways to till the soil. Managing surface runoff. The control of salinity Phosphate fertilizers. Use of nitrogen fertilizers. The liming f soils. The use of minor elements. Making more of irrigation. Insects The chemistry of DDT Aerosols for insects. New insect repellents. DDT i the home. Crops that resist insects. Control of forage pests. Insecticides for cotton. Orchard insecticides. Insecticides for vegetables. Controlling pests of stock. News about bee diseases. More honey from bees. New products New uses for farm crops. Penicillin. Rutin for the capillaries. Dairy byproducts. New goods from wood. Uses for vegetable wastes. Starch from wheat. Paper from flax. Food and clothing: Known nutrients in milk. Unidentified nutrients. Dried foods in the home. Freezing food at home. Fabrics without mildew New practices. Some new farm machines. Air war against pests. Machine-made forests. Equipment for oil corps. Sugarcane culture. Storing grain in small bins. Shell-cooled potato storage. Pests in stored products. Fungi in forest products. Advances in rodent control. New trends in marketing. Conclusions. Index.

Note Alfred Stefferud, editor writes in his "Note to the reader": "This book was prepared primarily for farmers, but we have always had in mind other persons whose interests and work have to do with gardening, chemistry beekeeping, stock raising, conservation, horticulture, housekeeping, and such. The articles were written by various specialists in the Department of Agriculture. There are extensive sections of photographic illustrations, and many of the articles are accompanied by brief lists of references. The volume was the first after 1942 in an annual Yearbook series begun in its present form in 1936 and interrupted by World War II.

VAUGHAN, LAWRENCE MOORE, AND LOWELL S HARDIN

Farm work simplification This publication is jointly sponsored by the Work Simplification Committees of the American Farm Economic Association and the American Society of Agricultural Engineers. New York John Wiley & Sons, Inc 1949 145 p illus. 22 cm. $3 24 7467

Contents. What work simplification is. What savings can be made. The principles of effective work Basic consumers of labor Simplifying handwork. Reducing chor travel. Using equipment and work crews effectively Principles may be applied to all work. How results may be used. Research in work simplification How to organize and conduct study Four types f analysis. Case studies of individual farms. Self-analysis by farmers. Training in work simplification Short courses for in-service training. A sample classroom demonstration. High-school and college instruction. Index.

Note. A short, well-organized book which is devoted primarily to practical ways of simplifying farm work. The methods described are based upon actual experiences of persons working in the field at state agricultural colleges.

WALLER, INGRID NELSON

Where there is vision, the New Jersey Agricultural Experiment Station, 1880–1955 New Brunswick Rutgers University Press, 1955 284 p illus 23 cm. $5 00 7468

Note. This official history is not the usual formal document filled with names and dates, but is a warmly written narrative of highlights in the history of the Agricultural Experiment Station of the state of New Jersey The title notwithstanding, it deals primarily with events of the quarter-century terminating in 1955. The research described ranges all the way from studies of the best way to roast frozen meats to the discovery of streptomycin.

WHITE, JOHN

John White's the farmer's handbook. New edition Revised by N W Sellers. Norman University of Oklahoma Press, 1952 462 p. illus 24 cm. $4 95 7469

Contents Grain crops. Legumes and grasses. Fiber and oil crops. Other field crops. Sugar and sirup crops. Garden and truck crops. The orchard. Trees on the farm. Berries. Beef cattle. Dairy cattle. Hogs. Horses, mules, asses, ponies. Sheep and goats. Feeds and feeding. Soil management. Beekeeping. Fish and wildlife. Farm engineering. A little about a lot. Index.

Note: A compact, practical reference book on farming practices and farm crops in the United States of America. The amount of space devoted to specific topics varies from few lines to several pages, but in most instances the information is adequate for practical farm needs. The book is particularly useful for its tabular and other compact statements of useful information, such as descriptions of the diseases of cattle, the composition ... of different feedstuffs, the requirements of various crops for fertilizer materials, and the composition of standard fruit and vegetabl sprays. A considerable amount of miscellaneous information, suc as pointers on the safe handling of guns, is also included. Th first edition was published in 1948. In this second edition, the boo is 22 pages longer.

SOILS AND FERTILIZERS

ANDREWS, WILLIAM BAKER

The response of crops and soils to fertilizers and manures Second edition. State College Miss. Published by W B Andrews, 1954 459 p illus. 23 cm. $4.50 7470

Contents (abridged) Crop response to sources of nitrogen. The use of anhydrous ammonia and aqua ammonia as sources of nitrogen. The use of cyanamid as the source of nitrogen. The effect of fertilizers on the vailable lime, phosphate, and potash in soils. Calculating the effect of fertilizers on the lime contents of soils. The use of legumes to supply nitrogen. The effect of leguminous green manures on the lime and potash content of the soil. The effect of harvesting nitrogen phosphorus, potash, and other elements in crops on the yield of crops which follow Soil organic matter. The agricultural importance of lime. The response of crops and soils to phosphorus. The response of crops t potash and soda. Production and use of commercial nitrogenous fertilizers. The effect of placement of fertilizers on the yield and stand of crops. Returning the itrogen, phosphorus, and potash harvested in crops to the soil in manure. Fertilizing ponds for fish production. The effect of fertilizers on the yield and feeding value of hay and pasture crops. Index of authors. Index of subjects.

Note. Intended as textbook for students and as handbook for farmers, this volume brings together data formerly scattered in the literature of agronomy and discusses its significance. Specifically it accumulates representative information on the response of crops and soils to fertilizers and manures, it organizes the data so that it may be easily interpreted, and it evaluates the data in terms of normal cost of fertilizers and prices of crops. Bibliographical sources for the data are presented at the ends of the chapters.

BAUM, E L AND OTHERS, editors

Methodological procedures in the economic analysis of fertilizer use data. Edited by E. L. Baum Earl O Heady and John Blackmore.

list of soil preferences by plants for vegetables, herbs, small fruits, fruit trees, perennial and annual flowers, shrubs, vines, ground covers, bulbs and lawns.

KELLOGG, CHARLES EDWIN

The soils that support us an introduction to the study of soils and their use by men. New York. The Macmillan Company 1941 370 p. illus. 22 cm. $4.95 7484

Contents (abridged) Preface. In the first place. The building material for soils. Life and the soil. The parts of a soil. The main zones and groups. Soils of cold places and of dry places. Soils of the grasslands, deserts, forested lands (temperate) and forested lands (warm and tropical). Man uses the soil. Soils for cultivated crops. Plowing and digging. Fertilizers and lime. Control of water on the land. When do soils "wear out?" Planning the use of the soil. Soil and our future. Appendix. Soil classification and soil maps. Descriptive outline of the great soil groups. Bibliography for further reading. Glossary. Index.

Note An introduction to the study of soils and their use by man. Scientific information of the origin of soils, their formation, classification, and management is presented in nontechnical language, with emphasis on man's relation to the soil and the ecological factors in systems of agriculture and soil science.

LYON, THOMAS LYTTLETON AND OTHERS

The nature and properties of soils. A college text of edaphology. By T. Lyttleton Lyon, Harry O. Buckman, and Nyle C. Brady. Fifth edition. Revised by Harry O. Buckman and Nyle C. Brady. New York The Macmillan Company 1952 591 p. illus. (part col'd) 24 cm. $6.00. 7485

Contents: The soil in perspective. The supply and availability of plant nutrients in mineral soils. Some important physical properties of mineral soils. Soil colloids, their nature and practical significance. The organisms of the soil. The organic matter of mineral soils. Forms of soil water, their movement, and their plant relationships. Vapor losses of soil moisture and their regulation. Liquid losses of soil water and their control. Soil air and soil temperature. The origin, nature, and classification of parent materials. Soil formation, classification and survey. Organic soils—nature, properties, and utilization. The soil reaction, soil acidity and alkalinity. Lime and its soil-plant relationships. The nitrogen economy of soils. The supply and availability of phosphorus and potassium. Fertilizers and fertilizer management. Farm manure and green manure. The fertility management of mineral soils. Index.

Note: In this standard work, the nature and properties of soils are covered from a scientific standpoint, and this knowledge is related to the maintenance of good soil conditions in agriculture. The fourth edition was published in 1943. In this edition all except five of the chapters have been either drastically revised or almost wholly rewritten. Some of the material, such as the chapters on soil water, soil colloids, and soil structure, has been recast at the simpler level. The number of illustrations has been more than doubled. Also revised and brought up to date are the bibliographical references, which are given in footnotes.

MILLAR, CHARLES ERNEST AND L. M. TURK

Fundamentals of soil science Second edition. New York John Wiley & Sons, Inc 1951 510 p. illus. (part col'd) 24 cm. $5.75 7486

Contents: Materials for soil development. Processes of soil development. Physical properties of soils. Classification of soils. Chemical properties of soils. Soil reaction. Lime and its use. Soil moisture. Soil organisms—kinds, numbers, activities, and relation to soil productivity. Soil organic matter. Cover and green-manure crops. Farm manure. Nutrient requirements of plants. Fertilizers and fertilizer materials. Fertilizer practices. Conserving soil. Soil fertility maintenance and productivity rating of soil. Soils and agriculture of arid regions. Irrigation. Soil resources. Acreage of farmland in the United States. Acreage of arable land and land requirement. Land policies of the United States. Glossary. Index.

Note. An inclusive introduction from the agricultural viewpoint. At the time of writing, the authors were Professors of Soil Science at Michigan State College. The first edition was published in 1943. In this edition, special attention is given to the advances in fundamental knowledge since then. The treatment of the chemical properties of soils, and the formation and classification of soils has been revised and expanded. However, the special chapters on truck and lawn soils which are included in the first edition have been dropped.

MILLAR, CHARLES ERNEST

Soil fertility New York John Wiley & Sons, Inc., 1955 436 p. illus. 24 cm. $6.75 7487

Contents: The development of agriculture. Essentials for plant growth. The soil solution and nutrient absorption by plants. Colloids and soil productivity. Soil reaction and liming. Soil organic matter. Nitrogen and crop production. Phosphorus. Potassium. Calcium and magnesium. Sulfur. Major and minor nonessential elements. Soil deficiencies and determination of nutrient needs of crops. Activities of soil organisms that affect productivity. Green manures, crop residues, and composts. Animal manures. Contributions of commercial fertilizers to soil productivity. Rotations and farming systems. A summary of old field experiments. Index.

Note. The fundamental aspects of the fertility of agricultural soils rather than practical applications of the knowledge are emphasized in this book. Much of the text consists of condensed descriptions of experimental results, and there is extensive citation of the research literature. Implications for practice are pointed out but are not elaborated. There are 118 tables of data and, in addition, many of the 34 figures are graphical representations of experimental results. Some material is included on factors other than soil fertility in the growth of plants, for example, the effects of atmospheric temperature. The author is Professor Emeritus of Soil Science in Michigan State College.

NELSON L. B., AND J. R. ADAMS, editors

Fertilizer use and crop yields in the United States by The Fertilizer Work Group, National Soil and Fertilizer Research Committee in cooperation with The Soil and Water Conservation Research Branch and the Production Economics Research Branch, Agricultural Research Service United States Department of Agriculture Washington D. C. Government Printing Office 1954 75 p. illus. 26 cm. (United States. Department of Agriculture Agriculture handbook no. 68) $0.50. 7488

Contents: Introduction. Procedure. Evaluation. Fertilizer use by regions. Southern States, by W. E. Colwell. North Central states, by K. C. Berger. Northeastern states, by M. Drake. Western states, by J. P. Conrad. Crop response tables. Southern states. North Central states. Northeastern states. Western states.

Note: This publication is a pioneer work of research produced by the co-operative labors of soil scientists, agronomists, horticulturists, and agricultural economists located in all of the 48 states. The last 60 of the 75 pages of the handbook consist of over 100 crop response tables giving a nationwide summary of fertilizer-response data. Average fertilizer rates, and acreages, yields, and fertilizer use are shown in these tables region by region and state by state for the chief crops, including corn grain, wheat, rye, barley, oats, soybeans, peanuts, tobacco, rice, flaxseed, sugarcane, sugar beets, potatoes, vegetables, hay and pasture and cover crops.

RICHARDS L. A., editor

Diagnosis and improvement of saline and alkali soils. United States Salinity Laboratory staff Contributing authors L. E. Allison, L. Bernstein, C. A. Bower, J. W. Brown, M. Fireman, J. T. Hatcher, H. E. Hayward, G. A. Pearson, R. C. Reeve, L. A. Richards, L. V. Wilcox. Agricultural Research Service.

used as an agricultural college textbook and also as a reference manual by advanced farmers and those who advise farmers, such as county agricultural agents in the United States of America. An extensive bibliography which in this edition runs to 43 pages, is included. The fourth edition was published in 1947 The chapter on application of liquid fertilizers is new in this edition and all of the chapters carried over from the preceding edition have been revised, some of them extensively There are now 193 figures and 192 tables.

FAULKNER, EDWARD HUBERT

Plowman's folly Norman University of Oklahoma Press, 1943 161 p 20 cm. $1 00 7477

Contents. The margin of error What is soil? Soil does not erode. Traditions of the plow Research : unsponsored unconventional. Proof on field scale. Soil by machine. King weather deposed. The treachery What about soil types? Coals to Newcastle. Exit pests. Weedless farming. Mother earth can smile again.

Note The author's thesis, based on his own successful experiments, is that farming without a plow means better crops and more of them, the end of soil erosion, no more artificial fertilizers and drainage systems, less damage from drought and bad weather and easier control of weeds and insect pests.

FAULKNER, EDWARD HUBERT

A second look Norman University of Oklahoma Press 1947 193 p 21 cm. $2 00 7478

Contents (abridged) Real soil. Substandard soils. Rewards for your work. Soil "needs. Nature's soil makers. Vanishing pests. Tile treachery What we eat. Real food. The farmer's income. Future farming.

Note In his *Plowman' folly* described above, the author attacked the use of the plow in agriculture and advocated instead a system of surface cultivation which was designed to add large quantities of organic matter to the top few inches of soil. The book started a good deal of controversy and many articles were written—some of which attacked, and others of which defended, the author's statement. In this sequel the author answers some of the criticisms that were made and retracts or modifies some of his original claims, but mainly he strengthens his case by citing additional experience with his system, and by describing additional evidence in support of the importance f organic materials in agricultural soils.

GUSTAFSON, AXEL FERDINAND

Using and managing soils New York Mc Graw Hill Book Company Inc. 1948 420 p illus. 24 cm (McGraw Hill rural activities series W A Ross, consulting editor) $4 48 7479

Contents Getting acquainted with the soil. Selecting land for farming and country living. Tilling and managing crop soils. Controlling water in soils. Controlling soil erosion. Managing acid soils. Managing alkali soils. Keeping up organic matter and nitrogen in soils. Conserving and using farm manures. Growing and using green-manure corps. Selecting and using commercial fertilizers. Planning systems f crop rotation. Managing pasture soils. Managing garden, fruit, and lawn soils. Keeping soils productive over the years. Appendix. Visual aids. Index.

Note A relatively simple presentation of the subjects mentioned in the chapter titles. It is designed for vocational agricultural courses and for reading by farmers. Modern conservation and cultural practices are described in fair detail and from the practical standpoint, but there are no references to related literature.

HUNGER SIGNS IN CROPS, a symposium Prepared by Firman E Bear and others Revised edition Washington, D C. National Plant Food Institute, 1949 390 p. illus (part col d) 26 cm $4 50 7480

Contents Why do plants starve? by G. D Scarseth and N J. Volk. Plant-nutrient deficiency in tobacco, by J E. McMurtrey Jr. Deficiency symptoms of corn and small grain, by G. N Hoffer and R. A. Krantz. Plant-nutrient deficiency symptoms in the potato, by H. P Cooper and L. Donald. Plant-nutrient deficiencies in vegetable or truck crops, by J J Skinner and E. R. Purvis. Nutrient-deficiency symptoms in deciduous fruits, by O. W Davidson and W P Judkins. Plant-nutrient deficiency symptoms in legumes, by W L. Nelson and F E. Bear Symptoms of citrus malnutrition, by A. F Camp and others. Appendix. Index.

Note The symptoms and effects of deficiencies in soil nutrients that are essential to plant growth are described in this valuable work. A clearly written text is supplemented by 118 illustrations reproduced in black and white and 124 plates in color. Though written by eminent specialists in plant nutrition, the book is addressed primarily to persons with practical interests, such as agricultural extension workers, chemists in the fertilizer industry and scientific farmers. The chapter titles are the same as in the first edition, 1941 but there has been much revision, and most of the chapters are signed with the name of an additional contributor.

JENNY, HANS

Factors of soil formation, a system of quantitative pedology New York McGraw-Hill Book Company, Inc., 1941 281 p. illus. 23 cm (McGraw Hill publications in the agricultural sciences, L. J Cole, consulting editor) $5 50 7481

Contents Definitions and concepts. Methods of presentation of soil data. Time as a soil-forming factor. Parent material as soil-forming factor. Topography as a soil-forming factor. Climate as a soil-forming factor. Organisms as a soil-forming factor.

Note. In this advanced treatise on theoretical soil science, the author brings together the wealth of material available in many parts of the world and fits it into a logical frame to form quantitative system of pedology Soil characteristics and profile features are graphically correlated with climate, vegetation, parent material, topography time, and human influences. Critical discussions of the fundamental concepts of formation classification and productivity of soils are included. Although emphasis is placed on soils of the United States of America, numerous illustrations from Europe and tropical regions enlarge the scope of the book.

KELLEY, WALTER PEARSON

Alkali soils their formation properties and reclamation. New York Reinhold Publishing Corporation, 1951 176 p illus. 24 cm. $5.50. 7482

Contents. Introduction. Origin and accumulation of salts in soils. Effects of salts and soils. Soluble salts and exchangeable bases of alkali soils. Formation of sodium carbonate and evolution of alkali soils. Irrigation in relation to alkali soils. Alkali soils in relation to plant growth. Reclamation f alkali soils. Selected bibliography Index.

Note The control of alkalinity in soils is fundamentally chemical problem, and this book deals almost entirely with the chemical aspects. It is of interest to chemists doing laboratory research on the problems of alkalinity and also to soil chemists and agronomists working directly with soil reclamation or irrigated agriculture. The author is Professor Emeritus of Soil Chemistry at the University of California.

KELLOGG, CHARLES EDWIN

Our garden soils. New York The Macmillan Company 1952 232 p. illus. 22 cm. $4 00 7483

Contents Natural soils. What place? The garden needs good skeleton. Organic matter the gardener's chair Plenty of well-behaved water Soil acidity and how to change it. Balancing the plant nutrients. More about lawns and grades. Starting plants and moving them. Planning the garden. Appendices: Soil maps. Some soil preferences of selected plants. Planting suggestions and yields of selected vegetables. For further reading. Index.

Note. A handbook about garden soils for the amateur gardener, written in nontechnical language by the Soil Survey Chief of the U S. Department of Agriculture. The book will be equally useful to those who wish to adapt their soils to certain kinds of plants and to those who wish to know what kinds of plants will grow best on the soils they have. The author tells how to determine soil types, how to maintain proper amounts of organic matter and moisture, how to control soil acidity and how to balance plant nutrients. The appendices contain much useful information including

UNITED STATES DEPARTMENT OF AGRICULTURE. *Soil Survey Staff*

Soil survey manual. By Soil Survey Staff Bureau of Plant Industry Soils and Agricultural Engineering, Agricultural Research Administration, United States Department of Agriculture. Washington, D C. Government Printing Office, 1951 503 p. illus. (part col'd) 24 cm. (United States. Department of Agriculture. Handbook no. 18) $3.00. 7494

Contents: Soil and landscape. Character of soil maps and reports. Purpose of soil maps and reports. Preparation for field work. Plotting and quantity of field data. Examination and description of soils in the field. Parent materials of soils. Land form, relief, and drainage. Identification and nomenclature of soil horizons. Soil color. Soil texture, coarse fragments, stoniness and rockiness. Soil structure. Soil consistence. Soil reaction. Special formations in soil profiles. Organic matter and roots. Accelerated soil erosion. Vegetation. Land use. Units of soil classification and mapping. The soil mapping legend. *Placing* soil boundaries in the field. Collection and examination of soil samples. Estimating and mapping of salts and alkali in the soil. Yield predictions and soil management practices. Soil correlation and inspection. Soil grouping on the map. The soil survey report. Reconnaissance soil mapping. General bibliography. Special bibliography of soil surveys. Appendixes: Map preparation with the plane table. Map preparation with compass traverse. Notes on map compilation and reproduction. Sample descriptions of soil areas. Guide to map scales. Index.

Note: A guide and reference book for soil scientists engaged in soil classification and mapping. It covers methods and problems of making and interpreting detailed basic soil surveys in the United States and territories. The work is a revision and enlargement of U. S. Department of Agriculture Miscellaneous publication no. 274, Soil survey manual, by Charles E. Kellogg, issued September, 1937 and superseding it.

WAKSMAN SELMAN ABRAHAM

Soil microbiology New York John Wiley & Sons, Inc., 1952 356 p. illus. 23 cm. $6.75 7495

Contents: Historical. The microbiological population of the soil as a whole. Occurrence of specific microorganisms in the soil. Decomposition of plant and animal residues in soils and in composts. Humus—nature and formation. Decomposition of soil organic matter and liberation of carbon dioxide. Transformation of nitrogen in soils: nitrate formation and nitrate reduction. Nitrogen fixation—symbiotic—nonsymbiotic. Transformation of mineral substances in soil by microorganisms. Higher plants and soil microorganisms. Associative and antagonistic effects of soil microorganisms. Disease-producing microorganisms in the soil and their control. Stable manures, composts, and green manures. Microorganisms and soil fertility. Recent developments in soil microbiology. Index.

Note: An introductory survey in which there is more emphasis on those aspects of the subject which are important to an understanding of soil fertility. Although introductory, the treatment is not elementary. The book is addressed to such readers as upperclass undergraduate students in agricultural colleges and to graduate students and other scientists who find themselves in need of a fairly advanced survey. The chapters are supplemented by useful selected bibliographies. The book replaces two other works by the author, Principles of soil microbiology, second edition, Baltimore, 1932, and The soil and the microbe, New York, 1931, and includes some material that appeared in those works. However, [illegible] has been carried over which [illegible] still valid, and the greater part of the material in the present title is new. There are 130 figures and 17 tables.

WORTHEN EDMUND L., AND SAMUEL R. ALDRICH

Farm soils their fertilization and management. Fifth edition. New York John Wiley & Sons Inc. 1956 439 p. illus. (part col'd) 22 cm. $4.96 7496

Contents: The soil that feeds us. Soils, climate, and crops. Getting acquainted with soil. How to fit plant and nutrients. Fertilizers for higher yields. Organic matter—life of the soil. Liming to correct soil acidity. Conserve and use farm manure. Water management, erosion control, drainage, and irrigation. Muck and peat soils. Special suggestions for individual crops. Keeping soils productive—land use, rotations, fertility. Soil maps, land judging, and soil classification. How to buy a farm. Glossary. Appendix. Index.

Note: A standard work used both as a text in agricultural schools and as a book of background information and guide to practice for farmers. In a simple, basic style, it presents some fundamental information on soils and fertilizers and a wide range of information on good soil management practices. The chapter on practices applicable to specific crops is a useful feature, although the primary emphasis of the book is on knowledge and techniques that are generally applicable. The first edition was published in 1927 and the fourth edition in 1948. In the fifth edition, the book has been extensively reorganized and rewritten and is essentially a new work. Although written at the same level, there is somewhat more emphasis on principles, while specific recommendations on such points as rates of fertilizer applications have been omitted.

CONSERVATION

ALLEN DURWARD L.

Our wildlife legacy New York. Funk & Wagnalls Company 1954 422 p. illus. 22 cm. $5.00. 7497

Contents: Part I, Numbers at work. The pilgrim's progress. They grow in the soil. The one-year plan. So many and no more. The management strategy. [illegible] Room and board. Part II, [illegible] The harvest. [illegible] the land. [illegible] Part III, The reading and the outlook. [illegible] The pilgrim's goals. Reference notes. Bibliography. Index.

Note: A balanced presentation of present-day wild life problems in the United States of America, written by a biologist of the United States Fish and Wildlife Service. The book gives the background necessary for an understanding of the fields of wildlife management and land-use ecology by explaining what is happening among the populations of birds, mammals, and fish that inhabit the fields, forests, and waters of the United States. The author's viewpoint is that these populations form an integral part of present-day civilization and should be planned for, managed, and conserved. The book is well suited for the general reader interested in the outdoors and for supplementary reading in school and college courses touching upon conservation.

ARCHER, SELLERS G

Soil conservation. Norman University of Oklahoma Press, 1956 305 p. illus. 22 cm. $3.75 7498

Contents: The field of conservation. Planning for soil conservation. Crop-land treatment. Contour agriculture. Farm forestry. Nature areas, or wildlife on the farm. Special programs in conservation. Public assistance in conservation. Bibliography. Index.

Note: The volume is a popular treatment of the conservation of soil, written by a specialist of the U. S. Soil Conservation Service. The author writes from his own experience with farmers, teachers, and landowners, and it is to these especially, although also to the general public, that the book is addressed. The history and principles of proper land use are explained and the importance of planning is emphasized. The book also provides guidance to enable the farmer to take advantage of the technical and financial aid on soil conservation offered by the Federal Government and by the individual state governments. The publication is useful to farmers, teachers, landowners, and teachers and students of agriculture.

BENNETT HUGH HAMMOND

Elements of soil conservation. Second edition. New York McGraw Hill Book Company Inc., 1955 358 p. illus. 24 cm. $4.20. 7499

Contents: The erosion problem in the United States. Extent of erosion. Effects of erosion. How erosion takes place. Rates of erosion and runoff. Climate and soil erosion. Rainfall penetration. A national program of soil conservation. Farming for conservation of soil and water. Use of vegetation in soil and water conservation. Contouring. Terracing. Channels and outlets. Gully control. Control

Washington, D C. Government Printing Office, 1954 160 p illus. 27 cm (United States. Department of Agriculture. Agriculture handbook no 60) $2 00 7489

Contents Introduction. Origin and nature of saline and alkali soils. Determination of the properties of saline and alkali soils. Improvement and management of soils in arid and semiarid regions in relation to salinity and alkali. Plant response and crop selection for saline and alkali soils. Quality of irrigation water Methods for soil characterization. Methods of plant culture and plant analysis. Literature cited. Glossary Appendix. Symbols and abbreviations. Conversion formulas and factors. Chemical symbols, equivalent weights, and common names. Soil sampler and core retainer Modulus of rupture apparatus.

Note: A technical publication for agricultural soil scientists, this handbook brings together and summarizes information that should be useful, particularly to professional agricultural workers, for the diagnosis of saline and alkali soils. The handbook is intended primarily as a practical guide for those who are confronted with soil, plant, and water problems involving salinity and alkali. The first five chapters provide a basis for the evaluation and interpretation of measurements. The procedures and measuring methods given in the final chapters are those with which the U S. Salinity Laboratory Riverside, California, has had experience and are considered to have general applicability in the diagnosis and improvement of saline and alkali soils.

SHAW, BYRON T , editor

Soil physical conditions and plant growth Compiled by the Joint Committee on Soil Tilth, American Society of Agronomy and American Society of Agricultural Engineers New York Academic Press, Inc., 1952 491 p illus 24 cm. (Agronomy a series of monographs, prepared under the auspices of the American Society of Agronomy Volume II) $10 00 7490

Contents Soil as a physical system, by L. T Alexander and H. E. Middleton. Mechanical impedance and plant growth, by J F Lutz. Soil water and plant growth, by L. A. Richards and C. H. Wadleigh. Soil aeration and plant growth, by M. B. Russell. Soil temperature and plant growth, by S. J. Richards and others. Epilogue, by B. T Shaw Index.

Note This work is the result of planned effort to prepare a critical statement of the current knowledge of the relationships between plant growth and soil physical conditions including not only the mechanical conditions of soil but also water content, aeration, temperature, etc. The chapters are based on literature surveys and are accompanied by extensive bibliographies. The authors are leaders in soil research associated with colleges of agriculture and government research agencies. The book is addressed primarily to graduate scientists, agricultural engineers, and other persons with similar scientific backgrounds and interests in basic knowledge of agricultural soils.

THORNE, D W , AND H. B PETERSON

Irrigated soils their fertility and management. Second edition New York McGraw Hill Book Company Inc. 1954 392 p. illus. 24 cm $7 00 7491

Contents Problems of irrigated regions. Soil as medium for plant growth. Soil and water relations. Soil, water and plant relations. The salt problem Evaluating land for irrigation. Source and quality of irrigation water Measuring irrigation water Planning a farm for irrigation. Irrigation practice. Drainage. Reclamation and management of saline and alkali soils. Control of the physical properties of soil. Control of the biological properties of soil. Maintaining organic matter in soil. Minerals and plant growth. Fertilizer elements and fertilizer materials. Using fertilizers. Soil management for general field crops. Soil management for fruit vegetable and specialty crops. Farm planning. Glossary Appendix. Index.

Note: A guide to the principles and practices of irrigation agriculture, written by two professors of the Utah State Agricultural College. Emphasis is upon the soil management problems of irrigation rather than upon the engineering problems. Such matters as the maintenance of a suitable level of organic matter, control of alkalinity and the use of fertilizers on irrigated soils are covered rather fully The level of treatment assumes an elementary knowledge of chemistry mathematics and physics on the part of the reader The book is suitable for use by advanced college students of agriculture, farmers who are graduates of agricultural colleges, and agricultural extension workers. Fairly extensive bibliographies are included in the chapters. In comparison to the first edition published in 1949 the scope and level are unchanged, but there has been considerable reorganization and both extensive deletion and addition of material.

TISDALE, SAMUEL L , AND WERNER L. NELSON

Soil fertility and fertilizers. New York The Macmillan Company 1956 430 p. illus. 24 cm $7 75 7492

Contents. Introduction—fertilizers in a changing world. Soil fertility—past and present. Growth and the factors affecting it. Elements required in plant nutrition. The forms and behavior of soil nitrogen. Soil phosphorus. Soil potassium, calcium, magnesium, and sodium. The secondary and trace elements. Nitrogen fertilizers—their properties and manufacture. Phosphate fertilizers. The manufacture and properties of potassium fertilizers. Manufacture and properties of materials other than lime containing the secondary and trace elements. The manufacture and properties of mixed fertilizers. Farm manure. Liming. Soil fertility evaluation. Fundamentals of fertilizer application. Cropping systems and soil management. Economics of lime and fertilizer use. Attacking soil fertility problems. Index.

Note. A well-organized introduction to soil fertility which is designed primarily for the instruction of advanced undergraduate students in agricultural colleges who have completed basic course on soils. It presents briefly and in a readable style the accumulated basic knowledge on plant nutrients and their behavior in the soil, then takes up the practical applications. The latter are covered from the viewpoint of experts in agronomy and soil fertility and such advanced and technical procedures as the analysis of plant tissues in soil fertility evaluation and the application of solutions of plant nutrients to foliage are discussed, along with standard topics. The discussions are condensed but reference to research reports and other literature in which more detail is available are supplied. The first-named author is Director of the Soil Testing Division of the North Carolina Department of Agriculture and his coauthor is associated with the American Potash Institute, Inc.

UNITED STATES DEPARTMENT OF AGRICULTURE

Atlas of American agriculture. Physical basis including land relief, climate, soils, and natural vegetation of the United States. Prepared under the supervision of O E. Baker Contributions from the Weather Bureau Bureau of Chemistry and Soils, Bureau of Plant Industry, Forest Service Bureau of Agricultural Economics Washington D C. Government Printing Office, 1936 6 v in 1 illus. (part col d) 27 cm. $17 00 7493

Contents. Introduction. Land relief by F J Marschner, 1936, 6 p. Climate Temperature, sunshine, and wind, by Joseph B. Kincer 1928 34 p. Climate Frost and the growing season, by William Gardner Reed, 1918, p. 29–40. Climate Precipitation and humidity by J B. Kincer 1922 48 p. Part III: Soils of the United States, by C. F Marbut, 1935 98 p. The physical basis of agriculture Natural vegetation Grassland and desert shrub, by H L. Shantz Forest, by Raphael Zon, 1924 29 p.

Note The series of colored maps of the United States published in this volume are accompanied by text, graphs, selected references, and, in the case of the last two parts, photographic illustrations. The publication is of permanent reference value to students of agriculture, of climate, soils, and natural vegetation of the United States. The maps would also be useful to persons considering farming from the commercial standpoint or seeking homes in the United States, and who wish information as to climatic, topographic, and soil conditions in any given section of the country The various parts are also sold separately

they show that the topsoil which is so essential to the maintenance of civilization can be conserved, and they describe some of the conservation measures that have been put into practice in the United States of America and elsewhere. The book is directed to general readers, and it is of interest both from the standpoint of general history and that of soil conservation.

DAVISON, VERNE ELBERT

Bobwhites on the rise. With illustrations by Wallace Hughes New York Charles Scribner's Sons, 1949 150 p. illus. 24 cm. $3.75 7506

Contents: Bobwhite and its range. Prevailing problems. Traditions [illegible]. The bobwhites' habits. Food is their greatest need. Cover, too, is essential. Wildlife land and its management. Woodland management. The place of fire. Cropland. Pastures. Idle land. Organized shoots. Bobwhite numbers and hunting. The things to do, in quick [illegible]. Loss to encourage production. Bibliography.

Note: "Dedicated to those who hunt the bobwhite quail and to the landowners, [illegible] can grow more of them," this volume for [illegible], [illegible], and game preserve owner presents land management [illegible] the chief influence on the welfare and production of the bobwhite. It shows what practices applied to wildlife lands can lead to conditions favorable to the increase in numbers of this popular game bird. The author writes on the basis of two decades of experience with game management in various sections of the range of the bobwhite quail in the United States of America.

GABRIELSON IRA NOEL

Wildlife refuges. New York The Macmillan Company 1943 257 p. illus. 24 cm. $5.00. 7507

Contents: History of the refuge movement. Purposes, values and limitations of refuges. Types of refuges. Management of refuges. Alaska's great land [illegible]. Special refuges. The [illegible] [illegible]. Migratory refuges. General wildlife refuges. Mysterious [illegible]. Patuxent wildlife research refuge. Migratory waterfowl refuges. Refuges on lands used primarily for other purposes. Refuges administered by other Federal agencies. State refuges. Private refuges. Canadian and Mexican refuges. Bibliography. Index.

Note: This book tells the story of the national wildlife refuge system. It includes also the history and status of all types of wildlife refuges, public and private, in the *United States of America* and gives an over-all picture of conditions at the time of the writing.

GABRIELSON IRA NOEL

Wildlife management. New York The Macmillan Company 1951 274 p. illus. 22 cm. $4 75 7508

Contents: The problems of wildlife management. Research in wildlife management. Education in wildlife management. Regulation of human harvest of wild populations. Inventories. Refuges in wildlife management. Artificial propagation. Population controls. Manipulation of upland environment. Manipulation of environment for aquatic forms. Sportsmanship. Administration and wildlife management. Can public hunting and fishing be maintained? Index.

Note: A thoughtful study by the director of the United States Fish and Wildlife Service, of present-day problems in the field of wildlife management and their solutions. The author appraises present wildlife management activities, indicating the advances made over the past half-century and taking into consideration the fact that farming, engineering projects, lumbering and other activities must continue side by side with the habitat for wild populations. He emphasizes the necessity for balanced programs and particularly the need for outside checks on projects and practices to be certain they are serving the needs of wildlife. The book is illustrated with photographs and contains bibliographical references at the ends of the chapters.

GEORGE ERNEST J

Thirty-one-year results in growing shelter belts on the northern Great Plains. Washington, D C Government Printing Office 1953 57 p. illus. 23 cm. (United States. Department of Agriculture. Circular no 924) $0.25 7509

Contents: Introduction. Project area. Cooperative procedure. *Planting sites. Planting* plans and methods. Making and maintaining records. Review of literature. Plantings made and shelterbelts grown. First-year survival, by species. Growth and survival for study period, by species. Factors affecting results. Conclusions. Summary. Literature cited.

Note: The northern *Great Plains* in Montana, Wyoming, and the Dakotas is an area almost treeless in nature and has climatic conditions unfavorable to the growth of trees. This circular presents the details and summarizes the results of co-operative project of testing shelterbelt species and methods carried on by farmers in this area over the 31-year period 1916–1946. It tells what was learned about selecting shelterbelt sites, selecting tree and shrub species for use in different parts of the belt, and how the trees and shrubs should be spaced. It gives figures on growth in height and in crown spread, resistance to cold, and survival for 12 species of deciduous trees, 6 of coniferous trees, and 6 of deciduous shrubs.

GRAHAM, EDWARD HARRISON

The land and wildlife. New York Oxford University Press 1947 232 p illus. 22 cm. $4 00 7510

Contents: Wildlife heritage. Three centuries. First the land. *Meadow and swamps.* Ponds and waters. Streambanks and ditches. Field borders and roadsides. Windbreaks and hedges. Gullies, odd areas, and spoilbanks. Cropland, pasture, and woodlot. Forests and range. Wildlife prospect. The cost and the harvest. Wildlife, land, and people. Bibliography. Index.

Note: In treating the specialized problem of how to protect American wildlife in our competitive economy the author has succeeded in combining textbook, popular treatise, and practical manual. Without minimizing the value of game preserves and other governmental activities, he devotes the major part of his study to converting expansion of the land practices which must be adopted by the individual farmer. Practical kinds of man-made protection are discussed and described in detail; the results of earlier experiments are listed; and available statistics in actual dollar and cents gain to the farmer are presented. Photographs are numerous and excellent, and the bibliography extensive.

GREENE, LEE SEIFERT, AND OTHERS

Rescued earth a study of public administration of natural resources in Tennessee. By Lee S Greene Virginia Holmes Brown, *and* Evan A. Iverson. Knoxville Published for the Bureau of Public Administration by The University of Tennessee Press, 1948. 204 p. illus. 23 cm. $2.25 7511

Contents: The growth of conservation administration. Resource conservation in the present. *Administrative management. Financing* resource conservation. Administrative relationships. Physical achievements in conservation. Retrospect. Index.

Note: A treatise on federal, state, and local administration of natural resources in the state of Tennessee, including mines, minerals, forests, public lands, fish, and wildlife, and including the Tennessee Valley Authority. The legal substructure of resource management rather than the inventory of natural resources is emphasized.

GUSTAFSON A. F., AND OTHERS

Conservation in the United States. Third edition. By A. F Gustafson, C. H. Guise, W J Hamilton, jr and H. Ries. Ithaca Comstock Publishing Associates, a division of Cornell University Press 1949 534 p. illus. 24 cm. $5.00 7512

Contents: Introduction. The development of conservation. The soil. Water—its uses and its conservation. Soil depletion and erosion. Soil conservation. Forests and forest lands. The development and status of forest conservation. Forest conservation—a program for the future. Parks—national and state. The western grazing

of erosion on stream banks. Water spreading. Wildlife and soil conservation. Farm ponds for water storage. Stubble-mulch farming. Farm drainage. Farm irrigation. The place of trees and shrubs in soil and water conservation. Upstream flood control. Field trips. Bibliography. Correlated list of visual aids. Index.

Note An elementary but fairly inclusive treatment of the subject. Its chief use is as a textbook in agricultural schools, but it is useful also as a source of general information on the economic significance of soil erosion, on the activities of various United States governmental agencies concerned with soil conservation, and on the practical techniques of preventing and retarding erosion. The author is one of the most eminent authorities on soil conservation in the United States of America and was from 1935 to 1951 Chief of the Soil Conservation Service of the United States Department of Agriculture.

BENNETT, HUGH HAMMOND

Soil conservation. New York McGraw Hill Book Company Inc, 1939 993 p illus 23 cm (McGraw Hill series in geography) $12 00 7500

Contents (abridged) The problem in the United States. Erosion and civilization. Results of erosion. Processes and types of erosion. Climate and soil erosion. Relation of erosion to crop yields, sedimentation. Geology and soil erosion. A national program of soil conservation. The place of forestry in soil and water conservation. Contouring. Terracing. Gully prevention and control. Control of erosion on highways. Wildlife and soil conservation. Soil conservation and flood control. Early efforts toward erosion control. Erosion problems in foreign countries. Soil conservation surveys.

Note Describes land loss, due to soil erosion, and the progressive waste of productive earth under the wash of rain and the sweep of wind, with its broad implications of social and economic decline. The relationship between erosion, wasted rain, floods, and the increasingly serious problem of sedimentation is explored. Measures of soil defense are outlined in a program of national conservation action.

BLACK, JOHN D

Biological conservation with particular emphasis on wildlife New York McGraw Hill Book Company Inc 1954 328 p illus 24 cm. $5 50 7501

Contents Part I, Basic considerations The need for conservation Historical review Essentials of life. Soil. Water Part II, The environment Basic ecology Standing water Running water. Grasslands and wildlife. Forests. Part III, Fish and other aquatic animals Game and pan fishes. Rough fishes. Forage fishes. Reptiles and amphibians. Invertebrates. Part IV Birds Upland game birds. Ducks and geese Shore birds. Predatory birds. Songbirds and non-game birds. Part Mammals Fur bearers Game mammals. Predatory mammals. Other mammals. Part VI, Solving the problem Administration of conservation. Annotated bibliography Film guide Index.

Note Background information concerning soil, water grasslands, and forests is presented in this introductory college textbook. Against this background the life histories of the chief forms of animal life in the United States of America are sketched and some of the problems of conserving them are discussed. Wildlife is interpreted to include not only the game birds and mammals, but also the non-game forms, such as songbirds and exotic birds, rodents and whales. Special attention is given to the freshwater aquatic forms of wildlife.

BUNCE ARTHUR CYRIL

Economics of soil conservation Ames The Iowa State College Press 1942 227 p illus 23 cm $3 50 7502

Contents Definitions of terms. Efficiency capacity elasticity and intensity The relationship of rent to the elasticity of production and intensity of land use Exploitation of virgin fertility and the intensive and extensive margins. Price changes and conservation. The individual and fertility maintenance. The individual and conservation when exploitation induces erosion or soil deterioration. Society and conservation. Method of social control over land use. Problems of measurement in conservation planning. War and conservation. The formulation of public policy and action. Selected readings. Index.

Note. This book is concerned with production economics as applied to agriculture, the use of the land by the individual, and the various aspects of soil conservation as related to society The need for more accurate methods of social accounting and the necessity of developing techniques of evaluating social gains and losses are stressed and related to specific problems in soil conservation.

BUTLER, M D

Conserving soil. New York D Van Nostrand Company Inc., 1955 321 p. illus. 24 cm. $4 20 7503

Contents Unit I, Introduction: What conserving soil means. How settlement affects soil. Factors to consider Unit II, Soil resources factors. Soil. Water Organic matter Plant nutrients in the soil. Unit III Jobs that improve land Summer and fall work. Good-weather jobs. Jobs to control soil movement by wind. Streambank control. Unit IV Conservation tools: Grasses and legumes. Trees. Unit V Watersheds: Flat willow creek. Drainage to the St. Lawrence, Red, and Mississippi rivers. Jones Creek. The Muskingum watershed. The Tennessee watershed. Yazoo River watershed. Buffalo Creek. The Pequest river The Sandstone Creek watershed. The Los Angeles river watershed.

Note An elementary survey of principles and practices. It is directed primarily to young people who are studying in agricultural schools in preparation for careers in farming, and more particularly to the Future Farmers of America, an organization of such youth. In it, the case for soil conservation and recommended soil conserving practices are presented in a simple, readable style. Some information is included on engineering aspects of soil erosion control, such as the construction of terraces. The histories of several soil conservation projects are recounted in outline form in the chapters at the end of the book.

COLMAN, E A.

Vegetation and watershed management an appraisal of vegetation management in relation to water supply, flood control and soil erosion Sponsored by the Conservation Foundation New York The Ronald Press Company, 1953 412 p illus 24 cm. $7 00 7504

Content Part I, Water yield and its control: Introduction Water yield in the United States. Problems of water-yield control. Part II, Principles of water yield control The watershed and the reservoir Control by structural works. Vegetation and hydrologic processes. Control by vegetation. Vegetation and structural works. Part III, Vegetation and water yield control Vegetation regions of the United States. Introduction to research. Alternative kinds of vegetation. Croplands. Fire. Grassed lands. Tree-covered lands. The opportunities and the challenge. Bibliography Index of names. Index of subjects.

Note A well-organized synthesis and critical interpretation of research studies and observations bearing on relations among vegetation on watersheds, water yields, and soil erosion. The principal thesis is that management of watershed lands is as important part of water management as is the control of water in streams and groundwater basins. The research work reviewed includes field operations, such as study of the effects on water yield and soil erosion of cutting the vegetation but leaving it on the land, and the effects of annual burning of litter on forest areas. Areas of the subject in which further research is needed are pointed out, and the social and economic problems of effective watershed management are discussed briefly

DALE TOM, AND VERNON GILL CARTER

Topsoil and civilization Norman University of Oklahoma Press 1955 270 p. illus. 22 cm. $3 95 7505

Content An overview The Nile valley Mesopotamia. The Mediterranean region. Crete and Lebanon. Syria and Palestine Greece North Africa Italy and Sicily Western Europe. Here and there—past and present The United States. Bibliography Index.

Note A panoramic survey of the effects of soil erosion upon the fate of nations. The authors' thesis is that the use or misuse of the land has been determining factor in the survival of the peoples occupying the land They outline the rise and fall of civilization in the Nile valley the Mediterranean region, North Africa, and in every instance show that the effect of soil erosion led to the permanent decline of kingdom, city or state Finally

SEARS, PAUL BIGELOW

Deserts on the march. Revised edition. Norman University of Oklahoma Press, 1954 178 p. illus. 20 cm. $2 75 7519

Contents Introduction to second edition, by L. Bromfield. Man, maker of wilderness. The wisdom of the ages. Hungry Europe. Far Eastward, poor Lo. The overbalance. *Prairie* [illegible] to [illegible]. The great pattern. Cold figures. Only God can make a tree. Leaves of grass. Mud. Wet deserts. Dust. It must be the weather. Pests. The way through. Where is the soil? Deserts in retreat.

Note A well-written popular account of events which reduced to deserts what were once fertile areas of the United States of America. The author describes the mistakes which have been made in the treatment of forest and grass lands, and outlines the steps which can and are being taken to rectify these mistakes. The concluding chapter, which tells of the advances made in the conservation of our soil resources in the period 1935–1947 is new in this edition, and there are several other changes.

SHEPARD WARD

Food or famine the challenge of erosion. New York The Macmillan Company 1945 225 p. illus. 20 cm. $4.00. 7520

Contents Erosion and hunger. Natural and human forces in the soil crisis. The Democratic revolution in soil conservation. The importance of forest management. Public controls over land use. A land conservation work corps. Public acquisition of low-grade land. Financing land reconstruction. Our lands control our towns. Integral watershed development. Agricultural science and education. Toward world conservation. Index.

Note A carefully considered approach to soil conservation as a world-wide problem. The author's survey of the steps so far taken in the United States of America toward soil conservation, forest management, and flood control is followed by recommendations for a long-range program of co-operation between land owners and government agencies. Considerable space is given to the legal and financial problems involved in public acquisition and management of land that cannot be effectively managed by private owners. Action necessary for carrying out a program of public ownership is outlined.

SMITH GUY HAROLD editor

Conservation of natural resources. Third edition. New York John Wiley & Sons, Inc. 1950. 552 p. illus. 25 cm. $6.75 7521

Contents The development of conservation in America, by A. J. Wright. The public domain and its disposal, by S S Visher. The land and people and their utilization, by L. A. Wolfanger. Soil conservation, by W A. Rockie. Tree crops, by J. R. Smith. American irrigation, by R. E. Brown. Grassland resources, by H. C. Hanson and W C. Whitman. Reclamation of wet and overflow lands, by G J Miller. The agricultural prospect, by G. H. Smith. Our forest resources, by G. D Dillar. The practice of forest conservation, by G D Dillar. Water supply for domestic and industrial use, by J H. Garland. Water power and its conservation, by G. H. Smith. Our waterways and their utilization, by E. J Foscue. Floods and flood control, by G H Smith. Conservation in the mineral kingdom, by W M. Myers. The mineral fuels, by E. W Miller. Conservation of wildlife, by C. A. Dambach. Fisheries for the future, by H E Martin. Recreational resources, by E. C. Prophet. The conservation of man, by E Huntington. State and local planning, by L. Durand, jr. National planning and the conservation of resources, by G H. Smith. Index.

Note A new and revised edition of a textbook which covers the entire field of conservation in a manner to interest the general reader as well as the college student. Nine new authors appear among the contributors to this edition. The book retains the general arrangement and organization of the earlier editions, but most of the chapters have been rewritten, a large number of illustrations have been added, and the entire make-up modernized.

TRIPPENSEE, REUBEN EDWIN

Wildlife management. New York Mc Graw Hill Book Company Inc., 1948–53 2 v illus. 23 cm (The American forestry series Henry J Vaux consulting editor) Vol. I, $6 50 vol. II $7.50 7522

Contents (abridged) Volume I. Upland game and general principles. Farm wildlife. The farm as wildlife habitat. Cottontail rabbit. Pheasants. Bobwhite quail. Tree squirrels. Forest wildlife: Wildlife management in the forest. Black bear. Deer. Ruffed grouse. Wild turkey American woodcock. Wilderness wildlife. Management of wilderness areas. American elk. Bighorn sheep. Grizzly bear Moose. Pronghorn antelope. Rocky mountain goat. Woodland caribou. Diseases and parasites of wild animals, by K. C. O'Kane. Miscellaneous wildlife relationships: Predatory relationships. Game production and harvest. Refuges. Winter feeding. Wildlife administration. General references. Index. Volume II. Fur bearers, waterfowl, and fish Foundations of wildlife production. Fur bearers. Waterfowl. Fish. General references. Index.

Note In this book the basic knowledge of wildlife which is essential to planning and conservation problems and the technique of managing fields and forests so as to ensure the maintenance of the wildlife population are both covered in detail. The author is Professor of Wildlife Management at the University of Massachusetts, and his treatment of the subject is more scientific than is sometimes found in books on wildlife management. A considerable portion of the two-volume set is devoted to chapters on individual species. In general, each species is discussed as to geographical distribution, life history ecology and management, with particular attention given to such aspects as food habits and data on population densities. The chapters are accompanied by extensive literature lists. The work is used both as a text in college courses and as a reference book by professional workers in the field and by sportsmen and other amateurs who are interested in wildlife conservation.

UNITED STATES. NATIONAL PARK SERVICE

Fading trails, the story of endangered American wildlife prepared by a committee of the United States Department of the Interior National Park Service, Fish and Wildlife Service, Daniel B Beard, chairman, Frederick C. Lincoln and others. Illustrations by Walter A. Weber Edited by Charles Elliott. New York The Macmillan Company 1942 279 p. illus. (part col d) 22 cm. $4.00. 7523

Contents: Foreword. Primitive days. Civilization's heavy hand. American casualties. Plans and progress. The grizzly bear. The bighorn. The woodland caribou. The sea otter. Rare fur bearers. The manatee. The wolf. The [illegible] bear. The California condor. The [illegible]. The trumpeter swan. The [illegible] grouse. The Hudsonian godwit. The snail kite. The Florida crane. The roseate spoonbill. The whooping crane. The swallow-tailed kite. The white heron. The ivory-billed woodpecker. The Puerto Rican parrot. The Great Lakes whitefish. The Atlantic salmon. The lobster The green turtle. The American crocodile. Close to the shadows. Selected bibliography Index.

Note An authoritative and dramatic presentation of the story of American wildlife—its discovery, exploitation, and present status. Wildlife authorities offer reasons for the extinction of some species of wildlife found by the first explorers of the New World, and tell what species are now endangered and why. There are life stories for each animal, bird and fish listed in the contents. Thirty-six illustrations included half-tone drawings and full-color plates.

UNITED STATES SOIL CONSERVATION SERVICE

A manual on conservation of soil and water Handbook for professional agricultural workers. Washington, D C. Government Printing Office, 1954 208 p. illus. 23 cm. (United States. Department of Agriculture. Agriculture handbook no. 61) $0 60 7524

Contents What is soil erosion? Classifying land capability Preventing and controlling gullies. Woodland improvement. Terracing. Stripcropping Cover crops. Soil-depleting, soil-conserving, and soil-building crops. Pasture improvement. Rangeland improvement. Conservation irrigation. Farm drainage. Conservation measures.

Note This handbook explains the causes, processes, and consequences of soil erosion and depletion, and describes the major soil- and water-conservation measures which, when applied to the land in correct combinations, [illegible] reduce or prevent soil erosion.

lands. Fish and fisheries. Game and fur resources. Conservation of other useful wildlife. Economics of mineral resources. The metals. Coal. Petroleum and natural gas. The nonmetallic minerals. Selections for supplementary reading. Index.

Note. The importance of natural resources and the problems of conserving them in the United States of America are the principal topics of this book. Techniques of conservation are a secondary but prominent theme. The field is covered broadly with attention paid to the state of all natural resources including soil, water wildlif and minerals. The picture that is drawn of the exploitation of such resources as wildlif is a dismal one. On the other hand, legislation and other corrective measures now being applied are adequately described. The first edition was published in 1939 and the second edition in 1944 Considerable material has been carried over from the second edition to the third edition. There has been some reorganization of the book some sections have been revised and extended later statistical data have been inserted, and literature published to about the close of 1938 added to the selected bibliography

LEOPOLD, ALDO

Game management. Drawings by Allan Brooks New York Charles Scribner's Sons, 1933 481 p illus 23 cm. $6 00 7513

Contents Part I, Management theory: History of ideas in game management. Mechanism of game management. Properties of game populations—fluctuation and density—movements, tolerances, and sex and flock habits. Game range. Part II Management technique Measurement of game populations. Game census. Measurement and diagnosis of productivity Game refuges. Control of hunting. Predator control. Control of food and water. The control of cover Control of disease. Accidents. Miscellaneous techniques. Part III, Game administration. Game economics and esthetics. Game policy and administration. Game as profession. Appendix Bibliography Glossary of terms used in game management. Breeding potential tables. Index.

Note. This book is recognized as landmark in the development of the conservation of game animals by scientific management in the United States of America. Although ritten 23 years ago and not since revised, it is nevertheless still basic ork for those who are preparing t enter this field professionally governmental officials concerned with conservation, and sportsmen who ish to be enlightened on the principles of game conservation. It contains very wide range of information on the habits and ecology of wild animals and also much knowledge that is basic to other fields of conservation of natural resources.

MARTIN, ROSCOE C , editor

TVA, the first twenty years a staff report. University Alabama Published jointly by University of Alabama Press and The University of Tennessee Press, Tennessee, 1956 282 p 24 cm. $4 50 7514

Content Introduction, by H. A. Curtis. The meaning of TVA, by G. R. Clapp. Part I, Framework for operation Legal foundations, by J C. Swidler Administrative foundations, by J Oliver Personnel administration by H. L. Case. Financial administration, by J H. Clark. Part II, Physical development of the valley: The river control system, by H. Wiersema. River transportation, by E. P Ericson. The power program, by G. S. Wessel. Reservoir land management, by C. W Nash. Part III, Social and economic development of the valley Fertilizer—Munitions and agriculture, by L. G. Allbaugh. Forestry by J O Artman. Health, by O. M. Derryberry Recreation, by R. M. Howes. Economic development an appraisal, by J V Krutilla. Part IV Some broader implications f the TVA TVA and state and local government, by L. L. Durisch. TVA in its larger setting, by E. A. Ackerman. Retrospect and prospect, by R. C. Martin. Index.

Note A quasi-official work, written by staff members of the Tennessee Valley Authority It had its origin in a series of lectures first delivered at Florida State University and the chapters as published are designed for general eading. Together they afford broad view of the aims, methods, and results of an epoch-making effort toward the conservation and development of the natural resources of a large region.

OSBORN, FAIRFIELD

Our plundered planet Boston Little Brown and Company, 1948 217 p 20 cm. $3 50 7515

Contents Part I, The planet The long view The dim yet potent years. The new geologic force—man. Life begets life. The flattery of science. Part II, The plunderer Asia—then and now Mediterranean lands and Africa. Russia. Europe, England and Australia. The New World. Conclusion. Acknowledgments. Bibliography and reading list.

Note. A thoughtful but nonetheless passionate plea for drastic and large-scale action toward the conserving of the natural resources f the earth particularly its soil. The underlying thesis is that man is only one element in a complex biological scheme, but he is the element which alone has the power and apparently the will to throw the entire plan out of balance. Most of the book is devoted to accounts of the damage which already has been done and some of the larger effects of it already observed. In the last part, the author makes some well considered proposals for remedying the situation.

PARKS, WILLIAM ROBERT

Soil conservation districts in action. Ames The Iowa State College Press, 1952 242 p. illus 24 cm. $4 50 7516

Contents. Beginnings of the soil conservation district. Nature of the soil conservation district. Gearing local districts into national conservation program. Role of district supervisors. Increasing supervisor's role in district administration. Value of district in achieving soil conservation. Future of the soil conservation districts. Appendix. Index.

Note. In the United States of America the soil conservation district is a legally independent unit of local government which works in co-operation with and essentially under the technical direction of the soil conservation service of the national government. The purpose of local soil conservation districts is to organize and to carry out such soil conservation techniques as terracing, construction of waterways, and reforestation. This book presents an outline of the history of such districts and thorough survey of their experience over a period of 15 years. There is some emphasis on the legal and management aspects, but accomplishments are also described.

PARSON, RUBEN L

Conserving American resources. Englewood Cliffs, N J Prentice-Hall Inc., 1956 550 p. illus 23 cm. $8 65 7517

Contents. The idea and the book. Natural environment and resources. Water on the land. Our soils—basic wealth. Land management—approach to conservation. Water conservation. Soil depreciation. Soil conservation. Forest exploitation. Permanent forests and perpetual timber supply Spoliation and restoration of our dry grasslands. Wildlife—functions and abuses. Wildlif conservation. Resources for recreation inspiration, and instruction. Resources of or bordering seas. Conservation of minerals. Prospect and responsibility Teaching aids. Selected bibliography Index.

Note. The style and illustrations of this book make it obvious that the author has made definite effort to reach wider audience than might be reached by a more sedate presentation. The illustrations include some cartoon type drawings and many photographs of extreme examples of soil erosion. The style is lively and that. Although chapter is included on the conservation of mineral resources, the primary subject is conservation of the soil and of the forests and wildlif that live on it.

PATTERSON ROBERT L

The sage grouse in Wyoming. Sketches by Charles W Schwartz. Denver Alan Swallow 1952 341 p illus 24 cm. $5 00 7518

Contents (abridged) Part I, The sage grouse and its environment. Part II, The natural history of sage grouse populations. Part III, Sage grouse and man. Part IV Restoration and management. Part V Appendix. Literature cited. Index.

Note A comprehensive study from the conservation standpoint of the sage grouse (also commonly called sage hen) *Tetrao urophasianus*. It was sponsored by the Game and Fish Commission of Wyoming, and most of the work was done within the boundaries of that state However the results of the study are applicable to the sage grouse throughout its natural range and some of the findings are generally applicable to the conservation of other game birds. Covered are not only the expected points such as the effects of disease and predation, but also critical discussions of land reclamation programs hich brush destruction of the natural sagebrush habitat.

Agriculture

Drainage and Irrigation

Note A comprehensive and detailed treatise. It covers not only the broad aspects as named in the chapter titles, but also sub-topics such as the proportion of rainfall intercepted by the foliage of plants. The published literature has been skillfully digested, and statements in the text are keyed to the lists of references which accompany the chapters. Numerous tables of data such as "Permissible velocities in canals excavated through different soils" are included. It is written on a professional level and is directed to such readers as advanced students of agricultural engineering, practicing irrigation engineers, and other persons with technical interests in irrigation. A wide range of information on engineering structures associated with irrigation projects is provided in the second volume.

ISRAELSEN ORSON WINSO
Irrigation principles and practices. Second edition. New York John Wiley & Sons, Inc., 1950. 405 p. illus. 23 cm. (The Wiley agricultural engineering series edited by J Brown-
lee Davidson) $7.50. 7531

Contents Purposes and problems. Sources and storage of irrigation water. Measurement of irrigation water. Conveyance of irrigation water. Pumping water for irrigation. Irrigation methods. Farm irrigation implements and structures. Basic soil and water relations. The flow of water in soils. Storage of water in unsaturated soils. Time of irrigation. Saline and alkali soils. Drainage of irrigated lands. Consumptive use of water by H. F. Blaney and O. W. Israelsen. Irrigation of cereals, forage, and root crops. Irrigation of [illegible]. Irrigation in humid climates. Social and administrative aspects of irrigation, by J. H. Maughan. Appendixes. Problems and questions. References. Index.

Note The revised edition of this textbook for college and university students covers the same field as the first edition, but the work has been changed and improved in the light of 18 years of additional study and experience. Some chapters have been entirely rewritten, and others contain major changes. A new chapter is devoted to the drainage of irrigated lands. The references have been brought up to date and are now grouped at the end of the book. The publication is of value to farmers concerned with large-scale irrigation problems and to agronomists, agricultural engineers, and civil engineers, as well as to students. The volume includes a folding map of the United States of America to show mean annual precipitation, and lines and figures indicating average annual evaporation in depth in inches.

ROE, HARRY BURGESS AND QUINCY CLAUDE AYRES
Engineering for agricultural drainage. New York McGraw Hill Book Company Inc., 1954 501 p. illus. 24 cm. (McGraw Hill publications in agricultural engineering Quincy
C. Ayres consulting editor) $8 00 7532

Contents Introduction. Soils in relation to drainage. Water properties of soils. Rainfall and runoff. Drainage of irrigated lands. The soil-moisture control problem on peat and muck lands. Cost of drainage. Drainage administration and law. Appendices. Literature cited. Index.

Note In this authoritative book, drainage of agricultural lands is presented as a facet of the broader field of the management of agricultural lands. Nevertheless, the greater part of the space is devoted to the design and construction of drainage systems. Both drainage with open ditches and drainage with buried tile are covered. Modern machinery for the digging and cleaning of ditches and for the laying of tile is described. Minor topics, such as the treatment of soft spots in the bottom of trenches dug for the laying of tile, are discussed along with the larger problems. Tabulated engineering data are included on such matters as the spacing and depth of tile drains. There are 67 references in the bibliography. The book is organized for use as a text in agricultural engineering, and it is useful also to farmers and practicing engineers.

ROE, HARRY BURGESS
Moisture requirements in agriculture. Farm irrigation. New York McGraw Hill Book Company Inc., 1950 413 p. illus. 24 cm. (McGraw Hill publications in agricultural engineering Quincy C. Ayres, consulting
editor) $7 75 7533

Contents: General considerations. Sources and disposition of soil moisture. Flow and measurement of water. Interrelations of irrigation and drainage. Fundamental principles of irrigation and problems of agriculture under it. Time of irrigation. Use of water in irrigation. Irrigation methods. Irrigation structures and works for the farm. Pumping in irrigation. Irrigation of specified crops. Irrigation farming. Legislative and administrative features of irrigation. Supplemental irrigation in humid regions. Literature cited. Literature consulted but not specifically cited. Index.

Note: An introductory but inclusive work in which particular attention is given to agriculture and farm irrigation in the United States of America west of the Mississippi River. It covers both the engineering and the agricultural phases of the subject. The author explains in elementary terms the hydraulics of mechanical distribution of water within farming areas and on individual farms and correlates that explanation with modern soil science. A feature of the book is its detailed presentation of the water requirements of different types of crops as determined by recent experiments and scientific research and a corresponding presentation of the methods whereby these requirements may best be met. The book is suitable both as a textbook for colleges training engineers in agriculture and as a practical guidebook for farmers, technicians, and engineers directly concerned with problems of irrigation.

SUTTON JOHN G
Design and operation of drainage pumping plants. Washington, D C. Government Printing Office 1950. 81 p. illus. 23 cm. (United States. Department of Agriculture.
Technical bulletin. No. 1008) Gratis. 7533A

Contents (abridged) Conditions for pumping. Relation of pumping plant to general plan of drainage. Location of pumping plants. Foundation conditions—soil borings. Storage at suction bay. Determination of static lifts. Determination of runoff to be pumped. Formula for maximum plant capacity. Plant capacity for Louisiana and Texas. Plant capacity for Florida. Minimum runoff pumped. Selection of pumps. Priming equipment. Selection of power equipment. Design of building and accessory structures. Farm pumping plants. Tests of pumping plants. Operation of the pumping plant. Literature cited. Appendix.

Note: Superseding Technical bulletin no. 390, this bulletin provides recommendations for the design and operation of drainage pumping plants for all parts of the United States. Attention is given both to plants of larger size, as for drainage and levee districts, and of smaller size, useful for installation on individual farms either to drain low areas or to supplement irrigation systems. Included in the illustrations are tables and figures presenting technical data, photographs, drawings, and plans of pumping systems.

UNITED STATES. BUREAU OF RECLAMATION
Canal linings and methods of reducing costs. Washington D C. Government Printing Office, 1952 69 p. illus. 23 cm. $0 25
7534

Contents: Introduction. Types of canal linings. Concrete linings. Shotcrete linings. Asphaltic linings. Earth-material linings. Miscellaneous linings. Standardization of canal sections. Justification for canal lining. Seepage investigations. Appendix: Canal linings installed by the Bureau of Reclamation since 1946. Appendix. Summary of seepage tests.

Note Methods of reducing costs of concrete canal linings and development of new types of lining are notable technical achievements of the United States Bureau of Reclamation. This bulletin summarizes and brings up to date all available information on the lower cost canal lining program, presents the results of laboratory research, field installations, economic studies, and investigations of seepage measuring devices; describes new developments in equipment and methods of constructing lined canals, particularly those of small size; and gives current conclusions and recommendations as to the value of various types of linings and their suitability for use under various field conditions.

UNITED STATES. BUREAU OF RECLAMATION
Water measurement manual. A manual pertaining to measurement of water for irrigation projects. Washington, D C. Gov

improve fertility and increase yields. The handbook was prepared for the use of officials, technicians, and agriculturists concerned with controlling wind and water erosion and making better use of rainfall available and irrigation water not only in the United States of America, but in other countries as well.

VOGT, WILLIAM
Road to survival, with an introduction by Bernard M Baruch. Illustrations by Stuart I. Freeman New York William Sloane Associates, Inc., 1948 335 p illus. 22 cm. $4 00 7525

Contents. Introduction by Bernard M. Baruch. The earth answers back. Energy from earth to man. As mankind thinketh. Industrial man—the great illusion. That the use be fitting. The long knives. The land on edge. Man-spawn and war-spawn. Man versus geography The dying land. The lion and the lizard. History of our future. References. Reading list. Index.

Note The author' experience as conservationist and his ability as stylist are utilized to present his grim thesis with force and clarity He maintains that the civilized world is bent on self-destruction through the avenues of land depletion and overpopulation. Although major emphasis is given to the problem in the United States of America, other regions (especially Latin America) are not ignored. Salvation is suggested through drastic reforms in conservation of natural resources, and an intelligent program of birth control—the possibility of both being predicated upon education, public financing, and wise legislation. The book is non-technical in language and is addressed directly to the layman. Its dramatic tone may alienate number of scientifically trained readers who would prefer greater objectivity of presentation. There are diagrams, references to textual citations, and short annotated list of suggested further reading.

WING, LEONARD WILLIAM
Practice of wildlife conservation. New York John Wiley & Sons Inc 1951 412 p illus 24 cm. $6 00 7526

Contents Conservation and management. The biological base of management. Techniques of field investigations and practices. Farm game and its management. Farm game birds and mammals. Forests and forest wildlife management. Game birds of the forest. Forest game mammal management. Game management in the open range. Southern wildlif species. Northland wildlife. Fur-bearer management. Wildfowl management. Lake fish management and improvement. Stream improvement and management. Songbird and nongame conservation and management. Treatment of rare, threatened, and persecuted species. State powers and controls. Federal wildlife controls in the United States. Provincial and federal wildlif spheres in Canada. Administration and regulation. Index.

Note. The chapter headings indicate the detailed subject content of this book on wildlife conservation and game management. The uthor has written on the basis of experience in various parts of North America. The book is especially suited for instruction at the college level, and it will be of interest and use also to the general eader who wishes to be informed on wildlife conservation and to the professional conservationist who needs reference work covering the entire field of conservation theory and practice.

YOCOM, CHARLES FREDERICK
Waterfowl and their food plants in Washington Seattle Wash University of Washington Press 1951 272 p illus 24 cm $5 00 7527

Contents (abridged) Waterfowl and their status in Washington. Waterfowl that winter in Washington and their relative abundance. Survey of nesting and resident waterfowl in eastern Washington, summers 1947 and 1948 Brood studies. Migration. Waterfowl and their relationship to hunting. Parasites and diseases. Management. The important food and cover plants for waterfowl in Washington Typhaceae. Sparganiaceae. Potamogetonaceae. Juncaginaceae. Alismaceae. Hydrocharitaceae. Gramineae. Cyperaceae. Lemnaceae. Polygonaceae. Chenopodiaceae Ceratophyllaceae Nymphaeaceae. Ranunculaceae. Cruciferae. Haloragidaceae. Lentibulariaceae. Summary Literature cited. Subject index. Plant and cover food index.

Note. This is study based upon field observations, of the wild swans, geese and ducks of the state of Washington with special attention to their food habits and to the native aquatic food plants and their distribution within the State. The expressed objective of the publication is to lay the groundwork for future research. Systematic descriptions are given of the distribution of 42 species of waterfowl. Descriptions, drawings, keys, and distribution maps of 126 species of cover and food plants utilized by the fowl are included. Ninety literature references are cited.

DRAINAGE AND IRRIGATION

FREVERT, RICHARD K , AND OTHERS
Soil and water conservation engineering. New York John Wiley & Sons, Inc., 1955 479 p illus. 22 cm. (The Ferguson Foundation agricultural engineering series) $8 00 7528

Contents Introduction. Precipitation. Infiltration, evaporation, and transpiration. Runoff. Soil physics. Soil erosion principles. Wind erosion control. Contouring, strip cropping, and tillage. Vegetated outlets and watercourses. Terracing. Gully control. Embankments and reservoirs. Headwater flood control. Field surface drainage. Open ditches. Subsurface drainage principles. Subsurface drainage design. Installation and maintenance of subsurface drains. Pumps and pumping. Sprinkler irrigation. Land clearing. Legal aspects of soil and water conservation. Appendix. Index.

Note. Designed for agricultural engineering students, the observations of this textbook on hydrology soil, physics, erosion, etc., are applicable throughout the United States of America. The authors describe established techniques and good practices and provide calculations and design data where required. Selected chapter references cover Experiment Station bulletins, journal articles and books.

GOLZÉ, ALFRED R.
Reclamation in the United States. New York McGraw Hill Book Company Inc. 1952 451 p illus. 24 cm (Civil engineering series Frederic T Mavis, consulting editor) $8 50 7529

Contents History of reclamation in the United States. Economics of reclamation. Reclamation law Participating agencies. Investigation and authorization of proposed projects. Single-purpose projects. Multiple-purpose projects. River-basin development. Allocations of cost. Repayment by water users. Repayment by power and other users. Financing the reclamation program. Estimating the cost. Programming and accounting. Settlement. Operation and maintenance. Appendix: Irrigation statistics—17 western states 1940–1950. Index.

Note A comprehensive work covering reclamation in the sense of "the process of reclaiming the desert lands of the western United States of America, through irrigated agriculture, supported by coordinated development of hydroelectric power Its purpose is twofold, (1) to provide instruction material for college courses in engineering and economics relating to reclamation and (2) to provide reference material for research or review of the reclamation programs of the United States. Bibliographical references appear at the ends of the chapters. The author is Director of Programs and Finance in the United States Bureau of Reclamation.

HOUK, IVAN E.
Irrigation engineering New York John Wiley & Sons Inc. 1951–56 2 v illus. 24 cm. Vol. I $11 00 vol. II $14 00 7530

Contents Volume I. Agricultural and hydrological phases. Introduction Irrigation soils. Soil fertility Moisture in irrigated soils. Soil-moisture movements. Climatic factors. Runoff and streamflow Snow melting and runoff forecasting. Evaporation from water surfaces. Land evaporation and transpiration. Irrigation and water requirements. Losses and waste of irrigation water Irrigation of saline and alkali soils. Irrigation preparations and procedures. Name index. Subject index. Volume II. Projects, conduits, and structures. Irrigation projects and their feasibility Planning irrigation projects. Studies of project lands. Studies of project water Conveyance of irrigation water Canals and ditches. Linings in canals and ditches. Flumes on irrigation projects. Pipes on irrigation projects. Tunnels on irrigation projects. Conveyance and control structures. Protective and miscellaneous structures. Diversion dams and intakes. Storage dams. Spillways and outlet works at dams. Gates and valves at irrigation structures. Fish protection at irrigation structures. Name index. Subject index.

[illegible] comprehensive enough and advanced enough to make it useful as a reference book as well as [illegible] text. [illegible] are included.

BARGER, EDGAR LEE, AND OTHERS

Tractors and their power units. By E. L. Barger, W. M. Carleton, E. G. McKibben and Roy Bainer. New York, John Wiley & Sons, Inc., 1952. 4[illegible]5 p. illus. 23 cm. $7.75. 7539

Contents (abridged): History and development of the tractor. Power and power measurement. Thermodynamic principles of internal combustion engines. Tractor fuels. Carburetion and fuel injection. Ignition systems. Engine cooling and [illegible] systems. Lubricants and lubrication systems. [illegible] Governors. Engine types and development. [illegible] of the tractor [illegible] Operator's comfort, convenience, and safety. Clutches and brakes. Transmissions, differentials, and final drives. Traction and traction devices. Tractor tests and performance. Tractor maintenance and repair. Tractor power cost economics. Appendix. Index of authors. Index of subjects.

Note: A tractor written from the engineering viewpoint. It applies particularly to farm tractors but much of the material is applicable also to larger machines such as are used in construction. [illegible] The book is intended for students enrolled in agricultural engineering courses, but it contains material of value to anyone concerned with the [illegible] of tractors. Lists of references [illegible] are included.

BARRE, HENRY JOHN, AND L. L. SAMMET

Farm structures. New York, John Wiley & Sons, Inc., 1950. 650 p. illus. 23 cm. $7.75. 7540

Contents (abridged): Materials and methods of use—wood, concrete, masonry. Types of structural frames. Heat and heat transfer. [illegible] Heat flow through walls—insulation. Temperature [illegible] in walls. [illegible] Dairy buildings. Poultry housing. Principles of crop and feed preservation and storage. Storage of fruit and vegetable crops. Storage of grains. Farm house. Estimating construction costs. [illegible] Introduction to structural design. [illegible] Appendix. Index.

Note: A book on the engineering of farm structures rather than on their planning and building. It relates standard methods of structural analysis and design to the problems encountered by architects or agricultural engineers in designing farm buildings. Standard building materials are covered as well. [illegible] The book is intended primarily for students of agricultural engineering, but [illegible] also suitable also as [illegible] reference manual.

CARTER, DEANE G

Farm buildings. *Line drawings by Keith H. Hinchcliff.* Fourth edition, rewritten; previous editions by Deane G. Carter and W. A. Foster. New York, John Wiley & Sons, Inc., 1954. 291 p. illus. 23 cm. $5.50. 7541

Contents: Introduction. Resources for planning. Farm and farmstead planning. Basic planning for farm buildings. Environmental conditions in farm buildings. Building materials—wood and wood products. Concrete and masonry units. Manufactured building materials. Structure of farm buildings. The parts of structure. Calculating costs and quantities. Farm dairy housing. Beef cattle and sheep housing. Hog housing. Farm poultry housing. Storing and conditioning ear corn. Grain storage and conditioning. Feed-storage structures. Housing farm machinery and equipment. Buildings for limited or special use. The farmhouse. Appraisal of farm buildings. Farm-building management. Appendix. Index.

Note: A compact, introductory treatment of the subject, designed for use as [illegible] textbook in colleges of agriculture and of interest also to architects concerned with the design of farm buildings, and to agricultural extension workers and practical farmers. It provides [illegible] broad view of the subject with more attention given to principles of planning and design, labor-saving, and materials than to actual construction techniques. The third edition was published in 1941. In the fourth edition the emphasis has been shifted even more toward principles and basic considerations, and more attention is given to contemporary trends in planning farm housing for efficiency and labor saving. There is much new text, and most of the illustrations are new.

DAVIS, ELIZABETH GOULD, compiler

Rural electrification in the United States. A bibliography of selected references. Washington, D. C. Government Printing Office 1954. 145 p. [illegible]3 cm. (United States. Department of Agriculture. Bibliographical bulletin no. [illegible]4) $0.45. 754[illegible]

Contents: Bibliographies. Development. Annuals. Chronological. By state. Rural electric cooperatives. General. Programs. Organization and management. Legal aspects. Distribution and load. Utilization and load building. Rates and consumption. Line costs and construction. Power sources. Effects. General. Farm production. Rural [illegible] industry. Index.

Note: A selected and classified list of book and periodical references to material on the historical, sociological, economic, and philosophical aspects of rural electrification in the United States. Technical and engineering phases of rural electrification are included only when they contain material bearing on costs or other factors affecting distribution of electricity. Most of the 17[illegible] entries are for items published between 1[illegible] and 1[illegible]. Call numbers indicate location of publications in the U. S. Department of Agriculture Library.

GRAY, HAROLD E.

Farm service buildings. New York, McGraw-Hill Book Company, Inc., 1955. 455 p. illus. 23 cm. (McGraw-Hill publications in agricultural engineering. Quincy C. Ayres, consulting editor) $7.50. 7543

Contents: Part I, Development and planning of farm buildings: Introduction. Planning farm service buildings—the farmstead. Part II, Materials of construction: Wood. Wood—fasteners. Concrete and masonry products. Manufactured building materials. Part III, Structural requirements. Loads on farm service buildings. Base construction of concrete and masonry. The main frame. Floor and ceiling support. Roof framing. Covering layers. Part IV, Environmental control: Fundamentals applicable to environmental control. Design procedures for environmental control. Part [illegible] Buildings for housing livestock: Dairy cattle housing. Poultry housing. Beef, sheep, and swine housing. Part VI, Storage buildings: Machinery housing and farm shop. Grain storage. Apple storages. Potato storages. Silos. Part [illegible], Remodeling farm buildings. Appendix. Index.

Note: A substantial work on all kinds of farm buildings—except housing for people—currently used on farms in the United States of America. It covers planning, materials, structural details, and the design of buildings for specific uses. A few examples of design calculations are included. It contains some information on equipment used within buildings such as feeding cribs. It covers both traditional methods of construction and relatively new methods, such as pole construction. Special devices such as timber connectors are described, and their uses in farm structures are illustrated. It is organized for use as [illegible] textbook in agricultural college courses, and is valuable also to practical farmers, agricultural extension workers, and builders who are concerned [illegible] th the construction of farm buildings.

GULVIN, HAROLD E.

Farm engines and tractors. New York, McGraw-Hill Book Company, Inc., 1953. 397 p. illus. 24 cm. (McGraw-Hill publications in agricultural engineering. Quincy C. Ayres, consulting editor) $6.50. 7544

Contents: Engine nomenclature. Engine terminology. The four-stroke-cycle, single-cylinder and multicylinder engines. The otto two-stroke-cycle engine. The Diesel engine. A comparison of spark-ignition and compression-ignition engines. Engine fuels. Fuel systems. Lubricants. Lubrication systems. Cooling systems. Ignition systems. Power transmission and drive systems. Auxiliary power

ernment Printing Office, 1953 271 p. illus. 19 cm $1 50 7535

Contents Introduction. Weirs. Parshall flumes. Submerged orifices. Current-meter gaging stations. Special measurement methods for open channels. Water-stage recorders, stilling wells, and gages. Measurement methods for pressure conduits. Bibliography Tables. Appendix.

Note This manual has two principal purposes: " to describe the common and standard methods and devices used by the Bureau of Reclamation for irrigation water measurement in the western United States and to acquaint irrigation system operators with several methods of measurement which cannot be classed as standard, according to present practice, but which may be used where the degree of accuracy obtainable is consistent with the requirements. The manual supersedes the booklet, *Measurement of irrigation water* five editions of which were published by the Reclamation Bureau during the period from 1913 to 1940, and the tentative edition of the *Manual for measurement of irrigation water* published in 1947 It is intended primarily for the use of irrigation works operators, ditch riders, and others in the irrigated western United States of America. It is useful also to engineers concerned with the design operation, and maintenance of devices and structures used in measuring irrigation water Forty-nine separate tables for measuring water flow are grouped together at the end of the manual.

UNITED STATES DEPARTMENT OF AGRICULTURE

Water Edited by Alfred Stefferud Washington, D C Government Printing Office, 1955 751 p illus. 24 cm. (United States Department of Agriculture The yearbook of agriculture, 1955) $2 00 7536

Contents (abridged) Our need for water The story of water as the story of man, by B. Frank. Animals and fowl and water by J F Sykes. The needs and uses of water by plants, by L. Bernstein. Water and the micro-organisms, by P R. Miller and F E. Clark. Where we get our water: From ocean to sky to land to ocean, by W C. Ackermann and others. The water in the rivers and creeks, by W B. Langbein and J V B Wells. Underground sources of our water by H. E. Thomas. Is weather subject to cycles? by L R. Tannehill. Hauling down more water from the sky by C. Gardner Jr Measuring snow to forecast water supplies, by R. A. Work. Fog, mist, dew and other sources of water by F W Went. Conversion of saline waters, by D S. Jenkins and others. Water and our soil How rainfall and runoff erode soil, by B. Osborn. Retention and transmission of water in soil, by L. A. Richards. Caring for our watersheds Conservation begins on the watersheds, by C. B Brown and W T Murphy The possibilities of land treatment in flood prevention, by H. O. Mateer and others. Frozen soil and spring and winter floods, by H. C. Storey The management of public watersheds, by G. R. Salmond and A. R. Croft. Water and our forests How to get more snow water from forest lands, by B C. Goodell and H. G. Wilm. Managing forests to control soil erosion, by E. G. Dunford and S. Weitzman. Soil surveys on forest and range lands, by J L. Retzer and E. A. Colman. Water for irrigation Supplemental irrigation in humid regions, by M. M. Tharp and C. W Crickman. Surface irrigation methods, by J T Phelan and W D Criddle. Preparing land for efficient irrigation, by J G Bamesberger Pumping ground water so as to avoid overdraft, by D C. Muckel. Replenishing ground water by spreading, by D C. Muckel and L. Schiff. Irrigation water and saline and alkali soils, by M. Fireman and H. E. Hayward. Water and our crops Climate as an indication of irrigation needs, by H. F Blaney Soil moisture in relation to plant growth, by C. H. Wadleigh. How to measure the moisture in the soil, by H. R. Haise. When to irrigate and how much water to apply by S. A. Taylor and C. S. Slater Irrigation of tobacco, peanuts, and soybeans, by D M. Whitt and C. H. M. van Bavel. Irrigating cotton to insure higher yields, by B A. Krantz and others. The irrigation and culture of rice, by C. R. Adair and K. Engler Growing 100-bushel corn with irrigation, by H. F Rhoades and L. B. Nelson. The irrigation of sugar beets, by J L. Haddock. Our ranges and pastures Farming where rainfall is 8–20 inches a year by F L. Duley and J. J. Coyle. Irrigation practices for pastures and forage crops, by J R. Carreker and J H. Lillard. Development and improvement of coastal marsh ranges, by R. E. Williams. Gardens, turf and orchards Irrigating orchards in dry regions, by F J Veihmeyer and A. H. Hendrickson. Drainage of fields: Technical problems and principles of drainage, by T W Edminster and J van Schilfgaarde. Systems for draining the surface, by K. V Stewart, Jr and I. L. Saveson. Tile drainage—its installation and upkeep by K. H. Beauchamp. The use of pumps for drainage, by J G. Sutton. Drainage of peat and muck lands, by J C. Stephens. Water and our wildlife Managing watersheds to provide better fishing, by H. P Olson and others. The need of wildlife for drinking water, by L. W Swift. Wetlands and the management of waterfowl, by S. P Shaw and W F Crissey Pure water for farms and cities: The encroachment of salt water into fresh, by G. G. Parker Pollution—a growing problem of a growing nation, by C. E. Schwob. Treating waste water for cities and industries, by R. E. Fuhrman. Safe sewage disposal for rural homes, by H. L. Garver. What research is doing on problems of water in agriculture, by C. P Barnes. Appendixes. Index.

Note. This large, cyclopedic volume, written by many specialists, has as its chief purpose the explaining of the nature, behavior, use, and conservation of water in agriculture. However, many other topics related to the use of water are also discussed. The emphasis is on facts to help farmers and others reach correct decisions in matters of water utilization and control. The book contains 16 pages of photographs, as well as line illustrations and charts in the text.

UNITED STATES DEPARTMENT OF AGRICULTURE LIBRARY

Drainage of agricultural land a bibliography of selected references. Compiled by Elizabeth Gould Davis and Marie L. Gould. Washington, D C. Government Printing Office, 1956 200 p. 23 cm. (United States. Department of Agriculture. Miscellaneous publication. No. 713) $0.60 7537

Contents Sources consulted. General. Research. Soil science in relation to drainage. Hydrology in relation to drainage. Legislation and finance. Special problems in drainage Irrigated lands. Peat and muck soils. Forests. Mosquito control. Drainage practices: Surface drainage. Open-ditch drainage. Subsurface drainage. Pump drainage and wells. Dams, dikes, and levees. Equipment. Drainage needs and effects. Projects and programs: North America. Central America and the West Indies. South America. Continental Europe. British Isles. Africa. Asia. Australia, New Zealand, and the Pacific Islands. Index.

Note. A numbered bibliography running to 1,573 items, arranged by topics, of publications on the subject of agricultural drainage for the period 1935–1953. Included are books, bulletins, government publications, journal articles, and theses. The majority of the entries are in English and pertain to North American conditions, but there is also considerable representation of items in foreign languages. In cases where the listed work is in a language that does not employ the Roman alphabet, the title is given in English. A brief note as to contents is added when the title is not explicit.

FARM MACHINERY AND BUILDINGS

BAINER, ROY, AND OTHERS

Principles of farm machinery By Roy Bainer R. A Kepner and E L. Barger New York John Wiley & Sons, Inc., 1955 571 p. illus 22 cm (The Ferguson Foundation agricultural engineering series) $8 75 7538

Contents Research and development in farm machinery Field capacities and cost analysis. Materials of construction. Elements of rotary power-transmission systems. Hydraulic controls and power-take-off drives. Tillage force analysis and hitching. Soil tillage—moldboard-type tools. Disk tools. Miscellaneous tillage equipment. Earth-moving equipment. Crop planting. Row-crop cultivation, flaming, and thinning. Application of fertilizers. Hay harvesting—mowing, raking, and baling. Forage chopping and handling. Seed cleaning and sorting. Grain and seed harvesting. Corn picking and shelling. Cotton harvesting. Harvesting of root crops. Spraying and dusting. Farm transport. Appendix. Index.

Note A broad treatment of farm machinery from the engineering standpoint. Typical machines are described, but the emphasis is on their engineering. Such devices as hitches for implements drawn by tractors are analyzed in terms of force relations, and formulas are given for the calculation of such relations. Details of very specialized mechanisms, such as the topping mechanism on a sugar beet harvester are illustrated. The book is introductory to the subject

Moses Ben Duncan and Kenneth R. Frost

Farm power New York John Wiley & Sons, Inc., 1952 484 p. illus. 24 cm. $5 75 7550

Contents (abridged) Part I, Relation of farm power to agriculture. Farm power development and utilization. Part II, Internal-combustion engines. Internal-combustion engine principles. Valve and engine timing. Fuels and combustion. Ignition methods. Diesel engines. Fundamentals of electric ignition. Starting and lighting systems. Governors and governor controls. Engine cooling. Lubrication. Engine troubles. Part III, Tractors. Clutches. Transmissions. Differentials and final drives. Pulley attachments, power take-offs, and power lifts. Tractor controls. Air cleaners. Spark arresters. Traction members. Power measurement. Hitches and drawbars. Tractor selection and management. References. Index.

Note Although the title indicates a general treatment of power on farms, the book is limited to tractors and their engines. The treatment is practical, and it is also simple in the sense that no previous experience with mechanical engineering on the part of the reader has been assumed. On the other hand, such aspects as tractor transmissions are discussed in adequate detail for the farmer's purposes. The book is intended primarily for students at agricultural colleges. It can be used also as a source of general information about tractors and their elements. There is a five-page bibliography

Phipps Lloyd J., and others

Farm mechanics text and handbook. New edition. By Lloyd J Phipps H. F McColly L. L. Scranton, and the late G. C. Cook. Danville, Ill. The Interstate Printers & Publishers, 1954 757 p. illus. 24 cm. $4.25 7551

Contents Introduction. Farm shop work. Shop tools and equipment. Woodwork and farm carpentry. Painting, refinishing and glazing. Welding. Hot and cold metal work. Sheet metal work. Rope and leather work. Farm power and machinery. Farm motors. Belts and tractors. Transmission of power. Farm machinery. Farm buildings and conveniences. Farm buildings. Concrete work. Farm home conveniences and sanitation. Fencing. Rural electrification. Soil and water management. Processing farm products. Appendix. Index.

Note Both a textbook for courses in farm mechanics offered to vocational students of agriculture and a reference book for use on the farm, this volume covers a wide range of building and repair operations. It is organized in five parts whose titles are given above, and in 51 chapters. Tools and techniques are described very specifically. There are several hundred illustrations, and each of the chapters contains a list of references to books and bulletins in which additional information may be found. The volume is well indexed for reference use.

Roehl, Louis Michael

Fitting farm tools. Third edition—revised. Milwaukee The Bruce Publishing Company 1940. 120 p. illus. 23 cm. $1.00. 7552

Contents Grinding the farm tools. Small saws. Large saws. Farm-tool saws. Fitting miscellaneous tools. Index.

Note A practical and well-illustrated manual for farmers and agricultural students. Directions for the sharpening of saws, grinding of farm tools, and fitting of handles to farm tools are given.

Sampson Harry O., and others

Farm shop skills in mechanized agriculture. By Harry O Sampson, Albert S. Mowery Harold L. Kugler Chicago American Technical Society 1955 395 p. illus. 22 cm. $4 95 7553

Contents The farm shop. Woodworking with hand tools. Woodworking with power tools. Painting of farm buildings and equipment. Concrete and concrete masonry construction. Soldering and pipe fitting. Metal working on the farm. Welding practices on the farm. Fitting shop and farm tools. Using electricity on the farm. Maintaining farm machinery. Farm shop projects. Index.

Note The amazing range of woodworking and metalworking operations carried out in farm shops in the United States of America is well covered in this practical book. Included are not only common repairs on farm machinery but also simple building, motor repairing and welding. The operations are described in a simple, straightforward style. There are more than 430 illustrations of excellent quality.

Schaenzer, J P

Rural electrification. Fifth revised edition. Milwaukee The Bruce Publishing Company 1955 378 p. illus. 23 cm. $3 75 7554

Contents Electricity the silent partner. How electricity is made and distributed. Serving the farm consumer. Wiring materials. Wiring maintenance and repair. Wiring the farmstead. Wiring the home. Wiring the barn and outbuildings. Lights and lighting. Electric motors. Fractional-horsepower motor applications. Ensilage cutters. Feed grinders. Wood sawing. Hay and grain handling and drying. Farm water supply. Electric power for irrigation. Poultry-house lighting. Electric poultry equipment. Pig and lamb brooders. The milking machine and cream separator. Dairy refrigeration. Other electrical equipment for the dairy. The barn cleaner and silo unloader. The electric fence and the cow trainer. The electric hotbed. Sweet-potato curing and storage. Home and farm freezers. Laundry and cleaning equipment. Kitchen and household equipment. Appendix. Index.

Note An elementary book used primarily as a text in organized agricultural courses at the secondary school level. It is useful also for home study by farmers and others who need an elementary practical discussion of electricity and electrical appliances on the farm. In this edition, there are 316 illustrations, and many of them are reproductions of photographs of electrical equipment used on farms in the United States of America.

Smith Harris Pearson

Farm machinery and equipment. Fourth edition. New York McGraw Hill Book Company Inc., 1955 514 p. illus. 24 cm. (McGraw Hill publications in agricultural engineering Quincy C. Ayres, consulting editor) $7.50. 7555

Contents Farm machinery and its relation to agriculture. Materials of construction. Mechanics. Transmission of power and component parts of machines. Lubricants and lubrication. Hydraulic power lifts and rubber tires. Selection of farm machinery. Tillage history and requirements. Primary tillage equipment. Secondary tillage equipment. Planting equipment. Weed-control equipment. Sprayers and dusting equipment. Fertilizing equipment. Hay and forage harvesting equipment. Grain harvesting equipment. Corn harvesting equipment. Cotton harvesting equipment. Miscellaneous harvesting equipment. Crop-processing equipment. Laboratory equipment. Appendix. Index.

Note An agricultural college textbook of comprehensive scope which is used also as a manual of information for farm equipment managers and dealers, and agricultural extension workers. It describes types of machines and principles rather than the products of specific manufacturers. The third edition published in 1948 was a very extensive revision made to cover the development of new machines introduced after the close of World War II. This fourth edition is the result of another such revision. It reflects the continued rapid expansion of mechanization of agriculture in the United States of America and the constant development of new machinery. The material has been reorganized, and new chapters have been added on such topics as hydraulic power lifts, rubber tires, and weed control equipment. Many new illustrations have been added.

Turner, Arthur William and Elmer J Johnson

Machines for the farm, ranch, and plantation. New York McGraw Hill Book Company Inc., 1948. 793 p. illus. 24 cm. $6.00. 7556

Contents (abridged) Part I, Seedbed-preparation machines. Part II, Crop-planting machines. Part III, Crop-tillage machines. Part IV, Harvest and harvest-handling machines. Part V, Mechanical power and transportation machines. Part VI, General-service machines and barn and product equipment. List of visual aids. Index.

systems. Performance. Selecting tractor or engine. The tune-up. Tractor operation. Appendixes. Abbreviations used. Reference aids. Index.

Note. An elementary practical text designed for instruction in vocational agricultural schools and for reading by farmers who operate tractors. Its purpose is to convey information that will be helpful in the selection and operation of internal combustion engines and tractors for farm use. Mechanical elements of engines and transmissions, fuels, and lubricants are all discussed in a simple style. In the chapter on selection of tractors and engines, several pages are devoted to the tests of tractors, which are carried out by the Agricultural Engineering Department of the University of Nebraska, the results of which provide detailed information on the performance of specific makes and models of tractors. Maintenance of engines and tractors is covered, but repairs are not.

HENDERSON, S M , AND R. L PERRY

Agricultural process engineering New York John Wiley & Sons, Inc., 1955 402 p illus 22 cm. $8 50 7545

Contents: The engineering approach. Fluid mechanics. Fluid-flow measurements. Pumps. Fans. Size reduction. Cleaning and sorting. Materials handling. Heat transfer Air-vapor mixtures (the psychrometric chart) Drying. Refrigeration. Process condition observations, records, and controls. Cost analysis. Process analysis and plant design. Manual operation economy Appendixes. Index.

Note. The engineering aspects of such processes as the drying of grain, the grinding of feeds, the packing of meat, and the freezing of vegetables are treated in this book which is organized for use as text in agricultural engineering. The variety of devices, whose principles are explained, is unexpectedly large for instance, there are five pages on bucket elevators. Although all of the types of devices of interest are described descriptive matter is subordinated to engineering analysis. The expository text includes many worked examples. Literature references are included, and there are other useful reference features such as tables of engineering data.

JONES, FRED R.

Farm gas engines and tractors Third edition New York McGraw Hill Book Company, Inc. 1952 489 p. illus 24 cm. (McGraw Hill publications in agricultural engineering, Quincy C Ayres consulting editor) $7 00 7546

Contents (abridged) Farm power sources and adaptability History and development of the internal-combustion engine and farm tractor Types of farm tractors. Thermodynamic principles and applications—engine cycles and efficiencies. Tractor-engine types and construction. Valves and valve operation. Fuels and combustion. Fuel-supply and carburetion systems. Air cleaners. Cooling and cooling systems. Governors and governing systems. Ignition methods—fundamentals of electric ignition. Storage cells and batteries. Diesel-engine construction and operation. Electric generators—starters—lighting. Lubricants and lubrication systems. Tractor clutches. Tractor transmissions and accessories. Tractor chassis—traction devices—pneumatic tires—steering mechanisms. Tractor power rating—Nebraska power tests. Tractor hitches and field operation. Gas-engine and tractor servicing and maintenance. Economics of tractor utilization. Materials of construction—power transmission. Appendix. Index.

Note An up-to-date textbook which is useful not only in agricultural college courses, but also as practical manual for mechanics and service men, and for owners and operators of tractors. It is illustrated with 415 photographs and drawings and 42 tables, and each chapter is concluded with bibliographical references. For the third edition the author has completely revised a large part of the subject matter A chapter has been added on basic thermodynamics and its application to heat-engine design. Such new developments as the use of LP gas as tractor fuel, hydraulic transmissions, and hydraulic controls are clearly presented. The illustrations have also been revised.

JONES, MACK M

Shopwork on the farm Second edition. New York McGraw Hill Book Company Inc. 1955 626 p illus. 24 cm (McGraw Hill rural activities series W A. Ross, consulting editor) $7 00 7547

Contents: Planning and equipping a home farm shop. Sketching and drawing. Woodwork and farm carpentry Power woodworking saws. The jointer. Painting, finishing, and window glazing. Sharpening and fitting tools. Rope work. Leather work. Concrete work. Soldering and sheet-metal work. Cold-metal work. The metalworking lathe. Farm blacksmithing. Pipework and simple plumbing. Electric arc welding. Oxyacetylene welding and cutting. Repairing and reconditioning machinery Maintaining electrical equipment. Correlated list of visual aids. Index.

Note: Practical information on the use of tools, and on the materials and the various skills needed in maintaining and repairing farm buildings and machinery forms the contents of this book. Outstanding features are an abundance of clear illustrations and summarized lists of the practical points of specific operations, such as soldering and welding. It is used as text in agricultural courses in high schools and vocational schools and as a reference book on farms. The first edition was published in 1945. In this second edition, the book has been considerably *extended to include* more information on power tools, welding, and various other topics.

McCOLLY, H. F , AND J W MARTIN

Introduction to agricultural engineering. New York McGraw Hill Book Company, Inc., 1955 553 p illus. 24 cm. (McGraw Hill publications in agricultural engineering Quincy C Ayres, consulting editor) $7.50 7548

Contents (abridged) Part I, Engineering in agriculture: The development of agricultural engineering. Agricultural engineering applications. Part II, Agricultural mechanics. Agricultural mathematics. Forces and simple machines. Drawing and lettering. Agricultural construction. Part III, Farm power: History of engines and the farm tractor. Selection and management of tractor power. Part IV Farm machinery Materials used in farm machinery Machine elements and the transmission of power. Selection and management of farm machines. Part V Rural electrification Basic electricity and electrical terms. Using electricity on the farm. Part VI, Processing agricultural products. Crop processing on the farm. Food processing. Part VII, Farm structures and conveniences. Farm-buildings investment and economics. Farm-structure requirements. Materials for farm structures. Care and maintenance of farm structures. Farm and home conveniences. Part VIII, Soil- and water-conservation engineering: Farm surveying and mapping. Soil-erosion control. Land drainage. Surface methods of irrigation. The sprinkler method of irrigation. Index.

Note: A broader view of the field of agricultural engineering than is common is presented in this textbook. There are—to cite examples—discussions of heating systems for farm residences, the lighting of poultry houses, and methods of testing the drawbar pull of tractors, as well as the expected decreases of land drainage, irrigation systems, etc. The book is an introduction as stated in the title, and most of the topics are treated descriptively Literature references are given. The authors are Professors of Agricultural Engineering in Michigan State University and the University of Idaho.

MORFORD, V J

Farm arc welding a handbook for building repairing and servicing farm equipment. Cleveland James F Lincoln Arc Welding Foundation 1954 460 p. illus. 22 cm. U.S.A. $2 00 elsewhere, $2 50 7549

Contents (abridged) Part I, General welding information: Using the farm welder Planning and equipping the farm shop. Suggested procedure in welding and cutting. Part II, Repair alteration and construction of farm equipment. Repairing farm equipment. Hard-surfacing farm tools. Tillage and fertilizer handling equipment. Mowing and forage handling equipment. Harvesting and crop processing equipment. Elevators, loaders and conveyors. Farm [illegible] trailers, trucks and machinery transports. Power units. Hitches, [illegible] and hoists. Farm buildings. Household equipment. Recreational equipment. Part III, Useful information Tables. Index.

Note Both the repair and construction of metal equipment used on farms are covered in this useful, fully illustrated book. The techniques described are based on the use of electric arc welding. Many dimensional drawings are included along with large number of photographs of farm equipment built or repaired by arc welding.

Note: A history of developments in the application of chemistry to the theory and practice of agriculture from the time of Democritus to the period of Liebig. The book gives a chronological account of attempts to apply chemical principles to the interpretation of the phenomena of plant and animal life as well as of their success in agriculture. Brief accounts are included of the lives, researches, and publications of 53 different investigators, with special stress upon the influence they exerted on subsequent developments. There are numerous quoted excerpts from the original writings and 32 facsimiles of title pages and drawings from classic publications.

DUTCHER, RAYMOND ADAMS AND OTHERS

Introduction to agricultural biochemistry by R. Adams Dutcher Clifford O Jensen and Paul M. Althouse. New York John Wiley & Sons Inc., 1951 502 p. 22 cm. $7.00. 7562

Contents (abridged): Part I, General and introductory: Chemistry of living matter. Physical state of matter. Carbohydrates. The lipids. Proteins. Enzymes. Biological oxidations. Part II, The plant: Seed germination. The soil and its relation to plant growth. Fertilizers. Pesticides. Plant chemistry. Part III, The animal: Foods and feeding stuffs. Digestion of foods. The chemistry of blood, lymph, and body tissues. The vitamins. Energy metabolism. Lipid metabolism. Protein metabolism. Protein nutrition. Mineral metabolism. Mineral nutrition. Appendix. Index.

Note: This book is primarily a textbook for use in agricultural colleges, but its compact discussions of such topics as protein metabolism could be useful to students in fields other than agriculture. Previous study of inorganic and organic chemistry is assumed in the treatment. The book is designed for approximately the same audience as Dutcher and Haley's *Introduction to agricultural biochemistry* but the contents are largely new.

FREAR, DONALD ELISHA HARDING editor

Agricultural chemistry a reference text. New York. D Van Nostrand Company Inc., 1950–51 2 vols. illus. 25 cm. $12.50 per vol. Set, $22.00. 7563

Contents: Volume I, Principles of agricultural chemistry: Part I, Some fundamental materials and processes common to plants and animals: Chemistry of the carbohydrates, by M. L. Wolfrom. Chemistry of the lipids, by J. B. Brown. Chemistry of the amino acids and proteins, by C. M. Stevens. Part II, Chemical processes of fundamental importance in agriculture: Chemistry of enzymes and their action, by G. F. Somers. Biological oxidations, by V. R. Potter. Biophysical phenomena and cell chemistry, by M. W. Lisse. Part III, Plant chemistry: Plant metabolism—general features, by K. V. Paige. Absorption and utilization of inorganic substances in plants, by D. R. Hoagland and P. R. Stout. The chlorophylls and photosynthesis, by J. F. Stauffer. Plant pigments other than the chlorophylls, by F. P. Zscheile. Utilization of carbohydrates in plants, by J. F. Stauffer. Absorption and utilization of nitrogen compounds in plants, by F. B. Schroeder. Plant hormones and other regulatory factors, by J. van Overbeek. Part IV, Animal chemistry: Animal metabolism—general features, by B. H. Schneider. Digestive processes, by B. H. Schneider. Energy metabolism, by L. Voris. Carbohydrate metabolism, by M. K. Kuhl. Lipid metabolism, by J. B. Brown. Protein metabolism, by G. H. Pritham. Absorption and utilization of inorganic substances by J. K. Loosli. The vitamins, by N. B. Guerrant. Part V, Soil chemistry: The minerals of the soil, by C. D. Jeffries. Colloids of the soil, by E. A. Hauser. Soil organic matter, by J. E. Dawson. Subject index. Volume II, Practical applications of agricultural chemistry: Part I, Chemistry of major agricultural products: The chemistry of seed and cereal crops, by V. R. Moore. The chemistry of fruit and vegetable crops, by H. W. von Loesecke and E. L. Karlson. The chemistry of forage crops, by J. T. Sullivan. The chemistry of meat and meat products, by R. C. Miller. The chemistry of milk and dairy products, by A. H. Johnson. The chemistry of eggs and poultry products, by R. M. Conrad. Part II, Fertilizers and soil amendments: Nitrogenous fertilizers, by S. F. Thornton. Potassium fertilizers, by J. D. Romaine. Phosphate fertilizers, by C. A. Black and W. H. Pierre. Mixed fertilizers, by S. F. Thornton. Liming materials, by A. C. Richer. Minor element supplements, by E. R. Purvis. Part III, Nutrition of farm animals: The nutrition of dairy cattle, by S. R. Smith. The nutrition of beef cattle, by R. H. Graham. The nutrition of horses and mules, by P. B. Pearson and C. F. Winchester. The nutrition of sheep and goats, by P. B. Pearson. The nutrition of poultry, by H. W. Titus. The nutrition of swine, by R. C. Miller. The nutrition of domestic and fur-bearing animals, by A. E. Schaefer. Part IV, Pesticides: Insecticides, by D. E. H. Frear. Fungicides, by D. E. H. Frear. Herbicides, by D. E. H. Frear. Part V, Commercial agricultural chemistry: Inventions and patents relating to agricultural chemistry, by C. W. Rivise and A. D. Caesar. Chemurgic applications of agricultural products, by J. R. Clayton. Subject index.

Note: A comprehensive survey of agricultural chemistry is presented in this work. Each of the chapters discusses in some detail the chemical aspects of some phase of the growing or processing of plants and animals of agricultural importance. Concluding each chapter is a bibliographical list of references. The work is especially suitable for reference use by such readers as (1) university graduate students in the various branches of agricultural chemistry, (2) county agents, extension workers, and business men who need working knowledge of such products as feeds, fertilizers, and insecticides, and (3) research investigators in the agricultural sciences who need information on subjects bordering on their own specialties. The volumes can be used independently of one another.

MITCHELL, JOHN WILLIAM AND PAUL C. MARTH

Growth regulators for garden, field and orchard. *Chicago The University of Chicago* Press, 1947 129 p. illus. (part col d) 22 cm. $2.50 7564

Contents: Introduction. Weed control. Vegetative propagation and transplanting. Prevention of growth in stored plant material. Preventing fruit-drop. Ripening fruit. Improving fruit-set and the production of seedless fruit. Other plant responses to growth-regulating substances. Key to abbreviations of firm names used in lists of commercial preparations. Index.

Note: The present volume has been written primarily for the layman. It provides concise, nontechnical information for amateur gardeners, farmers, and homeowners. For the convenience of such readers, trade names under which the various hormones are marketed in the United States of America are listed, together with the names of the manufacturers. Among the practical uses described of these chemicals are improving the keeping qualities of stored potatoes, killing weeds without injuring the grass in lawns, rooting plant cuttings, making female holly plants produce berries, [illegible] the set of pears and keeping apples from dropping until fully ripened.

ECONOMIC BOTANY

AMES, OAKES

Economic annuals and human cultures. Cambridge Mass. Botanical Museum of Harvard University 1939 153 p. illus. 29 cm. $3.00. 7565

Contents: Preface. The significance of the angiosperm seed. Antiquity of economic plants. Economic plants through the Pleistocene. The more important economic annuals. Plants as measures of cultural time. Index. Errata.

Note: The author develops the theory that "man, evolving with his food plants, developed horticulture and agriculture in both hemispheres at a time which may well have reached far back into the Pleistocene." Tables on the descent of flowering plants and herbaceous annuals based on geologic records and economic annuals through the Pleistocene are included. The bulk of the book consists of the section devoted to the more important economic annuals. For these annuals the Linnaean identification, detailed history of economic use, and diagrammatic illustrations are given.

ARTSCHWAGER, ERNST

Anatomy and morphology of the vegetative organs of *Sorghum vulgare* Washington D C. Government Printing Office, 1948. 55 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 957) $0.20. 7566

Contents: Previous investigations. Materials and methods. Gross morphology. Morphology of the stalk. Morphology of the leaf. Anatomy of the stem. Anatomy of the leaf. Anatomy of the root. Literature cited.

Note. A comprehensive guide to the selection, operation, care, general maintenance, and storage of agricultural machinery of practical value to agricultural students, farm machinery dealers, and farmers. The mor common types of machines, such as ploughs, drills, harvesters, and tractors, are discussed in detail, but attention is also given to less-well-known machines, such as hemp cutters, tung-nut hullers, and transplanters. Numerous illustrations depicting practical operations in the use and repair of specific machines are included.

WIK, REYNOLD M

Steam power on the American farm Philadelphia University of Pennsylvania Press, 1953 288 p illus 23 cm. $5 00 7557

Contents: Steam power comes to the farm. The portable agricultural steam engine. Portable steam engines used for threshing purposes. Self-propelled agricultural steam engines. The steam-engine boom, 1885–1912 The heyday of steam power on the farm. Distribution, financing, and sale f steam traction engines. Thresher men's organizations and schools. The development of the tractor and the decline of steam power Notes. Appendix. Bibliography Index.

Note. A history of the use of steam engines in agricultural operations in the United States of America. Most of the engines discussed were self-propelled and were used to operate machines for threshing grain. However there were also other uses, such as the grinding of sugar cane and the operation of saw mills, and these are described also. E ery facet of the subject is covered, even the difficulties of manufacturers in collecting money due from the customers to whom they sold machines. The final chapter deals briefly with the introduction of farm engines and tractors powered by internal combustion engines, a development that soon brought about the end of the use of steam power on the American farm. The book is a scholarly account based on wide review of the source material. It was written under the sponsorship of the American Historical Association. The "Notes"—which are primarily citations of sources—and the bibliography together occupy 55 pages.

WOOLEY, JOHN COCHRAN

Planning farm buildings Third edition. New York McGraw Hill Book Company Inc. 1953 303 p illus. 24 cm. (McGraw Hill publications in agricultural engineering Quincy C Ayres, consulting editor) $5 50 7558

Contents New farming practices and equipment affecting buildings. Planning buildings for size and quality Estimating the cost of new and value of old buildings. Protecting the investment in farm buildings. Expressing ideas in the form of sketches and working and illustratir drawings. Planning a working environment for the dairy cow Planning buildings that will contribute to the production of high-quality milk. Planning housing for young dairy stock. Planning dairy buildings and equipment for efficiency in daily operation. Planning for the intermittent and seasonal operations that support the daily routine. Planning housing for the beef-cattle enterprise. Planning buildings for the hog enterprise. Planning housing for the farm poultry flock. Planning housing for a broiler egg- or turkey-production enterprise. Housing the sheep enterprise. Planning storage for grain and forage. Planning storage for machinery supplies, and equipment. Remodeling old buildings to meet new management practices. Planning field and yard fencing and equipment. Planning for the farm home. Planning for utilities on the farm. Combining housing for the different enterprises at the farmstead. References. Appendixes. Index.

Note A practical book on the planning of buildings for specific farm purposes. It does not deal with structural design or with construction operations. A wide variety of buildings, as indicated by the chapter titles, is covered. In addition the chapter entitled Planning for utilities on the farm covers such matters as planning for water supply sewage disposal, and fire protection. The book is organized so that it may be used as an agricultural college text or as reference book by agricultural extension workers and others who advise farmers and by practical farmers themselves. It is complementary to the author's *Repairing and constructing farm buildings.*

WOOLEY, JOHN COCHRAN

Repairing and constructing farm buildings. New York McGraw Hill Book Company, Inc., 1952 261 p illus 24 cm. (McGraw Hill rural activities series W A Ross consulting editor) $4 40 7559

Contents. Part I, Repairing farm buildings Introduction to Part I Terminology of repair and construction. Disposing of roof and yard drainage. Repairing f undations. Repairing basement walls and floors. Repairing and replacing parts of barn frames. Repairing and re-covering exterior walls. Repairing windows and repairing and replacing doors. Repairing and re-covering old roofs. Insulating old buildings. Ventilating existing buildings. Repairing silos. Repairing ceilings, walls, and floors in farm houses. Part II, Constructing farm buildings. Introduction to Part II: Constructing farm buildings. Staking out a new building. Exca ating for construction of farm buildings. Mixing and placing concrete. Constructing foundation. Erecting the framework of a farm building. Framing gable, gambrel, and hip roofs. Framing Gothic-roof buildings. Constructing yard fences and gates. Appendix General-purpose lumber. Wood fasteners. Paint for farm buildings. Wood preservatives. Definition of parts and terms used in repair and construction of farm buildings. Correlated list of visual aids. Index.

Note: A practical book for the farmer who wants to learn how to construct and repair his own buildings or for contractors and carpenters engaged in such work. It presents in nontechnical language all necessary details for the construction and repair of various types of farm buildings, including the farm home. Carefully prepared line drawings add to the usefulness of the book. While not intended as a textbook, the book should be of service in agricultural education and also for persons who need information on construction and repair for purposes of supervision of carpenters and inspection of finished work.

AGRICULTURAL CHEMISTRY

AHLGREN, GILBERT HAROLD, AND OTHERS

Principles of weed control By Gilbert H. Ahlgren, Glenn C. Klingman and Dale E. Wolf New York John Wiley & Sons, Inc., 1951 368 p illus. 22 cm. $6 00 7560

Contents. Introduction. Principles of control and eradication. Chemicals used in weed control. Physiological effects of herbicides. Field crops grown in rows. Small grains and flax. Grasslands and rights-of-way Drilled and broadcast legumes. Vegetables and fruits. Drainage and irrigation ditches, stream banks, lakes, and ponds. Turf, lawns, and ornamental plants. Brush and undesirable trees. Soil sterilants. Defoliation. Poisonous weeds. Special weed problems. Application equipment. Appendix. Author index. Subject index.

Note An indication of the impact of science upon agriculture is found in the fact that most of this book is devoted to weed control by chemicals. Calcium cyanamide, 2 4-D 2, 4, 5-T and other chemicals now in use or that ha been tried in practical weed control are described. Techniques of chemically controlling weeds in various crops or chemically controlling particular weeds are covered. There are good lists of references and more than 100 illustrations.

BROWNE, CHARLES ALBERT

A source book of agricultural chemistry Waltham The Chronica Botanica Company, 1944 290 p illus. 26 cm. (Chronica Botanica. Volume 8, no 1 1944) $6 00 7561

Contents Agricultural chemistry in ancient times. Thales. Early Greek nature philosophers. Democritus. Aristotle. Experimental science in the later Greek epoch. Practices. Cato. Pliny Secundus. Relations of medicine and pharmacy to agricultural chemistry Dioscorides. Agricultural chemistry in the alchemical and iatrochemical periods: Paracelsus. Palissy. Duchesne. Bacon. Sala. Van Helmont. Glauber. Plattes. Agricultural chemistry in the time of the early Royal Society: Boyle. Redi. Hooke. Mayow Grew Winthrop, the younger. Clayton. Woodward. Hales. Tull. Agricultural chemistry in the early phlogiston period Becher. Stahl. Boerhaave. Réaumur. Duhamel. Margraf. Home. Wallerius. Agricultural chemistry in the late phlogiston period Black. Priestley. Ingen-Housz. Senebier. Cavendish. Scheele. Agricultural chemistry during the chemical revolution. Lavoisier. Thaer and Einhof. Chaptal. Hermbstaedt. De Saussure. Davy. De Candolle. Agricultural chemistry at the beginning of the modern period Wiegmann. Schuebler. Sprengel. Boussingault. Mulder. Liebig. Indexes. Addendum.

pharmaceutical materials than to others, terms pertaining to the crude drug materials of foodstuffs, perfumes, dyestuffs, waxes, etc., are also included. Definitions are compact and are usually expressed in technical terms. Plants are entered under their scientific names, and references to these are made from vernacular names in English, German, French, Spanish and other names used [illegible] countries. A few terms totally outside economic botany are included, for example, "vara, [illegible] unit of length. An appendix that follows the dictionary proper contains several bibliographies of books and periodicals, [illegible] list of terms describing properties and therapeutic uses of drugs, and [illegible] supplement of terms collected too late to be entered in the main alphabet. The book is useful as reference aid to persons engaged in the crude drug trade and to botanists, druggists and physicians.

KLOSE, NELSON

America's crop heritage the history of foreign plant introduction by the Federal Government. Ames The Iowa State College Press, 1950. 156 p. illus. 24 cm. $5.00. 7573

Contents: Early American agriculture. Search for new crops, 1770–1840. Federal promotion of crops. Leadership of the Patent Office, 1836–62. The commissionership, 1862–98. Major importations. Later experiment. Plant introduction under Knapp and Marlatt. Recent years. Plant introduction of the twentieth century. Appendix. Index.

Note: A somewhat informal history of an important activity in the development of agriculture in the United States of America. As the subtitle indicates, it is limited to the efforts of the National Government in introducing and testing new plants. Even within this limitation, the account is rather generalized, and only the most prominent men and the most important importations are given much space. However, information is assembled in the book that had not been readily available to students of the history of agriculture and of the economic development of the United States of America.

MUENSCHER, WALTER CONRAD

Weeds. Second edition. New York The Macmillan Company 1955 560 p. illus. 22 cm. $10.00. 7574

Contents (abridged): Part I, General—weeds and their control. Definitions and importance of weeds. Weeds of special habitats. The control of weeds. Part II, Weeds arranged according to family together with key. Glossary. Ready reference data. Literature references. Index.

Note: A standard and authoritative reference volume. Primarily it is an aid in the identification of plants which, because of their competition with plants of horticultural value or other undesirable characteristics are recognized as weeds. As shown above, there are three preliminary chapters on characteristics and habits of weeds, on how weeds are disseminated, on losses caused by weeds, on weeds that are troublesome pests in special horticultural environments and on the control of weeds. The discussion of the control last mentioned [illegible] somewhat limited in value because of the emphasis in this edition of chemical methods of control. However, methods of control other than chemical ones are adequately covered. The greater part of the space is devoted to the systematic descriptions of weed plants. In these information is given on scientific names, popular names, habits and habitats, range in continental United States and Canada, morphology and control. The plants are described verbally and are also shown in drawings of excellent quality. The descriptions of species are preceded by [illegible] key to identification. The first edition was published in 1935, and described 500 species. Descriptions of 71 additional species have been added in this second edition, and there are 1 new plates. Nomenclature has been revised and literature published since the first edition was prepared has been added to the bibliography.

ROBBINS WILFRED WILLIAM AND OTHERS

Weed control, a textbook and manual, by Wilfred W Robbins Alden S. Crafts, and Richard N Raynor Second edition. New York McGraw Hill Book Company Inc., 1952 503 p illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $8.00 7575

Contents: Weeds and human affairs. Reproduction of weeds. Methods of preventing the introduction and spread of weeds. Ecology of weeds. Principles of weed control. Tillage methods of weed control. Biological control of weeds. Use of chemicals in weed control. Properties and functions of herbicides. Selective herbicides—foliage contact applications. Selective herbicides—foliage contact applications—oils. Selective translocated herbicides—foliage contact applications—hormone-like substances. Selective herbicides—root applications. Nonselective herbicides—foliage contact applications. Nonselective herbicides—translocated foliage applications. Nonselective herbicides—root applications. Evaluation of combinations of chemical applications. Equipment for applying herbicides. Special weed problems—weeds of grasslands and turf. Special weed problems—cropped areas. Special weed problems—noncropped areas. Special weeds. Appendix: Convenient measures. Required nozzle capacities to apply desired number of gallons of spray per acre. Cost per unit weight of active ingredient. Common and scientific names of weeds used in text. General references. Author index. Subject index.

Note: A critical review of currently useful methods, organized so that it may be used both as [illegible] textbook in agricultural college courses and [illegible] reference book for practical farmers and agricultural extension workers. It has undergone complete revision to cover such developments since the 1942 edition as the discovery of 2,4-dichlorophenoxyacetic acid as [illegible] selective weed killer, the introduction of trichloroacetic acid and its salts, isopropyl phenylcarbamate, and maleic hydrazide, and other types of advances, including soil studies and improved methods of marketing and applying herbicides. The new edition contains new illustrations, additions to the bibliographies, and enlarged sections on specific weeds, the weeds of different crops, and special weed problems. The book has been somewhat reduced in size, principally by the condensing of illustrative material; the figures, mostly photographic, have been reduced in number from 202 in the first edition to 151.

SCHERY ROBERT W

Plants for man. New York Prentice-Hall, Inc. 1952 564 p. illus. 26 cm. $8.75 7576

Contents: Part I, Introduction Man [illegible] dependence upon plants. Man's economic interest in plants. Part II, Products from the plant cell wall: Forests available to man. The forest belts of North America. Wood and its uses. The forests, man, and the future. Fibers. Part III, Cell exudates and extractives. Latex products. Pectins, gums, resins, oleoresins, and similar exudates. Vegetable tannins and dyes. Essential oils for perfumes, flavors, and industrial uses. Medicinals, insecticides, and herbicides—tobacco. Vegetable oils, fats, and waxes. Carbohydrate extractives—sugars and starches. Part IV Plants and plant parts used primarily for food and beverage: Food plants. The cereals. Other food seeds and forages. Vegetables—root, stem, and leaf crops. Fruits. Beverage plants. Of microorganisms and miscellanea. Index.

Note: A readable, encyclopedic work on the plants and plant products that are useful to man. It is organized so that it may be used either as an introductory text in economic botany or as [illegible] source of information for general readers. Plants of considerable economic importance are given several pages of space, while those of minor importance are discussed in [illegible] single paragraph. The book is generously illustrated and the chapters are accompanied by selected references for supplementary reading. The index is full.

TUKEY H. B editor

Plant regulators in agriculture. New York John Wiley & Sons, Inc., 1954 269 p. 24 cm. $6.50. 7577

Contents: An introduction to plant regulators, by H. B. Tukey. Principles of plant growth and how plant regulators act, by C. L. Hamner and H. B. Tukey. The chemical nature of plant regulators, by A. G. Norman. Encouragement of roots by plant regulators, by V. T. Stoutemyer. Control of flowering and fruit setting by plant regulators, by E. H. Wittwer. Parthenocarpy and fruit development in relation to plant regulators, by L. C. Luckwill. Abscission and plant regulators, by F. T. Addicott. Plant regulators to prevent preharvest fruit drop, delay foliation and blossoming, and thin blossoms and young fruits, by L. P. Batjer. Maturing and ripening as influenced by application of plant regulators, by W. S. Stewart. Inhibition of sprouting by plant regulators, by O. Smith. Plant regulators and plant breeding, by E. L. Emsweller. Plant regulators for weed control in lawn, garden, orchard, and nursery, by R. F. Carlson and J. E. Moulton. Plant regulators for weed control in field crops, by C. J. Willard. Plant regulators for weed control in the tropics, by J. van Overbeek. Plant regulators for vegetation control on non-crop land, by E. C. Barnes. Equipment and methods for the application of plant regulators, by A. E. Mitchell. Index.

Note: This book was planned as [illegible] source of background information for such persons as county agricultural agents and others who advise farmers, amateur gardeners, public highway officials, etc.

Note. In this bulletin the morphology and anatomy of the sorghum plant are treated in detail because of the value to the geneticist and the pathologist of a knowledge of the structure of the plant organs. One hundred fifty-two different varieties of sorghum grown at the experimental farm at State College, New Mexico, furnished the material for the study and the illustrations which it contains.

FIFIELD, COLBURN CHARLES, AND OTHERS

Quality characteristics of wheat varieties grown in the western United States, by C C Fifield, C E Bode, H. C Fellows, Ray Weaver, J F Hayes, Alfred Christie, B E Rothgeb and Elwood Hoffecker Washington D C Government Printing Office, 1945 35 p illus 23 cm (United States Department of Agriculture. Technical bulletin no 887) $0 10 7567

Contents Introduction. Materials. Methods. Experimental results Agreement between field and nursery and irrigated and nonirrigated tests. Comparison of varieties of winter wheat. Comparison of varieties of spring wheat. Varieties in California. Commercial utilization and experimental characterization of varieties. Interrelations of quality characteristics Protein content and yield of grain. Protein content of grain and of flour Carotenoid content of grain and of flour. Relations involving bread-loaf volume. Bread-loaf volume, cooky factor and cake grain and texture. Relations involving cooky factor Relations involving cake grain-and-texture scores. Cake grain and texture and cooky factor Literature cited.

Note. Printed in this pamphlet are data relating to the quality characteristics of 44 varieties of wheat grown in experimental plot and nursery trials in the western United States of America, mostly without but in some cases with irrigation. Included were the important commercial and a number of new varieties. The study was undertaken co-operatively by western agricultural experiment stations and the United States Department of Agriculture. The publication is useful in assisting millers, bakers, and the grain trade in utilizing the wheat produced in the western states, and in guiding agronomists in recommending varieties to be grown under similar environmental conditions.

FOGG, JOHN MILTON, JR

Weeds of lawn and garden a handbook for eastern temperate North America Illustrations by Léonie Hagerty Philadelphia University of Pennsylvania Press 1945 215 p 21 cm. $3 00 7568

Contents (abridged) Introduction Why some plants are weeds. The geographic origin of weeds. The extermination of weeds. Chemical controls. Weeds as soil indicators. Illustrations and descriptions of weeds. Glossary Bibliography Index.

Note An unpretentious but useful guide which is suitable chiefly for amateur gardeners. It contains clear drawings and descriptions of 175 weeds which are common to the region mentioned in the title. When the immature form of the weed differs considerably from the mature plant, the former is also shown in order to aid in the early eradication of the weed. Methods of control are described very briefly—chemical control, for example, being covered in somewhat less than three pages, and other methods being covered in a line or two in the description of the weed itself.

GILMAN, JOSEPH CHARLES

A manual of soil fungi. Ames The Iowa State College Press 1945 392 p illus. 23 cm. 7569

Contents. Phycomycetes. Ascomycetes. Fungi imperfecti. Mycelia sterilia.

Note. A reference book designed to assist research workers in the fields of biology and agriculture in the identification of fungi which have been isolated from the soil. Mushrooms, plant pathogens not isolated directly from the soil, and forms from leaf mold and decayed wood not fully incorporated in the soil are not included. The book is based on a survey of the literature of the subject and provides descriptions of the growing characteristics of those species which have been cultivated artificially Keys to classes, orders, species, and families facilitate the problem of identification. A 10-page bibliography and a glossary are included. A second edition was published in 1957 450 p., $7.50.

HERMANN, F J

A botanical synopsis of the cultivated clovers (*Trifolium*) Washington, D C. Government Printing Office, 1953 45 p. illus. 23 cm (United States. Department of Agriculture. Agriculture monograph no. 22) $0.25 7570

Contents: Introduction. Key to cultivated clovers. *Trifolium pratense. Trifolium campestre. Trifolium dubium. Trifolium fragiferum. Trifolium tomentosum. Trifolium resupinatum. Trifolium hybridum. Trifolium repens. Trifolium ambiguum. Trifolium alexandrinum... Trifolium glomeratum. Trifolium subterraneum. Trifolium medium. Trifolium pratense. Trifolium striatum. Trifolium arvense. Trifolium alexandrinum. Trifolium incarnatum. Trifolium hirtum. Trifolium lappaceum.*

Note. A key for the identification of species and detailed descriptions of each of 20 clovers, many of them relatively newcomers to America, which have demonstrated such desirable agronomic qualities that they are now widely grown on a commercial basis in the United States. The key and descriptions are published to help the interested layman in distinguishing the different species of clovers. For each species are given scientific name, common name, bibliographical references, scientific description, range, and a line drawing.

HILL, ALBERT FREDERICK

Economic botany a textbook of useful plants and plant products. Second edition. New York McGraw Hill Book Company Inc. 1952 560 p illus 24 cm (McGraw Hill publications in the botanical sciences, Edmund W Sinnott, consulting editor) $8 00 7571

Contents (abridged) Introduction The importance and nature of plant products. Industrial plants and plant products. Forest products, wood and cork. Rubber and other latex products. Gums and resins. Essential oils. Fatty oils and waxes. Sugars, starches, and cellulose products. Drug plants and drugs. Food plants: The major cereals. The minor cereals and small grains. Legumes and nuts. Vegetables. Fruits of temperate regions. Tropical fruits. Food adjuncts. Spices and other flavoring materials. Beverage plants and beverages. Appendix. Bibliography Index.

Note. An introductory survey of the economical products derived from plants. It is designed for use as a textbook, but it serves equally well as a reference book. In both public and private libraries it is used to supply general information on such plant products as cherry gum, gum arabic, kola nuts, and Spanish moss. Though it is limited to books published since 1936, the bibliography is a helpful feature. In this edition, there is a fair amount of new material, including discussions of 140 additional species. There are 280 figures, most of which are reproductions of photographs.

HOCKING, GEORGE MACDONALD

A dictionary of terms in pharmacognosy and other divisions of economic botany a compilation of words and expressions relating principally to natural medicinal and pharmaceutical materials and the plants and animals from which they are derived their chemical composition, applications, and uses, together with some other materials derived from the plant animal and mineral kingdoms of current economic interest Springfield Ill. Charles C Thomas, 1955 284 p. illus. 25 cm. $9 75 7572

Note A dictionary of terms from various fields of economic botany Although more of the terms pertain to medicinal and

Agriculture

WELLS, JAMES S.
Plant propagation practices. New York The Macmillan Company 1955 344 p. illus. 23 cm. $7.50. 7583

Contents: [illegible]

Note: [illegible]

PLANT DISEASES

BARNES, HELEN VIRGINIA, AND JESSIE M ALLEN, compilers
A bibliography of plant pathology in the tropics and in Latin America. Washington, D C. Government Printing Office 1951 78 p. 27 cm. (United States. Department of Agriculture. Bibliographical bulletin no. 14) $0.40. 7584

Contents: Introduction, by F. L. Wellman. A bibliography of plant pathology in the tropics and in Latin America. Index of [illegible]. Index of plant diseases.

Note: This bibliography, listing [illegible] references on phytopathology in the tropics and Latin America, covers the years 1937 through 1949. [illegible]

CATION, DONALD AND OTHERS, editors
Virus diseases and other disorders with viruslike symptoms of stone fruits in North America. Publication committee Donald Cation, chairman. Washington, D C. Government Printing Office 1951 276 p. illus. (part col d) 24 cm. (United States. Department of Agriculture. Agriculture handbook 10) $2.00. 7585

Contents. Introduction. Virus diseases of peach. Virus diseases of sweet cherry. [illegible] Virus diseases of plum and prune. [illegible] Virus diseases of almond. [illegible] Literature cited. Appendix: Common and scientific names of plants. List of authors. Host-disease index.

Note: This handbook brings together up-to-date information about more than 40 known virus diseases affecting stone fruits in the United States of America, and also covers certain [illegible] Many photographs, [illegible] in black and white and in color [illegible] The chapters, each devoted to [illegible] The following subheadings occur in typical chapters: name of the disease, name of the causal virus, history, geographic distribution, economic importance, host range, symptoms, [illegible] The publication is useful to plant pathologists, fruit growers, nurserymen, students, and regulatory officials.

CHESTER, KENNETH STARR
The nature and prevention of the cereal rusts as exemplified in the leaf rust of wheat. Waltham Chronica Botanica Company 1946. 269 p. illus. 27 cm. (Annales cryptogamici et phytopathologici. Volume IV) $5.50. 7586

Contents (abridged): Introduction: names and history of the disease. Origin, distribution, and economic importance. Effect of the rust on the host plant and its yield. [illegible] Etiology. Physiologic specialization. Factors affecting rust survival and development. [illegible] Control of [illegible] rust by [illegible] Control by rust resistance. Bibliography. Author index. General index.

Note: An inclusive survey of the knowledge of leaf rusts of wheat, viewed as an exclusive of the whole cereal rust problem. It is based on a thorough survey of the international literature, and references are incorporated in the text to the [illegible] in the bibliography. The author's underlying theme is that the cereal rusts can be kept under control and the world is saved from starvation only by the vigilance of plant breeders and specialists in plant diseases who work constantly on the problem throughout the world. [illegible] The two final chapters are devoted to the most important technique yet developed—that of breeding varieties of wheat which are resistant to rust—and it is shown that even this technique must be constantly pursued in order to keep pace with the variations in rusts which adapt them to propagation on the new resistant varieties. The bibliography is 19 pages long.

CHESTER, KENNETH STARR
Nature and prevention of plant diseases. Second edition. New York McGraw Hill Book Company Inc., 1947 525 p. illus. 23 cm. (Blakiston books on agriculture) $7.50. 7587

Contents: Significance of plant disease in agriculture. Types of plant disease. Fungi. Diseases caused by basidiomycetes: Rusts, Smuts. Fleshy fungi, mycorrhizae. Diseases caused by ascomycetes. Diseases caused by imperfect fungi. Diseases caused by phycomycetes and related fungi. Damping-off and related troubles. Diseases caused by bacteria. Diseases caused by viruses. Diseases caused by parasitic seed plants and algae; epiphytes. Diseases caused by nematodes or eelworms. Physiogenic diseases. The methods of studying plant diseases. [illegible] and parasitic disease. Etiology and epiphytology of disease. Principles and procedures in the control of plant diseases. Control of plant diseases by regulation. Control of

on the use of herbicides and other plant regulators. It presents for readers with technical education the basic scientific facts and chemistry of compounds that regulate plant growth and describes the uses of the regulators that are commercially available. It contains a number of useful tabulations on such matters as the influence of growth regulators on the maturity and ripening of fruits. Although much information is included on methods of application, the book is not intended as a manual of application techniques. References are included to literature in which these techniques and other aspects of the subject are described in more detail.

VESTAL, PAUL ANTHONY, AND RICHARD EVANS SCHULTES

The *economic* botany of the Kiowa Indians, as it relates *to the* history of the tribe With a foreword by Clyde Kluckhohn. Cambridge, Mass Botanical Museum of Harvard University, 1939 110 p illus 27 cm $5 00 7578

Contents. Introduction. Historical notes. Materials and methods. Key to the pronunciation of Kiowa words. Economic plants of the Kiowa. Enumeration of Kiowa uses. Discussion of the foregoing botanical notes. I. Distribution studies, II. Borrowing. Conclusions. Summary Bibliography Explanation of the plates. Index.

Note In this work the technique of geographical botany is used to show relationship between the known history of Kiowa Indians and the geographical distribution of the plants used as foods, medicines, and symbolic plants. The uses of plants by the one-time nomadic, hunting Kiowa are correlated before, and after settlement by the tribe on a reservation in Oklahoma. Many plants which are in use today are the same ones which were employed as far back as the actual and traditional history of the tribe can be traced. Other plants, some important, have been acquired since settlement on the reservation. The most important recent acquisition is peyote, which has brought numerous changes in ceremonies and medicines.

WILSON, CHARLES MORROW, editor

New crops for the new world. New York The Macmillan Company, 1945 295 p illus 24 cm. $4 50 7579

Contents The undeveloped field of tropical fruits, by W Popenoe. Maize in the new world, by E. Anderson. The fattening of livestock breeds, by A. O. Rhoad. Palm oils and waxes, by M. L. Bomhard. Rubber returns to Latin America, by W N Bangham. Cinchona, the "fever" tree, by W Popenoe. Drug and medicinal crops, by E. C. Higbee. Biological control of insect pests, by C. P Clausen. Forest resources of tropical America, by A. Bevan. Silks from South America, by O. E. Adamson. Bamboos in the new world, by A. Lee. Peppers for the Americas, by A. T Erwin. Flowers for the new world, by B. Y Morrison. Cane sugar production, by P Honig. Introducing American plants to the Americas, by B. Y Morrison. Launching new crops for the Americas, by V C. Dunlap.

Note A survey designed for general reading, of recent efforts to introduce new crops and to re-introduce old ones on a commercial basis, together with expert appraisals of opportunities for further investigation and development. Most of the material is concerned with the Latin American countries, especially their tropical and subtropical regions. Each chapter is written by a specialist, but the book is designed for nonspecialists and general readers. There is more emphasis on the historical and economic than on the botanical and genetic aspects of the crop plants. The activities of both commercial firms and government agencies are described.

PLANT PROPAGATION

ADRIANCE, GUY W AND FRED R. BRISON

Propagation of horticultural plants *Second* edition New York McGraw Hill Book Company, Inc., 1955 298 p illus 24 cm. (McGraw Hill publications in the agricultural sciences R A Brink consulting editor) $6 50 7580

Contents: History and development of horticulture. The structure of plants. Inflorescences, flowers, fruits, and seed. Special plant-growing equipment. Methods of propagation. Germination of seeds. Methods of seedage. Layerage. Cuttage. Bulbs and other modified structures. Graftage. Methods of grafting. Methods of budding. Propagation of important horticultural plants. Transplanting. Pruning. Index.

Note. A broad rather than a detailed presentation of basic information and practice. The primary purpose of the book is to serve as a textbook for students of agriculture. It covers the techniques of propagation that are important in the production of horticultural plants, but does not describe all of them in full detail. The chapter on methods of grafting, for example, is only 18 pages long; however it includes references to 11 experiment station publications and journal articles. The first edition was published in 1939 Much new material has been added in this edition, and there has been some reorganization of the book. There are now 158 figures and a selection of recent literature has been added to the chapter bibliographies.

HAYES, HERBERT KENDALL, AND OTHERS

Methods of plant breeding, by Herbert Kendall Hayes, Forrest Rhinehart Immer and David Clyde Smith. Second edition. New York McGraw Hill Book Company, Inc., 1955 551 p illus 24 cm (McGraw Hill publications in the agricultural sciences, R. A. Brink consulting editor) $4 00 7581

Contents. The role of plant breeding. The genetic and cytogenetic basis of plant breeding. Heterosis. Mode of reproduction in relation to breeding methods. Techniques in selfing and crossing. The pure-line method of breeding naturally self-pollinated plants. Hybridization as method of improving self-fertilized plants. The backcross method of plant breeding. Breeding for disease resistance —for insect resistance. Special techniques. Inheritance in small grains and flax. Cotton and sorghum breeding. Development of methods of corn breeding. Inheritance in maize. Forage-crop improvement. Breeding other cross-pollinated plants. Seed production. Some commonly used measures of type and variability Correlation and regression in relation to plant breeding. Chi-square tests. Field-plot technique. Experimental designs and statistical methods for simple plant-breeding experiments. Heritability Literature citations. Glossary Appendix. Index.

Note. The purpose of this textbook for college courses is "to summarize the methods of breeding that have been developed for various categories of crop plants, to explain the reasons by particular methods are chosen for certain types of crop-improvement problems, and to introduce principles of field-plot technique and of statistical analysis that are adapted for particular uses. Concise reviews are included of the mode of inheritance of important characters of certain crops, notably corn, in order to illustrate the value to the breeder of inheritance as an aid in planning the breeding program. The first edition was published in 1942. Significant among the additions in this second edition are an expanded treatment of heterosis, summary of the current status of breeding for insect resistance, review of the present viewpoint of breeding forage crops, including both legumes and grasses, and a chapter on heritability which differentiates between variability due to genetical and environmental causes. The literature citations have been revised. In addition to its use in college courses, the book is useful as a reference summary for agricultural extension workers and others.

KAINS, MAURICE GRENVILLE, AND L. M. MCQUESTEN

Propagation of plants a complete guide for professional and amateur growers of plants by seeds, layers, grafting and budding, with chapters on nursery and greenhouse management. Revised and enlarged edition. New York Orange Judd Publishing Company, Inc. 1942 639 p. illus. 23 cm. $6.00 7582

Contents. Introduction. Germination. Seed testing. Vegetative propagation. Layerage, division, separation. Classes of cuttings. Root inhibition on cuttings by growth substances. Propagating structures. Transplanting. Greenhouse fumigation. Grafting—general considerations. Methods of grafting. After-treatment of grafts.

[illegible] in the transmission of plant diseases. Insect transmission of [illegible] compared with insect transmission of plant [illegible]. [illegible] in the study of insect transmission of plant [illegible].

Note: The [illegible] brings together the accumulated facts of insect transmission of plant diseases, [illegible] the phenomena from the standpoint of three broad [illegible], [illegible] as well as the standpoint of practical plant pathology.

[illegible], Roderick

Diseases of cereals and grasses in North America (fungi, except smuts and rusts). New York. The Ronald Press Company 1950. [illegible] p. 24 cm. $5.00. 7594

Contents: The Fungi. [illegible]. Literature cited. Index of fungi. Index of hosts and grasses.

Note: A systematic, descriptive [illegible], designed to aid plant pathologists in the identification of parasitic fungi and the diseases of the grass family caused by them. [illegible] fungi associated with parasitic fungi are also included. The geographic area covered includes North America, Central America, and Hawaii. The [illegible] of each species includes [illegible] description of the [illegible] fungus and of disease symptoms in the host, [illegible] by hosts and parasites, world distribution, and [illegible]. The author [illegible] plant pathologist on the staff of the Agricultural Experiment Station of the State College of Washington.

[illegible]vens, Neil Everett, and Russell B. [illegible]vens

Disease in plants: an introduction to agricultural phytopathology. Waltham. Chronica Botanica Company. 195[illegible]. [illegible]19 p. [illegible]4 cm. $5.00. 7595

Contents: Plants, plant disease, and human welfare. The effect of disease on plants. Causes, agents of plant disease. Viruses. Bacteria and fungi. Flowering plants, nematodes, and insects. Nutritional factors, [illegible] effects, chemical injury. Factors influencing the development of pathogenic diseases. The host. The pathogen. Weather and soil. Insects. Variation and physiological specialization in plant pathogens. Introduced hosts and pathogens. Disease control. The economy of disease control. Chemical treatment. Seed treatment. Soil treatment—crop rotation. [illegible]. Breeding for disease resistance. Market pathology. [illegible] plant disease problems. General index. Index of persons.

Note: A survey in which the emphasis is on the aspects of plant disease which are of general interest and applicability. On [illegible] points, such as the [illegible], [illegible], there is little or no elaboration; on the other hand, such aspects as methods of [illegible] are adequately described. Descriptions of individual diseases are in general not included, but types of diseases are discussed. The style is condensed. For example the chapter on breeding plants for resistance to disease [illegible] only 10 pages long. However, [illegible] supplemented by [illegible] selected bibliography. Social and economic aspects are covered in general, and the economy of various [illegible] control measures [illegible] compared.

Summers, Eaton Melrose, and others

Mosaic of sugarcane in the United States, with special reference to strains of the virus by Eaton M. Summers, E. W. Brandes, and R. D. Rands. Washington, D. C. Government Printing Office. 1948. 124 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 955) $0.35. 7596

Contents: High lights of sugarcane mosaic and the current development of resistant varieties. Theories of causation. Proof of [illegible]. Need for practical control. Developing resistant, adapted varieties. Geographic origin of [illegible]. Need for continuous variety replacement. Host range of the sugarcane mosaic virus. Sugarcane species and varieties. Other grass hosts. Epidemiology [illegible]. Local spread of mosaic in the field. Vectors. Strains of the mosaic virus. Historical. Discovery of differential variation. Comparative infection experiments. Summary of different symptoms produced on certain sugarcane varieties by seven strains of the mosaic virus. Key for identification of strains and substrains of mosaic virus. Key for identification of strains and substrains of the sugarcane mosaic virus differentiated in this study. Regional and varietal survey. Recovery from mosaic. Importance of recovery. Recovery among commercial varieties in Louisiana. [illegible] of recovery. Literature cited.

Note: Mosaic, [illegible] typical virus disease of the leaf-mottling type, has been [illegible] serious problem at one time or another in practically every country that produces sugarcane. It was [illegible] major cause of the [illegible] of the Louisiana sugar industry in 1925–26. The production of mosaic-resistant varieties of sugarcane is one of the main objectives in the cooperative varietal improvement program of the Division of Sugar Plant Investigations of the United States Department of Agriculture, the American Sugar Cane League, and the Louisiana Agricultural Experiment Station. This bulletin presents data from studies of strains of the mosaic [illegible] and their effect on different varieties of sugarcane.

United States. Department of Agriculture

Plant diseases. Edited by Alfred Stefferud. Washington, D. C. Government Printing Office. 1953. 940 p. illus. (part col'd) 24 cm. (United States. Department of Agriculture. The yearbook of agriculture 1953) $2.50. 7597

Contents (abridged): Oats and causes. Three billion dollars [illegible], by J. I. Wood. Bacteria—small and mighty, by A. J. Riker and A. C. Hildebrandt. Viruses, [illegible] of mankind, by C. W. Bennett. [illegible] pathogenic fungus, by W. W. Diehl. Resistance, antidotes, and [illegible], by L. R. [illegible]. The tiny but destructive nematodes, by A. L. Taylor. The effect of weather on diseases, by P. R. Miller. The effects of soil fertility, by G. L. McNew. Using chemicals to combat root diseases, by J. R. Christie. Treating seeds to prevent diseases, by R. W. Leukel. How nurseries get virus-free fruit stock, by L. C. Cochran and others. Breeding for resistance to disease, by G. H. Coons. Grasses and legumes. The many ailments of clover, by E. W. Hanson and K. W. Kreitlow. Sources of healthier alfalfa, by F. R. Jones and O. F. Smith. Bacteria, fungi, and viruses on soybeans, by H. W. Johnson and D. W. Chamberlain. Leaf diseases of range grasses, by J. R. Hardison. Cotton. Fusarium and nematodes on cotton, by A. L. Smith. The rot that attacks 2,000 species, by L. M. Blank. Bacteria and fungi on seedlings, by D. C. Neal. The leaf spots of cotton plants, by L. M. Blank. Food and feed grains. Rust rots of wheat, oats, rye, barley, by J. J. Christensen. The rusts of [illegible], oats, barley, rye, by J. H. Martin and R. C. Salmon. The smuts of wheat, oats, barley, by C. S. Holton and V. F. Tapke. Some smuts and rusts of corn, by A. J. Ullstrup. Several diseases of corn, by A. J. Ullstrup. Vegetable crops. Fungi diseases of beans and lima beans, by W. J. Zaumeyer and H. R. Thomas. Root rots, [illegible] and blights of peas, by W. T. Schroeder. The important diseases of lettuce, by G. W. Bohn. Hazards to onions in many areas, by J. C. Walker. Control of diseases of potatoes, by R. A. [illegible]. The fungi that cause rot in sweetpotatoes, by H. T. Cook. Preventing the diseases of peppers, by C. Wilson. Ways to combat disorders of tomatoes, by S. P. Doolittle. Developing healthier vegetables, by H. R. Thomas and W. J. Zaumeyer. Sugar crops. Rots, blights, and leaf diseases of sorgo, by E. V. Abbott and P. E. Beauchamp. Sugarcane and its diseases, by E. V. Abbott. The tobacco plant. The pests that make [illegible] tobacco, by E. E. Clayton. Soil fumigation to control root [illegible], by J. C. Gaines and T. W. Graham. Some ornamentals. Infectious diseases of carnations, by K. F. Baker and R. W. Jones. Virus diseases of the chrysanthemum, by P. Brierley. Some fungi that attack gladioli, by R. O. Magie. Nematodes in bulbs, by W. D. Courtney. Viruses on roses, by P. Brierley. Aster yellows, by L. O. Kunkel. Fruits and nuts. Scab of apples, by G. W. Keitt. Rust diseases of apple, by D. H. Palmiter. Powdery mildew on apples, by E. [illegible]. Scab on the pear, by J. R. Kienholz. Brown rot of peach, by J. C. Dunegan. Bacterial spot of peach, by J. C. Dunegan. Anthracnose of peach, by D. H. Petersen. Cherry leaf spot, by F. H. Lewis. Virus diseases of stone fruits, by L. C. Cochran and E. L. Reeves. Bacterial canker of stone fruits, by E. E. Wilson. Virus diseases of citrus fruits, by J. M. Wallace and T. J. Grant. Virus diseases of strawberries, by W. B. Bewert. Red stele disease of strawberry, by W. F. Jeffers and D. H. Scott. Virus diseases of the strawberry, by H. E. Thomas and C. P. Marcus, jr. The cultivated highbush blueberry, by A. C. Goheen. Filberts and Persian walnuts, by P. W. Miller. After harvest. Market diseases caused by fungi, by G. B. Ramsey and M. A. Smith. Postharvest [illegible] diseases, by L. P. McColloch. Injuries from chilling and freezing, by L. P. McColloch. Mechanical and chemical injuries, by G. B. Ramsey. Using chemicals to stop

plant disease by inducing resistance. Control of plant diseases by cultural methods. Glossary Index.

Note. This work, prepared by member of the faculty of Oklahoma Agricultural and Mechanical College, covers the causes and prevention of plant diseases in manner suited to formal courses in colleges of agriculture. It discusses the leading diseases f the major crops grown extensively in the United States of America, emphasizes the recognition of these diseases, and indicates in detail the latest generally approved methods f their control. In this edition there has been some rearrangement of the chapters, and new material has been added on several diseases, including apple bitter rot, sugar cane red rot, cabbage yellows, early blight of potato and tomato, aster yellows, sugar beet curly top phloem necrosis of elm, and golden nematode f potato. The reference lists of pertinent literature have been revised to include recent material.

DICKSON, JAMES G

Diseases of field crops. Second edition. New York McGraw Hill Book Company, Inc., 1956 517 p illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $8 50 7588

Contents Section I, General introduction Introduction. Physiological anatomy of plant groups in elation to disease. Section II, Diseases of cereals and grasses: Barley diseases. Corn diseases. Millet diseases. Oat diseases. Rice diseases. Rye diseases. Sorghum, Sudan grass, and Johnson grass diseases. Sugarcane diseases. Wheat diseases. Grass diseases. Section III, Diseases of legumes Alfalfa and sweetclover diseases. Clover diseases. Soybean diseases. Peanut diseases. Diseases of other legume crops. Section IV Diseases of fiber and other field crops. Cotton diseases. Flax diseases. Tobacco diseases. Appendixes. Index.

Note A concise work used primarily as textbook in agricultural college courses, but useful also as a reference book. It describes the causative organisms, symptoms and effects, etiology and control f diseases to which each crop is subject. It was based on a wide survey of the international literature, and extensive bibliographies are noteworthy feature. The first edition was published in 1947 Although the organization of this second edition is essentially the same, most chapters appear to have been revised, some f them very extensively in order to incorporate the results published in the literature published as recently as 1954 is now cited, and nomenclature has been revised to conform to the recommendations of the International Botanical Congress. The author is Professor of Plant Pathology in the University of Wisconsin.

DODGE, BERNARD OGILVIE, AND HAROLD W RICKETT

Diseases and pests of ornamental plants. Revised edition New York The Ronald Press Company 1948 638 p illus 24 cm $6 00 7589

Contents (abridged) Part I, Diseases and pests in general Plant diseases—plant diseases classified by symptoms—plant diseases classified by cause. Bacteria and fungi. Insects and other animal pests. Control—culture—exclusion—resistance—poisons—heat—biologic control. Part II, Diseases and pests of particular hosts. Index.

Note A relatively comprehensive manual. It is intended for use by home gardeners but is full enough to be useful in professional horticulture. The greater portion of the book is devoted to a listing of plant diseases and pests of specific hosts, given under the botanical names f the plant hosts, which are arranged in alphabetical order The symptoms and appearance of the disease are indicated along with the scientific and common name of the disease and methods of control are outlined. The first four chapters present general outline of the causes, effects, and means of preventing or overcoming plant diseases.

ELLIOTT, CHARLOTTE

Manual of bacterial plant pathogens. Second, entirely revised edition. Waltham Chronica Botanica Company 1951 186 p illus. 27 cm (Annales cryptogamici et phytopathologici Volume x. Edited by Frans Verdoorn) $6 50 7590

Contents: Part I, Bacterial plant pathogens. Part II, Bacterial species reported in the literature from plants but not recognized as valid plant pathogens. Index of genera and species of plant hosts. Index of genera and species of bacteria.

Note: A reference book of primary interest to professional workers in plant pathology It is organized as a dictionary with the scientific names of the pathogens arranged alphabetically The entry for each organism contains variety of information, including literature references, concise physical descriptions, behavior in various standard tests, optimum temperature, thermal death point, hosts, geographical distribution, and methods of control. The nomenclature adopted in this edition is that of the 1948 edition of Bergey's *Manual f determinative bacteriology.*

HORSFALL, JAMES G

Principles of fungicidal action. Waltham Chronica Botanica Company, 1956 280 p. illus 24 cm. $6.50 7591

Contents Introduction. Fungicidal action and its measurement. Protection and its measurement. Mobilization of a residual protectant. Permeation into the fungus. Disruption of cellular organization. Effect on mitosis, morphology and growth. Effect on metabolism of the fungus. Chelation of needed metals. The action of metals. The action of sulfur. Action of organic sulfur compounds. Action of quinones and other ketones. The action of heterocyclic compounds. Chemotherapy of plant diseases. Bibliography General index. Author index.

Note. A substantial amount of information on compounds that kill fungi or inhibit their growth has accumulated in the literature. This knowledge is organized and presented critically in this book. The mechanisms or principles of the toxic and inhibitory effects are the primary subjects. In the second and third chapters, the author describes criteria and techniques for the measurement of fungicidal action, and in the chapters that follow he discusses, first, the mechanisms of toxicity and inhibition, such as disruption of cellular organization, and interference with normal metabolism, and, second, the fungicidal actions of specific compounds. The book is based on the literature and references are made from all important statements in the text to the source articles, including the author's own papers in journals. The bibliography is 18 pages long.

LANGFORD, MICHAEL HENDRIX

South American leaf blight of hevea rubbertrees. Washington, D C. Government Printing Office, 1945 31 p. illus. 23 cm. (United States Department of Agriculture. Technical bulletin no 882) $0 10 7592

Contents Co-operative rubber-planting program. Blight-control program. Factors influencing disease development and severity. Host susceptibility The fungus. Environmental conditions. A system of classifying hevea clones for resistance. Other leaf spots associated with leaf blight. Resistance tests at Turrialba, Costa Rica. Clones recommended for field plantings. Literature cited.

Note. The fungus *Dothidella ulei* is the cause of South American leaf blight, the chief obstacle to the successful cultivation in tropical America of the Para rubbertree, the world's foremost source of rubber This bulletin reports the results of a four-year study of the influence of environmental factors on leaf blight severity and gives the results of a series of resistance tests on hevea plant material assembled from many parts of the world.

LEACH, JULIAN GILBERT

Insect transmission of plant diseases. New York McGraw Hill Book Company Inc., 1940 615 p illus 23 cm (McGraw Hill publications in the agricultural sciences L. J Cole, consulting editor) $9 00 7593

Contents Introduction. The interrelationships of plants and insects. Symbiosis between insects and microorganisms and its significance in plant pathology The relation of insects to the spread and development of plant diseases. Plant diseases caused by toxicogenic insects. Insects and bacterial diseases. Insects and phytofungus diseases. Insects and virus diseases. Insects and other small animals pathogenic Protozoa. Mites, nematodes, and physiology of as vectors of plant diseases. The anatomy and insect ... The anatomy plants in relation to infection and insect ... in the transmission of plant and physiology of insects in relation to the ... in relation to insect diseases. The inocula of plant pathogens ... habits of insects in ... transmission. The feeding and breeding

Locusts, insects, and weeds controlled by chemicals for the control of soil pests, by E. M. Crailey and F. E. Whitehead. Pesticides in banana culture, by N. C. Thornton. Use of pesticides for stored products in tropical countries, by R. R. Lester. Pest control in citrus production in tropical and subtropical America, by A. F. Camp. Weed control in Puerto Rico, by T. J. Muzik. Arthropod parasites in the African and new world tropics, by H. H. Schwardt and others.

Note. Papers on the chemical control of diseases, weeds, and insects encountered in the growing of the principal food crops in the tropics and semi-tropics have been collected in this volume. Six of the papers are accompanied by bibliographical references. The book is of interest to at least four groups: manufacturers of agricultural chemicals, tropical agricultural research workers, extension agents concerned with introducing improved methods of tropical agriculture, and persons engaged in raising crops (except [illegible]) in the tropics.

BAILEY STANLEY FULLER, AND LESLIE M SMITH

Handbook of agricultural pest control. New York Industry Publications, Inc. 1951 191 p. illus. 20 cm. $3.25 7604

Contents: Introduction. Section I, Chemicals: The agricultural chemicals. Physical and chemical properties. Compatibility. Containers. Fumigants and fumigation. Toxicology and residues. Spray oil specifications. Section II, Machines: Spraying machines. Rates of delivery of spray machines. Rates of application for sprays. Dusts and dusting. Aircraft. Section III, Miscellaneous. Reference tables and formulas for mosquito control operators. Hazards. Miscellaneous topics. Tables and formulas. Terms and symbols.

Note: A brief, well-constructed handbook containing up-to-date factual information useful in the use of insecticides, fungicides, weed killers, etc. There are 101 tables in addition to formulas scattered through the text. Trade names of chemicals are included occasionally to clarify the materials designated by chemical names. It is a useful book for progressive farmers, agricultural pest control operators, agricultural advisers, and research workers wanting precise guidance in handling, measuring, and applying agricultural chemicals. The authors are Professors of Entomology in the University of California.

BAKER, WILLIAM ALFONSO AND OTHERS

Biological *control of the European corn* borer in the United States, by W. A. Baker, W. G. Bradley and C. A. Clark. Washington, D. C. Government Printing Office, 1949 185 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 983) Gratis. 7605

Contents (abridged): Introduction. Synonymy. Importations. Domestic collections. Laboratory breeding. Storage of parasite material. Emergence. Parasite shipments. Colonization and sampling methods: Liberation procedure. Field sampling procedure. Imported parasites in [illegible] status in the United States. Imported parasites not known to be established in the United States. Parasite complexes at test points in the United States. Utilization of native hosts by imported parasites. Field status of native parasites. Insect predators. Birds. Diseases. Summary. Literature cited.

Note: A scientific report by three entomologists of the Bureau of Entomology and Plant Quarantine on the results of investigations conducted between 1919 and 1940 to reduce the losses of field and sweet corn due to the European corn borer. These investigations largely took the form of experiments with the introduction of various dipterous and hymenopterous insects parasitic upon the corn borer. Methods of introduction and colonization of the parasites are described, and figures are tabulated to show results by years, localities, and species of parasites released. Individual attention is given 21 different imported species of insect parasites. Briefer treatment is given to 29 native insect parasites and to insect predators, birds, and diseases as biological methods of control.

BROWN ANTHONY WILLIAM

Insect control by chemicals. New York John Wiley & Sons, Inc. 1951 817 p. illus. 22 cm. $15.00 7606

Contents: Insecticides of the mid-twentieth century and their properties. The structure of organic chemicals and their toxicity to insects. Susceptibility of insects to the entry of poisons. The pharmacology of poisons for insects. Equipment developed for the application of insecticides. The application of insecticides from aircraft. Toxicity and hazards to man and domestic animals. Toxicity of insecticides to plant growth. Chemical control of insects feeding on *plants. Chemical control of* insects affecting man and animals. Insecticides and the balance of animal populations.

Note: The author has managed to cover practically all aspects of the subject, from what is known about the relations between molecular structure and toxicity to comparisons between airplanes and helicopters in the application of dusts. The gist of the available information is given in all *instances*, and most practical workers in the field will find it adequate. Literature citations are given for all the important statements in the text. Most of the bibliographies appended to the chapters run to several hundred references; hence the book can be used as a guide to the literature.

CLAUSEN C P

Biological control of insect pests in the continental United States. Washington, D. C. Government Printing Office, 1956 151 p illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1139) $0.45 7607

Contents: Worldwide search for effective natural enemies. Organizations conducting biological control work. Microbial control of insect pests. Utilization of native parasites and predators. Effect of insecticides on natural enemies. Ants in relation to biological control. Mass culture of parasites and predators. Results of biological control. *Fruit insects. Field* and garden insects. Insects affecting forest, shade, and ornamental trees and shrubs. Miscellaneous insect pests. The established parasites and predators. Literature cited. Index to genera and species.

Note: The first half of this pamphlet is devoted to general considerations on biological control of insect pests in the United States of America, to descriptions of 33 fruit insect pests, 39 field and garden insect pests, 16 tree insect pests, and 4 other insect pests which have been subject to biological control measures, and to summaries of the work that had been done up to the year 1950 with each pest, to introduce and establish specific enemy species. The second half contains brief accounts of the importation, colonization, recovery and effectiveness in the field of each 95 species *of parasites and predators now established in the continental* United States of America.

COTTON RICHARD T

Pests of stored grain and grain products. Revised edition. Minneapolis Burgess Publishing Company 1956 306 p illus. 22 cm. $4.00 7608

Contents: Grain and its conservation. Rodent and bird pests of stored grain. The insect pests of stored grain. Prevention and control of insect infestation in farm-stored grain. Control of insects in grain stored in elevators and warehouses. Detection of insect infestation. The insect problem in flour mills. Practical control methods in the mill and flour warehouse. Fumigants and fumigation. The common fumigants. Flour mill and warehouse fumigation. Fumigation in atmospheric vaults and vacuum chambers. Heat sterilization. Protecting stored seed from insect attack. Index.

Note: A manual of practical information about the pests of stored grain and products made from it such as flour. Control measures for rodents, birds, and insects are explicitly described for conditions under which grain is stored on the farm, in elevators, in warehouses, in flour mills, and in the home. Most of the space is devoted to practical methods of control, but methods which have been proposed but not yet developed, such as the use of electromagnetic energy for killing insects in stored grain, also are mentioned, and literature reference is given. A substantial number of the 108 figures illustrate insect pests and techniques of application of fumigants and insecticides. The author is associated with the Bureau of Entomology and Plant Quarantine of the United States Department of Agriculture.

CRUMB S E.

The larvae of the Phalaenidae. Washington, D. C. Government Printing Office, 1956 356

spoilage, by J R. Winston and others. Ailments of house plants, by F A. Weiss. Wilt, rust, and pasmo of flax, by H. H. Flor Diseases of the avocado by G. A. Zentmyer Some important diseases of coffee, by F L. Wellman. Glossary Index. Color plates.
Note. A collection of practical discussions, based on scientific research, covering the entire range of plant diseases. Information is included on the cause and control of the diseases of all important crop plants. The volume concludes with a complete index and a separate section of 32 colored plates.

WALKER, JOHN CHARLES

Diseases of vegetable crops New York McGraw Hill Book Company, Inc, 1952 529 p illus 24 cm (McGraw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $8 00 7598

Contents Diseases of asparagus. Diseases of bean and lima bean. Diseases of beet and chard. Diseases of carrot and parsnip. Diseases of celery and parsley Diseases of crucifers. Diseases of cucurbits. Diseases of lettuce, endive, escarole, chicory salsify and globe artichoke. Diseases of onion, garlic, leek, chive, and shallot. Diseases of pea. Diseases of pepper and eggplant. Diseases of potato. Diseases of rhubarb. Diseases of spinach. Diseases of sweet potato. Diseases of tomato. Index.
Note A technical manual in which is brought together essential information on the nature and control of most diseases of vegetable crops, together with bibliographical references to pertinent research papers. Under each vegetable or group of vegetables, the diseases are described one by one. For most diseases a brief history is given, followed by discussions of symptoms, causal organism, disease cycle, control measures, and references to the literature. Emphasis is upon the disease rather than upon its treatment, although the treatment is summarized. The work is both a text for college courses in plant pathology and a reference volume for agricultural extension workers.

WALKER, JOHN CHARLES

Plant pathology New York McGraw Hill Book Company Inc., 1950 699 p illus 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) 7599

Contents History of plant pathology Nonparasitic diseases. Bacterial diseases. Diseases incited by plasmodiophorales. Diseases incited by phycomycetes—by fungi imperfecti—by ascomycetes—by basidiomycetes—by phanerogamic parasites—by nematodes. Virus diseases. Relation of environment to disease development. Host parasite interactions. Disease control through exclusion and eradication. Disease control through protection. Disease control through host resistance. Index.
Note An introductory textbook for undergraduate college students of botany and agriculture. The broad principles of the subject are developed from fairly intensive studies of representative diseases. For the diseases discussed there is a general overview an account of symptoms, causal organisms, the disease cycle, varietal resistance, control, and a list of general and specific references. The style is clear and concise and extensive lists of literature citations are included. There are 149 illustrations. A second edition was published in 1957 707 p. $10.00.

WEINDLING, RICHARD

Bacterial blight of cotton under conditions of artificial inoculation Washington D C Government Printing Office, 1948 59 p illus 23 cm. (United States. Department of Agriculture. Technical bulletin no 956) $0 20 7600

Contents Infection and disease reaction of individual leaves Materials and methods. Factors affecting infection of leaves. Factors affecting susceptibility Discussion. Artificially induced epidemics in relation to varietal resistance and epidemiology Methods. Greenhouse experiments. Field experiments. Miscellaneous studies Moisture relations in infection by *Xanthomonas malvacearum*. Vascular infection. Survival of *Xanthomonas malvacearum* in plant tissue. Natural spread of bacterial blight. Literature cited. Appendix.
Note The bacterial blight of cotton, caused by *Xanthomonas malvacearum*, which results on the cotton plant in angular leaf spot, black arm, and bacterial boll rot, is a common disease in all cotton-producing countries and is the subject of the investigations reported in this pamphlet. Emphasis in the experiments, which were carried on mostly at Clemson, South Carolina, between 1942 and 1945 was placed on (1) the host-parasite relationships fundamental in epidemics of the disease, involving intensive studies on infection of individual leaves, and (2) methods for producing epidemics by artificial inoculation, including greenhouse and field experiments on the epidemiology of the disease. The statistical results of the researches are presented in twenty-five tables appearing in the appendix.

WESTCOTT, CYNTHIA

Plant disease handbook. New York D Van Nostrand Co Inc., 1950 746 p. illus. 24 cm. $10 00 7601

Contents: Introduction. Garden chemicals and their application. Classification of plant pathogens. Plant diseases and their pathogens. Host plants and their diseases. List of agricultural experiment stations. Glossary Selected bibliography Index.
Note: A substantial reference manual. There are two main parts. "Plant diseases and their pathogens," about 360 pages in length, furnishes concise semitechnical descriptions of the diseases. The second main part "Host plants and their diseases," about 240 pages in length, is arranged by plant names with the diseases to which a particular plant is susceptible listed under the plant name. The book is more comprehensive than is required by the average home-gardener but it is a valuable reference book for libraries, agricultural extension workers, and advanced amateur gardeners.

WOLF, FREDERICK ADOLPH

Tobacco diseases and decays. Durham N C Duke University Press, 1935 454 p. illus 23 cm. (Duke University publications) 7602

Contents (abridged) Preface. Introduction. The seed bed as related to the problem of control of tobacco diseases. Nutritional diseases. Diseases due to unfavorable water relations. Disorders and diseased conditions of tobacco that are little known and non-infectious. Diseases caused by viruses. Bacterial diseases of tobacco. Diseases of the growing crop caused by fungi. Diseases caused by nematodes. Diseases caused by parasitic flowering or seed plants. Decays of tobacco during curing, during fermentation and storage, and after manufacture. Bibliography Index.
Note. This volume was written to aid the grower in the identification of tobacco diseases and to inform him regarding the causes and control of each disorder and for all others who are interested in the tobacco industry: manufacturers, investigators, plant pathologists, agricultural advisers, and students. A revised edition, 396 p., $7.50, was issued by the same publisher in 1957

INSECT PESTS AND PESTICIDES

AMERICAN CHEMICAL SOCIETY SYMPOSIUM ON PESTICIDES IN TROPICAL AGRICULTURE

Pesticides in tropical agriculture. A collection of papers comprising the Symposium on Pesticides in Tropical Agriculture, presented before the Division of Agricultural and Food Chemistry at the 126th meeting of the American Chemical Society New York, N Y., September 1954 Washington D C. American Chemical Society 1955 102 p. illus. 23 cm. (Advances in chemistry series no. 13, edited by the staff of Industrial and Engineering Chemistry) $3 00 7603

Contents Use of pesticides on basic food crops in the tropics, by J S. Niederhauser and D Barnes. Factors influencing the demand for pesticides in tropical agriculture, by E. J. Hambleton. Pesticides in sugar cane, by E. M. Summers. Pesticides for cotton in the tropical Americas, by C. F Rainwater and J. T Presley Chemical control of pests and diseases of cacao, by R G. Orellana. Control of rubber diseases by chemicals, by F L. Wellman. Coffee

Note A standard survey of the origin, chemistry, methods of preparation, uses, and analyses of insecticides, fungicides, and herbicides. The evolution of its title: *Chemistry of insecticides and fungicides*, 1942, *Chemistry of insecticides, fungicides and herbicides*, 1944, and now *Chemistry of the pesticides*, reflects the constant evolution and extension of chemical means of controlling agricultural pests. The subject is covered primarily from the chemical viewpoint, although toxicity and uses are discussed briefly. Extensive references to the literature are included. This third edition represents major revision involving both reorganization and extensive rewriting. There is now less emphasis on analytical methods, although these are still described briefly, and more emphasis on chemical structure and methods of preparation. Information on all the important new pesticides introduced since the second edition was written has been added, and the bibliographies have been revised to include the recent literature.

GRESSITT, J LINSLEY

The coconut rhinoceros beetle (Oryctes rhinoceros) with particular reference to the Palau Islands. Honolulu Bernice P Bishop Museum, 1953 157 p. illus. 26 cm. (Bernice P Bishop Museum. Bulletin 212) $3 00 7615

Contents (abridged) Introduction. Taxonomy, morphology and biology. Ecological relationships in the Palau Islands. Invertebrate inhabitants of feeding and breeding sites. Control. Quarantine and legislation. The rhinoceros beetle in Samoa. The rhinoceros beetle in other countries. Conclusions. Bibliography. Index.

Note A study of one of the most serious insect pests of the coconut palm. Primarily it is an ecological study; however, it includes also some discussion of taxonomy, morphology and biology and considerable discussion of means of control. A full range of information is presented on the feeding and breeding habits of the insect and it is shown that it will feed on a number of plants other than the coconut palm. It was based on approximately five months' field and laboratory work in the Palau Islands in 1952. In addition to the field and laboratory work, the author—who is entomologist on the staff of the Bernice P Bishop Museum—has surveyed the literature and incorporated the pertinent findings of other investigators. The bibliography contains 310 references. In conclusion, the author makes definite recommendations of procedures for the control of the coconut rhinoceros beetle.

GUNTHER, FRANCIS A. AND ROGER C BLINN

Analysis of insecticides and acaricides a treatise on sampling, isolation and determination, including residue methods. New York Interscience Publishers Inc., 1955 696 p. illus. 24 cm. (Chemical analysis, a series of monographs on analytical chemistry and its applications editors B L. Clarke and I. M. Kolthoff) $14.00 7616

Contents Section I, Problems in securing quantitative residue data. Persisting residues as an analytical problem. Presampling considerations. Sampling considerations. Sample processing. Preanalysis or cleanup treatment. The analyses. Interpretation of data. Analytical bookkeeping. Health hazards in residue laboratories. Section II, Problems in analyzing technical grade materials and formulated products. Composition analysis of technical grade materials and formulated products. Section III, Sampling, measuring, processing, cleanup, and analytical methods. Field sampling procedures. Measurement of samples. Processing procedures. Cleanup procedures. Analytical procedures. Appendixes: Detailed ultraviolet spectra. Detailed infrared spectra. Index.

Note Accurate quantitative analyses of insecticide residues on crops and of insecticides ingredients in commercial mixtures are more difficult to achieve than most other kinds of analytical determinations required in agricultural and industrial chemistry. This book, written by two staff members of the University of California Citrus Experiment Station, provides a detailed guide to tested sampling, isolation and determination procedures. It is written for professional analytical chemists, and the procedures it describes are such as would be carried out in well-equipped agricultural and food industry laboratories. The first three sections containing the chapters on sampling, data interpretation, safety practices and other matters ancillary to the actual analytical techniques runs to 110 pages. A few more than 350 pages are devoted to specific analytical procedures for 50 substances currently in use or being tested for use as insecticides, or acaricides. The appendix contains reproductions of ultraviolet and infrared spectra for about 50 substances. Literature references are of course included.

HOUGH WALTER SENEFF AND A. FREEMAN MASON

Spraying, dusting and fumigating of plants. Principles and applications. Revised edition. New York The Macmillan Company 1951 726 p. illus. 22 cm. $6.95 7617

Contents Part I, Principles: Development of pest control on plants. Insecticides. Fungicides. Miscellaneous spray ingredients, pesticides, and compatibility. Spraying and dusting machines. Construction and operation of spraying and dusting equipment. Fumigation. Soil treatment for control of insects, diseases, and weeds. Growth regulators. Herbicides. Seed treatment. Part II, Applications: Orchard-fruit troubles. Bush-fruit and strawberry troubles. Grape troubles. Cranberry troubles. Citrus troubles. Vegetable and truck-crop troubles. Cotton troubles. Tobacco troubles. General insect feeders. Poison baits. Appendix. Index of authors. Index of subjects.

Note A comprehensive volume on the control of plant pests, diseases and weeds, in the United States of America and Canada. It has been completely rewritten from the original edition of 1928. In the first part, up-to-date information is presented on all phases of the subject, including equipment, chemical compounds, and methods of application. Part II contains brief descriptions of diseases and destructive insects, with keys for diagnosis and discussions of best current remedies. The book contains many illustrations, charts, and formulas, and has bibliographical references in footnotes. It is a practical book which has particular value as a reference work for persons growing fruits and vegetables commercially and for persons working in agricultural experiment stations.

HOWARD LELAND OSSIAN

A history of applied entomology (somewhat anecdotal) (with 51 plates) Washington, D C. The Smithsonian Institution 1930 564 p. illus. 24 cm. (Smithsonian miscellaneous collections. Volume 84 Publication no 3065) $2.25 7618

Contents (abridged) Part I, North America: United States. Canada. Mexico. Part II, Europe: Old European writers on entomology. The Phylloxera of the grapevine and its influence on European applied entomology. Great Britain, Ireland, France and other countries. Part III, Asia. Part IV Africa. Part V Australia and the Pacific. Part VI, South and Central America and the West Indies. Part VII, Medical entomology. The international use of parasites. The practical use of predatory and parasitic insects. Importance of the insect enemies of weeds. Conclusion. Index.

Note A fairly comprehensive record of economic or applied entomology summarizing the work and accomplishments of numerous scientists and institutions throughout the world in the control of insects injurious to plants of commercial value. As indicated by the title, the account is presented as an informal history based on the author's personal contacts in many of the countries treated and upon the literature of the field, rather than as a critical scientific evaluation of the results. A brief history of entomological work in each country precedes the account of modern methods. Included also is a chapter on medical entomology and insect-borne diseases. There are about 230 photographs of leading entomological workers of various countries.

KING W V

Chemicals evaluated as insecticides and repellents at Orlando Fla. Entomology Research Branch, Agricultural Research Service. Washington, D C. Government Printing Office, 1954 397 p. 26 cm. (United States. Department of Agriculture. Agriculture handbook no. 69) $2.25 7619

p illus 23 cm. (United States Department of Agriculture. Technical bulletin no 1135) $1 25 7609

Contents. Introduction. Method of study Sources of material. Key to subfamilies. Subfamily Agaristinae. Subfamily Acronyctinae. Subfamily Heliothinae. Subfamily Acontiinae. Subfamily Cuculliinae. Subfamily Erastriinae. Subfamily Bagisarinae. Subfamily Hypeninae. Subfamily Phalaeninae. Subfamily Hadeninae. Subfamily Ufeinae. Subfamily Amphipyrinae. Subfamily Plusiinae. Subfamily Lithacodiinae. Subfamily Sarrothripinae. Subfamily Catocalinae. Subfamily Herminiinae. Appendix. Literature cited. Index.

Note The Phalaenidae, formerly known as the Noctuidae, is the largest family of Lepidoptera, and includes many important plant pests, among which the best known are the cornworm or tomato fruitworm, the tobacco budworm, and the many kinds of cutworms and armyworms. Because the larvae are responsible for the damage caused by members of this group the larvae are the forms most frequently observed and associated with economic injury In this bulletin the larvae of the family are for the first time classified. Seventeen subfamilies are differentiated, and under each subfamily are grouped the species belonging to it. A key to the subfamilies and keys to the species under each subfamily are provided. For each species are indicated: scientific name, scientific description, notes, distribution within the United States of America and Canada, and food plants on which the larva thrives. Enlarged scale drawings on 11 plates provide the major portion of illustrations.

DE ONG, E R

Chemistry and uses of pesticides Second edition of "Chemistry and uses of insecticides" New York Reinhold Publishing Corporation, 1956 334 p illus 23 cm. $8 75 7610

Contents Introduction. Arsenical compounds. Copper compounds. Sulphur and its compounds. Miscellaneous inorganic compounds. Petroleum and its products. Fumigants and fumigation. Plant derivatives. Synthetic organic insecticides and fungicides, repellents seed protectants. Organic herbicides and rodenticides. Cold, heat, dehydration and radiation as pesticides. Appendixes Dictionary of pesticides. Glossary Tolerances for pesticide residues in or on fresh fruits and vegetables. Official antidotes. Index.

Note A broad, compactly written treatment. The change in title reflects the fact that the scope has been extended to include all chemicals used against pests, including not only insecticides but also fungicides, herbicides and rodenticides. All the commercial chemicals are described and, in addition, there is a short survey of the usefulness of cold, heat, dehydration and radiation in the control of pests. Most of the chapters are devoted to groups of compounds, and the organization of these is as follows A prefatory paragraph or group of paragraphs followed by short, alphabetically arranged articles on individual compounds and, finally literature references. For each compound, chemical names and synonyms, chemical and physical properties, toxicity uses are given as well as variety of other information In comparison to the first edition, the whole book has been revised and largely rewritten.

DETHIER, VINCENT GASTON

Chemical insect attractants and repellents New York McGraw Hill Book Company Inc. 1947 289 p illus 23 cm $6 50 7611

Contents Introduction. Nature of chemical attractants. Essential oils, resins, and related substances. Fermentation products (alcohols, acids, aldehydes, esters, carbinols) Protein and fat decomposition products (fatty acids, amines, ammonia, carbon dioxide) Olfactometers and threshold concentrations. Baits and traps. Repellents. Chemical basis of taste and olfaction. Evolution of feeding preferences. Author index. Subject index.

Note Despite the title, this book is not a manual of recipes for the manufacture of insect attractants and repellents nor guide to the practical use of such substances. Instead, it reviews what is known about the scientific bases, especially the physical and physiological factors, that underlie the effectiveness of such compounds. The results of experiments that have been reported are digested and references are made to the original publications. Experimental techniques and pertinent aspects of insect behavior are described. The author is Professor of Zoology and Entomology at Ohio State University

FENTON, FREDERICK AZEL

Field crop insects. New York The Macmillan Company, 1952 405 p illus. 22 cm. $6 00 7612

Contents. Introduction. Insect abundance and distribution. Insect biology Insecticides. The application of insecticides. Crop sprayers and dusters for insecticides. Physical and mechanical control. Cultural control. Biological control. Plant quarantine and pest control campaigns. Leaf and plant destroying insects. Sap sucking insects. Fruit feeding insects. Soil inhabiting insects. Borers and other internal feeding insects. Feeders on floral parts and seeds. Feeders on broken seeds and farinaceous material. Index.

Note. A general introductory treatment designed mainly for use in agricultural college courses. It covers both insects that attack growing crops in the field and those that attack storage grains. The descriptions of harmful insects occupy more than half of the book, but they include not only biological information but also specific discussions of control. The author is Professor and head of the Department of Entomology in Oklahoma Agricultural and Mechanical College.

FREAR, DONALD E H.

A catalogue of insecticides and fungicides compiled by Donald E. H. Frear with a foreword by F F Lininger Waltham Chronica Botanica Company, 1947–48 2 v 27 cm. (Annales cryptogamici et phytopathologici. Volumes 7–8) *Vol. I* $6 50, vol. II $5.50 $12 00 set. 7613

Contents (abridged) Volume I, Chemical insecticides: Introduction Arrangement of compounds, coding system. General. Organic compounds. Subclassification. Inorganic compounds. Specific instructions and conventions. Abbreviations, references, etc. Chemical insecticides. Condensation products—insecticides. Miscellaneous insecticides. References and author index. Numerical patent list. Volume II, Chemical fungicides and plant insecticides: Chemical fungicides. Condensation products. Plant product fungicides. Miscellaneous fungicides. Plant insecticides. Miscellaneous plant products. References and author index. Numerical patent list. Index of chemical compounds.

Note. A valuable reference book for professional workers in chemistry plant pathology and economic entomology It is one of the results of work done under Project 999 of the Pennsylvania Agricultural Experiment Station, which was set up during World War II to find new insecticides and fungicides. It was the belief of the leaders of this project that before any concerted effort could be made to search for new chemicals, previous work in the field should be surveyed completely This catalogue, therefore, is the result of a comprehensive search of the published literature and of an appeal to workers in the field for unpublished data. Widely used compounds, such as nicotine, lead arsenate, and sulfur are not included but for less common compounds, the catalogue is practically complete up to January 1944. The main part of the catalogue is arranged by coding system especially for the work. Here the compound is described in chemical terminology and its uses are indicated concisely References are made then to the bibliography in which the source articles and patents are cited in full.

FREAR, DONALD E H

Chemistry of the pesticides Third edition. New York D Van Nostrand Company Inc., *1955 469 p. illus. 23 cm. $9 75* 7614

Contents. Introduction. Part I, Synthetic organic insecticides. DDT 1,2,3 4,5,6-hexachlorocyclohexane (benzene hexachloride) and lindane. Chlordane, aldrin, dieldrin, heptachlor, toxaphene and related compounds. Organic phosphorus insecticides. Miscellaneous synthetic organic insecticides. Fumigants. Part II, Natural organic insecticides Insecticides derived from plants—nicotine Pyrethrum and allethrin. Rotenone and rotenoids. Miscellaneous insecticides derived from plants. The oils. Part III, Inorganic insecticides. The arsenicals. Fluorine compounds and miscellaneous inorganic insecticides. Part IV Fungicides Organic fungicides. Copper compounds. Sulfur and inorganic sulfur compounds. Mercury compounds and miscellaneous inorganic fungicides. Part Herbicides. Organic herbicides. Inorganic herbicides. Part VI, Adjuvants Part VII, Rodenticides. Index.

[illegible]

PYENSON, LOUIS L.

Elements of plant protection. With line drawings by [illegible]. New York, John Wiley & Sons, Inc. [illegible] (Wiley farm series) $4.50. [illegible]

Contents: [illegible]

Note: [illegible]

SHEPARD, HAROLD HENRY

The chemistry and action of insecticides. New York, McGraw-Hill Book Company, Inc., 1951. 504 p. illus. 24 cm. $8.50. 7626

Contents: Introduction. Arsenic compounds. Fluorine compounds. [illegible] Copper compounds. [illegible] Plant products: [illegible] Appendix. Index.

Note: [illegible] of the United States Department of Agriculture.

STEINHAUS, EDWARD ARTHUR

Principles of insect pathology. New York, McGraw-Hill Book Company, Inc., 1949. 757 p. illus. 24 cm. (McGraw-Hill publications in the agricultural sciences. R. A. Brink, consulting editor) $12.00. 7627

Contents: Introduction. Mechanical, physical, and chemical injuries. Diseases of nutrition and metabolism. [illegible] Bacterial infections. Fungous infections. Virus infections. Protozoan infections. Nematode infections. Applied insect pathology and biological control. Author index. Subject index.

Note: An introductory but comprehensive survey of [illegible] The author is Associate Professor of Insect Pathology at the University of California.

TEXAS. AGRICULTURAL AND MECHANICAL COLLEGE. ENGINEERING EXPERIMENT STATION.

Handbook on aerial application in agriculture. A compilation of information emanating from research and conferences conducted by the Texas Engineering Experiment Station, the Texas Agricultural Experiment Station and the Texas Agricultural Extension Service of the Texas A. & M. College system. College Station, Texas, The Short Course Office, A. & M. College of Texas, 195[illegible]. 145 p. illus. [illegible] cm. $2.50. [illegible]

Contents: Aircraft, by F. E. Weick. [illegible]

Note: A handbook summarizing the important experimental and practical developments in the use of airplanes in agriculture. [illegible]

UNITED STATES. AGRICULTURAL MARKETING SERVICE. BIOLOGICAL SCIENCES BRANCH. STORED-PRODUCT INSECTS SECTION.

Stored grain pests. Revised August 1955. Washington, D. C., Government Printing Office, 1955. 46 p. illus. 23 cm. (United States. Department of Agriculture. Farmers' bulletin no. 1260) $0.25. 7629

Contents: Popular classification of grain pests. Grain weevils. Grain borers. Grain moths. Flour moths. Grain and flour beetles. [illegible] Mealworms. Dermestid beetles. Spider beetles. [illegible] Cockroaches. Flour or grain mites. Parasites of grain pests. How grain becomes infested. How to prevent primary infestation.

Contents. Sources of compounds tested. Classification of chemicals. Test insects. Evaluation of materials against the body louse. Mosquito larvicides. Flies and mosquitoes. Cockroach toxicants. Flea toxicants. Tick toxicants. Chigger toxicants. Mosquito repellents. Flea repellents. Tick repellents. Synergists. Summary of results of screening tests. Table I, Relative effectiveness of chemicals tested as insecticides and repellents. Table II, Larvicide tests against Southern house and yellow-fever mosquitoes. Table III, Tests of space and residual sprays against house flies and yellow-fever mosquitoes. Table IV Tests against cockroaches. Table V Additional tests of toxicants against fleas. Table VI, Additional tests of toxicants against ticks. Table VII, Additional mosquito-repellent tests. Table VIII Tests of repellents against fleas and ticks. Table IX, Tests of pyrethrum synergists against body lice.

Note Reported in this publication are the results of various chemical tests for insecticidal and repellent action on about 11,000 compounds received for testing between 1942 and 1952 at the Orlando Laboratory of the Bureau of Entomology and Plant Quarantine. The primary data is presented in Table I, covering 821 pages, in which are shown for each compound the name of the chemical its effects upon lice, mosquito larvae, flies, ticks, and chiggers, and its effectiveness as a repellent on skin and on clothes. The handbook is of value to entomologists, chemists, and other scientists interested in the development of new insecticides or in the effects of chemicals on insecticidal activity

METCALF, CLELL LEE, AND W P FLINT

Destructive and useful insects their habits and control By C L Metcalf and W P Flint. Revised by R. L Metcalf Third edition. New York McGraw Hill Book Company Inc., 1951 1,071 p illus. 24 cm (McGraw Hill publications in the agricultural sciences R. A Brink, consulting editor) $12 50 7620

Contents: Insects as enemies of man. The value of insects to man. The external morphology of insects. The internal anatomy and physiology of insects. The mouth parts of insects. Development and metamorphosis. The place of insects in the animal kingdom. The orders of insects. Insect control. Apparatus for applying insecticides. Insects injurious to corn. Insects injurious to small grains. Insects injurious to legumes. Cotton insects. Tobacco insects. Insects injurious to vegetable gardens and truck crops. Insects injurious to deciduous fruits and bush fruits. Citrus insects. Insect attacking shade trees and shrubs. Insect pests of green house plants and the flower garden. Household insects and pests of stored grains, seeds, and cereal products. Insects injurious to domestic animals. Insects that attack and annoy man and affect his health. Index.

Note. A thorough treatment of principles and practice in economic entomology which is used both as a text in college courses and as a reference manual and guide for agricultural extension workers, farmers, fruit growers, etc. The preceding edition was published in 1939 For this edition, parts of the book were entirely rewritten, and other parts were substantially revised and augmented. The chapter on insect control, increased 40 per cent in length, now contains descriptions including structural formulas of more than 150 substances used in the control of insects. The chapter on apparatus for applying insecticides has been completely modernized, and new illustrations of the latest types of equipment have been added. Literature lists have been revised to include the recent literature. There are now 334 figures.

METCALF, ROBERT L

Organic insecticides their chemistry and mode of action New York Interscience Publishers, Inc., 1955 392 p illus. 24 cm. $8.50 7621

Contents Nicotine, nornicotine, and anabasine. Rotenoids. Pyrethroids. Joint action of insecticides. Organic thiocyanates. Dinitrophenols. Dichlorodiphenyltrichloroethane. Acaricides. Benzene hexachloride. Cyclodiene insecticides. Organic phosphorus insecticides. Carbamates. Miscellaneous insecticides. Insecticide resistance. Index.

Note: An authoritative survey of the accumulated knowledge on the chemistry mode of action and toxicology of the organic insecticides. Although it has been developed from and is intended to supersede the author's *Mode of action of organic insecticides*, Washington, D C., 1948, the scope is broader and as might be expected, the information included is more up to date. In effect, the book is a literature survey organized as indicated in the above table of contents. Papers published as late as 1954 are cited. Most of the chapters are organized on the following plan, chemistry relation of structure to activity mode of action mammalian toxicology No index to authors cited is supplied, but the subject index is exceptionally detailed. The book is usable as a reference book of data and a guide to literature for professional workers in such fields as insecticide development, agricultural extension work and public health.

PAINTER, REGINALD HENRY

Insect resistance in crop plants. New York The Macmillan Company, 1951 520 p. illus. 22 cm. $9 50 7622

Contents. Introduction. The mechanisms of resistance. Factors that affect the expression of the permanence of resistance. Resistance to insects in wheat. Resistance to insects in corn. Resistance to insects in cotton. Resistance to insects in sorghums. Resistance to insects in potato. Methods and problems in breeding for resistance to insects in crop plants. Selected supplementary bibliography Index.

Note: This book is a comprehensive survey and digest of the published literature pertaining to the control of injurious insects by growing strains and varieties of crop plants that have high degree of resistance to insect attack. Numerous examples of such resistance are known and the literature is voluminous. The author has summarized it under the headings noted above and has included references to the source articles. The specially titled "Selected supplementary bibliography" is supplementary to the extensive bibliographies appended to the chapters. The author has been the head of co-operative study of insect resistance in crop plants at the Kansas Agricultural Experiment Station since 1926.

PARKER, J R, AND OTHERS

Observations on mass flights and other activities of the migratory grasshopper by J R. Parker, R C. Newton, and R. L. Shotwell Washington, D C Government Printing Office, 1955 46 p. illus. 23 cm. (United States Department of Agriculture. Technical bulletin no 1109) $0 20 7623

Contents. Methods of obtaining data. Changes in distribution and population density preceding 1938 flights. Flights in 1938. Flights in 1939 Flights in 1940. Other observations on flights. Structure and coloration of adult migrants. Increases in crop losses and control costs due to flights. Future flights. Summary Literature cited.

Note The Bureau of Entomology and Plant Quarantine of the U S. Department of Agriculture collected extensive data during the summers of 1938–1940 on the mass flights of the Rocky Mountain grasshopper (*Melanoplus mexicanus*) in those years, the most spectacular and extensive flights since those of 1874–1877 Most of the 1938 flights originated in north-central South Dakota. Flights in 1939 and 1940 originated in the same neighboring states. A summary of the data, together with information supplied by entomologists in the states and the Canadian provinces where flights took place, is presented in this bulletin.

PEAIRS, LEONARD MARION, AND RALPH HOWARD DAVIDSON

Insect pests of farm garden and orchard. Fifth edition. New York John Wiley & Sons, Inc., 1956 661 p. 24 cm. $8.50 7624

Contents Importance of insects to man. Structure and development of insects. Classification of insects. Natural insect control. Applied insect control—Chemical—Mechanical, cultural, biological, legislative. Insecticide formulations, applicators, and dilution table. Insects injurious to various crops—Grasses and cereal grains—Cotton —Leguminous crops—Solanaceous crops—Greenhouse, flower, and vegetable crops—Cucurbit and cruciferous crops—Asparagus, beets, onions, and other vegetable crops—Various fruit and shade trees, and ornamental plants—Pome fruits—Stone fruits—Grapes—Small fruits —Citrus—Stored products and household goods—Man and domestic animals. Index.

Note Designed for use both as textbook in courses in economic entomology at the college level and as a practical reference book for agricultural extension workers and practical farmers, the book is compact, general summary of information on the important

WILCOX, JOSEPH AND OTHERS

Investigations of the tomato fruitworm its seasonal history and methods of control by Joseph Wilcox, A. F Howland, and Roy E. Campbell. Washington, D C. Government Printing Office, 1956 47 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1147) $0.25 7634

Contents: Introduction. Damage to tomatoes. Life history and habits. Parasitism. Control. Phytotoxicity of insecticides. Picking practices as an aid in control. Destruction of crop remnants. Insecticide residues. Summary. Literature cited.

Note: A bulletin reporting scientific studies of the biology and control of the tomato fruitworm (Heliothis zea [Boddie]) carried on from 1934 through 1952 mostly in southern California. In these studies the habits of the insect on the tomato plant were analyzed, and various control measures were tested. The results are presented in 13 illustrations and in 31 tables as well as in the text of the pamphlet. The insect is also known as the corn earworm and the cotton bollworm, and is a major pest on these crops as on tomatoes.

FIELD AND VEGETABLE CROPS

ANDREWS, WILLIAM BAKER, editor

Cotton production, marketing and utilization. State College, Mississippi W. B. Andrews, 1950 476 p. illus. 24 cm. $4.50 7635

Contents: Shifts in cotton production among and within states, and some related factors, 1800–1949, by H. P. Todd. Cotton varieties and breeding, by J. F. O'Kelly. The response of cotton to fertilizers, by W. B. Andrews. Cotton diseases, by A. L. Smith. Cultural practices, by H. P. Smith. Cotton insect control, by W. B. Andrews. Harvesting cotton, by H. P. Smith. Cotton ginning, by C. A. Bennett. Warehousing for market, by J. H. Todd. Cotton fiber technology, by F. L. Gerdes. Cotton classing and standardization, by A. R. Cox. Cotton markets and marketing, by A. R. Cox. The spinning, weaving, finishing and marketing of cotton products, by J. F. Bolgen and others. Uses of cotton and its substitutes, by R. B. Evans. World cotton production and trade, by D. S. Murray. Cottonseed, by J. F. Moloney. Index of authors. Index of subjects.

Note: The editor of this work was associated with the Mississippi Agricultural Experiment Station, and other contributors are associated with agricultural colleges, the U. S. Department of Agriculture, or with associations such as the National Cottonseed Products Association at the time of writing. A compact style is used in most of the chapters, and a wide range of information is presented. Recent developments, such as mechanical cotton picking, are described along with long established techniques. Each chapter is supplemented by a useful bibliography.

BANADYGA, ALBERT ALEXANDER

Cucumbers for pickles a 1948 survey of literature dealing with their production. Oak Park, Illinois National Pickle Packers Association 1949 276 p 24 cm. $3.00 7636

Contents: Introduction—importance and distribution of pickle industry. Cultural practices. Diseases. Insects. Flower mites. Physiology, breeding, and genetics. Varieties. Summary. Bibliography—cucumber references. Appendix. Reports by stations.

Note: In the first part of this book the available information on the culture and breeding of pickle cucumbers is summarized. In the second part the international literature down to 1948 is listed with the usual bibliographical details. Although the book contains information that is valuable to farmers, it is intended more for agricultural extension workers and others who are professionally concerned with the growing of pickle cucumbers. The pickling of cucumbers is not included.

BARNHART FLOYD

Cotton. Fifth edition. Caruthersville, Mo. The author 1956. 390 p illus. (part col'd) 24 cm. $3 75 7637

Contents: The place of cotton. Cotton crop reports. Estimating yield of cotton. Judging and exhibiting cotton stalks and bolls. Elementary cotton marketing. Some factors which lower the grade of cotton. Harvesting cotton. Ginning. Soils, their composition, formation, and classification. Soil, most important factors for farmers. Fertilizers. Types and varieties of cotton. Selecting, delinting, and treating planting seed. Preparing soil for planting. Planting cotton. Cultivation of cotton. Structure and development of insects. Cotton insects and their control. Diseases of cotton, by G. M. Watkins. Appendix. Index.

Note: A practical handbook and textbook written especially for use in the vocational agriculture departments of secondary schools throughout the cotton belt of the United States.

BROWN HOWARD DEXTER, AND CHESTER S HUTCHISON

Vegetable science. Edited by R. W. Gregory Philadelphia J B Lippincott Company 1949 452 p. illus. 24 cm. $6.50 7638

Contents. The importance of vegetables. Food value of vegetables. Cost accounts. Vegetable classification. Soils and fertilizers. Green manures. The growing environment. Plant growing and plant-growing structures. Equipment. Irrigation and drainage. Storage of vegetables. Seed production and plant breeding. Diseases and pest control. Marketing vegetables. Home gardening. The potato. Sweet potato, yam, taro, and dasheen. Tomatoes, eggplant, and peppers. Beans and peas. Cole crops. Perennial crops. Sweet corn and popcorn. Cucurbits or vine crops. Salad crops. Greens. Root crops. Bulb crops. Index.

Note: An introductory text which is, however, sufficiently technical and detailed to make it of value to practical farmers. Agricultural practices which conserve the soil and at the same time permit the economical production of vegetable crops are emphasized. One hundred fifty-four figures, the majority of which are reproductions of photographs, 43 tables, and selected lists of literature references supplement the exposition. The authors are members of the faculty of Ohio State University.

CHRISTIDIS BASIL G., AND GEORGE J HARRISON

Cotton growing problems. New York McGraw Hill Book Company Inc., 1955 633 p. illus. 24 cm. $9 75 7639

Contents (abridged) Part I, Cotton varieties: Varietal characteristics. Cotton breeding. Leading cotton varieties. Part II, Crop rotation and soil cultivation. Part III, Fertilization. Nutrient requirements. Commercial fertilizers. Other means for increasing soil fertility. Part IV The cotton seed. Viability. Seed treatment before sowing. Recently recommended treatments. Part V Planting: Planting date. Spacing. Planting the seed. From seed to seedling. Part VI, Cultural methods Tillage, weed control, thinning, topping, defoliation, and desiccation. Irrigation. Part VII, Insect pests and diseases. Part VIII, Harvesting the crop. Index.

Note. Brought together in this treatise are the results of scientific experiments on the culture of cotton which have been carried out in the United States of America, Egypt, India, Greece and other countries over the past three decades. Most of the information presented has been published in the international literature, including journals, bulletins of agricultural experiment stations, etc. The results of some experiments conducted in Greece are published in this volume for the first time. Modern developments such as chemical weed control, defoliation, and mechanical harvesting, are described along with soil cultivation and fertilization. The book is of interest to scientists who are concerned with research on the cotton plant and cotton growing and to large-scale growers and advanced students in agricultural colleges. The senior author is Director of the Cotton Research Institute at Sindos, Greece, and the co-author was formerly Principal Agronomist attached to the United States Department of Agriculture's Cotton Field Station at Shafter, California.

COX JOSEPH FRANK AND LYMAN E. JACKSON

Crop management and soil conservation. Second edition. New York John Wiley & Sons, Inc., 1948. 572 p. illus. 21 cm. (The Wiley farm series A. K. Getman and E. R. Eastman editors) $5 48. 7640

Note. This bulletin describes, pictures, and discusses the chief insect pests of stored grain in the United States of America, and briefly suggests measures for the prevention of infestation. It is designed for practical use by grain farmers, grain shippers, millers, and grain dealers.

UNITED STATES DEPARTMENT OF AGRICULTURE

Insecticides and repellents for the control of insects of medical importance to the Armed Forces Prepared by the Orlando, Fla., Laboratory of the Entomology Research Branch, Agricultural Research Service. Washington, D C. Government Printing Office, 1955 91 p illus. 23 cm (United States. Department of Agriculture. Circular no 977) $0.35 7630

Contents Introduction. Chemistry of insecticides and repellents DDT Methoxychlor and TDE. Benzene hexachloride. Chlordane and heptachlor Dieldrin and aldrin. Isodrin and endrin. Pyrethrum and allethrin. Pyrethrum synergists. Other insecticides. Insecticide formulations. Repellents. Military-issue items. Control of mosquitoes Control of mosquito larvae. Control of adult mosquitoes. Airplane applications. Control of flies Residual sprays. Space sprays. Poisoned baits. Larvicides. Control of human lice and scabies Body lice. Head and crab lice. Scabies. Control of other medically important arthropods. Bed bugs. Cockroaches. Fleas. Ants. Sand flies. Black flies. Ticks. Chiggers. Repellents. Repellents applied to the skin. Repellents applied to clothing. Protection of animals from insect attack. Toxicology of insecticides and repellents Nature of hazards. General precautions. DDT Pyrethrum and allethrin. Methoxychlor TDE. BHC (benzene hexachloride) Lindane. Chlordane. Toxaphene. Dieldrin. Aldrin. Heptachlor Phosphorus insecticides. Repellents. Literature cited.

Note: During World War II and for 10 years thereafter thousands of new chemicals and chemical formulations were investigated under Army and Navy auspices as insecticides and repellents. This publication summarizes the results of the research in this field. Although the work was carried on principally to develop control methods applicable under military conditions, most of the methods developed are also with modifications applicable to civilian problems. The circular supersedes Miscellaneous publication no. 606, 1946.

UNITED STATES DEPARTMENT OF AGRICULTURE

Insects Edited by Alfred Stefferud Washington D C Government Printing Office 1952 780 p illus. (part col'd) 24 cm. (United States. Department of Agriculture. The year book of agriculture 1952) $2 50 7631

Content (abridged) Introducing the insects How many insects are there? by C. W Sabrosky Fossil insects, by F M. Carpenter. How insects live by E. O. Essig. How insects choose their food plants, by C T Brues. How to know an insect What kind of insect is it? by C. F W Muesebeck. How to collect and preserve insects for study by P W Oman. Insects as helpers Insect friends of man, by F C. Bishopp. Pollination by native insects, by G. E. Bohart. Breeding bees, by O. Mackensen and W C. Roberts. Insecticides and bees, by F E. Todd and S. E. McGregor. Insects to control weed, by J K. Holloway and C. B. Huffaker. Insects as destroyers. Losses caused by insects, by G. J Haeussler Carriers of human diseases, by F C. Bishopp and C. B Philip. Insects and helminths, by E. E. Wehr and J. T Lucker Insects and the plant viruses, by L. D Christenson and F F Smith. The nature of insecticides How insecticides are developed, by R. C. Roark. The organic insecticides, by C. V Bowen and S. A. Hall. The inorganic insecticides, by R. H. Carter Aerosols and insects, by W N Sullivan and others. Applying insecticides Using insecticides effectively by E. J Newcomer and others. Research on aerial spraying, by J S. Yuill and others. Machines for applying insecticides, by H. Ingerson and F Irons. Warnings as to insecticides Toxicity to livestock, by R. D Radeleff and others. Residues, soils, and plants, by W R. Borrell. Residues on fruits and vegetables, by R. A. Porter and J E. Fahey Insecticides and the pure food law by P B. Dunbar Resistance to insecticides Insects are harder to kill, by B. A. Porter Fumigants Fumigating soils and plants, by R. Latta and M. C. Lane. Fumigating stored foodstuffs, by R. T Cotton. Quarantines How insects gain entry by K. B. Sevin. Our domestic quarantines, by H. J Conkle. Inspections at terminals, by A. P Messenger Other controls. Insects, enemies of insects, by R. D. Burks. Parasites and predators, by C. P Clausen. Infectious diseases of insects, by E. A. Steinhaus. The vapor-heat process, by A. C Baker. Cold treatment of fruits, by H. H. Richardson. Radiant energy and insects, by A. H. Yeomans. Weather and climate, by H. B. Mills. Resistant crops, the ideal way by C. M. Packard and J H. Martin. Economic entomology Surveys of insect pests, by G. J Haeussler and R. W Leiby The insecticide industry by L. S. Hitchner. The industrial entomologist, by E. M. Searls. Extension work in entomology by M. P Jones. Insects, man, and homes Household insects, by L. S. Henderson. Mosquitoes, by H. H. Stage. Insects on cotton. Progress in research on cotton insects, by C. F Rainwater. The pink bollworm, by L. F Curl and R. W White. Insects and vegetables. Potato aphids, by W A. Shands and B. J. Landis. Sweetpotato weevil, by R. A. Roberts. The pea aphid, by J E. Dudley Jr and W C. Cook. The beet leafhopper, by J R. Douglass and W C. Cook. Insects on fruit. The oriental fruit fly by W Carter The Mexican fruit fly by P A. Hoidale. The Japanese beetle, by C. H. Hadley and W E. Fleming. Insects on field crops. Cereal and forage insects, by C. M. Packard. Grasshoppers, by J R. Parker. The Mormon cricket, by C. Wakeland and J R. Parker The chinch bug, by C. Wakeland. The European corn borer by W G. Bradley Insects that attack tobacco, by D. J. Caffrey Pests on ornamentals. Insect pests of flowers and shrubs, by C. A. Weigel and R. A. St. George. Livestock and insects: Flies on livestock, by G. W Eddy Ticks, lice, sheep keds, mites, by E. F Knipling. Screw-worms, by W G. Bruce. Cattle grubs, by R. W Laake and I. H. Roberts. Forests, trees, and pests. The spruce budworm, by R. C. Brown. Bark beetles in forests, by F P Keen. The gypsy moth, by J. M. Corliss. Insects and wildlife Insects and the lower vertebrates, by O. B. Cope. Bibliography and appendix. A selected list of publications, by L. L. Haynes and J S. Wade.

Note. A cyclopedic work on applied entomology Agricultural aspects are emphasized, but there is also much material on general phases, such as the relation of insects to disease. Although the authors include many outstanding entomologists, the work is addressed to farmers, amateur collectors, and general readers rather than to professionals. Seventy-two colored plates, each of which illustrates a different insect in various stages of its development, are included.

WATKINS, T C, AND L B NORTON

Handbook of insecticide dust diluents and carriers. 2nd edition revised and edited by D Weidhass and J L Brann, jr Caldwell, N J Dorland Books 1955 233 p. illus. 19 cm. $4 75 7632

Contents (abridged) Classification of insecticide dust diluents and carriers. Introduction to the data sheets. Index.

Note. A useful reference book on the inert substances used in insecticide dusts. Most of the space in it is devoted to data sheets on specific products such as sulfur, diatomite, attaclays and gypsum. For each product listed data are given on chemical analyses and on properties such as specific gravity abrasion index, particle size, and pH. The names of producers of these materials in the United States of America are listed.

WEIGEL, CHARLES ADOLPH AND L. G. BAUMHOFER

Handbook on insect enemies of flowers and shrubs. Washington, D C. Government Printing Office, 1948 115 p. illus. 23 cm. (United States. Department of Agriculture. Miscellaneous publication no. 626) $0.45 7633

Contents. How insects develop and feed. General plant pests. Insects attacking specific plants, arranged by plants. Insecticides. Table of measures. Where insecticides may be purchased. When and how to apply insecticides. Quantity of sprays or dusts to apply (DDT-insecticides). Spraying and dusting equipment. Appendix Index.

Note. Superseding Farmers bulletin 1945 *Insect enemies of the flower garden*, this publication is a concise, useful handbook of information to enable the gardener to recognize the common insect and related pests of the flower garden and to apply the proper remedies.

ministration in cooperation with the Bureau of Plant Industry Soils, and Agricultural Engineering. Most of the work on this manual was performed under a project authorized by the Research and Marketing Act of 1946 Washington, D C. Government Printing Office, 1952. 440 p. illus. 24 cm. (United States. Department of Agriculture. Agriculture handbook no. 30) $4.00. 7646

Contents: Introduction. Seed sampling and testing equipment. Obtaining the seed sample. Procedures for determining purity composition. Application of purity procedures to specific groups of genera. Application of purity procedures to specific groups of seeds. Procedures for determining germination. Application of germination procedures to specific groups. Examination for noxious-weed seeds. Origin of seeds. Testing for trueness of variety. Testing for moisture. Tolerances. Calculations, records, and reports. Identifying characters of seeds. Development, structure, and hereditary characteristics of seeds. Physiology of seeds. Pathological considerations in use of seeds. Literature cited. Selected references. Available publications on seed testing. Glossary. Appendix: List of botanical names. List of plant names. List of botanical and common names. Index.

Note: A book of instructions for seed technologists and laboratory workers, showing how to conduct laboratory tests and presenting also background information of a practical nature. Procedures are given for the testing of all kinds of agricultural and vegetable seeds, domestic and imported. A central section of 34 plates gives drawings of the seeds of 324 species of grasses, grains, vegetables, and forest trees. The manual supersedes the Department's Miscellaneous publication no. 437 Testing farm seeds in home and school, published 1942.

KNOTT JAMES EDWARD

Vegetable growing Fifth edition, thoroughly revised, with 88 illustrations. Philadelphia Lea & Febiger 1955 358 p. illus. 24 cm. $5.00 7647

Contents: Part I, General considerations. Vegetable growing. Classification of vegetables. Factors affecting plant growth. Protecting equipment. The seed supply. Seedage. Producing plants. Soils and their preparation for planting. Maintaining soil organic matter. Fertilizing the crop. Cropping systems. Moisture supply and weed control. Insect and disease control. The garden layout. Storage. Marketing. Part II, Cool season crops. The perennials. Potherbs and greens. The cole crops. The salad vegetables. The bulb crops. The root crops. Broad beans and peas. The potato. Miscellaneous cool season crops. Part III, Warm season crops. The sweet potato. Beans. The solanaceous fruits. The vine crops. Sweet corn. Miscellaneous warm season crops. Index.

Note: A compactly written survey of techniques of growing the kinds of vegetables which are currently of some importance as market crops in United States of America. It is designed primarily for use as a textbook in college courses, and is useful also as a general reference book on commercial vegetable growing. A short chapter is included on the home garden and, of course, much of the information in other chapters is applicable also to the growth of vegetables on a small scale. The space is divided almost evenly between the two parts of the book. The first part is devoted to basic principles and techniques. Although the treatment is reasonably up to date, the author makes no pretense of including the last word on such rapidly changing topics as insecticides. In the second part, the important commercial varieties, cultural practices and harvesting techniques are described for each crop. Literature references are given in both parts of the volume, and this fifth edition includes references to literature published as recently as 1954.

LAURITZEN JOHN IRVIN AND OTHERS

Inversion of sucrose and other physiological changes in harvested sugarcane in Louisiana, by John I. Lauritzen, R. T Balch, and Charles A. Fort. Washington, D C. Government Printing Office, 1948. 65 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 939) Gratis. 7648

Contents: Summary. Review of literature. Storage conditions. Varieties. Sampling. Methods of analysis: Hand-mill juice. Cane. Sampling. Preparation. Analysis. Determination of soluble dry solids. Experimental data: Temperature and high moisture and true purity. Rooting and sprouting. Inversion of sucrose and other conditions. Rooting and sprouting. Inversion of sucrose and other changes. Temperature and high and low moisture conditions. Temperature and inversion at common extraction deficit at different temperatures. Some factors affecting the loss of moisture. Relation of humidity and moisture loss to inversion of sucrose. Effect of maturity on inversion of sucrose. Discussion and conclusions. Literature cited.

Note: A report of the findings of a series of investigations carried out between 1933 and 1944 at the United States Sugar Plant Field Station, Houma, Louisiana.

MACGILLIVRAY, JOHN H.

Vegetable production, with special references to western crops. New York The McGraw Hill Book Company Inc., 1953 397 p. illus. 23 cm. $6.00. 7649

Contents: Production principles. Types of vegetable production. Classification of vegetables. Economic importance and production areas. Soils for vegetable production. Physiological factors affecting vegetable production. Improvement of vegetables through plant breeding. Quality and characteristics of seed. Plant growing. Pollination of vegetables. Fertilizers, manures, and organic matter. Preservation of vegetables. Vegetable grades and grading. Food value of vegetables. Insect and disease control. Cultural practices: Group A, Cool season crops tolerant of slightly freezing weather. Group B, Cool season crops damaged near harvest by freezing weather. Group C, Cool season crops which thrive over wide range of temperature and are tolerant of frost. Group D, Warm season crops intolerant of frost. Group E, Warm season crops requiring continuous warm weather. Index.

Note: Developed in a course at the University of California, this book emphasizes the vegetables and cultural practices of the western states of the United States of America. Since this region produces large volumes of vegetables for shipment to other sections, a practically complete range of the vegetables which are important as crops in the United States is covered. Many of the cultural practices described are local and are representative of large-volume production, including production on irrigated soils. General principles and production practices are described in the first part of the book, and cultural practices for individual vegetable crops are described in the second part. In the latter part, the information given on most crops includes a short account of history and history, statistical data on producing areas, data on food values, a description of the principal varieties, data on climatic and soil requirements, discussions of fertilizers, planting, irrigation and harvesting practices, and concise descriptions of insect pests and diseases with methods of control. Literature references, most of which are to publications of the national and state governments, are given for each vegetable. In addition to its use as a text in agricultural courses, the book is useful as a practical reference manual by agricultural extension personnel and practical farmers.

MACK, WARREN B., AND OTHERS

Vegetable and fruit growing. By Warren B Mack, Russell E. Larson, David G White, and Harry O Sampson. Philadelphia. J B Lippincott Company 1956. 560 p. illus. 23 cm. $4 40. 7650

Contents. The fruit and vegetable industry. Suitable climate for fruits and vegetables. The importance of productive soils. Maintaining soil fertility. Regulating soil moisture. Pests and their control. Tomatoes, peppers, and eggplants. Sweet corn and popcorn. Beans and peas. Cole crops. Root vegetables. Onions and other bulb vegetables. Cucurbits or vine crops. Salad vegetables. Cooking greens and savory herbs. Asparagus and rhubarb. Strawberries. Bramble fruits. Cranberries, blueberries, currants, and gooseberries. Grapes. Cherries and plums. Peaches. Apples and pears. Reference material. Index.

Note: Current practices in the growing of fruits and vegetables in the northeastern section of continental United States of America are described in this book. The treatment is elementary and practical, and the book is intended for students in schools of vocational agriculture, in introductory courses in horticulture at the college level, and for independent reading by farmers and young people preparing for careers in horticulture. The discussions of such matters as the maintenance of soil fertility are limited primarily to good practices and make little reference to the basic scientific knowledge. The descriptions of individual crops include not only

Contents (abridged) Part I, Balancing crop production and maintaining fertility Surveying crop production from the farm management standpoint. The nature and use of crop plants. The nature of soils. Protecting our soil from erosion. Manuring, fertilizing, and liming field crops. Securing the best crop varieties. Growing seed on the farm. Preparing seed beds—planting and cultivating crops. Marketing crops and co-operative programs. Controlling crop diseases. Controlling insect pests. Controlling weeds. Part II Corn growing. Wheat and rye growing. Oats, barley buckwheat, and flax growing. Sorghum growing. Growing soybeans and cowpeas. Growing the clovers. Growing lespedeza and other legumes. Growing grasses and legumes for hay and pasture. Managing pastures. Potato growing. Field-bean growing. Growing special field-truck crops. The home-farm food supply Food from the garden, fields, woods, and ponds. Index.

Note. A simple but authoritative treatment intended chiefly for classes in rural high schools but useful also to general readers who desire an introduction to the current methods of crop production and soil conservation.

DELORIT, RICHARD J, AND HENRY L. AHLGREN

Crop production, principles and practices New York Prentice-Hall, Inc., 1953 629 p illus 22 cm. $6.35 7641

Contents. The nature and importance of plants. Growth and reproduction. Corn. Wheat. Oats. Barley Rye. The sorghums. The millets. Flax. Buckwheat. Potatoes. The true clovers. Alfalfa. Sweet clover Soybeans. Cowpeas. Field peas. Lespedeza. The perennial forage grasses. Pastures. Haymaking. Grass silage. Weeds. Crop rotation and green manuring. Improvement of plants. Appendixes. Index.

Note. A textbook designed for the instruction of agricultural students enrolled in vocational schools and classes rather than in colleges. Its coverage is as inclusive as are typical college texts on crop production, but is written in simpler language. Another feature is that it is not limited to grain crops and potatoes, but includes also the legumes and grasses. Many of the 273 figures are reproductions of photographs.

GARNER, WIGHTMAN W

The production of tobacco Revised first edition. New York McGraw Hill Book Company Inc 1951 520 p illus 23 cm. $7 50 7642

Contents (abridged) Part I, The tobacco industry: The tobacco plant and its product, commercial leaf tobacco. History of the tobacco industry and present distribution of production in the United States. Part II, Growing, curing, and marketing the crop. Tobacco varieties. Soils and cropping systems for tobacco. Fertilization of the tobacco crop. The seed bed or plant bed. Transplanting, field care of the crop and harvesting. Curing the leaf. Grading and marketing Tobacco diseases and their control. Insect pests f tobacco and their control Part III, Physiology chemistry and genetics of tobacco Morphological, anatomical, and chemical characteristics of tobacco. Elements of quality in tobacco and factors influencing them Mineral nutrition of tobacco Characteristics of tobacco soils. Climate, weather and cultural practices in relation to yield and quality Curing, fermentation, and aging of tobacco. Tobacco genetics and breeding. Tobacco manufactures. Bibliography Index f authors. Subject index.

Note. A comprehensive work in which the agricultural aspects of tobacco are given most of the space and allied topics, such as the manufacture of tobacco products, are treated more concisely The book is suitable for use as a textbook in agricultural colleges and as a source of general information on tobacco production and marketing. It describes chiefly agricultural practices in the United States of America, but practices in other countries are outlined. The 15-page bibliography includes, among other citations, many references to the publications of agricultural experiment stations in the United States. The first edition was published in 1946. This "revised first edition contains minor revisions of some f the economic data.

HAWTHORN, LESLIE R.

Vegetable and flower seed production. New York McGraw-Hill Book Company, Inc. 1954 626 p illus. 24 cm '$9 50 7643

Contents: Part I, The vegetable- and flower-seed industry Business of seed growing. The development of the vegetable- and flower-seed industry Environmental factors related to seed production. Breeding in relation to seed production. Part II, Vegetable seed crops. Umbelliferae. Liliaceae. Compositae. Cucurbitaceae. Gramineae. Leguminosae. Cole crops of the Cruciferae. Root crops of the Cruciferae. Chenopodiaceae. Solanaceae. Miscellaneous vegetables. Part III, Flower seed crops: The flower-seed industry Growing the annual flower seeds. Growing the perennial and biennial flower seed. Part IV Handling the matured crop: Harvesting and milling equipment. Seed storage. Handling and marketing. Index

Note: A reliable and useful book on the production of egetable and flower seeds for the seed industry It deals with such matters as climatic and soil requirements, cultural practices, storage, diseases and insect enemies of the various flower and egetable crops whose seeds are grown on commercial basis. Hybridizing and other aspects of seed production based on genetics are not covered, nor is the commercial production of grass seed. The book is organized so that it may be used as a textbook in advanced college courses in agriculture and also as a reference book by seedsmen, county agents, and farmers who are interested in the potentialities of seed crops. It was based on a wide survey of the literature which is cited in bibliographies appended to the chapters. The authors are both specialists in horticultural science.

HUELSEN, WALTER A.

Sweet corn. New York Interscience Publishers Inc., 1954 409 p illus. 22 cm. (Economic crops, a series of monographs on the chemistry, physiology, and technology of food and food products, Z I. Kertesz, editor) $10.50 7644

Contents: History of sweet corn. Taxonomy and morphology Open pollinated varieties and their use. Breeding sweet corn hybrids. Factors affecting germination and growth of the seed. Physiological aspects of germination, growth, and maturity Author index. Subject index.

Note. Both the culture of sweet corn as crop and its processing as human food are covered in this comprehensive book, which is based on a wide review of the literature. References are made from all important statements and data in the text to citations of the source articles. The book is, therefore, both a comprehensive survey of the subject and guide to the literature. The author is member of the faculty of the College of Agriculture of the University of Illinois.

INGHAM VAN WIE, editor

Practical field crop production for the Northeast an elementary introduction to agronomy By Gilbert H. Ahlgren, Robert S. Snell John C Anderson, and Milton A. Sprague. Revised edition. New Brunswick Rutgers University Press 1952 423 p. illus. 23 cm. $5 00 7645

Contents (abridged) Crops and humanity Crops and livestock. Crops for direct marketing. Grasses and legumes. Seed and seed treatment. Soil and water conservation practices. Corn production in the Northeast. Small-grain production. Breeding and producing seed of the small grains. The main hay crops. Making good hay. Corn and hay-crop silage. The economy of pasture production. Management of pasture areas. White potatoes. Sweet potatoes. Soybeans and field beans. Tobacco. Weed control. Crop rotations. Appendix. Glossary Index.

Note When this book was written, all of the authors were members of the faculty of Rutgers University and then were associated with agricultural education in the region with which the book is concerned. The book is an elementary and practical text designed primarily for use in agricultural courses at the high-school level and extension courses offered by agricultural colleges. The elementary level notwithstanding, it provides wide range of authoritative and useful information on contemporary agriculture and farming practices in northeastern continental United States of America, region characterized by its aried types of farming. There are 74 tables and 148 figures.

JUSTICE, O L, editor

Manual for testing agricultural and vegetable seeds. United States Department of Agriculture, Production and Marketing Ad

[illegible] control, irrigation, and new developments in marketing practice, such as [illegible]. Literature published since the first edition [illegible] has been added to the bibliography which now contains [illegible] references. The book is suitable for use as a textbook in agricultural colleges and as a practical manual for vegetable growers.

[illegible]IVERS, ARTHUR FREDERICK

Production of drug and condiment plants. Washington, D. C., Government Printing Office, 1948. 99 p. illus. 23 cm. (United States. Department of Agriculture. Farmers' bulletin no. 1999) Gratis. 7657

Contents: Economic background. The more important plants. [illegible] Propagation, culture, and general handling: Propagation. Culture. Harvesting. Drying. Distillation of volatile oils. [illegible] and storing. Marketing. Culture of individual species: [illegible] Angelica. Anise. Arnica. Basil. [illegible] Caraway. Castor-bean. Catnip. [illegible] Coriander. Cumin. Dandelion. [illegible] Fennel. Gentian. Ginger. Ginseng. Goldenseal. [illegible] Lavender. [illegible] Lovage. Marjoram. [illegible] Mustard. [illegible] Peppermint. [illegible] Sage. [illegible] Spearmint. [illegible] Tansy. Tarragon. Thyme. Valerian. [illegible] Wormwood (American). Wormwood.

Note: Superseding Farmers' bulletin no. 663, this manual is a practical guide for those interested in the production on a commercial scale of drug plants and leaf and seed condiments in the United States of America. Many of these medicinal and condiment plants are imported regularly from abroad. The bulletin indicates [illegible] grown in the United States and gives practical directions for their cultivation. Related bulletins are *Farmers' bulletin 1977 [illegible]*, and *Farmers' bulletin [illegible]*.

SPRAGUE, GEORGE F., editor

Corn and corn improvement. New York, Academic Press, Inc., 1955. 699 p. illus. 23 cm. (A series of monographs prepared under the auspices of the American Society of Agronomy; general editor: A. G. Norman) $11.50. 7658

Contents: History and origin of corn, by P. Weatherwax and L. F. Randolph. Vegetative morphology, by J. E. Sass. Structure and arrangement of reproductive organs, by P. Weatherwax. The [illegible] of maize, by M. M. Rhoades. Corn breeding, by G. F. Sprague. Mineral nutrition of corn, by J. D. Sayre. Climatic requirements, by R. H. Shaw. Corn culture, by G. H. Stringfield. Production of hybrid corn seed, by J. M. Airy. Popcorn, by A. M. Brunson. Sweet corn, by G. M. Smith. Diseases of corn, by [illegible]. The most important corn insects, by [illegible]. Industrial utilization, by G. F. Sprague. The nutritive value of corn, by [illegible]. The world production of corn, by G. F. Sprague. Index.

Note: In the United States of America, corn (known in most other countries as maize; botanical name, *Zea mays*) is the most important crop grown for animal feed, and [illegible] is important in other countries of the world. Great strides have been made in its culture in recent decades, largely because [illegible] has been the subject of extensive scientific study and experimentation. Much of the knowledge gained in these studies and experiments [illegible] in the chapters of this monograph. The titles listed above indicate the book's scientific and cultural scope. Each of the chapters [illegible] an independent monograph of the subject treated in [illegible] based on an extensive survey of the literature, and includes [illegible] bibliography. A number of the chapters include [illegible]. Weatherwax's "Structure and development of reproductive organs," for example, contains 39 figures. The book [illegible] of interest to botanists, and other scientists engaged in agricultural research, plant breeding, etc.

STANTON, T. R.

Oat identification and classification. Washington, D. C., Government Printing Office, 1955. 2[illegible]6 p. illus. (part col.) 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1100) $1.50. 7659

Contents: Introduction. Previous investigations. Present investigations: Extent and nature of plant material. Identification procedure. Preparation of descriptions, histories, and distribution. The oat plant, its characters, and their value for classification. Morphological characters. Stem characters. Leaf characters. Panicle characters. Spikelet characters. Lemma characters. Awn characters. Caryopsis characters. Physiological characters. Classification of the genus *Avena*. Key to the species and subspecies. Large naked oat. Small naked oat. Wild red oat. Red oat. Desert oat. Slender oat. Sand oat. Abyssinian oat. Short oat. Wild oat. Common oat. (Common) tree oat. (Common) side oat. Literature cited. Index to species, varieties, and synonyms.

Note: This bulletin covers the description, history, distribution, and synonymy of the botanical and agricultural varieties of oats grown commercially. Also described are certain varieties of known, or potential, plant-breeding and taxonomic value that are grown and recognized primarily by agricultural experiment stations and other research institutions. The 12 species and subspecies are described in order, and under them are described a total of 227 varieties, of which 145 belong to the true oat subspecies. For each variety, in addition to the scientific description, the history, distribution, and synonyms are given. Spikelets and kernels of more than half the varieties are shown in [illegible] photographic illustrations.

STATEN, HI WILLIAMSON, AND MELVIN D. JONES

Farm crops judging, identification and grading. New York, McGraw-Hill Book Company, Inc., 1951. 251 p. illus. 24 cm. $5.00. 7660

Contents: Part I, The art and science of judging: Judging [illegible] Judging teams, and [illegible]. The art and science of judging. [illegible] Methods of giving reasons. [illegible] Training judging teams. Rules and regulations pertaining to crop judging contests. Calculation of the contestants' scores and score tabulation. Collection and preparation of fair exhibits. [illegible] Part II, Identification of farm crops, weeds, and diseases: Small grains. Sorghums. Forage grasses. Legumes. Other crops. Weeds. Diseases. Part III, Commercial grading: Grain, hay and cotton. Glossary. Bibliography. Index.

Note: The first part of this book is devoted chiefly to the judging of exhibits of agricultural crops at fairs and in contests of other kinds. It is a practical and fairly detailed manual, that is of interest not only to persons who will act as judges, but also to farmers and others who enter such competitions. The second part is a concise descriptive list of varieties of farm crops grown in the United States of America, of common weeds that infest them, and of diseases to which they are subject. Here, most verbal descriptions are supplemented by reproductions of drawings and photographs. The third part is a very short outline of the commercial grading of such crops as grain, hay and cotton.

THOMPSON, HOMER COLUMBUS

Vegetable crops. Fourth edition. New York, McGraw-Hill Book Company, Inc., 1949. 611 p. illus. 24 cm. (McGraw-Hill publications in the agricultural sciences. R. A. Brink, consulting editor) 7661

Contents: Vegetables and vegetable growing. Classification of vegetables. Soils and soil preparation. Manures. Soil-improving crops. Commercial fertilizers and lime. Seeds and seed growing. Plant growing and plant-growing structures. Planting vegetable crops in the open. Cultivation, mulches, and chemical methods of weed control. Irrigation. Rotation, succession, and intercropping. Control of diseases and insects. Marketing. Storage of vegetables. Perennial crops. Potherbs or greens. Salad crops. Cole crops. Root crops. Bulb crops. The potato. The sweet potato. Beans and peas. Solanaceous fruits. The cucurbits or vine crops. Sweet corn, okra, martynia. Literature cited. Index.

Note: A standard work since the publication of the first edition in 1923. It includes both theoretical and practical information [illegible] the chief vegetables of the nation. There are frequent references to experimental investigations, but the full descriptions of methods and findings the reader is referred to the source articles. The greater part of the book is devoted to descriptions of vegetables grown in the United States of America and to descriptions of good horticultural practices. A fifth edition, [illegible] p., illus., was published in 1957.

cultural practices, but also the names and characteristics of the leading varieties cultivated in the region to which the book pertains. Illustrations are numerous and consist primarily of reproductions of photographs of crops and cultural techniques.

MARTIN, JOHN HOLMES, AND WARREN H. LEONARD

Principles of field crop production. New York The Macmillan Company, 1949 1,176 p illus 22 cm. $6 75 7651

Contents (abridged) Part I, General principles of crop production Crop plants in relation to environment. Botany of crop plants. Crop improvement. Tillage practices. Fertilizer green-manuring, and rotation practices. Seeds and seeding. Harvest of field crops. Pastures and pasturage. Weeds and their control. Part II, Crops of the grass family: Indian corn or maize. Sorghums. Sugarcane. Wheat. Rye. Barley Oats. Rice. Millets. Perennial forage grasses. Part III, Legumes: Alfalfa. Sweetclover The true clovers. Lespedeza. Soybeans. Cowpeas. Field beans. Peanuts. Miscellaneous legumes. Part IV Crops of other plant families Buckwheat. Flax. Cotton. Tobacco. Sugar beets. Potatoes. Miscellaneous industrial crops. Sweetpotatoes. Part V Appendix: Seeding; seed and plant characteristics. The percentage composition of crop products. Glossary Index.

Note. An introductory but fairly inclusive textbook for use in agricultural courses. Somewhat less than one-third of the space is given to discussions of general principles and practices. The remainder of the space is occupied by descriptions of both major and minor crop plants. The discussions of the major plants are fairly long and are organized under subheadings, such as economic importance, adaptation, origin and history botanical description, general description, cultural and harvesting practices, uses, diseases and finally literature references. Crops of lesser importance are discussed somewhat more briefly The first-named author is senior agronomist in the Bureau of Plant Industry of the United States Department of Agriculture; the second is Professor of Agronomy in Colorado Agricultural and Mechanical College.

PRESLEY, JOHN T

Cotton diseases and methods of control. Revised November 1954 Washington, D C Government Printing Office, 1954 21 p illus (part col'd) 23 cm. (United States. Department of Agriculture. Farmers bulletin 1745) $0 20 7652

Contents Seedling diseases. Nematode injury Fusarium wilt. Verticillium wilt. Cotton root rot. Bacterial blight. Boll rots. Internal collar rot. Cotton rust. Ascochyta blight. Minor leaf spots. Acromania, or crazy top. Potash hunger or "rust. Crinkle leaf, or manganese toxicity Lightning injury 2 4-D injury

Note. T control diseases, the grower needs to know what organisms cause them, what the symptoms are, and the most effective control measures. This bulletin, prepared especially for cotton growers, gives such information on the more important diseases of cotton in the United States of America. It is revision of the edition prepared in 1935 by D. C. Neal and W W Gilbert.

RATHER, HOWARD C, AND CARTER M HARRISON

Field crops Second edition. New York McGraw Hill Book Company Inc 1951 446 p illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $6 50 7653

Contents. The significance of farm crops. Classification of farm crops. Field crops in relation to farm management. Soil conservation and management. Tillage and cultivation. Legumes for forage. Perennial forage grasses. Annual forage crops. Haymaking. Silage. Pastures and pasture management. The production of forage seed. Corn. Wheat and rye. Oats and barley Miscellaneous grain and seed crops. Small-grain and -seed harvest. Large-seeded legumes. Potatoes and sweet potatoes. Sugar crops. Cotton. Tobacco. Crop improvement. Appendix. Index.

Note. A book that enjoys wide use as text in short courses in agricultural colleges. It is written from the standpoint f practical agriculture, and describes the major crops grown as field crops in the United States of America, omitting fruits, garden vegetables, and specialized crops grown on relatively few acres. The treatment of individual crops varies, but generally speaking, soil and climatic conditions, economic importance, leading varieties, diseases and pests, and seeding and cultural practices are covered. Both in the general chapters at the beginning of the book and in the chapters on individual crops, there is emphasis on soil conservation practices, rotation of crops, etc. The first edition was published in 1942. Some revisions wer made in most chapters in preparing this second edition, but the book is not completely up to date on the culture of some crops, such as sugar beets.

ROSE, DEAN HUMBOLDT, AND HAROLD T COOK

Handling, storage, transportation, and utilization of potatoes a digest of information on the subject published mostly from 1938 to 1948 Washington, D C Government Printing Office, 1949 163 p illus. 23 cm. (United States. Department of Agriculture. Bibliographical bulletin no 11) Gratis. 7654

Contents Introduction. Varieties. Harvesting, handling and mechanical injury Grading, washing, and waxing. Vine killers. Precooling and transportation. Dormancy Storage (structures and operation) Potatoes in storage. Composition and dietetic value. Vitamin C content. Cooking quality Darkening of potatoes on cooking. Processing and byproducts. Consumer and market preferences. Diseases. Insect damage. Nematodes. Review papers. Conclusion.

Note One of series of digests planned to cover the biology and physical handling of important horticultural crops during the marketing period. The title and sub-title indicate the scope of the publication. Each chapter consists of a review of the literature of the subject of the chapter, followed by complete listing of bibliographical references. The conclusion brings out the importance of careful handling of potatoes at all stages following their harvest.

SANDO, W J

Buckwheat culture. Washington, D C. Government Printing Office, 1956 23 p. illus. 23 cm. (United States. Department of Agriculture. Farmers' bulletin no. 2095) $0 15 7655

Contents: Description of the plant. Climatic requirements. Soil adaptation. Soil preparation. Rotation. Fertilizers. Varieties. Seed and seeding. Harvesting. Threshing. Yield. Diseases and insects. Uses of buckwheat. Milling.

Note. Buckwheat (Fagopyrum spp.) is minor grain crop important for two main reasons, (1) it is considered the best grain crop to grow on land of low fertility (2) it matures quickly and can be grown when other crops fail or planting is delayed beyond the usual seeding date. It is raised chiefly in the northern portion of the United States of America, from Minnesota to Maine and in Canada and Europe. This bulletin is practical guide to its culture and harvesting. It supersedes Farmers' bulletin 1835.

SHOEMAKER, JAMES SHELDON

Vegetable growing Second edition. New York John Wiley & Sons, Inc. 1953 515 p. illus. 22 cm. $6 50 7656

Contents: Vegetable seed production. Perennial vegetable crops. Salad crops. Bulb crops. Legume or pulse crops. Root crops. Cole crops. Green crops. Potato. Sweetpotato. Solanaceous fruits. Vine crops. Miscellaneous vegetables, mushrooms, and herbs. Herbicides, insecticides and fungicides. References. Index.

Note. A comprehensive work on commercial vegetable growing in the continental United States of America and Canada. All of the vegetables now grown as crops for market are discussed from the growers' standpoint. The scientific aspects of seed selection, soil requirements, planting techniques, cultivation, insect and disease control, and harvesting are described for each crop. Other cultural techniques, such as greenhouse forcing and irrigation, are discussed for the crops to which they are applicable. The chapter on seed production is an important one for the grower even though he is interested in seeds only in regard to their selection. The first edition was published in 1947 Although much material has been carried over without change, numerous revisions have been made, including new material on hybrid varieties, on weeds, diseases and

UNITED STATES DEPARTMENT OF AGRICULTURE AGRICULTURAL MARKETING SERVICE

Handbook of official grain standards of the United States. Standards for wheat, effective August 2, 1954, corn, effective January 20, 1937, barley, effective July 1, 1956, oats, effective June 1, 1947, feed oats and mixed feed oats, effective July 1, 1935, rye, effective July 1, 1951, grain sorghums and flaxseed, effective July 1 1935 soybeans, effective September 1 1955 and mixed grain, effective July 1, 1935 Important features of grain inspection This publication was formerly issued as an unnumbered publication under the same title. Washington, D C Government Printing Office, 1956 104 p illus 15 cm (United States. Department of Agriculture Miscellaneous publication 722) $0.35 7662

Contents Grain standards Wheat standards. Corn standards. Barley standards. Oats standards. Feed oats standards. Mixed feed oats standards. Rye standards. Grain sorghums standards. Flaxseed standards. Soybeans standards. Mixed grain standards. Important features of grain inspection: Inspection requirements. Misrepresentation. Appeals, findings, and fees. Licensing of inspectors. Penalties. Regulations. Basis of inspection. Sampling of grain. Spout sampler or "Pelican." Grain probe (trier) and sampling canvas. Sample divider (Boerner sampler) Dockage tester Grain-testing sieves. Basis of determination for test weight per bushel. Standard method of making test-weight-per-bushel determination. Methods of making moisture tests. Electric moisture meter Equipment used in grain inspection.

Note. This handbook reprints the official standards for 11 kinds of grain marketed in the United States of America, showing classes and grades of each and defining them. The last 20 pages are devoted to miscellaneous information for persons concerned with grain-inspection work.

WALLACE, HENRY AGARD, AND EARL N BRESSMAN

Corn and corn growing 5th edition revised by J J Newlin, Edgar Anderson and Earl N Bressman New York John Wiley & Sons, Inc 1949 424 p illus. 21 cm (The Wiley farm series A K Getman and E R. Eastman editors) $5 50 7663

Contents History of corn. Importance of corn. Corn breeding. Corn genetics. Classification of corn. Development and parts of the corn plant. Preparation of the seed bed. Corn soils and fertilization f seed bed. Planting Cultivation. Weeds—prevalence and methods of control. Controlling insects, diseases, and other pests. Corn for fodder and silage. Corn performance trials. Sweet corn. Popcorn. Waxy corn. Corn as affected by temperature and rainfall. Growing, harvesting, and processing seed corn. Harvesting the crop. Feeding and marketing corn Cost of corn production. Competing corn-growing regions. Economic factors affecting corn prices. The interrelationship between corn and hogs. Problems and community studies. Corn products and their uses. Corn statistics. Glossary Index.

Note A comprehensive handbook on corn (maize) for students, farmers, and others with practical interests in this crop. The fifth edition has been extensively changed, rearranged, and modernized from the fourth edition f 1937 Emphasis in the new edition is on the tremendous changes in corn-growing practices since the previous edition. Among these are the greatly increased use of hybrid corn, the adaptation f mechanical equipment on farms (reflected in the reduction of number of illustrations showing horse-drawn equipment from 10 in the fourth edition to 1 in the fifth edition) increased application of fertilizers in corn-growing, and the introduction of new chemical methods for controlling weeds and insects. The statistical figures in the final chapter as elsewhere in the volume, have been brought up to date, as have the references at the ends of the chapters.

WATTS, RALPH L, AND GILBERT SEARLE WATTS

The vegetable growing business. Illustrated. Revised edition New York Orange Judd Publishing Company, Inc., 1947 542 p illus. 23 cm. $6.00 7664

Contents General view Locations and soils. Seeds. Plant growing. Management. Fertility program. Planting. Cultivation and weed control. Irrigation. Insects and diseases. Harvesting, packing and marketing. Storage. Cole crops. Salad crops. Tomatoes, peppers and eggplant. Bulb crops. Greens. Root vegetables. Perennial crops. Peas and beans. Potato and sweet potato. Sweet corn. Cucurbits. Okra, martynia and herbs. Vegetable forcing. Appendix. Index.

Note Large scale commercial growing of vegetables rather than home vegetable gardening is treated in this book. The space is about evenly divided between the chapters on general aspects such as the maintenance of fertility and the chapters on individual crops. In the latter the individual crops are described as to climatic and soil requirements, varieties, cultural practices, harvesting and marketing. The book is used both as text in agricultural colleges and as source of information by agricultural extension workers and farmers.

WEATHERWAX, PAUL

Indian corn in old America. New York The Macmillan Company, 1954 253 p. illus. (part col'd) 26 cm. $7.50 7665

Contents. Introduction—the problem. What to call the plant. Historical sources. How the Spanish found corn. How corn first went to Europe. How the Old World received corn. Where corn grew in old America. How corn was grown. Corn used for foods and drinks. Unusual uses of corn. Conservation of the cornlands. Corn from Asia? The search for wild corn. Maize and its relatives. The pod corn problem. Wild maize reconstructed. How the Indian improved corn. Corn and the culture of old America. Bibliography Index.

Note. Primarily this book is painstaking account of the status of corn (maize) and the system of agriculture and household arts based on it in 16th century America. Secondarily it is survey of the still unsolved problem of the origin of corn. The author, botanist and an authority on the history of corn based the work on an extensiv literature search as well as field investigation. However the book is much more readable than many scholarly productions and it is interestingly illustrated. There is a seven-page bibliography of sources.

WILSON, HAROLD K., AND WILL M MYERS

Field crop production, agronomic principles and practices. Philadelphia J B Lippincott Company, 1954 674 p. illus. 23 cm. $6.00 7666

Contents. The history of agronomy Plants and plant growth. Climate in relation to plant growth. Soils and their relation to plant growth. Crop sequence and maintenance of soil fertility Tillage in agriculture. Small grains and their culture. Corn. Sorghums, by A. F Swanson. Rice. Harvesting, storage, and marketing of grains. Annual legumes for forage and soil improvement. Biennial and perennial legumes for forage. Large seeded legumes grown primarily for seed. Annual forage grasses. Perennial cool season grasses. Perennial warm season grasses. Pastures of the northern humid region. Pastures of the southern humid region. Hay and grass silage. Sugar plants. Cotton, by D. G. Sturkie. Tobacco. Minor crop plants. Weeds. Crop improvement by plant breeding. Producing quality seed. Index.

Note: In this up-to-date textbook based upon research the authors present the elementary principles and practices of field crop production for college students. At the conclusion of each chapter is set of review questions and a list of selected references.

WILSON, HAROLD K.

Grain crops Second edition. New York McGraw Hill Book Company Inc., 1955 296 p illus. 24 cm (McGraw Hill publications in the agricultural sciences R. A Brink, consulting editor) $6 50 7667

Contents. Grain crops and environment. Plant classification. Distribution of grain crops. Crop rotation. Soils for grain crops.

The typical chapter is short; but the main facts are always presented, and each chapter is supplemented by references to longer treatments in professional periodicals. The book is organized so that it may be used as text in agricultural colleges. However, it is also useful reference manual for agricultural leaders and others in need of specific information about forage grasses.

JOINT COMMITTEE ON GRASSLAND FARMING

The new grassland-livestock handbook. Revised edition. Norman University of Oklahoma Press, 1955 48 p. illus. 20 cm. $0.50. 7677

Contents: Grassland for long profits. Establishing grassland program. Pasture—foundation of the grassland program. Irrigated pastures. Hay. Grass silage. Crop processing containers & storage structures. Machinery. Conclusions.

Note: An unpretentious but authoritative pamphlet addressed to practical farmers. It provides reliable and practical information in question-and-answer form on grassland farming. The committee that sponsors represents 19 agricultural, biological, and trade associations.

LUSH, R. H.

Pasture production and management. New York McGraw Hill Book Company Inc., 1952. 193 p. illus. 23 cm. $4.25 7678

Contents: History of pastures. Economic importance of pastures and other grassland. Pasture plants. Establishing new pastures. Management of old pastures. Supplementary pastures. Irrigated pastures. Nutritive value of pastures. Pastures for dairy cattle. Pastures for beef cattle. Pastures for sheep and goats. Pastures for horses and mules. Pastures for swine. Pastures for poultry. Utilization of grassland. Grassland pests and diseases. Control of weeds [illegible] grassland. Pasture demonstrations, contests, and techniques. General pasture recommendations. Bibliography. Index.

Note: An elementary practical manual written from the viewpoint of small farmers rather than that of operators of large ranches. It covers both the establishment of new pastures and the renovation of old. Some information is included on most aspects of the subject except costs, but no topic is covered in cyclopedic style. A series of 13 tables provides data on fertilizer requirements for pastures of varying types, the nutritive value of pasture forages, etc. The book [illegible] suitable for use as text in agricultural school courses and as first book on the subject for practical farmers. It contains an extensive bibliography of pamphlets and other publications available from the national and state governments in the United States of America at the time the book was written. The bibliography includes the other types of literature, such as books.

PRINCE, FORD S.

Grassland farming in the humid Northeast. Princeton. D Van Nostrand Company Inc., 1956. 441 p. illus. 24 cm. (The grassland farm series edited by William A. Wheeler) $6.50. 7679

Contents: What is grassland farming? Grass and soil conservation. Climate, soils, and grass. Extraordinary grassland crops. Seed mixtures. Semipermanent pastures. Grass silage. Hay and hay making. Permanent pastures—use and renovation. The economics of grassland farming. Adapting machinery to grassland farming. Utilization of grass by dairy animals. Utilization of grass by other livestock. Lime for grasslands. High fertility for grasslands. Alfalfa. Ladino clover. Other important legumes. Smooth bromegrass and timothy. Orchardgrass, tall fescue, and other grasses. Annual crops [illegible] grassland farming. Forage crop pests. Forage and pasture programs. Index.

Note: The farming practices described in the book were in part developed and are all applicable in the northeastern segment of continental United States of America and adjacent regions of Canada. Although the establishing and maintenance of pastures is primary topic, the book covers all phases of grassland farming including the growth, curing and storage of forage crops for winter use. The results of many research studies published in recent years have been incorporated, along with descriptions of good farming practices. The author [illegible] Professor of Agronomy at the University of New Hampshire, and the book is organized for use as text in agricultural colleges. However, each of its chapters contains section entitled "Summary and recommendations" which makes its contents readily available to practical farmers and to those who advise them, such as agricultural extension workers. The book is illustrated with numerous photographs of legumes, grasses, pastures, etc.

SERVISS GEORGE H., AND GILBERT H. AHLGREN

Grassland farming. New York John Wiley & Sons Inc., 1955 146 p illus. (part col d) 22 cm. $2 96 7680

Contents. Growing grassland crops. Using forage in livestock feeding. Growing forage for profit. Selecting legumes. Selecting grasses. Choosing seed and establishing seedlings. Adding lime and fertilizer. Managing pastures. Managing hay crops. Preserving forage. Conservation cropping. Equipping the grassland farm. Index.

Note: A brief but authoritative and useful presentation of information on grassland farming. Those aspects of the subject which are of most interest and value to practical farmers are compactly discussed in style that is easy to comprehend. The book is suitable for use as text in introductory courses offered at the high school and vocational school level, and for reading by practical farmers. Selected literature references are included.

STATEN HI WILLIAMSON

Grasses and grassland farming. Introduction by Louis Bromfield. New York The Devin-Adair Company 1952 319 p. illus. 22 cm. $5.00 7681

Contents. Man and grass. Grass the money maker. Building better pastures. Good pasture management. Year-round pastures. Regrassing abandoned land. Scorched earth. Grass for gully prevention. Down to the grass roots. Producing and harvesting grass seed. Grasses for the hay and pasture region. Grasses for the cotton belt. Grasses for the prairies. Grasses for the plains. Grasses for the western United States. Tailor-made grasses. Grass breeding. Appendix. Bibliography. Index.

Note: A practical discussion of the role of grass in the feeding of livestock. It is not textbook but is addressed to farmers and ranchers on the one hand and soil conservationists, teachers, and lay readers on the other. The author indicates the changes which have been reducing the acreage of tall grass prairie in the United States of America and the means whereby the trend may be reversed to the advantage of the national economy. He further shows how the individual farmer by study of his grasses and legumes can greatly develop them and thus increase his livestock profits, how the farmer by starting new grasses adapted to his soil and climate can raise new milk and beef income, and how the farmer can obtain maximum production per acre and at the same time conserve the stand of grass and the richness of the soil. Much practical information is included about the kinds of grasses for various purposes, and there are sketch maps to show distribution of different prairie grasses in the United States.

STODDART LAURENCE A., AND ARTHUR D SMITH

Range management. Second edition. New York. McGraw Hill Book Company Inc., 1955 433 p. illus. 23 cm. (The American forestry series. Henry J Vaux, consulting editor) $7.50 7682

Contents: Development of range management in the United States. Physical features of the western United States affecting range use. Grazing regions of the United States. Plant physiology in relation to grazing. Plant ecology in relation to grazing. Technical methods. Range inventory and condition classification. Relationship of native forms to ranges and range use—grazing to timber, water production, and soil conservation. Poisonous-plant problems on the range. Nutrition in relation to range management. Livestock management and ranch-operation problems. Securing proper range use. Increasing undesirable range plants. Artificial seeding of range lands. Range improvements. Index.

Note: Written by two faculty members of Utah State Agricultural College, the book deals in thorough manner with the management of range lands, such as are characteristic of many sections of western United States of America. The discussion is not limited to this area, but the range management principles and practices of the region predominate. The emphasis is on ecological

ARCHER, SELLERS G, AND CLARENCE E BUNCH

The American grass book. A manual of pasture and range practices Norman University of Oklahoma Press, 1953 330 p. illus 24 cm. $3 95 7672

Contents (abridged) Section I, Permanent agriculture based on grass. The importance of grass. Grass in soil development. Grass the conservator Section II, Planting grass The change to grassland. Choosing the grass that fits the farm. Using the land that fits the grass. Preparing the land. Planting operations. Section III, Management of grasslands. Take half and leave half. Management of native pastures and ranges. Management of tame pastures. Management of irrigated pastures. Section IV Seed production. Section V Grasses. Characteristics of individual grasses and legumes. List of grasses. Descriptions of individual grasses. Section VI, Legumes. List of legumes. Descriptions of individual legumes. Section VII, Pasture and hay mixtures. Bibliography Index.

Note. Grasses and legumes as pasture are the subjects of this reference manual. About half of the book deals with modern range practices. The other half is devoted to descriptions of individual grasses and legumes accompanied by photographic illustrations and maps showing distribution of the individual species in continental United States of America. Although written chiefly to help farmers and ranchers plan and establish grasslands on a sound basis, the book could also be used as a college textbook.

DONAHUE, ROY L, AND OTHERS

The range and pasture book. By Roy L. Donahue, Everett F Evans and L I Jones. Englewood Cliffs, N J Prentice-Hall, Inc., 1956 406 p illus 23 cm. $6 00 7673

Contents. Grasslands and their use. Grasslands pay The important grasses. Legumes in grassland agriculture. Pastures. Range management. Hay and silage. Grasses for soil and water conservation Grassland watersheds. Grasslands and wildlife. Principles of grassland agriculture. The grassland program. Three blades of grass. Bibliography Index.

Note The broad aspects of grassland agriculture in continental United States of America are combined in this book, with explicit discussions of good practices. The treatment is elementary but authoritative and up to date. The book is suitable for use as text in vocational schools and for reading by anyone who is in need of a book on this subject that is easy to understand. The bibliography provides a good selection of other books, including more advanced books, on grassland management and the raising of livestock on pasture and range. The volume is lavishly illustrated with 278 figures, most of which are reproductions of photographs.

HANSON, A. A, AND H. L CARNAHAN

Breeding perennial forage grasses. Washington, D C Government Printing Office, 1956 116 p illus. 23 cm (United States. Department of Agriculture. Technical bulletin no 1145) $0 40 7674

Contents Introduction. Problems and concepts. Adaptation and natural selection. The role of cytogenetics. Heritability Combining ability Breeding objectives. Breeding procedures. Multiplication and varietal release. Experimental techniques. Conclusion. Literature cited.

Note. Interest in grassland farming and increased use of forage crops in agricultural systems bring attention to possibilities of developing new and better varieties of the major forage grass species. This bulletin appraises the problems confronting the forage grass breeder and summarizes the techniques and methods that are at his disposal. Among the experimental techniques summarized are propagation of breeding materials, induction of flowering in the greenhouse, isolation and hybridization, harvesting seed, threshing and processing seed, note-taking systems, maintaining records, plot technique, and botanical analysis.

HARLAN, JACK R.

Theory and dynamics of grassland agriculture Princeton D Van Nostrand Company, Inc., 1956 281 p. illus 24 cm. (The grassland farm series edited by William A. Wheeler) $6 75 7675

Contents Some principles of grassland geography Some principles of grassland ecology Grasslands of the world. Evolution in the grass family The leguminosae. Some principles of plant physiology Some properties of soils. Some principles of animal nutrition. On the application of fundamentals. Mensuration of forages. Theory of range management. Theory of pasture management. Index.

Note. More advanced and fundamental in viewpoint than the frankly practical texts and manuals, this book is suitable for use as a textbook in advanced college courses and as background reading for specialists in agronomy Its chapters on geography are not essential reading for practical farmers, but they supply a helpful background for specialists and those preparing for specialization in this area of agriculture. The chapters on the evolution of grasses and on plant physiology are more closely related to practice, but even these are not directed to farmers. In contrast, the group of chapters that begins with "On the applications of fundamentals" are related directly to practical management of grasslands and are of interest to such readers as agricultural extension workers. Short lists of suggested reading are included in some of the chapters. The author is Professor of Agronomy at Oklahoma Agricultural and Mechanical College.

HUGHES, HAROLD DE MOTT, AND OTHERS, editors

Forages, the science of grassland agriculture. Under the editorial authorship of H. D Hughes Maurice E Heath, and Darrel S. Metcalfe. Ames The Iowa State College Press, 1951 724 p illus. 26 cm. $5 95 7676

Contents. Part I Forages and productive agriculture Forages in our advancing civilization, by H. D Hughes. What is grassland farming? by M. E. Heath. Economic aspects of forage production, by E. O. Heady Forages and soil conservation, by G. M. Browning. Soil fertility and the nutritive value of forages, by R. L. Lovvorn and W W Woodhouse, Jr. Forage statistics, by D S. Metcalfe. Part II Forage grasses and legumes. The botany of grasses and legumes, by D S. Metcalfe. Legume and grass seed production, by R. A. Hollowell. Forage crop breeding, by I. J Johnson. The inoculation of legumes, by O. N Allen. Alfalfa, by H. M. Tysdal. Red clover and alsike clover by C. P Wilsie. Sweetclover, by W K. Smith. Ladino and other white clovers, by E. A. Hollowell. Lespedeza, by C. A. Hein. Crimson clover, by E. A. Hollowell. Birdsfoot trefoil, by H. D Hughes and H. A. MacDonald. The vetches, by R. McKee. Other legumes, by R. McKee. The bluegrasses, by E. V. Fergus. The brome grasses, by L. C. Newell and K. L. Anderson. Timothy by M. W Evans. Orchardgrass, by W M. Myers. Bermuda-grass, by G. W Burton. Dallisgrass, Bahiagrass, and Vasey grass, by H. W Bennett. Reed canarygrass, by M. E. Heath and H. D. Hughes. The fescues, by R. Y Bailey The ryegrasses, by H. A. Schoth. Redtop and the bentgrasses, by J A. De France. The wheatgrasses, by C. McKee. Johnsongrass, carpetgrass, and other grasses for the humid South, by H. W Bennett. Other grasses for the North and West, by V B. Hawk. Cereals as forage, by M. A. Sprague. Sorghums for forage, by J. R. Quinby and R. E. Karper Millets and kochia, by W W Worzella. Rape, kale, and similar forages, by C. S. Dorchester Part III, Forage production practices. Soil, climate, and use in choosing forage crops, by O. S. Aamodt. Establishment of new seedings, by C. J. Willard. Fertilization of forages, by G. O. Mott. Weed control in forages, by C. J. Willard. Hay and pasture seedings for the Northeast, by V. G. Sprague. Hay and pasture seedings for the Central and Lake states, by H. L. Ahlgren. Hay and pasture seedings for the humid South, by D G. Sturkie. Hay and pasture seedings for the northern Great Plains and Intermountain states, by L. C. Newell. Hay and pasture seedings for the southern Great Plains, by R. C. Potts. Hay and pasture seedings for the Pacific Coast states, by A. L. Hafenrichter. Part IV Forage utilization What is quality hay? by G. Bohstedt. Mechanization of haymaking and storage, by E. L. Barger Grass-legume silage, by C. R. Bender Dehydration of forage crops, by A. C. Arny R. E. Miller Emergency hay and pasture crops, by D. R. Permanent pastures, by M. A. Hein. Rotation pastures, by M. Dodd. Range pasture, by D A. Savage. Irrigated pastures, by William L. Peterson. Forages for dairy cattle, by R. E Hodgson. Sheep are efficient of forages with beef cattle, by R. F Fuelleman. Forage utilization by horses of forages, by W G. Kammlade. Forage for poultry by D C. Kennard. Terminology by G. O. Mott. Author Index. Subject index.

Note. Each of the short chapters in this comprehensive work was written for it by a college professor or other specialist. He is recognized as an eminent authority on the specific topic of his chapter.

The typical chapter is short; but the main facts are always presented, and each chapter is supplemented by references to longer accounts in professional periodicals. The book is organized so that it may be used as a text in agricultural colleges. However, it is an useful reference manual for agricultural leaders and others in need of specific information about forage grasses.

JOINT COMMITTEE ON GRASSLAND FARMING

The new grassland-livestock handbook. Revised edition. Norman University of Oklahoma Press, 1955 48 p. illus. 20 cm. $0.50 7677

Contents: Grassland for long profits. Establishing grassland program. Pasture—backbone of the grassland program. Irrigated pasture. Hay. Grass silage. Crop processing containers & storage structures. Machinery. Conclusion.

Note: An unpretentious but authoritative pamphlet addressed to practical farmers. It provides sensible and practical information in question-and-answer form on grassland farming. The committee that prepared it represents 19 agricultural, biological, and trade associations.

LUSH, R. H.

Pasture production and management. New York. McGraw Hill Book Company Inc. 1952. 193 p. illus. 23 cm. $4.25 7678

Contents: History of pastures. Economic importance of pasture and other grassland. Pasture plants. Establishing new pastures. Management of old pastures. Supplementary pastures. Irrigated pastures. Nutritive value of pastures. Pastures for dairy cattle. Pastures for beef cattle. Pastures for sheep and goats. Pastures for horses and mules. Pastures for swine. Pastures for poultry. Utilization of grassland. Grassland pests and diseases. Control of weeds in grassland. Pasture demonstrations, contests, and techniques. General pasture recommendations. Bibliography. Index.

Note: An elementary practical manual written from the viewpoint of small farmers rather than that of operators of large ranches. It covers both the establishment of new pastures and the renovation of old. Some information is included on most aspects of the subject except costs, but no topic is covered in cyclopedic style. A series of 13 tables provides data on fertilizer requirements for pastures of varying types, the nutritive value of pasture forages, etc. The book, suitable for use as a text in agricultural school courses and as a first book on the subject for practical farmers. It contains an extensive bibliography of pamphlets and other publications available from the national and state governments in the United States of America at the time the book was written. The bibliography includes also other types of literature, such as books.

PRINCE, FORD S

Grassland farming in the humid Northeast. Princeton. D Van Nostrand Company Inc., 1956. 441 p. illus. 24 cm. (The grassland farm series edited by William A. Wheeler) $6.50. 7679

Contents: What is grassland farming. Grass and soil conservation. Climate, soils, and grass. Establishing grassland crops. Seed mixtures. Improvement pastures. Grass silage. Hay and hay making. Permanent pastures—use and renovation. The economics of grassland farming. Adapting machinery to grassland farming. Utilization of grass by dairy animals. Utilization of grass by other livestock. Lime for grasslands. High fertility for grasslands. Alfalfa. Ladino clover. Other important legumes. Smooth bromegrass and timothy. Orchardgrass, tall fescue, and other grasses. Annual crops in grassland farming. Forage crop pests. Forage and pasture programs. Index.

Note: The farming practices described in this book were in part developed and are all applicable in the northeastern segment of continental United States of America, and adjacent regions of Canada. Although the establishment and maintenance of pastures is a primary topic, the book covers all phases of grassland farming including the growth, cutting and storage of forage crops for winter use. The results of many research studies published in recent years have been incorporated, along with descriptions of good farming practices. The author, Professor of Agronomy in the University of New Hampshire, and the book is organized for use as a text in advanced courses. However, each of its chapters contains a section entitled "Summary and recommendations" which makes its contents readily available to practical farmers and to those who advise them, such as agricultural extension workers. The book is illustrated with numerous photographs of legumes, grasses, pastures, etc.

SERVISS GEORGE H., AND GILBERT H. AHLGREN

Grassland farming. New York John Wiley & Sons, Inc., 1955 146 p. illus. (part col d) 22 cm. $2 96 7680

Contents: Growing grassland crops. Using forage in livestock feeding. Growing forage for profit. Selecting legumes. Selecting grasses. Choosing seed and establishing seedlings. Adding lime and fertilizer. Managing pastures. Managing hay crops. Preserving forage. Conservation cropping. Equipping the grassland farm. Index.

Note: A brief but authoritative and useful presentation of information on grassland farming. Those aspects of the subject which are of most interest and value to practical farmers are compactly discussed in a style that is easy to comprehend. The book is suitable for use as a text in introductory courses offered at the high school and vocational school level, and for reading by practical farmers. Selected literature references are included.

STATEN HI WILLIAMSON

Grasses and grassland farming Introduction by Louis Bromfield. New York The Devin-Adair Company 1952 319 p. illus. 22 cm. $5.00. 7681

Contents: Man and grass. Grass the money maker. Building better pastures. Good pasture management. Year-round pastures. Regrassing abandoned land, scorched earth. Grass for gully prevention. Down to the grass roots. Producing and harvesting grass seed. Grasses for the hay and pasture region. Grasses for the cotton belt. Grasses for the prairies. Grasses for the plains. Grasses for the western United States. Tailor-made grasses. Grass breeding. Appendix. Bibliography. Index.

Note: A practical discussion of the use of grass in the feeding of livestock. It is not a textbook but is addressed to farmers and ranchers on the one hand and soil conservationists, teachers, and lay readers on the other. The author indicates the abuses which have been reducing the acreage of tall grass prairie in the United States of America and the means whereby the trend may be reversed to the advantage of the national economy. He further shows how the individual farmer by a study of his grasses and legumes can greatly develop them and thus increase his livestock profits, how the farmer by starting new grasses adapted to his soil and climate can realize new milk and beef income, and how the farmer can obtain maximum production per acre and at the same time conserve the stand of grass and the richness of the soil. Much practical information is included about the kinds of grasses for various purposes, and there are sketch maps to show distribution of different prairie grasses in the United States.

STODDART LAURENCE A. AND ARTHUR D SMITH

Range management. Second edition. New York McGraw Hill Book Company Inc., 1955 433 p. illus. 23 cm. (The American forestry series. Henry J Vaux, consulting editor) $7.50 7682

Contents: Development of range management in the United States. Physical features of the western United States affecting range use. Grazing regions of the United States. Plant physiology in relation to grazing. Plant ecology in relation to grazing. Technical methods. Range inventory and condition classification. Relationship of native forms to ranges and range use—grazing in timber, water production, and soil conservation. Poisonous-plant problems on the range. Nutrition in relation to range management. Livestock management and ranch-operation problems. Securing proper range use. Eradicating undesirable range plants. Artificial seeding of range lands. Range improvements. Index.

Note: Written by two faculty members of Utah State Agricultural College, this book deals in a thorough manner with the management of range lands, such as are characteristic of many sections of western United States of America. The discussion is not limited to that area, but the range management principles and practices of that region predominate. The emphasis is on ecological

relationships and on management practices that are both practical and productive of the most forage suitable for grazing. Conservation is an underlying theme but is not stressed. Some information is included on the management of cattle and sheep while on the range. Extensive literature references are a feature of most chapters. In this second edition, there are 116 figures, many of which are photographs of range scenes. The first edition was published in 1943 and it was very extensively revised and augmented for this second edition in text, illustrations, and bibliographies.

THARP, BENJAMIN CARROLL

Texas range grasses With drawings by Clare Y Whaley Austin University of Texas Press, 1952 125 p illus 26 cm. $4 00 7683

Contents: Introduction. The longleaf pine region. The coastal prairie region. The Fayette prairie region. The mesquite-chaparral region. The coastal mainland dunes region. The oak-hickory-mesquite region of the Llano uplift. The oak juniper region of the Edwards plateau and the Lampasas Cut plain. The montane forest and oak savanna region. The live oak-mesquite savanna region. The foothill-Mesa-Valley region of the trans-Pecos Texas. The sandy south plains region. The high plains region. The mesquite savanna region. The western cross timbers region. The eastern cross timbers region. The oak-hickory forest region. The pine-oak forest region. The blackland prairie region. Summary notes on Texas range grasses and their relatives beyond Texas borders. Appendixes The chemical composition of grasses from three Texas regions. Texas range and forage grasses, a comprehensive analytic list distribution and relative abundance of the more important species. Bibliography

Note. A survey of the distribution and relative abundance of the 148 species of grasses which are important as grazing plants in Texas. Following the geographic introductory sections, the 18 vegetational regions of the state are described and the distribution of their grasses analyzed. The work is written in nontechnical fashion, and 25 species are illustrated in full-page drawings for purposes of identification. The publication was prepared as a basis for further research and study in the program of Texas grassland improvement launched by the Grass Research Project of the Plant Research Institute.

UNITED STATES DEPARTMENT OF AGRICULTURE

Grass. Washington, D C Government Printing Office, 1948 892 p illus (part col'd) 24 cm. (United States. Department of Agriculture. Yearbook of agriculture 1948) $2 00 7684

Contents (abridged) Grass in the nation's life. Soil, grass, conservation Environment of natural grassland. How soils develop under grass. The tools of flood control. Grasses that fix sand dunes. Forage for livestock Soils, crops, minerals, animals. Grassland crops as feed for horses. The vital 10 percent for poultry Sheep, goats, and grasslands. Use of forage in feeding hogs. Grass for the production of beef. Dairy cattle must have good forage. The use and value of pastures The management of grazing. Management of irrigated pastures. Grass in natural forested areas. Soil management on farm pastures. Storage of forage: Principles of making hay The costs and ways of making hay Ensiling hay and pasture crops. Grass and rotations: Grass and the yields of cash crops. Fertilizers for grass in rotations. The range, a major resource How range forage grows. The major range types. Planning range conservation. Spacing water holes to save grass. Wildlife, a resource of the range. How to control noxious plants. Enemies of grass. Some diseases of forage grasses. Some diseases of forage legumes. Some of the insects. Grass for happier living Sod is ideal for playing fields. Pointers on making good lawns. Safety and beauty for highways. Airfields and flight strips. The search for better grass The breeder's ways and means. Wanted—a paragon for the range. Immigrants to our grasslands. Domesticated grasses in conservation. Improved varieties of alfalfa. Clovers that make a crop. The other pasture legumes. Developing grasses for special uses. Grass in the ten regions. The Northeastern states. Corn Belt and Lake states. Grasslands in the South. The Southern Great Plains. The Mountain region. The Pacific Coast states. Grasslands in Alaska. Grasslands in Hawaii. Grasslands in Puerto Rico. Grass in charts and tables. Lists of plant names. Scientific names. Common names. For further reference. Index.

Note: An exceptionally complete treatise on grass in all its varieties, uses, and localities. It was written by staff specialists of the United States Department of Agriculture, and grasses grown in the United States are emphasized. The book is divided into four parts: the first an examination of grass as it applies to people anywhere, with emphasis on livestock, soils and conservation the second, a series of studies of grass in the regions of the United States of America, with emphasis on varieties and uses; the third, a handbook describing systematically the most important and most useful grasses, legumes, and associated plants, the last, a section of charts and tables, including recommended hay and pasture mixtures and quantity of seed per acre for various states, followed by a bibliography of 24 pages and an index. In addition, there are included two extensive sections of photographic illustrations, one of the sections in full color

WHEELER, WILLIAM ARCHIE

Forage and pasture crops. A handbook of information about the grasses and legumes grown for forage in the United States. Prepared under the auspices of The Field Seed Institute of North America, with the cooperation and assistance of the agronomists, forage crop specialists, and other specialists of the United States Department of Agriculture and the state agricultural colleges and experiment stations. New York D Van Nostrand Company, Inc., 1950 752 p. illus. 23 cm. $10 00 7685

Contents. Part I, Forage and pasture crops—general: Grasses and legumes as forage and pasture crops. Soils and fertilizers for forage and pasture crops. Inoculation of legumes. Green manure and cover crops. Establishment and management of pastures. Hay making. The making of silage. Improving our forage and pasture crops. Pests of forage and pasture crops. Part II, Special crops—legumes: Alfalfa. True clovers. Sweetclover Lespedeza. Vetch and field pea. Cowpea, soybean, and velvetbean. Lotus-trefoils. Southern legumes for forage and soil improvement. Part III, Special crops—grasses: Timothy Orchardgrass. Bluegrasses. Bromegrasses. Fescues. Other northern forage grasses. Wheatgrasses. Buffalograss and gramas. Other Great Plains grasses. Southern forage grasses. Sorghums, Sudangrass, and Johnsongrass. Millets. Part IV Seed tables and references: Tables; data on seed, nomenclature, and adaptation of grasses and legumes. References, by State, U.S.D.A., and miscellaneous, cross-references by authors. Index.

Note. A comprehensive handbook of information about the legumes and grasses grown for forage and pasture in the United States of America. The general part takes up pasture crops, their distribution, soil requirements, methods of cultivation and harvesting, breeding for improvement, and their diseases and pests. Summaries and references are given at the ends of the chapters. The parts describing the individual legumes and grasses cover origin, history distribution, description, adaptation, selecting and preparing the land for planting, sowing the seed, cultivation and harvesting, the pests, weeds, and diseases of each of the legumes and grasses in turn, with suitable illustrations, notes as to regional cultural requirements, descriptions of the chief varieties, summaries, and bibliographical references. The book is of value to all persons concerned with grass and legume crops, including college students and teachers, soil conservation specialists, county agents, farmers, stockmen, and seedsmen.

GARDENING

AMERICAN ROSE ANNUAL 1956 Edited for the American Rose Society by Fred J Nisbet, with the assistance of Margaret E. Harbaugh. Columbus American Rose Society, 1956 261 p illus. (part col'd) 20 cm. $4.50 7686

Contents (abridged) Roses in western Europe, 1955, by E. De T Bechtel. Perpetual flowering roses, by V Young. Tests with fungicides for blackspot, by L. M. Massey and J. A. Naegele. Use of chemicals in Preservation of rose budwood, by E. W Lyle. Germination breaking seed dormancy in hybrid roses, by D. Morey Nematodes as pests of roses, by G. D. Rowley in Rosa ... by H. M. W R. Jenkins. Maintaining soil fertility for roses, by ... Waddoups. Difference in resistance to spring freezes in rose varieties, by H. R. Rosen. New approach to the breeding of hardy roses, by F L. Skinner Growing roses in a dry climate by R. C. Ward. New roses of the world. Patented roses in the United States. Index.

Note: Although directed more to amateur gardeners than to professional nursery men and growers of roses, this annual publication contains information of interest to both groups. The material in it ranges all the way from poems about the rose to articles on hybridizing and other technical subjects. Considerable space is always devoted to describing new varieties and experience with established ones. A permanent feature, under the title *Proof of the pudding*, summarizes the reports of selected members and co-operating sources on the response of new varieties to culture in their localities. A new variety is carried in this feature for five years after its introduction, and on the basis of the reports made to the American Rose Society is assigned a numerical rating of its over-all excellence.

BAILEY LIBERTY HYDE

The garden of gourds, with decorations. New York. The Macmillan Company 1937 134 p. illus. (part col'd) 24 cm. $2.98. 7687

Contents: Cucurbita pepo, and the yellow-flowered gourds. Cucurbita *Cucurbita pepo* var. *ovifera*. *Cucurbita-Pelon* gourd. Cucurbita *Cucurbita* *Cucurbita ficifolia*. *Cucurbita maxima* var. *turbaniformis*. *Cucurbita foetidissima*. *Cucumis* and *Cucumis anguria*. *Cucumis dipsaceus*. *Lagenaria siceraria*. *Luffa*, the vegetable sponge. *Trichosanthes anguina*. *Benincasa hispida*. *Momordica charantia* and *M. balsamina*. *Momordica cochinchinensis*. *Cyclanthera*. *Echinocystis lobata*. Index.

Note: A book of pen-and-ink drawings of the various species of gourds, with maps, semitechnical descriptive text for the interested layman. The advantages of the gourds as garden plants and ornaments for the home are indicated.

BAILEY LIBERTY HYDE AND ETHEL ZOE BAILEY compilers

Hortus second, a concise dictionary of gardening, general horticulture and cultivated plants in North America. New York The Macmillan Company 1941 778 p. illus. 26 cm. $12.50. 7688

Note: A concise dictionary of gardening and horticulture, based on the author's Hortus, New York, 1930, but it has been revised, reset, and issued in new format. It is designed to present in a single volume a comprehensive record of the plants in cultivation on the North American continent, a convenient reference book for cultural methods, backgrounds of plants, special types of horticulture, uses of plants, soil requirements, transplanting, propagation, methods, diseases and botanical names, spelling, definitions of terms, nature habitats, present range, distribution. It is useful to gardeners, growers, nurserymen, dealers, propagators, garden club members, landscape architects, botanists, teachers, and students.

BUSH-BROWN LOUISE, AND JAMES BUSH-BROWN

America's garden book. New revised edition. New York Charles Scribner's Sons, 1952 1,242 p. illus 21 cm. 7689

Contents: Soil and soil improvement. Design. Construction problems. Lawns. Ground covers. Vines. Trees. Shrubs. Hedges. Annuals. Biennials. Herbaceous perennials. Bulbs, corms, and tubers. Lilies. Roses. Rock and wall gardens. The woodland garden. Water and bog gardens. The herb garden. City gardens. Flower pot gardens. Coldframes and hotbeds. The small greenhouse. House plants and the window garden. The control of undesirable plants. The home fruit garden. The home vegetable garden. Garden practices. Tools and garden equipment. Propagation. Plant diseases and pests. Diseases and insect pests of trees and shrubs. Diseases and insect pests of common garden plants. Miscellaneous insect pests, rodents, and animals. Garden calendar. Maps. Glossary. Index.

Note: A standard comprehensive handbook of garden making and related matters that are of interest to home owners in the United States of America. It is addressed mainly to persons who design their own gardens and so assume the major responsibility for their planting and maintenance. However, the book does contain reference features, such as long lists of plants classified by various qualities and requirements, that are useful to professional landscape gardeners. Revisions and additions in the present edition are not major. A new chapter on the control of undesirable plants has been substituted for the former chapter on the culture of plants in nutrient solutions. A new edition, also designated as "new revised edition" was published early in 1958, 763 p., $7.95.

CHRISTOPHER, EVERETT P

The pruning manual based on "The pruning-manual" by Liberty Hyde Bailey New York The Macmillan Company 1956 320 p. illus. 22 cm. $5.00. 7690

Contents: An introduction to pruning. Plant structure as related to pruning. Plant growth in relation to pruning. Pruning techniques. Pruning apple trees. Pruning pears, peaches and other deciduous fruits. Pruning evergreen fruits, nut trees and shrubs. Pruning dwarf trees. Grapes. Pruning small fruits. Pruning shade and ornamental trees. Prevention and repair of damage to trees. Pruning shrubs and vines. Pruning roses. Nursery practices. Grafting. Forestry. Response to special treatments. Pruning tools. Index.

Note: As noted in the title, this book is based on Bailey's *Pruning-manual* which was first published in 1898 and for half a century enjoyed the status of a standard work. In its new version the book remains a comprehensive, practical guide to the pruning of all kinds of fruits, vines and shrubs of horticultural interest. Both principles and techniques are discussed, and where there is variety of established methods as for grapes, the various methods are compared. There are 52 figures in the text and 13 plates.

CLARKSON ROSETTA E.

Herbs, their culture and uses. Illustrated by Tabea Hofmann. New York The Macmillan Company 1942 226 p. illus. 24 cm. $3.75 7691

Contents: Introduction. Why have herbs in your garden? Herb arrangements in the garden. Propagation of herbs. Outdoor planting. Cu... herb plantings. The country garden. Fragrant herb garden. Indoor herb gardens. Harvesting and drying. Herb dyes. Potpourri. Herb products. Herb vinegars. The use of herbs in cooking. Herb teas and beverages. Marketing of herbs. Tabular monographs on 101 useful herbs. Herb tables. Index.

Note: For the advanced amateur gardener who wishes to grow herbs.

DE GRAAFF JAN

The new book of lilies. New York M. Barrows and Company Inc., 1951. 176 p. illus. (part col'd) 21 cm. $3.50. 7692

Contents: The lily. How to grow lilies. In the garden. Growing lilies indoors. On parade. How to multiply. How new kinds are made. Progress to date. Lily troubles. Lily lists. Reference chart of species and varieties. Lily language. Glossary. Index.

Note: A complete and up-to-date book on the growing of lilies in the United States of America. The author has included an account of his own work in developing and propagating lilies in Holland, England, and the United States. The reference chart lists type, country of origin, year of introduction, season of bloom, height, dominant color, flower form, spacing in planting, stem roots, scent, and remarks for 115 species and varieties commonly grown. The section of color plates give full-page photographic reproductions of 37 varieties in full color. The work is useful both to amateurs and to commercial growers.

EDMOND JOSEPH B., AND OTHERS

Fundamentals of horticulture a textbook designed for courses in general horticulture. By J B Edmond, A. M. Musser and F S Andrews. New York McGraw-Hill Book Company Inc., 1951. 502 p. illus. 24 cm. 7693

Contents (abridged): Part I, Plant growth and development. Fundamental plant processes, tissues, and structures. The water supply. The nutrient supply. Part II, Principal horticultural practices. Propagation. Climate, soils, and soils. Plant growing structures. Transplanting—cultivating—irrigating. Pruning. Control of pests. Preservation. Part III, Principal horticultural crops: The tree fruits. Grapes, and small fruits. Nut fruits—subtropical fruits—

relationships and on management practices that are both practical and productive of the most forage suitable for grazing. Conservation is an underlying theme but is not stressed. Some information is included on the management of cattle and sheep while on the range. Extensive literature references are a feature of most chapters. In this second edition, there are 156 figures, many of which are photographs of range scenes. The first edition was published in 1943 and it was very extensively revised and augmented for this second edition in text, illustrations, and bibliographies.

THARP, BENJAMIN CARROLL.

Texas range *grasses* With drawings by Clare Y Whaley Austin University of Texas Press, 1952 125 p illus 26 cm. $4 00 7683

Contents Introduction. The longleaf pine region. The coastal prairie region. The Fayette prairie region. The mesquite-chaparral region. The coastal tableland desert region. The oak-hickory-mesquite region of the Llano uplift. The oak juniper region of the Edwards plateau and the Lampasas Cut plain. The montane forest and oak savanna region. The live oak-mesquite savanna region. The foothill-Mesa-Valley region of the trans-Pecos Texas. The sandy south plains region. The high plains region. The mesquite savanna region. The western cross timbers region. The eastern cross timbers region. The oak hickory forest region. The pine-oak forest region. The blackland prairie region. Summary notes on Texas range grasses and their relatives beyond Texas borders. Appendixes. The chemical composition of grasses from three Texas regions. Texas range and forage grasses, a comprehensive analytic list: distribution and relative abundance of the more important species. Bibliography

Note. A survey of the distribution and relative abundance of the 168 species of *grasses* which are important as grazing plants in Texas. Following the geographic introductory sections, the 18 vegetational regions of the state are described and the distribution of their grasses analyzed. The work is written in nontechnical fashion, and 23 species are illustrated in full-page *drawings* for purposes of identification. The publication was prepared as a basis for further research and study in the program of Texas grassland improvement launched by the Grass Research Project of the Plant Research Institute.

UNITED STATES DEPARTMENT OF AGRICULTURE

Grass Washington, D C. Government Printing Office, *1948* 892 p illus. (part col'd) 24 cm. (United States. Department of Agriculture. Yearbook of agriculture 1948) $2 00 7684

Contents (abridged) Grass in the nation's life. Soil, grass, conservation. Environment of natural grassland. How soils develop under grass. The tools of flood control. Grasses that fix sand dunes. Forage for livestock. Soils, crops, minerals, animals. Grassland crops as feed for horses. The vital 10 percent for poultry. Sheep, goats, and grasslands. Use of forage in fattening hogs. Grass for the production of beef. Dairy cattle must have good forage. The use and value of pastures. The management of grazing. Management of irrigated pastures. Grass in natural forested areas. Soil management on farm pastures. Storage of forage. Principles of making hay. The costs and ways of making hay. Fertilizing hay and pasture crops. Grass and rotations. Grass and the yields of cash crops. Fertilizers for grass in rotations. The range, a major resource. How range forage grows. The major range types. Planning range conservation. Spacing water holes to save grass. Wildlife, a resource of the range. How to control noxious plants. Enemies of grass: Some diseases of forage grasses. Some diseases of forage legumes. Some of the insects. Grass for happier living. Sod is ideal for playing fields. Pointers on making good lawns. Safety and beauty for highways. Airfields and flight strips. The search for better grass. The breeder's ways and means. Wanted—a paragon for the range. Immigrants to our grasslands. Domesticated grasses in conservation. Improved varieties of alfalfa. Clovers that make a crop. The other pasture legumes. Developing grasses for special uses. Grass in the ten regions. The Northeastern states. Corn Belt and Lake states. Grasslands in the South. The Southern Great Plains. The Mountain region. The Pacific Coast states. Grasslands in Alaska. Grasslands in Hawaii. Grasslands in Puerto Rico. Grass in charts and tables. Lists of plant names: Scientific names. Common names. For further reference. Index.

Note. An exceptionally complete treatise on grass in all its varieties, uses, and localities. It was written by staff specialists of the United States Department of Agriculture, and grasses grown in the United States are emphasized. The book is divided into four parts: the first an examination of grass as it applies to people anywhere, with emphasis on livestock, soils and conservation; the second, a series of studies of grass in the regions of the United States of America, with emphasis on varieties and uses; the third, a handbook describing systematically the most important and most useful grasses, legumes, and associated plants; the last, a section of charts and tables, including recommended hay and pasture mixtures and quantity of seed per acre for various states, followed by a bibliography of 14 pages and an index. In addition, there are included two extensive sections of photographic illustrations, one of the sections in full color.

WHEELER, WILLIAM ARCHIE

Forage and pasture *crops*. A handbook of information about the grasses and legumes grown for *forage in the United States*. Prepared under the auspices of The Field Seed *Institute of North America*, with the cooperation and assistance of the agronomists, *forage crop specialists* and *other specialists* of the United States Department of Agriculture and the state agricultural colleges and experiment stations New York D Van Nostrand Company, Inc., *1950* 752 p. illus. 23 cm. $10 00 7685

Contents. Part I, Forage and pasture crops—general: Grasses and legumes as forage and pasture crops. Soils and fertilizers for forage and pasture crops. Inoculation of legumes. Green manure and cover crops. Establishment and management of pastures. Hay making. The making of silage. Improving our forage and pasture crops. Pests of forage and pasture crops. Part II, Special crops—legumes: Alfalfa. True clovers. Sweetclover. Lespedeza. Vetch and field pea. Cowpea, soybean, and velvetbean. Large-trefoils. Southern legumes for forage and soil improvement. Part III, Special crops—grasses. Timothy. Orchardgrass. Bluegrasses. Bromegrasses. Fescues. Other northern forage grasses. Wheatgrasses. Buffalograss and gramas. Other Great Plains grasses. Southern forage grasses. Sorghums, Sudangrass, and Johnsongrass. Millets. Part IV Seed tables and references. Tables: data on seed, nomenclature, and adaptation of grasses and legumes. References, by State, U.S.D.A., and miscellaneous; cross-references by authors. Index.

Note. A comprehensive handbook of information about the legumes and grasses grown for forage and pasture in the United States of America. The general part takes up pasture crops, their distribution, soil requirements, methods of cultivation and harvesting, breeding for improvement, and their diseases and pests. Summaries and references are given at the ends of the chapters. The parts describing the individual legume and grass crops cover origin, history distribution, description, adaptation, selecting and preparing the land for planting, sowing the seed, cultivation and harvesting, weeds, and diseases of each of the legumes and grasses in turn, with suitable illustrations, notes as to regional cultural requirements, descriptions of the chief varieties, summaries, and bibliographical references. The book is of value to all persons concerned with grass and legume crops, including college students and teachers, soil conservation specialists, county agents, farmers, stockmen, and seedsmen.

GARDENING

AMERICAN ROSE ANNUAL *1956* Edited for the American Rose Society by Fred J Nisbet, with the assistance of Margaret E. Harbaugh. Columbus American Rose Society 1956 261 p illus. (part col d) 20 cm. $4.50 7686

Contents (abridged) Roses in western Europe, 1955, by E. De T. Bechtel. Perpetual flowering roses, by N Young. Tests of fungicides for blackspot, by L. M. Massey and J. A. Naegele. Preservation of rose bedwood, by R. W. Lyle. Use of chemicals in breaking seed dormancy in hybrid roses, by D. Hoerr. Germination in Rosa canina, by G. D. Rowley. Nematodes as pests of roses, by W. R. Jenkins. Maintaining soil fertility for roses, by H. M. Waddoups. Differences in resistance to spring freezes in rose varieties, by H. R. Rosen. New approach to the breeding of hardy roses, by F. L. Skinner. Growing roses in dry climates, by R. C. Ward. New roses of the world. Patented roses in the United States. Index.

HUME, H. HAROLD

Azaleas kinds and culture. New York. The Macmillan Company 1956 199 p. illus. (part col'd) 23 cm. $6.00 7700

Contents: Azaleas—an appreciation. Azalea botany. Where azaleas will grow. Deciduous azaleas. Persistent-leaved azaleas. Propagating azaleas. Soils and their preparation. Planting azaleas. Culture and care. Feeding azaleas. Pruning azaleas. Azaleas in gardens. Azaleas as pot plants. Greenhouse culture. Insect and mite pests. Azalea diseases. Index.

Note: A reliable, fully illustrated manual written from the horticultural viewpoint. It contains a short chapter on the botany of the azaleas, but all of the other chapters pertain to horticultural aspects such as desirable varieties for gardens, culture, propagation, and disease control. Both outdoor culture and greenhouse forcing are covered. There are eight full-page plates in color, and 48 in black-and-white.

HUME, H. HAROLD

Camellias kinds and culture. New York The Macmillan Company 1951 271 p. illus. (part col'd) 23 cm. $6.50 7701

Contents: Camellia geography. Camellia history. Camellia botany. Camellia classifications. Japonica camellias. Sasanqua varieties. Miscellaneous camellias. Naming camellia varieties. Propagating camellias. Soils and soil fertility. Planting camellias. Fertilizing camellias. Culture and care. Pruning and training. Camellias in gardens. Pot and greenhouse culture. Camellia diseases. Insects and other [illegible]. Index.

Note: A comprehensive book on the history and classification, kinds and varieties, and propagation and culture of camellias. The author wrote it [illegible] to be helpful to amateur camellia growers and covers all the details of care of the plant necessary to the achievement of success in the raising of this flower. The introductory chapters on the geography, history and botany of the camellia cover about 40 pages; the remainder of the volume is about equally divided between the descriptions of the varieties of camellias and the methods of culture. The work is handsomely illustrated with eight plates in full color and many others in black and white.

HUME, H. HAROLD

Hollies. New York The Macmillan Company 1953 242 p. illus. (part col'd) 23 cm. $6.75 7702

Contents: Holly and man. Botany of hollies. American holly varieties. English hollies. Chinese holly. Japanese holly. Miscellaneous evergreen hollies. Deciduous hollies. Chinese hollies. Intermediate hollies. Holly propagation. Holly pollination. Planting hollies. Holly culture. Values and uses. Holly enchantment. Holly pests. Index.

Note: Written primarily from the horticultural viewpoint, the book is a monograph on the trees and shrubs of the family Aquifoliaceae, popularly known as hollies. It provides morphological descriptions of the recognized species and varieties and described horticultural groups, such as the English hollies. It supplies, also, practical information on propagation and culture. There is a generous number of illustrations of several kinds. Some are plates reproduced in color; a considerable number are [illegible] reproductions of photographs, and some are reproductions of line drawings.

JEFFERSON, THOMAS

Thomas Jefferson's Garden book, 1766–1824 with relevant extracts from his other writings. Annotated by Edwin Morris Betts. Philadelphia The American Philosophical Society 1944 704 p. illus. 24 cm. (American Philosophical Society Memoirs. Volume XXII) $5.00 7703

Contents: Garden book for the years 1766–1824, with relevant extracts from Jefferson's other writings: Early years (1766–1775). Revolutionary period (1776–1783). Minister to France (1784–1789). Secretary of State (1790–1793). Monticello interlude (1794–1796). Vice President (1797–1800). President (1801–1808). Retirement (1809–1826). Appendices. Bibliography. Index.

Note: The varied entries in Jefferson's Garden book not only show us what he was doing and planting at Monticello, Poplar Forest, and his other estates, but also give a clue to his interests in introducing new plants and improving horticulture, viticulture, and many other aspects of the rural life of his time. The gardens and grounds at Monticello were experimental plots where new plants were introduced and nurtured, and are tied up with the agricultural and horticultural needs of the United States of America, as shown by Jefferson's attempts to introduce the cultivation of olive trees and dry rice into South Carolina and Georgia, mainly for improving the living conditions of the slaves. There are seven appendices giving Jefferson's summary of his meteorological journal, remarks on the water supply at Monticello, lists of plants sent by Jefferson to Paris, and other related extracts.

LEVISON, JACOB JOSHUA

The home book of trees & shrubs. A complete guide to the design, planting, and care of the home grounds, with information on lawns, woodlands, flower borders, garden accessories, and the identification of trees. Second edition, completely revised, enlarged, and reset. New York Alfred A. Knopf 1949 524 p. illus. 28 cm. $12.50. 7704

Contents: What trees can teach us. Structure and habits of trees and shrubs. Types and kinds of trees and shrubs. Planning the home grounds. When and how to plant. Trees and shrubs for every purpose. Trees and shrubs for color. Worth-while, interesting trees and shrubs not commonly seen. The care of trees and shrubs. Pruning, wounds, cavities, and bracing. How to control insects and diseases. The ailments of trees and shrubs. Common insect pests. Common diseases. The wooded portion of the place. Lawns. Flower borders, herbs, and wild gardening. Accessories. How to identify some of the most common trees. Some good books on trees and shrubs. Common names and botanical equivalents. Index.

Note: This guidebook by a distinguished arboriculturist is a reference tool for the homeowner, amateur and professional gardener, and landscape designer; a reference book in which trees and shrubs are discussed from the standpoint of their characteristics and uses in the landscaping of gardens and grounds around dwellings. Its basic purpose is to tell in detail how to select and handle trees and shrubs for the individual's own grounds and how to obtain good results most economically. Related matters, such as garden furniture, are discussed briefly. The illustrations include numerous reproductions of plantings and landscapes. Tables and outlines are used to advantage for clarity and conciseness.

MCFARLAND, JOHN HORACE, AND OTHERS

Garden bulbs in color by J. Horace McFarland, R. Marion Hatton, Daniel J. Foley. Revised edition. New York The Macmillan Company 1941 296 p. illus. (part col'd) 23 cm. $3.95 7705

Contents: Foreword. Introduction. Bulbs through the ages. Definitions. Bulbs in the landscape. A note on planting bulbs. Bibliography. Tulips. Narcissus. Lilies. Other bulbs. Index.

Note: A compilation of information on many varieties of plants grown from bulbs, corms, and tubers for the amateur gardener. Some lesser-known names, domestic and foreign, are introduced. Notes on culture are included, but the main intention is that of description of items, assisted by numerous illustrations in color drawn from seed catalogues. The nomenclature used is mainly that of Bailey's Hortus, New York, 1930.

MACNEIL, ALAN AND ESTHER MACNEIL

Garden lilies. New York Oxford University Press, 1946. 226 p. illus. (part col'd) 21 cm. $5.00. 7706

Contents: Part 1: Geographic sources of origin. The bases of selection. Placement suggestions. Notes on color. Planting. Culture and propagation. Lilies for pots and exhibition. Natural hazards and pests. Diseases. Lilies through the ages. Part 2: A list of lilies. Addenda. Bibliography. Index.

Note: An expertly written manual. It is exactly suited to the needs of the more serious type of amateur gardener, and it is technical enough to be of interest to the professional gardener too. The space is almost equally divided between the two parts. In

ture. Vegetable crops. Commercial floriculture. The nursery plants. Horticulture and the home. Index.

Note. An introductory textbook on the growing of fruit, flower and vegetable crops. Basic information on plant growth and on practices that are common to the production of many crops is emphasized. The authors are members of the faculties of colleges in the southern United States of America, and the book deals mainly with the horticulture of that region. The second edition was published in 1957 436 p., $6.75.

ELLIS, CARLETON, AND M W SWANEY

Soilless growth of plants Second edition, revised and enlarged by Tom Eastwood. New York Reinhold Publishing Corporation, 1947 277 p illus. (part col'd) 22 cm $6 50 7694

Contents General plant physiology General types of soilless culture. Water culture. Sand culture. Gravel culture. The nutrient solution. Technical control of nutrient solution. Technical control of the plant culture. General plant culture. Common detriments. Special chemicals. Analyses of the nutrient solution. Selected reference list. Index.

Note A comprehensive manual. Knowledge accumulated during the nearly ten years' circulation of the first edition has been incorporated in the present revision. The new material includes experience gained in several large-scale hydroponic gardens developed by the U S. Army Air Forces on Pacific islands during World War II. Revising has been carried out so extensively that, except for few of the illustrations, very little of the original text remains.

FREE, MONTAGUE

All about African violets, the complete guide to success with Saintpaulias Garden City Doubleday & Company, Inc., 1951 304 p illus (part col'd) 22 cm. $3 50 7695

Contents. What are African violets? Growing conditions. Soils. Fertilizers. Pots and potting. Watering. Trouble avoidance and cure. General care and growing for exhibition. Adding to your collection. Greenhouse culture. Propagation. Species and varieties of Saintpaulia. Glossary Index.

Note A book for amateurs on the raising of currently popular houseplant. Mainly it covers culture in dwellings, but there is one chapter on culture in greenhouses. The subject is covered in detail with particularly explicit discussions of such troublesome problems as watering. There are 5 color plates and 111 illustrations reproduced in black and white. All of the latter are reproductions of photographs.

FREE, MONTAGUE

All about house plants, their selection, culture and propagation, and how best to use them for decorative effect. Fully illustrated with color photographs and halftones and with drawings by Eva Melady John Brimer, George Hollrock & Maud H Purdy Garden City Doubleday & Company Inc., 1948 329 p illus (part col d) 22 cm. $3 95 7696

Contents (abridged) Part I, Plants indoors: Give them a chance to live. Terrariums. Small plant arrangements. Part II, Culture Soils, Fertilizers. Growing plants without soil. Pots and potting. Watering. Rest periods for house plants. Pinching, pruning, training. Propagation. House-plant enemies. Part III, Types of house plants: Flowering plants. Foliage plants. Part IV Lists of plants. General list of house plants. Plants for special conditions. Index.

Note. A general treatment which is intended for the amateur grower of plants in the home. It is exceptionally comprehensive for book of this type, and the discussions of cultural practices and plant varieties are thorough enough to be useful to the advanced amateur and fancier The text proper is supplemented by 17 illustrations in color and 30 black and-white reproductions of photographs in addition to numerous line drawings. Fundamental operations such as potting are shown in step-by-step sequence. The author is a widely known authority on horticulture.

FREE, MONTAGUE.

Gardening, a complete guide to garden making With 73 halftones & 125 line drawings Revised edition New York Harcourt, Brace and Company and The American Garden Guild, 1947 550 p illus. 22 cm. $4 95 7697

Contents Selecting and planning the property Grading. Walks. Soil improvement. Manures and fertilizers. The lawn. Trees and shrubs. Foundation planting. Vines and their supporting structures. Hedges. Flower beds and borders. Hardy herbaceous perennials. Annuals and biennials. Flowering bulbs. Rose garden. Rock and wall gardens. Water gardens. The city garden. Roof gardens, window and porch boxes, vases, hanging baskets. Herb garden, ferns, wild garden. The vegetable garden. The fruit garden. Plants in the house. Coldframes and hotbeds. Greenhouses. Plant propagation. Pruning ornamental trees and shrubs. Winter protection. Garden enemies. Tools and labels. Odds and ends. The gardener's year—a few reminders. Index.

Note: A comprehensive and practical guide for both beginners and experienced gardeners. Gardening operations and plants are thoroughly described and illustrated. Principal changes in this edition include replacement of some plant articles with newer ones and revision of the material on pests and diseases to include the most recent methods of controlling them.

GERICKE, WILLIAM FREDERICK

The complete guide to soilless gardening. New York Prentice-Hall Inc., 1940 285 p. illus 23 cm. $3 75 7698

Contents Introduction. Apparatus. Nutrient solutions. Water. Planting. Physical conditions. Symptoms of change. Tomatoes and other vine crops. Potatoes. The root vegetables. Leaf vegetables. Seed vegetables. Perennial vegetables and berries. Field crops. Herbaceous annual flowers. Flowers from bulbs, corms, tubers, and rhizomes. Flowering woody perennials. Commercial, garden, and home production. Mineral composition of plants. Sand culture. Hydroponics and agriculture. Glossary Index.

Note A textbook and manual for the amateur as well as the professional, giving the fundamentals of hydroponics or production of crops without soil, the theory of which was first presented in 1929. The author points out that in 1940 the art was still in the experimental stage and that although hydroponics requires a larger expense per unit area than agriculture, experience has shown that it is profitable commercially because of increased yield and quality of product. The main purpose of the book is to aid the beginner The work contains numerous illustrations of practical applications as well as detailed methods for raising each particular type of vegetable, fruit, or flower Formulas of chemicals required for plant food are also included.

HERTRICH, WILLIAM

Palms and cycads their culture in southern California as observed chiefly in the Huntington Botanical Gardens. San Marino, Calif. The Henry E. Huntington Library and Art Gallery 1951 141 p illus (part col d) $5.00. 7699

Contents Historical background. The palm garden. Cultural notes. Palms Group I, Pinnate or feather-leaved palms. Group II, Palmate or fan-leaved palms. Cycads. Index. Index to illustrations.

Note. Described in this book are the palms and cycads which have been grown—and most of which are still growing—in the Huntington Botanical Gardens at San Marino, California. Although it consists chiefly of species and varieties indigenous to subtropical regions, the collection is an extensive one. It is described primarily from the horticultural viewpoint. There are general comments on culture and, in addition, the accounts of species and varieties sometimes include notes on the experience with them in the Huntington Botanical Gardens, for example, on their degree of hardiness to low temperatures. Aside from the cultural notes, the descriptions of form are concerned chiefly with such details as height, general appearance, shape, color of the leaves, etc. The book is fully illustrated with reproductions of photographs.

[illegible]

QUILLIN, ELLEN DOROTHY (SCHULZ)

Cactus culture. Illustrated with drawings by Ben Carlton Mead. Revised edition. New York: Orange Judd Publishing Company, Inc., 1942. 153 p. illus. 21 cm. $3.50. 7714

[illegible]

ROCKWELL, FREDERICK FRYE, editor

10,000 garden questions answered by 15 experts, with 400 illustrations and temperature and planting maps. F. F. Rockwell, editor; associate editors, Montague Free, T. H. Everett, and Esther C. Grayson. Garden City: The American Garden Guild, Inc., and Doubleday Doran and Company, Inc., 1944. 1457 p. illus. 20 cm. $4.95 7715

[illegible]

SHEPHERD, ROY E.

History of the rose. New York: The Macmillan Company, 1954. 264 p. illus. 21 cm. $4.75 7716

STEFFEK, EDWIN F.

Wild flowers and how to grow them. New York: Crown Publishers, Inc., 1954. 192 p. illus. (part col'd) 23 cm. $3.95 7719

[illegible]

Part I the selection of lilies for specific environments and lily culture are covered In Part II over 170 species of lilies and lily hybrids are described, chiefly as to their appearance, time of flowering, and cultural requirements. The *bibliography* comprises an excellent selection of the literature on lilies.

MUENSCHER, WALTER CONRAD, AND MYRON ARTHUR RICE

Garden spice and wild pot herbs With *illustrations* cut on wood by Elfriede Abbe. Ithaca *Comstock Publishing Associates*, a division of Cornell University Press, 1955 211 p illus 28 cm $5 75 7707

Contents Introduction. Descriptions of the herbs. Treatment of the herbs. *Wild* pot-herbs. The classification and naming of plants. Illustrations of seeds. Glossary Index.

Note. An attractive volume, artistically illustrated. One of its distinguishing features in comparison to other books on herbs is that the plants described are carefully identified. Botanical names and vernacular names in English, French, German, and Italian are given. As herb books go, the discussions of the plants are conservative that is to say there is much less of legend and folklore than is customary In addition to the *botanical* identifications, the plants are described morphologically their uses, actual and reputed, are discussed and cultural directions are given. Altogether there are 56 plates of illustrations.

MUSSER, HOWARD BURTON

Turf management A publication of the United States Golf Association. Foreword by James D Standish, jr New York McGraw Hill Book Company, Inc., 1950 354 p. illus. 24 cm. $7 00 *7708*

Contents. Broad relationships in the production of special-purpose turf. Soil and turf relationships. Fertilizers and lime in turf production. Drainage and *irrigation*. Special-purpose turf grasses. Turf propagation. Turf maintenance. Weed control. Turf diseases and related *damage*. *Control* of insects and other pests. *Elements of golf*-course design. Golf-course operation. Appendix. Index.

Note. This book, which is devoted *exclusively* to the establishment, care, and upkeep of golf turf, public park lawns, and other large areas of *turf grasses*, was prepared under the sponsorship of the United States Golf Association. It is an authoritative presentation of all phases of large-scale turf development and maintenance, with the most emphasis on golf course grass problems. There is no bibliography The appendix contains list of fertilizers, liming and soil-amendment materials, turf seeds, weed-control chemicals, and tabulated information on various grasses. The author is Professor of Agronomy at Pennsylvania State College.

NORTHEN, HENRY T, AND REBECCA T NORTHEN

The complete book of greenhouse gardening New York The Ronald Press 1956 353 p illus. (part *col'd*) 22 *cm*. $6.50 7709

Contents Gardening under glass. Selecting and building your greenhouse. Managing your greenhouse. Soils and nutrition. Growing plants from seed. Propagating plants. Controlling shape size, and flowering time. Plant pests. Diseases of greenhouse plants. Common cut flowers. Unusual cut flowers. Pot plants. The amaryllis family Exotic foliage and flowering plants. Begonias. Bromeliads. Ferns. Gesneriads. Orchids. Poinsettias and their relatives. *Flowering* and foliage plants of various families. Cacti and other succulents. Bulbs for forcing. Bulbs for continuous growth. Greenhouse and outdoor garden. Vegetables. Index.

Note: A useful book which is addressed primarily to amateur gardeners. It provides wide range of rather *detailed* information on *the culture* of flowers in small greenhouses, and condensed information on the growing of greenhouse vegetables for home use It describes not only expected techniques, but also some unusual ones such as the growing of fuchsias from seed. It is written in simple, *direct style* and is generously illustrated with reproductions of both diagrams and photographs.

NORTHEN, HENRY T, AND REBECCA T NORTHEN

The secret of the green thumb. New York The Ronald Press Company 1954 431 p. illus. 22 cm. $5 00 *7710*

Contents. Life story of plants. Supply lines and operating centers. Water. Plants at work—oxygen. Food *for growth—sugar*. Light. Temperature. Soils and nutrition. Plant hormones. Seasonal phenomena. Planting and propagation. *Flowering*. Plant breeding. Science explains heredity Insects and other garden pests. Bacteria, viruses, and fungi. Plants without seeds. The seed plants. Evolution. Plant communities. Conservation. Index.

Note. An unusual presentation of *scientific information related* to gardening. The relationship is obvious in the chapters on such topics as light, temperature, *planting* and propagation, and less so in the chapters on plant communities and conservation. However, even the latter chapters are so written *that the dedicated gardener* will find them of interest. In most of the chapters, scientific information *that will be helpful to most amateur gardeners* is explained in a simple, nontechnical style, and the verbal explanations *are supplemented* by pictures of which there are *111* in the book.

NORTHEN, REBECCA TYSON

Home orchid growing. Princeton D Van Nostrand Company, Inc., 1950 286 p illus. 23 cm. $6 95 *7711*

Contents. Orchids as a hobby Adult cattleyas and their care. The cattleya species. Hybrids. Seedlings from flask to community pot. Seedlings from community pot to first bloom. Growing and sowing your own seed. The orchid tribes, the arides tribe. The cattleya tribe. The cymbidium tribe. The cypripedium tribe. The dendrobium tribe. *The odontoglossum* tribe. Collectors' items. Mineral nutrition. Diagnosing orchid ailments. Hybridizing your orchids. The care and use of cut flowers. *Bibliography Appendices*: Key to the tribes and genera of the orchid family Sources of orchid plants and supplies. Index.

Note. An explicit, *practical guide for amateur growers*, especially those who wish to grow orchids in their homes and in small greenhouses on a noncommercial basis. The illustrations include six plates in color and several hundred black-and-white illustrations. The author wife of Henry T *Northen, Professor of* Botany in the University of Wyoming, is an eminent amateur grower of orchids.

PIRONE, PASCAL POMPEY

Maintenance of shade and ornamental trees Second edition. New York Oxford University Press, 1948 436 p. illus 24 cm. $8.50 7712

Contents: Foreword, by L. H. Bailey Part I. General maintenance practices: The normal tree. The *soil* and its relation to trees. Transplanting trees. *Fertilizers* and their use. Pruning trees and treating wounds. Cavity treatments. Bracing and cabling. Trees suitable for streets and roadsides. *Part II*. Specific abnormalities of trees: Diagnosing tree troubles. Non-parasitic injuries. Insect control. Spraying equipment and practices. *Tree diseases* and their control. General parasitic diseases. Diseases and insect pests of deciduous street and roadside trees. *Disease and insect pests* of deciduous ornamental trees and some shrubs. Diseases and insect pests of evergreen trees and some shrubs. Appendix. *Selected* bibliography Index.

Note. A useful and authoritative *reference manual* for such persons as landscape architects, park superintendents, and specialists in the care of trees. Although termed a *second edition* by the publisher the text of the original pages seems not to have been changed. Instead a 11-page appendix has been added to cover advances in insecticides, fungicides, etc., and references are made from this appendix to the *body of the book where the same* subject is discussed more fully About one page of references has been added to the bibliography

POST, KENNETH

Plants and flowers in the home. *New York* Orange Judd Publishing *Company* Inc., 1944 198 p. illus. 20 cm. $3 50 7713

Contents: Environment and plant growth. Care of plants. Where to use plants. Reproduction. *Flowering* plants. Foliage plants.

preparing the present edition are not extensive, but there is some newly added material on new developments of practical importance, such as constant level irrigation. Figures given in the chapter on costs of production have been revised [illegible] them by 30% in order to align them to 1948 conditions has been [illegible].

LAURIE, ALEX, AND VICTOR H. RIES

Floriculture fundamentals and practices. Second edition. New York McGraw Hill Book Company Inc., 1930. 525 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $7.50. 7726

Contents: How plants grow. Soils. Fertilizers. Horticultural machinery. Soilless culture. Cold frames, hotbeds, and greenhouses. Garden design. Propagation of plants. Lawns. Annuals. Perennials. Flowering bulbs. The rock garden. Roses. Water gardening. Woody plants. House plants. Insect pests and plant diseases. Greenhouse management. Index.

Note: A standard work used both as a text in agricultural colleges and as a manual of practical information by persons with interests in commercial floriculture. The treatment of most topics is concise, hence, a considerable range of information is included, some of it very specific. Bibliographies are included. The greater part of the text is unchanged from that of the first edition published in 1942, but important revisions have been made in some parts such as the discussion of pest control.

POST KENNETH

Florist crop production and marketing the application of scientific facts to the production and marketing of florist cut flowers, potted plants and bulbs grown in the greenhouse or in the field. New York Orange Judd Publishing Company Inc., 1949 891 p. illus. 24 cm. $10.00 7727

Contents (abridged): Part I. The florist business. The structure of plants. The production of new varieties. Temperature and growth. Light and growth. The effects of gases. Soils and fertilizers. Water uses and application. Propagation of plants. Cut flowers. Potted plants. Troubles. Structures for growing plants. Part II. Plant culture and marketing. Authors' index. Subject index.

Note: A comprehensive manual of sound practices in the growing of flowers and potted plants as crops for market. The first part, [illegible] a little over one-third of the book's length and is composed of the chapters whose titles are given above. The second part is composed of 19 chapters on the culture and marketing of various species. Although the viewpoint from which the book is written is strictly practical, the author has gone to some pains to draw attention to the findings of scientific experiments pertaining to such matters as the response of various species to light, effectiveness of various techniques of soil sterilization, and control of diseases. References to the literature are given throughout the volume. There are numerous pictures of equipment and of plants. The author is a member of the faculty of New York State College of Agriculture, Cornell University.

FRUIT CULTURE

ANDERSON HARRY WARREN

Diseases of fruit crops. New York McGraw Hill Book Company Inc. 1956 501 p. illus. 23 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $8 50 7728

Contents: Introduction. Diseases of pome fruits. Diseases of drupe or stone fruits. Diseases of brambles. Diseases of grapes. Diseases of strawberries. Diseases of gooseberries and currants. Diseases of the cranberry. Diseases of the blueberry. Index.

Note: An authoritative treatise in which the accumulated knowledge of the diseases of the classes of fruits named in the above chapter titles is presented. It was based on a wide survey of the literature and references to the original publications are given. However, the discussions of the diseases are complete enough to provide the average user of the volume with adequate information without reference to the source literature. The individual diseases are discussed as to history, geographic distribution, economic importance, symptoms, causal organism, hosts, disease cycle, relation to environment, and control. The viewpoint is primarily horticultural. Condensed morphological descriptions of causal organisms are included, though printed in smaller type. Most of the 94 figures are reproductions of photographs. The author is Professor of Plant Pathology in the University of Illinois.

BARTHOLOMEW, ELBERT THOMAS, AND WALTON B SINCLAIR

The lemon fruit its composition physiology and products. Berkeley and Los Angeles University of California Press 1951 163 p. illus. 24 cm. $4.50. 7729

Contents (abridged): General information. Composition and physiology. Products and their uses. Literature cited. Author index. Subject index.

Note: Essentially this work is a compact summary of information which has been gathered from the technical literature. Botanical and biochemical aspects are covered in the first two parts. The third part, which is only 8 pages long, contains information on the commercial importance and uses of the whole fruit and its components. Horticultural aspects are not covered. The book is useful as a reference volume and a guide to the technical literature. There is a 12-page bibliography.

BROOKS, REID M., AND CLARON O HESSE

Western fruit gardening a handbook for the home gardener on fruit varieties climatic adaptations soil, water and nutrient requirements pruning and propagation control of diseases and pests. Illustrations by Beverley Farmer Berkeley University of California Press, 1953 287 p. illus. 24 cm. $4.50 7730

Contents: Part I, Growing fruit plants: Planning your fruit garden. Care of young and mature trees. Pruning. Propagating your own selection of varieties. Growing fruit in limited space. Part II, Western fruits. Part III, Troubles of fruit plants: Kinds of diseases and pests. Control Measures. Implements. Index.

Note: Because of the varieties of climate, many kinds of fruits can be grown in the western states of continental United States of America. Forty-eight kinds suitable for these regions, ranging from almond to the [illegible] and including apples, apricots, avocados, cherries, dates, grapes, grapefruit, lemons, olives, oranges, pears, pomegranates, raspberries and walnuts, are considered in the book. Each kind is described as to climatic requirements, hardiness, varieties, soil, nutrients and water requirements, harvesting, diseases, and pests. Preceding the discussion of individual fruits are several short chapters on general aspects of tree culture such as planting, watering, fertilizing, and propagating. The book is directed to gardeners, especially those who are interested in raising fruit for home use.

BROOKS REID M. AND H. P OLMO

Register of new fruit and nut varieties 1920–1950. By Reid M. Brooks and H. P Olmo with the assistance of cooperating horticulturists Berkeley University of California Press, 1952 206 p. 24 cm. $3 00. 7731

Contents: Register of varieties: Almond. Almond-peach. Apple. Apricot. Avocado. Blackberry. Blueberry. Butternut. Carissa. Carob. Chaenomeles. Cherry. Cherry plum. Chestnut. Cranberry. Currant. Date. Elderberry. Fig. Filbert. Gooseberry. Grape. Grapefruit. Guava. Hickory. Lemon. Lime. Mango. Natal plum. Nectarine. Orange. Orangequat. Papaya. Peach. Pear. Pecan. Persimmon. Plum. Plumcot. Pomegranate. Prune. Quince. Raspberry. Strawberry. Tangelo. Tangerine. Tangor. Tung. Walnut. White sapote. Patented varieties. Varieties by place of origin. Index.

Note: A compilation of lists of new varieties of fruits and nuts originated in North America during the years 1920 to 1950 inclusive. The lists were published originally in the *Proceedings* of the American Society for Horticultural Science. Information given for

native lilies. Lobelias, red and blue. The mallow group. Mandrake or May apple. Marsh marigold. Meadow-beauty or deergrass. Three bog orchids. The phloxes. Pipsissewas. Prickly pear cactus. Purple coneflower Early saxifrage and blue-eyed grass. The showy orchis. A quartet of silenes. The dependable spiraeas. The spring beauty Swamp pink. Trailing arbutus or Mayflower The trilliums. Trout lilies unlimited. Twinflower or deervine. The violets. The water lilies. Wild calla. Wild geranium. Wild ginger Wild lupine. Wintergreen and partridgeberry Wood sorrel. Yellow stargrass. Index.

Note: The purpose of this book is to describe the principal groups of American wild flowers and to offer suggestions on transplanting and growing them. The first part gives a general introduction to the subject. In the second part, each of 71 kinds of plants is treated in detail under the following headings "Description "*Where they grow*" Blooming season, "Culture, "Species. Many of the descriptions are accompanied by photographic illustrations. The section of colored illustrations consists of 50 plates reprinted from *Wild flowers of America*, by H. W Rickett, illustrated by Mary Vaux Walcott and Dorothy Falcon Platt, 1953.

WESTCOTT, CYNTHIA

The plant doctor, the how, why and when of disease and insect control in your garden. Revised edition 1950 with a calendar for the Northeast and special chapters for other sections. Line drawings by the author Philadelphia J B Lippincott Company, 1950 231 p illus. 21 cm. $3 50 7720

Contents The plant doctor's calendar· February March. April. May June. July August. September October November Special troubles in the Middle West. Special troubles in the Southeast. Special troubles in the Southwest. Special troubles in California. Special troubles in the Northwest. Alphabetical miscellany List of agricultural experiment stations. Index.

Note: An established reference handbook used by noncommercial gardeners in the United States of America. It presents a considerable range of simple, practical information on insecticides application and other control measures. The first edition was limited to the northeastern United States, but the book now covers the whole nation. However that portion which is arranged by calendar month still refers only to the area around New York City The alphabetical miscellany is an extensive list of common garden plants with their diseases and descriptions of the preferred treatments. Although of no use to specialist, the book is a handy one for its intended audience.

WISTER, JOHN CASPAR

Bulbs for home gardens. New York Oxford University Press 1948 270 p illus. 22 cm. $5 00 7721

Contents Introduction Definitions, examples of uses, and sources of supply Culture. Types of bulb gardening. Some well-known bulbs for the spring garden. Crocus. Bulbs for the rock garden. Bulbs in the wild garden. Hyacinths. Daffodils. Daffodil culture. Tulips—history and cultivation. Tulips—garden varieties. Some other spring and summer-blooming bulbs. Lilies. Gladiolus. Half hardy summer-flowering bulbs. Tender bulbs. Appendices Daffodils. Tulips. Index.

Note An excellent manual on the subject for amateur gardeners, even those who have advanced far enough in their hobby to be interested in the importation of unusual varieties. Expert and detailed instructions for the planting and care of flower bulbs which may be grown successfully in the United States of America are given. Much advice is included on the selection of varieties and on the sources of special information, such as the societies in the field and names of leading breeders. In addition to the varieties named in the text, the appendix contains extensive lists which give the dates of introduction of all the leading varieties.

WYMAN, DONALD

Shrubs and vines for American gardens. New York The Macmillan Company 1956 442 p illus (part col'd) 24 cm $8 00 7722

Contents: Introduction. Hardiness. Order of bloom. Ornamental fruits. Foliage colors. Shrubs for various purposes. General list of recommended plants. Vines. Bamboos. The naming of horticultural varieties. Secondary plant list. Index.

Note. A reference book for home gardeners, landscape architects, and nurserymen. It is designed as a guide in the selection of shrubs and vines according to such characteristics as color time of blooming, hardiness to frost. It contains list of plants recommended by the author and a supplementary list of plants of secondary interest. Other useful lists, such as a classification according to color of fruit, are included. The General list of recommended plants" is 155 pages long and provides such information for individual species as botanical and popular names, height, hardiness, color of flower time of flowering, color of fruit, color of foliage, habitat and a general comment such as: "One of the handsomest of evergreens with lustrous green foliage, very similar to that of holly an excellent ornamental shrub growing well in either sun or partial shade.

WYMAN, DONALD

Trees for American gardens. New York The Macmillan Company, 1951 376 p. illus. 24 cm. $7 50 7723

Contents. Introduction. Hardiness. Order of bloom. Ornamental fruits. Foliage colors. Trees for various purposes. Street and highway planting. One hundred tree champions. Dwarf trees. General list of recommended trees. Secondary list of trees. Index.

Note. Essentially a reference manual for landscape architects, nurserymen, and amateur gardeners concerned with selecting trees to meet specific growing conditions or produce desired landscaping effects. Seven hundred and forty-five species of trees are described and grouped according to degree of hardiness, date of blooming, autumn coloration, and other characteristics important in gardening. Emphasis is placed on the landscaping qualities of the trees, and only brief attention is given to planting methods and general care.

COMMERCIAL FLORICULTURE

GARDNER, VICTOR RAY

Basic horticulture. Revised edition. New York The Macmillan Company, 1951 465 p. illus. 24 cm. $6 50 7724

Contents The place of horticulture in American agriculture. Classifications of plants. Plant structure and plant growth. Specialized buds and stems. Temperature relations of plants. Water as a limiting factor. Light as limiting factor. Plant nutrients as limiting factors. Water and nutrient intake, translocation, and utilization. Carbohydrates. Growth and fruitfulness. Flower-bud differentiation and flowering habits. Training horticultural plants. Pruning. Flowers, fruits, and seeds. Propagation. Hormones and growth regulators. The culture of annuals. The culture of biennials, herbaceous perennials and bulbous plants. The culture of woody perennials. Plant pests and the injuries caused by them. Control of plant ills. Weeds and their control. Some general questions and problems. Suggested laboratory exercises. Glossary Index.

Note An inclusive exposition of the fundamental principles of horticulture for beginning students in agricultural colleges. Emphasis is upon the understanding of plants—their structure, how they grow and the way in which they react to different environments. As factual information and illustrative material, the author presents material which he has found useful in the presentation of the subject at Michigan State College. This edition contains newly added chapters on hormones and on the control of weeds.

LAURIE, ALEXANDER AND D C KIPLINGER

Commercial flower forcing· the fundamentals and their practical application to the culture of greenhouse crops. Fifth edition. New York McGraw Hill Book Company Inc., 1948 550 p illus. 24 cm. $6 75 7725

Contents. Status and development of the industry Greenhouse construction and heating. Factors influencing plant growth. Soils. Growing ornamental green house crops in gravel culture. Fertilizers. Reproduction. Diagnosing greenhouse ills. Major crops. Minor crops. Miscellaneous cut flower crops. Bulbs, corms, and tubers. Flowering pot plants. Foliage plants. Forcing hardy plants. Cloth house. Wholesale marketing. Costs of production. Index.

Note. This work is both standard text for use in agricultural colleges and reference manual used in the commercial green house industry The authors were teachers of horticulture at Ohio State University in which state the green house industry has reached comparatively high state of development. Revisions made in

pany Inc., 1952 739 p. illus. 23 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $10.00. 7737

Contents (abridged) Section I, Water relations: The intake and utilization of water. Orchard soil management methods and moisture conservation. The response of fruit plants to varying conditions of soil moisture and humidity Irrigation. Section II, Nutrition: Fruit nutrients and their absorption. Manufacture and utilization of carbohydrates. The limitations of the reproductive process, surpluses and deficiencies. The application of nitrogen-carrying fertilizers. Section III, Temperature relations of fruit plants: Growing-season temperatures. Winter killing and hardiness. Winter injury Protection against frost. Section IV Light relations. Section Growth regulators. Section VI, Pruning: Growing and bearing habits. Pruning, the method. Pruning with special reference to particular fruits. Section VII, Fruit setting: The structures and processes concerned in fruit formation. Unfruitfulness associated with internal factors. Unfruitfulness associated with external factors. Fruit setting as an orchard problem. Glossary Index.

Note As the title is intended to indicate, this book is concerned with fundamental factors in fruit production rather than specific cultural practices. Its 35 chapters are devoted to such matters as soil-water relationships, translocation of nutrient elements in the plant, the factors of winter injury photoperiodic response, and the factors in fruit setting. Although much of the discussion is pertinent to fruits of all kinds, there is more emphasis on tree fruits. The book was based on wide literature survey and extensive lists of literature cited are included. The second edition was published in 1939 The major changes in this third edition are the addition of the section (four chapters) on light relations and growth regulators and the dropping of the sections on propagation and on geographic influences in fruit production which appeared in the second edition. Less extensive revisions have been made in the chapters carried over but some information has been added to all of them, and selection of the literature published since the writing of the second edition has been added to the lists of references.

Hedrick Ulysses Prentiss

Fruits for the home garden. New York Oxford University Press, 1944 171 p. illus. 22 cm. $3 75 7738

Contents: Fruit-garden foresight. Propagating fruits. Planting plans. The first year. Care of fruit garden. The art of pruning. Controlling orchard pests. The apple. The pear. The peach. The plum. The cherry The grape. The bush fruits. The bramble fruits. The strawberry Index.

Note: This manual is addressed primarily to the gardener faced for the first time with the problem of planting fruit garden. Soil and climatic requirements are specified for each kind of fruit, together with advice on the choice of the most suitable kind and the methods of improving soil conditions for the growing of fruit. Suggestions and directions are also provided on how many varieties should be planted, the correct distances between plants, and the arrangement of the garden. Details of life-span, time required between planting and fruit bearing, and harvesting methods are included.

Hedrick, Ulysses Prentiss

Grapes and wines from home vineyards. New York Oxford University Press, 1945 326 p. illus. 22 cm. $6.00 7739

Contents (abridged) Part I, The home vineyard The grape plant. Propagation. Climate, sites, and soils. Care of vineyard. Insects and fungi Pruning Old World grapes in eastern America. Grape-breeding. Varieties of grapes. Part II, Wines from home vineyard American wines. The home winery The care of new wine. Wine drinks. Wine in cookery Index.

Note This is well-organized manual of American grapes and although is slanted primarily toward the serious amateur, it should prove of considerable interest to professionals as well. The treatment account is complete, from the selection of proper vineyard site to the manner of holding the glass for savoring the wine. Characterized by pleasing literary style, the book is still essentially practical. The author is particularly careful not to minimize the time, trouble, and expense concomitant with successful pursuit, nor does he allow unnecessarily extravagant claims for the superiority of American wines over European. There are numerous drawings, photographs, and tables and an extensive list of recipes, but no bibliography

Shoemaker, James Sheldon

Small fruit culture a text for instruction and reference work and a guide for field practice. Third edition. With 75 illustrations. New York McGraw Hill Book Company Inc. 1955 447 p illus. 23 cm. $7.00 7740

Contents: Introduction. Grape culture. Strawberry culture. Bramble-fruit culture. Currant and gooseberry culture. Blueberry culture. Cranberry culture. References. Index.

Note: More reference book than text, this standard work is used for both purposes. It deals in thorough manner with the kinds of small fruits named in the chapter titles. More than 100 pages are devoted to the strawberry—to take an example. The important producing regions of the United States of America and of Canada are first described, then follow history; descriptions of commercially important varieties, information on duration of planting, yield and cost of production; methods of propagation; soil and moisture requirements, climate and weather factors; preparation of the soil setting out of plants, control of pests and weeds; irrigation; mulching; fertilizing; harvesting and marketing practices. The other fruits are covered in similar fashion. The second edition was published in 1948. Although the chapter titles are the same in this third edition, important changes have been made, especially on new varieties, insect and disease control, irrigation, and (for some crops) newer harvesting and marketing practices. The bibliography an important feature of earlier editions, has been extended to 421 references and to include literature published as recently as 1953.

Southwick Lawrence

Dwarf fruit trees. Edited by Ed Robinson. New York The Macmillan Company 1948. 126 p. illus. 22 cm. (The "Have-more" plan reference library edited by Ed Robinson) $1.95 7741

Contents: Why have dwarf trees? What dwarf trees are. What is good dwarf? Planning dwarf orchard. How to buy or propagate your own dwarf trees. Special directions for planting dwarfs. Pruning the dwarf orchard. Thin for bigger fruit. Soil management and fertilization. A simplified program for pest control. Harvesting—best time to pick fruits. How to store fruits. Espaliers, fascinating hobby Growing dwarf trees for sale. Index.

Note: For suburban dwellers and small-scale farmers, dwarf fruit trees have several advantages over trees of standard size. This book is addressed to such gardeners, and it provides detailed descriptions of all phases of dwarf fruit tree cultivation, from the time of the initial propagation of the tree until the fruit is ready for harvesting. The book is well illustrated with photographs showing the right and wrong way of doing things, and such operations as planting, pruning, staking, etc., are clearly explained with the aid of diagrams.

Talbert Thomas Jesse

General horticulture principles and practice of orchard, small fruit, and garden culture. Illustrated with 129 engravings. Philadelphia Lea & Febiger 1946 452 p. illus. 24 cm. $4 00 7742

Contents: The horticultural industry Factors affecting fruitfulness. Varieties, pollination, and fruit thinning. Propagation. Sites, locations, and plantings. Soil management and fertilization. Pruning deciduous fruit trees. Insects of fruit crops. Diseases of horticultural crops. Spraying and dusting. The pome fruits. The stone fruits. Grape culture. Strawberry culture. Cane and bush fruit culture. Nut tree culture. Growing vegetables. Beautifying the home grounds. Tropical and subtropical fruits. Handling and distributing horticultural crops. Index.

Note: Fruit crops, Philadelphia, 1930 written by the author and A. E. Murneek, has under the present title been extensively revised, and has been expanded by the addition of five chapters on topics which were not treated in the earlier work. As before, the work presents contemporary view of horticultural crops and practices in the United States of America, and is intended primarily for students in agricultural colleges. It is useful also as manual of information for persons who are considering fruitgrowing as an occupation. The reference lists appended to the chapters serve as guides to books, government bulletins, circulars, etc.

each variety includes place and date of origination, name of originator date of commercial introduction, U S. A. patent number with assignment if any parentage when known, brief description or characterization of fruit and tree, and time of bearing when significant. The lists were compiled with the co-operative assistance of 86 American and Canadian horticulturists located in 42 states and 4 provinces. Varieties are included only if they have shown promise of becoming commercially important or appear to have unusual characteristics useful to the breeder of new forms.

CHANDLER, WILLIAM HENRY

Deciduous orchards Second edition, thoroughly revised. With 113 illustrations Philadelphia Lea & Febiger, 1951 436 p illus 24 cm. $6 50 7732

Contents. Part I, The tree and its flowers and fruit The deciduous orchard tree. Deciduous orchard buds. Classification of deciduous orchard trees. Growth and flower bud formation. Pollination and the setting of fruit. The growing fruit. The mature fruit. Part II, Deciduous orchard environments Climate for deciduous orchards. Deciduous tree roots and the soil. The water supply in tree and fruit. Nutrients for trees. Essential elements and some others that influence trees. Part III, Growing and training deciduous orchard trees. Propagation of deciduous orchard trees. Transplanting trees from the nursery to the orchard. Response of deciduous trees to pruning. Part IV Deciduous orchard species Pome fruits. Stone fruits. The mulberry and the fig. The persimmon, the northern papaw and some other fruits. Edible nut trees. The tung-oil tree. Recent papers. Index.

Note: A standard textbook used in courses in fruit growing in agricultural colleges. Although some information on cultural practices is included, the main emphasis is on background information such as the processes of flower bud formation, pollination, the studying of fruit tree nutrition, and influence of climate, etc. The first edition was published in 1942 This edition has almost the same number of pages nevertheless, important revisions have been made in all chapters. References to 270 recent papers have been incorporated in the text. However several bibliographies appended to chapters were not revised although the need for revision is evident. A third edition revised was published in 1957 492 p., $7.50.

CHILDERS NORMAN FRANKLIN

Fruit science, orchard and small fruit management. Edited by R. W Gregory Philadelphia J B Lippincott Company 1949 630 p illus 24 cm $6 50 7733

Contents Introduction. Establishing the fruit planting Apple regions, production, and varieties. Pruning apple trees. Soil management for apples. Flower-bud formation, pollination, and fruit set in the apple. Thinning apple fruits. Grafting and budding apple trees. Freezing injury to apples. Harvesting and packing apples. Storing apples. Marketing apples. Pear and quince culture. Peach, nectarine, apricot, and almond. Culture of plums. Cherry culture. Control of insects and disease. Judging contests and exhibitions. Freezing preservation of fruits. Grape growing. Strawberry growing. Bush berry culture. Appendix. Index.

Note A practical text written by a staff member of the New Jersey Agricultural Experiment Station. Designed primarily for use in agricultural college courses, enough matter has been included to make it useful also in agricultural extension work and as orientation for young farmers who are thinking of growing fruit. There are 304 figures, many of which have been reproduced from photographs, more than 40 tables, and a useful selected list of pertinent books, government publications, and current journals.

CHILDERS, NORMAN FRANKLIN editor

Mineral nutrition of fruit crops deciduous and evergreen tree and small fruits. New Brunswick, N J Horticultural Publications, Rutgers University 1954 907 p illus 23 cm $10 00 7734

Contents Apple nutrition, by D Boynton. Avocado and mango, by S. J Lynch. Blueberry and cranberry by J C. Cain and G. J Galletta. Bush fruits nutrition by J W Eckert. Cherry nutrition, by F B. Wann. Citrus nutrition, by P F Smith and W Reuther Leaf analyses of citrus, by W Reuther and P F Smith. Grape nutrition, by E. G. Christ and A. Ulrich. Special photographic section Boron deficiency Calcium deficiency Copper deficiency Iron deficiency Nitrogen deficiency Manganese deficiency Magnesium deficiency Molybdenum deficiency Potassium deficiency Sulfur deficiency Zinc deficiency Other problems. Edible nuts, by E. L. Proebsting and E. F Serr Peach nutrition, by H. K. Bell and N. F Childers. Pear nutrition, by D. Boynton. Plum prune, and apricot, by R. C. Lindner, N R. Benson, and R. M. Bullock. Strawberry nutrition, by D L. Matlock. Tung nutrition, by M. Drosdoff, and others. Isotopic tracers in fruit nutrition, by S. H. Wittwer and H. B. Tukey Chelated metals for growing plants, by I. Stewart and C. D Leonard. Experimentation with orchard trees, by G. F Potter and B. G. Sitton. Mineral contents of important fruit plants, by L. M. Shannon. Index of authors. Index of subjects. Corrigenda.

Note. A systematic review of the literature bearing on mineral nutrition and mineral deficiency in the various fruit crops of the United States. Each crop is surveyed in detail by a research specialist. Typical is the 78-page chapter covering apple nutrition, which is divided as follows. Growth and fruiting habit. Soil aeration and moisture. Nitrogen. Potassium. Magnesium. Calcium. Iron. Manganese. Zinc. Copper Phosphorus. Boron. Literature cited. Under each mineral are indicated such considerations as its presence in the soil, its absorption and use, specific responses of the specific fruit to the specific mineral, visible symptoms of the deficiency and control of the deficiency The lists of literature appearing at the ends of the chapters are extensive. The book is fitted for use as an advanced textbook of the subject and also as a reference compendium for agricultural research workers in the field of fruit nutrition.

CONDIT, IRA JUDSON

The fig Foreword by Walter T Swingle. Waltham Chronica Botanica Company 1947 222 p. illus. 27 cm. (A new series of plant science books, Frans Verdoorn, editor Volume XXX) $5 50 7735

Contents (abridged) The fig in song and story History and distribution. Systematic botany General botany Caprification. Fig breeding. Fruit characters. Fig varieties. Some fig districts of the Old World. Other fig districts. Climatology Propagation. Fig culture. The fresh fig crop. The dried fig crop. Fig products. Chemistry and food value. Economics and marketing. Diseases. Insects and other pests. Bibliography Index.

Note. A comprehensive monograph in which all aspects of the subject are touched upon but in which topics of current interest, such as fig culture, are accorded most of the space. The work is essentially a condensed summary of the literature. References have been carefully made from the text proper to the very extensive bibliography The author a specialist in horticulture, is widely known for his writing on the fig.

DARROW, GEORGE MCMILLAN, AND OTHERS

Blueberry growing by George M. Darrow, J B Demaree, and W E. Tomlinson, Jr Revised 1951 Washington D C. Government Printing Office, 1952 53 p. illus. 23 cm. (United States. Department of Agriculture. Farmers bulletin no 1951) Gratis. 7736

Contents (abridged) Development of the blueberry industry Important species: Lowbush blueberry Highbush blueberry Dryland blueberry Evergreen blueberry Mountain blueberry Rabbiteye blueberry Highbush varieties and their culture. Soil and climatic requirements. Varieties and their characteristics. Need for cross-pollination. Growing and care of seedlings and native plants. Planting and cultivation. Maintaining soil fertility Good drainage essential. Irrigation often profitable. Mulching. Pruning. Harvesting and marketing. Yields. Uses. Blueberry diseases. Blueberry insects.

Note. A summary of information on selecting and growing blueberries in home gardens and commercial plantings, and protecting them from diseases and insects. Most of the space is given to the highbush varieties, which are the chief varieties grown commercially in the United States.

TALBERT, THOMAS JESSE

Growing fruit and vegetable crops 72 illustrations Philadelphia Lea & Febiger, 1953 350 p illus 25 cm. $4 50 7743

Contents. Origin and improvement of fruits and vegetables. Growth and fruitfulness. A new enclosure for horticultural crops. Budding and grafting fruit trees. Culture of apples, pears and quinces. Pruning pome fruits, the apple, pear and quince. Culture of the peach nectarine, apricot and almond. Culture of cherries and plums. Growing strawberries. Growing grapes. Growing cane and bush fruits. Some neglected native fruits. Controlling rodents harmful to horticultural crops. Windbreaks and cold injury The home fruit garden. Diseases and insects and sprays and spraying. Growing vegetable crops. Root, legume and bulb crops. Salad, green and cole crops. White potato and sweet potato crops. Solanaceous crops; tomato, eggplant and peppers. Cucumber muskmelon and watermelon. The pumpkin and squash and miscellaneous vegetables. Vegetable disease and insect control. Marketing and storage of vegetables and fruits. Index.

Note A comprehensive introduction to the culture of the fruits and vegetables grown in commercial quantities in the United States of America. The titles of the chapters are listed above. In those chapters devoted to specific groups of fruits or vegetables, types and varieties, soil requirements, hardiness, cultural practices and diseases are described. However the descriptions of none of these aspects is very detailed. The chapters on disease and insect control, marketing, etc., also are surveys other than detailed treatments. Unusual features of the book include a chapter on th multiflora rose as a hedge for the enclosure of land areas devoted to horticultural crops, and a chapter on wild fruits in the continental United States, which in the author's opinion are worth study and cultivation.

WEBBER, HERBERT JOHN, AND LEON DEXTER BATCHELOR, editors

The citrus industry With the collaboration of Elbert Thomas Bartholomew, Walter Tennyson Swingle, Homer Dwight Chapman and others Berkeley University of California Press, 1943 1048 p illus (part col d) 25 cm. $10 00 7744

Contents Volume I. History and development of the citrus industry by H. J Webber Plant characteristics and climatology by H. J. Webber The commercial citrus regions of the world—their physiographic, climatic, and economic characters, by H. J Webber. The botany of citrus and its wild relatives of the orange sub-family by W T Swingle. Cultivated varieties of citrus, by H. J Webber General morphology histology and physiology by E. T Bartholomew and H. S. Reed. The mineral nutrition of citrus, by H. D Chapman and W P Kelley Seed reproduction—development of gametes and embryos, by H. B. Frost. Genetics and breeding, by H. B Frost. Bud variation and bud selection, by A. D. Shamel. Bibliography Index.

—— Volume II Production of the crop Berkeley University of California Press, 1948 933 p illus (part col'd) 25 cm. $10 00 7745

Contents Nursery methods, by H. J Webber Rootstocks their character and reactions, by H. J Webber Choice of rootstocks, by L. D Batchelor and M. B. Rounds. Selection of orchard site, by E. R. Parker Planning and planting the orchard, by R. G. LaRue and M. B. Rounds. Cultivation, or tillage, by W R. Schoonover and L. D Batchelor Principles and methods of pruning, by R. W Hodgson. Principles and methods of irrigation, by M. R. Huberty Diseases and their control, by H. S. Fawcett and L. J. Klotz. Biological control of insect pests, by H. S. Smith. Biological control of citrus insects by parasitic fungi and bacteria, by H. S. Fawcett. Insects and mites and their control, by A. M. Boyce. Quarantine and quarantine service, by H. S. Smith. Injury by rodents and its control, by T L. Storer Protecting the citrus orchard against frost, by F D Young and W E. Harmon. Effects of freeze—treatment and recovery of injured trees, by H. J Wilder Index.

Note: A comprehensive study of the botany genetics, climatic and soil requirements, reproduction and culture of citrus fruits. Although it is presentation of basic knowledge, it is ritten for practical growers as ell as for agricultural college students and research workers. Emphasis is placed on American conditions and methods. The bibliography in the first volume is an extensive history of the basic literature. The results of rootstock experiments at the California Citrus Station are reported in detail in the second volume.

ZIELINSKI, QUENTIN BLISS

Modern systematic pomology Dubuque Wm. C. Brown Company, 1955 296 p. illus. 28 cm. $5 00 7746

Contents: Part I. Introduction. Systematic pomology and its significance. History of plant classification. Botanical structure of fruits and flowers. Principles of systematic pomology The origin of cultivated fruit plants. Plant nomenclature. Plant identification. Descriptions of fruits and plants. Literature of systematic pomology The origin and improvement of fruit varieties. Chronological outline of important developments in systematic pomology Part II: Apricots. Cherries. Plums and prunes. Peaches and nectarines. Almonds. Apples. Pears and quinces. Blueberries, huckleberries and cranberries. Currants and gooseberries. Strawberries. Blackberries and raspberries. Grapes. Walnuts and butternuts. Pecans and hickories. Filberts and chestnuts. The citrus group. Sub-tropical, tropical, and other fruits. Glossary Index.

Note. A college textbook for beginning courses in systematic pomology organized on the basis of the author's experience in research and teaching in taxonomy genetics, and variety improvement. The material is presented in two divisions of approximately equal length the first is general treatment of the theories of fruit growing, including the basic botanical and horticultural background the second is a systematic enumeration of 12 genera of fruit plants widely grown in North America, followed by chapters treating the nuts, the citrus fruits, and 31 genera of sub-tropical and tropical species. Part II includes for each genus metechnical description, together with brief consideration of the geographic and ecological distribution of the family represented. In the chapters devoted to fruits, the leading horticultural varieties of each fruit are named. Each of the two parts concludes with selected bibliography

BEEKEEPING

GROUT, ROY A., editor

The hive and the honey bee, a new book on beekeeping to succeed the book "Langstroth on the hive and the honeybee." Edited by R. A. Grout with the collaboration of a staff of specialists Revised edition. Hamilton, Ill. Dadant & Sons, 1949 652 p. illus. 24 cm. $4 00 7747

Contents The beekeeping industry by R. A. Grout. Races of bees, by A. Z. Abushady The honey-bee colony—a history by O. W Park. Activities of honey bees, by O. W Park. The honey comb, by H. C. Dadant. Beekeeping equipment, by H. C. Dadant. First considerations in keeping bees, by G. H. Cale. The apiary by M. G. Dadant. Common practices in management, by G. H. Cale. Management for extracted honey production, by G. H. Cale. Extracting the honey crop, by R. A. Grout. The production of comb honey by C. E. Killion. The production of bulk comb honey by W. L. Lyle. The overwintering of productive colonies, by C. L. Farrar. Honey by V G. Milum. Marketing the honey crop, by E. R. Willson. The honey bee as a pollinating agent, by J. I. Hambleton. Sources of nectar and pollen, by F C. Pellett. The anatomy of the honey bee, by R. E. Snodgrass. Production and uses of beeswax, by R. A. Grout. The production of queens and package bees, by M. G. Dadant. Injury to bees by poisoning, by J E. Eckert. Diseases and enemies of the honey bee, by A. P Sturtevant. Index.

Note. A comprehensive manual in which the emphasis is definitely on the practical aspects of beekeeping but in which there is also considerable discussion of biological aspects. It goes back to the first edition, published in 1853 of L. L. Langstroth's *Langstroth on the hive and the honeybee* and includes numerous editions of that classic revised by Langstroth during his lifetime and later by Charles Dadant and C. P Dadant. In 1946, the first edition in which the chapters were written by a number of contributors appeared and this edition is the first revision of it. In comparison to the 1946 edition, there are three new chapters—those by Abushady Willson and Hambleton—and extensive revisions have been made in several of the other chapters. There are now 303 figures, and several of the authors have documented their chapters with footnote references to pertinent literature.

reference data and 120 figures. Most of the latter are reproductions of photographs. Literature references are included in the chapters.

CARROLL, W E. AND J L. KRIDER

Swine production. Second edition. New York. McGraw Hill Book Co., Inc., 1956 496 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $6.50. 7761

Contents: Part I, Organization as a factor in the cost of production: Functions of the swine enterprise. Characteristics of swine and of their production. The enterprise and the farm. Important landmarks in the development of the swine industry in the United States. Part II, Establishing the swine enterprise as a factor in the cost of production: Number and kind of hogs affect cost of production. Breed and cost of production. Founding the herd and cost of production. Maintaining and improving the herd. Part III, Management as a factor in the cost of production: The system of management may affect costs. Management as a factor in the number of pigs farrowed—and quality of pigs weaned. Managing fattening pigs as a factor in the cost of production. Equipment as a factor in the cost of production. Part IV, Feed as a factor in the cost of production: The importance of feed in swine-production costs. Nutrient allowances for swine. Cereal grains as swine feeds. Milk, animal, and marine products. Protein and vitamin supplemental feeds of plant origin and antibiotics. Forage crops for swine. Formulation of rations for efficient production. Preparation of feeds and methods of feeding. Feeding the breeding herd and young pigs. Marketing hogs as a factor in profits. Index.

Note: A comprehensive work in which the basic principles and present-day practices of pig production are treated at the agricultural college level. It includes extensive citations of research studies and long bibliographies. Although the main emphasis is on principles, good farm practices including housing, formulation of rations, etc., are described in detail. There are 73 figures. The first edition was published in 1950. The organization and scope are the same in this edition, but sections of chapters have been revised to cover new developments in breeding, management, etc., and to describe new breeds.

CASSARD DANIEL W

Approved practices in feeds and feeding Edited by Elwood M Juergenson. Danville, Ill. The Interstate Printers and Publishers, Inc., 1956 305 p illus 21 cm. $2.00 7762

Contents: Opportunities in livestock feeding. Approved practices in livestock feeding. Use of feed by animals. Types of feeds. Determination of balanced rations. Mixing and preparation of feeds. Feeds for beef cattle. Feeds for sheep. Feeds for dairy cattle. Feeding hogs. Feeding horses. Comparative values of feeds. Feeding equipment and work simplification. Troubles from improper feeding. Feed composition tables. Daily requirements tables. Glossary. Index.

Note: A small reference handbook of good practices in the feeding of domestic livestock. All of the practices listed have been tested and found to be sound in research, when conducted by state agricultural experiment stations, the United States Department of Agriculture, and farmers. Much of the information presented has been taken from government documents and other reports of research; nevertheless, few references to the source publications are given. Useful information on feeding racks and related equipment is included, together with some drawings of such equipment. The book is intended for the use of practical farmers including those who are not in the livestock business but maintain a few animals as part of a family subsistence enterprise. It is written in a simple, straightforward style and is well organized for quick reference.

CLAWSON MARION

The western range livestock industry New York McGraw Hill Book Company Inc., 1950 401 p. illus. 24 cm. (The American forestry series Walter Mulford, consulting editor) $6 50 7763

Contents: What is "range"? Range livestock in the nation. Delineation of the range region. Climate of the range region. Plant cover in relation to range livestock production. Other natural factors. General economic structure of the range region. Land ownership. Administration of federal range lands. Livestock numbers and production rates. Economic utilization of feed and forage. Range livestock fattening and marketing. General characteristics of ranches. Ranch organization and management principles. Cattle ranches. Sheep ranches. Ranch values and incomes. Grazing land values and grazing fees. Credit for the range livestock industry. Meat consumption. Geography of meat and animal prices. Income from sale of meat animals. Competition among meats. Wool. Factors affecting the supply of meat. Range livestock industry in the second World War. Conclusions and a look ahead. Index.

Note: An authoritative survey, largely from the economic point of view, of the industry of raising beef cattle and other domestic animals on the open, unfenced grazing areas in the western portion of the United States of America. The area covered is mainly one in which the forage consists of native plants and which, because of low rainfall or rough topography, is not suitable for other forms of agriculture. The problems discussed relate to the best utilization of the available pasture so as to produce meat and wool in the most profitable ways, taking the long-range viewpoint. The 48-plate illustrations include both graphs on which much economic data are represented and photographs of scenes of the industry. The author is in the Industry Bureau of Land Management of the Department of Interior of the United States Government.

COLLINS SPELMAN B

Profitable sheep. Illustrations by Richard F Johnson. New York The Macmillan Company 1956. 310 p. illus. 21 cm. $5.25 7764

Contents: Entering the business. Pre-breeding and breeding management of ewes. The care of pregnant ewes. Equipment for lambing. The lambing barn and its use. Lambing time. Growing the lambs. Health control for growing lambs—marking—pest control—worming. Marketing lambs and surplus stock. Growing wool, shearing, and marketing wool. Sheep psychology—handling sheep. Prevention and treatment of disease and other sheep troubles. Index.

Note: A well-written, practical book addressed to beginners in sheep raising and to students taking courses in agricultural colleges. It is outstanding for its sympathetic view of sheep husbandry and for the detail with which the care and management of sheep are covered. It includes not only the expected material but also a variety of minor but useful detail, such as information on techniques of driving sheep along a road, which is also in use by automobiles. Much of the information presented is applicable to the management of sheep wherever they are located. The book was written against a background of experience in the western range country of the United States of America.

CRAMPTON E. W

Applied animal nutrition the use of feedstuffs in the formulation of livestock rations. Drawings by Evan L. Gillespie. San Francisco W H. Freeman and Company 1956 458 p. illus. 22 cm. $6.50. 7765

Contents: Section I, What are feedstuffs: Terms and definitions used in connection with feeds. The proximate analysis of feeds. Schemes of describing the energy value of feeds. Schemes of describing protein values of feeds. Digestible nutrients. Section II, Nutritional requirements of animals: The energy requirements of animals. Requirements for protein. Requirements for minerals, vitamins, and miscellaneous additives. Feeding standards. Section III, The nutritional characteristics of some common feeds: A classification of feeds. Basal feeds. Protein supplements. Vitamin and mineral supplements and miscellaneous additives. Roughages. Section IV, Ration formulation: Translation of feeding standards to meal mixture specifications. The preparation of flexible formulas for meal mixtures. The preparation of mixed mineral supplements. Flexible formulas for cattle meal mixtures. Flexible formulas for swine meal mixtures. Section V, Appendices: Miscellaneous feeding guides. Feedstuffs control and legislation. Miscellaneous tables and charts. Index.

Note: Basic scientific information on nutrition is co-ordinated with the practical formulation of feeds for farm animals in this book. Advanced students in agricultural colleges are the intended audience. However the book is potentially useful also to large-scale farmers who mix their own feeds and to commercial manufacturers of animal feeds. Many tables of data are included, and many formulas for feeds. The author is a member of the faculty of McGill University. The formulas given are based on feedstuffs commonly available in both Canada and the United States of America. Likewise, the discussions of governmental control and

beginning of the volume are devoted to the basic anatomy and physiology. Beginning with the sixth chapter, the topics discussed are directly related to the management of cattle breeding. However even in these chapters, the emphasis is on the basic physiological and pathological information, and there is no attempt to describe explicitly such a matter as the technique of artificial insemination. Although it contains much information of value to practical cattle breeders, the book is directed more to biologists concerned with research on cattle, veterinarians, and specialists concerned with the direction of extensive breeding programs. Literature references are an important feature. There are 50 figures.

BAILEY, J W

A veterinary handbook for swinemen St. Paul The Webb Publishing Company, 1955 261 p illus 24 cm $3 95 7755

Contents. Practical pointers for owners. From the veterinarian's standpoint. Contagious diseases. Digestive troubles. Mammary troubles. Respiratory troubles. Skin troubles. Nervous troubles. Urinary troubles. Reproductive troubles. Miscellaneous troubles. Baby pig troubles. Appendix Commoner diseases. Index.

Note A useful reference book directed to farmers. Written by veterinarian, it deals with not only the diseases of swine but also with management practices that aid in the prevention of disease. Specific disorders are discussed as to cause, symptoms, diagnosis, treatment and prevention. Most of the 70 figures are reproductions of photographs that show techniques of administration of medicines, operations such as the clipping of teeth, and manifestations of disease.

BENNETT, RUSSELL H.

The compleat rancher, with drawings by Ross Santee. New York Rinehart & Company, Inc., 1946 246 p illus 22 cm. $3 00 7756

Contents The country. The apprenticeship. The critter. The ranch homestead. Fencing and haying. The horse. Ranch recreations. Ranch economics. Conclusion. Bibliography

Note. An informal but nonetheless keen analysis of the business of beef cattle production on ranges in the United States of America. It is addressed particularly to persons who are thinking of going into the business. It is written in narrativ style, and is printed without subdivisions or subheads within the chapters. Also, there are no tables or other statistical apparatus such as usually characterize books on this subject. The illustrations are limited to such things as decorative chapter heads. The style and the format are obviously intended to facilitate reading. The book can be considered as light reading of a fruitful kind for persons who are sufficiently attracted by ranch lif to consider devoting time or money to it.

BIEN, CORABEL, AND MARIE GOULD, compilers

Tropical beef cattle industry in the western hemisphere. Washington D C Government Printing Office 1952 157 p 23 cm. (United States Department of Agriculture. Bibliographical bulletin no 19) Gratis. 7757

Contents. General Adaptation. South America. Central America. Mexico. United States. West Indies. Hawaii. Physiology hygiene and sanitation Physiology and morphology Diseases. Pests and parasites. Management Breeding and breeds. Feeds and feeding. Pasture and range Management. Fertilizers. Land clearing. Soils. Winter. Browse. Forage plants. Poisonous plants. Weeds. Products. Index.

Note. A bibliography of 1 749 numbered items, mostly dated between 1940 and 1950 pertaining to the beef cattle industry in the American tropics. Most of the references are in the English, Spanish, and Portuguese languages. The bibliography includes within its scope the economics of the industry the breeds adapted to warm, humid climates, the care and management of beef cattle in the tropics, feeding and utrition, diseases and parasites, pastures and forage plants. The index brings out important subjects in each publication, and includes also the names of uthors, editors, and translators. Some of the references are annotated, and the longer references show contents or partial contents. Florida and the Mexican Gulf coastal regions of the United States of America are included, as are the West Indies and all of Central America and the northern half of South America, excepting Bolivia and Paraguay which are omitted because climatic conditions in these two countries differ from those in the humid tropics.

BRIGGS, HILTON MARSHALL

Modern breeds of livestock. New York The Macmillan Company, 1949 772 p illus. 24 cm. $7 00 7758

Contents: Section I, The breeds of cattle: Shorthorn. Polled Shorthorn. Hereford. Polled Hereford. Aberdeen-Angus. Galloway and West Highland. Brahman and associated breeds. Milking Shorthorn. Red Poll. Holstein-Friesian. Jersey Guernsey Brown Swiss. Ayrshire. The American dairy cattle. Section II, The breeds of hogs. Berkshire. Hampshire. Poland China. Spotted Poland China. Duroc. Chester White. Yorkshire and the Tamworth. Hereford, Minnesota No. 1 and Minnesota No. 2 Section III, The breeds of sheep and goats: Merino. Rambouillet. Southdown. Hampshire. Shropshire. Oxford. Dorset. Cheviot. Suffolk. Corriedale, Columbia, Targhee, Panama, Romeldale, and Montadale. The long-wool breeds. Karakul. Angora goat. The breeds of milk goats. Section IV The breeds of horses. Arabian. Thoroughbred. Standardbred. Hackney American saddle horse. American quarter horse. Morgan. Tennessee walking horse. Palomino. Percheron. Belgian. Shire, Clydesdale, and the Suffolk. The breeds of ponies. American Jack. Index.

Note: A reference manual in which breeds of livestock currently recognized and bred in the United States of America are described and their history outlined. Such points are covered as origin, foundation of the breed, activities of outstanding breeders, important breeding developments in the U. S. A. and elsewhere, the influence of outstanding individuals of the breed, descriptions of prominent families and herds, lists of champions and winners, history and activities of U S. A. associations concerned with the breed and, finally the titles of the U S. A. periodicals currently published about the breed. There are 201 illustrations most of them are reproductions of photographs of outstanding animals. A few literature references are included as footnotes. The author is now dean and director of the College of Agriculture, University of Wyoming.

BUNDY, CLARENCE E , AND RONALD V DIGGINS

Livestock and poultry production principles and practices Englewood Cliffs, N J Prentice-Hall Inc., 1954 608 p illus 23 cm. $6.55 7759

Contents (abridged) Livestock feeding and nutrition. Profitable pork production. Profitable beef production. Profitable production of dairy products. Profitable production of dual-purpose cattle. Cattle diseases and parasites. Profitable sheep production. Profitable poultry production. Reproduction and inheritance. Index.

Note Elementary basic principles and good practices in livestock farming are well described in this vocational school text. All kinds of livestock and poultry which are of major agricultural importance in the United States of America are covered, and practices are described in considerable detail. Most of the 330 figures are reproductions of photographs. Some features not always found in elementary texts include good lists of references to the literature and 59 tables of reference data.

BUNDY, CLARENCE E , AND RONALD V DIGGINS

Swine production. Englewood Cliffs, N J Prentice-Hall Inc., 1956 337 p. illus. 23 cm. $6 00 7760

Contents Opportunities in swine production. Breeds of swine. Selection of breeding and feeding stock. Feed selection in swine nutrition. Swine breeding. Feeding and management during gestation. Feeding and management during farrowing and suckling time. Feeding and management from weaning to market. Pasture periods. Feeding and management from weaning to market. Pasture crops for swine. Buildings and equipment. Disease and parasite control. Swine marketing. Swine records. Fitting and showing. Index.

Note. Although written at an elementary level, this book provides an authoritativ and useful introduction to good practices in the raising of swine. It is addressed to students of farming who are studying at the vocational level and to practical farmers. Present-day methods are described, even such relatively new developments as the use of hybrid boars. There are 54 tables of

Contents: History and development of the beef cattle industry. Distribution, adaptation, and the future of the beef cattle industry. Types and breeds of beef and dual-purpose cattle. Establishing the herd; selecting and judging beef cattle. Systems of beef production. Breeding beef cattle. Feeding beef cattle. Beef cattle management. Range cattle management. Buildings and equipment for beef cattle. Beef cattle health, disease prevention, and parasite control. Marketing and slaughtering cattle. Selecting, fitting, and showing beef cattle. Appendix. Index.

Note: A text directed both to students in agricultural courses and to practical stockmen. Its first seven chapters are essentially the same as the first seven chapters in the section "Beef cattle" of the author's *Animal science*, described above; but there are some changes, and beginning with the eighth chapter additional material is presented. There are 243 illustrations.

ENSMINGER, M. E.

Horse husbandry. Danville, Ill. The Interstate, 1951. 336 p. illus. 24 cm. (Animal agriculture series) $4.00. 7772

Contents: History and development of the horse and mule industry. Distribution, adaptation, and the future of the horse and mule industry. Types and classes of light horses according to use. Types and classes of work horses and mules. Breeds of light horses. Breeds of draft horses. Selecting and judging horses. Determining the age and height of horses. Unsoundnesses and stable vices. The horse in action. Breeding horses. Feeding horses. Buildings and equipment for horses and mules. Horse and mule health, disease prevention, and parasite control. Equitation. Appendix. Animal units. Weights and measures of common feeds. Gestation tables. All-time top sales. United States and world records for thoroughbreds. The breed associations. Breed publications. State agricultural experiment stations. Index.

Note: In this work on the care and breeding of horses under current conditions in the United States of America, the emphasis is on light horses, such as are used for racing, riding, hunting, etc. The book is addressed to beginners and nonspecialists, but it contains enough material to make it useful to those who are interested in horse raising from a practical standpoint. For each breed of horse described, the author gives origin and native home, characteristics, adaptation and use, and present status. The 144 figures include many reproductions of photographs of horses and numerous line drawings of such operations as saddling and mounting.

ENSMINGER, M. E.

Sheep husbandry. Second edition. Danville, Ill. The Interstate Printers and Publishers, 1955. 587 p. illus. 24 cm. (Animal agriculture series) $4.00 7773

Contents: History and development of the sheep industry. Distribution, adaptation, and the future of the sheep industry. Types and breeds of sheep. Establishing the flock; selecting and judging sheep. Systems of sheep production. Breeding sheep. Feeding sheep. Sheep management. Range sheep management. Buildings and equipment for sheep. Sheep and goat health, disease prevention, and parasite control. Marketing and slaughtering sheep and lambs. Wool and mohair. Glossary of wool terms. Goats. Selecting, fitting, and showing sheep. Appendix. Index.

Note: An authoritative text designed for use by students in technical courses in agriculture and by practical ranchers. Several of its chapters are essentially identical with chapters in the author's *Animal science*, described above. However, it contains much additional material. Current practices in the United States of America are specifically described. There are 232 illustrations.

ENSMINGER, M. EUGENE

Swine husbandry. Danville, Ill. The Interstate, 1952. 378 p. illus. 24 cm. (Animal agriculture series) $4.00 7774

Contents: History and development of the swine industry. Distribution, adaptation and the future of the swine industry. Types and breeds of swine. Establishing the herd; selecting and judging swine. Breeding swine. Feeding swine. Grains and other high energy feeds for swine. Protein and vitamin supplements for swine. Pastures for swine. Buildings and equipment for swine. Swine health, disease prevention and parasite control. Central marketing and packer slaughtering of hogs. Selecting, fitting and showing swine. Appendix. Animal units. Weights and measures of common feeds. Gestation table. All-time top sales. The breed associations. Breed publications. Swine publications. State agricultural experiment stations. Index.

Note: A well-organized, practical description of good techniques in swine production. The treatment is elementary enough for use in agricultural courses in high schools and colleges, yet sufficiently detailed for the guidance of farmers and swine raisers. The choice of feeds, methods of feeding, and disease prevention are discussed in considerable detail. One hundred fifty-five figures and more than 30 tables supplement the textual material.

FOHRMAN, M. H., AND OTHERS

A crossbreeding experiment with dairy cattle, by M. H. Fohrman, R. E. McDowell, C. A. Matthews, and R. A. Hilder. Washington, D.C. Government Printing Office, 1954. 127 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no. 1074) $0.45 7775

Contents: Introduction. Review of literature. Plan of the experiment. Foundation animals. Two-breed crosses. Three-breed crosses. Progeny of the three-breed crosses. Sister groups. Production of Beltsville crossbred cows in cooperating dairy herds. Sires used on the crossbreeding project: Holstein sires. Red Dane sires. Jersey sires. Order of sire-breed rotation. Persistency of production by the crossbreds. Body weights of the crossbred females. Discussion. Summary and conclusions. Literature cited.

Note: Crossbreeding of cattle became practical on a general scale with the introduction of practical techniques of artificial insemination. Before 1939 there was comparatively little available published information on crossing breeds of dairy cattle. In that year, when the use of hybrid corn by farmers was expanding rapidly and crossbreeding with poultry, swine, and sheep had been studied experimentally, interest among dairymen in the possibilities of crossbreeding led the Bureau of Dairy Industry of the U. S. Department of Agriculture to begin crossbreeding experiments at Beltsville, Maryland. The purpose of the program was to develop knowledge on the subject which would provide a sound basis for advising the operators of milk-producing farms on what results to expect if they should cross breed as a means of producing better replacements for their milking herds. Breeds used were Holstein, Guernsey, Jersey and Red Dane. In this publication are reported, in text, chart, and tabular form, the breeding performance and milk and butterfat production of the individual animals used on the project which had had time to complete a normal first-lactation period. The evidence indicated that female progeny of crossbred cows, when sired by production-proved bulls, developed into very satisfactory dairy animals.

GORMAN, JOHN ALEXANDER

The western horse: its types and training. Danville, Ill., The Interstate, 1949. 396 p. illus. 22 cm. $3.50. 7776

Contents: Part I, Training: Training the colt. Training the young horse to work. Training the stock horse. Horse hunting. Restraining devices. Training and gaiting the pleasure saddle horse. Trick training. Rodeos and western shows. Horse shows and recreation. Horse racing. Part II, Types of western horses. Light breeds of horses. Types of western stock horses. Remount horses. Wild horses. Draft horses and mules. Part III, Shipping and marketing horses. Reducing losses in shipping. Marketing horses. Index. Breed associations.

Note: "Western" in the title of this book refers of course to the western part of the United States of America, a region in which all types of horses are raised, most of them under range conditions, and in which most of the "cow ponies" are produced. The book is about evenly divided between the discussions of training methods and the descriptions of types of horses. The style is simple. The book is useful as a general source of information on how western horses are bred and trained. The author is chairman of the Department of Animal Husbandry, Washington State College.

JUKES, THOMAS H.

Antibiotics in nutrition. New York, Medical Encyclopedia, Inc., 1955. 128 p. illus. 23 cm. $4.00. 7777

Contents: Introduction. Mechanism of the antibiotic growth effect. Effect of feeding antibiotics on the requirement for nutrients. Antibiotics in animal production. Physiologic and other effects of dietary antibiotics. Bibliography. Name index. Subject index.

legislation pertain both to Canada and the *United States*. Lists of "Suggested reading" are included in most chapters, but the author did not attempt a comprehensive bibliography

DEYOE, GEORGE P, AND OTHERS

Raising livestock. By George P Deyoe, W A Ross and W H Peters Second edition New York McGraw Hill Book Company, Inc., 1954 540 p illus 24 cm. (McGraw Hill rural activities series W A. Ross consulting editor) $7 50 7766

Contents. Engaging in the livestock business. Selecting livestock. Feeding livestock. Providing housing and equipment for livestock. Caring for and handling livestock. Keeping livestock healthy and sound. Breeding and improving livestock. Keeping and using livestock records. Marketing livestock and livestock products. Preparing and processing livestock products for home use. Appendices. Index.

Note A sound, practical introduction to livestock raising. It emphasizes those practices which are best suited to farms in the United States of America. However much of the information presented is applicable to the care and management of cattle, horses, sheep and swine in other regions as well. The material is arranged according to operations rather than according to kind of animal. The chapter on housing and equipment, for example, covers buildings and equipment for hogs, dairy cattle, beef cattle, sheep horses and mules. The book is written in an elementary readable style, and is used for the instruction of students who are taking their first courses in the subject in vocational agricultural courses and for home study by young people on farms and ranches who are just entering the livestock business. It contains 261 figures, but only a few literature references. One of the appendixes provides a list of films and other visual aids suggested for use with the book in teaching.

DEYOE, GEORGE P, AND J L KRIDER

Raising swine. New York McGraw Hill Book Company, Inc, 1952 447 p illus. 24 cm (McGraw Hill rural activities series W A. Ross, consulting editor) $6 25 7767

Contents Engaging in swine raising. Selecting and purchasing swine. Keeping and using records. Planning feeding program for swine. Feeding swine. Providing facilities for raising swine. Handling and caring for swine. Keeping swine healthy Breeding and improving swine. Marketing swine. Preparing and processing pork for home use. Correlated list of visual aids. Index.

Note Good practices in the raising of swine under conditions which prevail in the United States of America are described in simple language and in rather full detail in this book. The main emphasis is on the raising and marketing of meat animals however the raising of breeding stock is also discussed. The book is suitable for the guidance of young people who are interested in raising hogs as 4-H club enterprise and for practical farmers. It is fully illustrated.

DIGGINS, RONALD V, AND CLARENCE E BUNDY

Beef production Englewood Cliffs, N J Prentice-Hall Inc 1956 335 p illus. 23 cm. $5 85 7768

Contents Opportunities in beef cattle production Breeds and breed selection. Selecting and establishing the breeding herd. Selection of feeder cattle. Feeds and feed utilization by beef cattle. Feeding and management of the breeding herd. Feeding and management of calves. Feeding and management of stockers and fattening cattle. Beef cattle housing and handling equipment. Keeping cattle healthy Buying and selling beef cattle. Reproduction, inheritance, and breeding systems in beef cattle. Fitting and showing beef cattle. Index.

Note. A thoroughly illustrated, practical book. It is written in elementary style, but provides wide range of up-to-date information on good practices in the breeding and management of beef cattle, including adequate discussions of feeding and specific formulas for rations. It is suitable for use by students in vocational agricultural courses and practical farmers. References to more technical literature are provided in bibliographies appended to the chapters.

DYKSTRA, RALPH RALPH

Animal sanitation and disease control. Revised and enlarged Danville Ill. The Interstate Printers-Publishers, 1955 887 p. illus. 21 cm. $4 00 7769

Contents (abridged) Part one, Some animal health factors. The anatomy and physiology of the organs of digestion in animals. Vitamins, minerals and hormones as health requirements. Animal housing and control. Animal surroundings and manure disposal. Part two, Some animal disease factors: Hereditary factors and abnormalities. Animal care and disease. Commercially sales, community sites, and transit losses. Part three, Some disease control guides: The quarantine. Disinfecting premises. Pasture rotation and sanitation. Destroying ailing animals and disposal of carcasses. Part four, Infections and their handling Guides in the selection of chemical disinfectants and their modes of action. Non-chemical disinfection. Methods of application of chemical disinfectants. Part five, Some insecticides, larvacides and their use on premises and hosts: Disinfecting buildings and animals. Rats, and some other rodents, and their control. Part six, Non-infectious, sporadic ailments. Some secondary ailments. Control and cosmetic devices, and ailments. Some surgical ailments. Plant, food, and chemical poisonings. Deficiency ailments. Part seven, Infectious and communicable ailments of barnyard fowl: Some infectious and communicable ailments of barnyard fowl. Part nine, Parasites and disease Some larger (macroscopic) parasites. Ektoparasites and their role. Part ten, Miscellaneous information: Some special methods of diagnosis. Artificial feeding of orphaned animals. Methods of administering medicine to animals. Livestock breeding problems. Artificial insemination or artificial breeding. Some diseases common to man and animals. Part eleven, Livestock sanitary bureaus, boards, and commissions, and the veterinarian. Index.

Note. Another revised and enlarged edition of standard work on disease control in farm animals. It is addressed to students enrolled in agricultural courses and to farmers rather than to veterinarians. In it much ground is covered in an elementary practical way

ENSMINGER, M E

Animal science. Third edition. Danville, Ill. The Interstate Printers and Publishers, 1955 1,152 p illus. 24 cm. (Animal agriculture series) $6 50 7770

Contents (abridged): General sections: The field of animal science. Some principles of genetics and animal breeding. Feeding livestock. Livestock barns, shelters, and equipment. Animal health, disease prevention, and parasite control. Beef cattle. Distribution, adaptation, and the future of the beef cattle industry. Types and breeds of beef and dual-purpose cattle. Systems of beef production. Breeding beef cattle. Feeding beef cattle. Central marketing and packer slaughtering of cattle and calves. Sheep and goats: Distribution, adaptation, and the future of the sheep industry. Types and breeds of sheep. Systems of sheep production. Breeding sheep. Feeding sheep. Wool and mohair. Goats. Swine Distribution, adaptation, and the future of the swine industry. Types and breeds of swine. Breeding swine. Feeding swine. Horses: Distribution, adaptation, and the future of the horse industry. Breeds of horses. Selecting and judging horses. Breeding horses. Feeding horses. Appendix Space requirements of buildings and equipment for beef cattle, sheep, swine, and horses. How to determine the size silo to build. State colleges of agriculture. New animal frontiers through research. Index.

Note: A reference book on animal husbandry as it is practiced in the United States of America. It is organized in 51 chapters of which a selection is listed by title above. Much attention is given both to descriptions of breeds and to descriptions of breeding, feeding and marketing practices. The book is written in an elementary style and is designed primarily for the use of such readers as students in agricultural colleges, beginners in animal husbandry and practical farmers. In this third edition there are 415 figures, and most of them are reproductions of photographs of animals, of typical and noted animals, and of farm scenes. The author is Chairman of the Department of Animal Husbandry of the State College of Washington.

ENSMINGER, M E

Beef cattle husbandry Second edition. Danville, Ill. The Interstate Printers and Publishers, 1955 597 p illus. 24 cm. (Animal agriculture series) $4 00 7771

Animal Husbandry

[illegible] beef cattle, swine, and sheep husbandry, by C. F. [illegible] and J. X. [illegible]. The use of estrogens to stimulate [illegible], by J. F. Sykes. The [illegible] in cattle and goats, by J. F. Sykes. The use of [illegible] for milk production, by J. W. Thomas.

Note: The papers presented at this symposium [illegible] the use of hormones in livestock and poultry production. The basic physiologic knowledge and the results of experimental investigations are very compactly presented. The literature is covered up to the end of 1951. [illegible] applications which in the [illegible] production [illegible] of meat, milk, and eggs. Problems that still require research [illegible] 1953 are discussed.

PERRY ENOS J., editor

The artificial insemination of farm animals. Second revised edition. New Brunswick. Rutgers University Press. 1952. 341 p. illus. 23 cm. $5.00. 7783

Contents: [illegible], by E. J. Perry. Advantages and limitations [illegible], by E. J. Perry. The organs of reproduction, by J. Edwards. The [illegible] of hormones in reproduction, by R. P. Reece. General [illegible], by E. J. Perry. Factors influencing the quality and quantity [illegible], by E. J. Perry. Cattle, by E. J. Perry. Sheep and goats [illegible], by E. J. Perry. [illegible], by C. E. [illegible]. Horses and jackstock, by V. [illegible]. Swine, by E. J. Perry. Dogs, by E. P. [illegible]. [illegible], by J. W. Bartlett. [illegible], by J. W. Bartlett. [illegible] of semen, by J. W. Bartlett. [illegible], by E. J. Perry. The shipping of semen, by [illegible]. E. J. Perry. [illegible] in artificial insemination, by J. A. [illegible]. Feeding and management of bulls, by J. W. Bartlett. Index.

Note: The second revised edition of this standard work on the artificial insemination of farm animals has been brought up to date in all its parts and contains an added chapter on the artificial insemination of dogs. Covering both principles and procedures of the subject, the publication is a complete exposition of the subject and may be equally well used as a textbook in agricultural colleges and as a manual of practice for those concerned with artificial insemination programs.

PETERS WALTER H., AND ROBERT H. GRUMMER

Livestock production. Second edition. New York. McGraw Hill Book Company Inc., 1954. 415 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $6.00. 7784

Contents: Section I. The field of animal production. The importance of animals. Improvement of animals through breeding. Progress in animal feeding. The care and health of animals. The beginnings of livestock. Selecting the livestock enterprise. Judging livestock. Section II. Beef cattle production. Products and adaptations of beef cattle. Breeding beef cattle. Feeding beef cattle. The management and care of beef cattle. Judging beef cattle. Market classes and grades of cattle. Section III. Dairy cattle production. Products and adaptations of dairy cattle. Breeding dairy cattle. Feeding dairy cattle. Management and care of dairy cattle. Judging dairy cattle. Section IV. Swine production. The products and adaptations of swine. Swine breeding. Swine feeding. The management and care of swine. Judging swine. Market classes and grades of swine. Section V. Sheep and goat production. The products and adaptations of sheep and goats. Breeding sheep and goats. Feeding sheep. The management and care of sheep. Judging sheep. The market classes and grades of sheep. Section VI. Horse and mule production. Uses and adaptations of horses. Breeding horses. Feeding horses. The management and care of horses. Judging horses. Mule production. Index.

Note: A broad survey of livestock production, particularly as it is practiced in continental United States of America, is provided in this college textbook. The general aspects of animal husbandry are discussed, then the uses, breeds and general principles of the management of the chief kinds of domesticated livestock are described. Farm and range practices are not covered in detail, but references are made to books in which detailed descriptions are available. The first edition was published in 1942. The scope and organization are unchanged in this second edition, but data on production, prices, etc., were revised, and a few other changes were made.

RHOAD ALBERT O

Breeding beef cattle for unfavorable environments a symposium presented at the King Ranch Centennial Conference. Austin University of Texas Press. 1955 248 p. illus. (part col'd) 24 cm. $4.75 7785

Contents: Modern [illegible] nature of evolution, by E. M. [illegible]. Introduction—the impact of science on ranching, by [illegible] D. W. Williams. Part I. The unfavorable environment. [illegible] of the British beef breeds in the tropics and subtropics, by [illegible]. The [illegible] J. C. Bonsma. Heat tolerance in cattle, by D. H. K. Lee. The effects of climate on reproduction, by J. Hammond. Climatic stress [illegible], by G. H. Kerr. The effects of [illegible] on [illegible] production, by F. B. [illegible]. [illegible] fertility in relation to [illegible] production, by C. L. [illegible] and W. D. [illegible]. Breeding [illegible] production, by C. L. Lambill and W. D. Lamb. Breeding range [illegible], by W. G. Whaley. Part II. [illegible] for difficult environments, by W. G. Whaley. Part II. [illegible] beef cattle for the unfavorable environment. The Santa Gertrudis [illegible], by R. J. [illegible] of heritability in breeding programs, by J. L. Lush. [illegible] breeds in [illegible] problems in population genetics, by L. M. Winters. [illegible], by E. J. Warwick. The place of crossbreeding and inbreeding, by E. J. Warwick. The development and maintenance of a high genetic standard, by R. T. Clark. Quality of beef as related to grade and laboratory tests [illegible]. The improvement of indigenous breeds in subtropical environments, by J. C. Bonsma. Improved Indian breeds [illegible], by J. S. [illegible]. Procedures used in developing the Santa Gertrudis breed, by A. O. Rhoad. The [illegible] of [illegible] research and practice, by T. [illegible]. Our one hundred years of [illegible] ranching—what next? by R. J. Kleberg, Jr. Appendix. Index.

Note: The King Ranch in Texas, which celebrated in 1953 the centennial of its founding, is renowned not only for its size [illegible] but also for pioneering work in [illegible] management and for the development of the Santa Gertrudis breed of cattle, a breed well adapted to the climate of Texas and to other regions with similar climates. Appropriately, its centennial was celebrated by a symposium [illegible] on the physiology of cattle, cattle breeding, and management. The papers they delivered are published in this volume. Many of the papers are accompanied by literature references and digests of discussion.

RICE, VICTOR ARTHUR, AND OTHERS

Breeding better livestock, by Victor Arthur Rice Frederick Newcomb Andrews, and Everett James Warwick. New York. McGraw Hill Book Company Inc., 1953 465 p. illus. 24 cm. $7.00. 7786

Contents: Section I. Background for animal breeding: An introduction to animal breeding. Animal domestication and development. Section II. Mechanisms of reproduction. The male's part in reproduction. The female's part in reproduction. Fertility and sterility. Management of breeding males—females. Artificial insemination. Pregnancy and birth. Section III. Mechanisms of heredity: Background of heredity. Physical basis of heredity. Primary laws of heredity. Secondary laws of heredity. How heredity works. Genetic variation. Nongenetic variation. Fact and fancy in breeding. Section IV. The art of breeding. Inbreeding. Outbreeding. Crossbreeding and linecrossing. General principles of selection. Selecting dairy cattle—beef cattle [illegible] The breeder's art. List of visual aids. Index.

Note: An introductory but fairly substantial text on the practical breeding of farm animals. The historical background is outlined in the first two chapters; all of the other chapters are devoted to basic knowledge and descriptions of techniques and standards of research in breeding. There are 141 figures, a majority of which are reproductions of photographs of selected animals. There are also more than 30 tables of useful data. Only animals of agricultural importance in the United States of America are discussed. The book is organized for use as a text in courses in animal husbandry.

RICE, VICTOR ARTHUR, AND FREDERICK NEWCOMB ANDREWS

Breeding and improvement of farm animals. With chapter on Selection in meat animals by Everett James Warwick. Fourth edition. New York McGraw Hill Book Company, Inc., 1951 787 p. illus. 24 cm. (Mc-

Note: The published literature, together with unpublished observations of some research scientists, bearing on the nutritional aspects of antibiotics, is concisely summarized in this monograph. The main emphasis is on investigations of antibiotics in the nutrition of farm animals. Some results from clinical medicine and from experimentation on laboratory animals and human subjects also are included. There are 25 tables of data. In the last few pages, the author has drawn certain conclusions. However the book is essentially an organized guide to the literature. There are 439 entries in the bibliography and the names of the authors of the cited works are assembled in the name index.

LUSH, JAY LAURENCE

Animal breeding plans Third edition. Ames The Iowa State College Press, 1945 443 p illus 24 cm. $7 00 7778

Contents Background on animal breeding. Genetic principles in animal breeding. Breeding plans based on selection. Breeding plans based on relationship. Breeding plans based on somatic likeness. Other topics concerning breeding plans. Topics relating to reproduction. Summary Subject index.

Note. A manual of information for the livestock grower interested in perfecting inherited characteristics of his animals. The book is also intended as a text for agricultural-college students who have completed courses covering such topics as stock judging, history of breeds, herdbook study and the genetics, embryology anatomy and physiology of farm animals. It is recognized as one by the most outstanding books on a practical application of genetics to animal breeding. Bibliographic references are appended to most of the chapters. Revision of the chapters on sire indexes was the only major change made in preparing the third edition.

MAYNARD, LEONARD A., AND JOHN K. LOOSLI

Animal nutrition. Fourth edition New edition New York McGraw Hill Book Company, Inc., 1956 484 p illus. 23 cm (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $7 50 7779

Contents. General bases of nutrition. The nutrients and their metabolism. The measurement of body needs and feed values. Nutritive requirements for body processes and productive functions. Appendix. Visual-aids bibliography Name index. Subject index.

Note In this standard work, the basic principles and the more important experimental findings in nutrition are related to the metabolism of farm animals. The scientific knowledge that is the foundation of good feeding practices is the subject rather than feeds and feeding. However the presentation is such that the relations to actual practices in livestock feeding are obvious. Source publications are cited in footnotes, with emphasis on the pioneer studies and on recent work. The names of the authors of the cited literature are brought together in the author index, thus making the book useful as a guide to the literature. The third edition was published in 1951 The chapter on growth stimulating substances is new in this fourth edition. Some revisions have been made in most of the chapters carried over from the preceding edition.

MORRISON, FRANK B

Feeds and feeding a handbook for the student and stockman By Frank B Morrison assisted by Elsie B Morrison and Spencer H Morrison. Twenty second edition unabridged Ithaca The Morrison Publishing Company 1956 1 165 p illus 24 cm $9.50 7780

Contents (abridged) Part I, Fundamentals of animal nutrition Digestion, absorption, and use of food. Measuring the usefulness of feeds. Proteins—fats—carbohydrates. Minerals in livestock feeding. Vitamins in livestock feeding. Growth—fattening—reproduction. Production of milk, work, and wool Balanced rations—feeding standards. Economy in feeding livestock. Part II, Feeding stuffs Pasture and other forage. Hay and haymaking. Silage and crops for silage. Legumes for forage. Indian corn and sorghums for forage. Roots, tubers, and miscellaneous forages—poisonous plants and poisonous feeds. Corn and oat grains and their by-products. The other cereals and by-products. Miscellaneous concentrates. Manurial value of feeding stuffs. Part III, Feeding farm animals. Feeding and caring for dairy cows. Feed and care of beef cattle—methods and costs of beef production—veal production. Feeding and caring for sheep and lambs—fattening lambs—goats. Feeding and caring for horses. Feeding and care of swine. Feeding and caring for poultry Appendix Table I, Average composition of American feeds, digestible nutrients mineral and fertilizing constituents, digestion coefficients. Table III, Morrison feeding standards for farm animals. Table V Vitamin content of feeding stuffs. Table VII Example rations for farm animals. Table X, Amino acid content of certain feeds. Table XI, Productive and metabolizable energy of feeds for poultry Index.

Note. This work has been used in its various editions for almost 60 years. It is a comprehensive digest of the published knowledge concerning the nutritional requirements and the feeding of the larger farm animals, together with full information concerning the composition, use, and value of the many different feedstuffs, especially those of importance in the United States of America. It is used both as a textbook in agricultural colleges and as a reference manual by large-scale and medium-scale livestock breeders and feeders. The chapters are accompanied by lengthy bibliographies. The 21st unabridged edition was published in 1948. In preparing this edition, sections of chapters were revised so as to include new data and results from investigations published since the 21st edition was written; references to recent literature were added to the bibliography and the useful and extensive tables in the appendix of data on the composition and digestible nutrients of feedstuffs were revised. The author's *Feeds and feeding abridged*, published in a ninth edition early in 1958 696 p., $4.75 is based on this book.

NATIONAL RESEARCH COUNCIL. AGRICULTURAL BOARD COMMITTEE ON FEED COMPOSITION

Composition of concentrate by-product feeding stuffs Prepared under the auspices of the Committee on Feed Composition of the Agricultural Board Washington, D C. National Academy of Sciences—National Research Council, 1956 126 p. 28 cm. (National Academy of Sciences—National Research Council. Publication 449) $3.00 7781

Contents. Guide for use of tables. Tables of composition Proximate composition. Mineral composition. Vitamin composition. Amino acid composition. Energy and carbohydrate composition. Appendix. Contributors of unpublished data. Industry State agricultural experiment stations. State feed control laboratories. Federal agencies.

Note. The Committee on Feed Composition was established in 1946 for the purpose of providing precise information on the nutrient value of feeding stuffs available in the United States of America for livestock and poultry production. In this publication addressed to agricultural extension personnel and farmers, the Committee provides basic information in tabular form on the composition of concentrate by-product feeding stuffs. Data are presented for 38 nutrients showing percentages (maximum, minimum, and mean) of composition of the various products, which are divided into the following groups oil seed and legume by-products, cereal milling by-products, root, fruit, and vegetable by-products, brewers and distillers by-products, packing house by-products, milk by-products, marine by-products, mineral supplements, yeasts and yeast by-products and miscellaneous by-products.

NATIONAL RESEARCH COUNCIL

Hormonal relationships and applications in the production of meats, milk and eggs, a report of the Committee on Animal Nutrition Prepared by the Subcommittee on Hormones J F Sykes, chairman Washington, D C National Research Council 1953 54 p. 24 cm. (National Research Council Publication 266) o p 7782

Contents: Introduction. The use of estrogens for fattening poultry by F W Lorenz. Thyroprotein and antithyroid drugs in poultry feeding, by F W Hill. Some uses of drugs and hormones

[illegible], Leon Frazier

How to breed dogs: a regular exposition of the results, principles underlying reproduction and heredity in dogs, with special reference to their practical application. Revised edition. New York: Orange Judd Publishing Company, Inc., [illegible] p. illus. 24 cm. 7793 $5.00

[illegible]

Note: [illegible]

Williams, David Willard

Beef cattle production in the South. Second edition. Danville, Ill.: The Interstate, 1950. 450 p. illus. [illegible] cm. $5.00 7794

Contents (abridged): Historical development and distribution. Judging beef cattle. Breeds of beef cattle. Breeding beef cattle. Feeds and feeding. Marketing beef cattle. Handling and management practices. Showing beef cattle. Pastures. [illegible] Equipment for beef production. Appendix. Glossary of terms. Selected references. Index.

Note: [illegible]

Winters, Laurence M.

Animal breeding. With chapters on selection and the effectiveness of selection by William Rempel, and chapters on fertility and artificial insemination by John N. Cummings. Fifth edition. New York: John Wiley & Sons, Inc., 1954. 420 p. illus. 22 cm. $5.95 7795

Contents: The economic importance of animal improvement. The breed background. Reproductive organs. Gametogenesis and the physical basis of heredity. The breeding cycle and the sex hormones. Fertilization and prenatal development. The role of heredity. Fundamental Mendelism and animal breeding. Lethals. Sex. Selection. Effectiveness of selection. Inbreeding. Crossbreeding. Purebred breeding. Grading. Fertility. Artificial insemination. Building superior germ plasm. Bibliography. Glossary. Index.

Note: A standard work used for many years as an agricultural college textbook and [illegible] by livestock breeders. It covers both the pertinent basic knowledge of genetics and related subjects that are important in practical breeding programs for farm animals. Although the mechanisms of reproduction and heredity and the results of important experiments are given considerable space, the treatment of them is directed to students of practical agriculture in agricultural colleges and to breeders of farm animals. Beginning with the chapter on selection, the practical aspects of animal breeding are presented in some detail. The first edition was published in 1 [illegible] and the fourth edition in 1948. In this fifth edition, the most noteworthy additions are the contributed chapters [illegible] are mentioned in the subtitle. Several of the chapters carried over from the preceding edition, notably those on inbreeding and [illegible], have been extensively revised, and portions of [illegible] have been revised or [illegible]. [illegible] published since the fourth edition was written, including some published as recently as 1952, has been added to the 14-page bibliography.

DAIRYING AND DAIRY PRODUCTS

Adams, Harold S.

Milk and food sanitation practice. Cambridge, Mass.: Harvard University Press, 1947. 311 p. illus. 24 cm. $5.[illegible] 7796

Contents: Milk sanitation: History and public health importance of milk control. Planning and administering [illegible] milk control program. [illegible] Fundamentals of sanitary milk production. Undulant fever [illegible] The pasteurization process. Plans for the modern pasteurization plant. Pasteurization plant equipment and inspection. [illegible] Laboratory procedures used to evaluate [illegible] Bibliography [illegible] milk supply. The sanitary control of frozen desserts. [illegible] Food sanitation: The food control problem. [illegible] The [illegible] of food establishment sanitation. [illegible] of food handlers. Bibliography [illegible] Appendix. Index.

Note: [illegible]

American Public Health Association

Standard methods for the examination of dairy products, microbiological and chemical. Tenth edition. Microbiological methods formulated by committees of the American Public Health Association and approved for publication by the American Public Health Association. Chemical methods compiled by the Committee on Editing Methods of Analysis of the Association of Official Agricultural Chemists and approved for publication by that Association, including current changes to date of last annual meeting in Washington, September 29–October 1, 1952. New York: American Public Health Association, Inc., 1953. 345 p. illus. (part col'd) 24 cm. $5.00. 7797

Contents: Selection and interpretation of quality tests. Microbiological methods for milk and cream. Detection of special bacterial groups or species. Microbiological methods for butter—[illegible]—ingredients used in frozen dairy foods—frozen dairy foods. Tests for sanitization of equipment and containers. Phosphatase methods to determine pasteurization. AOAC, official. Chemical methods. Screening tests. Index.

Note: A reference work that enjoys [illegible]-official status in the United States of America. It describes specifically procedures for tests and interpretation of the results of tests of dairy products. Some of the methods described are taken from the Official methods of analysis of the Association of Official Agricultural Chemists. The work is revised periodically. Changes made by this tenth edition were not numerous. However, several methods have been revised and several new ones recognized. Retention of tests in each new edition and addition of new tests are both decided upon by a joint editorial committee of the American Public Health Association and the Association of Official Agricultural Chemists. Bibliographies are included, and for some chapters are very extensive.

Graw Hill publications in the agricultural sciences, R. A. Brink, consulting editor) $8 50 7787

Contents: Section I, Animals and man up to the present. Animal breeding—present and past. Early man and animal domestication. Animal origins and progression. Section II, Mechanisms of reproduction The male's part in reproduction. The female's part in reproduction. Reproductive efficiency Lowered fertility and sterility Pregnancy and parturition. Mammary development and the initiation of lactation. Artificial insemination. Section III, Mechanisms of heredity History and problems of genetics. The principles of heredity The principles of variation. Sex determination. Section IV The art of breeding. Systems of breeding—unrelated animals. Systems of breeding—related animals. General considerations in selection. Selection in dairy cattle. Selection in meat animals. Selection in horses. Retrospect and prospect. Appendix: Livestock record associations. Name index. Subject index.

Note. A standard textbook for agricultural college courses. Each section has been brought up to date with added data to cover new developments and added material in the bibliographies and illustrations. Among the advances covered are: the broadened recognition of the fundamental aspects of animal agriculture and shifting emphasis among the various classes of livestock; further developments in the hormonal regulation of sex manifestations and the widespread adoption of artificial insemination and continuing delineation and refinement of the basic laws of inheritance and their application to livestock improvement.

SAUNDERSON, MONT HARRIS

Western stock ranching Minneapolis The University of Minnesota Press, 1950 247 p. illus 24 cm. $5 00 7788

Contents. Resources and ranches. Livestock management economics. Grazing land use. Choice of feed crops for ranch use. Markets, prices, and incomes. Business management. Planning the management program of the ranch. The use of federal public lands. Common and botanical names of range plants. Bibliography Index.

Note The author of this book is a Range Economist associated with the United States Forest Service, and he has covered the subject of stock raising in western United States of America from the economic and management standpoint. Land, use, labor market prices, and management of grazing areas (both private and public) are among the important aspects discussed in some detail. Areas of the United States of America which are suited to ranching and the chief types of stock ranches are described in the first chapter

SELF, MARGARET CABELL

Horses their selection, care and handling New York A. S Barnes and Company, Inc *1943 170 p illus 23 cm. $3 75* 7789

Contents Selection of the horse. Selection and care of equipment. The stable. General care. First aid. Handling the horse. Cause and control of vices. Riding. Driving. Starting the child. The show ring. Glossary Index.

Note. A guide which emphasizes the everyday handling of horses. The book is designed for the person owning his own driving or saddle horse, and is intended to teach the rudiments of worthwhile hobby and its benefits. Well-chosen pictures and clearly drawn diagrams supplement and illustrate the text.

SMITH, WILLIAM WESLEY

Pork production With a chapter on *Sanitation and disease control* by L M Hutchings. Third edition New York The Macmillan Company 1952 616 p illus 22 cm $6 50 7790

Contents General view Feeding and handling the herd in the breeding season. Feeding pregnant sows and gilts. Care and feeding of the sow and litter Size of litters—birth weight of pigs—milk flow of sows. Housing and general management of the breeding herd. Food demands of the growing and fattening pig. Food deficiencies of the cereal grains. Forage crops. Methods of feeding on forage. Hogging-off corn and other crops. Protein supplements—dairy by-products—packing house and similar products. Protein supplements of plant origin. The cereal grains and other carbonaceous feeds. The cost of producing pork. Marketing. Factors affecting the price of hogs. Judging. Breeds of hogs. Breeding. Sanitation and disease control. Index.

Note. A standard book on the subject used both as a text in agricultural college courses and as reference book. All aspects of the subject which are of interest to the practical hog raiser are covered in considerable detail. References to the literature are included. The previous edition appeared in 1937 In the third edition there has been extensive revision in order to describe new management practices and to include research information published in the recent literature. Economic data have also been revised. The number of figures has been increased to 112

SNAPP, ROSCOE R

Beef cattle. With a chapter on sterility by Harry Hardenbrook, jr Fourth edition. New York John Wiley & Sons, Inc., 1952 641 p. illus. 23 cm. $6 50 7791

Contents. Part I, General aspects of the beef-cattle industry Phases and areas of beef production. The relation of beef cattle to general farming. The relation of beef cattle to soil fertility Part II, The breeding herd Advantages and disadvantages. When to start. Selection. Reproduction and mating. Pregnancy Parturition. Summer management. Winter management. Weaning, dehorning, castration, and marking calves. Feeding and care of young cattle. Part III, Fattening cattle for market. Fattening cattle. The importance of age in growth and fattening. The importance of grade and sex in feeder cattle. The use of grain in fattening cattle. Carbonaceous concentrates and their use. Protein requirements. The principal nitrogenous concentrates. Roughage and its use. Corn silage as a feed for fattening cattle. A comparison of various silages. Grass as a feed for fattening cattle. Miscellaneous feeding stuffs. The preparation of feeds for beef cattle. Methods of feeding. Part IV General problems in beef production: Baby-beef production. The marketing of cattle. The financial aspect of beef production. Fitting cattle for show and sale. Buildings and equipment for beef cattle. Diseases and parasites affecting beef cattle. Sterility Index.

Note. After 13 years this comprehensive textbook and manual has again been revised and brought up to date. Included in the fourth edition are reports on new breeding and feeding techniques introduced since the previous edition, new methods of calculating rations and estimating the feed required to winter or fatten beef cattle of different ages and weights, new data on grass silage, new material on artificial insemination, and a special chapter on sterility in beef cattle. Additions have also been made to the chapters on fitting cattle for show and sale, on buildings and equipment, and on diseases, parasites, and poisonous plants. Four chapters of introductory and background materials and the lists of references at the ends of the chapters which appeared in the previous edition have been omitted. The new edition contains 110 illustrations and 243 tables.

TOWNE, CHARLES WAYLAND, AND EDWARD NORRIS WENTWORTH

Shepherd's empire, with drawings by Harold D Bugbee. Norman University of Oklahoma Press, 1946 364 p illus. 22 cm. $3.50. 7792

Contents Columbus. Cortés, and the conquistadors. Sheep at the missions. New Mexican and Californian dons. Gold diggers, soldiers, and saints. Under the Lone Star The Indian—friend and foe. The day of the great sheep trails. Cattlemen war on woolies. Sheep against the sea. Predators take their toll. Poison plants and droughts. Herders and the herded. Lambing and shearing. Men behind the flocks. Bibliography Index.

Note: A fascinating historical account of sheep herding in what is now continental United States of America. The story begins with the introduction of sheep to the American continent by the Spanish conquerors of Mexico, and it is carried down to recent years. Much space is given to the often murderous rivalry between cattlemen and sheepmen in the western United States during the latter part of the nineteenth century. Although it is solidly based on contemporary documents, and statements in the text are liberally fortified with footnote citations of the sources of the data, the adventures of shepherding are played up. The book is of value to students of the history of agriculture, but it is also exciting reading for laymen with an interest in the western United States.

[illegible] standards. Standardization of the fat content of milk and cream. Pasteurization of milk. Bottling milk—capping and hooding. Cleaning milk bottles. Washing and sterilizing bottles, cans and equipment. [illegible] Churning. Washing the butter. Working the butter. Storing butter. Soft cheeses. Cottage cheese. Neufchâtel and cream cheese. Testing dairy products. Index.

Note: A manual of practical information written for the guidance of dairy workers engaged in the manufacture and processing of milk, ice cream, butter, and soft cheese. It is intended to be used as a handy reference and which will provide answers to questions regarding the composition of milk and its products, [illegible], types of equipment needed and methods of operation, [illegible] and [illegible], accepted standards, etc. Almost half of the volume deals with the making of ice cream mixes (for which [illegible] are included) use of flavors, and [illegible] and freezing methods. In an effort to make the material readily accessible, the main topics within each chapter are arranged alphabetically.

Gilmore, Lester Odell

Dairy cattle breeding. Edited by R. W Gregory Philadelphia. J B. Lippincott Company 1952 604 p. illus. 23 cm. $6.50. 7803

Contents: Domestication. Inheritance and environment. Basic [illegible] in breeding. Gene frequency analysis. Sex. Reproductive efficiency. Multiple births. Lethals. Nonlethal physical characters. Color and color patterns. Blood typing. Disease resistance. Growth and development. Milk secretion. Efficiency of feed utilization. Longevity and miscellaneous physiological characteristics. The [illegible] process. How production is inherited. Type and production. [illegible] bulls. Evaluating dams and cow families. Pedigrees. Herd analysis. Inbreeding. Outbreeding. Extending the use of well-bred bulls and cows. Artificial breeding. Co-operative bull [illegible]. Purebred cattle. Index.

Note: This publication is an exclusive textbook for agricultural college students and teachers which can also be of use to dairy cattle breeders, to officials of breed registry and artificial breeding organizations, and to vocational agriculture students and teachers. The author concentrates on the breeding of dairy livestock, except in certain chapters wherein animals relating to all cattle are presented, such broader knowledge being considered helpful to the student for an understanding of the breeding of dairy livestock. These chapters are those dealing with domestication, environmental variations, reproduction, inherited characters, and systems of breeding. Illustrations number 171, aside from 116 tables. Bibliographical references are given in footnotes, and study questions are given at the ends of the chapters.

Goss, Emery F

Techniques of dairy plant testing. Ames Iowa State College Press, 1953 350 p. illus. 23 cm. $5.00. 7804

Contents: Sampling for the Babcock test. Fat in milk—cream—ice cream—skim milk, buttermilk, and whey—in homogenized, chocolate, evaporated, and sweetened condensed milks. Moisture, fat, and salt in butter—cheese. Acidity in milk and its products. Solids in milk and its products. Using the lactometer. Methylene blue and resazurin tests. Phosphatase test for Pasteurization. Checking the strength of alkali cleaning solutions and the hardness of water. Testing chemical sterilizing solutions. Mojonnier test for fat and solids. Appendix. Index.

Note: A textbook and reference manual of tests for such substances as fat and water, and such properties as acidity, of dairy products. It describes detailed procedures for all of the standard tests, and explains their principles. Numerous illustrations depict apparatus and testing techniques. Literature references are included. The book was developed in courses given at Iowa State College.

Hammer, Bernard Wernick

Dairy bacteriology Third edition. New York John Wiley & Sons Inc., 1948. 593 p. illus. 24 cm. $7.50 7805

Contents: Bacterial count on milk. Tests for the general quality of raw milk. Milk fermentations. Contamination of milk and its control. Bacteriology of filtration, clarification, and separation. Growth of bacteria in milk and cream. Milk enzymes. Spread of diseases through milk and milk derivatives. Pasteurization. Bacteriology of evaporated milk. Bacteriology of sweetened condensed milk. Bacteriology of milk powder. Bacteriology of ice cream. Bacteriology of butter and cultures. Bacteriology of fermented milk preparations. Bacteriology of butter. Bacteriology of cheese. Bacteriology of dairy-plant water supplies. Index.

Note: A concise presentation of the essential facts relating to the bacterial aspects of dairy processes, methods, and controls. The volume is a standard work and is intended for use in agricultural colleges and as a reference manual for research workers in the dairy industry. Emphasis is placed on fermentation in milk and its derivatives. As in the previous editions, knowledge of elementary bacteriology on the part of the reader has been assumed. This edition has been considerably enlarged. A new chapter on dairy-plant water supplies has been added, and milk powder, butter, and cheese are discussed at greater length.

Harrison, Edwin Shepherd

Judging dairy cattle. Text by Edwin S. Harrison. Photographs by Henry A. Strohmeyer Jr., and John T Carpenter Jr New York John Wiley & Sons Inc., 1940. 132 p. illus. 28 cm. $5 75 7806

Contents: The true type cow and the score card for the cow of each of the five leading dairy breeds. Head and neck of the dairy cow. The mammary system of the dairy cow. The legs and feet of the dairy cow. The chest, chine, rump and shoulders of the dairy cow. Faults and [illegible] on parts of cows. Judging dairy heifers. Judging dairy bulls. Index.

Note: This manual presents, in pictorial form, a complete study of the variations in the conformation of the dairy cow. The text matter describes the features for which the reader must look, and explains what effect the variations have upon the usefulness of the cow. Definite, practical problems in judging are illustrated in the comparison between types. The discussion of these comparisons are intended to train the reader to base his judgments upon accepted scientific foundations. The profuse photographic illustrations include some of the most famous animals in the principal dairy breeds.

Henderson, H. O., and Paul M Reaves

Dairy cattle feeding and management. Fourth edition. New York John Wiley & Sons, Inc., 1954 614 p. illus. 22 cm. $6.50. 7807

Contents: Development of dairying. The components of plants and animals. The work of digestion. The use of feed in the body. Milk secretion. Selection of feeds. Desirable characteristics of rations. Minerals and vitamins. The development of feeding standards. Balancing rations. Feeding for milk production. Effect of abnormal and unusual rations. Making and feeding silage. Hay and haymaking. Pastures. Some details in dairy cattle management. Milking the dairy herd. Raising the dairy calf. Care and development of the dairy heifer. Feeding and care of the bull. The principles of dairy-cattle breeding. The selection of a sire. Establishing a herd. Artificial breeding of dairy cattle. Maintaining breeding efficiency. Dairy cattle health. Keeping records on the dairy farm. Programs of the breed registry associations. The purebred dairy cattle business. Marketing dairy cattle. Fitting dairy animals for show and sale. Production of high-quality milk. Marketing milk. Dairy buildings. Types and arrangements. Dairy barn and milk-house equipment. Appendix. Index.

Note: A practical textbook on the feeding and management of dairy cattle. It is organized for use in agricultural college courses, and its scope and level of treatment are such that it is also useful as a guide for practical farmers. The basic information that would be expected in a good textbook is present, and it is accompanied by a wide range of information on good farm practices. Breeding and feeding practices are emphasized. Selected literature references are given. The preceding edition was published in 1933. Six new chapters have been added in this edition, and the chapters carried over have been extensively revised so as to incorporate such important advances as artificial insemination.

Herrington, Barbour Lawson

Milk and milk processing New York McGraw Hill Book Company Inc., 1948. 343 p. illus. 23 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $6.00 7808

Contents (abridged): The dairy industry. Milk—its nature and properties. The fats of milk. The principal proteins of milk. Lactose

DIGGINS, RONALD V, AND CLARENCE E BUNDY

Dairy production Englewood Cliffs, N J Prentice-Hall, Inc., 1956 342 p illus 23 cm. $5 65 7798

Contents Dairy products in human nutrition. Opportunities in dairying. Selecting a breed. Selecting foundation stock. Nutritional requirements for milk production. Feeding the producing herd. Feeding young dairy stock. Feeding and management of the herd sire. Management of dairy cattle. Reproduction, inheritance, and breeding systems in dairy cattle. Housing and equipment. Keeping cattle healthy Marketing dairy products. Fitting and showing dairy cattle. Index.

Note. Similar in style and organization to other books on animal husbandry by this team of authors, this book is addressed both to students and vocational agricultural courses and to practical farmers. It describes in an elementary readable style, the basic principles and good practices in dairying. Practices are described in detail, with references given to other books in which more technical matter on the same subjects are vailable. Each chapter contains a summary in which the gist of the chapter is recapitulated. There are 205 illustrations, and most of them are reproductions of photographs of cattle, techniques in dairy management, dairy equipment, and scenes on dairy farms.

ECKLES, CLARENCE HENRY

Dairy cattle and milk production Revised by Ernest L Anthony Contributing authors H O Henderson, N P Ralston, and R. E Becker Fifth edition New York The Macmillan Company, 1956 587 p. illus. 22 cm $6 75 7798A

Contents. Introduction. Origin and classification of domesticated cattle. The dairy type. Holstein-Friesians. Jerseys. Guernseys. Ayrshires. Brown Swiss. Minor breeds. Dual-purpose cattle. General consideration in selecting a breed. Selection of the individual cow Selection of the cow by records. Selection, care, and management of the sire. Dairy cattle breeding. Calf feeding and raising—calfhood diseases. The growing heifer Artificial breeding. Registered herds—the aesthetic and business sides of the purebred business. Care and management. Milking factors influencing the quantity and quality of milk. Common ailments of cattle. Digestion in the ruminant. Feeding for milk production. Characteristics of common feeds. The feeding standard and the calculation of rations. The silo and silage. Pastures and soiling crops. Barns for cows. Handling manure—material for bedding. Appendix. Index.

Note A long-established agricultural textbook. In it full descriptions of dairy breeds raised in the United States of America are combined with discussions of the management of dairy cattle. Diagrams and photographs of barns and related equipment are included, and there are more than 70 pages of reference data. The fourth edition was published in 1950. Considerable text has been carried over from it to this fifth edition but there has also been considerable revision. As indicated on the title page, there are three new contributors who hav rewritten chapters that appeared in the fourth edition. The most extensive changes are to be found in the chapters on breeding, artificial insemination, growth and nutrition. The chapters on dairy cattle breeds which have always been an outstanding featur of the book are unchanged except for revision of statistics and records of production.

ECKLES, CLARENCE HENRY, AND OTHERS

Milk and milk products, prepared for the use of agriculture college students. By Clarence Henry Eckles Willes Barnes Combs and Harold Macy Fourth edition. New York McGraw Hill Book Company Inc., 1951 454 p illus. 24 cm. (McGraw Hill publications in the agricultural sciences, R A. Brink, consulting editor) $6 00 7799

Contents (abridged) The constituents of milk. Factors influencing the composition of milk. Milk and dairy products as food. Microorganisms. The Babcock methods for determining fat in milk and cream. Common dairy processes. Market milk. The manufacture f dairy products—butter—cheese—ice cream—condensed milk, dry milk, milk by-products. Dairy arithmetic. Appendix: Methods for bacteriological analysis of milk. Roese-Gottlieb method for fat determination (official A.O.A.C.) Babcock method for fat determination (official A. O. A. C.) Table for calculating total solids in milk from specific gravity and fat percentage. Table for determining the total solids of sweet and sour cream buttermilk from the lactometer reading. Market grades of creamery butter. Tentative U.S. standards for grades of American Cheddar cheese. Specific grading requirements for non-fat milk solids. Index.

Note. A standard work used both as an introductory text and as a practical guide for dairy plant personnel. The arrangement and scope are the same as in the preceding edition published in 1943 and much of the text has not been altered. However, useful revisions have ben made, particularly in the statistical material and in the tests described in the chapters on the Babcock method, miscellaneous tests, and in the appendix.

ESPE, DWIGHT, AND VEARL R. SMITH

Secretion of milk. Fourth edition. Ames Iowa State College Press, 1952 291 p. illus. 23 cm. $4 95 7800

Contents Evolution of the mammary gland. Anatomy of the udder. Hormonal interrelations in mammary gland development. Hormonal interrelations in lactation. Physiological and biochemical aspects of lactation. Physiology of milking. Mechanics of milking. Physiological factors affecting the quantity and quality of milk. Effect of feed on the amount and composition of milk. Environmental factors affecting lactation. Index.

Note. This book is standard critical review and digest of the literature pertaining to milk production in dairy cows. Each of the chapters consists of concise text key-numbered to an extensive list of literature references. Many points are made that are of value to the practical farmer but the chief uses of the book are as a supplementary text in agricultural college courses and reference handbook in research. In the present edition, the chapter arrangement has been somewhat reorganized, and literature published as late as 1950 has been covered.

FARRALL, ARTHUR W

Dairy engineering Second edition. New York John Wiley & Sons, Inc., 1953 477 p. illus. 24 cm. $7 00 7801

Contents. Physical and chemical properties of milk. Simple mechanical principles. Power transmission. Electrical power and equipment. Hydraulics and pumping. Heat measurement, transfer and control. Steam and its use in the dairy Principles of refrigeration. Insulation and cold-storage rooms. Heaters; coolers, heat-exchange equipment, and milk-storage tanks. Ice-cream freezing equipment. Homogenizers. Pasteurizing equipment. Evaporating and drying equipment. Can washing and sterilizing equipment. Bottle washers, fillers, and cappers. Cream and butter handling equipment. Cheese and casein plant equipment. Equipment maintenance. Dairy plant design, layout, and utilization. Appendix. Index.

Note A comprehensive and practical treatise on the design of sanitary dairy plants, on the equipment used in them, and on the maintenance of equipment. As their titles indicate, some of the chapters are devoted to basic matters such as fundamental mechanical principles. However these topics are covered essentially in outline form, and most of the space is given to information specifically pertinent to plants for the processing of dairy products. The first edition was published in 1942. In this second edition the book is some 70 pages longer and contains a wide range of revised and additional information. Somewhat more emphasis has been placed on plant design. Literature published since the first edition was written has been added to the bibliography There are now 199 figures and 84 tables.

FOUTS, EVERETT LINCOLN, AND THEODORE R. FREEMAN

Dairy manufacturing processes, a hand book for dairy plant workers and short course students New York John Wiley & Sons, Inc., 1948 237 p 24 cm $5 00. 7802

Contents (abridged) Ice cream manufacture, sherbets and ices. Dairy products used in making ice cream. Figuring ice cream mixes. Freezing the ice cream. Flavoring ice cream. Sherbets and ices. Market milk and related products: Composition of milk, definitions.

[illegible] ... member of the faculty of the University of Illinois.

OLSON THOMAS [illegible]

Elements of dairying. Revised edition. New York. The Macmillan Company 1950. [illegible] p. illus. 22 cm. $6.00. 7815

Contents (abridged): Part I, Dairy cattle: [illegible]

Note: A [illegible]

PETERSEN, W. E.

Dairy science, its principles and practice. Second edition. Edited by R. W. Gregory. Philadelphia. J. B. Lippincott Company 1950. 695 p. illus. 24 cm. $6.50. 7816

Contents (abridged): The history of dairying. [illegible]

Note: A comprehensive volume [illegible]

ROADHOUSE, CHESTER LINWOOD AND JAMES LLOYD HENDERSON

The market-milk industry. Second edition. New York. McGraw Hill Book Company, Inc., 1950. 716 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences. R. A. Brink, consulting editor) $[illegible]. 7817

Contents: History and development of the market-milk industry. The composition of milk and its physical and chemical properties. [illegible]

Note: A college textbook [illegible]

SPEARING, JACK

Fitting and showing dairy cattle. Ames. The Iowa State College Press, 1952. 97 p. illus. 20 cm. $2.00. 7818

Contents: Selection of the show herd. [illegible]

Note: Techniques of preparing dairy cattle for display and judging [illegible]

THOMAS, ROY HILMAN, AND OTHERS

Dairy farming in the South. By Roy H. Thomas, Paul M. Reaves, and C. W. Pegram. Revised edition. Danville, Ill. The Interstate, 1949. 431 p. illus. 21 cm. $2.50. 7819

Contents: The importance of dairying in the South. [illegible]

Note: A practical textbook designed for use in agricultural courses in high schools and colleges. [illegible]

and the carbohydrates. The minor constituents of milk. Variation in the composition of milk. Acidity Microorganisms. Pasteurization. Creaming and cream separation. Homogenization. The market-milk industry The butter industry Concentrated milks. The dry-milk industry The ice-cream industry The cheese industry The casein industry The Babcock test. Lactometry Index.

Note. A brief but authoritative treatment. It covers the chemistry of milk and milk products in some detail, describes the various processes which milk undergoes before it is sold to the consumer, and surveys briefly the economics and techniques of the industries based on milk. The main use of the book is as a textbook in introductory courses in dairy science, but the information it provides on milk as a food and on the American milk-marketing industries makes it useful to several groups of readers including workers in the nutrition field and consumers.

HUNZIKER, OTTO FREDERICK

The butter industry, prepared for factory, school and laboratory Third edition, rewritten and enlarged La Grange, Ill The Author 1940 821 p illus 23 cm. U S and Canada, $6 50, other foreign countries, $7 00 7809

Contents (abridged) History and development. Creamery organization. Steam, power refrigeration, water-tempering. Creamery equipment. Factory sanitation. Care of milk and cream on farm and in transit. Separation of milk, why cream tests vary Systems of cream buying. Receiving—grading, sampling, weighing, can washing. Neutralization of sour cream. Pasteurization systems. Methods for removal of objectionable flavors. Starters. Cream ripening. Churning. Washing, salting, working, moisture control. Packing. Creamery overrun, utilization of by-products. Markets, imports, exports, consumption. Cold storage. Composition and properties of butter Butter defects. Butter scoring. Factory tests. Index.

Note A standard work for practical use in the butter industry and for use as a textbook in agricultural colleges.

JUDKINS, HENRY FOREST, AND MERRILL J MACK

The principles of dairying testing and manufactures Third edition, revised by Merrill J Mack. New York John Wiley & Sons Inc, 1941 315 p illus 23 cm. $5 00 7810

Contents The general scope of the dairy industry The secretion of milk. The composition and properties of milk. Factors affecting the composition of milk, particularly the butterfat content. The sampling of milk and cream. The Babcock test for whole milk. The Babcock test for milk products. Testing milk for total solids. The bacteriology of milk. Quality tests for milk. Keeping milk and butterfat records. Essentials in the production and handling of market milk on the farm. Market milk from farm to consumer The separation of cream. Butter making. Ice cream making. Cheese making. Miscellaneous dairy products. The food value of milk and its products. Appendices. Index.

Note. This third edition of an elementary book on dairying has been revised and expanded. Treatment of the subject is largely from the standpoint of handling milk and milk products, with general survey of the whole field of dairy technology

KNODT, C B

Successful dairying New York McGraw Hill Book Company Inc 1954 381 p. illus. (part col d) 24 cm (McGraw Hill rural activities series W A. Ross consulting editor) $6 00 7811

Contents Getting started in dairying. Selecting dairy cattle. Raising dairy calves. Raising and managing dairy heifers. Raising and managing the herd sire. Providing feed for dairy cows. Providing housing for dairy cattle. Managing the dairy herd. Keeping dairy cattle healthy Producing high-quality milk and cream. Marketing dairy products and cattle. Handling dairy products in the farm household. Appendixes. Locations of agricultural colleges. Bulletins and leaflets, U S. Department of Agriculture. Farm magazines. Supplementary texts. A complete dairy record. Correlated list of visual aids. Index.

Note. A practical text of broad scope and much detail. It covers the traditional topics and, in addition, some uncommon ones, such as the feeding of potatoes to dairy cattle, the technique of making potato silage, the sulfur dioxide method of grass silage preservation. Also, it contains an 80-page section—much of which has been reprinted from publications of the United States Department of Agriculture—on buildings for the housing of dairy cattle. All techniques included are explicitly described. The book is directed both to students enrolled in agriculture courses and to practical farmers. It contains approximately 200 illustrations, the majority of which are reproductions of photographs.

LAMPERT, LINCOLN MAXIMILIAN

Milk and dairy products, their composition, food value, chemistry, bacteriology and processing New York Chemical Publishing Company, Inc., 1947 291 p illus. 22 cm. $7.00 7812

Contents (abridged) Milk, its value as a food and its composition. The vitamins in milk. Some fundamentals of dairy bacteriology Pasteurization—raw milk versus pasteurized milk. Diseases that may be carried and spread by infected milk and infected milk products. Grades of milk. Human milk—goat's milk. Cream—skim milk—buttermilk—whey Homogenized milk—soft curd milk—frozen milk—chocolate milk—evaporated milk—condensed milk. Ice cream. Principles of dairy tests—examples in dairy arithmetic. Appendix. Bibliography Index.

Note. A book of information for the layman and dairyman that deals in a semitechnical way with the properties and processing of milk for human consumption, and with some of the products, such as butter and cheese that are made from milk. The bibliography contains 111 references for readers who want additional information on the subject. This book appears to be aimed at persons who are beginning work in dairy plants and desire information about the industry It is useful also as reference book for consumers. Specific information is given on milk products, their qualities, and their processing. The author is Senior Dairy Chemist of the California Department of Agriculture.

LASCELLES, H R.

Western dairying Danville, Ill. The Interstate, 1951 280 p illus 21 cm. $3.00 7813

Contents Factors that influence milk production in the West. Rentals, partnerships and leases. Grass. The cow The bull. Production testing and record keeping. The shelter Feeding under western conditions. Disease control. Pricing milk. The show ring. Sources of material. Index.

Note. A practical introductory text on the breeding and management of dairy cattle under the economic and agricultural conditions prevailing in the western states of the United States of America. It is addressed primarily to young people, especially students in high schools and members of 4-H clubs. However, the subject is covered explicitly and thoroughly enough to make the book useful to anyone in need of an introductory view of this branch of western agriculture. Selected literature references are included.

NEVENS, WILLIAM BARBOUR

Principles of milk production New York McGraw Hill Book Company, Inc. 1951 443 p. illus. 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink, consulting editor) $6 00 7814

Contents (abridged) Part I, Dairy farming affords many incentives. Production of milk an important phase of agriculture. Part II. Feeding, breeding, and managing dairy cattle Feeding dairy cattle: feeding cows during the barn-feeding season—the composition and nutritive value of feeds—mineral and vitamin needs—feeding dairy cattle during the pasture season. Breeding dairy cattle: Selection—systems of breeding—artificial insemination. Raising the dairy calf. Part III, Dairy-cattle breeds and selection of individual animals Part IV Milk secretion, production of high-quality milk, and marketing milk. Part The business aspects of dairy farming. Part V, Growing and preparing feeds for milk production. Good soil management essential to successful feed-crop production. Pastures on most farms may be improved. Making high-quality hay Silage has an important place in milk production. Part VI, Better buildings for milk production. Index.

Poultry

[illegible]

POULTRY

BIESTER, HARRY EDWARD, AND L. H. SCHWARTE, [illegible]

Diseases of poultry. Third edition. Ames, The Iowa State College Press, [illegible] 1245 p. illus. [illegible] cm. [illegible]

[illegible]

Note: An established encyclopedic [illegible]

WOODWARD, THOMPSON ELWYN, AND R. R. GRAVES

Results of inbreeding grade Holstein-Friesian cattle. Washington, D. C., Government Printing Office, [illegible] p. illus. [illegible] cm. (United States. Department of Agriculture. Technical bulletin no. [illegible]) Gratis. [illegible]

[illegible]

Note: [illegible]

NAPP, WILLIAM WODIN, AND WILLIAM BARBOUR NEVENS

Dairy cattle: selection, feeding and management. Fourth edition. New York, John Wiley & Sons, Inc., 1955. 4[illegible]0 p. illus. (part col'd) 22 cm. $4.[illegible]6. 7827

Contents: Dairy farming contributes to national welfare. Selecting and breeding dairy cattle. Feeding dairy cattle. Managing dairy cattle. The financial aspects of dairy farming. Milk secretion, care and merchandising of milk. Producing roughages for dairy cattle. Providing good buildings for dairy cattle. Looking into the future. Index.

Note: A standard work used in its various editions since 19[illegible] as [illegible] textbook for agricultural-college students and [illegible] manual for practical farmers. It is authoritative, well-organized, and written in [illegible] style that is easy to read. Principles are emphasized. However, there are also many detailed descriptions of specific operations in the management of dairy cattle. The third edition was published in 1943. This fourth edition is the result of [illegible] considerable reorganization and revision. The scope and level of treatment remain the same, but [illegible] wide range of information has been added in various chapters. The lists of references now consist largely of literature published since the third edition was written.

CARD, LESLIE ELLSWORTH

Poultry production. Formerly by Lippincott and Card. Eighth edition thoroughly revised with 216 illustrations and 4 plates, 2 in color. Philadelphia, Lea & Febiger, 1952. 416 p. illus. 24 cm. $5.00. 78[illegible]9

Contents: The poultry industry. The structure of the chicken and the formation of the egg. Principles of poultry breeding. Selection and improvement. Incubation. Brooding and rearing. Houses and equipment. The principles of poultry nutrition. The feeds. The nutrient requirements of poultry. Management practices. Controlling diseases and parasites. Marketing poultry products. The business of poultry keeping. Index.

Note: A long-established text, widely used in agricultural college courses and to [illegible] lesser extent by practical farmers. The presentation is more advanced and there is more emphasis on basic matters, such as the biology of evolution, than would be appropriate in [illegible] book for beginners [illegible] the subject. Almost the all of [illegible] instruction. Nevertheless, the main emphasis is on the application of [illegible] findings to practical poultry farming. In the revision, the chapter on breeds and the extensive [illegible] which were [illegible] feature of earlier editions have been dropped. On the other hand, valuable material has been added on poultry breeding and improvement, poultry houses, and recent developments in nutrition.

chapters have been added. There are 174 figures, but no bibliography

Trout, George Malcolm

Homogenized milk a review and guide East Lansing Michigan State College Press, 1950 233 p illus 23 cm. (Michigan. Agricultural Experiment Station Bulletin Memoir series No 9) $3 75 7820

Contents An introduction to homogenized milk. Effect of homogenization on the physical and chemical properties of milk. Effect of homogenization on the fat and proteins of milk. Processing homogenized milk. Problems associated with homogenized milk and their control. Laboratory control. Qualities of homogenized milk with which the consumer may be concerned. Literature cited. Author index. General index.

Note. The Michigan Agricultural Experiment Station began in 1930 a series of studies of milk homogenization. This volume brings together the results of these studies, presenting them against a background of pertinent historical information, other scientific studies, and recent commercial applications and usages. It is a complete guide to the subject, with a bibliography of 451 citations.

United States Department of Agriculture Agricultural Marketing Service

Federal and state standards for the composition of milk products Revised September 1956 Washington, D C Government Printing Office 1956 15 p 26 cm (United States Department of Agriculture Agriculture handbook no 51) Gratis. 7821

Contents Introduction. Whole milk. Skim milk. Defatted milk. Cultured buttermilk. Chocolate milk. Chocolate drink. Half and half. Cream. Evaporated milk. Sweetened condensed (whole) milk. Sweetened condensed skim milk. Plain condensed skim milk. Dry whole milk. Nonfat dry milk. Plain ice cream. Fruit, nut, or chocolate ice cream. Sherbet (milk) Frozen custard. Ice milk. Butter Asiago cheese. Blue cheese. Brick cheese. Caciocavallo siciliano cheese. Camembert cheese. Cheddar cheese. Cottage cheese. Colby cheese. Cook cheese. Cream cheese. Edam cheese. Gammelost cheese. Gorgonzola cheese. Gouda cheese. Granular cheese. Gruyère cheese. Hard cheese. Hard grating cheese. High moisture jack cheese. Limburger cheese. Monterey cheese. Munster cheese. Pineapple cheese. Neufchatel cheese. Parmesan cheese. Provoloni cheese. Romano cheese. Roquefort cheese. Sap sago cheese. Semisoft cheese. Swiss cheese. Part skim cheddar cheese. Part skim spiced cheese. Semisoft part skim cheese. Skim milk cheese. Soft ripened cheese. Spiced cheese. Washed curd cheese. Miscellaneous cheese. Specialty and miscellaneous dairy products.

Note A reference publication for the use of those needing information on legal standards for the composition of milk and manufactured dairy products in the United States of America. It presents in tabular form the official requirements or acceptable minimums of the National Government and the States and Territories for such components of dairy products as fat.

Van Slyke, Lucius L, and Walter V Price

Cheese a treatise on the manufacture of American cheddar cheese and some other varieties—intended as a textbook for the use of dairy teachers and students in classroom and workroom—prepared also as a handbook and work of reference for the daily use of practical cheese-makers in cheese factory operations Revised and enlarged New York Orange Judd Publishing Company Inc. 1949 522 p illus. 23 cm $6 00 7822

Contents. The constituents of milk. Variations in the proportions of constituents of milk. Composition and quality of cheddar cheese. Standardization of milk for cheese. Milk constituents and the yield of cheese. Methods of paying for milk for cheese making. Microorganisms and cheese making. The quality of milk for cheese making. Starter Essentials of cheese making. Cheddar cheese making—preliminary steps—cutting to milling—salting to shipment. Modifications of the cheddar process. Defects in cheddar cheese—moisture, acidity and flavor—body and texture—color and finish. Judging and describing the attributes of cheddar cheese. Technology of cheddar cheese ripening—curing treatments—losses of weight. Changes during the ripening of cheddar cheese. Packaging cheddar cheese. Process cheese. Cottage cheese. Cream and Neufchatel cheese. Whey and its utilization. The cheese factory Analytical methods. Index.

Note: A standard treatise on the manufacture of American cheddar cheese and some other varieties of cheese. It is used as textbook in courses in cheese-making in schools of agriculture and food technology and as a manual for orientation and reference by practical cheese makers. The subject is covered in full detail, even down to test methods for various properties of cheese, such as tests for fat, moisture, and acidity The first edition was published in 1927 and the third edition in 1936. In this fourth edition, the book has been enlarged by 151 pages, and a wide range of new information has been added. Literature published since 1937 has been added to the list of references that accompany the text.

Wheeler, Richard G, and John D Black

Planning for successful dairying in New England Cambridge, Mass Harvard University Press 1955 321 p illus. 24 cm. $5 00. 7823

Contents. Problems and objectives. The region and its farms. Land and its use in forage production. Improving the forage program on one farm. Buildings, equipment, and labor. Mechanization opportunities on one farm. Market outlets and prices. Some rules for successful dairying. Opportunities for improvement—the general pattern—adjusting herd size—other problems. Poultry enterprises on dairy farms. Other enterprises on dairy farms. Income prospects in dairying and in off-farm work. Regional production implications. Exploiting opportunities. Index.

Note An economic study of dairying in the six northeastern states of the United States of America which are known collectively as New England. Dairying is a major agricultural enterprise of the region. Many of its farms are exclusively devoted to the production of milk, while many others combine milk production with other enterprises such as potato growing. The study was carried out under grants made to Harvard University by the Charles H. Hood Dairy Foundation. It involved the detailed analysis of the layouts and practices on 241 individual farms. The work is included here because of the light it throws on the equipment of farms and farming practices in this region.

Whittier, Earle Ovando, and Byron H. Webb

Byproducts from milk New York Reinhold Publishing Corporation, 1950 317 p. illus. 24 cm. $6 00 7824

Contents The byproducts of milk. Beverages from byproducts. Dried products. Fermentation products from whey Condensed products. Canned products Cheese and cheese products. Bakery products. Casein and whey products. Lactose. Miscellaneous food products. Casein and whey protein. Lactose. Index.

Note A comprehensive presentation of the technology of manufacturing food and nonfood products from milk. It is based on review of the literature, including patents and government publications, statements in the text are keyed to the reference lists. Certain products such as butter and cheese which are fully covered in other books are either omitted or discussed only in selected aspects. For example, cheddar cheese is not included, but there is considerable discussion of cheese spreads. The book is especially useful for the information that it provides on a host of minor products such as acidophilus milk, chocolate-flavored milk, lactic acid, whey concentrates, cottage cheese, canned cream, salad dressings, and casein. Flow sheets are included for the manufacture of calcium lactate, casein, and lactose. The authors hold positions with the Bureau of Dairy Industry in the United States Department of Agriculture.

Wilster Gustav Hana

Practical butter manufacture. Eighth edition Corvallis, Ore. Published by OSC Co-

poultry farming. A third edition was published in 1934. In this fourth edition, the scope is essentially the same, but a wide range of information has been added on such topics as the use of artificial illumination to increase egg production and the use of antibiotics in rations.

HUTT FREDERICK BRUCE

Genetics of the fowl. New York McGraw Hill Book Company Inc., 1949 590 p. illus. 23 cm. (McGraw-Hill publications in the agricultural sciences R. A. Brink, consulting editor) $8.00 7836

Contents: Domestic birds. Cytology Variations in the skeleton. Structural variations in the skin. Variations in the plumage. Variations in the color of the skin. Variations in the color of the plumage. Lethal genes and miscellaneous characters. Variations in body size. Egg production. Variations in eggs. Genetic resistance to disease. Genetic aspects of reproduction. Linkage. Genetics in practice. Appendix: Symbols for the genes of the fowl. Glossary Author index. Subject index.

Note: Intended for use as a text and reference book for agricultural college students, this work surveys accumulated knowledge of heredity and variation in the domestic fowl (chicken) The student is assumed to have had an introductory course in genetics, but the poultryman who has not had such a course should not have difficulty in understanding the book. Much of the text consists of digest of the literature of the subject. The final chapter tells how genetic knowledge may contribute to the breeding of better fowls.

IVES, PAUL POMEROY

Domestic geese and ducks a complete and authentic handbook and guide for breeders, growers and admirers of domestic geese and ducks. Illustrated by Franklane L. Sewell and Arthur O Schilling and others. New York Orange Judd Publishing Company Inc. 1947 372 p. illus. 22 cm. $4.00 7837

Contents (abridged): Part 1, Geese: History habits, traditions and general peculiarities in geese. Breeds of geese. Selecting for breeding. Hatching and rearing. Fattening geese. Exhibiting geese. Marketing. "Geese must have grass." Part II, Ducks: General nature, various types, adaptability of different breeds. Breeds of ducks. Breeding ducks. Hatching Feeding. Marketing Establishing a duck farm. Exhibiting ducks. Diseases of ducks. Sexing day old ducklings. Ten favorite recipes for preparing duck. Index Part 1, Geese; Part II, Ducks.

Note: The subtitle of this volume is an accurate description of its purpose. The book is suited both to the large-scale breeder and to the householder or farmer who desires to raise geese and ducks on a small scale. Considerable material is included on the histories of the breeds.

JULL, MORLEY ALLAN

Poultry breeding Third edition. New York John Wiley & Sons, Inc., 1952 398 p. illus. 24 cm. $6.50. 7838

Contents: Breeds and varieties of chickens. Physiology of reproduction. Mechanism of inheritance. Color characters. Morphological characters. Gene linkage and blood group antigens. Fertility and hatchability Viability Meat production. Egg production. Egg characters. Selection methods. Index.

Note: A standard treatise in which accounts of genetic mechanisms and descriptions of commercially desirable characteristics in poultry that are basic to breeding are given most of the space. However, these topics are covered from the viewpoint of practical breeders. Also in this edition, the final chapter outlines practical methods for the selection of breeding stock. Each of the chapters is supplemented by a substantial list of literature references. The work was extensively rewritten for this edition. Text, illustrations, and bibliographies have all been revised.

JULL, MORLEY ALLAN

Poultry husbandry Third edition. New York McGraw Hill Book Company Inc., 1951 526 p. illus. (part col d) 24 cm. (McGraw Hill publications in the agricultural sciences R. A. Brink consulting editor) $6.50. 7839

Contents: The poultry industry The breeds of chicken. The biology of the chicken. Breeding principles. Breeding practice. Incubation principles and practice. Rearing principles and practice. Housing and yarding principles and practice. Feeding principles. Feeding practice. Disease prevention and control. Marketing eggs. Marketing poultry Economics of production. Index.

Note: A standard textbook for agricultural college courses. Essentially it is a complete guide to the principles and methods of modern poultry husbandry. In this edition it has been revised to bring it thoroughly up to date in all its parts, including text, illustrations, tables, and selected lists of references.

JULL, MORLEY ALLEN

Successful poultry management. Second edition. New York McGraw Hill Book Company Inc., 1951 447 p. illus. (part col d) 23 cm. (McGraw Hill rural activities series W A. Ross consulting editor) $6 95 7840

Contents: Keeping good stock. Culling to maintain efficient production. Breeding for more efficient production. Renewing the flock. Brooding and housing the growing stock. Housing the laying flock. Providing chickens with good nutrition. Feeding for efficient meat and egg production. Controlling losses from mortality and other causes. Marketing eggs. Marketing chickens. Making a success of the chicken business. Appendixes: References. Correlated list of visual aids. Index.

Note: An introductory and practical book directed more to general farmers and owners of small flocks rather than to large-scale poultry farmers. It is suitable also as a first book for agricultural college students. The title notwithstanding, it considers chickens only not ducks, geese, turkeys or other poultry It provides basic, practical information on such topics as breeding and culling, and describes proven techniques in detail. On the other hand, techniques of limited applicability or suitable only for most expertly managed enterprises, such as the keeping of laying hens in cages, are dealt with more briefly The first edition was published in 1943. The chapter titles and chapter arrangement are the same in this second edition; nevertheless, new information has been added on diet, commercial production of broilers, etc. Data on economic aspects, such as production costs, have been revised, and some new literature has been added to the bibliography

KLEIN GAY T

Starting right with poultry Edited by Ed Robinson. New York The Macmillan Company 1947 177 p. illus. 22 cm. $2 95 7841

Contents: Should you keep a flock of chickens? The poultry house and its furniture. Selecting a breed and getting a start. Brooding chickens. Feeding layers. Raising broilers, roasters, and capons. Keeping the flock healthy How to pick the layers. Other poultry problems. Preparation and preservation of poultry and eggs. If you want to expand. Flock records. Poultry cooking. Ways to serve eggs. Index.

Note: A simplified presentation aimed at persons interested in poultry raising on a small scale. It does not compare in subject coverage or range of detail with full-size introductory texts, but it does describe methods and equipment.

KLEIN GAY T

Starting right with turkeys edited by Ed Robinson. New York The Macmillan Company 1946. 129 p. illus. 22 cm. $2 95 7842

Contents: Is the small turkey project practical? Selecting a breed and getting a start. Housing your turkeys. Brooding poults. The turkeys grow up. Keeping the flock healthy Producing your own poults. Killing and dressing. Preservation of turkeys. Records and scheduling of work. If you want to expand. Ways to cook turkeys. Index.

Note: This book is similar in purpose and scope, and is part of the same series as the author's *Starting right with poultry*, described above.

CHARLES, THOMAS BURR, AND HOMER O STUART

Commercial poultry farming Eighth edition. Danville, Ill The Interstate, 1950 540 p illus 24 cm $4 00 7830

Contents Incubation. Hatchery practices. Brooding practices. Battery brooding and laying cages. Broiler production. Capons and caponizing. Principles of feeding. Feeding chickens. Feeding adult birds. Rearing and range management. Selection. Breeding and sex distinction. Trapnesting and pedigreeing. Improvement programs. Marketing. Fattening. Housing and appliances. Management factors. Poultry diseases. Egg formation. Classes, breeds, varieties, strains. Turkey production. Index.

Note. This work in its various editions has been used as an agricultural school textbook for many years. It provides an introductory but substantial survey of practical knowledge, together with relatively full discussions of improvement programs. All major phases of the subject are discussed from the selection of eggs for incubation to the packing and marketing of the eggs and dressed birds. It is not now up to date on such matters as the use of hormones in caponizing or the effects of antibiotics in promoting growth. There are scattered references to government publications, but both the bibliography and the index are inadequate.

FUNK, ERNEST M, AND M RICHARD IRWIN

Hatchery operation and management. New York John Wiley & Sons Inc., 1955 349 p illus. 23 cm. $7 50 7831

Contents: Development and use of artificial incubation. Development of the hatchery industry The hatchery and its equipment. Flock selection and pullorum testing. Poultry improvement. Breeds, varieties, strains, crosses, and grades of chicks. Factors influencing the hatchability of eggs. Incubation principles and practices. Securing hatching eggs. Cost of producing baby chicks. Factors affecting hatchery profits. Advertising and selling. Organization of work in the hatchery Hatchery correspondence and office procedure. Chick delivery methods. Measuring chick quality Prevention and control of disease in the hatchery Brooding and rearing. *References.* Index.

Note. The operation of commercial hatcheries which hatch chicken eggs and sell the young chicks to farmers is an extensive business in contemporary United States of America. It requires not only a knowledge of the principles f incubation and the operation of incubators, but also some knowledge of the genetics of chickens, diseases of chickens, and considerable knowledge of the principles of managing small enterprises. All of these aspects are covered thoroughly in this book. Although the importance of flock selection is emphasized, there is less discussion f poultry genetics than might be expected. There are numerous illustrations and a four page list of references to the literature. The first-named author is Professor of Poultry Husbandry in the University of Missouri, and his co-author is president of a large poultry enterprise in the same state.

HABERMAN, JULES J

Poultry farming for profit. Englewood Cliffs N J Prentice-Hall Inc., 1956 239 p illus. 23 cm. $4 95 7832

Contents Part I, Planning the farm Choosing a poultry farm. How to obtain credit for farming. Housing the poultry flock. Part II, Brooding and rearing management Selecting your stock. Brooding units. Managing the growing chick—the first eight weeks. Feeding the young and growing bird. How to reduce chick and pullet mortality Range management. Surgical and chemical caponizing. Part III, Laying flock management Selecting and housing the pullet flock. How to feed the laying flock. Artificial lighting for maximum egg production. The production and marketing of quality eggs. Culling to increase profits. Dressing chickens on the farm. Part IV Reduce mortality—increase profits. Preventing poultry losses. Sanitation. Anatomy and physiology of the fowl. How to diagnose poultry diseases. Addresses of state agricultural experiment stations. State poultry diagnostic laboratories. Index.

Note. A practical inclusive introduction to poultry farming, written for persons who are thinking of going into this type of farming. It describes good practices in poultry management, and also discusses related topics of interest, such as points to look for in the selection of a farm and the marketing of poultry products. Approximately 80 pages are devoted to the diagnosis and treatment of poultry diseases.

HEUSER, GUSTAVE F

Feeding poultry Second edition. New York John Wiley & Sons, Inc., 1955 632 p. 23 cm. $7 95 7833

Contents The feeding problem. Objects and principles in feeding poultry Composition of plants, animals, and rations. Measuring the value of feeds. Poultry feeds—cereals, seeds, and other seed constituents—animal protein supplements—vegetable protein supplements—green feeds and vegetable products. Factors in making a poultry ration. Feeding systems and practices. Health feeding. Feeding and management of young chickens. Feeding and management for egg production. Feeding and management of breeders. Fattening or finishing of poultry Feeding turkeys. Feeding waterfowl. Feeding other species of birds. Economics of feeding. Appendix. Index.

Note A monographic survey in which a wide range of information gathered from the author's own research and from the literature is presented in a well-organized form. The presentation is both critical and well documented. Lists of references, some of them running to scores of citations, are included in each chapter. Theory experimental results, and practice are all covered. The book is directed to advanced students of poultry husbandry ho are taking courses in agricultural colleges, and is useful also to feed manufacturers and farmers who raise poultry on large scale. The first edition was published in 1946. The chapter titles are almost the same in this second edition, but some information has been added to most chapters, and substantial amount has been added to many The length of the book has been increased by almost 100 pages.

HEUSER, GUSTAVE F, AND OTHERS

Poultry management, by G F Heuser G O Hall and J H Bruckner Philadelphia. J B Lippincott Company, 1952 565 p. illus. 22 cm (Agricultural management series prepared under the general supervision of R W Gregory) $10 00 7834

Contents. The poultry industry Breeds of poultry—their nature, characteristics, and uses. Principles and practices of poultry breeding. Culling the farm flock. Housing the flock. Feed nutrients and poultry feeds. Hatching the chicks. Brooding and rearing. Growing young stock. Feeding hens for production. Producing market poultry Marketing poultry products. Poultry and egg shows. Diseases and parasites of poultry Growing turkeys. Index.

Note. A practical, comprehensive text. It is written in simple language and is addressed to such readers as students taking their first formal course in the subject, and to farmers now engaged in poultry farming or thinking of engaging in it. Economic aspects, such as the relations between the umber of laying hens per man working on the farm and labor income from the enterprise, are adequately discussed. However most of the space is devoted to descriptions f good practices. There are 87 tables of data on various aspects such as optimum levels of humidity in incubators and composition of mixed feeds. There are numerous illustrations and adequate bibliographies.

HURD, LOUIS M

Modern poultry farming. Fourth edition. New York The Macmillan Company, 1956 575 p illus. 22 cm. $7 50 7835

Contents The business of poultry-keeping. Investment, returns and expenses in poultry farming. Starting a poultry enterprise. Choosing a breed. Poultry-houses and equipment. Hatching the eggs. Requirements for brooding chickens. Brooding, feeding and rearing. Rations and feeding practices for chickens. What's in a ration? Rations and feeding practices for laying hens. Vitamins. Artificial illumination as a means of increasing egg production. Marketing eggs. Marketing poultry. Culling and selecting poultry by external characters. Selection and management of breeders for egg production. Principles of breeding poultry for egg production. Prevention and control of diseases and parasites. Turkeys, guinea fowls and peafowls. Ducks, geese and swans. Pigeons. Pheasants. Appendix. Index.

Note. A long-established practical manual. It is directed to beginners in poultry raising and to general farmers who need dependable manual of good practices. Most of the space is devoted to chickens and to egg production, but there are four chapters on other kinds of poultry Tested practices based on the best available scientific knowledge are described in simple, straightforward style. The first edition was published in 1928 under the title *Practical*

Contents: Nutrients and their functions. Digestion and absorption. Metabolism. Hormones and nutrition. Utilization of food. Nutrition and reproduction. Nutrient requirements and allowances. Quality of flesh and eggs as affected by diet. Nutritional diseases and [illegible]. Nutritive properties of feedstuffs. Metabolic antagonists and [illegible] in [illegible] feeds. Individual feedstuffs. Management and feeding. Formulating diets. Useful information for formulating diets. Addendum: Energy values of feedstuffs for poultry. Vitamin B_{12} and the unidentified growth factors. Feed [illegible]. Hemorrhagic disease. Index.

Note: A wide range of information on poultry nutrition and poultry feeds is presented in this book. The various aspects of the subjects which are named in the chapter titles are discussed concisely. There are many tables of data, and the chapter entitled Formulating diets contains explicit formulas for standard kinds of poultry feeds. Obviously the information presented has been culled from the literature, but few literature references are given. The technical nature and broad scope of the book suit it to the use of such persons as trained agricultural extension workers and the managers of very large-scale poultry enterprises than to small farmers.

WINTER, ALDEN RAYMOND AND E. M FUNK

Poultry science and practice. Edited by R. W Gregory Fourth edition. Philadelphia J B Lippincott Company 1956 662 p. illus. 24 cm. $6.50. 7850

Contents (abridged) The poultry industry. Classes, breeds, and varieties of chickens. Breeding principles and practices. Incubation principles and practices. Rearing principles and practices. Housing principles and practices. Feeding principles and practices. Disease and parasite prevention and control. Marketing eggs. Marketing poultry. Poultry farm management. Turkey varieties and breeding problems. Turkey production and management. Ducks, geese, and miscellaneous poultry. Appendix. Index.

Note: A comprehensive work designed and used both as a text in agricultural college courses and as a reference manual by agricultural extension workers and practical farmers. A [illegible] range of information is presented in the text and tables, and the treatment is thorough. Both small and large-scale packing methods are covered.

FUR AND GAME ANIMALS

ASHBROOK, FRANK GETZ

Fur farming for profit. Revised and reset. New York Orange Judd Publishing Company Inc., 1948. 429 p. illus. 22 cm. $5.00. 7851

Contents: History and development of fur farming. Fur farming [illegible] to beginners. Selecting [illegible] fur farming site. Essentials of breeding. Essentials of feeding. General management of the fur farm. Prevention and treatment of diseases. Fox farming. Mink farming. Raising other fur animals. Transporting live animals. Pelting. Marketing furs. Associations and co-operatives. Fur animal exhibitions. Index.

Note: A general introductory presentation of the subject for students in agricultural colleges, persons who are considering fur farming as a business, and established fur farmers. The chapter "Raising other fur animals" discusses the fur animals (other than fox and mink) that apparently can be raised profitably under present conditions and also those, such as skunk, that thrive in captivity but do not return a profit. Throughout the book, emphasis is placed on practical methods that have proved profitable. The first edition was published in 1928. In the present edition, the book has been very extensively [illegible] revised and new discussions such new developments as [illegible].

BACHRACH MAX

Fur a practical treatise. Third edition. Englewood Cliffs N J Prentice-Hall, Inc., 1953 660 p. illus. 24 cm. $10.00 7852

Contents (abridged) Section [illegible] Fur world chronology and physical geography. Section II, Technical details of peltry valuation. Morphological details of the skin and hair. Grading peltries into [illegible]. Section III, Peltry details of the rodent family. Section IV Peltry details of the cat family. Section [illegible] Peltry details of the dog. Section VI, Peltry details of the bear-raccoon family. Section VII, Peltry details of the weasel family. Section VIII, Peltry details of the pouched animals family. Section IX, Peltry details of the hoofed animals family and miscellaneous groups. Section X, Ranching, buying, and distributing peltries. Section XI, Processing and handling peltries. Section XII, Data for research study: Microscopy and its relation to fur peltries. Microscopical study of guard hair and fur fibers. Appendix. Bibliography. Index.

Note: A comprehensive work in which all furs of commercial importance are described under the following headings: natural history and habitat of the animal from which the fur is obtained, pelt, characteristics, special qualities, grades and other merchandising details. Of special interest is the collection of microphotographs of the longitudinal sections of various fur fibers. Although designed primarily for the guidance of dealers in fur, the book is also of value to breeders of fur animals.

GREENBERG DAVID BENJAMIN

Raising game birds in captivity New York D Van Nostrand Company Inc., 1949 224 p. illus. 26 cm. $3.50. 7853

Contents: The importance of wild life in nature's scheme of things. The business of farm game bird production. Game bird classification. Artificial incubation. Artificial brooding. Hatching and rearing with bantams. The nutrition and feeding of game birds. Wing clipping, pinioning, brailing, etc. Predators and their control. Pheasants. The growing pheasant. The story of a young pheasant farm. Bobwhite quail. The chukar (chukor) partridge. The Hungarian partridge. The McCarty pens for raising pheasants, bobwhites, chukars, and Hungarians. Wild turkeys. Aquatic game birds. The marketing of game birds. Appendixes: Official organizations concerned with wildlife protection. Publications on game birds. Index.

Note. A comprehensive illustrated manual on breeding, raising, and selling game birds. It describes in detail the best methods of incubating, brooding, raising, and marketing the several varieties of game birds. It also covers the equipment needed to raise game birds and includes many plans and drawings for pens, incubators, brooders, etc. It is valuable to game breeders and conservation department officials and to others interested in raising game birds, either for food or for purposes of stocking shooting preserves or government lands. Attention is called to the laws of the states of the United States of America governing the marketing of game birds.

FISH CULTURE AND FISHERIES

DAVIS, HERBERT SPENCER

Care and diseases of trout. Revised edition, 1946. Washington, D C. Government Printing Office, 1946. 98 p. illus. 23 cm. (United States. Fish and Wildlife Service. Research report no. 12) $0.40. 7854

Contents: Introduction. Care of breeding trout. Care of ponds and raceways. Trout foods. Feeding methods. Improvement of stock. Parasites and diseases. General considerations. General principles of disease control. Sterilization of ponds and raceways. External animal parasites. Internal animal parasites. Bacterial diseases. Miscellaneous diseases. Literature cited.

Note. The third and most extensive revision of this publication, which is intended for reference and guidance of persons operating trout hatcheries. The work covers the general care of the trout, their ponds and raceways. Trout foods and methods of feeding are discussed, with special attention to the use of dry products for supplementing fresh meat in the diet. Improvement of stock by selective breeding is given consideration. The section on parasites and diseases covers 50 pages and includes a detailed account of each disease, including the characteristic symptoms, etiology, pathology and methods of control. The figures include drawings and photomicrographs of the more important organisms that cause trout diseases and their effects on the tissues. The bibliography is five-and-one-half pages in length.

DAVIS, HERBERT SPENCER

Culture and diseases of game fishes. Berkeley University of California Press 1953 332 p. illus. 24 cm. $5.00. 7855

Contents: Part I, Culture of game fishes: History of fish culture. Location and construction of trout hatcheries. Propagation of trout. Care and rearing of trout. Artificial trout foods. Prepara-

MARBLE, DEAN R, AND FRED P JEFFREY

Commercial poultry production New York The Ronald Press Company, 1955 415 p. illus 24 cm. $6 00 7843

Content The poultry industry in the United States. Poultry breeding. Selection of foundation stock. Culling and breeder selection. Formulating poultry rations. Feeding practices. Hatchery management. Brooding and rearing. Housing the laying flock. Laying flock management. The production and marketing of eggs. The production and marketing of poultry Poultry diseases. The economics of poultry farming. Turkey production. Ducks and geese. Appendix. Index.

Note. An eminently practical book designed for use as a text in agricultural colleges and as source f information and guidance for agricultural extension workers and practical farmers. Although there is a chapter on turkeys and another on ducks and geese, chickens are the principal subject. The raising of chickens for both eggs and meat production is covered, but there is somewhat more emphasis on the former than on the latter Good practices are concisely described in a simple, straightforward style. Equipment is described, and the advantages and disadvantages of specialized systems, such as the keeping of laying hens in cages, are well discussed. Most of the 110 figures are reproductions of photographs.

MARSDEN, STANLEY J, AND J HOLMES MARTIN

Turkey management. Sixth edition Danville Ill The Interstate Printers & Publishers Inc, 1955 999 p illus 21 cm $7 00 7844

Contents Starting with turkeys. Rearing problems. Feeding practice. The feeding stuffs. Nutrient requirements. Preparation for market. Marketing data and practices. Turkey shows and showing. Classification, origin, and history Varieties. Breeding principles and practices. Management of breeding stock. Trapnesting, pedigreeing, sexing and caponizing. Incubation. Disease prevention and sanitation. Deformities, injuries and vices. Diagnosis and control of diseases and parasites. Appendix. Index.

Not A comprehensive, practical manual f turkey production as it is currently practiced on farms in the United States of America. The first edition was published in 1939 and the fifth edition in 1949 All the sub-topics named in the above chapter titles are covered in detail. The book is addressed primarily to practical growers. It is useful also for reference purposes to such persons as agricultural extension workers who advise farmers. It was extensively revised in this edition, so as to incorporate advances in utrition, breeding, marketing, etc. The long lists of references to the literature that ere formerly included ha been replaced by short, selected lists to recent literature.

NAETHER, CARL A.

The book of the pigeon Third, completely revised edition Philadelphia David McKay Company 1944 242 p illus 21 cm. 7845

Content Billing and cooing. Breeding and keeping. Lofts—equipment and management. Homes at any cost. Fleet ings—origin, care, handling, management, and breeding. Fancy breeds. For pelf and palate. Commercial breeds Concerning foreign doves. Glossary Pigeon literatur Index.

Not Intended for the novice as ell as for the experienced fancier this book affords practical and up-to-dat information pertaining to every important phase of modern pigeon-keeping. Approximately 100 varieties, including fancy racing, utility pigeons and foreign doves, are described. Helpful hints are offered on the care, housing, feeding, and breeding of these varieties. The subjects of the anatomy physiology and diseases of the pigeon are not included. A fourth revised edition as issued by the same publisher early in 1951 245 p., $3.00.

RICE, JAMES E, AND HAROLD E BOTSFORD

Practical poultry management Sixth edition New York John Wiley & Sons, Inc. 1956 449 p illus. (part col d) 22 cm $4 24 7846

Contents: Brooding and feeding chickens. Preventing and treating chick diseases, parasites, and lice. Caring for young stock past the brooding period. Housing laying and breeding stock. Principles of housing poultry Feeding laying and breeding stock. Principles of feeding and formulating rations. Maintaining egg production summer and winter Using artificial illumination. Preparing eggs for market. Preparing poultry meat for market. Keeping records of the flock. Studying the records. Diagnosing common diseases, parasites, pests, and vices in adult stock. Treating diseases and combating parasites, pests, and lice. Culling the flock. Principles of selection. Selecting and mating the breeders. Renewing the flock. Hatching the eggs. The art of knowing chickens. Shall I be a poultryman? Anatomy and physiology of the domestic fowl. Formation of the egg and chick. Index.

Note This book has long enjoyed the status of standard manual and illustrated guide to the principles and practices of successful poultry raising. It is especially suitable for beginners in poultry husbandry whether studying the subject in agricultural colleges and vocational schools or engaging in it on farms. The subject is treated in an elementary practical manner The fifth edition was published in 1949 This sixth edition is the product of an extensive reorganization and augmentation without, however changing the level of treatment or scope of the earlier editions. One chapter was deleted and some others condensed. Numerous changes ere made in the illustrations.

SEIDEN, RUDOLPH, editor

Poultry handbook an encyclopedia for good management of all poultry breeds. Foreword by Cliff D Carpenter Second edition. Princeton D Van Nostrand Company Inc., 1952 444 p illus. 24 cm. $6 95 7847

Note: A practical reference book of information useful in the management of poultry Definitions of terms and concise discussions of specific topics are arranged in one alphabet, with abundant cross references. Terms such as "bracket" are defined in few lines, while topics such as hopper" are discussed in an article as long as two pages. Many subjects are discussed, but material on nutrition and treatment of diseases predominate. Enough information is given under most headings to serv the needs of county agents and practical farmers In addition, references are given to the original articles and bulletins. There is generous number of illustrations. The first edition was published in 1947 The new material in the second edition appears in an 11-page section near the end of the volume under the heading "The new drugs, feed supplements, remedies, and practices.

TAYLOR, LEWIS WALTER, editor

Fertility and hatchability of chicken and turkey eggs New York John Wiley & Sons Inc. 1949 423 p. illus. 22 cm. $6 75 7848

Contents. The nutrition of the breeding flock, by W W Cravens. Formation of the hen's egg, by D C. Warren. Fertility in chickens and turkeys, by J E. Parker The care of hatching eggs before incubation, by E. M. Funk. Biochemistry of the developing embryo egg, by A. L. Romanoff. Physical conditions in incubation, by W M. Insko, Jr Genetics and physiology of embryonic development, by H. R. Moseley and W Landauer Diseases in relation to hatchery operations, by W R. Hinshaw Education and research in fertility and hatchability by L. W Taylor. Appendix: Supplementary references. Incubation trouble-shooting chart. Glossary Index.

Note. A review of all significant literature through 1947 on factors influencing fertility and hatchability of chicken and turkey eggs. It was published at the instigation of the International Baby Chick Association. Particular consideration is given by the authors to evaluation of results obtained from past research and to problems remaining to be solved. The book can serv both as college textbook and as a source of information for those concerned with the practical applications of the subject. Extensiv lists of pertinent literature are included.

TITUS, HARRY W

The scientific feeding of chickens. Revision of second edition (with addendum) Danville Ill The Interstate Printers & Publishers Inc. 1955 297 p. illus. 21 cm. $3 00 7849

E. E. Coker. The natural resources of North Carolina, by H. J. Lane. A preliminary survey of marine angling in North Carolina, by F. LaMonte. Part II, Economics of the fisheries of North Carolina, by R. F. Taylor. Bibliography. Appendix. Index.

Note: A comprehensive monograph that covers the biological, practical, economic, and legal aspects. Although limited to marine species that are of some importance in North Carolina, the book is of more than local interest, because the marine products gathered by North Carolina fishermen are identical with those gathered by fishermen of many other regions. Similarly the discussions of economics and marketing are of general interest along at least the Atlantic seaboard of the United States of America. The book is essentially a skilled synthesis of published literature and it includes much information, especially economic information, that had not been published hitherto. Bibliographies and numerous statistical tables are included.

UNITED STATES. FISH AND WILDLIFE SERVICE

Fishery publication index, 1920–54 Publications of the Bureau of Fisheries and fishery publications of the Fish and Wildlife Service by series, authors and subjects. Washington, D. C. Government Printing Office, 1955 254 p. 26 cm. (United States. Fish and Wildlife Service. Circular 36) $1.50. 7863

Contents: Introduction. Publication series. Administrative reports. Circulars. Conservation bulletins. Current fisheries statistics. Documents. Economic circulars. Fishery bulletins. Fishery circulars. Fishery leaflets. Investigational reports. Market development leaflets. Progressive fish-culturist. Regulatory announcements. Research reports. Separates. Special scientific reports. Special scientific reports—fisheries. Statistical digests. Statistical lists. Test kitchen series. Author index. Subject index.

Note: This circular provides a list of the various fisheries series published 1920–1954 by the United States Government Printing Office, followed by author and subject indexes to the contents of these series. The compilation was a joint undertaking of the Department of the Interior Library and the Fish and Wildlife Service. Publications issued by the Bureau of Fisheries before 1920 were indexed in *An analytic subject bibliography of the publications of the Bureau of Fisheries, 1871–1920* by R. M. E. MacDonald, 1921. 306 p. Bureau of Fisheries document 899, no longer in print.

WALFORD LIONEL ALBERT editor

Fishery resources of the United States. Illustrated by Katherine Howe. Washington, D. C. Public Affairs Press, 1947 134 p. illus. (part col'd) 30 cm. $5.00. 7864

Contents (abridged): The fishery resources of the United States and its territories. Pacific fishery resources: Salmons. Sardines. Mackerels. Herring. Halibut. Anchovies. Clams. Crabs. The fur seal resource (*Callorhinus ursinus cynocephalus*). World fishery resources: Tunas. Atlantic fishery resources: Groundfishes (in general). Haddock (*Melanogrammus aeglefinus*). Cod (*Gadus callarias*). Whiting (*Merluccius bilinearis*). Halibut (*Hippoglossus hippoglossus*). Herring (*Clupea harengus*). Mackerels. Salmon (*Salmo salar*). Alewives. Shad (*Alosa sapidissima*). Menhaden (*Brevoortia tyrannus*). Flounders. Weakfish (*Cynoscion regalis*). Striped bass (*Roccus saxatilis*). Pompano (*Trachinotus* spp.). Bluefish (*Pomatomus saltatrix*). Tarpon (*Tarpon atlanticus*). Reptiles and amphibians. Diamond-back terrapins (*Malaclemys* spp.). Crustaceans: Lobster (*Homarus americanus*). Crabs. Mollusks: Soft-shelled clam (*Mya arenaria*). Hard-shelled clam (*Mercenaria mercenaria*). Scallops. Mussels (*Mytilus edulis*). Oysters. Fresh water fishery resources: Brook trout (*Salvelinus fontinalis*). Rainbow trout (*Salmo irideus*). Lake trout (*Cristivomer namaycush*). Rock bass (*Ambloplites rupestris*). Muskellunge (*Esox masquinongy*). Great Lakes fishery resources. Pond fish culture. Sponges. Seaweeds. Fishery resources of Puerto Rico and the Virgin Islands. Fishery resources of Hawaii. Water pollution and the fisheries. Economics of United States fisheries. Index.

Note: An authoritative volume of facts and figures for the general or special reader interested in salt-water and fresh-water fish and in the conservation of fishery resources. The discussions of specific varieties of fish usually cover classification, life habits, fishing methods, market preparation, uses, and the annual production of fish in pounds. The material is presented largely from the standpoints of the economic importance and the need for planned conservation efforts. The volume is profusely illustrated with informal although scientifically correct drawings of the various food and game fishes, maps showing their geographic ranges, and diagrams indicating commercial fishing techniques.

tion of the Pacific salmons. Propagation of grayling, pikeperch, pike, and muskelunge. Construction and operation of fishponds. Propagation of the black basses and other centrarchids. Propagation of the channel catfish. Propagation of minnows and suckers. The farm fishpond. Part II, Parasites and diseases of game fishes. General considerations of parasites and diseases. External animal parasites. Internal animal parasites. Bacterial diseases. Miscellaneous diseases, including those of uncertain origin. Appendixes. Construction of drip incubator Siphon egg picker Construction of the circular pool. Methods of counting small fish. Terms used by fish culturists to designate fish of various ages and sizes. Culture of Daphnia. Prolonged treatment for control of external parasites on hatchery fish. Bibliography Index.

Note. An illustrated handbook for persons concerned with the tending of freshwater fish in hatcheries. The book is the first of its type since the *Manual f fish culture*, published by the United States Government more than 50 years ago. It takes account of all recent research in this field, much of it by federal and state agencies. The first half of the manual is devoted to the propagation and rearing of game fishes, with special attention to trout. The second half, on fish diseases and parasites, is a practical exposition for the use of fish culturists without special training in pathology of parasitology

DAVISON, VERNE ELBERT

Farm fishponds for food and good land use. Washington, D C Government Printing Office, 1947 29 p illus 23 cm (United States. Department of Agriculture Farmers' bulletin 1983) Gratis 7856

Contents. Introduction. Management of fishponds. Laws. How to stock a pond with fish. Fertilizing. Weed control. Fishing. Draining the pond. How to build a good pond Choosing location. Clearing the site. Installing overflow and drain pipes. Building the dam. The flood spillway Deepening the edges. Diking the shallow end. The finished pond. Protecting the pond from erosion. Old ponds and small lakes.

Note Superseding Farmers' bulletin no. 1938 this bulletin points out that, when suitable site for farm pond exists, a properly developed and managed pond may provide both food and pleasure to the farm family It is intended for those who wish lasting pond which may be fished many times a year It tells how to select site how to build the pond, and how to insure rapid production of an ample supply of fish.

EDMINSTER, FRANK CUSTER

Fish ponds for the farm New York Charles Scribner's Sons, 1947 114 p illus 26 cm. $3 95 7857

Contents Fish ponds yesterday and today Location of the pond. Building the pond. Landscaping the pond area. Preparing old ponds for fish management. Some fundamental biologic facts and principles. Developing good fishing. The fish harvest and pond maintenance.

Note An inclusive, practical manual on the building and management of small ponds for the raising of fish for food. It is generously illustrated with diagrams and charts and with numerous photographs which show both pond-building operations and completed ponds.

HAGEN, WILLIAM, JR.

Pacific salmon hatchery propagation and its role in fishery management. Washington D C Government Printing Office 1953 56 p. illus. 23 cm (United States Fish and Wildlife Service Circular 24) $0.30 7858

Contents. The Pacific salmon Lif history Chinook. Red. Silver. Pink. Chum. Steelhead trout. The homing instinct. Economic value. Hatchery propagation f Pacific salmon Early history and objectives. Circumstances requiring hatchery propagation. Methods. Diseases. Foods for hatchery salmon. The hatchery and fishery management. The salmon hatchery Hatchery ater supply The hatchery building. Rearing ponds. Trapping adult salmon. Adult holding ponds. Personnel, equipment and facilities. Literature cited.

Note. The salmon of the Pacific coast of continental United States of America ha long been and important food source. Population growth and industrial development has interfered with the natural reproduction of the species because of rivers and streams becoming either polluted or dammed or both. Artificial propagation of salmon has been resorted to as a means of offsetting losses in natural spawning. This booklet is a review of salmon-hatchery techniques and management. It describes the life history of the Pacific salmon and explains the equipment used and the methods followed in hatchery propagation.

JOHNSON, HARLAN E, AND RICHARD F BRICE

Use of impounded water for fish culture. Washington, D C Government Printing Office. 1953 35 p illus 22 cm. (United States. Fish and Wildlife Service. Research report 35) $0 20 7859

Contents (abridged) Dorena Dam and Reservoir. Facilities for experiments. Water analyses and temperature data. Hatchery experiments. Conclusions. Literature cited.

Note The report of a series of experiments which were carried out to determine if water from reservoirs behind dams could be used successfully in fish-cultural operation. The water used as taken from the Dorena Dam in Oregon, and data from analyses and temperature operations are presented in tables and graphs. Hatchery techniques used in the experiments are described. On the basis of the results of the experiments the authors concluded that impounded water is suitable for use in fish hatcheries if attention is paid to aeration and temperature control.

ROUNSEFELL, GEORGE A, AND W HARRY EVERHART

Fishery science, its methods and applications New York John Wiley & Sons, Inc., 1953 444 p illus 24 cm. $7 75 7860

Contents. Introduction. Road to management How do produce knowledge? Relation of life history to management. Natural populations. Factors limiting abundance. Criteria for separating populations. Effects of exploitation. Factors affecting estimation of population size. Methods of estimating population size. Fish ponds Construction and stocking of fish ponds. Fertilization and management f fish ponds. Fishing gear Types of fishing gear and their use. Protection against hazards. Fishways. Screens and racks. Pollution. Improvement of habitat. Habitat improvement. Control of undesirable species. Tagging of fish Types of tags and information sought. Techniques of tagging and recovery Age and growth. How to determine age. Growth. Collecting basic data. Fishery statistics. Stream and lake surveys. Managing natural populations. Management techniques. Artificial propagation of salmonids as a management tool. Regulations and their effect. Problems. Appendix. Fishery journals. Glossary Index.

Note An authoritative presentation of the scope and methods of applied biology in the study of and management of fish populations. Included also is wide range of accumulated knowledge on factors that determine the fate of fish in their natural habitats. The style is technical but not so technical as to make the book incomprehensible to the educated lay reader who is interested in one or more aspects of the subject. However the book is more suited to the needs f preparing for professional work in fish research and management and graduate biologists who are entering this field from some other field of biology Bibliographies are included.

TAYLOR, HARDEN FRANKLIN, AND OTHERS

Survey of marine fisheries of North Carolina. By Harden F Taylor and a staff of associates Chapel Hill The University of North Carolina Press 1951 555 p. illus. 26 cm. $5 00 7861

Contents (abridged) Foreword, by R. E. Coker Part 1, Hydrography of North Carolina marine waters, by Marshall. Part II, Biology and natural history of the economic species Introduction, by H. F Taylor The menhaden, by W A Ellison, Jr The edible finfishes of North Carolina, by E. W Roelofs. The oyster and other mollusks in North Carolina, by A F Chestnut The shrimps in North Carolina, by C. Broad. The blue crab in North Carolina, by by J C. Pearson. The diamond-back terrapin in North Carolina, by

particularly to veterinarians and to students who have not had previous training in laboratory procedures. The directions for laboratory procedures used are explicit and detailed. Special procedures that are valuable only in research work are set in smaller type. A table entitled "Data for differentiation of disease-producing bacteria in domestic animals" occupies twenty-eight pages and furnishes a wide range of information. Lists of related literature are appended to the chapters. The second edition was published in 1941. The chapter entitled "Diagnostic interpretation in clinical medicine" is new in the third edition. Important changes have been made in the chapters on hematology and in several other chapters. There are now 73 black-and-white text figures and four plates in color

DREGUSS MIKLÓS N., AND LOUISE S LOMBARD

Experimental studies in equine infectious anemia. With 28 illustrations and 16 tables. Philadelphia University of Pennsylvania Press, 1954 203 p. illus. (part col d) 24 cm. $6.50. 7871

Contents History and geographic distribution. Natural transmission of the infection. Symptomatology. Clinical diagnosis. Properties of the virus. Methods of laboratory diagnosis. Hematology. Hemagglutination. Pathogenesis. Transmission to laboratory animals. Cultivation of the virus in chick embryos. Immunization experiments. Histopathology. Therapy and control. Concluding remarks. Bibliography. Index.

Note: A monograph based on (1) the results of a program of intensive research carried out at the School of Veterinary Medicine at the University of Pennsylvania over a six-year period, and (2) a comprehensive survey of the international literature. Although there are over 1,200 citations of the literature, more space is given to the techniques and results of the experimental studies. These included efforts to find a suitable small laboratory animal, to develop rapid laboratory diagnostic tests, and to find a means of preventive immunization against the disease. These goals were not attained, but a base was built for further research on equine infectious anemia.

DUKES H. H. AND OTHERS

The physiology of domestic animals. Seventh edition. Ithaca Comstock Publishing Associates a division of Cornell University Press, 1955 1,020 p. illus 24 cm. $9 75 7872

Contents Part 1 Introductory—the circulating fluids of the body. Physicochemical basis of physiological phenomena, by E. A. Hewitt. Blood. Lymph, cerebrospinal fluid, synovial fluid. Part 2 Circulation of the blood. Heart. Flow of blood in the blood vessels. Vasomotor mechanisms. Part 3 Respiration. Mechanics of respiration. Transport and exchange of gases. Regulation of respiration. Respiration in birds. Part 4 Digestion and absorption. Digestion—introductory considerations. Prehension, mastication, salivary secretion, deglutition. Digestion in the simple stomach. Digestion in the ruminant stomach. Digestion in the small intestine. Digestion in the large intestine. Intestinal movements. Digestion in the chicken. Absorption. Part 5, Water and electrolytes—kidney and urine—skin. Water, electrolytes, and acid-base balance by M. R. Kare. Kidney and urine. Skin. Part 6, Intermediary metabolism, by J. A. Dye. Carbohydrate metabolism. Protein metabolism. Fat metabolism. Part 7 Energy exchange—minerals and vitamins. Energy metabolism. Temperature regulation. Minerals and vitamins. Part 8, Muscular activity and the nervous system. Muscular activity. Activity of peripheral nerve. Neurons, receptors, synapses, effectors. Spinal cord and reflex action. Brain-stem and cerebellum. Postural reflexes. Cerebral hemispheres. Autonomic nervous system. Vision. Hearing, smell, and taste. Part [illegible] Endocrine organs, reproduction, and growth, by J. A. Asdell. Endocrine organs. Female generative organs. Male generative organs. Growth. Appendix. Lecture demonstrations in physiology. Index.

Note: Based upon the author's experience in teaching animal physiology and upon the literature of veterinary science, this book is a standard, comprehensive text in physiology for students of veterinary medicine. In preparing the new edition, all parts were revised and enlarged to some extent, and the number of illustrations was increased from 184 to 233. As in the previous edition, there are extensive bibliographical references in each part. These not only give authority for statements in the text, but also can be used as a guide to further reading and study

FOUST H. L., AND ROBERT GETTY

Atlas and dissection guide for the study of the anatomy of domestic animals. Third edition. Ames Iowa State College Press, 1954 105 p. illus. (part col'd) $4.50 7873

Contents Hints for the beginner. Dissection of the dog: Muscular system. Angiology and neurology. Abdomen and pelvis. Pelvic limb. Cephalic area. Directions for dissection of large animals: Head and neck. Thorax and thoracic limb. Abdomen, pelvic region, and pelvic limb.

Note: A standard laboratory manual designed for the guidance of students of veterinary medicine, written by the former and present heads of the Department of Veterinary Anatomy of Iowa State College. In the present edition, there are 46 plates of generous size pertaining to the dissection of the dog, horse, cow, pig, cock and hen. In addition to the plates and their descriptive legends, there are 19 pages of text and literature references. The second edition was published in 1947. In this edition, the number of plates has been increased by nine, and the accompanying text has been expanded slightly

FRANK E. R.

Veterinary surgery Minneapolis Burgess Publishing Company 1953 302 p illus. 28 cm. $6.50. 7874

Contents. Anesthesia. Surgical technic. Miscellaneous infections. Wounds and their care. Neoplasms and cysts. Fractures and dislocations. Affections of the head and neck. Affections of the shoulder and front limb. Affections of the thoracic and abdominal cavities. Affections of the tail, anus, rectum, vagina and penis. Affections of the posterior limb. Index.

Note: A useful manual of surgery on the larger farm animals. Procedures are described concisely but in sufficient detail for practical use. The book is suitable for advanced students of veterinary science who have already studied anatomy, histology, and other basic sciences and for practicing veterinarians. There are 277 illustrations, most of which are reproduced from photographs; and there are references to additional literature. The book is reproduced from typewritten copy in order to make frequent revisions practical. This is the fifth edition. In comparison to the preceding edition, there has been some reorganization of the material, about 30 pages of new matter have been added, and there are 20 more illustrations.

GETTY ROBERT

Atlas for applied veterinary anatomy Minneapolis Burgess Publishing Company 1955 227 p. illus. (part col d) $6.50. 7875

Contents (abridged) Neurology. Splanchnology. Digestive system. Respiratory system. Urogenital system (male genital organs). Urogenital system (female genital organs). Angiology. Myology. Osteology and arthrology. Aesthesiology. The chicken.

Note: A reference book and dissection guide developed in the Department of Veterinary Anatomy of Iowa State College. There are 98 full-page plates, many of which contain reproductions of more than one photograph or drawing pertaining to the gross anatomy of the cow, horse, pig, dog and chicken. The plates are accompanied by legends which identify the parts that can be seen. In each section, the plates are preceded by brief guides for the student-dissector.

HABEL ROBERT E.

Guide to the dissection of the cow Third edition. Ann Arbor J W Edwards, Inc., 1955 127 p. illus. 22 cm. $1.00 7876

Note: A handbook for college students of veterinary medicine. As the title indicates, it is strictly a manual of dissection, not a textbook of bovine anatomy. In this edition, there are 15 figures and a five-page bibliography. The author is Associate Professor of Veterinary Anatomy in the New York State Veterinary College.

HABERMAN JULES J

The farmer's veterinary handbook. By Jules J Haberman assisted by Mary L. Holcomb. Englewood Cliffs, N J Prentice Hall Inc., 1953 305 p. illus. 23 cm. $4 95 7877

VETERINARY MEDICINE

ADVANCES IN VETERINARY SCIENCE. Edited by C. A Brandly and E L Jungherr Volume I. New York Academic Press, Inc , 1953 431 p illus. 23 cm. $9 00 7864

Contents. Animal diseases and human welfare, by K. F Meyer Virus diseases, by J A. Baker and C. J York. Sulfonamides, by D K. Detweiler and S. F Scheidy Antibiotics, by S. F Scheidy and D K. Detweiler The infertility problem f cattle, by D E. Bartlett and W L. Boyd. Bovine mastitis, by W N Plastridge. Swine diseases, by S. H. McNutt. Veterinary public health, by J H. Steele. Author index. Subject index.

—— Volume II New York Academic Press, Inc., 1955 449 p illus. 23 cm. $10 00 7865

Contents: Epizootiology ■ virus diseases, by R. E. Shope. Mycoses of animals, by C. W Emmons. Respiratory diseases of poultry by H. Van Roekel. The blood groups of animals, by L. C. Ferguson. Diseases caused by deficiencies of trace elements, by L J Cunningham. Photosensitization in animals, by N T Clare. Rumen dysfunction, by A. T Phillipson. Bovine ketosis, by J C. Shaw Tickborne rickettsioses in South Africa, by D A. Haig. Vibriosis, by W N Plastridge. Effectiv control of internal parasites, by D C. Boughton. Author index. Subject index.

Note. These volumes are the first two published in a series which is planned to review the progress in the more active fields of research pertinent to veterinary science and in the application of the newer knowledge to the art and practice f veterinary medicine and veterinary public health." They contain the monographic reviews whose titles and authors are listed above. Each review is a critical survey of the literature pertinent to its specific topic. Recent literature is emphasized, but the uthors were not limited to the literature published during specific year or any other cir cumscribed period. A list of references of considerable length is included in each monograph. Contributors to the series include scientists working in New Zealand, South Africa, and Scotland, as well as the United States of America.

BAKER, EUSTACE THURMAN

The home veterinarian s handbook a guide for handling emergencies in farm animals and poultry New York The Macmillan Company 1944 191 p illus 21 cm. $3 50 7866

Note. In this book approximately 700 terms and subjects are arranged in alphabetical order and defined briefly The definition, symptoms, first aid, and special cautions for each disease are given in brief outline, and in many cases the reader is advised to call veterinarian rather than attempt home treatment himself. There are 54 photographs of actual cases in the author's ex perience, and an index for ready reference.

BENBROOK, EDWARD A AND MARGARET W SLOSS

Veterinary clinical parasitology Second edition. Ames Iowa State College Press 1955 206 p illus 23 cm. $6 50 7867

Contents (abridged) Section I, Fecal examination in the diagnosis of parasitism. Section II, Examination for mites of the skin and of the internal organs. Section III, The diagnosis of louse infestations. References. Index.

Note. A practical manual ritten to assist eterinarians in making an accurate diagnosis of parasitic diseases in domestic animals. Clear concise descriptions of suitable laboratory techniques and other methods of identification are supplemented by numerous reproductions of microphotographs showing ova, oocysts, sporocysts and larvae, as ell as adult specimens of various parasites. The first edition was published in 1948. There are 271 figures in this second edition, including the microphotographs just mentioned as well as other illustrations. Literature published since the first edition was written has been added to the list of references, hich is now 23 pages long. The senior author is Head of the Department of Veterinary Pathology at Iowa State College, and his co-author is member of the faculty of the same department.

BIERER, B W

A short history of veterinary medicine in America. East Lansing Michigan State University Press, 1955 113 p. 21 cm. $3 00. 7868

Contents Out of the ancient past. Animal plagues and agricultural progress. Disease control through scientific progress. Medical schools and scientific progress. Bibliography

Note. Essentially a long essay this book in its first chapter sketches some high points of the development of eterinary medicine in other countries before the coming of the white man to America, but is primarily concerned with the development of veterinary medicine in the United States of America. E en in the chapters on American aspects the book is description of landmarks rather than thorough history Nevertheless, it is useful as a background to the study and practice of veterinary medicine and as an account of a phase of agricultural history The author's style reads easily and an extensive bibliography is included.

CALHOUN, M LOIS

Microscopic anatomy of the digestive system of the chicken. Ames Iowa State College Press 1954 108 p illus 23 cm. $3.50 7869

Contents Review of literature. Gross anatomy Materials and methods. Results. Discussion. Summary Literature cited. Additional references.

Note The results of detailed microscopic study of the entire digestive tract of the chicken are presented in this book. There are 44 plates, three of hich are representations of gross anatomy while the balance depict microanatomy Many of the plates in the latter group contain reproductions of t microphotographs. The plates are prefaced by comprehensi critical review of the literature and by a descripti text. The work, originally master thesis, was first published in the Iowa State College *Journal of science* Volume VII, 1933 but has been augmented in this edition by the addition of several plates and additions to the text, especially to the review of the literature.

COFFIN DAVID L

Manual of veterinary clinical pathology Third edition. Ithaca N Y Comstock Publishing Associates, a Division of Cornell University Press 1953 322 p. illus. (part col d) 24 cm. $5 50 7870

Contents Microscopic techniques for clinical pathologic examinations. How to collect, pack and ship specimens for laboratory diagnosis. Parasitologic examinations. Urine examinations. Interpretation of urinary findings. Diagnostic interpretation in clinical chemistry Hematology Interpretation of hematologic findings. Diagnostic methods in bacterial disease Diagnosis of bacterial diseases. Diagnosis of mycotic diseases. Diagnosis of protozoan blood diseases. Diagnosis of protozoan genital infection Diagnostic methods in virus diseases. Fertility examinations. Poultry and game-bird autopsy Formulas and techniques. Inde

Not A concise presentation intended for use by both students of veterinary medicine and practicing eterinarians. It deals chiefly with microscopic and other office and laboratory techniques that may be used as aids in diagnosis. Step-by Step directions are included for collecting specimens and performing autopsies. There are directed

Note A reference manual and textbook devoted to the bacteria and mycotic organisms which are of interest in veterinary medicine. The methods and techniques of bacteriological research are briefly discussed, but the greater part of the volume is devoted to descriptions of specific organisms, their occurrence, diseases which they produce, morphology, staining characteristics, and methods of culture. In this edition the chapters dealing with Proteus, organisms of the genera Brucella, Streptococcus and Staphylococcus, and staining methods have been revised. The work is designed for students and research workers in veterinary science, and for practicing veterinarians.

KRÁL, FRANK, AND BENJAMIN J NOVAK

Veterinary dermatology Introduction by John D Beck. 162 illustrations in 124 figures. Philadelphia J B Lippincott Company 1953. 325 p. illus. 26 cm. $10.00. 7883

Contents: Basic survey. Examination of the skin. Causes and classification of skin disorders. Skin inflammations, dermatitis, eczema. Moist eczema in dogs. Urticaria. Drug eruptions. Food rashes. Photosensitization. Hypertrophic changes of the skin. Skin tumors. Functional disorders of the skin. Gangrene of the skin. Skin manifestations in the course of infectious diseases caused by viruses—in the course of infectious diseases caused by bacteria—caused by fungi—caused by Protozoa. Dermatoses associated with helminth parasites. Dermatoses associated with Helminths. Acarine dermatoses associated with ticks and mites. Dermatoses caused by insects (insecta). Appendix. Index.

Note: Claimed to be the first complete text published in the English language on its subject, this book is an authoritative and comprehensive manual. It is organized so that it is equally valuable as a text for students in veterinary colleges and as a reference book for practicing veterinarians. Except for the three preliminary chapters which have a total of only 23 pages, the volume is entirely devoted to descriptions of specific diseases of the skin and the skin manifestations of diseases of other systems. The essays on individual diseases vary somewhat but, generally speaking, each one provides a general clinical description of the disease, a description of the causal organism or other agent, and discussions of symptoms, prognosis and treatment. Numerous formulas for ointments and other medicines are included. Bibliographies of the related literature are a special feature, and the names of authors whose works are cited are assembled in the bibliographic index.

LEAHY JOHN R. AND PAT BARROW

Restraint of animals Second edition. Ithaca. Cornell Campus Store, Inc., 1953 269 p. illus. 20 cm. $3 75 7884

Contents: Introduction. Basic rope work. Horse. Cow. Pig. Dog. Cat. Fur bearing animals. Sheep and goats. Laboratory animals. Poultry.

Note: A useful manual of information on methods of catching and restraining animals. It is directed to college students of veterinary medicine, practicing veterinarians, and farmers. All of the methods described require only simple apparatus, or none in the case of small animals. The volume is fully illustrated.

LITTLE, RALPH B., AND W N PLASTRIDGE, editors

Bovine mastitis a symposium. New York McGraw Hill Book Company Inc., 1946 546 p. illus. 23 cm. (McGraw Hill publications in the agricultural sciences Leon J Cole consulting editor) $9.00. 7885

Contents: Introduction. Anatomy of the udder, by M. A. Emmerson. Physiology of milk secretion, by C. W Turner. Pathology of mastitis, by L. B Sholl. Diagnosis of mastitis: Examination of the udder, by L. J. Tompkins. Examination of udder secretion, by W N Plastridge and C. S. Bryan. Bacteriology of mastitis, by R. B. Little and others. Serological classification of the mastitis streptococci, by A. W Stableforth. Environmental and hereditary factors, by R. B. Little. Transmission, by R. B. Little. Mastitis in heifers, by O. W Schalm. Eradication of chronic mastitis, by W. N. Plastridge. Vaccination in the control of bovine mastitis, by C. S. Bryan and W N Plastridge. Treatment of bovine mastitis, by O. W Schalm and R. B. Little. Public-health significance of bovine mastitis, by J. H. Brown. Relation of bovine mastitis to quality of dairy products, by E. O. Anderson. Stable hygiene in the control of mastitis for the production of clean milk, by C. S. Bryan and others. Recommendations for state control programs, by O. W Schalm and others. Mastitis in goats, by C. S. Bryan. Appendix: Indirect tests for evidence of mastitis. Preparation of defibrinated blood and serum. Fluid mediums. Solid mediums. Staining methods. Special mediums and tests. Addendum. Index.

Note: Although composed of separate papers, this work is a comprehensive treatise on the subject. The papers were written for the book, and together they present both the current knowledge of the disease and the more important techniques used in controlling it. They are intended for veterinarians, public health officials, and other persons with professional interests in the subject. Each paper is accompanied by a good-sized list of references to the pertinent literature.

MCCAY CLIVE MAINE

Nutrition of the dog Second edition. Ithaca Comstock Publishing Company Inc. 1949 337 p. illus. 22 cm. $3 50. 7886

Contents: Men and their dogs. Carbohydrates for dogs. Fat in the diet of dogs. Proteins for dogs. Amino acids and protein derivatives. Mineral requirements of dogs. Fat-soluble vitamins. Water-soluble vitamins. Modern dog foods. The ingredients of dog foods. Plant foods. Testing dog foods. Blood and bone. Practical feeding and management of dogs. Kennels and equipment. Parasites and their control. Questions about foods. A shelf of books for the dog owner. Index of persons. Index of subjects.

Note. Offering more than the title suggests, this book is a guide to the care and the feeding of dogs. The style is sufficiently non-technical to make the book available to the average owner of a dog, but the wide range of information included, together with the extensive literature references, gives the book enough substance to make it valuable to veterinarians as well. Each chapter includes an introductory section of general information which is then developed on a more technical level. This edition incorporates recent advances and is more than twice as long as the first edition published in 1943. Statements in the text are keyed to the bibliographies.

MERCHANT I. A., AND R. A. PACKER

Veterinary bacteriology and virology Fifth edition. Ames Iowa State College Press, 1956 850 p. illus. 24 cm. $9.90 7887

Contents (abridged) Part I, General biology of microorganisms: Scope and history of bacteriology. Physiology of microorganisms. Bacteriological technic and methods. Sterilization and disinfection. Antibiotic agents. Part II, Infection, resistance, and immunity: Mechanism of infection. Principles of immunity. Phagocytosis. Anaphylaxis and allergy. Part III, Classification and characteristics of pathogenic bacteria, yeasts, and molds. Part IV The filtrable viruses: General characteristics of viruses. Methods used in the study of viruses. Classification of viruses. Index.

Note: A standard work, the first edition of which was published in 1940 and the fourth edition in 1950. It is primarily a textbook for introductory courses in bacteriology and virology in colleges of veterinary medicine. It is used also as a reference book by practicing veterinarians, scientists engaged in veterinary research, etc. The present edition is organized in the four parts whose titles are given above, and in 54 chapters, of which only a few are listed above. About equal emphasis is given to physiology and morphology. In Parts III and IV there are systematic discussions in which the following points are covered for most of the genera: synonyms and history, distribution and transmission, morphology, cultural requirements, resistance, biochemical properties, antigenic structure, pathogenicity, immunity and laboratory diagnosis. In comparison with the fourth edition, revised sections are to be found in many chapters and in some chapters, such as those on the viruses, the changes are extensive. A selection of the literature published since the fourth edition was written has been added to the bibliographies.

MERCK AND COMPANY INC.

The Merck veterinary manual a reference handbook of diagnosis and therapy for the veterinarian. Rahway N J Merck & Co., Inc. 1955 1,385 p. 17 cm. $7.50. 7888

Contents: Part I: Allergy. Blood, lymphatic, and cardiovascular. Breeding and obstetrics. Digestive system. Endocrine. Eye and ear. Genito-urinary. Infectious diseases. Metabolic disturbances. Musculoskeletal. Neoplasms. Nervous system. Nutrition. Parasitic diseases. Physical influences. Respiratory. Skin and connective tissue.

Contents: Cattle diseases and conditions. Swine diseases and conditions. Diseases and conditions of sheep and goats. Diseases and conditions of horses. Diseases and conditions of fowl. Addresses of state livestock sanitary officials. Agricultural experiment stations in the U S. Index.

Note: A reference book designed for use by practical farmers. It is organized according to kind of animal as noted in the above contents. Within the individual chapters diseases are described individually with the descriptions arranged in alphabetical order according to the name of the disease. Diseases are discussed as to causes, symptoms, treatment and preventive measures. Treatments within the abilities of the average farmer are described more fully than those requiring the attention of a veterinarian. Techniques of a veterinary nature not related to disease treatment, such as castration, are covered also. However most of the discussions of treatment are brief. A considerable part of the value of the book lies in its suggestions for prevention of disease.

HADLEY, FREDERICK BROWN

Principles of veterinary science Fifth edition, illustrated Philadelphia W B Saunders Company, 1954 546 p illus. (part col'd) 21 cm $5 00 7878

Contents. Part I, Anatomy and physiology of animals. Introductory The animal world. The animal body as a whole. The skeletal system. The muscular system. The nervous system. The circulatory system. The respiratory system. The digestive system. The urogenital system. The special systems. Part II, Animal diseases: Maintaining animal health. Veterinary medicines. Principles of livestock hygiene and sanitation. Hygiene of breeding and feeding. Hygiene of meat and milk. Veterinary pathology Wounds and wound infections. Diseases of the digestive organs. Mineral and vitamin deficiency diseases. Veterinary surgery Veterinary obstetrics. Disturbances of the reproductive organs. Other noncommunicable diseases. Some communicable diseases. Veterinary parasitology Poisons and poisonings. Index.

Note. A long-established textbook for college courses. The author distinguishes between veterinary science and veterinary medicine, and has designed this book to meet the needs of students who are interested in veterinary science as phase of animal husbandry rather than those of students who are preparing for the veterinary profession. The sections on structure and function are designed to be of practical value in judging animal form, capacity and productivity as well as in the solving of problems connected with the feeding and breeding of animals. The fourth edition appeared in 1949 In this fifth edition the former chapter on veterinary hygiene has been replaced by three chapters on livestock hygiene and sanitation and public health aspects of meat and milk production. Also, important changes have been made in the chapters on diseases.

HAGAN, WILLIAM ARTHUR, AND DORSEY WILLIAM BRUNER

The infectious diseases of domestic animals, with special reference to etiology, diagnosis, and biologic therapy Second edition. Ithaca, New York Comstock Publishing Company Inc., 1951 920 p illus 24 cm. (Comstock series in veterinary medicine William Arthur Hagan consulting editor) 7879

Contents (abridged) Part I, The mechanisms of infection and resistance The causes of disease. The protective mechanisms of the body Toxins and antitoxins. The lytic antibodies. The agglutinins and precipitins. Phagocytosis. Hypersensitization. Part II, Chemotherapy Part III, The pathogenic bacteria. Part IV Bacteria-like pathogenic organisms of uncertain classification Part V The pathogenic fungi. Part VI, The pathogenic protozoa. Part VII, The viruses. Index.

Note. A successful textbook for the instruction of college students of veterinary medicine. It is useful also to graduate practitioners of veterinary medicine and research workers as a reference manual and guide to the literature. Although arranged largely according to standard biological groups, there is little emphasis on morphology and classification. Instead, for each organism such matters are discussed as culture, pathogenicity for experimental animals, disease manifestations in domestic animals, modes of transmission, diagnosis, chemotherapy etc. Also if the organism is pathogenic to man this fact is stated. The authors are faculty members of the New York State Veterinary College at Cornell University The third edition was published in 1957 943 p., $10.50.

JONES, L MEYER

Veterinary pharmacology and therapeutics. Ames Iowa State College Press, 1954 850 p. illus. 26 cm. 7880

Contents (abridged) Part I, Introduction. Part II, Drugs acting locally on the skin and mucous membranes. Part III, Drugs acting on the digestive tract. Part IV Drugs acting on the central nervous system. Part V Drugs anesthetizing the peripheral nerves. Part VI, Drugs acting upon the autonomic nervous system. Part VII, Drugs acting upon the blood and heart. Part VIII, Systemic anti-infective drugs—sulfonamides. Part IX, Systemic anti-infective drugs—antibiotics. Part X, Internal parasiticides and antiparasitics. Part XI, External parasiticides and antiparasitics. Part XII, Drugs influencing tissue metabolism. Part XIII, Drugs acting directly upon the reproductive system. Part XIV Drugs having special lethal effect. Index.

Note. A comprehensive textbook on drugs of veterinary interest and their uses in veterinary medicine. Background information on the historical development of veterinary pharmacology on the sources of drugs, drug standards, dosage forms, prescription writing, methods of drug administration, and the general principles of pharmacodynamics is covered briefly in the first part. The other parts f the book are devoted to the classes of drugs named in their titles. Together the parts contain 60 chapters. Most of the individual chapters are devoted to descriptions of individual drugs arranged in appropriate subclasses. In most instances the drug is described, and its chemistry method of administration, physiological effects, clinical uses and dosage are concisely described. If a drug is useful on several domestic animals, there are separate discussions of the uses, dosages, etc. for each animal. Literature references are included in the chapters. The author is Professor of Veterinary Pharmacology in Iowa State College. The second edition as published in 1957 946 p., $11.50.

JONES, THOMAS CARLYLE, AND CHESTER A. GLEISER, editors

Veterinary necropsy procedures. Sponsored by The Armed Forces Institute of Pathology and The American Veterinary Medical Association. Philadelphia J B Lippincott Company 1954 136 p. illus (part col'd) 26 cm. $7 50 7881

Contents: The importance of the necropsy by E. A. Benbrook. General principles of necropsy procedure, by H. Smith. Necropsy procedure for the horse, by H. Smith. Necropsy procedure for cattle and sheep, by P Olafson. Necropsy procedure for swine, by L. M. Roderick. Necropsy procedure for the dog and cat, by D L. Coffin. Necropsy procedure for chickens and other birds, by E. L. Stubbs. Necropsy procedure for laboratory animals, by C. Olsen Jr Necropsy procedures for wild animals, by L. J. Goss. Preparation of necropsy protocols, by T C. Jones. Selection and preparation of specimens for laboratory examination, by R. Randall. The collection and preservation of parasitologic specimens, by H. J Griffiths. Suggestions for facilitating laboratory diagnosis of various diseases, by H. R. Seibold. References. Index.

Note. An authoritative and comprehensive manual of good technique in the postmortem examination of animals. It was planned and written to fill gap in English-language literature of eterinary medicine. Procedures are described explicitly and clearly illustrated. The techniques of laboratory diagnostic tests are not included, but the collection of specimens for such tests are adequately described. The list of reference is selected one, classified by disease. There are 50 figures, containing somewhat higher umber of illustrations.

KELSER RAYMOND ALEXANDER AND HARRY W SCHOENING

Manual of veterinary bacteriology Fifth edition. Baltimore The Williams & Wilkins Company 1948 767 p. illus 23 cm. $6.50 7882

Contents (abridged): Bacteria, their morphology physiology and classification. Bacteriological methods. Infection and immunity Bacterial variation. Pathogenic organisms of the class Schizomycetes. Pathogenic fungi. The Protozoa. The filtrable viruses and Rickettsiae. Serology Hematology Preparation of eterinary biological products. Bacteriological examination of milk and water.

has been [illegible] than might be expected, there being only 17 [illegible]. The author is Professor of Veterinary Medicine and [illegible] in the New York State Veterinary College at Cornell University.

ROONEY JAMES R., II

Guide to the dissection of the horse. Third edition. Illustrated by Pat Barrow Ann Arbor J W Edwards, Inc., 1956 183 p. illus. 32 cm. $2.00. 7895

[illegible] A companion work to Habel, Guide to the dissection of the [illegible], described above. It is intended for the use of students in colleges of veterinary medicine, and its purpose is to serve as a guide for the systematic dissection of the horse cadaver. In this edition, there are 17 full-page plates, containing [illegible] larger number of illustrations, and a [illegible]-page bibliography.

RUNNELLS RUSSELL A.

Animal pathology Fifth edition. Ames Iowa State College Press 1954 718 p. illus. (part col'd) 23 cm. $9.50 7896

Contents: Part I General pathology. Introduction. Predisposing [illegible] of disease. The causes of disease (etiology). Disturbances of development. Disturbances in the nutrition and growth of cells. Disturbances of cell metabolism. Death. Defenses of the body against [illegible]. Disturbances in circulation. Tumors. Part II, Special pathology of the systems. Cardiovascular system. [illegible] system and the blood. Respiratory system. Digestive system. Urinary system. Genital system. Nervous system. Part III, Special pathology of the specific infectious diseases. [illegible] bacterial diseases. [illegible] bacterial and protozoan diseases. [illegible] bacterial and fungus diseases. [illegible] virus diseases. [illegible] virus diseases. [illegible] virus diseases. [illegible] diseases with [illegible]. Part IV Special pathology of food-deficiency diseases. Deficiencies of water, [illegible], carbohydrates, and minerals. Vitamin deficiencies. Appendix. Index.

Note: An introduction to the pathology of domestic animals which [illegible] used as [illegible] text in veterinary colleges in the United States of America and other countries. It is used also as a reference book by practicing veterinarians. While pathology is the principal subject, there [illegible] descriptions of the etiology, symptoms, etc., of specific diseases. Revisions and augmentations were made in several chapters in preparing the fifth edition. Among the [illegible] additions is [illegible] discussion of the effects of ionizing radiation on domestic animals. A selection of literature published since the fourth edition was written has been added to the bibliographies. There are now 216 illustrations, and the length of the volume has been increased by approximately 80 pages.

SISSON SEPTIMUS

The anatomy of the domestic animals. Fourth edition. Revised by James Daniels Grossman. With 736 illustrations, many in color Philadelphia W B Saunders Company 1953 972 p. illus. (part col'd) 26 cm. $15.00. 7897

Contents (abridged): Osteology: Skeleton of the horse—The ox—The sheep—The pig—The dog. Arthrology. Myology. Splanchnology. Respiratory system. Urogenital system. Male genital organs. Female genital organs. Angiology. Blood-vascular system of the horse. Lymphatic system. Blood-vascular system of the ox. Lymphatic system of the ox and sheep. Circulatory system of the pig. Circulatory system of the dog. Neurology—the nervous system. [illegible]. The sense organs and common integument of the horse—Of the ox—Of the pig—Of the dog. The chicken: Skeleton of the chicken. Myology. Digestive system. Respiratory system. [illegible] and female generative organs. Circulatory system. Nervous system. Index.

[illegible] First published in [illegible] the work has held for many years the status of [illegible] standard text in schools of veterinary medicine. It provides [illegible] systematic introduction presented from [illegible] comparative viewpoint. The illustrations are of outstanding quality and are well reproduced. The third edition [illegible] published in [illegible]. In preparing this edition, most of the illustrations of the third edition were retained, some deleted, and [illegible] few new ones [illegible] added. No important changes were made in the text.

UDALL, DENNEY HAMMOND

The practice of veterinary medicine with one hundred and sixteen illustrations. Sixth revised edition. Ithaca, N Y The author, 1954 811 p. illus. 24 cm. $8.50 7898

Note: A standard reference book, used by both students and practicing veterinarians. It provides concise, systematic descriptions of the diseases of the larger farm animals including swine. For each disease information on the etiology, morbid anatomy, symptoms, and recommended treatment is given.

UNITED STATES. DEPARTMENT OF AGRICULTURE

Keeping livestock healthy edited by Gove Hambridge and Marion Julia Drown. Washington, D C. Government Printing Office, 1942 1,276 p. illus. 23 cm. (United States. Department of Agriculture. Yearbook of agriculture 1942) $3.25 7899

Contents: 1942 yearbook [illegible]. Foreword—Keep 'em healthy! by C. R. Wickard. Keeping livestock healthy—a summary by G. Hambridge. Part I, Fundamentals of disease and insect control. Losses caused by animal diseases and parasites. Causes of disease. Protective mechanisms against disease. The endocrine glands in health and disease. The relation of genetics to disease. Artificial insemination and disease control. Disinfection and disinfectants. New research aids in disease control. Origin and spread of important insect pests of animals. Regulatory activities in animal-disease control. Fighting disease with knowledge. Part II, Important general diseases common to several species: Tuberculosis and its eradication. Anthrax. Foot-and-mouth disease. Parasites and insects affecting livestock. Bacterial infections and parasites common to man and animals. The screwworm and blowfly problem. Nutritional diseases of farm animals. Plants poisonous to livestock. Part III, Common diseases and parasites of horses and mules. Equine encephalomyelitis. Equine infectious anemia, or swamp fever. Periodic ophthalmia of horses. Glanders. Dourine. Miscellaneous diseases of animals. Internal parasites of horses and mules. Mange in equines. Horse bots and their control. Some insect pests of horses and mules. Part IV Diseases and parasites of cattle. Brucellosis of cattle. Johne's disease. Bovine mastitis. Blackleg. Shipping fever, or hemorrhagic septicemia. Milk fever. Miscellaneous diseases of cattle. Cattle coccidiosis. Cattle tick fever. Anaplasmosis. [illegible] diseases of cattle. Cattle scab and its control. Tapeworm and roundworm parasites of cattle. Bovine genital trichomoniasis. Cattle grubs, or heel flies. The stablefly. The horn fly. Cattle lice. Cattle injuries caused by ingesting foreign objects. Poison poisoning in cattle. Nutritional diseases of cattle. Part [illegible] Diseases and parasites of swine: Hog cholera. Swine erysipelas. Enteritis of swine. Swine influenza. Miscellaneous diseases of swine. Brucellosis (infectious abortion) in swine. Mange of swine. Hog lice. Internal parasites of swine. Trichinosis. Salt tolerance and salt poisoning of swine. Nutritional diseases of swine. Part VI, Diseases and parasites of sheep and goats. Foot rot of sheep. Sore mouth of sheep and goats. Miscellaneous diseases of sheep and goats. Internal parasites of sheep and goats. Sheep scab and its control. Sheep ticks. Goat lice. Pregnancy disease of sheep. Lunger disease of sheep. Part VII, Common diseases and parasites of poultry. Pullorum disease. Fowl paralysis and other forms of the avian leukosis complex. Respiratory diseases of chickens and turkeys. Fowl pox (sorehead). Psittacosis. Miscellaneous diseases of poultry. Internal parasites of poultry. Coccidiosis of the chicken. Poultry lice and their control. Poultry mites. The fowl tick. Bedbugs as pests of poultry. The pigeon fly. Nutritional diseases of poultry. Part VIII, Common diseases and parasites of dogs and cats. Rabies and its control. Distemper of dogs. Three [illegible]. Miscellaneous diseases of dogs and cats. Internal parasites of dogs and cats. Mange of dogs. Ticks affecting dogs. Fleas. Running fits (fright disease). Nonparasitic skin diseases of dogs and cats. Nutritional diseases of dogs and cats. Part IX, Wildlife diseases and parasites. Diseases of wildlife and their relationship to domestic livestock. Diseases of fur-raised game birds. Diseases of fur animals. Index.

Note: This volume is [illegible] comprehensive, popular handbook on the diseases and parasites that attack domestic animals. The chapters are written by various scientists of the Department of Agriculture. Effort [illegible] made to give both the needed practical information and the scientific background of each disease. To this end, for most of the diseases described, the following facts are treated: history, symptoms, diagnosis, treatment, method of eradication,

Part II, Toxicology Part III, Poultry Part IV Fur laboratory and zoo animals. Part V Addendum. Part VI, Index.

Note A useful and reliable work which contains concise descriptions of the diseases and other disorders of all animals for whose care the practicing veterinarian is likely to be concerned, and in addition, compact presentations of basic information on nutrition and other factors in animal health. Diseases are discussed as to causal agents symptoms, diagnosis and treatment. The part entitled Addendum covers such techniques as oxygen therapy veterinary radiology laboratory diagnostic tests, body temperatures, and disposal of dead animals. The volume is well indexed.

MILLER, MALCOLM EUGENE

Guide to the dissection of the dog. Third edition Ithaca, N Y The author, 1952 369 p illus 28 cm $5 75 7889

Contents (abridged) Introduction. The skeletal system. The muscular system. The thorax, neck and pectoral limb. The abdomen pelvis and pelvic limb. The head, the central nervous system, the articulations. Bibliography Index.

Note. The author of this book is Head of the Department of Veterinary Anatomy of the New York State Veterinary College of Cornell University The book was designed for use by beginning students in this College and in other undergraduate colleges of veterinary medicine. It provides detailed directions for the laboratory dissection of a dog cadaver and simultaneously describes the anatomy The text is supplemented by 219 figures, most of which are reproductions of well executed drawings made directly from dissections.

MORGAN, BANNER BILL, AND PHILIP A. HAWKINS

Veterinary protozoology Revised edition Minneapolis Burgess Publishing Company, 1952 187 p illus 28 cm. $5 00 7890

Contents General introduction. Protozoa of the horse. Protozoa of cattle. Protozoa of sheep and goats. Protozoa of swine. Protozoa of the dog and cat. Protozoa of poultry Protozoa of fur bearers. Diagnosis of protozoan infections. Appendix Nomenclature. Parasite-host list. Treatment schedule. Index.

Note A practical handbook for students and graduate practitioners of veterinary medicine. It deals with the protozoan parasites occurring in the domesticated animals of continental North America. Following list of Protozoa of veterinary importance and a general introduction, the parasitic organisms of each animal are briefly described in terms of their morphology pathology life histories, transmission, diagnosis, treatment, and control. Gaps in the knowledge are pointed out with view toward stimulating further research. A special chapter deals with diagnostic techniques. Good lists of literature are included. The first edition was published in 1948. It was well revised for this second edition.

MULLIGAN, RICHARD MICHAEL

Neoplasms of the dog Baltimore The Williams & Wilkins Company 1949 135 p. illus. 23 cm. $4 00 7891

Contents Introduction. Mammary neoplasms. Epithelial neoplasms of skin and adnexa. Neoplasms of mesenchymal origin and of nerve sheath cells. Melanoma. Mast cell sarcoma, lymphosarcoma, histiocytoma. Neoplasms of endocrine glands. Other neoplasms. Technical supplement. Bibliography Index.

Note A compact monograph in which most of the space is given to the commoner neoplasms while the uncommon ones are described rather briefly It is concerned with diagnosis and classification, not with treatment. However data relating incidence to age and sex are included. There are 59 plates, most of which contain reproductions of more than one photograph. Microphotographs of neoplastic tissues predominate, but there are also number of photographs of gross specimens. The book is of interest to teachers and students of veterinary pathology and to practicing veterinarians.

NATIONAL RESEARCH COUNCIL

A review of bloat in ruminants a report of the Committee on Animal Health of the Agricultural Board. Revised 1955 Prepared by the Subcommittee on Bloat, H. H. Cole, chairman. Washington, D C National Academy of Sciences—National Research Council, 1956 64 p 24 cm (National Academy of Sciences—National Research Council. Publication 388) $2 00 7892

Contents. Introduction. Microbiology of the rumen, by R. E. Hungate. Sources of rumen gases, by M. Kleiber Chemical constituents of plants as related to the bloat problem, by W D. Maclay and C. R. Thompson. Physiology of the rumen as related to bloat, by R. W Dougherty Experimental production of bloat, by C. F Huffman. Etiology of bloat, by C. F Huffman and H. H. Cole. Prevention of bloat, by H. H. Cole and H. W Colvin, Jr. Treatment of bloat, by R. W Dougherty Summary of significant findings relating to the bloat problem. References.

Note. The present state of knowledge concerning bloat in ruminants and particularly bloat in domestic cattle is surveyed in this pamphlet, which contains the papers whose authors and titles are given above. There is a bibliography of 354 literature references. The work complements and re-evaluates a previous review of the subject published in the *Journal of animal science*, vol. 4, 1945.

NEWSOM, ISAAC ERNEST

Sheep diseases. Baltimore The Williams & Wilkins Company, 1952 352 p illus. 24 cm. $7 00 7893

Contents Part I, Infectious diseases. Diseases due to bacteria. Diseases due to fungi. Diseases due to protozoa. Diseases due to filterable viruses. Diseases due to rickettsiae. Part II, Parasitic diseases: Diseases due to external parasites. Diseases due to internal parasites. Part III, Non-infectious diseases: Diseases due to deficiency Neoplasms. Diseases of the digestive system. Diseases of the respiratory system. Diseases of the urinary system. Diseases of the genital system. Diseases of the circulatory system. Diseases of the nervous system. Diseases of the skin and of the ear Part IV Poisons. Diseases due to inorganic poisons. Diseases due to organic poisons. Diseases due to poisonous plants—photosensitization. Diseases due to plants containing hydrocyanic acid (prussic acid) Diseases due to plants containing selenium. Diseases due to other plants. Index.

Note. An inclusive textbook and reference manual which is devoted entirely to discussions of specific diseases. The typical essay on a disease covers such points as etiology symptoms, morbidity mortality anatomy treatment, and literature references. The essays on parasitic diseases contain also descriptions of the life cycles of the parasites. There are 118 illustrations and lots of literature references. The book is of interest to practical sheep breeders, veterinarians, agricultural extension workers, and students of veterinary medicine. The author is Dean of Veterinary Medicine of Colorado Agricultural and Mechanical College.

ROBERTS, STEPHEN J

Veterinary obstetrics and genital diseases. Ithaca The author distributed by Edwards Brothers Inc. Ann Arbor, Michigan 1956. 551 p illus 29 cm. $10 50 7894

Contents Part I, Obstetrics Introduction. Obstetrical anatomy Examinations for pregnancy Gestation period—embryology fetal membranes and placenta. Physiology of the gestation period. Diseases and accidents during the gestation period. Parturition. The causes of dystocia. Procedures preliminary to the handling of dystocia. Obstetrical operations for relieving dystocia. Diagnosis and treatment of the various types of dystocia. Injuries and diseases of the puerperal period. Part II, Genital diseases Physiology of reproduction. Infertility in the mare. Infertility in the cow Infertility in sheep and goats. Infertility in swine. Infertility in dogs and cats. Infertility in male animals. Artificial insemination. Index.

Note An introductory textbook which is at the same time comprehensive enough to make it useful for reference. It is designed primarily for the instruction of students in colleges of veterinary medicine and is useful also to practicing veterinarians. The presentation is critical one, and there are many such passages as, "Some authors have suggested that certain male animals develop excessive fatness because of an endocrine disturbance such as hypothyroidism, that predisposes the male to infertility This is possible but has not yet been proved. The chapters on infertility constitute a major part of the volume, although all of the topics mentioned in the chapter titles are discussed in considerable detail. Literature references are included in all chapters. The volume con-

has fewer illustrations than might be expected, there being only 17 figures. The author is Professor of Veterinary Medicine and Obstetrics in the New York State Veterinary College at Cornell University.

ROONEY JAMES R., II

Guide to the dissection of the horse. Third edition. Illustrated by Pat Barrow Ann Arbor J W Edwards Inc., 1956 183 p. illus. 22 cm. $2.00. 7895

Note A companion work to Habel, Guide to the dissection of the ox, described above. It is intended for the use of students in colleges of veterinary medicine, and its purpose is to serve as a guide in the systematic dissection of the horse cadaver. In this edition, there are 12 full-page plates, containing somewhat larger number of illustrations, and [illegible]-page bibliography.

RUNNELLS RUSSELL A.

Animal pathology Fifth edition. Ames Iowa State College Press 1954 718 p. illus. (part col'd) 23 cm. $9.50. 7896

Contents: Part I. General pathology Introduction. Predisposing factors of disease. The causes of disease (etiology) Disturbances of development. Disturbances in the nutrition and growth of cells. Disturbances of cell metabolism. Death. Disturbances of the body [illegible]. Disturbances in circulation. Tumors. Part II, Special pathology of the systems: Cardiovascular system. Hemopoietic system and the blood. Respiratory system. Digestive system. Urinary system. Genital system. Nervous system. Part III, Special pathology of the specific infectious diseases. Suppurative bacterial diseases. Nonsuppurative bacterial and protozoan diseases. Granulomatous bacterial and fungus diseases. Epitheliotropic virus diseases. Neurotropic virus diseases. Viscerotropic virus diseases. Virus diseases with disturbances of leucocyte [illegible]. Part IV, Special pathology of food-deficiency diseases. Deficiencies of water, [illegible], carbohydrates, and minerals. Vitamin deficiencies. Appendix. Index.

Note An introduction to the pathology of domestic animals which is widely used as a text in veterinary colleges in the United States of America and other countries. It is used also as a reference book by practicing veterinarians. While pathology is the principal subject, there are some discussions of the etiology, symptoms, etc., of specific diseases. Revisions and rearrangement were made in several chapters in preparing this fifth edition. Among the major additions [illegible] discussion of the effects of ionizing radiation on domestic animals. A selection of literature published since the fourth edition was written has been added to the bibliography. There are now 274 illustrations, and the length of the volume has been increased by approximately 50 pages.

SISSON SEPTIMUS

The anatomy of the domestic animals. Fourth edition. Revised by James Daniels Grossman. With 736 illustrations many in color Philadelphia W B Saunders Company 1953 972 p. illus. (part col'd) 26 cm. $15.00. 7897

Contents (abridged): Osteology Skeleton of the horse—The ox—The sheep—The pig—The dog. Arthrology Myology Splanchnology Respiratory system. Urogenital system. Male genital organs. Female genital organs. Anatomy. Blood-vascular system of the horse. Lymphatic system. Blood-vascular system of the ox. Lymphatic system of the ox and sheep. Circulatory system of the pig. Circulatory system of the dog. Neurology—the nervous system. [illegible] The sense organs and common integument of the horse—Of the ox—Of the pig—Of the dog. The chicken. Skeleton of the chicken. Myology. Digestive system. Respiratory organs. Male and female generative organs. Circulatory system. Nervous system. Index.

Note First published in 1910, this work has had for many years the status of a standard text in schools of veterinary medicine. It provides a systematic introduction presented from a comparative viewpoint. The illustrations are of outstanding quality and are well reproduced. The third edition was published in [illegible]. In preparing this edition, some of the illustrations of the third edition were revised, some deleted, and a few new ones were added. No important changes were made in the text.

UDALL, DENNEY HAMMOND

The practice of veterinary medicine with one hundred and sixteen illustrations. Sixth revised edition. Ithaca, N Y The author 1954 811 p. illus. 24 cm. $8.50 7898

Note A standard reference book, used by both students and practicing veterinarians. It provides concise, systematic descriptions of the diseases of the larger farm animals including swine. For each disease information on the etiology, morbid anatomy, symptoms, and recommended treatment is given.

UNITED STATES. DEPARTMENT OF AGRICULTURE

Keeping livestock healthy edited by Gove Hambidge and Marion Julia Drown. Washington D C. Government Printing Office 1942 1,276 p. illus. 23 cm. (United States. Department of Agriculture. Yearbook of agriculture 1942) $2.25 7899

Contents: 1942 yearbook committee. Foreword—Keep 'em healthy, by C. R. Wickard. Keeping livestock healthy—a summary by G. Hambidge. Part I, Fundamentals of disease and insect control. Losses caused by animal diseases and parasites. Causes of disease. Protective mechanisms against disease. The endocrine glands in health and disease. The relation of nutrition to disease. Artificial insemination and disease control. Disinfection and disinfectants. How research aids in disease control. Origin and spread of important insect pests of animals. Regulatory activities in animal-disease control. Fighting disease with knowledge. Part II, Important general diseases common to several species: Tuberculosis and its eradication. Anthrax. Foot-and-mouth disease. Protozoa and insects affecting livestock. Bacterial infections and parasites common to man and animals. The screwworm and blowfly problem. Nutritional diseases of farm animals. Plants poisonous to livestock. Part III, Common diseases and parasites of horses and mules. Equine encephalomyelitis. Equine infectious anemia, or swamp fever. Periodic ophthalmia of horses. Glanders. Dourine. Miscellaneous diseases of equines. Internal parasites of horses and mules. Mange in equines. Horse bots and their control. Some insect pests of horses and mules. Part IV, Diseases and parasites of cattle. Brucellosis of cattle. Johne's disease. Bovine mastitis. Blackleg. Shipping fever, or hemorrhagic septicemia. Milk fever. Miscellaneous diseases of cattle. Cattle coccidiosis. Cattle tick fever. Anaplasmosis. [illegible] diseases of cattle. Cattle scab and its control. Tapeworm and roundworm parasites of cattle. Bovine genital trichomoniasis. Cattle grubs, or heel flies. The stablefly. The horn fly. Cattle lice. Cattle injuries caused by ingesting foreign objects. Plant poisoning in cattle. Nutritional diseases of cattle. Part V, Diseases and parasites of swine: Hog cholera. Swine erysipelas. Enteritis of swine. Swine influenza. Miscellaneous diseases of swine. Brucellosis (infectious abortion) in swine. Mange of swine. Hog lice. Internal parasites of swine. Trichinosis. Salt tolerance and salt poisoning of swine. Nutritional diseases of swine. Part VI, Diseases and parasites of sheep and goats: Foot rot of sheep. Sore mouth of sheep and goats. Miscellaneous diseases of sheep and goats. Internal parasites of sheep and goats. Sheep scab and its control. Sheep ticks. Goat lice. Pregnancy disease of sheep. Lamb diseases of sheep. Part VII, Common diseases and parasites of poultry: Pullorum disease. Fowl paralysis and other forms of the avian leukosis complex. Respiratory diseases of chickens and turkeys. Fowl pox (diphtheria). Pneumonia. Miscellaneous diseases of poultry. Internal parasites of poultry. Coccidiosis of the chicken. Poultry lice and their control. Poultry mites. The fowl tick. Bedbugs as pests of poultry. The pigeon fly. Nutritional diseases of poultry. Part VIII, Common diseases and parasites of dogs and cats: Rabies and its control. Distemper of dogs. Feline enteritis. Miscellaneous diseases of dogs and cats. Internal parasites of dogs and cats. Mange of dogs. Ticks affecting dogs. Fleas. Running fits (fright disease). Nonparasitic skin diseases of dogs and cats. Nutritional diseases of dogs and cats. Part IX, Wildlife diseases and parasites. Diseases of wildlife and their relationship to domestic livestock. Diseases of farm-raised game birds. Diseases of fur animals. Index.

Note This volume is a comprehensive, popular handbook on the diseases and parasites that attack domestic animals. The chapters are written by various scientists of the Department of Agriculture. Effort was made to give both the needed practical information and the scientific background of each disease. To this end, for most of the diseases described, the following facts are treated: history, symptoms, diagnosis, treatment, method of eradication,

literature cited. The book is intended to be of use to students of agriculture and technical workers as well as to farmers and veterinarians.

UNITED STATES LIVESTOCK SANITARY ASSOCIATION

Foreign animal diseases, their prevention, diagnosis and control. *Trenton, N J U S Livestock Sanitary Association, 1954* 265 p. illus. 20 cm $1 75 7900

Contents Animal disease problem. Disease control requirements. Local, state and federal responsibility Diseases affecting swine—Cattle—Sheep—Cattle and sheep—Cattle, sheep and swine—Horses—Chickens and other poultry Appendices.

Note This manual is the report of committee of the U. S. Livestock Sanitary Association which is charged with the responsibility of studying the threat of foreign animal diseases that might enter the United States and Canada either by accident or by deliberate acts of sabotage. It presents in a concise, standardized form information on the etiology history clinical features, pathology diagnosis, prognosis, epizootiology control, import restrictions, public health aspects (where applicable) and literature references for between 20 and 30 exotic diseases. It is directed primarily to veterinarians. The information included on treatment and control together with the literature references make the book potentially useful in countries where the diseases are established.

WAY, ROBERT F

The anatomy of the bovine foot, a pictorial approach. Philadelphia University of Pennsylvania Press, 1954 58 p. illus. 27 cm. $4.00. 7901

Note. Addressed primarily to practicing veterinarians and to advanced students who are preparing for this profession, this book provides [illegible] illustrations of the anatomical structures found in the metacarpo-phalangeal (or metatarso-phalangeal) region of the foot of cattle. The illustrations are all reproductions of drawings, and they are large enough so that the details of the depicted structures are clear. They are accompanied by one-page discussions. The author is a member of the faculty of the School of Veterinary Medicine of the University of Pennsylvania.

FORESTRY

ALLEN, SHIRLEY WALTER

An introduction to American forestry. Second edition. New York, McGraw-Hill Book Company, Inc., 1950. 413 p. illus. 24 cm. (The American forestry series, Walter Mulford, consulting editor) $6.50. 7902

Contents: Man and the forest. Building the country with forests. Where our forests are and what they produce. What [illegible] forest is. What forestry is. Forestry that starts with [illegible] forest. Forestry that [illegible] has [illegible]. Defending the forest from fire. Defending the forest from attacks of insects and other animals. Defending the forest from fungous pests and from the elements. Measuring the forest. Harvesting the forest crop. Making forest products adaptable and durable. Beneficial influences and services from the forest. Forestry as [illegible] public policy in the United States. How the Forest Service and other Federal bureaus practice forestry. How the states and communities practice forestry. The practice of forestry on private lands. Education in forestry—the profession of forestry. Forestry and national planning. Appendix. Selected forest-fire statistics. American forest schools. Index.

Note: An inclusive, introductory work used primarily as [illegible] text in college courses and secondarily as [illegible] source of general information about forestry and forest conservation in the United States of America. It is written in [illegible] style, and most of the material is descriptive. The first edition was published in 1938. [illegible] since revisions are apparent in this edition but the book has not been extensively revised.

BAKER, FREDERICK STORRS

Principles of silviculture. New York, McGraw-Hill Book Company, Inc., 1950. 414 p. illus. 24 cm. (The American forestry series, Walter Mulford, consulting editor) $7.00 7903

Contents: Introduction. Forests in general—their form and composition. Ecological classifications of forests. Classification by site, quality and density. Tolerance and crown classes. Water supply of the forest. [illegible] of water by the forest. The photosynthetic process. Nitrogen and mineral nutrition (forest soils). Production of seed. Dissemination of seed. Overwintering losses of seed. Germination of seeds. Establishment, mortality of seedlings. Growth of trees in general. Height growth of trees. Growth of trees in diameter. Growth of trees in volume. Growth of stands. Biology of the growth of stands. Bibliography. Index.

Note: A college textbook in which the chief emphasis is on the physiological aspects of trees and forestry. There are full discussions of such topics as transpiration, the development of [illegible] in the succession stage, survival of seedlings under various conditions, and relations between growing space and production of merchantable timber. A bibliography of 519 references is included. The book is an extensive revision of the first half of the author's *Theory and practice of silviculture*, New York, 1934.

BAXTER, DOW VAWTER

Pathology in forest practice. Second edition. New York, John Wiley & Sons, Inc., 1952. 601 p. illus. 24 cm. $8.50 7904

Contents: Forest disease. The fungi that cause disease. Loss and appraisal of damage. Relation of nursery site and practice to disease incidence. Relation of site and cultural practice to disease incidence in plantations. Relation of site and cultural practice to disease incidence in the mature forest. Relation of fungi and certain other forest pests to disease in the mature forest. Relation of fire and uses of slash and pack loans to disease incidence. Handling and treatment of forest products in relation to decay and certain other defects. Discolorations, stains, and molds in forest (and allied) products. Index.

Note: A practical treatment of tree diseases in the sense that the subject is treated from the viewpoint of professional foresters and others who are concerned with silviculture or with the marketing and use of lumber. Disease in [illegible] and in ornamental tree plantings also is covered from [illegible] practical viewpoint. Approximately equal emphasis is placed on descriptions of tree diseases and on their control. A wide range of useful information has been added in this edition. The new material pertains both to recent developments in the understanding of specific diseases and in control methods.

BELYEA, HAROLD CAHILL

Forest measurement. New York, John Wiley & Sons, Inc., 1931. 319 p. illus. 24 cm. $4.50. 7905

Contents: Introduction to forest measurement. The instruments used in forest measurement. Units of volume. Log rules. Measurements of volume—scaling. The determination of volume in standing trees. The determination of volume in forests. The application of statistical methods. Graphs and curves. Alinement charts and nomographic curves. Form and taper. Volume tables. The age of forests. The study of growth. The yields of forests. Bibliography. Appendix. Index.

Note: This book describes the measurement of forest products, of individual trees, and of forest areas from the practical as well as the theoretical standpoint. Included are the numerous "rules of thumb" which should be known to every timber cruiser, and the more technical refinements of mathematical formulae which only the forest engineer is capable of using. Special attention is paid to the measuring of growth and yield, the development of yield tables, and the application of statistical methods to forest mensuration and to the development of alinement and nomographic charts.

BOERKER, RICHARD HANS DOUAI

Behold our green mansions, a book about American forests with photographs and maps. Chapel Hill, The University of North Carolina Press, 1945. 313 p. illus. 24 cm. $1.50. 7906

Contents: What is conservation? Forest resources of the United States. Recreation for the people. Relation of forests to wild life. Forests and the water supply. Holding the soil. Forests and flood control. Lumber and its by-products. The forest as livestock range. Forestry and agriculture. Fire, the destroyer. Insect enemies. Tree diseases and forest protection. Leadership of the Federal government. Progress of the states in forest protection. Forestry problems in the South. Community forests. Economic factors in private forestry. Index.

Note: The author has presented here with considerable success [illegible] picture of the history of American timber resources and of their very closely integrated role with other phases of our social and economic structure. Although the steps taken by the Federal government in the past several decades are recognized as valuable, there is [illegible] throughout the text the need for [illegible] far more effective kind of forest control: an active, national program, geared to future needs, rather than the mere protection of existing stocks. The questions involved in public ownership of forest lands are treated somewhat indirectly with [illegible] careful avoidance of the larger controversial aspects. The numerous photographs are excellent; there are also diagrams and occasional bibliographic footnotes.

BOYCE, JOHN SHAW

Forest pathology. Second edition. New York, McGraw-Hill Book Company, Inc.,

1948 550 p illus 23 cm (The American forestry series, Walter Mulford, consulting editor) $8 50 7907

Contents. Introduction. Disease. The fungi. Noninfectious diseases. Seedling diseases. Root diseases. Foliage diseases of hardwoods. Foliage diseases of conifers. Stem diseases Rusts of conifers, cankers of conifers, cankers f hardwoods, galls, witches'-brooms, and fasciations, diebacks and wilts. Stem diseases caused by mistletoes, dwarf mistletoes, lichens, and climbers. Stem diseases. decay The rots. Deterioration of dead timber Deterioration of forest products. Decay sap stains. Principles of forest-disease control. Appendices. Fungicides. List of common names f plants used with scientific equivalents. Index.

Note. A comprehensi description of the various diseases which attack forest trees of the United States of America and Canada and of the methods employed in their control. The book is intended for use as a college text and reference manual, and is based on courses given at Yale University No attempt is made to deal with culture methods and other pathological techniques. The general scope and arrangement of this edition remain the same as in the earlier edition, but the material has been revised to incorporate developments which have occurred since 1938.

BRAUN, EMMA LUCY

Deciduous forests of eastern North America. New York McGraw Hill Book Company, 1950 596 p illus 23 cm. $10 00 7908

Contents Part I, Introduction: The forest. Forest ecology and terminology Part II, The deciduous forest formation The deciduous forest as whole. The mixed mesophytic forest region. The western mesophytic forest region—a transition region. The oak-hickory forest region. The oak-chestnut forest region. The oak-pine forest region. The southeastern evergreen forest region. The beech-maple forest region. The maple-basswood forest region. The hemlock-white pine-northern hardwoods region. Part III, The evolution of the present pattern of forest distribution Problems of forest distribution. The paleobotanic record. Disjunct occurrences of species and communities and their significance in forest migration. A brief physiographic history of eastern United States. A chronologic account of forest development correlated with physiographic history The relationships of climaxes and the climax elements of the forest regions. Bibliography Index of scientific and common names. Subject index.

Note. An important reference book written on the basis of more than 23 years of field study throughout the deciduous forests of eastern North America, supplemented by study of the literature of the subject. It provides a broad view of the entire forest area, portraying the present pattern and so far as possible reconstructing the pattern of the original forest, presenting data on composition and aspect of forest communities in all parts of the forest area, and tracing through geologic time the development and distribution of forests in eastern North America. The bibliography includes about 500 references and the illustrative material consists of 84 photographs, 91 tables, and nine maps.

BROWN, NELSON COURTLANDT

Logging, the principles and methods of harvesting timber in the United States and Canada. New York John Wiley & Sons Inc. 1949 418 p illus. 24 cm. $6 50 7909

Content (abridged) Part I, General introduction Forest utilization. Forest resources and stumpage valuation. Forest labor and housing. Partial cutting (selective logging) Part II, Preparation of logs for transport Felling and bucking. Part III, Minor log transportation Animal skidding. Tractor logging. Power logging—cable-hauling systems. Part IV Loading for transport. Part Major land transportation Chutes. Wheeled vehicles—animal and tractor draft. Sleds. Motor trucks. Forest railroads. Part VI, Major water transportation Floating and driving. River and lake rafts and booms. Ocean rafts. Flumes. Barges and steamers. Summary of regional logging methods. Index.

Note: The several books by Professor Brown on various aspects of the lumbering industry are well known to students of forestry and to the industry The present volume brings together in revised form two earlier works *Logging—principles and practices*, New York, 1934 and *Logging—transportation* New York, 1936. It constitutes practical guide to the methods and techniques of felling, handling, collecting, and transporting lumber as practiced in the United States of America and Canada Particularly valuable are the descriptions of equipment, the tabulations of data regarding operating costs and production estimates, and the numerous photographs and diagrams illustrating operating methods. The extensive bibliographies contained in the two earlier volumes ha e been omitted in this revision.

BRUCE, DONALD, AND FRANCIS X. SCHUMACHER

Forest mensuration. Third edition. New York McGraw Hill Book Company, Inc., 1950 483 p illus. 23 cm (American forestry series, Walter Mulford, consulting editor) $7 00 7910

Contents (abridged) Part I, Direct measurement: Measurement of diameter—height—volume—age. Direct estimate by sampling. Averages. Measures of dispersion and the normal curve of error. Sampling. Part III, Indirect estimate based on one or more independent variables. The graphic method of rectangular coordinates. Effectiveness of free-hand curves in t variables. The board foot and the log rule. Estimation of the method of least squares. Estimation by means of two independent variables. The alinement chart. Estimates based on four variables—taper tables and volume tables derived therefrom. Timber cruising. The use of aerial photographs in cruising. Part IV Prediction of growth and yield. Appendix. Index.

Note The principles and basic techniques of forest mensuration, including both standing timber and cut logs, are the subject of this college textbook. The various methods of estimation are presented and methods of handling the variables so that the estimating procedure will yield useful figure are clearly discussed. Practical considerations such as planning the sampling of a forest so as to make the best use of the timber cruiser's time are mentioned. The first edition as published in 1935 and the second in 1942. Several chapters were rewritten and the chapter on aerial photographs was added in preparing this third edition.

CHAPMAN, HERMAN HAUPT, AND WALTER H. MEYER

Forest mensuration New York McGraw Hill Book Company, Inc. 1949 522 p illus. 24 cm. $7 75 7911

Contents (abridged) Elementary computations. Cord or stacked measure. Cubic volume f logs. The measurement of board feet in the log. Construction of log rules. Piece products. Determination of volume f felled trees for the construction of volume tables. Local tree volume tables. The construction of standard volume tables for cubic feet. The construction of alinement charts for standard volume tables for cubic feet. The construction of standard volume tables for board feet. The construction and application of taper tables. The measurement of diameters of standing trees. The measurement of heights of standing trees. The boundary survey and determination of total area. Timber estimating for cubic and cord measure. Timber estimating for board feet by use of log rules. Measurement of piece products in the tree. Fundamental statistical techniques. The age of trees and stands. The growth of trees and of stands. Normal yield tables for even-aged stands and their construction. Periodic and current growth in diameter based on stand tables. Growth percentage. Sample plots. The forest survey or inventory Appendix. Index.

Note. Forest mensuration is treated on an advanced but practical level in this work. The table of contents indicates the wide scope. Not only are log rules and volume tables discussed but the other techniques that may concern foresters and timber surveyors such as the establishing of boundaries in lands surveyed long ago are covered also. Problems, such as the varying contents of the cord and the accuracy of established log rules, are analyzed. The estimating of growth and yields is fully discussed. Extensive bibliographies are included. The book is text for college students of forestry and manual for graduate foresters. It supersedes H. H. Chapman and D B. Demeritt, *Elements of forest mensuration*, 1932

CLINE, ALBERT COLLINS, AND S H SPURR

The virgin upland forest of central New England a study of old growth stands in the Pisgah Mountain section of southwestern New Hampshire. Petersham Mass. Harvard Forest 1942 58 p. illus. 23 cm. (Harvard Forest. Bulletin no 21) $0 50 7912

Contents: Introduction. Description of the Pisgah Mountain area. Method of study. The original forest. Disturbing influences in the virgin forest. Associations within the Pisgah virgin forest. Ecological status of the tree species. Shrubs and herbs. Soils. Summary and conclusions. Appendix. Bibliography

Note: A monograph on the old-growth forest land situated in Cheshire county New Hampshire, in the northwest corner of the town of Winchester, covering an area of approximately 2,000 acres. Tables are presented giving average composition and volume, forest cover types and distribution, associations following old and recent disturbances, stand descriptions and histories, and frequency of occurrence of shrubs and herbs. Destructive agencies independent of man are also discussed.

Craighead Frank Cooper, and others

Insect enemies of eastern forests. Washington, D C. Government Printing Office, 1950. 679 p. illus. 24 cm. (United States. Department of Agriculture. Miscellaneous publication no. 657) $2 75 7913

Contents: Introduction: Relation of insects to forest and ornamental trees. Prevalence and activity of forest insects. Insects and disease. The control of forest insects: Natural control factors and influences. Silvicultural control of forest insects. Insects attacking shade and ornamental trees. Borers in living trees. Insects in nurseries and young plantations. Insects attacking forest products. Bark beetle control. Insecticidal control of insects in the forest, by F P Keen. The use of beneficial insects in the control of forest tree pests, by R. C. Brown. The zoological position of insects and some of their common relatives: Crayfish and sowbugs. Millipedes and centipedes. Scorpions. Pseudoscorpions. Spiders. Harvestmen. Mites, ticks, and red spiders. Marine borers, by R. A. St. George. The forest insects: Practical keys to the orders, families, and genera of forest insects, based on types of injury. Important orders of insects. The termites, by T E. Snyder. Grasshoppers, katydids, walkingsticks, and related forms, by H D. Wygant. Sucking insects, by W L. Baker and others. The beetles, by F C. Craighead and others. Butterflies and moths, by J. V Schaffner Jr. The flies, by R. T. Webber. Hymenoptera: The sawflies and horntails, by J. V Schaffner, Jr., and William Middleton. Bees, wasps, ants, and parasites, by P B. Dowden. Literature cited. Index.

Note: This publication treats in [illegible] practical manner the more important forest insects of the United States of America, east of the Great Plains (or, roughly east of the 100th meridian). The insects are described in systematic order with numerous illustrations, chiefly photographic. Keys to assist in identification are frequent. There [illegible] considerable discussion of practical control methods. The work is [illegible] companion volume to F P Keen, *Insect enemies of western forests* (United States. Department of Agriculture. Miscellaneous publication no. 273).

Davis, Kenneth P

American forest management. New York McGraw Hill Book Company 1954 482 p. illus. 23 cm. (The American forestry series. Henry J Vaux, consulting editor) $7.50 7914

Contents: Part I. Foundations of management: Nature, purpose, and scope of forest management. The forest management situation in the United States. Site, stocking, and spacing. Forest yield and yield tables. Growth. Volume, growing stock, and yield of the fully regulated forest. Determination of the cut. Regulation of even-aged forests. The nature and structure of uneven-aged management. Application of uneven-aged management—cost analysis. Determination of the rotation. Organization and subdivision of the forest for management. Timber management planning and plans. Part II. Valuation: Valuation principles. Interest and investment. The arithmetic of interest. Valuation of forest land and of the timber stand. Valuation of stumpage. Valuation of the tree. Valuation of financial alternatives. Appraisal of damages. Bibliography. Appendix. Index.

Note: An authoritative exposition of principles and practice of forest management directed toward [illegible] sustained yield of merchantable timber from the managed forest. Forestry is represented as business and forest management as [illegible] *kind of business management*. Accordingly there is considerable emphasis on the economics of timber growing. Part [illegible] on management is 281 pages in length, [illegible] [illegible] on valuation is 167 pages long. Both parts are written at [illegible] mature level and are intended for the instruction and guidance of advanced students of forestry and practicing foresters. The author is Professor of Forest Management in the University of Michigan.

Eyre, F H., and W M Zillgitt

Partial cuttings in northern hardwoods of the Lake states twenty year experimental results. Washington, D C. Government Printing Office, 1953 124 p. illus. 23 cm. (United States. Department of Agriculture. Technical bulletin no 1076) $0 40 7915

Contents: Introduction. Characteristics of the northern hardwood forest: Extent and composition. Ecological position, reproductive capacity and species characteristics. Soils and sites. Injurious biological and physical factors. Age and stand structure. Relative value of component species. Summary of characteristics. Management of mature stands. Problems of silviculture and management. Description of experimental area and cuttings. Growth and mortality under different kinds of cutting. Stocking, stand structure, and cutting cycle. Growing quality timber. Natural regeneration. Slash disposal and fire protection. Hemlock stands—a special problem. Recommended silvicultural methods for mature hardwood stands. Treatment of second growth: Characteristics of second-growth stands. Timber stand improvement. Possibilities of commercial thinnings and improvement cuttings. All-aged versus even-aged silviculture. Summary. Literature cited. Appendix.

Note: Within the present century lumbering practice in the hardwood forests of the Lake states—Michigan, Wisconsin, Minnesota—has been gradually altered from clear cutting to [illegible] practice of selective or partial cutting. Those responsible for directing the cutting looked toward sustained-yield forestry in which growth balances cut, but had no extensive scientific proof of the advantages of the newer methods. In 1926, tests were started on the Upper Peninsula Experimental Forest at Dukes, Michigan, to try out partial cuttings and to compare them with the commercial practices then prevailing. This bulletin presents [illegible] comprehensive report of these experiments over the first 20 years.

Flick, Frances Josephine compiler

The forests of continental Latin America (including European possessions) A bibliography of selected literature, 1920–1950 Washington, D C. Government Printing Office, 1952 193 p. 23 cm. (United States. Department of Agriculture. Bibliographical bulletin no 18) $0 45 7916

Contents. Sources consulted. General. Argentina. Bolivia. Brazil. Central America: British Honduras. Costa Rica. Guatemala. Honduras. Nicaragua. Panama. El Salvador. Chile. Colombia. Ecuador. The Guianas: British Guiana. French Guiana. Surinam (Dutch Guiana). Mexico. Paraguay Peru. Uruguay Venezuela. Periodicals. Index.

Note: An annotated bibliography of books and periodicals published between 1920 and 1950. A total of 1,917 books and articles is listed. For each item are given author, title, publication data. Brief annotation follows where scope of the article is not clearly indicated in the title. Outside the scope of the bibliography are such commodities as Hevea rubber, cinchona, and palm products, which are subject to separate bibliographic treatment. Also omitted, or included only incidentally are references on taxonomic botany, wood technology, forest legislation, commodity production statistics, and trade statistics.

Forbes Reginald D

Forestry handbook. Edited for the Society of American Foresters by Reginald D Forbes. Staff editor Arthur B Meyer New York The Ronald Press Company Inc. 1955 1 143 p. illus. 24 cm. $15 00 7917

Contents: Forest mensuration. Forest management—volume tables—yield tables and stocking—cutting budget and annual cut. Geology and soils. Silvics and silviculture. *Protection against fire.* Protection against insects and diseases. Forest wildlife management. Watershed management. Forest range management. Forest recreation. Materials, structures, and facilities. Utilization and wood technology. Economics and finance. Logging. Surveying. Forest road engineering. Aerial photography. Communications. Chemistry and physics of wood. Chemical and physical tables and definitions. Mathematical formulas and definitions. General index.

Note A professional-grade reference book designed for use by practicing foresters and other persons who has technical interests in forestry and forest products. Its comprehensive scope is apparent from the section titles quoted above. The sections are, in most instances, composed of very compact statements of basic information and tabulations of useful data. A bibliography is included in each one. Some of the sections, for instance that on forest road engineering, are generously illustrated. The general index runs to 41 two-column pages and is exceptionally detailed.

FRANK, BERNARD

Our national forests Norman University of Oklahoma Press, 1955 238 p illus. 23 cm. $4 00 7918

Contents How it came about. Profit, pleasure—and something more. Within these borders. Ten thousand loyal servants. Questions for the future. Appendixes National forest recreational and scientific resources. National forests in the United States by states. Stream flow from western national forests. Forest and grazing lands on national forests. Annual values of national forest properties. Index.

Note: The history of the national forests in the United States of America, their current status and their value in regard to the conservation of soil and wildlife, the preservation of recreational areas and a constant supply of timber are recounted in this semi-popular book. The techniques of forestry practices are not described, but the benefits of good forestry management are implied throughout the book. The first appendix is a 39-page state-by-state list of the national forests and their principal features.

GRAHAM, SAMUEL ALEXANDER

Forest entomology Third edition. New York McGraw Hill Book Company, Inc., 1952 351 p illus 24 cm. (The American forestry series, Walter Mulford, consulting editor) $6 50 7919

Contents: Introduction. Historical review Detection and appraisal. Reproductive potential. Environmental resistance. Population levels. Direct control tree insects. Direct control by chemical methods. Insecticides and their effects. Methods of indirect control. Indirect control by parasites and predators. Indirect control by silvicultural practices. Leaf-eating insects. Sap-sucking insects. Meristematic insects. Phloem insects. Phloem-wood insects. Wood destroyers. Bibliography Index.

Note. An introductory work addressed primarily to college students of forestry but potentially valuable to any mature reader in need of survey of the problem f control of insects injurious to forests. The subject is treated from the viewpoint of forestry and even in the chapters on kinds f insects, the author has not attempted to name all the injurious insects. The emphasis is on biological and chemical and control methods and on matters related to control, such as the effects of weather The second edition was published in 1939 In comparison this edition represents very extensive revision with much material on such topics as chemical control, that did not appear in the 1939 edition. There are now 85 figures and a 22-page classified bibliography

GUISE, CEDRIC HAY

The management of farm woodlands Second edition New York McGraw Hill Book Company Inc., 1950 356 p illus 24 cm. (The American forestry series, Walter Mulford, consulting editor) $6 00 7920

Contents. Farm woodlands and forestry The structure and physiology of trees. Ecology of woodlands. The volumes of woodland products. Surveys and maps. The volumes of trees and stands. The increment and yield of growing timber The care and improvement of woodlands. Establishing new woodlands—forest planting. Protection of farm woodlands. The utilization of woodland products. The marketing of woodland products. The durability and preservative treatment of farm timbers. Woodland management. Index.

Note: A standard description of forestry principles and practices applicable to the management of small woodlots and timber stands on farms in the United States of America and especially in the northeastern part of this country The emphasis is on principles and practices that will produce a continual and profitable yield. The book is used chiefly as a college text, however, it is also suitable for use as a manual of practical information. The first edition was published in 1939 This edition lacks most of the statistical material that appeared in the first edition, but useful material has been added on such topics as timber estimating, logging methods, and tree planting.

HAWLEY, RALPH CHIPMAN, AND PAUL W STICKEL

Forest protection. Second edition New York John Wiley & Sons, Inc., 1948 355 p. 24 cm $5.50 7921

Contents (abridged) Man as a source of injury to the forest. Forest fires. Fire prevention. Presuppression activities in fire control detection—communication, transportation and firebreaks—equipment and personnel—fuel reduction and fuel mapping—fire-danger rating—fire-control policy and objectives. Fire suppression. Forest fire insurance. Protection against injurious plants. Protection against insects. Protection against domestic animals. Protection against wildlife. Protection against atmospheric agencies. Appendix. Author index. Subject index.

Note. A general treatment of the agencies that are injurious to forests. Each agency is described as to economic significance, nature and extent of the injury to the forest, and the methods of control. Although the authors have not attempted a comprehensive manual of control methods, they do mention the main details of most techniques and supply references to literature in which fuller discussions may be found. The book is used chiefly as a college text. In addition to routine rewriting to take care of recent developments in the field, this edition is characterized by rather extensive rearrangement of topics in sequence, inclusion of recent references in the chapter bibliographies, and a considerably expanded and more efficient topical index.

HAWLEY, RALPH CHIPMAN, AND DAVID M SMITH

The practice of silviculture. Sixth edition. New York John Wiley & Sons, 1954 525 p. illus. 23 cm. $7.50 7922

Contents. The place of silviculture in forestry Reproduction methods: treatment of stand during the period of regeneration or establishment. The clearcutting method. The seed-tree method. The shelterwood method. The selection method. Methods based on vegetative reproduction. Artificial reproduction by seeding or planting. Slash disposal and prescribed burning. Intermediate cutting: treatment of a stand during the portion of the rotation not included in the period of regeneration. Fillings, improvement in salvage cuttings, pruning, methods of controlling cuttings. In conclusion. Appendix. Author index. Subject index.

Note. This book presents the principles of silviculture against a background of contemporary forestry practice in continental North America, particularly the United States of America and Canada. The best silvicultural practices for these regions are described in considerable detail, and references are given to the professional literature. The first edition was published in 1921 and the fifth edition was published in 1946. This sixth edition is the result of thorough revision and considerable enlargement of the fifth edition. There is more emphasis on ecological principles.

HUNT, STUART SHERMAN

European larch in the northeastern United States, a study of existing plantations. Petersham, Mass Harvard Forest, 1932 45 p. illus 22 cm. (Harvard Forest. Bulletin no. 16) $0.50 7923

Contents: Introduction. Distribution of European larch. Growth and yield. Silvical characters and their influence upon the establishment of larch plantations in the northeast. Susceptibility to injury Culture and management. Summary Properties and uses. Bibliography

Note. A brief, nontechnical account of the qualities of the European larch from the standpoint of practical forestry This tree, native of the high mountains of central Europe, has been successfully planted in the United States of America for about 100 years and is well known for its soil improving qualities, its rapid height growth, and its durability in outdoor construction without the use of creosote and other preservatives. Twenty-nine titles are listed in the bibliography

JOINT COMMITTEE ON FORESTRY OF THE NATIONAL RESEARCH COUNCIL AND THE SOCIETY OF AMERICAN FORESTERS

Problems and progress of forestry in the United States. Washington D C. Society of American Foresters, 1947 112 p. 25 cm. $1.75. 7924

Contents (abridged) Part I, The forest situation in the United States: American forests today. Effect of war on American forests. Forests of Alaska. Forest ownership. The field of wood utilization, by G. A. Garratt. Part II, Public responsibilities and action in forestry: National aspects of the forest problem. National forests. National parks. Other federal forests. Organization of federal action in forestry. State forests. Part III, Problems of private forestry: Factors retarding practice of forestry by private owners. Forestry in the Pacific Northwest, by T. T. Munger. Forestry in the north-[illegible], by I. F. Eldredge. Part IV, Public action in advancing private forestry: Public cooperative activities in forestry. Forest protection. Wildlife conservation. Range management and forest grazing. Forest taxation. Forest fire insurance and credits. Public [illegible]. Part [illegible] Education and [illegible] of cutting on private forests. Part [illegible] Education and research in forestry: Forestry education. Postwar employment of foresters. What kind of students should be admitted to professional forestry curricula? by H. Schmitz. Research in forestry. Summary of recommendations.

Note: The above committee was appointed in 1942 with the threefold purpose of: studying the present forest situation in the United States, evaluating the activities and accomplishments of various branches of forestry, and determining what problems are already being met by existing forest agencies. The present volume is a report of the committees' findings and recommendations. The information is intended for professional foresters, timber owners, educators, and conservation officials.

LARSON, AGNES MATHILDA

History of the white pine industry in Minnesota. Minneapolis University of Minnesota Press 1949 432 p. illus. 23 cm. $7.50 7925

Contents: Minnesota's forest treasure. The lumber industry comes to the Upper Mississippi valley. The home market stimulates the mills at St. Anthony and Winona, 1850–1870. The pinelands of the St. Croix delta become the property of lumbermen. Logging in the St. Croix forests. Rafting and selling downriver. Railroads broaden the market for the white pine of the Upper Mississippi, 1870–1890. Lumber and logs on the Mississippi after 1870. Growth of sawmills in Minnesota, 1870–1890. Logging and driving, 1870–1900. Life in the woods. The downriver sawmills are stilled. The lumber industry in Minneapolis reaches its height, 1890–1905. The Duluth district sends its white pine eastward. The pinelands of northern Minnesota become private property. The operation of [illegible] land laws in the pineland area. The [illegible] of state lands in the pineland area. The new age in logging and sawing. Marketing and prices, especially after 1890. The white pine in the building of the state. Index.

Note: A full-scale history based upon consultation and study of original company records and interviews with persons formerly active in an extensive regional industry. The story is told in detail of the co-operation of the promoters and managers of little and big business units and the lumberjacks and other workers in lumber [illegible], with the help of tools and machines and rivers and lakes, felled the trees, manufactured the lumber and sent it to market. A section of 16 pages of illustrations includes reproductions of many original photographs of loggers at work.

LILLARD RICHARD GORDON

The great forest. New York Alfred A. Knopf 1947 399 p. illus 24 cm. $5 75 7926

Contents (abridged) The backwoods system. Hunting in the wilderness. Cabin in the clearing. Fever and fire. Subsidy for independence. Harvest for progress. Romance in the making. Lumberjack, sawdust, and rafting. Crusade for conservation. Protest from labor. Forest in the machine age. Sylvan heritage. Appendices. Sources of principal quotations. Bibliography. Index.

Note: Of permanent interest to foresters, timber owners, and conservationists, this interesting study contains much for the student of American economic and social history as well as for general readers. In skilful prose the author presents the story of the forest in the United States of America, not as an isolated unit but as a primary influence through three centuries in shaping the American way of life. Careful consideration is given the impact of the forest on colonial personality (development of the "frontier type") on American war and peace, on economics and agriculture, and especially on capital and labor, so that the pageant of the country's history is seen to center around its timber resources. Illustrations are well chosen and numerous, and supplementary and bibliographical material is extensive.

LUTZ, HAROLD JOHN AND ROBERT F CHANDLER, JR.

Forest soils. New York John Wiley & Sons, Inc., 1946. 514 p illus. 22 cm. $7.00 7927

Contents. Introductory. Soil-forming minerals. Soil-forming rocks. Disintegration and decomposition of minerals and rocks. Forest soil organisms. The organic matter of forest soils. Nature and properties of soil colloids. General physical properties of forest soils. The water relations of soils, particularly forest soils. General chemical properties of forest soils. Soil formation. Forest soil classification. Soil erosion and forest-soil deterioration. Appendix. Author index. Subject index.

Note: Essentially this work is a textbook for use in courses offered to forestry students. It provides rather detailed information on the formation, characteristics, and conservation of forest soils as distinguished from soils used for agriculture. It contains very extensive reference lists to which statements in the text are keyed; and it may therefore be used also as a survey guide to the literature of the subject.

MCKINNON FINDLAY STEWART AND OTHERS

Cut-over old field pine lands in central New England a regional study of the composition and stocking of the ensuing volunteer stands by F S. McKinnon G R. Hyde, and A. C. Cline. Petersham, Mass. Harvard Forest, 1935 80 p. illus. 23 cm. (Harvard Forest. Bulletin no. 18) $0.50 7928

Contents: Introduction. Review of related studies. Cut-over old field pine land: conditions immediately following logging. Method of collecting data. Analysis of data. Conclusion. Bibliography and appendix.

Note. To ensure a reliable appraisal of growing stock conditions on the cut-over "old field" pine lands of central New England and to bring conclusive evidence to bear on the question of their susceptibility to cultural treatment, the authors examined 225 individual stands within an area of 1,500 square miles. The findings show that over three-quarters of the area formerly covered with pine now supports mixed hardwood stands, and that the great majority of these have at an early age the requisites of high quality sawtimber production.

MEYER, HANS ARTHUR, AND OTHERS

Forest management. By H. Arthur Meyer Arthur B Recknagel and Donald D Stevenson. New York The Ronald Press Company 1952 290 p. illus. 24 cm. $6.00. 7929

Contents. Part I, Introduction: Scope and objectives of forest management. History and present status of forest management. Part II, General organization of forest property for management: Ownership, boundaries, and subdivisions of forests. Maps and classification of forest conditions. Actual growing stock and growth. The development and improvement of forests. Business aspects of forest management. Part III, Forest regulation: Problems and scope of forest regulation. The normal even-aged forest. The normal uneven-aged forest. Methods of regulation of cut. Part IV Management plans: Types and forms of management plans. Farm woodlands and other small forest properties. Management plans for medium and large forests. Control and revision of management plans. Index of names. Index of subjects.

Note: The chief distinctive feature of this text is its presentation of the principles of forestry from the standpoint of American conditions, where such factors as higher labor costs and lower product costs make inapplicable some of the principles and techniques developed in Europe. Such problems as the determination of

a "best" plan of rotation are discussed against the historical background and the economic, technical, and silvicultural factors in American forestry As the title indicates, the book is about management. Though problems of finance, logging, protection, etc., are noted as closely influencing the execution of management plans, they are not developed. Both European and United States of America literature is included in the lists of literature references. One of the authors is a college teacher of forestry one is on the staff of a large paper company and one is a staff member of the United States Department of Agriculture.

PRESTON, JOHN FREDERICK

Farm wood crops. New York McGraw Hill Book Company, Inc., 1949 302 p illus 24 cm. (The American forestry series, Walter Mulford, consulting editor) $6 00 7930

Contents Introduction. National aspects of farm woodlands of the United States. Financial value of woodlands in the farm business. Other farm woodland values. Problems of forestry on the farm. Assistance available to farmers. Farm planning involving the woodland. Developing a farm woodland enterprise. Practices on farm woodlands. Establishment of new woodlands. Tools and equipment. Building a farmer clientele. Appendixes. References in the text. Bibliography Glossary Index.

Note This book is concerned primarily with the principles of handling farm woodland as a branch of general farming and secondarily with the actual techniques of forestry It is a simplified text book of farm forestry intended both as a text for students and as a technical guide for farmers wishing to develop a farm-woodland enterprise. It may also be useful to conservationists who wish to show farmers the financial and other advantages of farm-woodland enterprises.

RAUP, HUGH MILLER, AND REYNOLD E CARLSON

The history of land use in the Harvard Forest. Petersham, Mass. Harvard Forest, 1941 64 p illus 23 cm. (Harvard Forest. Bulletin no 20) $0 65 7931

Contents Forward. Introduction. Previous work. Methodology History of agriculture. Local industries. Petersham in decline. Forest history Appendix. Bibliography

Note. This history since 1733 of the land in the Harvard Forest of 2,300 acres at Petersham, Massachusetts, is based upon the premise that present-day forest management cannot be carried on effectively without some knowledge of past land use. Although the study is chiefly of interest to foresters, it also presents a valuable picture of the economic and social development of this typical small New England town.

SAND NORBERT H, AND MILTON M BRYAN editors

Managing the small forest. By Forest Service, Soil Conservation Service and Extension Service Washington D C Government Printing Office 1947 61 p illus. 23 cm. (United States Department of Agriculture. Farmers bulletin no 1989) Gratis 7932

Content Introduction. Silviculture—growing and tending the forest What a small forest should look like. Helping the forest to grow Harvesting the timber crop. Perpetuating the forest Planting trees What trees to plant Sow seeds or plant seedlings. Preparing to plant seedlings. Planting the seedlings. Protecting the small forest Fire. Disease. Insects Grazing damage. Other protection. Measuring the forest Integrated use. Measuring and grading sawlogs. Estimating standing timber Veneer logs. Poles and piling. Pulpwood. Ties. Mine timbers. Bolts and billets Fuel wood. Cutting the timber crop Tools. Handling sawlogs. Cutting other timber products. Caring for timber products Selling forest products Finding a market. Sales contracts. Cooperatives for selling timber Sample timber sale agreement.

Note. The information in this publication is intended to provide the owner of the small forest with simple rules of good forest management so that his trees may be vigorous and productive.

SHIRLEY, HARDY LOMAX

Forestry and its career opportunities. New York McGraw Hill Book Company, Inc., 1952 492 p illus 24 cm. (The American forestry series Henry J Vaux, consulting editor) $6 75 7933

Contents The meaning of forestry Forestry throughout the ages. The development of forestry in the United States. Forest regions. Protecting forests. Forest care and use. Harvesting timber crops. Lumber manufacture and sale. Wood, its nature, and uses. Wood chemistry paper and plastics. Secondary forest products. Wildlife and range management. Forests and recreation. Protecting soil and watersheds. The business of forestry Social benefits of forestry World and national forest resources. Recent programs and progress. Proposed programs of forestry The profession of forestry Employers of foresters. Forest employment by regions and fields. Education in forestry Research in forestry Administration in forestry Trends and outlook in forestry Index.

Note. A survey book that presents a picture of contemporary forestry in relation to the national and world economy and also describes the scope and techniques of forestry It is addressed particularly to young people who are thinking of adopting forestry as a career but its scope is wide enough to make it useful to general readers and others in need of general information on forestry The author is Dean of the College of Forestry of Syracuse University

SOCIETY OF AMERICAN FORESTERS

Fifty years of forestry in the U S A. Edited by Robert K. Winters. Washington Society of American Foresters 1950 385 p 24 cm $4 00 7934

Contents. The first half century by Robert K. Winters. Forest protection, by H. T Gisborne. Silviculture, by F S. Baker. Forest management, by H. H. Chapman. Forest utilization, by Nelson C. Brown. Range management, by L. A. Stoddart. Forest wildlife management, by Warren W Chase. Forest influences, by Bernard Frank. U S. Forest Service, by Lyle F Watts. U S. Department of the Interior by John F Shanklin. Other Federal agencies, by S. Blair Hutchison. State forestry by Joseph S. Illick. Industrial forestry by W B. Greeley Farm forestry by Joseph F Kaylor. The Society of American Foresters, by Shirley W Allen. Citizen and trade associations dealing with forestry by Charles A. Gillett. Education in professional forestry by Ralph S. Hosmer. Forest research, by S. B. Show Appendixes. Literature cited. Index. [Samuel T Dana. American and world forestry]

Note. The major aspects of the development of forestry in the United States of America are covered in this sponsored work. Considerable attention is paid to the enactment of legislation, the growth of government agencies, and the development of forestry as a profession. Apparently because of space restrictions many of the chapters are little more than outlines, but important dates are given and outstanding men and associations are named. The bibliographies are not comprehensive but are limited more or less to the publications referred to by the various authors in their papers.

SOCIETY OF AMERICAN FORESTERS

Forestry and related research in North America. Prepared by Frank H Kaufert and William H. Cummings for the Society of American Foresters Forestry Research Project. Washington D C Society of American Foresters 1955 280 p. illus. 23 cm. $5 00. 7935

Contents (abridged) Part I, Forestry and related research in the United States. Recommendations and goals. Research in our national economy The importance of forests and related resources. Development of forestry research. Scope of the present study The national program summarized. Timber production research. Forest products and utilization. Forestry-related management research—Recreation. Forestry wild-life—Range—Watershed management. Part II, Forestry and related research in Canada, prepared by Samuel T Dana. Part III, Forestry and related research in Mexico, prepared by Enrique Beltran. Index.

Note The accomplishments of forestry research in the United States of America, [illegible] current status and recommended goals for

the forests are all discussed in this authoritative survey. Agencies engaged in forestry research are named and data are given on expenditures on forestry research in 1953. Much the same pattern is followed in the part on Canada. In contrast, the Mexican survey is largely devoted to a review of published literature.

SOCIETY OF AMERICAN FORESTERS

Forestry terminology. A glossary of technical terms used in forestry. Original edition compiled and edited by Committee on Forestry Terminology, Ralph C. Hawley, chairman. Revised edition compiled and edited by Committee on Forestry Terminology, Edward N. Munns, chairman. Washington, D.C. Society of American Foresters 1950. 93 p. 26 cm. 7936

Note: An alphabetical listing, with definitions, of words and terms used by foresters. The scope of the contents is shown by the names of the ten subcommittees of the Committee on Forestry Terminology responsible for the publication: Forest entomology. Forest fire. Forest pathology. Lumbering and wood-using industries. Forest management. Forest mensuration. Range management. Recreation and wildlife. Silviculture. Wood technology; these subcommittees decided on terms to be included and excluded and were responsible for the drafting of the definitions. Some words have been included which were omitted from the 1944 edition, added definitions have been given for many terms, and in certain cases definitions have been rewritten. A total of 2640 words and terms are defined, aside from which the vocabulary contains many cross references. A new edition was published in 1958, $1.50.

SPAULDING, PERLEY

Diseases of North American forest trees planted abroad. An annotated list. Northeastern Forest Experiment Station, Forest Service. Washington, D.C. Government Printing Office, 1956. 144 p. 23 cm. (United States. Department of Agriculture. Agriculture handbook no. 100) $0.45 7937

Contents: Introduction. The diseases: Viruses. Bacteria. Fungi. Mistletoes. Host index of the diseases. Species planted abroad. Locations of foreign plantings.

Note: This is the first of a projected line of handbooks on the diseases of North American forest trees resulting from a survey of the infectious forest-tree diseases of the world. The term trees is used in the broad sense to include trees, shrubs, and woody vines, but diseases of fruit and nut trees are included only if the trees are growing in a wild state. The causal agents include viruses, bacteria, fungi, and the mistletoes; by definition, diseases caused by the lichens and those caused by animals, e.g., insects and nematodes, were excluded from the survey. The handbook lists and describes the foreign plant pathogens that have been reported to attack North American trees abroad, indicates the seriousness of the attack, and includes a host list of these diseases. Lists are also given of the chief foreign plantings of North American trees.

SPURR, STEPHEN HOPKINS

Aerial photographs in forestry. New York. The Ronald Press Company 1948. 340 p. illus. 24 cm. $6.50 7938

Contents (abridged): Part I, Aerial photographs: Types of aerial photographs. Films, filters, and theory of photography. Scale and focal length. Obtaining and handling aerial photographs. Part II, Aerial surveying: Overcoming displacement by radial line triangulation. Transfer of detail from single photographs. Stereoscopy. Stereoscopic transfer of planimetric detail. Topographic mapping from aerial photographs. Part III, Photo-interpretation: Techniques and principles of photo-interpretation. Tree species. Stand density and crown diameter. Tree heights. Part IV, Forestry applications: Forest mapping. Volume estimation from aerial photographs. Use of photographs in control of ground inventory. Index.

Note: A considerable amount of periodical literature on the applications of photogrammetric techniques to forestry has appeared, but this seems to be the pioneer book. It is mainly a digest and critical review of the literature which is cited in bibliographies appended to the chapters. It is useful to advanced students of forestry and others interested in investigating and extending the present techniques, and to managers of large tracts of forests. The author is Associate Professor of Forestry at the University of Minnesota.

SPURR, STEPHEN HOPKINS

Forest inventory. New York. Ronald Press Company 1952. 476 p. illus. 24 cm. $8.50 7939

Contents: Part I, Forest measurement: Tree measurement. Measurement of trees and stands on aerial photographs. Sample plots. Part II, Volume estimation: Tree-volume computation. Theory of tree-volume estimation. Methods of volume table construction. Total cubic-foot volume. Factors affecting total cubic-foot volume. Merchantable cubic-foot tree volume. Board-foot tree volume. Tree-volume tables for use with aerial photographs. Direct estimation of stand volume. Part III, Growth estimation: The growth of trees and stands. Continuous inventory. Stem analysis. Stand-table projection. Yield tables. Growth tables. Density. Site. Growth correlations. The two-way method of predicting growth. Part IV, Sampling and inventory design: Theory of sampling. Sampling applied to forest inventories. Ground surveys. Aerial photographic surveys. Combined photographic and ground surveys. Aerial photocruise tests. Large-scale European and American surveys. Bibliography. Index.

Note: The increasing use of aerial photographs in determining not only the kind of trees on a forest area but also—in some cases—the volume of harvestable timber has prepared the way for this comprehensive, critical presentation of currently useful techniques of forest mensuration. The uses and limitations of aerial photographs are discussed fully and practical techniques for combining aerial surveys with the ground cruising of sample plots are described. The book is addressed to advanced students of forestry and to persons who are professionally in charge of large-scale forestry and timber projects. Information from the published literature and original material based on the author's investigations are both included. Literature citations are included in the text and the book concludes with a comprehensive bibliography.

SWEZEY, OTTO H.

Forest entomology in Hawaii: an annotated check list of the insect fauna of the various components of the Hawaiian forests. Edited by R. H. Van Zwaluwenburg. Published in collaboration with the Hawaiian Botanical Society and the Hawaiian Entomological Society. Honolulu. Bernice P. Bishop Museum 1954. 266 p. illus. 25 cm. (Bernice P. Bishop Museum. Special publication 44) $4.00 7940

Note: A reference book on the insects which are associated with the trees in Hawaiian forests. It covers the subject comprehensively from the standpoint of entomology rather than of forestry or economic entomology. The arrangement is by host plant. The information given establishes the relationship between the hosts and the insects and cites the literature in which the original description of the insect is to be found. The insects themselves are not described; however, pictures of a considerable number of them are included. The bibliography runs to 17 pages and constitutes a useful guide to the literature on Hawaiian insect fauna. The volume is fully indexed.

TOUMEY, JAMES WILLIAM

Foundations of silviculture upon an ecological basis. Second edition, revised by Clarence F. Korstian. New York. John Wiley & Sons, Inc., 1947. 468 p. illus. 24 cm. $6.50 7941

Contents: Introduction—Definitions and generalities. Part I, Environment of forests: Solar radiation. Air temperature. Atmospheric moisture. Climate. Soil conditions. Soil moisture and its influence on forest vegetation. Physiographic conditions. Biotic factors. Interaction of site factors. Part II, Influence of forests on their environment: Reaction of forest vegetation on its physical environment. Effect of forests on animal life, particularly mankind. Part III, For-

ests: Form and life of forest trees. Differentiation and development of stands. Reproduction, growth, and yield of stands. Tolerance. Forest vegetational units and their classification. Origin and development of forest communities—forest succession. Appendix. Common and technical names of trees. Bibliography Index.

Note: A comprehensive study of the distribution of forest vegetation in the United States of America and of the various causes which affect its existence and growth. The book is intended for use in college courses in silvics, and the treatment assumes a prior knowledge of botany and plant physiology This edition has been enlarged to include some of the more recent advances in forestry ecology and plant physiology A few chapters have been rewritten, but the general scope and arrangement of the earlier edition have been retained. Approximately 30 references to articles and books published after the 1917 edition are cited in the 32-page bibliography

UNITED STATES DEPARTMENT OF AGRICULTURE

Trees, the yearbook of agriculture, 1949 Washington, D C. Government Printing Office, 1949 944 p illus. (part col'd) 24 cm. (United States. Department of Agriculture. The yearbook of agriculture, 1949) $2 75 7942

Contents (abridged) The editor to the reader by A. Stefferud. The tree: A tree is living thing, by N T Mirov Trees remembered and remembering, by G. H. Collingwood. Trees and homes: Trees for the country home, by W H. Larrimer City trees, by L C. Root and C. C. Robinson. Shade trees for the Northeast, by A. M. Waterman and others. Shade trees for the Southeast, by E. M. Lindgren and others. Shade trees for the Plains, by R. Wright and T W Bretz. Shade trees for the Rockies, by L. S. Gill. Shade trees for California, by W W Wagener. Shade trees for the north Pacific area, by T W Childs. Forests and men: The community of trees, by J H. Buell. Forest types of the United States, by W A. Dayton. Forests and soils, by J T Auten and T B Plair Forest renewal, by L. I. Barrett. Direct seeding of trees, by W R. McQuilkin. Amateur tree breeders? Why not? by E. J Schreiner Production of planting stock, by F M. Cossitt and others. The small woodland Cash crops from small forests, by R. E. McArdle. Cooperatives and small woodlands, by A. W Bratton. Windbreaks and shelterbelts, by J H. Stoeckler and R. A. Williams. The job of planting trees survey by P C. Wakeley and G. W Jones. How to care for your small forest, by M. M. Bryan. Harvesting the small forest, by A. M. Sowder The farmer and Christmas trees, by A. M. Sowder Company forests: Large private holdings in the North, by H. L. Shirley Private forestry in the West, by C. L. Tebbe and H. J Andrews. Forestry on large ownerships in the South, by J H. Stone and others. Naval stores, the industry by J Ward. N val stores, the forests, by C. E. Ostrom and J. W Squires. The national forests The people's property by C. M. Granger Appalachian comeback, by M. A. Mattoon. The AuSable cooperative, by J E. Frason. Evolution of management on Chippewa, by H. B. Wales. Forestry in the Black Hills, by A. F C. Hoffman and T Krueger. New security for forest communities, by D J Kirkpatrick. Rebuilding southern forest, by F A. Albert. Pine forests of California, by B. O Hughes and D Dunning. Forests of Alaska, by B. F Heintzleman. The administration of national forests, by E. W Loveridge. Projects of many uses State forests, by S. G Fontanna. Community forests, by G. A. Duthie. Arboretums, places of beauty and science, by W H. Larrimer and E. J Schreiner Insects, diseases, parasites. Insects in the forest, a survey by F C. Craighead and J M. Miller The key to protection by S. A. Rohwer The spruce budworm, by R. C. Brown and others. Pine bark beetles, by F P Keen. Insects in wood products, by T E. Snyder Controlling the tussock moth, by P H Roberts and J C. Evenden. Diseases and the forest, by L. M Hutchins. Dutch elm disease, by R. U Swingle and others. Blister rust on white pine, by J F Martin and P Spaulding. Breeding and selecting pest-resistant trees, by R. B Clapper and J M. Miller The airplane in forest-pest control, by J S. Yuill and C. B. Eaton. Fire, friend and enemy Building a fire organization, by R. S. Pierce and C. A. Gustafson. Forest fire danger by G. L. Hayes. Fighting fires from the air by C. S. Crocker Fire as tool in southern pine, by A. W Hartman. Fun in the forests New values in the minds of men, by L. F Kneipp. Trail riding in the wilderness, by S. W Allen. Treasures of the nation, by C. L. Wirth and J H. Gadsby Safety for forest visitors, by R. S. Monahan. Forests and wildlife Forests as a wildlife habitat, by L. W Swift. Trees and food from acorns, by A. A. Downs. Managing Utah's big-game crop, by D I. Rasmussen and D M. Gaufin. Forests and fish, by P R. Needham and F W Johnson. Action on the Blue Ridge, by T C Fearnow and L. T Quinn. Watersheds and how to care for them, by G. W Craddock and C. R. Hursh. T help control floods, by G. R. Phillips and B. Frank. Wood in use: Seasoning of wood, by R. C. Rietz. Preservative treatment of wood, by T R. Truax. Fungi and wood, by C. Hartley The gluing of wood, by D. Brouse. Chemicals from wood, by A. J Stamm. The Forest Products Laboratory by G. M. Hunt. The foresters' calling: Education in forestry by S. T Dana. Teachers and conservation, by J L. Bostwick. National forest personnel, by H. D Cochran. Industrial forestry associations, by C. Collins. Picturing forests from the air, by R. D. Garver Railroads and foresters, by R. N Hoskins. Yesterday and today: The history of forestry in America, by W N Sparhawk. Today and tomorrow: Forest resources and the nation's economy by E. C. Crafts and M. A. Dietz. The world forest situation, by S. B. Show. A national program for forestry by L. F Watts. Lists and other aids: Important forest trees of the United States, by E. L. Little, Jr. Fifty trees from foreign lands, by E. L. Little, Jr. Key for the identification of woods without the aid of a hand lens or microscope, by A. Koehler. Trees best adapted for special purposes. A vacation guide National forests. Natural areas. Areas administered by the National Park Service. Public forest-tree nurseries. State forestry agencies. Publications of the Forest Products Laboratory For further reading a bibliography Some words woodsmen use. Index.

Note: The purpose of this large collection is explained in the words of the editor: "We have tried here to put into clearer perspective some items of history importance, administration, and outlook that so far have been in scattered form. We have tried to tell the essentials of choosing, planting, and growing trees as farm crop, as a renewable national treasure, as a necessary part of country and city life. We have tried to make a book that is practical and useful for all Americans and interesting and inspiring for those who are unaware of the beauty and delight of the woods. The papers were written for the work by many outstanding specialists in forestry conservation and related fields.

UNITED STATES FOREST SERVICE

Woody plant seed manual. Prepared by the Forest Service. Washington, D C. Government Printing Office, 1948 [i.e. 1949] 416 p. illus. 27 cm. (United States. Department of Agriculture Miscellaneous publication no. 654) $3 75 7943

Contents (abridged) Part I, Seed and its development: Flowering. Pollination and seed formation. Seed structure. Types of seed. Seed ripening. Germination. Biological changes during germination. Types of germination. Seed production and dispersal. Source of seed. Collection, extraction, and storage. Treatment of seed prior to sowing. Seed testing. Literature cited. Part II, Bibliography Use list: Wood production. Erosion control. Shelter belts. Wildlife purposes. Ornamental planting. Glossary Index of plant names used in part II.

Note: A manual of information on all phases of woody-plant seed handling for seedsmen, nurserymen, and foresters. It contains the results of more than 20 years of studies. The information on such points as the time of seed ripening, behavior of the seed after planting, viability storage of seed, and pretreatment to induce prompt germination is based on both laboratory and field tests and practices. The first part gives general principles on the various phases of seed handling from formation of the seed to sowing; the second part provides detailed yet concise information on the seeds of all principal American species and varieties of trees and shrubs, including data on distribution and use, discussions of seeding habits, methods of seed collection, extraction and storage, seed germination, and nursery and field practice, with illustrations of the seeds and seedlings. As the manuscript of the manual was completed for publication at the beginning of World War II, the bibliography for the most part lists no publications later than 1941

WACKERMAN, ALBERT EDWARD

Harvesting timber crops. New York Mc Graw Hill Book Company Inc. 1949 437 p. illus. 24 cm. (The American forestry series Walter Mulford consulting editor) $6.75 7944

Contents. Introduction. Part I, Considerations preliminary to actual harvesting: Timber crops—the goal of forestry The development of forest industries in America. The origins of modern timber-harvesting methods. Planning the timber harvest. Wood

bles. Part II, Preparation of trees for removal from the forest. Marking of trees to cut. The felling operation. Bucking felled trees. Barking, skidding, and peeling. Tools used in felling, bucking, and processing trees. Part III, Movement of products from the forest. Bunching products in the forest. Skidding forest products. Loading forest products. Transportation of products from the forest. Part IV, Organization and control of harvesting operations. Measurement of forest products. Organization of harvesting operations. Costs and records. Regional harvesting practices: The Northeast, by F. C. Simmons. The Lake states, by G. Brouhard. The western pine region, by T. J. Orr, Jr. The Douglas fir region, by W. D. Reynolds. California redwood, by E. Fritz. Southern hardwoods, by E. R. Lien. The southern pine region, by W. C. Hammerle. Selected references. Index.

Note: A well-organized text which is designed for college students of forestry and practical foresters. Emphasis is on the forestry aspects rather than on the engineering aspects of harvesting, although the third part of the book dealing with the movement of products from the forest necessarily covers certain of the engineering phases of the operations. A feature of the volume is the section on regional harvesting practices, written by regional authorities on timber harvesting in different parts of the United States of America.

WAKELEY PHILIP C

Planting the southern pines. Washington, D.C., Government Printing Office 1954 233 p. illus. 27 cm. (United States. Department of Agriculture. Agriculture monograph no. 18) $2.75 7945

Contents: Introduction. Planting policies. Seed. Nursery practice. Planting. Plantation care. Summary of important points. Literature cited. Appendix.

Note: An illustrated summary of available technical knowledge on pine planting, the bulk of it drawn from studies conducted by the Southern Forest Experiment Station since 1922 and from records of Region 8, U. S. Forest Service. Some of the findings are here published for the first time. The publication supersedes U. S. Department of Agriculture, Technical bulletin, 492. The author places main emphasis on the four principal southern species of pine: loblolly (*Pinus taeda* L.), slash (*Pinus caribaea* Engelmann), longleaf (*Pinus palustris* Mill.) and shortleaf (*Pinus echinata* Mill.). In the appendix are 35 pages of useful information on such topics as safety rules, insecticides, fungicides, guide to drying of seed, directions for germination tests, and directions for correct planting with hand tools.

WESTVELD RUTHFORD HENRY

Applied silviculture in the United States. Second edition. New York John Wiley & Sons, Inc., 1949 590 p. illus. 24 cm. $6 75 7946

Contents: Northeast spruce-hardwood region. New England white pine region. Oak region. Allegheny hardwood-pine-hemlock region. Southern Appalachian region. Southern pine region. Southern bottomland hardwood region. Central hardwood region. Lake States region. Douglas-fir region. Northern Rocky Mountain region. Lodgepole pine region. Southwest ponderosa pine region. California pine region. Northwest ponderosa pine region. Black Hills ponderosa pine region. Redwood region. Southeastern Alaska. Appendix: Common names of trees and their scientific equivalents. Common names of insects and their scientific equivalents. Common names of diseases and some of their causal agents with their scientific equivalents. Author index. Subject index.

Note: A textbook on the application of silviculture in the 18 chief forest regions of the United States of America. It presents the fundamental principles of the ecology and economics of each of the forest regions with a view to giving the student a broad outlook of silvicultural problems. The book may also be useful as a reference book for the practitioner, especially since it contains at the close of each chapter a comprehensive list of references. The revised edition takes account of advances in silviculture since 1939. In the handling of data on prices, costs, and profits the author has, wherever possible, substituted references to dollars and substituted man-hours of time or ratios to show relative values. Other changes include those made to conform with revised lists of tree names and forest-type classifications and additions to the bibliographies so as to include references to publications issued 1939–1948.

WESTVELD RUTHFORD HENRY, AND RALPH H. PECK

Forestry in farm management, by R. H. Westveld and the late Ralph H. Peck. Second edition, revised by R. H. Westveld. New York John Wiley & Sons, Inc., 1951 340 p. illus. 24 cm. $5.50. 7947

Contents (abridged): Forest trees in balanced agriculture. Growing forest-tree crops. How to improve and perpetuate existing farm forests. How to establish new farm forests. Measuring volumes and growth of farm forests. Making trees into the most valuable wood products. Marketing farm-forest products. Management of farm forests for special products. How farm forests may aid wildlife. Appendix. Index.

Note: The value and usefulness of forests to farmers, the methods of handling them, and the means of making them real farm assets are set forth in this book. It is divided into two parts, the first giving an account of the fundamental principles of modern farm forestry, the second (the appendix) presenting certain basic information, such as log and volume tables. The second edition has been brought up to date and expanded and in some respects reorganized. It discusses the new equipment and the new techniques of the decade between the first edition and the second edition, the most notable being the power saws and the tree-planting machines which have reduced both the amount of labor needed and the cost of harvesting and planting trees. The references at the ends of the chapters have been revised. A new chapter has been added on the public and private aid available to farm-forest owners in the United States of America. Persons concerned with forests on farms, whether as farmers or county agricultural agents or teachers of vocational agriculture or students in agricultural colleges, find this book of basic value.

WILDE S A., AND G K. VOIGT

Analysis of soils and plants for foresters and horticulturists (diagnosis of soil productivity by field and laboratory methods) Ann Arbor J W Edwards, Inc., 1955 117 p. illus. 22 cm. $3 75 7948

Contents (abridged): Introduction. Part I, Analysis of physical properties of soils. Part II, Analysis of chemical characteristics of soils. Part III, Analysis of ground water. Part IV, Analysis of biological and microbiological properties of soils, organic residues, and composts. Part V, Floristic and mensuration analyses. Part VI, Analyses of plant tissue. Part VII, Analysis of nursery stock. *Appendices:* Notes pertinent to chemical analysis of soils. Soil fertility standards for raising nursery stock and critical content of nutrients in soils of planting sites. Conversion factors commonly used in soil and timber analyses. International atomic weights of elements important in soil analyses.

Note: This book discusses the special problems of analysis of forest soils and other soils supporting woody plants, and describes specific techniques for physical, chemical and fungal investigations. Among the techniques offered for the analysis of physical properties are ones for determination of organic matter content, water holding capacity and air permeability. Included among those for chemical characteristics are techniques for determination of exchange properties, total carbon, and available nutrient elements. The techniques for analyses of biological and microbiological properties include several for detection of mycorrhizae and the determination of the effect of volatile substances released by soil humus and composts. All are described explicitly. Selected literature references are included in each section. The book is addressed to scientists and technicians who are familiar with the general principles and techniques of chemical analyses, and is designed for practical use in connection with the management of forests, nurseries, and orchards. The authors are members of the faculty of the University of Wisconsin.

FOREST PRODUCTS

BROWN NELSON COURTLANDT

Forest products the harvesting, processing and marketing of materials other than lumber including the principal derivatives, extractives and incidental products in the

United States and Canada. New York John Wiley & Sons, Inc., 1950 399 p illus 21 cm $6 50 7949

Contents (abridged) Part I, Introduction, economics, and general considerations. Relative importance of principal forest products. Technical properties in relation to uses. Decreasing use of special products. Farm woodlands as sources of forest products. Principal developments and advances made in recent years. Part II, Construction materials Veneers and plywood. Cross ties. Shingles and shakes. Part III, Chemically derived products. Wood pulp and its products. Wood-distillation products. Rubber Maple sugar and sirup. Part IV Wood containers. Part V Mechanically reduced products Excelsior Wood flour Wood densification. Part VI, Wood as fuel. Part VII, Miscellaneous products. Bark (other than for tannin) Christmas trees and decorations. Wild fruits, edible nuts, and tree seeds. Glossary of some terms as used with forest products. Bibliography of forest products. Index.

Note The ancestry of this book goes back to the author's *Forest products* which appeared in 1919 and was revised and published in a second edition in 1927 In 1937 the book was again revised and published under the title of *Timber products*. Now the original title has been restored. The book remains a treatise and reference book on the harvesting, processing, and uses of forest products other than sawn lumber In the present edition, the economic data hav been revised and a good share of the descriptive text has been completely rewritten. Also there are discussions of many new topics, such as sandwich type of wall panels, compressed wood, and insulating wool from tree bark. As in earlier editions, minor forest products, such as spruce gum and Spanish moss, are covered as well as major products.

BROWN, NELSON COURTLANDT

Lumber manufacture conditioning, grading distribution, and use. New York John Wiley & Sons, Inc. 1947 344 p illus 22 cm. 7950

Contents History economics, and general considerations. The manufacture of lumber Conditioning by air seasoning and kiln drying. Remanufacture. Grades and inspection. The small sawmill. Sizes and price relationships. Merchandising, distribution, and use. Shipping and traffic. Export. Lumber trade associations. Index.

Note A survey of the manufacture of lumber that may be used either as text in schools of forestry or as a book of background information by persons engaged in the manufacture or sale of lumber The economics of the industry and its technology are given almost equal emphasis. There is considerable resemblance to the author's earlier *The American lumber industry* (1923) but there is so much new material, and the older material that has been used has been so thoroughly revised, that this is fairly called new work. In 1957 the publisher reported that a new edition was in press.

PANSHIN, ALEXIS JOHN, AND OTHERS

Forest products their sources production and utilization. By A J Panshin E S Harrar W J Baker, and P B Proctor New York McGraw Hill Book Company Inc., 1950 549 p illus. 24 cm (The American forestry series Walter Mulford, consulting editor) $8 00 7951

Contents Part Economics of forest utilization Timber resources and their importance in the economy of the United States. Wood residues and the related problems of wood-utilization research. The relation of wood properties to wood utilization. Part II, Wood products: Round timbers. Mine timbers. Railroad ties. Wood furniture. Veneers and plywood. Wood containers. Shingles and shakes. Wood flour Sawdust and shavings. Wood fuel. Minor wood products. Part III, Chemically derived products from wood Pulp and paper Thermal- and sound-insulation materials. Cellulose filaments and film. Carbonization and destructive distillation of wood. Wood saccharification. Part IV Derived and miscellaneous forest products N val stores. Maple sirup and sugar Tannins and dyes. Wood in the plastics industry Minor forest products. Index.

Note. A college textbook which is useful also as an elementary reference book in institutional and personal libraries. The first part occupies only 51 pages. The rest of the space is devoted to specific descriptions of forest products which are currently manufactured in the United States of America or are imports of economic importance. Individual products are described in adequate detail and the methods of manufacturing each one are also described. Flow charts are used frequently to diagram processes, and illustrations are included to show special machines and techniques. Selected literature references are included.

RECORD, SAMUEL JAMES, AND ROBERT W HESS

Timbers of the New World New Haven Yale University Press, 1943 640 p. illus. 27 cm. $15 00 7952

Contents (abridged) Gymnosperms. Angiosperms. Explanation of wood descriptions. Lists of families classified with reference to special properties and uses of their bark, lea es, and timber. Sources of information and material. Bibliography Explanation of the photomicrographs. Index.

Note. An encyclopedia covering the trees and larger shrubs of the entire western hemisphere, exclusive of the Pacific islands. The bulk of the treatise concerns Latin America. The book describes the trees and their woods; supplies the vernacular trade and scientific names, and indicates their present and potential economic value in classified lists which suggest substitute woods and possible sources of rubber resins, oil tannins, dyestuffs, drugs, and fibers.

SMITH, J RUSSELL

Tree crops, a permanent agriculture. New York The Devin Adair Company, 1953 408 p illus 22 cm. $6 00 7953

Contents (abridged) How long can we last? Tree crops—the way out. The plan—an institute of mountain agriculture. A stock food and man-food tree—the carob. A stock feed tree—the honey locust. The real sugar tree. The persimmon—a pasture tree for the beasts and kingly fruit for man. A corn tree—the oak as forage crop. Nuts as human food. The pecan—king of hickories—a type study in tree crops. Some suggested lines of work—the unexplored realm. A peep at the tropics. Tree crops and farm management. Appendices. Index.

Note. Primarily this book is strong plea for more attention to trees as producers of food for animal and human consumption. The author's thesis is that trees conserve soil and that if the same attention were given to their breeding and culture as has been given to other types of crops, such as the grain crops, they would be as important in the production of food and at the same time would protect the soil from depletion and erosion. Much information is included on suitable trees, yields from them, their effects on the soil, on human elfare, etc. Proposals for research are outlined. The volume is illustrated ith 137 figures, most of hich are reproductions of photographs f trees, uts and fruits, scenes of soil erosion, orchards, and tree plantings.

STAMM, ALFRED J, AND ELWIN E HARRIS

Chemical processing of wood New York Chemical Publishing Company 1953 595 p. illus 23 cm $12 00 7954

Contents Wood as chemical raw material. The constituents of wood. Structure of wood. Surface properties of ood. Mechanical and thermal properties of wood and wood products. Drying wood. Preservative and fire-retardant treatments. Modified woods. Wood-base plastics and boards. Pulp and paper Pulp boards and paper-base laminates. Cellulose derivatives. Tree exudates. Destructive distillation of wood. Extractives. Wood hydrolysis. Hydrogenation of wood and wood products. Miscellaneous products from wood. Index.

Note This book covers not only processes in hich wood is used as a chemical raw material but also processes in which wood is chemically treated to improv its structural or other properties. Each of the chapters is based on an extensiv literature survey and is accompanied by long bibliography Uses and processes are described in sufficient detail to enable the technically trained reader to decide in most instances whether he wishes to look up the source articles or not. The disadvantages of wood as ra material are discussed along with the advantages. Cost data on some processes are included but in many instances they are based on prices prevailing in 1945 or earlier
